General information

The funds described in this report are sub-funds of a SICAV (Société d'Investissement à Capital Variable) incorporated under Luxembourg law.

Performance

The investment return, or performance, of a mutual fund investment is measured by the change in value of the fund's shares. The net asset values per share (= redemption prices) with the addition of intervening distribution, are used as the basis for calculating the value. Past performance is not a guide to future results.

The corresponding benchmark – if available – is also presented in the report. All financial data in this publication is as of December 31, 2025 (unless otherwise stated).

Sales prospectuses

Fund shares are purchased on the basis of the current sales prospectus, the key investor information document and the articles of incorporation and by-laws of the SICAV, in combination with the latest audited annual report and any semiannual report that is more recent than the latest annual report.

The annual financial statements are prepared in accordance with accounting principles in Luxembourg (LuxGAAP) using the going concern basis of accounting. In the event of a liquidation of a sub-fund, the corresponding financial statements will be prepared on the basis of liquidation values, departing from the going concern basis of accounting, as described in the notes on valuation of the sub-fund in question.

Issue and redemption prices

The current issue and redemption prices and all other information for shareholders may be requested at any time at the registered office of the Management Company and from the paying agents. In addition, the issue and redemption prices are published in every country of distribution through appropriate media (such as the Internet, electronic information systems, newspapers, etc.).

Liquidations of sub-funds

The sub-fund DWS Invest Emerging Markets IG Sovereign Debt (in liquidation) was liquidated effective January 10, 2024, following a resolution to that effect adopted by the Board of Directors of the SICAV and the approval of the Luxembourg supervisory authority CSSF. Investors could redeem sub-fund shares until January 9, 2024.

As the sub-fund holds assets in its portfolio that are affected by sanctions as a result of the Russia/Ukraine crisis, these assets can de facto neither be traded nor transferred. In addition, all payments associated with these assets since the start of the sanctions, including interest/coupon payments and capital repayments to which the sub-fund is entitled, are directly affected by these sanctions. The sub-fund still has no corresponding amounts available in this regard. As a result, the liquidation of the sub-fund cannot yet be completed.

The sub-fund DWS Invest ESG Mobility (in liquidation) was liquidated effective March 6, 2025, following a resolution to that effect adopted by the Board of Directors of the SICAV and the approval of the Luxembourg supervisory authority CSSF. The issue of new shares of the sub-fund was discontinued effective February 12, 2025. Investors could redeem sub-fund shares until February 12, 2025.

The sub-fund DWS Invest ESG NextGen Consumer (in liquidation) was liquidated effective March 6, 2025 following a resolution to that effect adopted by the Board of Directors of the SICAV and the approval of the Luxembourg supervisory authority CSSF. The issue of new shares of the sub-fund was discontinued effective February 12, 2025. Investors could redeem sub-fund shares until February 12, 2025.

The sub-fund DWS Invest Global High Yield Corporates (in liquidation) was liquidated effective March 25, 2025, following a resolution to that effect adopted by the Board of Directors of the SICAV and the approval of the Luxembourg supervisory authority CSSF. The issue of new shares of the sub-fund was discontinued effective March 13, 2025. Investors could redeem sub-fund shares until March 13, 2025.

The sub-fund DWS Invest Africa (in liquidation) was liquidated effective June 3, 2025, following a resolution to that effect adopted by the Board of Directors of the SICAV and the approval of the Luxembourg supervisory authority CSSF. The issue of new shares of the sub-fund was discontinued effective April 9, 2025. Investors could redeem sub-fund shares until April 9, 2025.

The sub-fund DWS Invest ESG Social Focus (in liquidation) was liquidated effective November 27, 2025, following a resolution to that effect adopted by the Board of Directors of the SICAV and the approval of the Luxembourg supervisory authority CSSF. The issue of new shares of the sub-fund was discontinued effective November 6, 2025. Investors could redeem sub-fund shares until November 6, 2025.

The sub-fund DWS Invest Metaverse (in liquidation) was liquidated effective April 13, 2026, following a resolution to that effect adopted by the Board of Directors of the SICAV and the approval of the Luxembourg supervisory authority CSSF. The issue of new shares of the sub-fund was discontinued effective March 19, 2026. Investors could redeem sub-fund shares until March 19, 2026.

Renaming of sub-funds

The sub-fund DWS Invest ESG Climate Tech was renamed DWS Invest ESG Climate Opportunities effective April 25, 2025.

The sub-fund DWS Invest ESG Healthy Living was renamed DWS Invest WellCare effective April 25, 2025.

The sub-fund DWS Invest ESG Smart Industrial Technologies was renamed DWS Invest Critical Technologies effective April 25, 2025.

The sub-fund DWS Invest ESG Women for Women was renamed DWS Invest ESG Social Focus effective April 25, 2025.

The sub-fund DWS Invest Low Carbon Corporate Bonds was renamed DWS Invest Net Zero Transition Euro Corporate Bonds effective April 25, 2025.

Renaming of share classes of sub-funds

The LC share class of the sub-fund DWS Invest ESG CROCI Innovation Leaders was renamed RC effective April 25, 2025.

The USD LC share class of the sub-fund DWS Invest ESG CROCI Innovation Leaders was renamed USD RC effective April 25, 2025.

Closure of share classes of sub-funds

The RC (CE) share class for the sub-fund DWS Invest Convertibles was closed effective February 25, 2025, by resolution of the Management Board of DWS Investment S.A. authorized by the Board of Directors.

The IC50 share class for the sub-fund DWS Invest CROCI Euro was closed effective February 25, 2025, by resolution of the Management Board of DWS Investment S.A. authorized by the Board of Directors.

The CHF IC share class for the sub-fund DWS Invest Enhanced Commodity Strategy was closed effective February 25, 2025, by resolution of the Management Board of DWS Investment S.A. authorized by the Board of Directors.

The ICH share class for the sub-fund DWS Invest ESG Asian Bonds was closed effective February 25, 2025, by resolution of the Management Board of DWS Investment S.A. authorized by the Board of Directors.

The IC EB share class for the sub-fund DWS Invest ESG CROCI Innovation Leaders was closed effective February 25, 2025, by resolution of the Management Board of DWS Investment S.A. authorized by the Board of Directors.

The NCH (P) share class for the sub-fund DWS Invest ESG Equity Income was closed effective February 25, 2025, by resolution of the Management Board of DWS Investment S.A. authorized by the Board of Directors.

The WFD share class for the sub-fund DWS Invest ESG Equity Income was closed effective February 25, 2025, by resolution of the Management Board of DWS Investment S.A. authorized by the Board of Directors.

Obligations for cross-border distribution

The annual financial statements for this SICAV (Société d'Investissement à Capital Variable) contain a report by the Réviseur d'Entreprises agréé (independent auditor's opinion). This report refers exclusively to the German-language version of the annual financial statements as prepared for the purposes of complying with the requirements imposed by the supervisory authority of the country of origin of the SICAV ("original version"). For cross-border distribution, one of the obligations of the SICAV is to also publish annual reports in at least one of the national languages of the relevant country of distribution or in another language authorized by the competent authorities in the relevant country of distribution; where applicable, extracts may be published on a sub-fund basis. The tax information contained in the annual reports for investors who are subject, without limitation, to taxation in the Federal Republic of Germany and specific information for investors in a different country of distribution have been omitted in the national or specific language versions. National or language versions must also be published for the semiannual reports to be produced for the first half of the fiscal year. In the event of any discrepancies in content between the German original version of the report and any translation thereof, the German-language version shall prevail.

Annual report and annual financial statements

Annual report
DWS Invest Africa (in liquidation)

Investment objective

The sub-fund DWS Invest Africa (in liquidation) focused on the African continent. The management primarily invested in equities of issuers that had their registered offices in Africa or conducted their principal business activity in Africa, or which, as holding companies, predominantly held interests in companies registered in Africa, especially in South Africa, Egypt, Mauritius, Nigeria, Morocco and Kenya. Preference was given to companies with strong earnings that had good market positions and solid balance sheets. When selecting individual stocks, the longer-term focus was on themes including abundance of natural resources, infrastructure spending and growth in consumer spending.

"BVI method" performance, i.e., excluding the initial sales charge.
Past performance is not a guide to future results.

As of: June 3, 2025 (liquidation date)

Liquidation

According to the letter to shareholders dated April 10, 2025, the Board of Directors of the fund resolved to place the sub-fund DWS Invest Africa (in liquidation) (the "sub-fund") into liquidation effective April 10, 2025 ("date of placement in liquidation"). The subscription and redemption of shares of the sub-fund was discontinued effective April 10, 2025. On April 11, 2025, the Portfolio Manager started the planned winding up of the sub-fund portfolio (April 11–22, 2025). However, in view of the market environment development in the course of the sale process, the Portfolio Manager became aware that winding up the portfolio completely by April 22, 2025, would no longer be possible in a way that would be in the best interests of the shareholders. This was mainly due to the market conditions in the respective target countries at that time. Continuing volatility and limited liquidity on the African stock exchanges prevented the quick, market-oriented sale of the portfolio holdings. In the opinion of the portfolio management, a quick sale would have meant significantly reduced prices which would not have been conducive to the aim of preserving value for the shareholders. To protect the interests of the shareholders and to facilitate the orderly sale of the rest of the assets while preserving their value, the Portfolio Manager viewed it necessary to extend the wind-up period. The originally planned period for the redemption of sub-fund shares (April 25–May 13, 2025) was therefore moved to the period from May 13, 2025, to May 28, 2025, and the sub-fund was opened again for the redemption of sub-fund shares. The sub-fund was finally closed after the acceptance deadline for the sub-fund's respective share classes on May 28, 2025. The liquidation proceeds were therefore paid to the shareholders on June 3, 2025. This had originally been scheduled for May 16, 2025 (the "completion of the liquidation process").

Liquidation proceeds that were unable to be paid out to the beneficiaries on completion of the liquidation process are deposited with the Caisse de Consignation in the Grand Duchy of Luxembourg. The beneficiaries can request the proceeds to which they are entitled at any time within a period of 30 years. After this period, these proceeds will be transferred to the ownership of the Grand Duchy of Luxembourg.

In the period from the beginning of January 2025 through June 3, 2025 (liquidation date), the sub-fund DWS Invest Africa (in liquidation) recorded an appreciation of 4.6% per share (LC share class; in euro; BVI method).

Other information – Not covered by the audit opinion on the annual report

Information on the environmental and/or social characteristics

This financial product qualified as a product in accordance with Article 6 of Regulation (EU) 2019/2088 on sustainability-related disclosures in the financial services sector ("SFDR").

The following is the disclosure in accordance with Article 7 of Regulation (EU) 2020/852 of June 18, 2020, on the establishment of a framework to facilitate sustainable investment: The investments underlying this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

The following disclosures are made for the financial product in accordance with Article 7(1) of Regulation (EU) 2019/2088 on sustainability-related disclosures in the financial services sector: The portfolio management did not consider principal adverse impacts on sustainability factors for this financial product, because (as stated above) no ESG and/or sustainable investment policies were pursued with the product.

DWS Invest Africa (in liquidation)

Liquidation proceeds for the share classes (in EUR)

Share class	ISIN	Liquidation proceeds per share

Annual financial statements
DWS Invest Africa (in liquidation)

The following risk management disclosures (other information) are unaudited and are not covered by the audit opinion on the annual report.

Composition of the reference portfolio (according to CSSF circular 11/512)
MSCI EFM AFRICA EUR Index

Market risk exposure (value-at-risk) (according to CSSF circular 11/512)

Lowest market risk exposure	%	0.012
Highest market risk exposure	%	126.563
Average market risk exposure	%	74.764

The values-at-risk were calculated for the period from January 1, 2025, through June 3, 2025, using historical simulation with a 99% confidence level, a 10-day holding period and an effective historical observation period of one year. The risk in a reference portfolio that does not contain derivatives is used as the measurement benchmark. Market risk is the risk to the fund's assets arising from an unfavorable change in market prices. The Company determines the potential market risk by means of the **relative value-at-risk approach** as defined in CSSF circular 11/512.

In the reporting period, the average leverage effect from the use of derivatives was 0.0, whereby the total of the nominal amounts of the derivatives in relation to the fund's assets was used for the calculation (sum-of-notional approach).

The gross exposure generated via derivatives pursuant to point 40 a) of the "Guidelines on ETFs and other UCITS issues" of the European Securities and Markets Authority (ESMA) totaled EUR 0.00 as of the reporting date.

Notes on valuation

Against the backdrop of the resolution adopted by the Board of Directors of the SICAV to put the fund into liquidation effective June 3, 2025, the going-concern basis was relinquished and the financial statements were prepared on the basis of liquidation values. Under the responsibility of the Board of Directors of the SICAV, the Management Company determines the net asset values per share and performs the valuation of the assets of the fund.

If no trading prices are available, prices are determined with the aid of valuation models (derived market values) which are agreed between State Street Bank International GmbH, Luxembourg Branch, as external price service provider and the Management Company and which are based as far as possible on market parameters. This procedure is subject to an ongoing monitoring process. The plausibility of price information from third parties is checked through other pricing sources, model calculations or other suitable procedure.

Assets reported in this report are not valued at derived market values.

DWS Invest Africa (in liquidation)

Statement of income and expenses (incl. income adjustment)

for the period from January 1, 2025, through June 3, 2025 (liquidation date)

I.	**Income**

BVI total expense ratio (TER)

The total expense ratio for the share classes was:

Class FC 0.44%[1], Class LC 0.86%[1], Class LD 0.86%[1], Class NC 1.15%[1], Class GBP D RD 0.44%[1], Class USD LC 0.88%[1].

The TER expresses total expenses and fees (excluding transaction costs) as a percentage of a fund's average net assets in relation to the respective share class within a fiscal year.

[1] Annualization has not been performed for share classes liquidated during the year.

Transaction costs

The transaction costs paid in the reporting period amounted to EUR 50 670.07.

The transaction costs include all costs that were reported or settled separately for the account of the fund in the reporting period and are directly connected to the purchase or sale of assets. Any financial transaction taxes which may have been paid are included in the calculation.

Statement of changes in net assets 2025

I.	**Value of the fund's net assets at the beginning of the shortened fiscal year**	**EUR**	**23 370 944.75**
1.	Distribution for the previous year	EUR	-11 373.24
2.	Net outflows	EUR	-24 436 142.81
3.	Income adjustment	EUR	4 244 445.36
4.	Net change in unrealized appreciation/depreciation	EUR	-3 167 874.06
II.	**Value of the fund's net assets at the end of the fiscal year**	**EUR**	**0.00**

DWS Invest Africa (in liquidation)

Transactions processed for the account of the fund's assets via closely related companies (based on major holdings of the Deutsche Bank Group)

The share of transactions conducted for the account of the fund's assets via brokers that are closely related companies and persons (share of 5% and above), amounted to 0.00% of all transactions. The total volume was EUR 0.00.

Swing pricing

Swing pricing is a mechanism that is intended to protect shareholders from the negative effects of trading costs arising from subscription and redemption activities. Extensive subscriptions and redemptions within a (sub-)fund may lead to a dilution of the assets of this (sub-)fund, as the net asset value sometimes does not reflect all trading and other costs that are incurred when the portfolio manager must buy or sell securities in order to manage large (net) inflows or outflows in the (sub-)fund. In addition to these costs, substantial order volumes may lead to market prices that are considerably below or above the market prices that apply under normal circumstances.

To enhance the investor protection of existing shareholders, a swing pricing mechanism can be applied to compensate for trading costs and other expenses if the aforementioned cumulative (net) inflows or outflows should have a material impact on the (sub-)fund on a valuation date and exceed a predetermined threshold (partial swing pricing). This mechanism can be applied across all (sub-)funds. If swing pricing is introduced for a particular (sub-)fund, this will be disclosed in the special section of the sales prospectus.

The Management Company of the fund will predefine thresholds for the application of the swing pricing mechanism, based, among other things, on current market conditions, available market liquidity and estimated dilution costs. In accordance with these thresholds, the adjustment itself will be initiated automatically. If the (net) inflows or outflows exceed the swing threshold, the net asset value is revised upward if the (sub-)fund sees large net inflows and is revised downward in the event of large net outflows. This adjustment is applied uniformly to all subscriptions and redemptions for the trading day in question. If a performance-based fee applies for the (sub-)fund, the calculation is based on the original net asset value.

The Management Company has established a swing pricing committee that determines the swing factors for each individual (sub-)fund. These swing factors indicate the extent of the net asset value adjustment. The swing pricing committee takes into account the following factors in particular:

– bid-ask spread (fixed-price element),
– impacts on the market (impacts of the transactions on the price),
– additional costs that are incurred as a result of trading activities for the investments.

The appropriateness of the applied swing factors, the operational decisions made in connection with the swing pricing (including the swing threshold), the extent of the adjustment, and the affected (sub-)funds are reviewed at regular intervals.

The amount of the swing pricing adjustment can therefore vary from one (sub-)fund to another and will not generally exceed 2% of the original net asset value per share. The net asset value adjustment is available upon request from the Management Company. In a market environment with extreme illiquidity, the Management Company can, however, increase the swing price adjustment to more than 2% of the original net asset value. Such an increase will be announced on the Management Company's website: www.dws.com.

As the mechanism should only be applied if significant (net) inflows or outflows are expected and it does not apply for normal trading volumes, it is assumed that the net asset value will only be adjusted occasionally.

This (sub-)fund can apply swing pricing and has done so in the reporting period, as its (net) inflows and outflows exceeded the relevant threshold previously defined. No swing pricing adjustment was applied that would have had an impact on the (sub-)fund's net asset value per share on the last day of the reporting period.

Annual report
DWS Invest Artificial Intelligence

Investment objective and performance in the reporting period

The objective of the investment policy is to achieve long-term capital appreciation. To this end, the sub-fund invests predominantly in companies in the international equity markets whose business benefits from or is currently connected to the development of artificial intelligence (AI). In addition, equities of all market capitalizations, equity certificates, participation and dividend-right certificates, convertible bonds and equity warrants issued by foreign and domestic companies can be added to the sub-fund. Aspects considered when selecting investments include financial strength and also a focus on environmental, social and corporate governance (ESG) factors.*

"BVI method" performance, i.e., excluding the initial sales charge.
Past performance is not a guide to future results.

As of: December 31, 2025

In the reporting period from January 1, 2025, through the end of December 2025, DWS Invest Artificial Intelligence recorded an appreciation of 5.8% per share (LD share class; BVI method; in euro).

Investment policy in the reporting period

Geopolitical crises like the Russia-Ukraine war that has been ongoing since February 24, 2022, the escalated conflict in the Middle East, and the power struggle between the United States and China had an impact on the capital market environment in 2025 as well. Furthermore, the erratic swings in U.S. trade and tariff policy generated additional uncertainty in the capital markets. On the other hand, the easing of monetary policy, which had begun previously, continued during the reporting period. The European Central Bank (ECB) thus lowered the key interest rate in four steps from 3.00% p.a. to 2.00% p.a. (deposit facility) while the U.S. Federal Reserve gradually reduced its key interest rates by 0.75 percentage points to a target range of 3.50% p.a. – 3.75% p.a.

Despite market uncertainty induced mainly by geopolitical factors, the international equity markets recorded appreciable price gains overall in the reporting period amid sometimes considerable volatility in some cases. These gains were underpinned by the emerging easing of interest rates and increased investor confidence in artificial intelligence (AI). Against this backdrop, the securities contained in the portfolio also recorded a positive performance overall.

In the reporting period, the sub-fund benefited significantly from the further expansion of the AI infrastructure, driven by increasingly more complex models and the computing power required for them, as well as from the advances in the field of artificial intelligence, especially in the area of generative artificial intelligence. The information technology sector recorded above-average performance and was the strongest sector in the portfolio. Semiconductor stocks in particular made very positive contributions to performance against the backdrop of continually increasing investment in AI infrastructure. The sector's technology and hardware stocks also made a positive contribution to performance. In contrast, software stocks in the technology sector had a negative

impact on the sub-fund's performance – especially in the second half of the year – as the market was concerned that artificial intelligence might disrupt software provisions or even replace them entirely. These concerns were related to, for example, potential competition from AI providers who might develop their own applications, as well as the availability of AI-powered programming tools that enable companies to create their own software solutions by themselves.

In addition to the information technology sector, the positioning in the communication services sector in particular also contributed significantly to the positive performance of DWS Invest Artificial Intelligence. Health care stocks as well as consumer discretionary, financial services and consumer staples stocks that were also involved in the field of AI made a negative contribution to the overall performance in the reporting period.

In terms of country allocation, the sub-fund benefited significantly from its positioning in the Asian region, where a particular focus on Korea, Taiwan and China made positive performance contributions. In Taiwan and Korea, semiconductor manufacturers that benefited from significant gains in 2025 had a particularly strong presence. Portfolio holdings from the United States also made positive overall contributions to performance; however, they were not as significant as the performance contributions from the Asian region. While the fund management largely remained loyal to its sector and country allocation during the reporting period, it also made selective additions particularly in the information technology and communication services sectors and, at country level, primarily in the United States and China.

In the reporting period, Asian stocks in particular were amongst the best performing equities in the sub-fund. For example, SK Hynix, Delta Electronics and Samsung Electronics recorded appreciable price gains. Semiconductor stocks and semiconductor equipment producers from the United States, such as Amphenol and KLA, were amongst the equities with the greatest price gains. Of the "Magnificent 7", Alphabet, one of the sub-fund's top-10 holdings, was amongst the best performing stocks.

In contrast, the positions in Trade Desk, Duolingo and Redcare Pharmacy recorded below-average performance; they were also among the worst-performing equities overall in the reporting period. Trade Desk suffered primarily from the slowing growth accompanied by competition worries; the fund management thus decided to sell the equity. Worries of competition from AI, monetization and user growth concerns were the main issues in relation to Duolingo, which is why the fund management also sold off this equity during the reporting period. The Redcare Pharmacy equities also suffered from competition fears and margins that were worse than excepted.

New positions added by the portfolio management to the sub-fund in the reporting period included Reddit, Netflix and Coherent. Reddit is a U.S. social news platform that provides important data material for Large Language Models (LLMs) from its content. Netflix, an American streaming provider, benefits from generative AI, which it uses to provide new content more cheaply. Coherent supplies lasers and optical components for high-speed connections that are used in AI data centers.

Highest market risk exposure	%	117.707
Average market risk exposure	%	100.185

The values-at-risk were calculated for the period from January 1, 2025, through June 30, 2025, using historical simulation with a 99% confidence level, a 10-day holding period and an effective historical observation period of one year. The risk in a reference portfolio that does not contain derivatives is used as the measurement benchmark. Market risk is the risk to the fund's assets arising from an unfavorable change in market prices. The Company determines the potential market risk by means of the **relative value-at-risk approach** as defined in CSSF circular 11/512.

In the reporting period, the average leverage effect from the use of derivatives was 0.0, whereby the total of the nominal amounts of the derivatives in relation to the fund's assets was used for the calculation (sum-of-notional approach).

The gross exposure generated via derivatives pursuant to point 40 a) of the "Guidelines on ETFs and other UCITS issues" of the European Securities and Markets Authority (ESMA) totaled EUR 0.00 as of the reporting date.

DWS Invest Artificial Intelligence

Notes on valuation

Under the responsibility of the Board of Directors of the SICAV, the Management Company determines the net asset values per share and performs the valuation of the assets of the fund. The basic provision of price data and price validation are performed in accordance with the method introduced by the Board of Directors of the SICAV on the basis of the legal and regulatory requirements or the principles for valuation methods defined in the SICAV's prospectus.

If no trading prices are available, prices are determined with the aid of valuation models (derived market values) which are agreed between State Street Bank International GmbH, Luxembourg Branch, as external price service provider and the Management Company and which are based as far as possible on market parameters. This procedure is subject to an ongoing monitoring process. The plausibility of price information from third parties is checked through other pricing sources, model calculations or other suitable procedure.

Assets reported in this report are not valued at derived market values.

Footnotes

* The prepaid placement fee is amortized over a period of three years (as specified in article 13 (f) of the general section of the fund's management regulations).
** Does not include positions with a negative balance, if such exist.

BVI total expense ratio (TER)

The total expense ratio for the share classes was:

Class FC 0.85% p.a.,	Class IC 0.66% p.a.,
Class LC 1.60% p.a.,	Class LD 1.60% p.a.,
Class LDM 1.31%[4],	Class MFC 0.46% p.a.,
Class NC 2.10% p.a.,	Class PFC 2.66% p.a.,
Class TFC 0.84% p.a.,	Class TFCH (P) 0.89% p.a.,
Class XC 0.44% p.a.,	Class USD FC 0.85% p.a.
Class USD IC 0.66% p.a.,	Class USD LC 1.60% p.a.

The TER expresses total expenses and fees (excluding transaction costs) as a percentage of a fund's average net assets in relation to the respective share class within a fiscal year.

[4] Annualization has not been performed for share classes launched during the year.

Transaction costs

The transaction costs paid in the reporting period amounted to EUR 344 859.28.

The transaction costs include all costs that were reported or settled separately for the account of the fund in the reporting period and are directly connected to the purchase or sale of assets. Any financial transaction taxes paid are included in the calculations.

Statement of changes in net assets 2025

I. Value of the fund's net assets at the beginning of the fiscal year		**EUR**	**1 422 053 648.09**
1. Distribution for the previous year		EUR	-53 397.39
2. Net outflows[2]		EUR	195 042 767.76
3. Income adjustment		EUR	290 400.92
4. Net investment income		EUR	-11 825 727.47
5. Realized gains/losses		EUR	45 369 500.15
6. Net change in unrealized appreciation/depreciation		EUR	63 558 711.15
II. Value of the fund's net assets at the end of the fiscal year		**EUR**	**1 714 435 903.21**

[2] Reduced by a dilution fee in the amount of EUR 297 806.82 for the benefit of the fund's assets.

Summary of gains/losses 2025

Realized gains/losses (incl. income adjustment)		**EUR**	**45 369 500.15**
from:			
Securities transactions		EUR	46 010 127.23
Derivatives and other financial futures transactions[3]		EUR	-640 627.08

[3] This item may include options transactions or swap transactions and/or transactions from warrants and credit derivatives.

DWS Invest Artificial Intelligence

Transactions processed for the account of the fund's assets via closely related companies (based on major holdings of the Deutsche Bank Group)

The share of transactions conducted in the reporting period for the account of the fund's assets via brokers that are closely related companies and persons (share of 5% and above) amounted to 40.35% of all transactions. The total volume was EUR 4 353 917 419.32.

Placement fee / dilution adjustment

In the reporting period, the fund paid a placement fee of 2.9% of the fund's net assets to the distributor. This fee was calculated on the subscription date. The specified placement fee serves in particular as remuneration for distribution. The gross amount of the placement fee was paid in a single payment on the subscription date and simultaneously recognized in the fund's net assets as prepaid expenses. These are amortized on a daily basis over a period of three years from the date of subscription. The remaining position for prepaid expenses per share on each valuation date is calculated on a daily basis by multiplying the net assets of the fund by a factor. The relevant factor is determined through straight-line reduction of the placement fee by a certain percentage on a daily basis over three years from the subscription date. The prepaid expenses position fluctuates during the three years from the subscription date of the fund, since it depends on both the fund's net assets and the predetermined factor.

In addition, a dilution adjustment of up to 3% based on the gross redemption amount was charged for the benefit of the fund's net assets in the reporting period (to be paid by the shareholder).

Further details on the placement fee and the dilution adjustment can be found in the corresponding section of the fund's sales prospectus.

Annual report
DWS Invest Asian Bonds

Investment objective and performance in the reporting period

The objective of the sub-fund is to generate appreciation and surpass the performance of the benchmark (JACI Asia Pacific Credit Index). To achieve this, it invests in interest-bearing securities issued by governments of Asia Pacific countries, Asia Pacific government authorities, municipal administrations in Asia Pacific countries, companies having their registered offices in an Asia Pacific country, supranationals (securities denominated in Asia Pacific currencies) and non-Asia Pacific companies (securities issued in Asia Pacific currencies). The interest-bearing securities may be denominated in U.S. dollars, in other G7 currencies, or in an Asian currency. However, the sub-fund has invested almost exclusively in issues denominated in U.S. dollars since its inception.

The sub-fund DWS Invest Asian Bonds recorded an appreciation of 7.7% per share (USD FC share class; BVI method) in the 2025 fiscal year but slightly underperformed its benchmark, which returned +8.1% (both percentages in U.S. dollar terms).

Investment policy in the reporting period

The capital market environment in 2025 was challenging. This was due in particular to geopolitical crises like the Russia-Ukraine war that has been ongoing since February 24, 2022, the escalated conflict in the Middle East, and the power struggle between the United States and China. Furthermore, the erratic swings in U.S. trade and tariff policy generated additional uncertainty in the capital markets.

The first half of 2025 was shaped by sudden U.S. trade measures, including drastic tariff increases and the announcement of wide-ranging import duties at the beginning of April. These political changes gave rise to strong interest rate fluctuations. Against this backdrop, the sub-fund acted with caution and it maintained its barbell approach by combining high-quality investment-grade (IG) bonds with selective short-term high yield (HY) investments. HY positions remained defen-

sive and were of short duration, enabling flexible risk management. Investments in high yield bonds focused on issuers that were relatively sheltered from trade tensions and were supported by domestic policy, including the Macau gaming sector, renewable energies in India, infrastructure and – in the opinion of the portfolio management – high-quality Indonesian HYs. The IG performance was underpinned by positions in subordinated debt securities of Japanese life insurance companies.

Toward the end of 2025, global insecurities, concerns regarding AI valuation and weaknesses in the technology sector once again constituted a risk factor that put pressure on the higher yielding Asian corporate bonds. The sub-fund used this to build up positions in Mongolian bank bonds that offered attractive yields, supported by an improvement in the fundamental data and a diversification of the commodities markets.

The U.S. government bonds recorded increased volatility throughout 2025 due to uncertainties regarding tariffs, fears of stagflation and changing expectations with respect to interest rate cuts. The yield curve became steeper as the short-term yields fell due to global monetary easing, while long maturity bonds were put under pressure by increasing public deficits and inflation risks. Central banks continued the policy of monetary easing. The European Central Bank (ECB) thus lowered the key interest rate in four steps from 3.00% p.a. to 2.00% p.a. (deposit facility) while the U.S. Federal Reserve gradually reduced its key interest rates by 0.75 percentage points to a target range of 3.50% p.a. – 3.75% p.a.

The duration of the bond portfolio was kept broadly neutral. Instead, the positioning focused on the belly of the yield curve (3–10 years) in order to benefit from an expected steepening that was driven by potential rate cuts at the short maturity date and pressure at the longer maturities end caused by the risk of inflation and fiscal risks. Asian corporate bonds stayed robust in 2025, supported by strong technical factors such as local offers from regional banks and insurance companies.

The barbell approach described above had a positive effect on the sub-fund's investment result. The overweight in subordinated debt securities of Japanese life insurance companies with investment-grade rating also contributed to the investment gain, supported by stable interest income and narrowed credit spreads. The positions in the Macau gaming sector also resulted in high levels of income, buoyed by a robust rise in the gross gambling revenue, high interest income and ongoing debt reduction. High-quality HY investments in India (e.g., renewable energies, infrastructure) and selective HY bonds in Indonesia offered significant yields that were supported by political factors and robust domestic demand in India as well as by idiosyncratic drivers in Indonesia, including offers for tender and healthy domestic liquidity.

The improved market sentiment in China and Hong Kong boosted

"BVI method" performance, i.e., excluding the initial sales charge.
Past performance is not a guide to future results.

As of: December 31, 2025

the performance of the regional dollar bonds in 2025. Furthermore, Korean and Australian financial instruments with longer maturities benefited from falling U.S. yields. However, the sub-fund was underweight in these three segments which was the main reason why it underperformed its benchmark.

The sub-fund's duration policy, which was broadly in line with that of its benchmark, occasionally fell short during intense U.S. government bond rallies; however, it only had a very minor effect on the investment result overall in 2025. The majority of the underperformance was compensated for by the sub-fund's positioning in the belly of the yield curve (3–10 years) that benefited from the movements of a steepening yield curve in the course of the year.

The following risk management disclosures (other information) are unaudited and are not covered by the audit opinion on the annual report.

Composition of the reference portfolio (according to CSSF circular 11/512)
JP Morgan JACI Asia Pacific Index

Market risk exposure (value-at-risk) (according to CSSF circular 11/512)

Lowest market risk exposure	%	76.217
Highest market risk exposure	%	106.251
Average market risk exposure	%	90.987

The values-at-risk were calculated for the period from January 1, 2025, through December 31, 2025, using historical simulation with a 99% confidence level, a 10-day holding period and an effective historical observation period of one year. The risk in a reference portfolio that does not contain derivatives is used as the measurement benchmark. Market risk is the risk to the fund's assets arising from an unfavorable change in market prices. The Company determines the potential market risk by means of the **relative value-at-risk approach** as defined in CSSF circular 11/512.

In the reporting period, the average leverage effect from the use of derivatives was 0.0, whereby the total of the nominal amounts of the derivatives in relation to the fund's assets was used for the calculation (sum-of-notional approach).

The gross exposure generated via derivatives pursuant to point 40 a) of the "Guidelines on ETFs and other UCITS issues" of the European Securities and Markets Authority (ESMA) totaled USD 12 708 930.17 as of the reporting date. Does not include any forward currency transactions entered into for currency hedging purposes at the level of the share classes.

Market abbreviations

Contracting parties for forward currency transactions
Barclays Bank Ireland PLC, Crédit Agricole CIB, HSBC Continental Europe, Morgan Stanley Europe SE, Nomura Financial Products Europe GmbH, State Street Bank International GmbH and UBS AG.

Notes on valuation

Under the responsibility of the Board of Directors of the SICAV, the Management Company determines the net asset values per share and performs the valuation of the assets of the fund. The basic provision of price data and price validation are performed in accordance with the method introduced by the Board of Directors of the SICAV on the basis of the legal and regulatory requirements or the principles for valuation methods defined in the SICAV's prospectus.

If no trading prices are available, prices are determined with the aid of valuation models (derived market values) which are agreed between State Street Bank International GmbH, Luxembourg Branch, as external price service provider and the Management Company and which are based as far as possible on market parameters. This procedure is subject to an ongoing monitoring process. The plausibility of price information from third parties is checked through other pricing sources, model calculations or other suitable procedure.

Assets reported in this report are not valued at derived market values.

The management fee / all-in fee rates in effect as of the reporting date for the investment fund units held in the securities portfolio are shown in parentheses. A plus sign means that a performance-based fee may also be charged. As the investment fund held units of other investment funds (target funds) in the reporting period, further costs, charges and fees may have been incurred at the level of these individual target funds.

Footnotes

* Floating interest rate.
** The prepaid placement fee is amortized over a period of three years (as specified in article 13 (f) of the general section of the fund's management regulations).
*** Does not include positions with a negative balance, if such exist.

DWS Invest Asian Bonds

Statement of income and expenses (incl. income adjustment)

Class USD FC50 0.40% p.a.,
Class USD IC 0.45% p.a.,
Class USD LDM 1.19% p.a.,
Class USD TFDM 0.69% p.a.,

The TER expresses total expenses and fees (excluding transaction costs) as a percentage of a fund's average net assets in relation to the respective share class for a given fiscal year.

[5] Annualization has not been performed for share classes launched during the year.

Transaction costs

The transaction costs paid in the reporting period amounted to EUR 11 758.67.

The transaction costs include all costs that were reported or settled separately for the account of the fund in the reporting period and are directly connected to the purchase or sale of assets. Any financial transaction taxes which may have been paid are included in the calculation.

Statement of changes in net assets 2025

I.	**Value of the fund's net assets at the beginning of the fiscal year**	**USD**	**1 154 522 955.49**
1.	Distribution for the previous year	USD	-17 946 531.83
2.	Net outflows[3]	USD	-357 477 305.31
3.	Income adjustment	USD	8 329 795.45
4.	Net investment income	USD	43 656 456.34
5.	Realized gains/losses	USD	8 380 141.65
6.	Net change in unrealized appreciation/depreciation	USD	19 891 991.83
II.	**Value of the fund's net assets at the end of the fiscal year**	**USD**	**859 357 503.62**

[3] Reduced by a dilution fee in the amount of USD 2 644.13 for the benefit of the fund's assets.

Summary of gains/losses 2025

Realized losses (incl. income adjustment)	**USD**	**8 380 141.65**
from:		
Securities transactions	USD	3 461 391.41
Derivatives and other financial futures transactions[4]	USD	4 918 750.24

[4] This item may include options transactions or swap transactions and/or transactions from warrants or credit derivatives.

Transactions processed for the account of the fund's assets via closely related companies (based on major holdings of the Deutsche Bank Group)

The share of transactions conducted for the account of the fund's assets via brokers that are closely related companies and persons (share of five percent and above), amounted to 6.81% of all transactions. The total volume was USD 152 018 701.29.

Placement fee / dilution adjustment

In the reporting period, the fund paid a placement fee of 2.9% of the fund's net assets to the distributor. This fee was calculated on the subscription date. This placement fee serves in particular as compensation for distribution. The gross amount of the placement fee was paid in a single payment on the subscription date and simultaneously recognized in the fund's net assets as prepaid expenses. These are amortized on a daily basis over a period of three years from the date of subscription. The remaining position for prepaid expenses per share on each valuation date is calculated on a daily basis by multiplying the net assets of the fund by a factor. The relevant factor is determined through straight-line reduction of the placement fee by a certain percentage on a daily basis over three years from the subscription date. The prepaid expenses position fluctuates during the three years from the subscription date of the fund, since it depends on both the fund's net assets and the predetermined factor.

In addition, a dilution adjustment of up to 3% based on the gross redemption amount was charged for the benefit of the fund's net assets in the reporting period (to be paid by the shareholder).

Further details on the placement fee and the dilution adjustment can be found in the corresponding section of the fund's sales prospectus.

In the case of a final distribution, any remaining net income for the fiscal year is reinvested.

DWS Invest Asian Bonds

Swing pricing

Swing pricing is a mechanism that is intended to protect shareholders from the negative effects of trading costs arising from subscription and redemption activities. Extensive subscriptions and redemptions within a (sub-)fund may lead to a dilution of the assets of this (sub-)fund, as the net asset value sometimes does not reflect all trading and other costs that are incurred when the portfolio manager must buy or sell securities in order to manage large (net) inflows or outflows in the (sub-)fund. In addition to these costs, substantial order volumes may lead to market prices that are considerably below or above the market prices that apply under normal circumstances.

To enhance the investor protection of existing shareholders, a swing pricing mechanism can be applied to compensate for trading costs and other expenses if the aforementioned cumulative (net) inflows or outflows should have a material impact on the (sub-)fund on a valuation date and exceed a predetermined threshold (partial swing pricing). This mechanism can be applied across all (sub-)funds. If swing pricing is introduced for a particular (sub-)fund, this will be disclosed in the special section of the sales prospectus.

The Management Company of the fund will predefine thresholds for the application of the swing pricing mechanism, based, among other things, on current market conditions, available market liquidity and estimated dilution costs. In accordance with these thresholds, the adjustment itself will be initiated automatically. If the (net) inflows or outflows exceed the swing threshold, the net asset value is revised upward if the (sub-)fund sees large net inflows and is revised downward in the event of large net outflows. This adjustment is applied uniformly to all subscriptions and redemptions for the trading day in question. If a performance-based fee applies for the (sub-)fund, the calculation is based on the original net asset value.

The Management Company has established a swing pricing committee that determines the swing factors for each individual (sub-)fund. These swing factors indicate the extent of the net asset value adjustment. The swing pricing committee takes into account the following factors in particular:

- bid-ask spread (fixed-price element),
- impacts on the market (impacts of the transactions on the price),
- additional costs that are incurred as a result of trading activities for the investments.

The appropriateness of the applied swing factors, the operational decisions made in connection with the swing pricing (including the swing threshold), the extent of the adjustment, and the affected (sub-)funds are reviewed at regular intervals.

The amount of the swing pricing adjustment can therefore vary from one (sub-)fund to another and will not generally exceed 2% of the original net asset value per share. The net asset value adjustment is available upon request from the Management Company. In a market environment with extreme illiquidity, the Management Company can, however, increase the swing price adjustment to more than 2% of the original net asset value. Such an increase will be announced on the Management Company's website: www.dws.com.

As the mechanism should only be applied if significant (net) inflows or outflows are expected and it does not apply for normal trading volumes, it is assumed that the net asset value will only be adjusted occasionally.

This (sub-)fund can apply swing pricing and has done so in the reporting period, as its (net) inflows and outflows exceeded the relevant threshold previously defined. No swing pricing adjustment was applied that would have had an impact on the (sub-)fund's net asset value per share on the last day of the reporting period.

Annual report
DWS Invest Brazilian Equities

Investment objective and performance in the reporting period

DWS Invest Brazilian Equities focuses its investments on companies that have their registered offices in Brazil or conduct their business activities predominantly in Brazil. In the reporting period from January 1 through December 31, 2025, the sub-fund achieved an appreciation of 38.6% per share (LC share class; BVI method). Its benchmark, MSCI Brazil 10/40 Net TR, rose 35.3% in the same period (both percentages in euro terms).

As of: December 31, 2025

Investment policy in the reporting period

The Brazilian equity market experienced a rally in 2025, triggered by the hope of imminent interest rate cuts, attractive valuations, inflows of foreign capital, decent corporate profits and expectations linked to the elections. Throughout the entire year, high interest rates and optimism about a possible regime change in the 2026 presidential elections caused foreign capital to flow into the market. Market sentiment fluctuated back and forth due to the influence of the data from political polls as the popularity of President Lula's government saw an upturn in the second half of the year. The Brazilian real (BRL) increased in value. It benefited from the weakness of the U.S. dollar, attractive valuations, light positioning and a high carry. Brazil easily defended its position as the country with the highest real interest rates amongst the major economies.
In December, the Brazilian market crashed after incarcerated ex-president Jair Bolsonaro "selected" his son Flávio as the right-wing candidate for the presidential election in October 2026. Investors had banked on the nomination of Tarcísio de Freitas, governor of the federal state of São Paulo. Flávio's candidacy threatened to split electoral votes against Lula and increase the chances of the incumbent president being re-elected. Inflation fell to below 4.5% by the end of the year and was thus within the target range (3% +/- 1.5 percentage points). Despite this, the Brazilian Central Bank (BCB) was unmoved and kept the key interest rate at 15.00% after rigidly tightening the monetary policy to stem baseless inflation expectations.

The most important positive factors for the investment result were the stock selection in the financials and industrials sectors as well as the sub-fund's overweight in utilities and consumer discretionaries and the underweight in consumer staples and basic materials. The stock selection in the utilities and health care sector and the underweight in financials had particularly negative effects.

The most significant overweights were in consumer discretionaries, real estate and industrials as of the reporting date. The most important underweights were related to financials and customer staples. The fund management's focus for the portfolio continued to be on companies characterized by three principal features: high quality, low valuations and a high carry (i.e., dividend yield plus buy backs). At the same time, it positioned itself with a view to greater political volatility in 2026.

The following risk management disclosures (other information) are unaudited and are not covered by the audit opinion on the annual report.

Composition of the reference portfolio (according to CSSF circular 11/512)
100% MSCI Brazil 10-40

Market risk exposure (value-at-risk) (according to CSSF circular 11/512)

Lowest market risk exposure	%	91.270
Highest market risk exposure	%	116.823
Average market risk exposure	%	105.356

The values-at-risk were calculated for the period from January 1, 2025, through December 31, 2025, using historical simulation with a 99% confidence level, a 10-day holding period and an effective historical observation period of one year. The risk in a reference portfolio that does not contain derivatives is used as the measurement benchmark. Market risk is the risk to the fund's assets arising from an unfavorable change in market prices. The Company determines the potential market risk by means of the **relative value-at-risk approach** as defined in CSSF circular 11/512.

In the reporting period, the average leverage effect from the use of derivatives was 0.0, whereby the total of the nominal amounts of the derivatives in relation to the fund's assets was used for the calculation (sum-of-notional approach).

The gross exposure generated via derivatives pursuant to point 40 a) of the "Guidelines on ETFs and other UCITS issues" of the European Securities and Markets Authority (ESMA) totaled EUR 3 797.61 as of the reporting date.

Notes on valuation

Under the responsibility of the Board of Directors of the SICAV, the Management Company determines the net asset values per share and performs the valuation of the assets of the fund. The basic provision of price data and price validation are performed in accordance with the method introduced by the Board of Directors of the SICAV on the basis of the legal and regulatory requirements or the principles for valuation methods defined in the SICAV's prospectus.

If no trading prices are available, prices are determined with the aid of valuation models (derived market values) which are agreed between State Street Bank International GmbH, Luxembourg Branch, as external price service provider and the Management Company and which are based as far as possible on market parameters. This procedure is subject to an ongoing monitoring process. The plausibility of price information from third parties is checked through other pricing sources, model calculations or other suitable procedure.

Assets reported in this report are not valued at derived market values.

BVI total expense ratio (TER)

The total expense ratio for the share classes was:

Class FC 1.03% p.a.,
Class IC 0.59% p.a.,
Class NC 2.59% p.a.,
Class USD IC 0.59% p.a.,
Class USD TFC.92% p.a.
Class FC50 0.40% p.a.,
Class LC 1.94% p.a.,
Class TFC 1.03% p.a.,
Class USD LC 1.94% p.a.,

The TER expresses total expenses and fees (excluding transaction costs) as a percentage of a fund's average net assets in relation to the respective share class within a fiscal year.

Transaction costs

The transaction costs paid in the reporting period amounted to EUR 116 040.29.

The transaction costs include all costs that were reported or settled separately for the account of the fund in the reporting period and are directly connected to the purchase or sale of assets. Any financial transaction taxes paid are included in the calculations.

Statement of changes in net assets 2025

Transactions processed for the account of the fund's assets via closely related companies (based on major holdings of the Deutsche Bank Group)

The share of transactions conducted for the account of the fund's assets via brokers that are closely related companies and persons (share of 5% and above), amounted to 0.00% of all transactions. The total volume was EUR 0.00.

Swing pricing

Swing pricing is a mechanism that is intended to protect shareholders from the negative effects of trading costs arising from subscription and redemption activities.

Extensive subscriptions and redemptions within a (sub-)fund may lead to a dilution of the assets of this (sub-)fund, as the net asset value sometimes does not reflect all trading and other costs that are incurred when the portfolio manager must buy or sell securities in order to manage large (net) inflows or outflows in the (sub-)fund. In addition to these costs, substantial order volumes may lead to market prices that are considerably below or above the market prices that apply under normal circumstances.

To enhance the investor protection of existing shareholders, a swing pricing mechanism can be applied to compensate for trading costs and other expenses if the aforementioned cumulative (net) inflows or outflows should have a material impact on the (sub-)fund on a valuation date and exceed a predetermined threshold (partial swing pricing). This mechanism can be applied across all (sub-)funds. If swing pricing is introduced for a particular (sub-)fund, this will be disclosed in the special section of the sales prospectus.

The Management Company of the fund will predefine thresholds for the application of the swing pricing mechanism, based, among other things, on current market conditions, available market liquidity and estimated dilution costs. In accordance with these thresholds, the adjustment itself will be initiated automatically.

If the (net) inflows or outflows exceed the swing threshold, the net asset value is revised upward if the (sub-)fund sees large net inflows and is revised downward in the event of large net outflows. This adjustment is applied uniformly to all subscriptions and redemptions for the trading day in question. If a performance-based fee applies for the (sub-)fund, the calculation is based on the original net asset value.

The Management Company has established a swing pricing committee that determines the swing factors for each individual (sub-)fund. These swing factors indicate the extent of the net asset value adjustment. The swing pricing committee takes into account the following factors in particular:

– bid-ask spread (fixed-price element),
– impacts on the market (impacts of the transactions on the price),
– additional costs that are incurred as a result of trading activities for the investments.

The appropriateness of the applied swing factors, the operational decisions made in connection with the swing pricing (including the swing threshold), the extent of the adjustment, and the affected (sub-)funds are reviewed at regular intervals.

The amount of the swing pricing adjustment can therefore vary from one (sub-)fund to another and will not generally exceed 2% of the original net asset value per share.

The net asset value adjustment is available upon request from the Management Company. In a market environment with extreme illiquidity, the Management Company can, however, increase the swing price adjustment to more than 2% of the original net asset value. Such an increase will be announced on the Management Company's website: www.dws.com.

As the mechanism should only be applied if significant (net) inflows or outflows are expected and it does not apply for normal trading volumes, it is assumed that the net asset value will only be adjusted occasionally.

This (sub-)fund can apply swing pricing but has not done so in the reporting period, as its (net) inflows and outflows did not exceed the relevant threshold previously defined.

Annual report
DWS Invest China Bonds

Investment objective and performance in the reporting period

The sub-fund seeks to generate sustained capital appreciation. To achieve this, at least 60% of the sub-fund's net assets must be invested in securities of issuers that have their registered office or principal business activity in the Greater China region. The sub-fund may invest its assets in interest-bearing debt securities issued by the Chinese government, Chinese state agencies, Chinese local authorities or companies having their registered office or principal business activity in China. The sub-fund's net assets are generally hedged to the U.S. dollar, and are invested in interest-bearing debt securities denominated in or hedged to the U.S. dollar as well as in U.S. dollar-denominated cash deposits. Renminbi-denominated assets may be invested via the Chinese offshore as well as the Chinese onshore market.

In the 2025 fiscal year, the sub-fund DWS Invest China Bonds achieved an appreciation of 6.2% per share (USD LC share class, in U.S. dollars; BVI method).

As of: December 31, 2025

Investment policy in the reporting period

Since 2018, the sub-fund DWS Invest China Bonds has focused its investments on corporate bonds in the Greater China region. In 2025, CNH* bonds were added to the portfolio due to the rapid expansion of the CNH market and the devaluation of the USD. As of the reporting date, the majority of the bonds held in the portfolio had investment-grade (IG) rating.

The sub-fund increased the duration in the face of the downturn in government bond yields. In the investment-grade (IG) sector, the sub-fund had an appropriate level of investment in Chinese financials, giving it a stable carry and boosting prices due to strong demand and low supply. The sub-fund also invested in the real estate sector in Hong Kong and China where the portfolio management saw a significant improvement of the risk assessments and of the prices in this sector. In other IG areas, the investments in Japanese companies and financial bonds together with Australian corporate bonds continued to generate positive yields. The sub-fund benefited further from inflows of income from Macau high yield (HY) gaming bonds. A large number of these issuers were able to access low

cost bank loans and significantly improve their operative performance, which was reflected in the growth of the gross gambling revenue in Macau.

The capital market environment in 2025 was challenging. This was due in particular to geopolitical crises like the Russia-Ukraine war that has been ongoing since February 24, 2022, the escalated conflict in the Middle East, and the power struggle between the United States and China. Furthermore, the erratic swings in U.S. trade and tariff policy generated additional uncertainty in the capital markets. On the other hand, the easing of monetary policy, which had begun previously, continued during the reporting period. The European Central Bank (ECB) thus lowered the key interest rate in four steps from 3.00% p.a. to 2.00% p.a. (deposit facility) while the U.S. Federal Reserve gradually reduced its key interest rates by 0.75 percentage points to a target range of 3.50% p.a. – 3.75% p.a.

In the international bond markets, the yield curve in 2025 became increasingly steeper at the long end – although this was still moderate – following the previous normalization. In light of the more relaxed interest rate policy of the central banks, bond yields fell noticeably at the short end in some cases. Long-dated government bonds, on the other hand, came under pressure due, for example, to the rise in public deficits and, in some instances, had to accept price declines on a full-year basis, accompanied by rising bond yields. Corporate bonds, on the other hand, profited from their relatively high coupons as well as narrowing risk premiums.

Sentiment on the Chinese USD loan market improved in 2025 due to the strong performance of the risk assets in Greater China. The tactical investment in Chinese and Hong Kong real estate bonds made a positive contribution to the development of the sub-fund. Investment in the Australian real estate and mining sector facilitated a suitable risk/earnings balance for the sub-fund. The investments in the Macau gambling sector and in the Indian and Indonesian high yield sector were reduced as they appeared to be too highly valuated. In addition, the portfolio management invested in dim sum bonds**, whereby issues and demand increased and were boosted by strong CNH appreciation in 2025. The sub-fund began the fiscal year with a short-maturity focus which, however, dampened its performance. The duration of the portfolio was adapted/extended during the course of 2025.

The following risk management disclosures (other information) are unaudited and are not covered by the audit opinion on the annual report.

Composition of the reference portfolio (according to CSSF circular 11/512)
14.14% of portfolio value

Market risk exposure (value-at-risk) (according to CSSF circular 11/512)

Lowest market risk exposure	%	0.004
Highest market risk exposure	%	0.020
Average market risk exposure	%	0.013

The values-at-risk were calculated for the period from January 1, 2025, through December 31, 2025, using historical simulation with a 99% confidence level, a 10-day holding period and an effective historical observation period of one year. The risk in a reference portfolio that does not contain derivatives is used as the measurement benchmark. Market risk is the risk to the fund's assets arising from an unfavorable change in market prices. The Company determines the potential market risk by means of the **absolute value-at-risk approach** as defined in CSSF circular 11/512.

In the reporting period, the average leverage effect from the use of derivatives was 0.1, whereby the total of the nominal amounts of the derivatives in relation to the fund's assets was used for the calculation (sum-of-notional approach).

The gross exposure generated via derivatives pursuant to point 40 a) of the "Guidelines on ETFs and other UCITS issues" of the European Securities and Markets Authority (ESMA) totaled USD 10 448 647.35 as of the reporting date. Does not include any forward currency transactions entered into for currency hedging purposes at the level of the share classes.

Notes on valuation

Under the responsibility of the Board of Directors of the SICAV, the Management Company determines the net asset values per share and performs the valuation of the assets of the fund. The basic provision of price data and price validation are performed in accordance with the method introduced by the Board of Directors of the SICAV on the basis of the legal and regulatory requirements or the principles for valuation methods defined in the SICAV's prospectus.

If no trading prices are available, prices are determined with the aid of valuation models (derived market values) which are agreed between State Street Bank International GmbH, Luxembourg Branch, as external price service provider and the Management Company and which are based as far as possible on market parameters. This procedure is subject to an ongoing monitoring process. The plausibility of price information from third parties is checked through other pricing sources, model calculations or other suitable procedure.

Assets reported in this report are not valued at derived market values.

The management fee / all-in fee rates in effect as of the reporting date for the investment fund units held in the securities portfolio are shown in parentheses. A plus sign means that a performance-based fee may also be charged. As the investment fund held units of other investment funds (target funds) in the reporting period, further costs, charges and fees may have been incurred at the level of these individual target funds.

Footnotes

* Floating interest rate.
** Does not include positions with a negative balance, if such exist.

BVI total expense ratio (TER)

The total expense ratio for the share classes was:

Class CHF FCH 0.77% p.a.,	Class CHF LCH 1.34% p.a.,
Class RMB FC 0.74% p.a.,	Class RMB LC 1.31% p.a.,
Class RMB FCH 0.77% p.a.,	Class RMB LCH 1.34% p.a.,
Class FCH 0.76% p.a.,	Class FDH 0.77% p.a.,
Class LCH 1.34% p.a.,	Class LDH 1.34% p.a.,
Class NC 1.76% p.a.,	Class NCH 1.79% p.a.,
Class NDH 1.79% p.a.,	Class NDQH 1.78% p.a.,
Class PFCH 0.75% p.a.,	Class PFDQH 0.64% p.a.,
Class TFCH 0.77% p.a.,	Class SEK FCH 0.77% p.a.,
Class SEK LCH 1.34% p.a.,	Class USD FC 0.74% p.a.
Class USD FCH (P) 0.76% p.a.,	Class USD LC 1.31% p.a.,
Class USD LDMH (P) 1.34% p.a.,	Class USD TFC 0.74% p.a.

The TER expresses total expenses and fees (excluding transaction costs) as a percentage of a fund's average net assets in relation to the respective share class within a fiscal year.

Transaction costs

The transaction costs paid in the reporting period amounted to USD 8 652.45.

The transaction costs include all costs that were reported or settled separately for the account of the fund in the reporting period and are directly connected to the purchase or sale of assets. Any financial transaction taxes which may have been paid are included in the calculation.

Statement of changes in net assets 2025

Transactions processed for the account of the fund's assets via closely related companies (based on major holdings of the Deutsche Bank Group)

The share of transactions conducted for the account of the fund's assets via brokers that are closely related companies and persons (share of five percent and above), amounted to 3.88% of all transactions. The total volume was USD 15 925 715.00.

Placement fee / dilution adjustment

In the reporting period, the fund paid a placement fee of 2.9% of the fund's net assets to the distributor. This fee was calculated on the subscription date. The placement fee serves in particular as compensation for distribution. The gross amount of the placement fee was paid in a single payment on the subscription date and simultaneously recognized in the fund's net assets as prepaid expenses. These are amortized on a daily basis over a period of three years from the date of subscription. The remaining position for prepaid expenses per share on each valuation date is calculated on a daily basis by multiplying the net assets of the fund by a factor. The relevant factor is determined through straight-line reduction of the placement fee by a certain percentage on a daily basis over three years from the subscription date. The prepaid expenses position fluctuates during the three years from the subscription date of the fund, since it depends on both the fund's net assets and the predetermined factor.

In addition, a dilution adjustment of up to 3% based on the gross redemption amount was charged for the benefit of the fund's net assets in the reporting period (to be paid by the shareholder).

Further details on the placement fee and the dilution adjustment can be found in the corresponding section of the fund's sales prospectus.

DWS Invest China Bonds

Swing pricing

Swing pricing is a mechanism that is intended to protect shareholders from the negative effects of trading costs arising from subscription and redemption activities.

Extensive subscriptions and redemptions within a (sub-)fund may lead to a dilution of the assets of this (sub-)fund, as the net asset value sometimes does not reflect all trading and other costs that are incurred when the portfolio manager must buy or sell securities in order to manage large (net) inflows or outflows in the (sub-)fund. In addition to these costs, substantial order volumes may lead to market prices that are considerably below or above the market prices that apply under normal circumstances.

To enhance the investor protection of existing shareholders, a swing pricing mechanism can be applied to compensate for trading costs and other expenses if the aforementioned cumulative (net) inflows or outflows should have a material impact on the (sub-)fund on a valuation date and exceed a predetermined threshold (partial swing pricing). This mechanism can be applied across all (sub-)funds. If swing pricing is introduced for a particular (sub-)fund, this will be disclosed in the special section of the sales prospectus.

The Management Company of the fund will predefine thresholds for the application of the swing pricing mechanism, based, among other things, on current market conditions, available market liquidity and estimated dilution costs. In accordance with these thresholds, the adjustment itself will be initiated automatically.

If the (net) inflows or outflows exceed the swing threshold, the net asset value is revised upward if the (sub-)fund sees large net inflows and is revised downward in the event of large net outflows. This adjustment is applied uniformly to all subscriptions and redemptions for the trading day in question. If a performance-based fee applies for the (sub-)fund, the calculation is based on the original net asset value.

The Management Company has established a swing pricing committee that determines the swing factors for each individual (sub-)fund. These swing factors indicate the extent of the net asset value adjustment. The swing pricing committee takes into account the following factors in particular:

– bid-ask spread (fixed-price element),
– impacts on the market (impacts of the transactions on the price),
– additional costs that are incurred as a result of trading activities for the investments.

The appropriateness of the applied swing factors, the operational decisions made in connection with the swing pricing (including the swing threshold), the extent of the adjustment, and the affected (sub-)funds are reviewed at regular intervals.

The amount of the swing pricing adjustment can therefore vary from one (sub-)fund to another and will not generally exceed 2% of the original net asset value per share.

The net asset value adjustment is available upon request from the Management Company. In a market environment with extreme illiquidity, the Management Company can, however, increase the swing price adjustment to more than 2% of the original net asset value. Such an increase will be announced on the Management Company's website: www.dws.com.

As the mechanism should only be applied if significant (net) inflows or outflows are expected and it does not apply for normal trading volumes, it is assumed that the net asset value will only be adjusted occasionally.

This (sub-)fund can apply swing pricing and has done so in the reporting period, as its (net) inflows and outflows exceeded the relevant threshold previously defined. No swing pricing adjustment was applied that would have had an impact on the (sub-)fund's net asset value per share on the last day of the reporting period.

Annual report
DWS Invest Chinese Equities

Investment objective and performance in the reporting period

The objective of the investment policy of the sub-fund DWS Invest Chinese Equities is to participate in the opportunities of the emerging market China (including Hong Kong) and to achieve sustained capital appreciation, outperforming the benchmark for the sub-fund (MSCI China 10/40 (EUR)). Most of the securities of the sub-fund are expected to be an integral part of the benchmark. In order to take advantage of special investment opportunities at its own discretion, the sub-fund management will not invest in the securities and sectors contained in the benchmark.

DWS Invest Chinese Equities achieved an appreciation of 13.9% per share (LC share class; BVI method) in the 2025 fiscal year, while the MSCI China 10/40 index was up 15.2% (both percentages in euro terms).

As of: December 31, 2025

Investment policy in the reporting period

The global equity markets rallied strongly in 2025. The MSCI ACWI index made significant gains, led by the international markets and the emerging markets. The regions outside of the United States benefited from the weaker U.S. dollar and attractive valuations. The main influencing factors were robust corporate earnings, falling inflation and supportive monetary policy. The interest rate cuts initiated or announced by the major central banks – especially the Fed – increased willingness to take risks. The volatility triggered by geopolitical tensions and tariff shocks at the beginning of the year subsided as trade agreement negotiations progressed and supportive fiscal policies improved sentiment. At the same time, the markets continued to be boosted by structural optimism with regard to AI and innovation, which contributed to solid earnings in the year overall.

The MSCI China recovered significantly in 2025 and had one of its best years in recent history. The primary performance drivers were positive revaluations and the steady profit growth of the companies. Two main factors gave tailwind to the better valuations: the extremely low valuations at the beginning of the year and the robust political support, such as massive economic stimulus programs, monetary easing and measures to stabilize the real estate sector. An important turning point was the AI breakthrough with "DeepSeek" that reignited optimism in China's technology sector. It eased the barriers to AI development and sped up investment in data centers, energy infrastructure and basic materials – sectors that benefit from this trend at an early stage. Despite geopolitical tensions and concerns about tariffs, investor sentiment improved significantly, which was reflected in regained trust in China's innovation capabilities. This trust and structural growth factors defined the market into 2026.

The sub-fund underperformed relative to the benchmark in 2025. Its industry positioning with an overweight in consumer discretionaries and information technology, which adversely affected the investment performance, made a particular impact. In contrast, certain individual equities made a positive contribution to performance in the reporting period. This included Zhaojin Mining, China Molyedenum and China Hongqiao in the basic materials sector, CSPC Pharmaceutical and Hansoh Pharmaceutical in the health care sector, Yantai Jereh

Oilfield in the energy sector and Contemporary Amperex Technology in the industrials sector. The sub-fund's stock selection continued to focus on high-quality growth companies trading with a reasonable valuation.

The sub-fund's key overweights included industrials and the information technology sector. The investment rationale of being overweight in the industrial sector was based on the "value-up" initiative of Chinese state-owned enterprises, which resulted in better ROE and higher returns for shareholders. Such efforts were also reflected in valuation re-rating and hence better share price returns. In the information technology sector, the portfolio management saw opportunities in technology localization trends and rising power grid investment in China.

DWS Invest Chinese Equities

The following risk management disclosures (other information) are unaudited and are not covered by the audit opinion on the annual report.

Composition of the reference portfolio (according to CSSF circular 11/512)
S&P BMI Gold and Precious Metals Gross Index

Market risk exposure (value-at-risk) (according to CSSF circular 11/512)

Lowest market risk exposure	%	99.320
Highest market risk exposure	%	116.101
Average market risk exposure	%	107.775

The values-at-risk were calculated for the period from January 1, 2025, through December 31, 2025, using historical simulation with a 99% confidence level, a 10-day holding period and an effective historical observation period of one year. The risk in a reference portfolio that does not contain derivatives is used as the measurement benchmark. Market risk is the risk to the fund's assets arising from an unfavorable change in market prices. The Company determines the potential market risk by means of the **relative value-at-risk approach** as defined in CSSF circular 11/512.

In the reporting period, the average leverage effect from the use of derivatives was 0.0, whereby the total of the nominal amounts of the derivatives in relation to the fund's assets was used for the calculation (sum-of-notional approach).

The gross exposure generated via derivatives pursuant to point 40 a) of the "Guidelines on ETFs and other UCITS issues" of the European Securities and Markets Authority (ESMA) totaled EUR 0.00 as of the reporting date.

Notes on valuation

Under the responsibility of the Board of Directors of the SICAV, the Management Company determines the net asset values per share and performs the valuation of the assets of the fund. The basic provision of price data and price validation are performed in accordance with the method introduced by the Board of Directors of the SICAV on the basis of the legal and regulatory requirements or the principles for valuation methods defined in the SICAV's prospectus.

If no trading prices are available, prices are determined with the aid of valuation models (derived market values) which are agreed between State Street Bank International GmbH, Luxembourg Branch, as external price service provider and the Management Company and which are based as far as possible on market parameters. This procedure is subject to an ongoing monitoring process. The plausibility of price information from third parties is checked through other pricing sources, model calculations or other suitable procedure.

Assets reported in this report are not valued at derived market values.

DWS Invest Chinese Equities

Statement of income and expenses (incl. income adjustment)

for the period from January 1, 2025, through December 31, 2025

I. Income			
1. Dividends (before withholding tax)		EUR	1 950 315.98
2. Interest from investments of liquid assets (before withholding tax)		EUR	48 365.60
3. Deduction for foreign withholding tax		EUR	-123 425.01
Total income		**EUR**	**1 875 256.57**
II. Expenses			
1. Management fee		EUR	-1 212 638.90
thereof:			
Basic management fee	EUR -1 194 844.36		
Income from expense cap	EUR 1 350.82		
Administration fee	EUR -19 145.36		
2. Depositary fee		EUR	-6 513.62
3. Auditing, legal and publication costs		EUR	-24 393.19
4. Taxe d'abonnement		EUR	-39 600.05
5. Other expenses		EUR	-84 525.18
Total expenses		**EUR**	**-1 367 670.94**
III. Net investment income		**EUR**	**507 585.63**
IV. Sale transactions			
Realized gains/losses		EUR	5 540 431.90
Results from sales transactions		**EUR**	**5 540 431.90**
V. Net gain/loss for the fiscal year		**EUR**	**6 048 017.53**

BVI total expense ratio (TER)

The total expense ratio for the share classes was:

Class FC 0.91% p.a.,
Class LC 1.70% p.a.,
Class NC 2.40% p.a.
Class TFC 0.92% p.a.,
Class GBP D RD 1.03% p.a.,
Class USD FC 1.03% p.a.,
Class USD LC 1.91% p.a.,
Class USD TFC 0.96% p.a.

The TER expresses total expenses and fees (excluding transaction costs) as a percentage of a fund's average net assets in relation to the respective share class for a given fiscal year.

Transaction costs

The transaction costs paid in the reporting period amounted to EUR 188 477.51.

The transaction costs include all costs that were reported or settled separately for the account of the fund in the reporting period and are directly connected to the purchase or sale of assets. Any financial transaction taxes which may have been paid are included in the calculation.

Statement of changes in net assets 2025

I. Value of the fund's net assets at the beginning of the fiscal year		**EUR**	**74 753 756.37**

Transactions processed for the account of the fund's assets via closely related companies (based on major holdings of the Deutsche Bank Group)

The share of transactions conducted for the account of the fund's assets via brokers that are closely related companies and persons (share of five percent and above), amounted to 0.00% of all transactions. The total volume was EUR 0.00.

Swing pricing

Swing pricing is a mechanism that is intended to protect shareholders from the negative effects of trading costs arising from subscription and redemption activities. Extensive subscriptions and redemptions within a (sub-)fund may lead to a dilution of the assets of this (sub-)fund, as the net asset value sometimes does not reflect all trading and other costs that are incurred when the portfolio manager must buy or sell securities in order to manage large (net) inflows or outflows in the (sub-)fund. In addition to these costs, substantial order volumes may lead to market prices that are considerably below or above the market prices that apply under normal circumstances.

To enhance the investor protection of existing shareholders, a swing pricing mechanism can be applied to compensate for trading costs and other expenses if the aforementioned cumulative (net) inflows or outflows should have a material impact on the (sub-)fund on a valuation date and exceed a predetermined threshold (partial swing pricing). This mechanism can be applied across all (sub-)funds. If swing pricing is introduced for a particular (sub-)fund, this will be disclosed in the special section of the sales prospectus.

The Management Company of the fund will predefine thresholds for the application of the swing pricing mechanism, based, among other things, on current market conditions, available market liquidity and estimated dilution costs. In accordance with these thresholds, the adjustment itself will be initiated automatically. If the (net) inflows or outflows exceed the swing threshold, the net asset value is revised upward if the (sub-)fund sees large net inflows and is revised downward in the event of large net outflows. This adjustment is applied uniformly to all subscriptions and redemptions for the trading day in question. If a performance-based fee applies for the (sub-)fund, the calculation is based on the original net asset value.

The Management Company has established a swing pricing committee that determines the swing factors for each individual (sub-)fund. These swing factors indicate the extent of the net asset value adjustment. The swing pricing committee takes into account the following factors in particular:

– bid-ask spread (fixed-price element),
– impacts on the market (impacts of the transactions on the price),
– additional costs that are incurred as a result of trading activities for the investments.

The appropriateness of the applied swing factors, the operational decisions made in connection with swing pricing (including the swing threshold), the extent of the adjustment, and the affected (sub-)funds are reviewed at regular intervals.

The amount of the swing pricing adjustment can therefore vary from one (sub-)fund to another and will not generally exceed 2% of the original net asset value per share. The net asset value adjustment is available upon request from the Management Company. In a market environment with extreme illiquidity, the Management Company can, however, increase the swing price adjustment to more than 2% of the original net asset value. Such an increase will be announced on the Management Company's website: www.dws.com.

As the mechanism should only be applied if significant (net) inflows or outflows are expected and it does not apply for normal trading volumes, it is assumed that the net asset value will only be adjusted occasionally.

This (sub-)fund can apply swing pricing but has not done so in the reporting period, as its (net) inflows and outflows did not exceed the relevant threshold previously defined.

Annual report
DWS Invest Conservative Opportunities

Investment objective and performance in the reporting period

The sub-fund DWS Invest Conservative Opportunities is a multi-asset fund with integrated risk management. The sub-fund seeks to achieve above-average returns. To attain this, the sub-fund primarily invests in investment funds such as equity, balanced, bond and money market funds. In addition, the sub-fund may invest in equities, interest-bearing securities, certificates such as equity, bond and index certificates, investment funds, derivatives, convertible and warrant-linked bonds whose warrants are on securities, warrants for securities, participation and dividend-right certificates, as well as in money market instruments and liquid assets. Aspects considered when selecting investments include financial strength and also a focus on environmental, social and corporate governance (ESG) factors.*

In the twelve months through the end of December 2025, DWS Invest Conservative Opportunities recorded an appreciation of 4.9% per share (LC share class; BVI method; in euro).

DWS Invest Conservative Opportunities

Performance of share classes (in EUR)

Share class	ISIN	1 year	3 years	5 years
Class LC	LU2034326152	4.9%	11.1%	10.9%
Class FD	LU2034326079	5.4%	12.7%	13.6%
Class LD	LU2034326236	4.9%	11.1%	10.9%
Class LDM	LU2968763305	4.0%[1]	–	–
Class NC	LU2161839753	4.7%	10.5%	9.9%
Class ND	LU2034326319	4.7%	10.5%	9.8%

[1] Class LDM launched on January 29, 2025

"BVI method" performance, i.e., excluding the initial sales charge.
Past performance is not a guide to future results.

As of: December 31, 2025

Investment policy in the reporting period

On the bond side, the sub-fund primarily invested in ETFs in corporate bonds with good credit quality in euro, such as XTRACKERS II EUR CORPORATE BOND UC. In addition, high yield bonds in the corporate sector were added, primarily via investments in DWS Invest Euro High Yield Corporates, but also in government bonds denominated in euro via, for example, Xtrackers II Eurozone Government Bond UCITS ETF. The equity portfolio was represented primarily by the multi-asset funds DWS ESG Dynamic Opportunities and DWS Concept Kaldemorgen. The portfolio management also invested in the equities segment in the reporting period, partially via derivatives as well as through smaller positions in ETFs.

The capital market environment in 2025 was challenging. This was due in particular to geopolitical crises like the Russia-Ukraine war that has been ongoing since February 24, 2022, the escalated conflict in the Middle East, and the power struggle between the United States and China. Furthermore, the erratic swings in U.S. trade and tariff policy generated additional uncertainty in the capital markets. On the other hand, the easing of monetary policy, which had begun previously, continued during the reporting period. The European Central Bank (ECB) thus lowered the key interest rate in four steps from 3.00% p.a. to 2.00% p.a. (deposit facility) while the U.S. Federal Reserve gradually reduced its key interest rates by 0.75 percentage points to a target range of 3.50% p.a. – 3.75% p.a.

Despite market uncertainty induced mainly by geopolitical factors, the international equity markets, as measured by the MSCI World, recorded appreciable price gains overall in 2025 amid sometimes considerable volatility. These gains were underpinned by the emerging easing of interest rates, increased investor confidence in artificial intelligence, as well as robust corporate profits. Among the markets in Western industrial countries, the DAX 40 in Germany posted significant gains, buoyed by factors such as the multi-billion-euro package of fiscal relief measures. The emerging markets, as measured by the MSCI Emerging Markets, were even able to outperform the industrial countries on a full-year basis through the end of 2025. In this respect, China's equity market was one of the stand-out performers and continued to recover significantly. This trend was supported by Chinese economic growth, which was stimulated by expansionary macroeconomic policies. However, the international stock exchanges

were intermittently hit hard by the erratic swings in U.S. trade and tariff policy.

In the international bond markets, the yield curve in 2025 became increasingly steeper at the long end – although this was still moderate – following the previous normalization. In light of the more relaxed interest rate policy of the central banks, bond yields fell noticeably at the short end in some cases. Long-dated government bonds, on the other hand, came under pressure due, for example, to the rise in public deficits and, in some instances, had to accept price declines on a full-year basis, accompanied by rising bond yields. Corporate bonds, on the other hand, profited from their relatively high coupons as well as narrowing risk premiums.

The two core components from DWS Concept Kaldemorgen and DWS ESG Dynamic Opportunities made a particularly positive contribution to the overall result. Both multi-asset products benefited from their equity and gold positions in particular. Furthermore, direct positions in alternative assets, such as gold, and an investment in the UCITS fund THEAM Quant Cross Asset High Focus as well as in equities had a positive effect. Investments in corporate bonds in particular, in the high yield market (EUR) as well as in the investment-grade market (EUR), also had a positive effect on the sub-fund's performance. The government bond positions also made a slightly positive contribution. However, duration management via derivative positions and derivative positions in the Japanese yen had a noticeably adverse effect on the result.

The following risk management disclosures (other information) are unaudited and are not covered by the audit opinion on the annual report.

Composition of the reference portfolio (according to CSSF circular 11/512)
70% iBoxx Euro Overall Index, 30% MSCI All Country World Index, in EUR

Market risk exposure (value-at-risk) (according to CSSF circular 11/512)

Lowest market risk exposure	%	61.449
Highest market risk exposure	%	100.075
Average market risk exposure	%	80.490

The values-at-risk were calculated for the period from January 1, 2025, through December 31, 2025, using historical simulation with a 99% confidence level, a 10-day holding period and an effective historical observation period of one year. The risk in a reference portfolio that does not contain derivatives is used as the measurement benchmark. Market risk is the risk to the fund's assets arising from an unfavorable change in market prices. The Company determines the potential market risk by means of the **relative value-at-risk approach** as defined in CSSF circular 11/512.

In the reporting period, the average leverage effect from the use of derivatives was 0.4, whereby the total of the nominal amounts of the derivatives in relation to the fund's assets was used for the calculation (sum-of-notional approach).

The gross exposure generated via derivatives pursuant to point 40 a) of the "Guidelines on ETFs and other UCITS issues" of the European Securities and Markets Authority (ESMA) totaled EUR 161 280 125.28 as of the reporting date.

Notes on valuation

Under the responsibility of the Board of Directors of the SICAV, the Management Company determines the net asset values per share and performs the valuation of the assets of the fund. The basic provision of price data and price validation are performed in accordance with the method introduced by the Board of Directors of the SICAV on the basis of the legal and regulatory requirements or the principles for valuation methods defined in the SICAV's prospectus.

If no trading prices are available, prices are determined with the aid of valuation models (derived market values) which are agreed between State Street Bank International GmbH, Luxembourg Branch, as external price service provider and the Management Company and which are based as far as possible on market parameters. This procedure is subject to an ongoing monitoring process. The plausibility of price information from third parties is checked through other pricing sources, model calculations or other suitable procedure.

Assets reported in this report are not valued at derived market values.

The management fee / all-in fee rates in effect as of the reporting date for the investment fund units held in the securities portfolio are shown in parentheses. A plus sign means that a performance-based fee may also be charged. As the investment fund held units of other investment funds (target funds) in the reporting period, further costs, charges and fees may have been incurred at the level of these individual target funds.

Footnotes

* Floating interest rate.
** Does not include positions with a negative balance, if such exist.

V.	**Net gain/loss for the fiscal year**		**EUR**	**11 547 950.61**

BVI total expense ratio (TER)

The total expense ratio for the share classes was:

Class FD 0.40% p.a.,	Class LC 0.85% p.a.,
Class LD 0.85% p.a.,	Class LDM 0.79%[2],
Class NC 1.06% p.a.,	Class ND 1.05% p.a.

The TER expresses total expenses and fees (excluding transaction costs) as a percentage of a fund's average net assets in relation to the respective share class within a fiscal year.

Further costs, charges and fees were incurred at the level of the target funds. The fund invested more than 20% of its assets in target funds. If the target funds publish a TER themselves, this will be taken into account at fund level (synthetic TER). If a TER is not published at target fund level, the all-in fee / management fee will be used for the calculation. The synthetic TER was:

Class FD 0.62% p.a.,	Class LC 1.06% p.a.,
Class LD 1.06% p.a.,	Class LDM 1.00%[2],
Class NC 1.28% p.a.,	Class ND 1.26% p.a.

[2] Annualization has not been performed for share classes launched during the year.

Transaction costs

The transaction costs paid in the reporting period amounted to EUR 26 549.38.

The transaction costs include all costs that were reported or settled separately for the account of the fund in the reporting period and are directly connected to the purchase or sale of assets. Any financial transaction taxes which may have been paid are included in the calculation.

Statement of changes in net assets 2025

Transactions processed for the account of the fund's assets via closely related companies (based on major holdings of the Deutsche Bank Group)

The share of transactions conducted for the account of the fund's assets via brokers that are closely related companies and persons (share of five percent and above), amounted to 27.56% of all transactions. The total volume was EUR 172 458 754.97.

Annual report
DWS Invest Conservative Sustainable Bonds

Investment objective and performance in the reporting period

The objective of the investment policy is to generate above-average returns. To this end, the sub-fund invests in interest-bearing securities of issuers from member countries of the Organisation for Economic Co-operation and Development (OECD) that finance special projects relating to environmental, social and corporate governance (ESG) issues (use-of-proceeds bonds representing a category of sustainable bonds). A conservative risk profile is pursued. The sub-fund invests at least 80% of its assets in debt instruments whose proceeds will be exclusively used for projects benefiting the environment or the climate and/or for other sustainability- or ESG- related projects (e.g., green bonds, social bonds, sustainability bonds) that typically contribute to one or more of the UN SDGs. Aspects considered when selecting suitable investments include a focus on environmental, social and corporate governance (ESG) standards. These aspects are an integral component of the investment strategy.*

In the twelve months through the end of December 2025, the sub-fund DWS Invest Conservative Sustainable Bonds recorded an appreciation of 2.4% per share (FC100 share class; BVI method; in euro).

DWS Invest Conservative Sustainable Bonds

Performance of share classes (in EUR)

Share class	ISIN	1 year	Since inception
Class FC100	LU2708163634	2.4%	8.8%[1]
Class FC	LU2743053121	2.3%	6.0%[2]
Class IC	LU2743053394	2.4%	6.1%[2]
Class LC	LU2743053477	2.1%	5.6%[2]
Class LD	LU2743053550	2.2%	5.6%[2]

[1] Class FC100 launched on November 27, 2023
[2] Classes FC, IC, LC and LD launched on January 30, 2024

"BVI method" performance, i.e., excluding the initial sales charge.
Past performance is not a guide to future results.

As of: December 31, 2025

Investment policy in the reporting period

The sub-fund DWS Invest Conservative Sustainable Bonds was invested in bonds of near-government issuers (e.g., European Investment Bank, Germany's KfW), as well as in corporate bonds, financials (bonds issued by financial service providers), mortgage bonds and government bonds. The portfolio management actively managed the average duration as well as sector allocation of the portfolio in order to benefit from the volatility on the bond markets. The sub-fund's investment in newly issued securities meant that it took advantage of new issuance premiums. The bond portfolio additionally benefited from narrowing risk premiums for near-government issuers, mortgage bonds, corporate bonds and financials.

The capital market environment in 2025 was challenging. This was due in particular to geopolitical crises like the Russia-Ukraine war that has been ongoing since February 24, 2022, the escalated conflict in the Middle East, and the power struggle between the United States and China. Furthermore, the erratic swings in U.S. trade and tariff policy generated additional uncertainty in the capital markets. On the other hand, the easing of monetary policy, which had begun previously, continued during the reporting period. The European Central Bank (ECB) thus lowered the key interest rate in four steps from 3.00% p.a. to 2.00% p.a. (deposit facility) while the U.S. Federal Reserve gradually reduced its key interest rates by 0.75 percentage points to a target range of 3.50% p.a. – 3.75% p.a.

In the international bond markets, the yield curve in 2025 became increasingly steeper at the long end – although this was still moderate – following the previous normalization. In light of the more relaxed interest rate policy of the central banks, bond yields fell noticeably at the short end in some cases. Long-dated government bonds, on the other hand, came under pressure due, for example, to the rise in public deficits and, in some instances, had to accept price declines on a full-year basis, accompanied by rising bond yields. Corporate bonds, on the other hand, profited from their relatively high coupons as well as narrowing risk premiums.

Other information – Not covered by the audit opinion on the annual report

Information on the environmental and/or social characteristics

This product reported in accordance with Article 9(3) of Regulation (EU) 2019/2088 on sustainability-related disclosures in the financial services sector ("SFDR").

Presentation and content requirements for periodic reports for financial products as referred to in Article 9(3) of Regulation (EU) 2019/2088 (SFDR) and in Article 5 of Regulation (EU) 2020/852 (Taxonomy) are available at the back of this report.

* Further details are set out in the current sales prospectus.

The format used for complete dates in security names in the investment portfolio is "day month year".

DWS Invest Conservative Sustainable Bonds

The following risk management disclosures (other information) are unaudited and are not covered by the audit opinion on the annual report.

Presentation of the maximum limit (according to CSSF circular 11/512) (according to CSSF circular 11/512)
14.14% of portfolio value

Market risk exposure (value-at-risk) (according to CSSF circular 11/512)

Lowest market risk exposure	%	0.009
Highest market risk exposure	%	0.013
Average market risk exposure	%	0.000

The values-at-risk were calculated for the period from January 1, 2025, through December 31, 2025, using historical simulation with a 99% confidence level, a 10-day holding period and an effective historical observation period of one year. The risk in a reference portfolio that does not contain derivatives is used as the measurement benchmark. Market risk is the risk to the fund's assets arising from an unfavorable change in market prices. The Company determines the potential market risk by means of the **absolute value-at-risk approach** as defined in CSSF circular 11/512.

In the reporting period, the average leverage effect from the use of derivatives was 0.1, whereby the total of the nominal amounts of the derivatives in relation to the fund's assets was used for the calculation (sum-of-notional approach).

The gross exposure generated via derivatives pursuant to point 40 a) of the "Guidelines on ETFs and other UCITS issues" of the European Securities and Markets Authority (ESMA) totaled EUR 359 701.19 as of the reporting date.

Notes on valuation

Under the responsibility of the Board of Directors of the SICAV, the Management Company determines the net asset values per share and performs the valuation of the assets of the fund. The basic provision of price data and price validation are performed in accordance with the method introduced by the Board of Directors of the SICAV on the basis of the legal and regulatory requirements or the principles for valuation methods defined in the SICAV's prospectus.

If no trading prices are available, prices are determined with the aid of valuation models (derived market values) which are agreed between State Street Bank International GmbH, Luxembourg Branch, as external price service provider and the Management Company and which are based as far as possible on market parameters. This procedure is subject to an ongoing monitoring process. The plausibility of price information from third parties is checked through other pricing sources, model calculations or other suitable procedure.

Assets reported in this report are not valued at derived market values.

V.	**Net gain/loss for the fiscal year**		**EUR**	**1 234 393.92**

BVI total expense ratio (TER)

The total expense ratio for the share classes was:

Class FC 0.33% p.a.,
Class FC100 0.22% p.a.,
Class IC 0.25% p.a.,
Class LC 0.51% p.a.,
Class LD 0.49% p.a.

The TER expresses total expenses and fees (excluding transaction costs) as a percentage of a fund's average net assets in relation to the respective share class within a fiscal year.

Transaction costs

The transaction costs paid in the reporting period amounted to EUR 790.14.

The transaction costs include all costs that were reported or settled separately for the account of the fund in the reporting period and are directly connected to the purchase or sale of assets. Any financial transaction taxes paid are included in the calculations.

Statement of changes in net assets 2025

I.	**Value of the fund's net assets at the beginning of the fiscal year**	**EUR**	**35 878 864.30**
1.	Distribution for the previous year	EUR	-105.00
2.	Income adjustment and reimbursed expenses	EUR	-336.74
3.	Net investment income	EUR	1 051 857.73
4.	Realized gains/losses	EUR	182 536.19
5.	Net change in unrealized appreciation/depreciation	EUR	-357 134.21
II.	**Value of the fund's net assets at the end of the fiscal year**	**EUR**	**36 755 682.27**

Summary of gains/losses 2025

Realized gains/losses (incl. income adjustment)	**EUR**	**182 536.19**
from:		
Securities transactions	EUR	50 773.89
(Forward) currency transactions	EUR	117 430.00
Derivatives and other financial futures transactions[1]	EUR	14 332.30

[1] This item may include options transactions or swap transactions and/or transactions from warrants and credit derivatives.

Transactions processed for the account of the fund's assets via closely related companies (based on major holdings of the Deutsche Bank Group)

The share of transactions conducted for the account of the fund's assets via brokers that are closely related companies and persons (share of five percent and above), amounted to 5.23% percent of all transactions. The total volume was EUR 577 335.52.

Swing pricing

Swing pricing is a mechanism that is intended to protect shareholders from the negative effects of trading costs arising from subscription and redemption activities. Extensive subscriptions and redemptions within a (sub-)fund may lead to a dilution of the assets of this (sub-)fund, as the net asset value sometimes does not reflect all trading and other costs that are incurred when the portfolio manager must buy or sell securities in order to manage large (net) inflows or outflows in the (sub-)fund. In addition to these costs, substantial order volumes can lead to market prices that are significantly below or above the market prices that apply under ordinary circumstances.

To enhance the investor protection of existing shareholders, a swing pricing mechanism can be applied to compensate for trading costs and other expenses if the aforementioned cumulative (net) inflows or outflows should have a material impact on the (sub-)fund on a valuation date and exceed a predetermined threshold (partial swing pricing). This mechanism can be applied across all (sub-)funds. If swing pricing is introduced for a particular (sub-)fund, this will be disclosed in the special section of the sales prospectus.

The Management Company of the fund will predefine thresholds for the application of the swing pricing mechanism, based, among other things, on current market conditions, available market liquidity and estimated dilution costs. In accordance with these thresholds, the adjustment itself will be initiated automatically. If the (net) inflows or outflows exceed the swing threshold, the net asset value is revised upward if the (sub-)fund sees large net inflows and is revised downward in the event of large net outflows. This adjustment is applied uniformly to all subscriptions and redemptions for the trading day in question. If a performance-based fee applies for the (sub-)fund, the calculation is based on the original net asset value.

The Management Company has established a swing pricing committee that determines the swing factors for each individual (sub-)fund. These swing factors indicate the extent of the net asset value adjustment. The swing pricing committee takes into account the following factors in particular:

- bid-ask spread (fixed-price element),
- impacts on the market (impacts of the transactions on the price),
- additional costs that are incurred as a result of trading activities for the investments.

The appropriateness of the applied swing factors, the operational decisions made in connection with the swing pricing (including the swing threshold), the extent of the adjustment, and the affected (sub-)funds are reviewed at regular intervals.

The amount of the swing pricing adjustment can therefore vary from one (sub-)fund to another and will not generally exceed 2% of the original net asset value per share. The net asset value adjustment is available upon request from the Management Company. In a market environment with extreme illiquidity, the Management Company can, however, increase the swing price adjustment to more than 2% of the original net asset value. Such an increase will be announced on the Management Company's website: www.dws.com.

As the mechanism should only be applied if significant (net) inflows or outflows are expected and it does not apply for normal trading volumes, it is assumed that the net asset value will only be adjusted occasionally.

This (sub-)fund can apply swing pricing but has not done so in the reporting period, as its (net) inflows and outflows did not exceed the relevant threshold previously defined.

Annual report
DWS Invest Convertibles

Investment objective and performance in the reporting period

The objective of the investment policy is to generate above-average returns in euro. To attain this objective, the sub-fund invests worldwide in convertible and warrant-linked bonds of domestic and foreign issuers denominated in euro or hedged against the euro. When selecting investments, environmental and social aspects and the principles of good corporate governance (ESG aspects) are taken into consideration alongside financial performance. The focus of the portfolio is on convertible bonds with a balanced (average) equity delta.

The capital market environment in 2025 was challenging. This was due in particular to geopolitical crises like the Russia-Ukraine war that has been ongoing since February 24, 2022, the escalated conflict in the Middle East, and the power struggle between the United States and China. Furthermore, the erratic swings in U.S. trade and tariff policy generated additional uncertainty in the capital markets. On the other hand, the easing of monetary policy, which had begun previously, continued during the reporting period. The European Central Bank (ECB) thus lowered the key interest rate in four steps from 3.00% p.a. to 2.00% p.a. (deposit facility) while the U.S. Federal Reserve gradually reduced its key interest rates by 0.75 percentage points to a target range of 3.50% p.a. – 3.75% p.a.

The sub-fund recorded an appreciation of 9.2% per share (LC share class; BVI method; in euro) in the fiscal year through the end of December 2025.

"BVI method" performance, i.e., excluding the initial sales charge.
Past performance is not a guide to future results.

As of: December 31, 2025

Investment policy in the reporting period

In the past fiscal year, the portfolio management maintained the broad diversification of the portfolio. The sub-fund offered an internationally oriented convertible bond portfolio. The management invested primarily in securities of companies that, in their opinion, have a convincing business model and better-than-average growth prospects.

Regionally, convertible bonds from the United States made up the largest proportion of the sub-fund in the reporting period. This was because this region offered the largest selection of interesting and attractively valued underlyings and structures.

In line with its orientation, the convertible bonds held in the portfolio had an average credit rating of BBB (external and internal credit ratings). The portfolio management focused principally on large-caps, i.e., issues of major internationally known companies

with large market capitalizations. Issues from the mid-cap segment (companies with medium market capitalizations) were added for diversification. In addition to the attractiveness of the convertible bond structure, the primary selection criteria included the earnings and liquidity of the underlying equities, combined with the business development. Investments in high yield convertible bonds were also added from a risk perspective. These were non-investment-grade issues that generally trade in the markets at considerably higher risk premiums but also tend to exhibit noticeably elevated price volatility.

In terms of industry, the management favored companies from the growth sectors, such as IT, consumer discretionaries and industrials. Securities from the utilities, health care and financial sectors, preferably with stable earnings, were also included in the portfolio.

Other information – Not covered by the audit opinion on the annual report

Information on the environmental and/or social characteristics

This product reported in accordance with Article 8(1) of Regulation (EU) 2019/2088 on sustainability-related disclosures in the financial services sector ("SFDR").

Presentation and content requirements for periodic reports for financial products as referred to in Article 8(1) of Regulation (EU) 2019/2088 (SFDR) and in Article 6 of Regulation (EU) 2020/852 (Taxonomy) are available at the back of this report.

The format used for complete dates in security names in the investment portfolio is "day month year".

The following risk management disclosures (other information) are unaudited and are not covered by the audit opinion on the annual report.

Presentation of the maximum limit (according to CSSF circular 11/512)
14.14% of portfolio value

Market risk exposure (value-at-risk) (according to CSSF circular 11/512)

Lowest market risk exposure	%	0.023
Highest market risk exposure	%	0.060
Average market risk exposure	%	0.046

The values-at-risk were calculated for the period from January 1, 2025, through December 31, 2025, using historical simulation with a 99% confidence level, a 10-day holding period and an effective historical observation period of one year. The risk in a reference portfolio that does not contain derivatives is used as the measurement benchmark. Market risk is the risk to the fund's assets arising from an unfavorable change in market prices. The Company determines the potential market risk by means of the **absolute value-at-risk approach** as defined in CSSF circular 11/512.

In the reporting period, the average leverage effect from the use of derivatives was 1.5, whereby the total of the nominal amounts of the derivatives in relation to the fund's assets was used for the calculation (sum-of-notional approach).

The gross exposure generated via derivatives pursuant to point 40 a) of the "Guidelines on ETFs and other UCITS issues" of the European Securities and Markets Authority (ESMA) totaled EUR 235 213 055.32 as of the reporting date. Does not include any forward currency transactions entered into for currency hedging purposes at the level of the share classes.

Notes on valuation

Under the responsibility of the Board of Directors of the SICAV, the Management Company determines the net asset values per share and performs the valuation of the assets of the fund. The basic provision of price data and price validation are performed in accordance with the method introduced by the Board of Directors of the SICAV on the basis of the legal and regulatory requirements or the principles for valuation methods defined in the SICAV's prospectus.

If no trading prices are available, prices are determined with the aid of valuation models (derived market values) which are agreed between State Street Bank International GmbH, Luxembourg Branch, as external price service provider and the Management Company and which are based as far as possible on market parameters. This procedure is subject to an ongoing monitoring process. The plausibility of price information from third parties is checked through other pricing sources, model calculations or other suitable procedure.

Assets reported in this report are not valued at derived market values.

The management fee / all-in fee rates in effect as of the reporting date for the investment fund units held in the securities portfolio are shown in parentheses. A plus sign means that a performance-based fee may also be charged. As the investment fund held units of other investment funds (target funds) in the reporting period, further costs, charges and fees may have been incurred at the level of these individual target funds.

Footnotes

* Some or all of these securities are lent.
** The prepaid placement fee is amortized over a period of three years (as specified in article 13 (f) of the general section of the fund's management regulations).
*** Does not include positions with a negative balance, if such exist.

BVI total expense ratio (TER)

The total expense ratio for the share classes was:

Class CHF FCH 0.82% p.a.,	Class CHF LCH 1.38% p.a.,
Class FC 0.79% p.a.,	Class FC(CE) 0.82% p.a.,
Class FD 0.80% p.a.,	Class LC 1.35% p.a.,
Class LC (CE) 1.38% p.a.,	Class LD 1.36% p.a.,
Class NC 1.76% p.a.,	Class PFC 1.92% p.a.,
Class TFC 0.79% p.a.,	Class TFD 0.80% p.a.,
Class GBP DH RD 0.82% p.a.,	Class SEK FCH 0.83% p.a.,
Class SEK LCH 1.37% p.a.,	Class USD FCH 0.82% p.a.
Class USD LCH 1.39% p.a.,	Class USD TFCH 0.82% p.a.

The TER expresses total expenses and fees (excluding transaction costs) as a percentage of a fund's average net assets in relation to the respective share class within a fiscal year.

As well, the additional income from securities lending resulted in a performance-based fee of

Class CHF FCH<0,000% p.a.,	Class CHF LCH <0,000% p.a.,
Class CHF RCH <0,000% p.a.,	Class FC <0,000% p.a.,
Class FC(CE) <0,000% p.a.,	Class FD <0,000% p.a.,
Class LC (CE)<0,000% p.a.,	Class LC <0,000% p.a.,
Class LD <0,000% p.a.,	Class NC <0,000% p.a.,
Class PFC <0,000% p.a.,	Class RC (CE) <0,000% p.a.,
Class TFC <0,000% p.a.,	Class TFD <0,000% p.a.,
Class GBP DH RD <0,000% p.a.,	Class SEK FCH <0,000% p.a.,
Class SEK LCH <0,000% p.a.,	Class USD FCH <0,000% p.a.
Class USD LCH <0,000% p.a.,	Class USD TFCH <0,000% p.a.

of the fund's average net assets in relation to the respective share class.

Transaction costs

The transaction costs paid in the reporting period amounted to EUR 25 484.78.

The transaction costs include all costs that were reported or settled separately for the account of the fund in the reporting period and are directly connected to the purchase or sale of assets. Any financial transaction taxes which may have been paid are included in the calculation.

Statement of changes in net assets 2025

I.	**Value of the fund's net assets at the beginning of the fiscal year**	**EUR**	**191 311 374.25**

Transactions processed for the account of the fund's assets via closely related companies (based on major holdings of the Deutsche Bank Group)

The share of transactions conducted for the account of the fund's assets via brokers that are closely related companies and persons (share of five percent and above), amounted to 1.13% of all transactions. The total volume was EUR 8 206 969.01.

Placement fee / dilution adjustment

In the reporting period, the fund paid a placement fee of 2.9% of the fund's net assets to the distributor. This fee was calculated on the subscription date. The placement fee serves in particular as compensation for distribution. The gross amount of the placement fee was paid in a single payment on the subscription date and simultaneously recognized in the fund's net assets as prepaid expenses. These are amortized on a daily basis over a period of three years from the date of subscription. The remaining position for prepaid expenses per share on each valuation date is calculated on a daily basis by multiplying the net assets of the fund by a factor. The relevant factor is determined through straight-line reduction of the placement fee by a certain percentage on a daily basis over three years from the subscription date. The prepaid expenses position fluctuates during the three years from the subscription date of the fund, since it depends on both the fund's net assets and the predetermined factor.

In addition, a dilution adjustment of up to 3% based on the gross redemption amount was charged for the benefit of the fund's net assets in the reporting period (to be paid by the shareholder).

Further details on the placement fee and the dilution adjustment can be found in the corresponding section of the fund's sales prospectus.

DWS Invest Convertibles

Swing pricing

Swing pricing is a mechanism that is intended to protect shareholders from the negative effects of trading costs arising from subscription and redemption activities. Extensive subscriptions and redemptions within a (sub-)fund may lead to a dilution of the assets of this (sub-)fund, as the net asset value sometimes does not reflect all trading and other costs that are incurred when the portfolio manager must buy or sell securities in order to manage large (net) inflows or outflows in the (sub-)fund. In addition to these costs, substantial order volumes may lead to market prices that are considerably below or above the market prices that apply under normal circumstances.

To enhance the investor protection of existing shareholders, a swing pricing mechanism can be applied to compensate for trading costs and other expenses if the aforementioned cumulative (net) inflows or outflows should have a material impact on the (sub-)fund on a valuation date and exceed a predetermined threshold (partial swing pricing). This mechanism can be applied across all (sub-)funds. If swing pricing is introduced for a particular (sub-)fund, this will be disclosed in the special section of the sales prospectus.

The Management Company of the fund will predefine thresholds for the application of the swing pricing mechanism, based, among other things, on current market conditions, available market liquidity and estimated dilution costs. In accordance with these thresholds, the adjustment itself will be initiated automatically. If the (net) inflows or outflows exceed the swing threshold, the net asset value is revised upward if the (sub-)fund sees large net inflows and is revised downward in the event of large net outflows. This adjustment is applied uniformly to all subscriptions and redemptions for the trading day in question. If a performance-based fee applies for the (sub-)fund, the calculation is based on the original net asset value.

The Management Company has established a swing pricing committee that determines the swing factors for each individual (sub-)fund. These swing factors indicate the extent of the net asset value adjustment. The swing pricing committee takes into account the following factors in particular:

- bid-ask spread (fixed-price element),
- impacts on the market (impacts of the transactions on the price),
- additional costs that are incurred as a result of trading activities for the investments.

The appropriateness of the applied swing factors, the operational decisions made in connection with the swing pricing (including the swing threshold), the extent of the adjustment, and the affected (sub-)funds are reviewed at regular intervals.

The amount of the swing pricing adjustment can therefore vary from one (sub-)fund to another and will not generally exceed 2% of the original net asset value per share. The net asset value adjustment is available upon request from the Management Company. In a market environment with extreme illiquidity, the Management Company can, however, increase the swing price adjustment to more than 2% of the original net asset value. Such an increase will be announced on the Management Company's website: www.dws.com.

As the mechanism should only be applied if significant (net) inflows or outflows are expected and it does not apply for normal trading volumes, it is assumed that the net asset value will only be adjusted occasionally.

This (sub-)fund can apply swing pricing and has done so in the reporting period, as its (net) inflows and outflows exceeded the relevant threshold previously defined. No swing pricing adjustment was applied that would have had an impact on the (sub-)fund's net asset value per share on the last day of the reporting period.

Annual report
DWS Invest Corporate Green Bonds

Investment objective and performance in the reporting period

The sub-fund DWS Invest Corporate Green Bonds seeks to generate sustained capital appreciation. To achieve this, the sub-fund invests in interest-bearing debt instruments that are issued by public, private and public-private issuers worldwide, which finance special projects relating to environmental, social and corporate governance (ESG) issues.* These especially comprise "green" bonds, i.e., debt securities, the proceeds of which are only permitted to be used for projects that benefit the environment and/or climate action. These include, for example, projects in the area of renewable energy, energy-efficient construction, as well as public transport.

The sub-fund DWS Invest Corporate Green Bonds recorded an appreciation of 2.9% per share (LD share class; BVI method) in the 2025 fiscal year but underperformed its benchmark, which returned 3.3% (both percentages in euro terms).

DWS Invest Corporate Green Bonds

"BVI method" performance, i.e., excluding the initial sales charge.
Past performance is not a guide to future results.

As of: December 31, 2025

Investment policy in the reporting period

The capital market environment in 2025 was challenging. This was due in particular to geopolitical crises like the Russia-Ukraine war that has been ongoing since February 24, 2022, the escalated conflict in the Middle East, and the power struggle between the United States and China. Furthermore, the erratic swings in U.S. trade and tariff policy generated additional uncertainty in the capital markets. On the other hand, the easing of monetary policy, which had begun previously, continued during the reporting period. The European Central Bank (ECB) thus lowered the key interest rate in four steps from 3.00% p.a. to 2.00% p.a. (deposit facility) while the U.S. Federal Reserve gradually reduced its key interest rates by 0.75 percentage points to a target range of 3.50% p.a. – 3.75% p.a.

In the international bond markets, the yield curve in 2025 became increasingly steeper at the long end – although this was still moderate – following the previous normalization. In light of the more relaxed interest rate policy of the central banks, bond yields fell noticeably at the short end in some cases. Long-dated government bonds, on the other hand, came under pressure due, for example, to the rise in public deficits and, in some instances, had to accept price declines on a full-year basis, accompanied by rising bond yields. Corporate bonds, on the other hand, profited from their relatively high coupons as well as narrowing risk premiums.

The sub-fund continued to invest predominantly in green bonds of international issuers. DWS has developed specific green bond guidelines that form the basis of bond selection. A check was carried out to determine whether a bond complies with the Green Bond Principles, which are voluntary guidelines for minimum standards regarding transparency, disclosure and reporting in connection with the issue of green bonds. These were developed by banks, issuers, investors and environmental organizations to ensure market integrity. With regard to the issuer structure, the investment focus was again on corporate bonds and bonds issued by financial service providers. During selection, care was taken to ensure that the bonds comply

with DWS sustainability criteria. Companies from controversial sectors or with controversial business practices were thus excluded, as were issuers with an inadequate climate action strategy. In regional terms, the sub-fund was globally positioned; European issues were the main focus of investment. In addition to bonds with investment-grade status, high yield bonds were also selectively added.

The overweight in companies not involved in financials had a particularly positive effect on the investment result of the sub-fund DWS Invest Corporate Green Bonds; they recorded above-average performance in 2025, especially the disproportionate positioning in industrial and telecommunication bonds which made a significant contribution to the relative performance. The underweight in utilities was also beneficial, as was the successful stock picking in the BBB rating segment in which several bonds recorded above-average price gains. From a regional point of view, the underweight in German issuers and the overweight in U.S. interest-bearing instruments boosted the sub-fund's relative performance.

In contrast, the underweight in financials, especially in banks, which was one of the better performing sectors in 2025, and a slightly longer duration in comparison to the benchmark, had a detrimental effect and had a negative impact in an environment of rising or volatile yields. This also explains why the sub-fund fell short of its benchmark in the reporting period overall.

The following risk management disclosures (other information) are unaudited and are not covered by the audit opinion on the annual report.

Composition of the reference portfolio (according to CSSF circular 11/512)
BBG MSCI Euro Corporate Green Bond 5% Capped

Market risk exposure (value-at-risk) (according to CSSF circular 11/512)

Lowest market risk exposure	%	103.189
Highest market risk exposure	%	138.171
Average market risk exposure	%	123.502

The values-at-risk were calculated for the period from January 1, 2025, through December 31, 2025, using historical simulation with a 99% confidence level, a 10-day holding period and an effective historical observation period of one year. The risk in a reference portfolio that does not contain derivatives is used as the measurement benchmark. Market risk is the risk to the fund's assets arising from an unfavorable change in market prices. The Company determines the potential market risk by means of the **relative value-at-risk approach** as defined in CSSF circular 11/512.

In the reporting period, the average leverage effect from the use of derivatives was 0.1, whereby the total of the nominal amounts of the derivatives in relation to the fund's assets was used for the calculation (sum-of-notional approach).

The gross exposure generated via derivatives pursuant to point 40 a) of the "Guidelines on ETFs and other UCITS issues" of the European Securities and Markets Authority (ESMA) totaled EUR 67 586 029.83 as of the reporting date. Does not include any forward currency transactions entered into for currency hedging purposes at the level of the share classes.

Notes on valuation

Under the responsibility of the Board of Directors of the SICAV, the Management Company determines the net asset values per share and performs the valuation of the assets of the fund. The basic provision of price data and price validation are performed in accordance with the method introduced by the Board of Directors of the SICAV on the basis of the legal and regulatory requirements or the principles for valuation methods defined in the SICAV's prospectus.

If no trading prices are available, prices are determined with the aid of valuation models (derived market values) which are agreed between State Street Bank International GmbH, Luxembourg Branch, as external price service provider and the Management Company and which are based as far as possible on market parameters. This procedure is subject to an ongoing monitoring process. The plausibility of price information from third parties is checked through other pricing sources, model calculations or other suitable procedure.

Assets reported in this report are not valued at derived market values.

BVI total expense ratio (TER)

The total expense ratio for the share classes was:

Class FD 0.57% p.a.,
Class IC 0.44% p.a.,
Class LC 0.79% p.a.,
Class LD 0.78% p.a.,
Class LDM 0.70%[2],
Class ND 1.18% p.a.,
Class TFC 0.59% p.a.,
Class XC 0.29% p.a.,
Class XD 0.28% p.a.

The TER expresses total expenses and fees (excluding transaction costs) as a percentage of a fund's average net assets in relation to the respective share class within a fiscal year.

[2] Annualization has not been performed for share classes launched during the year.

Transaction costs

The transaction costs paid in the reporting period amounted to EUR 34 819.37.

The transaction costs include all costs that were reported or settled separately for the account of the fund in the reporting period and are directly connected to the purchase or sale of assets. Any financial transaction taxes which may have been paid are included in the calculation.

Statement of changes in net assets 2025

Transactions processed for the account of the fund's assets via closely related companies (based on major holdings of the Deutsche Bank Group)

The share of transactions conducted for the account of the fund's assets via brokers that are closely related companies and persons (share of five percent and above), amounted to 1.46% of all transactions. The total volume was EUR 20 906 085.81.

Swing pricing

Swing pricing is a mechanism that is intended to protect shareholders from the negative effects of trading costs arising from subscription and redemption activities. Extensive subscriptions and redemptions within a (sub-)fund may lead to a dilution of the assets of this (sub-)fund, as the net asset value sometimes does not reflect all trading and other costs that are incurred when the portfolio manager must buy or sell securities in order to manage large (net) inflows or outflows in the (sub-)fund. In addition to these costs, substantial order volumes may lead to market prices that are considerably below or above the market prices that apply under normal circumstances.

To enhance the investor protection of existing shareholders, a swing pricing mechanism can be applied to compensate for trading costs and other expenses if the aforementioned cumulative (net) inflows or outflows should have a material impact on the (sub-)fund on a valuation date and exceed a predetermined threshold (partial swing pricing). This mechanism can be applied across all (sub-)funds. If swing pricing is introduced for a particular (sub-)fund, this will be disclosed in the special section of the sales prospectus.

The Management Company of the fund will predefine thresholds for the application of the swing pricing mechanism, based, among other things, on current market conditions, available market liquidity and estimated dilution costs. In accordance with these thresholds, the adjustment itself will be initiated automatically. If the (net) inflows or outflows exceed the swing threshold, the net asset value is revised upward if the (sub-)fund sees large net inflows and is revised downward in the event of large net outflows. This adjustment is applied uniformly to all subscriptions and redemptions for the trading day in question. If a performance-based fee applies for the (sub-)fund, the calculation is based on the original net asset value.

The Management Company has established a swing pricing committee that determines the swing factors for each individual (sub-)fund. These swing factors indicate the extent of the net asset value adjustment. The swing pricing committee takes into account the following factors in particular:

- bid-ask spread (fixed-price element),
- impacts on the market (impacts of the transactions on the price),
- additional costs that are incurred as a result of trading activities for the investments.

The appropriateness of the applied swing factors, the operational decisions made in connection with the swing pricing (including the swing threshold), the extent of the adjustment, and the affected (sub-)funds are reviewed at regular intervals.

The amount of the swing pricing adjustment can therefore vary from one (sub-)fund to another and will not generally exceed 2% of the original net asset value per share. The net asset value adjustment is available upon request from the Management Company. In a market environment with extreme illiquidity, the Management Company can, however, increase the swing price adjustment to more than 2% of the original net asset value. Such an increase will be announced on the Management Company's website: www.dws.com.

As the mechanism should only be applied if significant (net) inflows or outflows are expected and it does not apply for normal trading volumes, it is assumed that the net asset value will only be adjusted occasionally.

This (sub-)fund can apply swing pricing and has done so in the reporting period, as its (net) inflows and outflows exceeded the relevant threshold previously defined. No swing pricing adjustment was applied that would have had an impact on the (sub-)fund's net asset value per share on the last day of the reporting period.

Annual report
DWS Invest Corporate Hybrid Bonds

Investment objective and performance in the reporting period

The sub-fund DWS Invest Corporate Hybrid Bonds seeks to generate above-average returns. To achieve this objective, it invests worldwide in interest-bearing securities, convertible bonds, warrant-linked bonds whose underlying warrants are on securities, participation and dividend-right certificates and derivatives, as well as in money market instruments and liquid assets. At least 50% of the sub-fund's assets must be invested worldwide in hybrid bonds of corporate issuers. Hybrid bonds are bonds whose structure features both debt characteristics and equity characteristics. Hybrid bonds also encompass subordinated bonds (Tier 1 and Tier 2 bonds), dividend-right certificates, convertible and warrant-linked bonds, as well as subordinated insurance bonds. Up to 100% of the sub-fund's assets may be invested in subordinated bonds. The portfolio manager seeks to hedge any currency risks in the portfolio against the euro. Derivatives can be used in hedging activities and for investments. Aspects considered when selecting investments include financial strength and also a focus on environmental, social and corporate governance (ESG) factors.*

In the 2025 fiscal year, the sub-fund DWS Invest Corporate Hybrid Bonds achieved an appreciation of 4.7% per share (LC share class, in euro; BVI method).

"BVI method" performance, i.e., excluding the initial sales charge.
Past performance is not a guide to future results.

As of: December 31, 2025

Investment policy in the reporting period

In line with its investment policy, the portfolio management invested largely in corporate hybrid bonds. In terms of its sector allocation, the sub-fund was generally broadly positioned, although utility issues (electricity, energy) predominated as these companies constituted the largest proportion of issuers in the hybrid bond market. The securities held in the portfolio had both investment-grade (ratings of BBB- or better from the leading rating agencies) and non-investment-grade status as of the reporting date. Regionally, the sub-fund was globally positioned, In comparison with the previous year, investment became more heavily focused on bonds denominated in U.S. dollars (USD). This was because of the ongoing growth of the USD hybrid bond segment that, in the opinion of the portfolio management, offered attractive investment opportunities. In addition, investments were made for the first time in hybrid bonds denominated in Australian dollar.

The capital market environment in 2025 was challenging. This was due in particular to geopolitical crises like the Russia-Ukraine war that has been ongoing since February 24, 2022, the escalated conflict in the Middle East, and the power struggle between the

United States and China. Furthermore, the erratic swings in U.S. trade and tariff policy generated additional uncertainty in the capital markets. On the other hand, the easing of monetary policy, which had begun previously, continued during the reporting period. The European Central Bank (ECB) thus lowered the key interest rate in four steps from 3.00% p.a. to 2.00% p.a. (deposit facility) while the U.S. Federal Reserve gradually reduced its key interest rates by 0.75 percentage points to a target range of 3.50% p.a. – 3.75% p.a.

In the international bond markets, the yield curve in 2025 became increasingly steeper at the long end – although this was still moderate – following the previous normalization. In light of the more relaxed interest rate policy of the central banks, bond yields fell noticeably at the short end in some cases. Long-dated government bonds, on the other hand, came under pressure due, for example, to the rise in public deficits and, in some instances, had to accept price declines on a full-year basis, accompanied by rising bond yields. Corporate bonds, on the other hand, profited from their relatively high coupons as well as narrowing risk premiums.

The investment result of the sub-fund was positively affected by price increases caused by lower interest rates and narrower risk premiums (credit spreads). Bonds from the utilities and energy sectors as well as from the real estate segment contributed substantially to the sub-fund's appreciation. The portfolio management successfully avoided loan defaults and hybrid bonds for which coupon payments were suspended. On the currency side, the focus continued to be on euro investments. Securities in the portfolio denominated in currencies other than the euro were hedged against the latter.

Other information – Not covered by the audit opinion on the annual report

Information on the environmental and/or social characteristics

This product reported in accordance with Article 8(1) of Regulation (EU) 2019/2088 on sustainability-related disclosures in the financial services sector ("SFDR").

Presentation and content requirements for periodic reports for financial products as referred to in Article 8(1) of Regulation (EU) 2019/2088 (SFDR) and in Article 6 of Regulation (EU) 2020/852 (Taxonomy) are available at the back of this report.

* Further details are set out in the current sales prospectus.

The format used for complete dates in security names in the investment portfolio is "day month year".

The following risk management disclosures (other information) are unaudited and are not covered by the audit opinion on the annual report.

Presentation of the maximum limit (according to CSSF circular 11/512)
14.14% of portfolio value

Market risk exposure (value-at-risk) (according to CSSF circular 11/512)

Lowest market risk exposure	%	0.010
Highest market risk exposure	%	0.019
Average market risk exposure	%	0.013

The values-at-risk were calculated for the period from January 1, 2025, through December 31, 2025, using historical simulation with a 99% confidence level, a 10-day holding period and an effective historical observation period of one year. The risk in a reference portfolio that does not contain derivatives is used as the measurement benchmark. Market risk is the risk to the fund's assets arising from an unfavorable change in market prices. The Company determines the potential market risk by means of the **absolute value-at-risk approach** as defined in CSSF circular 11/512.

In the reporting period, the average leverage effect from the use of derivatives was 0.3, whereby the total of the nominal amounts of the derivatives in relation to the fund's assets was used for the calculation (sum-of-notional approach).

The gross exposure generated via derivatives pursuant to point 40 a) of the "Guidelines on ETFs and other UCITS issues" of the European Securities and Markets Authority (ESMA) totaled EUR 60 731 923.59 as of the reporting date. Does not include any forward currency transactions entered into for currency hedging purposes at the level of the share classes.

Notes on valuation

Under the responsibility of the Board of Directors of the SICAV, the Management Company determines the net asset values per share and performs the valuation of the assets of the fund. The basic provision of price data and price validation are performed in accordance with the method introduced by the Board of Directors of the SICAV on the basis of the legal and regulatory requirements or the principles for valuation methods defined in the SICAV's prospectus.

If no trading prices are available, prices are determined with the aid of valuation models (derived market values) which are agreed between State Street Bank International GmbH, Luxembourg Branch, as external price service provider and the Management Company and which are based as far as possible on market parameters. This procedure is subject to an ongoing monitoring process. The plausibility of price information from third parties is checked through other pricing sources, model calculations or other suitable procedure.

Assets reported in this report are not valued at derived market values.

Footnotes

* Floating interest rate.
** Some or all of these securities are lent.
*** Does not include positions with a negative balance, if such exist.

BVI total expense ratio (TER)

The total expense ratio for the share classes was:

Class CHF FCH 0.73% p.a.,	Class CHF LCH 1.03% p.a.,
Class FC 0.71% p.a.,	Class FC10 0.51% p.a.,
Class FD 0.71% p.a.,	Class LC 1.01% p.a.,
Class LD 1.01% p.a.,	Class NC 1.22%[2],
Class TFC 0.71% p.a.,	Class TFD 0.71% p.a.,
Class XC 0.28% p.a.,	Class XD 0.28% p.a.,
Class SGD LDMH 1.03% p.a.,	Class USD FCH 0.73% p.a.,
Class USD FCH50 0.36% p.a.,	Class USD FDH 0.73% p.a.,
Class USD FDQH 0.73% p.a.,	Class USD LCH 1.03% p.a.,
Class USD LDMH 1.03% p.a.	

The TER expresses total expenses and fees (excluding transaction costs) as a percentage of a fund's average net assets in relation to the respective share class within a fiscal year.

As well, the additional income from securities lending resulted in a performance-based fee of

Class CHF FCH 0.004% p.a.,	Class CHF LCH 0.005% p.a.,
Class FC 0.005% p.a.,	Class FC10 0.004% p.a.,
Class FD 0.004% p.a.,	Class LC 0.005% p.a.,
Class LD 0.005% p.a.,	Class NC 0.002%[2],
Class TFC 0.005% p.a.,	Class TFD 0.005% p.a.,
Class XC 0.005% p.a.,	Class XD 0.005% p.a.,
Class SGD LDMH 0.005% p.a.,	Class USD FCH 0.006% p.a.,
Class USD FCH50 0.005% p.a.,	Class USD FDH 0.005% p.a.,
Class USD FDQH 0.005% p.a.,	Class USD LCH 0.005% p.a.,
Class USD LDMH 0.005% p.a.	

of the fund's average net assets in relation to the respective share class.

[2] Annualization has not been performed for share classes launched during the year.

Transaction costs

The transaction costs paid in the reporting period amounted to EUR 5 833.80.

The transaction costs include all costs that were reported or settled separately for the account of the fund in the reporting period and are directly connected to the purchase or sale of assets. Any financial transaction taxes which may have been paid are included in the calculation.

Statement of changes in net assets 2025

I.	**Value of the fund's net assets at the beginning of the fiscal year**	**EUR**	**282 572 928.20**
1.	Distribution for the previous year	EUR	-2 102 257.16
2.	Net outflows	EUR	-15 679 829.80
3.	Income adjustment	EUR	-459 070.19
4.	Net investment income	EUR	9 094 211.71
5.	Realized gains/losses	EUR	1 927 614.87
6.	Net change in unrealized appreciation/depreciation	EUR	-732 157.51
II.	**Value of the fund's net assets at the end of the fiscal year**	**EUR**	**274 621 440.12**

Summary of gains/losses 2025

Realized gains/losses (incl. income adjustment)	**EUR**	**1 927 614.87**

Transactions processed for the account of the fund's assets via closely related companies (based on major holdings of the Deutsche Bank Group)

The share of transactions conducted for the account of the fund's assets via brokers that are closely related companies and persons (share of five percent and above), amounted to 27.39% of all transactions. The total volume was EUR 392 801 951.24.

DWS Invest Corporate Hybrid Bonds

Swing pricing

Swing pricing is a mechanism that is intended to protect shareholders from the negative effects of trading costs arising from subscription and redemption activities. Extensive subscriptions and redemptions within a (sub-)fund may lead to a dilution of the assets of this (sub-)fund, as the net asset value sometimes does not reflect all trading and other costs that are incurred when the portfolio manager must buy or sell securities in order to manage large (net) inflows or outflows in the (sub-)fund. In addition to these costs, substantial order volumes may lead to market prices that are considerably below or above the market prices that apply under normal circumstances.

To enhance the investor protection of existing shareholders, a swing pricing mechanism can be applied to compensate for trading costs and other expenses if the aforementioned cumulative (net) inflows or outflows should have a material impact on the (sub-)fund on a valuation date and exceed a predetermined threshold (partial swing pricing). This mechanism can be applied across all (sub-)funds. If swing pricing is introduced for a particular (sub-)fund, this will be disclosed in the special section of the sales prospectus.

The Management Company of the fund will predefine thresholds for the application of the swing pricing mechanism, based, among other things, on current market conditions, available market liquidity and estimated dilution costs. In accordance with these thresholds, the adjustment itself will be initiated automatically. If the (net) inflows or outflows exceed the swing threshold, the net asset value is revised upward if the (sub-)fund sees large net inflows and is revised downward in the event of large net outflows. This adjustment is applied uniformly to all subscriptions and redemptions for the trading day in question. If a performance-based fee applies for the (sub-)fund, the calculation is based on the original net asset value.

The Management Company has established a swing pricing committee that determines the swing factors for each individual (sub-)fund. These swing factors indicate the extent of the net asset value adjustment. The swing pricing committee takes into account the following factors in particular:

- bid-ask spread (fixed-price element),
- impacts on the market (impacts of the transactions on the price),
- additional costs that are incurred as a result of trading activities for the investments.

The appropriateness of the applied swing factors, the operational decisions made in connection with the swing pricing (including the swing threshold), the extent of the adjustment, and the affected (sub-)funds are reviewed at regular intervals.

The amount of the swing pricing adjustment can therefore vary from one (sub-)fund to another and will not generally exceed 2% of the original net asset value per share. The net asset value adjustment is available upon request from the Management Company. In a market environment with extreme illiquidity, the Management Company can, however, increase the swing price adjustment to more than 2% of the original net asset value. Such an increase will be announced on the Management Company's website: www.dws.com.

As the mechanism should only be applied if significant (net) inflows or outflows are expected and it does not apply for normal trading volumes, it is assumed that the net asset value will only be adjusted occasionally.

This (sub-)fund can apply swing pricing and has done so in the reporting period, as its (net) inflows and outflows exceeded the relevant threshold previously defined. No swing pricing adjustment was applied that would have had an impact on the (sub-)fund's net asset value per share on the last day of the reporting period.

Annual report
DWS Invest Credit Opportunities

Investment objective and performance in the reporting period

The sub-fund DWS Invest Credit Opportunities seeks to achieve sustained capital appreciation. To this end, it can invest worldwide in government bonds, bonds of quasi-government issuers (e.g., central banks, government authorities, local authorities and supranational institutions), asset-backed securities and asset-backed bonds, as well as in corporate bonds and bonds of issuers from emerging markets. Derivatives may be used for investment purposes. Aspects considered when selecting investments include financial strength and also a focus on environmental, social and corporate governance (ESG) factors.*

"BVI method" performance, i.e., excluding the initial sales charge.
Past performance is not a guide to future results.

As of: December 31, 2025

In the 2025 fiscal year, the sub-fund DWS Invest Credit Opportunities achieved an appreciation of 3.6% per share (FC share class, in euro; BVI method).

Investment policy in the reporting period

In line with its investment policy, the portfolio management invested predominantly in corporate bonds and financials (bonds issued by financial service providers). In terms of region, the sub-fund was globally positioned, although interest-bearing instruments from the United States and from Europe were the main focus of investment. Most of the issues held in the portfolio had investment-grade status as of the end of December 2025.

The capital market environment in 2025 was challenging. This was due in particular to geopolitical crises like the Russia-Ukraine war that has been ongoing since February 24, 2022, the escalated conflict in the Middle East, and the power struggle between the United States and China. Furthermore, the erratic swings in U.S. trade and tariff policy generated additional uncertainty in the capital markets. On the other hand, the easing of monetary policy, which had begun previously, continued during the reporting period. The European Central Bank (ECB) thus lowered the key interest rate in four steps from 3.00% p.a. to 2.00% p.a. (deposit facility) while the U.S. Federal Reserve gradually reduced its key interest rates by 0.75 percentage points to a target range of 3.50% p.a. – 3.75% p.a.

In the international bond markets, the yield curve in 2025 became increasingly steeper at the long end – although this was still moderate – following the previous normalization. In light of the more relaxed interest rate policy of the central banks, bond yields fell noticeably at the short end in some cases. Long-dated government bonds, on the other hand, came under pressure due, for example, to the rise in public deficits and, in some instances, had to accept price declines on a full-year basis, accompanied by rising bond yields. Corporate bonds, on the other hand, profited from their relatively high coupons as well as narrowing risk premiums.

However, due to the strong narrowing of risk premiums, above all in the high yield segment, the focus was on bonds from the investment-grade segment that the portfolio management viewed as having a more attractive opportunity/risk ratio. Nevertheless, the sub-fund also took advantage of interesting investment oppor-

tunities in the high-yield market, particularly in relation to the opportunistic investments whose performance is typically independent of the market.

In addition, the portfolio management increased the average duration in the portfolio somewhat, especially in the second half of 2025.

Overall, the sub-fund benefited from the growth in the yield of the corporate bonds and from the duration policy, whereas the hedging positions with respect to loans had a somewhat negative impact on the appreciation of the sub-fund DWS Invest Credit Opportunities.

DWS Invest Credit Opportunities

The following risk management disclosures (other information) are unaudited and are not covered by the audit opinion on the annual report.

Presentation of the maximum limit (according to CSSF circular 11/512)
14.14% of portfolio value (from January 1, 2025, through April 24, 2025)

Market risk exposure (value-at-risk) (according to CSSF circular 11/512)

Lowest market risk exposure	%	13.986
Highest market risk exposure	%	25.714
Average market risk exposure	%	17.491

The values-at-risk were calculated for the period from January 1, 2025, through April 24, 2025, using historical simulation with a 99% confidence level, a 10-day holding period and an effective historical observation period of one year. The risk in a reference portfolio that does not contain derivatives is used as the measurement benchmark. Market risk is the risk to the fund's assets arising from an unfavorable change in market prices. The Company determines the potential market risk by means of the **absolute value-at-risk approach** as defined in CSSF circular 11/512.

In the reporting period, the average leverage effect from the use of derivatives was 0.5, whereby the total of the nominal amounts of the derivatives in relation to the fund's assets was used for the calculation (sum-of-notional approach).

Composition of the reference portfolio (according to CSSF circular 11/512)
80% ICE BofA Euro High Yield BB Rated Index (HE10), 20% ICE BofA CCC & Lower Euro High Yield Index EUR (from April 25, 2025, through December 31, 2025)

Market risk exposure (value-at-risk) (according to CSSF circular 11/512)

Lowest market risk exposure	%	85.779
Highest market risk exposure	%	85.779
Average market risk exposure	%	106.634

The values-at-risk were calculated for the period from April 25, 2025, through December 31, 2025, using historical simulation with a 99% confidence level, a 10-day holding period and an effective historical observation period of one year. The risk in a reference portfolio that does not contain derivatives is used as the measurement benchmark. Market risk is the risk to the fund's assets arising from an unfavorable change in market prices. The Company determines the potential market risk by means of the **relative value-at-risk approach** as defined in CSSF circular 11/512.

In the reporting period, the average leverage effect from the use of derivatives was 0.4, whereby the total of the nominal amounts of the derivatives in relation to the fund's assets was used for the calculation (sum-of-notional approach).

The gross exposure generated via derivatives pursuant to point 40 a) of the "Guidelines on ETFs and other UCITS issues" of the European Securities and Markets Authority (ESMA) totaled EUR 27 821 876.69 as of the reporting date.

Market abbreviations

Futures exchanges
MS = Morgan Stanley Bank AG

Contracting parties for derivatives (with the exception of currency transactions)
BC = Barclays Bank Ireland PLC
BNP = BNP Paribas S.A.

Contracting parties for forward currency transactions
Barclays Bank Ireland PLC, BNP Paribas S.A., Citigroup Global Markets Europe AG, State Street Bank International GmbH and UBS AG.

Notes on valuation

Under the responsibility of the Board of Directors of the SICAV, the Management Company determines the net asset values per share and performs the valuation of the assets of the fund. The basic provision of price data and price validation are performed in accordance with the method introduced by the Board of Directors of the SICAV on the basis of the legal and regulatory requirements or the principles for valuation methods defined in the SICAV's prospectus.

If no trading prices are available, prices are determined with the aid of valuation models (derived market values) which are agreed between State Street Bank International GmbH, Luxembourg Branch, as external price service provider and the Management Company and which are based as far as possible on market parameters. This procedure is subject to an ongoing monitoring process. The plausibility of price information from third parties is checked through other pricing sources, model calculations or other suitable procedure.

Assets reported in this report are valued to a minor extent at derived market values.

The management fee / all-in fee rates in effect as of the reporting date for the investment fund units held in the securities portfolio are shown in parentheses. A plus sign means that a performance-based fee may also be charged. As the investment fund held units of other investment funds (target funds) in the reporting period, further costs, charges and fees may have been incurred at the level of these individual target funds.

Footnotes

* Floating interest rate.
** Some or all of these securities are lent.
*** Does not include positions with a negative balance, if such exist.

BVI total expense ratio (TER)

The total expense ratio for the share classes was:

Class CHF TFCH 0.73% p.a.,
Class FC100 0.28% p.a.,
Class LC 1.01% p.a.,
Class LDM 0.91%[2],
Class TFC 0.69% p.a.,
Class USD XCH 0.31% p.a.

Class FC 0.69% p.a.,
Class FD 0.70% p.a.,
Class LD 1.02% p.a.,
Class NC 1.21%[2],
Class TFD 0.69% p.a.,

The TER expresses total expenses and fees (excluding transaction costs) as a percentage of a fund's average net assets in relation to the respective share class within a fiscal year.

As well, the additional income from securities lending resulted in a performance-based fee of

Class CHF TFCH 0.009% p.a.,
Class FC100 0.005% p.a.,
Class LC 0.007% p.a.,
Class LDM 0.010%[2],
Class TFC 0.005% p.a.,
Class USD XCH 0.004% p.a.

Class FC 0.005% p.a.,
Class FD 0.005% p.a.,
Class LD 0.008% p.a.,
Class NC 0.004%[2],
Class TFD 0.005% p.a.,

[2] Annualization has not been performed for share classes launched during the year.

Transaction costs

The transaction costs paid in the reporting period amounted to EUR 7 947.00.

The transaction costs include all costs that were reported or settled separately for the account of the fund in the reporting period and are directly connected to the purchase or sale of assets. Any financial transaction taxes which may have been paid are included in the calculation.

Transactions processed for the account of the fund's assets via closely related companies (based on major holdings of the Deutsche Bank Group)

The share of transactions conducted for the account of the fund's assets via brokers that are closely related companies and persons (share of 5% and above), amounted to 21.10% of all transactions. The total volume was EUR 179 802 319.84.

DWS Invest Credit Opportunities

Swing pricing

Swing pricing is a mechanism that is intended to protect shareholders from the negative effects of trading costs arising from subscription and redemption activities.

Extensive subscriptions and redemptions within a (sub-)fund may lead to a dilution of the assets of this (sub-)fund, as the net asset value sometimes does not reflect all trading and other costs that are incurred when the portfolio manager must buy or sell securities in order to manage large (net) inflows or outflows in the (sub-)fund. In addition to these costs, substantial order volumes may lead to market prices that are considerably below or above the market prices that apply under normal circumstances.

To enhance the investor protection of existing shareholders, a swing pricing mechanism can be applied to compensate for trading costs and other expenses if the aforementioned cumulative (net) inflows or outflows should have a material impact on the (sub-)fund on a valuation date and exceed a predetermined threshold (partial swing pricing). This mechanism can be applied across all (sub-)funds. If swing pricing is introduced for a particular (sub-)fund, this will be disclosed in the special section of the sales prospectus.

The Management Company of the fund will predefine thresholds for the application of the swing pricing mechanism, based, among other things, on current market conditions, available market liquidity and estimated dilution costs. In accordance with these thresholds, the adjustment itself will be initiated automatically.

If the (net) inflows or outflows exceed the swing threshold, the net asset value is revised upward if the (sub-)fund sees large net inflows and is revised downward in the event of large net outflows. This adjustment is applied uniformly to all subscriptions and redemptions for the trading day in question. If a performance-based fee applies for the (sub-)fund, the calculation is based on the original net asset value.

The Management Company has established a swing pricing committee that determines the swing factors for each individual (sub-)fund. These swing factors indicate the extent of the net asset value adjustment. The swing pricing committee takes into account the following factors in particular:

– bid-ask spread (fixed-price element),
– impacts on the market (impacts of the transactions on the price),
– additional costs that are incurred as a result of trading activities for the investments.

The appropriateness of the applied swing factors, the operational decisions made in connection with the swing pricing (including the swing threshold), the extent of the adjustment, and the affected (sub-)funds are reviewed at regular intervals.

The amount of the swing pricing adjustment can therefore vary from one (sub-)fund to another and will not generally exceed 2% of the original net asset value per share.

The net asset value adjustment is available upon request from the Management Company. In a market environment with extreme illiquidity, the Management Company can, however, increase the swing price adjustment to more than 2% of the original net asset value. Such an increase will be announced on the Management Company's website: www.dws.com.

As the mechanism should only be applied if significant (net) inflows or outflows are expected and it does not apply for normal trading volumes, it is assumed that the net asset value will only be adjusted occasionally.

This (sub-)fund can apply swing pricing but has not done so in the reporting period, as its (net) inflows and outflows did not exceed the relevant threshold previously defined.

Annual report
DWS Invest Critical Technologies

(formerly: DWS Invest ESG Smart Industrial Technologies)

Investment objective and performance in the reporting period

The objective of the investment policy is to generate long-term capital appreciation. To this end, the sub-fund invests in equities of all market capitalizations, equity certificates, participation and dividend-right certificates, convertible bonds and equity warrants. At least two thirds of the net assets of the sub-fund are invested worldwide in equity securities of companies of all market capitalizations that carry out at least part of their economic activities in areas that the sub-fund management considers relevant in the context of "critical technologies". The sub-fund management defines "critical technologies" as companies with economic activities across the entire value chain of solutions in the following segments: robotics and progressive production, cybersecurity, artificial intelligence, semiconductors, energy, infrastructure, defense and aerospace, the quality of which is assessed by the sub-fund management via fundamental analysis.

In the fiscal year from the beginning of January through the end of December 2025, the sub-fund recorded an appreciation of 14.1% per share (LC share class; BVI method).

[2] In USD

"BVI method" performance, i.e., excluding the initial sales charge.
Past performance is not a guide to future results.

As of: December 31, 2025

Investment policy in the reporting period

On the one hand, the capital market environment in the fiscal year through the end of December 2025 was shaped by geopolitical risks like the ongoing Russia-Ukraine war, the escalated conflict in the Middle East, the power struggle between the United States and China, as well as the erratic swings in U.S. trade and tariff policy. On the other hand, the easing of monetary policy, which had begun previously, continued during the reporting period. The European Central Bank (ECB) thus lowered the key interest rate in four steps from 3.00% p.a. to 2.00% p.a. (deposit facility) while the U.S. Federal Reserve gradually reduced its key interest rates by 0.75 percentage points to a target range of 3.50% p.a. – 3.75% p.a.

Despite market uncertainty induced mainly by geopolitical factors, the international equity markets, as measured by the MSCI World, recorded appreciable price gains overall in 2025 amid sometimes considerable volatility. These gains were underpinned by the emerging easing of interest rates, increased investor confidence in artificial intelligence, as well as robust corporate profits. Among the markets in Western industrial countries, the DAX 40 in Germany posted significant gains, buoyed by factors such as the multi-billion-euro package of fiscal relief measures. The emerging markets, as measured by the MSCI Emerging Markets, were even able to outperform the industrial countries on a full-year basis through the end of 2025. However, the international stock exchanges were intermittently hit hard by the erratic swings in U.S. trade and tariff policy.

In the reporting period, the equities of Howmet Aerospace and GE Aerospace again made an above-average contribution to the sub-fund's performance, as they recorded strong profit growth due to the positive engine market. NVIDIA, Broadcom, Taiwan Semiconductor Manufacturing Company, Siemens Energy, Amphenol and other companies who benefit considerably from investment in data centers also made a particularly positive contribution.

In contrast, Saia and United Parcel Service equities, for example, made a below-average contribution to performance, as both suffered due to a weak transportation market. In addition, Recruit Holdings made a slightly negative contribution, as it was put under pressure by the weak labor market.

The strategy took on a new orientation as of April 25; since then it has focused on five clearly defined areas related to key technologies: defense and aerospace, cybersecurity, artificial intelligence and semiconductors, energy and infrastructure as well as robotics and progressive production. The focus on the defense sector in particular was strengthened considerably.

Other information – Not covered by the audit opinion on the annual report

Information on the environmental and/or social characteristics

This financial product qualified as a product in accordance with Article 6 of Regulation (EU) 2019/2088 on sustainability-related disclosures in the financial services sector ("SFDR").

The following is the disclosure in accordance with Article 7 of Regulation (EU) 2020/852 of June 18, 2020, on the establishment of a framework to facilitate sustainable investment: The investments underlying this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

The following disclosures are made for the financial product in accordance with Article 7(1) of Regulation (EU) 2019/2088 on sustainability-related disclosures in the financial services sector: The portfolio management did not consider principal adverse impacts on sustainability factors for this financial product, because (as stated above) no ESG and/or sustainable investment policies were pursued with the product.

The format used for complete dates in security names in the investment portfolio is "day month year".

The following risk management disclosures (other information) are unaudited and are not covered by the audit opinion on the annual report:

Composition of the reference portfolio (according to CSSF circular 11/512)
MSCI World Industrials NET EUR version Composite (from January 1, 2025, through April 24, 2025)

Market risk exposure (value-at-risk) (according to CSSF circular 11/512)

Lowest market risk exposure	%	97.020
Highest market risk exposure	%	128.972
Average market risk exposure	%	116.812

The values-at-risk were calculated for the period from January 1, 2025, through April 24, 2025, using historical simulation with a 99% confidence level, a 10-day holding period and an effective historical observation period of one year. The risk in a reference portfolio that does not contain derivatives is used as the measurement benchmark. Market risk is the risk to the fund's assets arising from an unfavorable change in market prices. The Company determines the potential market risk by means of the **relative value-at-risk approach** as defined in CSSF circular 11/512.

In the reporting period, the average leverage effect from the use of derivatives was 0.0, whereby the total of the nominal amounts of the derivatives in relation to the fund's assets was used for the calculation (sum-of-notional approach).

Composition of the reference portfolio (according to CSSF circular 11/512)
50% MSCI World Industrials Index Gross Return in EUR, 30% MSCI World Information Tech Index Net Return in EUR, 20% MSCI All Country World Index, in EUR (from April 25, 2025, through December 31, 2025)

Market risk exposure (value-at-risk) (according to CSSF circular 11/512)

Lowest market risk exposure	%	96.455
Highest market risk exposure	%	128.828
Average market risk exposure	%	108.394

The values-at-risk were calculated for the period from April 25, 2025, through December 31, 2025, using historical simulation with a 99% confidence level, a 10-day holding period and an effective historical observation period of one year. The risk in a reference portfolio that does not contain derivatives is used as the measurement benchmark. Market risk is the risk to the fund's assets arising from an unfavorable change in market prices. The Company determines the potential market risk by means of the **relative value-at-risk approach** as defined in CSSF circular 11/512.

In the reporting period, the average leverage effect from the use of derivatives was 0.0, whereby the total of the nominal amounts of the derivatives in relation to the fund's assets was used for the calculation (sum-of-notional approach).

The gross exposure generated via derivatives pursuant to point 40 a) of the "Guidelines on ETFs and other UCITS issues" of the European Securities and Markets Authority (ESMA) totaled EUR 0.00 as of the reporting date. Does not include any forward currency transactions entered into for currency hedging purposes at the level of the share classes.

Notes on valuation

Under the responsibility of the Board of Directors of the SICAV, the Management Company determines the net asset values per share and performs the valuation of the assets of the fund. The basic provision of price data and price validation are performed in accordance with the method introduced by the Board of Directors of the SICAV on the basis of the legal and regulatory requirements or the principles for valuation methods defined in the SICAV's prospectus.

If no trading prices are available, prices are determined with the aid of valuation models (derived market values) which are agreed between State Street Bank International GmbH, Luxembourg Branch, as external price service provider and the Management Company and which are based as far as possible on market parameters. This procedure is subject to an ongoing monitoring process. The plausibility of price information from third parties is checked through other pricing sources, model calculations or other suitable procedure.

Assets reported in this report are not valued at derived market values.

The management fee / all-in fee rates in effect as of the reporting date for the investment fund units held in the securities portfolio are shown in parentheses. A plus sign means that a performance-based fee may also be charged. As the investment fund held units of other investment funds (target funds) in the reporting period, further costs, charges and fees may have been incurred at the level of these individual target funds.

Footnote

* The prepaid placement fee is amortized over a period of three years (as specified in article 13 f "Placement Fee" section in the general section of the fund's management regulations).
** Does not include positions with a negative balance, if such exist.

BVI total expense ratio (TER)

The total expense ratio for the share classes was:

Class FC 0.93% p.a.,
Class LC 1.77% p.a.,
Class LD 1.72% p.a.,
Class NC 2.32% p.a.,
Class PFC 3.17% p.a.,
Class TFC 0.91% p.a.,
Class XC 0.22%[4],
Class USD LC 0.09%[4],
Class USD TFCH 0.93% p.a.

The TER expresses total expenses and fees (excluding transaction costs) as a percentage of a fund's average net assets in relation to the respective share class within a fiscal year.

[4] Annualization has not been performed for share classes launched during the year.

Transaction costs

The transaction costs paid in the reporting period amounted to EUR 108 106.62.

The transaction costs include all costs that were reported or settled separately for the account of the fund in the reporting period and are directly connected to the purchase or sale of assets. Any financial transaction taxes which may have been paid are included in the calculation.

Statement of changes in net assets 2025

I.	**Value of the fund's net assets at the beginning of the fiscal year**	**EUR**	**26 968 908.83**

Transactions processed for the account of the fund's assets via closely related companies (based on major holdings of the Deutsche Bank Group)

The share of transactions conducted for the account of the fund's assets via brokers that are closely related companies and persons (share of 5% and above), amounted to 0.00% of all transactions. The total volume was EUR 0.00.

Placement fee / dilution adjustment

In the reporting period, the fund paid a placement fee of 2.9% of the fund's net assets to the distributor. This fee was calculated on the subscription date. The placement fee serves in particular as compensation for distribution. The gross amount of the placement fee was paid in a single payment on the subscription date and simultaneously recognized in the fund's net assets as prepaid expenses. These are amortized on a daily basis over a period of three years from the date of subscription. The remaining position for prepaid expenses per share on each valuation date is calculated on a daily basis by multiplying the net assets of the fund by a factor. The relevant factor is determined through straight-line reduction of the placement fee by a certain percentage on a daily basis over three years from the subscription date. The prepaid expenses position fluctuates during the three years from the subscription date of the fund, since it depends on both the fund's net assets and the predetermined factor.

In addition, a dilution adjustment of up to 3% based on the gross redemption amount was charged for the benefit of the fund's net assets in the reporting period (to be paid by the shareholder).

Further details on the placement fee and the dilution adjustment can be found in the corresponding section of the fund's sales prospectus.

Annual report
DWS Invest CROCI Euro

Investment objective and performance in the reporting period

The objective of the investment policy is to achieve capital appreciation that exceeds the benchmark (MSCI EMU Value). To achieve this objective, at least 75% of the net assets of the sub-fund are invested in equities of issuers with their headquarters in a member state of the European Economic and Monetary Union (EMU) according to the CROCI methodology and the CROCI "Euro" investment strategy. This strategy selects the thirty equities with the lowest positive CROCI Economic Price Earnings Ratio ("CROCI Economic P/E") from an investment universe comprising equities of the largest companies in the euro area by market capitalization and for which CROCI Economic P/Es are calculated. Equities with low liquidity can also be excluded from selection. In addition, the investment strategy can use rules-based methods for reducing unnecessary recomposition in the portfolio to cut market impact and transaction costs. These methods are designed to ensure, for example, that replacing an existing equity from the investment strategy during recomposition is restricted to cases in which the CROCI Economic P/E is sufficiently higher than that of the proposed replacement equity. Consequently, it may be the case that an equity is not added to the portfolio during recomposition of a sub-fund even though it is one of the thirty equities with the lowest CROCI Economic P/E amongst the equities available for selection. Also, an equity may remain in the sub-fund although it is no longer one of the thirty equities with the lowest CROCI Economic P/E. These methods do not have any impact on the investment strategy that continues to hold approximately thirty components. Furthermore, with respect to the investment strategy, other factors may be considered, such as liquidity, transaction costs and, after reporting to the CROCI Investment and Valuation Group, market occurrences related to the permissible equities. The sub-fund manager may take into account risk limits when determining the implementation of the investment strategy. Aspects considered when selecting investments include financial strength and also a focus on environmental, social and corporate governance (ESG) criteria.

"BVI method" performance, i.e., excluding the initial sales charge.
Past performance is not a guide to future results.

As of: December 31, 2025

The capital market environment in the 2025 fiscal year was challenging. This was especially due to geopolitical crises like the Russia-Ukraine war that has been ongoing since February 24, 2022, the escalating conflict in the Middle East, and the intensifying power struggle between the United States and China. Furthermore, the abrupt changes of direction in U.S. trade and tariff policy caused additional uncertainty in the capital markets. On the other hand, the monetary easing that had already begun continued in the reporting period. The European Central Bank (ECB) thus lowered the key interest rate in four steps from 3.00% p.a. to 2.00% p.a. (deposit facility) while the U.S. Federal Reserve (Fed) gradually reduced its key interest rates by 0.75 percentage points to a target range of 3.50% p.a. – 3.75% p.a.

Despite the uncertainty on the markets, caused primarily by geopolitical factors, the international

equity markets recorded significant price gains overall in 2025 as measured by the MSCI World, against the backdrop of sometimes considerable volatility. These gains were boosted by the easing of interest rate pressure, improved investor confidence in artificial intelligence and solid corporate profits. Among the markets in the Western industrial countries, the DAX 40 in Germany made significant gains, buoyed by factors such as the tax relief package aimed at easing pressure on the economy that was worth several billion euros. On the basis of the entire year through the end of 2025, the emerging markets performed even better than the industrial countries, as measured by the MSCI Emerging Markets. The Chinese equity market was one of the most outstanding performers which continued to significantly recover. This development was boosted by the economic growth in China that was given impetus by expansionary macroeconomic policy. However, the international stock exchanges were hit very hard by the erratic changes of direction in U.S. trade and tariff policy.

In the fiscal year through December 31, 2025, DWS Invest CROCI Euro recorded an appreciation of 23.7% per share (LC share class; BVI method). Its benchmark, the MSCI EMU Value, recorded an increase of 36.4% in the same period (both percentages in euro terms).

Investment policy in the reporting period

The DWS Invest CROCI Euro strategy primarily determined stock selection based on economic valuation, with the sector and country allocation directly driven by the stock selection.

In terms of its sector allocation, the sub-fund was broadly diversified, with a particular investment focus on industrial names, such as Saint Gobain, Ryanair Holdings and Vinci. Another focus was the consumer staples sector with positions in Ahold Delhaize and Henkel AG. In addition, there was exposure to the utilities sector, with a position in Verbund. In terms of country allocation, the portfolio was generally broadly diversified. The sub-fund management's investment focus was on France and Germany.

The following risk management disclosures (other information) are unaudited and are not covered by the audit opinion on the annual report.

Composition of the reference portfolio (according to CSSF circular 11/512)
MSCI EMU Value Index Net EUR

Market risk exposure (value-at-risk) (according to CSSF circular 11/512)

Lowest market risk exposure	%	79.751
Highest market risk exposure	%	97.051
Average market risk exposure	%	91.523

The values-at-risk were calculated for the period from January 1, 2025, through December 31, 2025, using historical simulation with a 99% confidence level, a 10-day holding period and an effective historical observation period of one year. The risk in a reference portfolio that does not contain derivatives is used as the measurement benchmark. Market risk is the risk to the fund's assets arising from an unfavorable change in market prices. The Company determines the potential market risk by means of the **relative value-at-risk approach** as defined in CSSF circular 11/512.

In the reporting period, the average leverage effect from the use of derivatives was 0.0, whereby the total of the nominal amounts of the derivatives in relation to the fund's assets was used for the calculation (sum-of-notional approach).
The gross exposure generated via derivatives pursuant to point 40 a) of the "Guidelines on ETFs and other UCITS issues" of the European Securities and Markets Authority (ESMA) totaled EUR 57 914.07 as of the reporting date. Does not include any forward currency transactions entered into for currency hedging purposes at the level of the share classes.

Notes on valuation

Under the responsibility of the Board of Directors of the SICAV, the Management Company determines the net asset values per share and performs the valuation of the assets of the fund. The basic provision of price data and price validation are performed in accordance with the method introduced by the Board of Directors of the SICAV on the basis of the legal and regulatory requirements or the principles for valuation methods defined in the SICAV's prospectus.

If no trading prices are available, prices are determined with the aid of valuation models (derived market values) which are agreed between State Street Bank International GmbH, Luxembourg Branch, as external price service provider and the Management Company and which are based as far as possible on market parameters. This procedure is subject to an ongoing monitoring process. The plausibility of price information from third parties is checked through other pricing sources, model calculations or other suitable procedure.

Assets reported in this report are not valued at derived market values.

[1] This includes primarily income from the release of excess accruals in the amount of EUR 635 574.69.

BVI total expense ratio (TER)

The total expense ratio for the share classes was:

Class IC 0.58% p.a.,
Class LC 1.15% p.a.,
Class NC 2.15% p.a.,
Class TFD 0.62% p.a.,
Class USD TFCH 0.65% p.a.
Class IC50 0.04%[3],
Class LD 1.15% p.a.,
Class TFC 0.62% p.a.,
Class USD LCH 1.18% p.a.,

The TER expresses total expenses and fees (excluding transaction costs) as a percentage of a fund's average net assets in relation to the respective share class within a fiscal year.

[3] Annualization has not been performed for share classes liquidated during the year.

Transaction costs

The transaction costs paid in the reporting period amounted to EUR 129 885.87.

The transaction costs include all costs that were reported or settled separately for the account of the fund in the reporting period and are directly connected to the purchase or sale of assets. Any financial transaction taxes which may have been paid are included in the calculation.

Statement of changes in net assets 2025

I.	**Value of the fund's net assets at the beginning of the fiscal year**	**EUR**	**163 381 183.29**

Transactions processed for the account of the fund's assets via closely related companies (based on major holdings of the Deutsche Bank Group)

The share of transactions conducted for the account of the fund's assets via brokers that are closely related companies and persons (share of 5% and above), amounted to 0.00% of all transactions. The total volume was EUR 21.25.

Annual report
DWS Invest CROCI Global Dividends

Investment objective and performance in the reporting period

The objective of the investment policy is to achieve capital appreciation that exceeds the benchmark (MSCI World High Dividend Yield). In order to attain this, the sub-fund invests in large cap equities from industrial countries worldwide according to the CROCI methodology and the CROCI "Global Dividends" investment strategy. This strategy selects the 50 equities with the lowest positive CROCI Economic Price Earnings Ratio ("CROCI Economic P/E") from an investment universe comprising equities of the largest companies in industrial countries by market capitalization for which CROCI Economic P/Es are calculated and that also meet certain criteria for sustainable dividends. The sub-fund's approximately 50 equities are periodically reconstituted in accordance with the investment strategy's rules with the intention of equal weighting. Aspects considered when selecting investments include financial strength and also a focus on environmental, social and corporate governance (ESG) criteria.

DWS Invest CROCI Global Dividends

"BVI method" performance, i.e., excluding the initial sales charge.
Past performance is not a guide to future results.

As of: December 31, 2025

The capital market environment in the 2025 fiscal year was challenging. This was especially due to geopolitical crises like the Russia-Ukraine war that has been ongoing since February 24, 2022, the escalating conflict in the Middle East, and the intensifying power struggle between the United States and China. Furthermore, the abrupt changes of direction in U.S. trade and tariff policy caused additional uncertainty in the capital markets. On the other hand, the monetary easing that had already begun continued in the reporting period. The European Central Bank (ECB) thus lowered the key interest rate in four steps from 3.00% p.a. to 2.00% p.a. (deposit facility) while the U.S. Federal Reserve (Fed) gradually reduced its key interest rates by 0.75 percentage points to a target range of 3.50% p.a. – 3.75% p.a.

Despite the uncertainty on the markets, caused primarily by geopolitical factors, the international equity markets recorded significant price gains overall in 2025 as measured by the MSCI World, against the backdrop of sometimes considerable volatility. These gains were boosted by the easing of interest rate pressure, improved investor confidence in artificial intelligence and solid corporate profits. Among the markets in the Western industrial countries, the DAX 40 in Germany made significant gains, buoyed by factors such as the tax relief package aimed at easing pressure on the economy that was worth several billion euros. On the basis of the entire year through the end of 2025, the emerging markets performed even better than the industrial countries, as measured by the MSCI Emerging Markets. The Chinese equity market was one of the most outstanding performers which continued to significantly recover. This develop-

ment was boosted by the economic growth in China that was given impetus by expansionary macroeconomic policy. However, the international stock exchanges were hit very hard by the erratic changes of direction in U.S. trade and tariff policy.

In the fiscal year through December 31, 2025, DWS Invest CROCI Global Dividends recorded an appreciation of 17.0% per share (USD LC share class; BVI method). Its benchmark, the MSCI World High Dividend Yield, gained 19.6% in the same period (both percentages in U.S. dollars).

Investment policy in the reporting period

The DWS Invest CROCI Global Dividends strategy primarily determined stock selection based on economic valuation after excluding stocks that did not meet various dividend sustainability screens, with the sector allocation directly driven by the stock selection.

This resulted in broad diversification in terms of sectors. The top sectors by weighting were health care, consumer staples, industrials and energy. In terms of country allocation, the United States was the most heavily weighted with approximately 50% of total assets, followed by Japan and European countries.

DWS Invest CROCI Global Dividends

The following risk management disclosures (other information) are unaudited and are not covered by the audit opinion on the annual report.

Composition of the reference portfolio (according to CSSF circular 11/512)
MSCI World High Yield Dividend Index (Net)

Market risk exposure (value-at-risk) (according to CSSF circular 11/512)

Lowest market risk exposure	%	106.096
Highest market risk exposure	%	136.443
Average market risk exposure	%	121.921

The values-at-risk were calculated for the period from January 1, 2025, through December 31, 2025, using historical simulation with a 99% confidence level, a 10-day holding period and an effective historical observation period of one year. The risk in a reference portfolio that does not contain derivatives is used as the measurement benchmark. Market risk is the risk to the fund's assets arising from an unfavorable change in market prices. The Company determines the potential market risk by means of the **relative value-at-risk approach** as defined in CSSF circular 11/512.

In the reporting period, the average leverage effect from the use of derivatives was 0.0, whereby the total of the nominal amounts of the derivatives in relation to the fund's assets was used for the calculation (sum-of-notional approach).

The gross exposure generated via derivatives pursuant to point 40 a) of the "Guidelines on ETFs and other UCITS issues" of the European Securities and Markets Authority (ESMA) totaled USD 142 057.52 as of the reporting date.

Notes on valuation

Under the responsibility of the Board of Directors of the SICAV, the Management Company determines the net asset values per share and performs the valuation of the assets of the fund. The basic provision of price data and price validation are performed in accordance with the method introduced by the Board of Directors of the SICAV on the basis of the legal and regulatory requirements or the principles for valuation methods defined in the SICAV's prospectus.

If no trading prices are available, prices are determined with the aid of valuation models (derived market values) which are agreed between State Street Bank International GmbH, Luxembourg Branch, as external price service provider and the Management Company and which are based as far as possible on market parameters. This procedure is subject to an ongoing monitoring process. The plausibility of price information from third parties is checked through other pricing sources, model calculations or other suitable procedure.

Assets reported in this report are not valued at derived market values.

The management fee / all-in fee rates in effect as of the reporting date for the investment fund units held in the securities portfolio are shown in parentheses. A plus sign means that a performance-based fee may also be charged. As the investment fund held units of other investment funds (target funds) in the reporting period, further costs, charges and fees may have been incurred at the level of these individual target funds.

Footnotes

* The prepaid placement fee is amortized over a period of three years (as specified in article 13 f "Placement Fee" section in the general section of the fund's management regulations).

BVI total expense ratio (TER)

The total expense ratio for the share classes was:

Class IC 0.76% p.a.,
Class LC 1.55% p.a.,
Class NC 2.15% p.a.,
Class TFC 0.80% p.a.,
Class GBP ID 0.76% p.a.,
Class USD IC 0.76% p.a.,
Class USD LDQ 1.54% p.a.
Class ID 0.76% p.a.,
Class LD 1.55% p.a.,
Class PFC 2.54% p.a.,
Class GBP IC 0.76% p.a.,
Class GBP LC 1.55% p.a.,
Class USD LC 1.55% p.a.,

The TER expresses total expenses and fees (excluding transaction costs) as a percentage of a fund's average net assets in relation to the respective share class within a fiscal year.

Transaction costs

The transaction costs paid in the reporting period amounted to EUR 104 204.65.

The transaction costs include all costs that were reported or settled separately for the account of the fund in the reporting period and are directly connected to the purchase or sale of assets. Any financial transaction taxes which may have been paid are included in the calculation.

Statement of changes in net assets 2025

Transactions processed for the account of the fund's assets via closely related companies (based on major holdings of the Deutsche Bank Group)

The share of transactions conducted for the account of the fund's assets via brokers that are closely related companies and persons (share of 5% and above), amounted to 0.00% of all transactions. The total volume was USD 16.80.

Placement fee / dilution adjustment

In the reporting period, the fund paid a placement fee of 2.9% of the fund's net assets to the distributor. This fee was calculated on the subscription date. The placement fee serves in particular as compensation for distribution. The gross amount of the placement fee was paid in a single payment on the subscription date and simultaneously recognized in the fund's net assets as prepaid expenses. These are amortized on a daily basis over a period of three years from the date of subscription. The remaining position for prepaid expenses per share on each valuation date is calculated on a daily basis by multiplying the net assets of the fund by a factor. The relevant factor is determined through straight-line reduction of the placement fee by a certain percentage on a daily basis over three years from the subscription date. The prepaid expenses position fluctuates during the three years from the subscription date of the fund, since it depends on both the fund's net assets and the predetermined factor.

In addition, a dilution adjustment of up to 3% based on the gross redemption amount was charged for the benefit of the fund's net assets in the reporting period (to be paid by the shareholder).

Further details on the placement fee and the dilution adjustment can be found in the corresponding section of the fund's sales prospectus.

Annual report
DWS Invest CROCI Japan

Investment objective and performance in the reporting period

The objective of the investment policy is to achieve capital appreciation that exceeds the benchmark (MSCI Japan Value). The strategy selects equities with the lowest positive CROCI Economic Price Earnings Ratio ("CROCI Economic P/E") from an investment universe comprising equities of large Japanese companies by market capitalization and for which CROCI Economic P/Es are calculated. Equities with low liquidity can also be excluded from selection. If fewer than thirty equities have a positive CROCI Economic P/E, only those equities with a positive CROCI Economic P/E are added to the sub-fund. In addition, the investment strategy can use rules-based methods for reducing unnecessary recomposition in the portfolio to cut market impact and transaction costs. These methods are designed to ensure, for example, that replacing an existing equity from the investment strategy during recomposition is restricted to cases in which their CROCI Economic P/E is sufficiently higher than that of the proposed replacement equity. Consequently, it may be the case that an equity is not added to the portfolio during recomposition of a sub-fund even though it is one of the thirty equities with the lowest CROCI Economic P/E amongst the equities available for selection. Also, an equity may remain in the sub-fund although it is no longer one of the thirty equities with the lowest CROCI Economic P/E. These methods do not have any impact on the investment strategy that continues to hold approximately thirty components. Furthermore, with respect to the investment strategy, other factors may be considered, such as liquidity, transaction costs and, after the sub-fund has reported this to the CROCI Investment and Valuation Group, market occurrences related to the permissible equities. The sub-fund manager may take into account risk limits when determining the implementation of the investment strategy. The net assets of the sub-fund are periodically reconstituted in accordance with the investment strategy's rules (re-selecting the approximately thirty equities that the sub-fund will invest in) with the intention that each constituent equity is equally weighted. However, in order to minimize impacts on performance when trading the sub-fund's assets, the sub-fund manager may take necessary steps to reduce the costs related to trading and market impact, including effecting the recomposition in stages over a period of time. Consequently, the sub-fund may hold more or fewer than thirty different equities at certain times and may therefore not always be equally weighted. Aspects considered when selecting investments include financial strength and also a focus on environmental, social and corporate governance (ESG) criteria.

The capital market environment in the 2025 fiscal year was challenging. This was especially due to geopolitical crises like the Russia-Ukraine war that has been ongoing since February 24, 2022, the escalating conflict in the Middle East, and the intensifying power struggle between the

As of: December 31, 2025

United States and China. Furthermore, the abrupt changes of direction in U.S. trade and tariff policy caused additional uncertainty in the capital markets. On the other hand, the monetary easing that had already begun continued in the reporting period. The European Central Bank (ECB) thus lowered the key interest rate in four steps from 3.00% p.a. to 2.00% p.a. (deposit facility) while the U.S. Federal Reserve (Fed) gradually reduced its key interest rates by 0.75 percentage points to a target range of 3.50% p.a. – 3.75% p.a.

Despite the uncertainty on the markets, caused primarily by geopolitical factors, the international equity markets recorded significant price gains overall in 2025 as measured by the MSCI World, against the backdrop of sometimes considerable volatility. These gains were boosted by the easing of interest rate pressure, improved investor confidence in artificial intelligence and solid corporate profits. Among the markets in the Western industrial countries, the DAX 40 in Germany made significant gains, buoyed by factors such as the tax relief package aimed at easing pressure on the economy that was worth several billion euros. On the basis of the entire year through the end of 2025, the emerging markets performed even better than the industrial countries, as measured by the MSCI Emerging Markets. The Chinese equity market was one of the most outstanding performers which continued to significantly recover. This development was boosted by the economic growth in China that was given impetus by expansionary macroeconomic policy.

However, the international stock exchanges were hit very hard by the erratic changes of direction in U.S. trade and tariff policy.

In the fiscal year through December 31, 2025, DWS Invest CROCI Japan recorded an appreciation of 19.0% per share (JPY LC share class; BVI method). Its benchmark, the MSCI Japan Value, recorded an increase of 31.7% in the same period (both percentages in Japanese yen terms).

Investment policy in the reporting period

The DWS Invest CROCI Japan strategy primarily determined stock selection based on economic valuation, with the sector allocation directly driven by the stock selection.

In terms of its sector allocation, the sub-fund was broadly diversified, with a particular investment focus on industrials such as Mitsui OSK Lines, Ana Holdings and Daikin constituting 28% of portfolio assets. Another focus was on the health care sector, which made up approximately 20% of the portfolio assets with positions in Takeda, Shionogi and Astella Pharma, as well as on consumer discretionaries, consumer staples and basic materials.

The following risk management disclosures (other information) are unaudited and are not covered by the audit opinion on the annual report.

Composition of the reference portfolio (according to CSSF circular 11/512)
MSCI Japan Value NR Index in JPY

Market risk exposure (value-at-risk) (according to CSSF circular 11/512)

Lowest market risk exposure	%	81.302
Highest market risk exposure	%	99.176
Average market risk exposure	%	89.550

The values-at-risk were calculated for the period from January 1, 2025, through December 31, 2025, using historical simulation with a 99% confidence level, a 10-day holding period and an effective historical observation period of one year. The risk in a reference portfolio that does not contain derivatives is used as the measurement benchmark. Market risk is the risk to the fund's assets arising from an unfavorable change in market prices. The Company determines the potential market risk by means of the **relative value-at-risk approach** as defined in CSSF circular 11/512.

In the reporting period, the average leverage effect from the use of derivatives was 0.0, whereby the total of the nominal amounts of the derivatives in relation to the fund's assets was used for the calculation (sum-of-notional approach).

The gross exposure generated via derivatives pursuant to point 40 a) of the "Guidelines on ETFs and other UCITS issues" of the European Securities and Markets Authority (ESMA) totaled JPY 0.00 as of the reporting date. Does not include any forward currency transactions entered into for currency hedging purposes at the level of the share classes.

Notes on valuation

Under the responsibility of the Board of Directors of the SICAV, the Management Company determines the net asset values per share and performs the valuation of the assets of the fund. The basic provision of price data and price validation are performed in accordance with the method introduced by the Board of Directors of the SICAV on the basis of the legal and regulatory requirements or the principles for valuation methods defined in the SICAV's prospectus.

If no trading prices are available, prices are determined with the aid of valuation models (derived market values) which are agreed between State Street Bank International GmbH, Luxembourg Branch, as external price service provider and the Management Company and which are based as far as possible on market parameters. This procedure is subject to an ongoing monitoring process. The plausibility of price information from third parties is checked through other pricing sources, model calculations or other suitable procedure.

Assets reported in this report are not valued at derived market values.

DWS Invest CROCI Japan

Statement of income and expenses (incl. income adjustment)

for the period from January 1, 2025, through December 31, 2025

I.	**Income**

BVI total expense ratio (TER)

The total expense ratio for the share classes was:

Class ICH 0.61% p.a.,
Class LCH 1.48% p.a.,
Class TFC 0.62% p.a.,
Class JPY IC 0.58% p.a.,
Class JPY LC 1.15% p.a.,
Class USD ICH 0.61% p.a.,
Class LC 1.46% p.a.,
Class NC 2.15% p.a.,
Class TFD 0.62% p.a.,
Class JPY IC7500 0.41% p.a.,
Class JPY TFC 0.63% p.a.
Class USD TFC 0.62% p.a.

The TER expresses total expenses and fees (excluding transaction costs) as a percentage of a fund's average net assets in relation to the respective share class for the fiscal year.

Transaction costs

The transaction costs paid in the reporting period amounted to JPY 9 731 048.00.

The transaction costs include all costs that were reported or settled separately for the account of the fund in the reporting period and are directly connected to the purchase or sale of assets. Any financial transaction taxes which may have been paid are included in the calculation.

Statement of changes in net assets 2025

I.	**Value of the fund's net assets at the beginning of the fiscal year**	**JPY**	**26 949 116 335.00**
1.	Distribution for the previous year	JPY	-72 627 877.00
2.	Net outflows	JPY	-13 948 589 188.00
3.	Income adjustment	JPY	683 241 018.00
4.	Net investment income	JPY	176 974 628.00
5.	Realized gains/losses	JPY	2 370 898 793.00
6.	Net change in unrealized appreciation/depreciation	JPY	3 624 448.00
II.	**Value of the fund's net assets at the end of the fiscal year**	**JPY**	**16 162 638 157.00**

Summary of gains/losses 2025

Realized gains/losses (incl. income adjustment)		**JPY**	**2 370 898 793.00**

Transactions processed for the account of the fund's assets via closely related companies (based on major holdings of the Deutsche Bank Group)

The share of transactions conducted for the account of the fund's assets via brokers that are closely related companies and persons (share of 5% and above), amounted to 0.00% of all transactions. The total volume was JPY 0.00.

Annual report
DWS Invest CROCI Sectors Plus

Investment objective and performance in the reporting period

The objective of the investment policy is to achieve capital appreciation that exceeds the benchmark (MSCI World Value). To this end, the sub-fund invests in equities of large companies in the United States, Europe and Japan according to the CROCI methodology and the CROCI "Sectors Plus" strategy, which selects the ten equities with the lowest CROCI Economic Price Earnings Ratio ("CROCI Economic P/E") from each of the three sectors with the lowest median CROCI Economic P/Es. The sectors eligible for selection are: communication services, consumer discretionaries, consumer staples, health care, information technology, industrials, basic materials, utilities and energy. The sub-fund's approximately 30 shares are periodically reconstituted in accordance with the investment strategy's rules with the intention of equal weighting. Aspects considered when selecting investments include financial strength and also a focus on environmental, social and corporate governance (ESG) criteria.

"BVI method" performance, i.e., excluding the initial sales charge.
Past performance is not a guide to future results.

As of: December 31, 2025

The capital market environment in the 2025 fiscal year was challenging. This was especially due to geopolitical crises like the Russia-Ukraine war that has been ongoing since February 24, 2022, the escalating conflict in the Middle East, and the intensifying power struggle between the United States and China. Furthermore, the abrupt changes of direction in U.S. trade and tariff policy caused additional uncertainty in the capital markets. On the other hand, the monetary easing that had already begun continued in the reporting period. The European Central Bank (ECB) thus lowered the key interest rate in four steps from 3.00% p.a. to 2.00% p.a. (deposit facility) while the U.S. Federal Reserve (Fed) gradually reduced its key interest rates by 0.75 percentage points to a target range of 3.50% p.a. – 3.75% p.a.

Despite the uncertainty on the markets, caused primarily by geopolitical factors, the international equity markets recorded significant price gains overall in 2025 as measured by the MSCI World, against the backdrop of sometimes considerable volatility. These gains were boosted by the easing of interest rate pressure, improved investor confidence in artificial intelligence and solid corporate profits. Among the markets in the Western industrial countries, the DAX 40 in Germany made significant gains, buoyed by factors such as the tax relief package aimed at easing pressure on the economy

that was worth several billion euros. On the basis of the entire year through the end of 2025, the emerging markets performed even better than the industrial countries, as measured by the MSCI Emerging Markets. The Chinese equity market was one of the most outstanding performers which continued to significantly recover. This development was boosted by the economic growth in China that was given impetus by expansionary macroeconomic policy. However, the international stock exchanges were hit very hard by the erratic changes of direction in U.S. trade and tariff policy.

In the fiscal year through December 31, 2025, DWS Invest CROCI Sectors Plus recorded an appreciation of 3.3% per share (LC share class; BVI method). Its benchmark, the MSCI World Value, recorded an increase of 7.5% in the same period (both percentages in euro terms).

Investment policy in the reporting period

The DWS Invest CROCI Sectors Plus strategy initially determined the three best sectors based on economic valuation and then selected the ten best stocks from each of the chosen sectors on the same basis.

The sub-fund's three most recent sectors for investment were consumer staples, utilities and energy. This resulted in a wide country allocation focused mostly on the United States with around 60% of portfolio assets, followed by France and Japan with roughly 10% each.

DWS Invest CROCI Sectors Plus

The following risk management disclosures (other information) are unaudited and are not covered by the audit opinion on the annual report.

Composition of the reference portfolio (according to CSSF circular 11/512)
MSCI World Value (Net) EUR Index

Market risk exposure (value-at-risk) (according to CSSF circular 11/512)

Lowest market risk exposure	%	74.462
Highest market risk exposure	%	96.935
Average market risk exposure	%	83.715

The values-at-risk were calculated for the period from January 1, 2025, through December 31, 2025, using historical simulation with a 99% confidence level, a 10-day holding period and an effective historical observation period of one year. The risk in a reference portfolio that does not contain derivatives is used as the measurement benchmark. Market risk is the risk to the fund's assets arising from an unfavorable change in market prices. The Company determines the potential market risk by means of the **relative value-at-risk approach** as defined in CSSF circular 11/512.

In the reporting period, the average leverage effect from the use of derivatives was 0.0, whereby the total of the nominal amounts of the derivatives in relation to the fund's assets was used for the calculation (sum-of-notional approach).

The gross exposure generated via derivatives pursuant to point 40 a) of the "Guidelines on ETFs and other UCITS issues" of the European Securities and Markets Authority (ESMA) totaled EUR 0.00 as of the reporting date. Does not include any forward currency transactions entered into for currency hedging purposes at the level of the share classes.

Market abbreviations

Contracting parties for forward currency transactions
Barclays Bank Ireland PLC, Citigroup Global Markets Europe AG, Commerzbank AG, Crédit Agricole CIB, HSBC Continental Europe, Morgan Stanley Europe SE, Royal Bank of Canada (UK) and UBS AG.

Notes on valuation

Under the responsibility of the Board of Directors of the SICAV, the Management Company determines the net asset values per share and performs the valuation of the assets of the fund. The basic provision of price data and price validation are performed in accordance with the method introduced by the Board of Directors of the SICAV on the basis of the legal and regulatory requirements or the principles for valuation methods defined in the SICAV's prospectus.

If no trading prices are available, prices are determined with the aid of valuation models (derived market values) which are agreed between State Street Bank International GmbH, Luxembourg Branch, as external price service provider and the Management Company and which are based as far as possible on market parameters. This procedure is subject to an ongoing monitoring process. The plausibility of price information from third parties is checked through other pricing sources, model calculations or other suitable procedure.

Assets reported in this report are not valued at derived market values.

Footnotes

* The prepaid placement fee is amortized over a period of three years (as specified in article 13 f "Placement Fee" section in the general section of the fund's management regulations).
** Does not include positions with a negative balance, if such exist.

BVI total expense ratio (TER)

The total expense ratio for the share classes was:

Class AUD ID 0.85% p.a.,
Class FCH (P) 0.92% p.a.,
Class LC 1.49% p.a.,
Class LDH (P) 1.52% p.a.,
Class PFC 2.72% p.a.,
Class TFD 0.79%[4],
Class JPY IC 0.83% p.a.,
Class NOK LCH 1.52% p.a.,
Class USD LC 1.48% p.a.
Class FC 0.89% p.a.,
Class IC 0.85% p.a.,
Class LCH (P) 1.52% p.a.,
Class NC 2.34% p.a.,
Class TFC 0.89% p.a.,
Class XC 0.51% p.a.,
Class JPY IC7500 0.59% p.a.,
Class USD IC 0.84% p.a.,

The TER expresses total expenses and fees (excluding transaction costs) as a percentage of a fund's average net assets in relation to the respective share class within a fiscal year.

[4] Annualization has not been performed for share classes launched during the year.

Transaction costs

The transaction costs paid in the reporting period amounted to EUR 418 314.10.

The transaction costs include all costs that were reported or settled separately for the account of the fund in the reporting period and are directly connected to the purchase or sale of assets. Any financial transaction taxes which may have been paid are included in the calculation.

Statement of changes in net assets 2025

Transactions processed for the account of the fund's assets via closely related companies (based on major holdings of the Deutsche Bank Group)

The share of transactions conducted for the account of the fund's assets via brokers that are closely related companies and persons (share of 5% and above), amounted to 0.00% of all transactions. The total volume was EUR 0.00.

Placement fee / dilution adjustment

In the reporting period, the fund paid a placement fee of 2.9% of the fund's net assets to the distributor. This fee was calculated on the subscription date. This placement fee serves in particular as compensation for distribution. The gross amount of the placement fee was paid in a single payment on the subscription date and simultaneously recognized in the fund's net assets as prepaid expenses. These are amortized on a daily basis over a period of three years from the date of subscription. The remaining position for prepaid expenses per share on each valuation date is calculated on a daily basis by multiplying the net assets of the fund by a factor. The relevant factor is determined through straight-line reduction of the placement fee by a certain percentage on a daily basis over three years from the subscription date. The prepaid expenses position fluctuates during the three years from the subscription date of the fund, since it depends on both the fund's net assets and the predetermined factor.

In addition, a dilution adjustment of up to 3% based on the gross redemption amount was charged for the benefit of the fund's net assets in the reporting period (to be paid by the shareholder).

Further details on the placement fee and the dilution adjustment can be found in the corresponding section of the fund's sales prospectus.

Annual report
DWS Invest CROCI US

Investment objective and performance in the reporting period

The objective of the investment policy is to achieve capital appreciation that exceeds the benchmark (MSCI USA Value). In order to attain this, the sub-fund invests in large cap U.S. equities according to the CROCI methodology and the CROCI "US" investment strategy. This strategy selects the forty equities with the lowest positive CROCI Economic Price Earnings Ratio ("CROCI Economic P/E") from an investment universe comprising equities of the largest companies from the United States by market capitalization and for which CROCI Economic P/Es are calculated. Equities with low liquidity can also be excluded from selection. The sub-fund's assets are periodically reconstituted in accordance with the investment strategy's rules (re-selecting the approximately forty selected shares that the fund will invest in) with the intention that each constituent share is equally weighted. In order to minimize impacts on performance when trading the sub-fund's assets, the sub-fund manager may take necessary steps to reduce the costs related to trading and market impact, including effecting the recomposition in stages over a period of time. Aspects considered when selecting investments include financial strength and also a focus on environmental, social and corporate governance (ESG) criteria.

"BVI method" performance, i.e., excluding the initial sales charge.
Past performance is not a guide to future results.

As of: December 31, 2025

The capital market environment in the 2025 fiscal year was challenging. This was especially due to geopolitical crises like the Russia-Ukraine war that has been ongoing since February 24, 2022, the escalating conflict in the Middle East, and the intensifying power struggle between the United States and China. Furthermore, the abrupt changes of direction in U.S. trade and tariff policy caused additional uncertainty in the capital markets. On the other hand, the monetary easing that had already begun continued in the reporting period. The European Central Bank (ECB) thus lowered the key interest rate in four steps from 3.00% p.a. to 2.00% p.a. (deposit facility) while the U.S. Federal Reserve (Fed) gradually reduced its key interest rates by 0.75 percentage points to a target range of 3.50% p.a. – 3.75% p.a.

Despite the uncertainty on the markets, caused primarily by geopolitical factors, the international equity markets recorded significant price gains overall in 2025 as measured by the MSCI World, against the backdrop of sometimes considerable volatility. These gains were boosted by the easing of interest rate pressure, improved investor confidence in artificial intelligence and solid corporate profits. Among the markets in the Western industrial countries, the DAX 40 in Germany made significant gains, buoyed by factors such as the tax relief package aimed at easing pressure on the economy that was worth several billion euros. On the basis of the entire year through the end of 2025, the emerging markets performed even better than the industrial countries, as measured by the MSCI Emerging Markets. The Chinese equity market was one of the most outstanding performers which continued to significantly recover. This development was boosted by the economic growth in China that was given impetus by expansionary macroeconomic policy. However, the international stock exchanges were hit very hard by the erratic changes of direction in U.S. trade and tariff policy.

In the fiscal year through December 31, 2025, DWS Invest CROCI US recorded an appreciation of 10.2% per share (USD LC share class; BVI method). Its benchmark, the MSCI USA Value, gained 14.1% in the same period (both percentages in U.S. dollar terms).

Investment policy in the reporting period

The DWS Invest CROCI US strategy primarily determined stock selection based on economic valuation, with the sector allocation directly driven by the stock selection.

Within broad sector diversification, the health care sector was heavily weighted due to numerous individual stock investments in the sector, constituting of around 30% of portfolio assets. The sub-fund management also focused on consumer staples, financials and information technology.

The following risk management disclosures (other information) are unaudited and are not covered by the audit opinion on the annual report.

Composition of the reference portfolio (according to CSSF circular 11/512)
MSCI US Value (Large & Mid Cap) Index

Market risk exposure (value-at-risk) (according to CSSF circular 11/512)

Lowest market risk exposure	%	103.913
Highest market risk exposure	%	155.740
Average market risk exposure	%	130.601

The values-at-risk were calculated for the period from January 1, 2025, through December 31, 2025, using historical simulation with a 99% confidence level, a 10-day holding period and an effective historical observation period of one year. The risk in a reference portfolio that does not contain derivatives is used as the measurement benchmark. Market risk is the risk to the fund's assets arising from an unfavorable change in market prices. The Company determines the potential market risk by means of the **relative value-at-risk approach** as defined in CSSF circular 11/512.

In the reporting period, the average leverage effect from the use of derivatives was 0.0, whereby the total of the nominal amounts of the derivatives in relation to the fund's assets was used for the calculation (sum-of-notional approach).

The gross exposure generated via derivatives pursuant to point 40 a) of the "Guidelines on ETFs and other UCITS issues" of the European Securities and Markets Authority (ESMA) totaled USD 0.00 as of the reporting date. Does not include any forward currency transactions entered into for currency hedging purposes at the level of the share classes.

Notes on valuation

Under the responsibility of the Board of Directors of the SICAV, the Management Company determines the net asset values per share and performs the valuation of the assets of the fund. The basic provision of price data and price validation are performed in accordance with the method introduced by the Board of Directors of the SICAV on the basis of the legal and regulatory requirements or the principles for valuation methods defined in the SICAV's prospectus.

If no trading prices are available, prices are determined with the aid of valuation models (derived market values) which are agreed between State Street Bank International GmbH, Luxembourg Branch, as external price service provider and the Management Company and which are based as far as possible on market parameters. This procedure is subject to an ongoing monitoring process. The plausibility of price information from third parties is checked through other pricing sources, model calculations or other suitable procedure.

Assets reported in this report are not valued at derived market values.

The management fee / all-in fee rates in effect as of the reporting date for the investment fund units held in the securities portfolio are shown in parentheses. A plus sign means that a performance-based fee may also be charged. As the investment fund held units of other investment funds (target funds) in the reporting period, further costs, charges and fees may have been incurred at the level of these individual target funds.

BVI total expense ratio (TER)

The total expense ratio for the share classes was:

Class IC 0.58% p.a.,
Class LC 1.12% p.a.,
Class TFC 0.62% p.a.,
Class USD LC 1.12% p.a.,
Class ICH 0.61% p.a.,
Class LCH 1.45% p.a.,
Class USD IC 0.58% p.a.,
Class USD TFC 0.62% p.a.

The TER expresses total expenses and fees (excluding transaction costs) as a percentage of a fund's average net assets in relation to the respective share class within the fiscal year.

Transaction costs

The transaction costs paid in the reporting period amounted to EUR 48 587.96.

The transaction costs include all costs that were reported or settled separately for the account of the fund in the reporting period and are directly connected to the purchase or sale of assets. Any financial transaction taxes which may have been paid are included in the calculation.

The share of transactions conducted for the account of the fund's assets via brokers that are closely related companies and persons (share of 5% and above), amounted to 0.00% of all transactions. The total volume was USD 0.00.

Annual report
DWS Invest CROCI US Dividends

Investment objective and performance in the reporting period

The objective of the investment policy is to achieve capital appreciation that exceeds the benchmark (MSCI USA High Dividend Yield). To achieve this objective, the sub-fund invests in large cap U.S. equities according to the CROCI methodology and the CROCI "US Dividends" investment strategy. This strategy selects the 40 equities with the lowest positive CROCI Economic Price Earnings Ratio ("CROCI Economic P/E") from an investment universe comprising equities of the largest companies in the United States by market capitalization for which CROCI Economic P/Es are calculated and that also meet certain criteria for sustainable dividends. The sub-fund's approximately 40 equities are periodically reconstituted in accordance with the investment strategy's rules (re-selecting the approximately 40 selected equities that the sub-fund will invest in) with the intention that each constituent equity is equally weighted. Aspects considered when selecting investments include financial strength and also a focus on environmental, social and corporate governance (ESG) criteria.

"BVI method" performance, i.e., excluding the initial sales charge.
Past performance is not a guide to future results.

As of: December 31, 2025

The capital market environment in the 2025 fiscal year was challenging. This was especially due to geopolitical crises like the Russia-Ukraine war that has been ongoing since February 24, 2022, the escalating conflict in the Middle East, and the intensifying power struggle between the United States and China. Furthermore, the abrupt changes of direction in U.S. trade and tariff policy caused additional uncertainty in the capital markets. On the other hand, the monetary easing that had already begun continued in the reporting period. The European Central Bank (ECB) thus lowered the key interest rate in four steps from 3.00% p.a. to 2.00% p.a. (deposit facility) while the U.S. Federal Reserve (Fed) gradually reduced its key interest rates by 0.75 percentage points to a target range of 3.50% p.a. – 3.75% p.a.

Despite the uncertainty on the markets, caused primarily by geopolitical factors, the international equity markets recorded significant price gains overall in 2025 as measured by the MSCI World, against the backdrop of sometimes considerable volatility. These gains were boosted by the easing of interest rate pressure, improved investor confidence in artificial intelligence and solid corporate profits. Among the markets in the Western industrial countries, the DAX 40 in Germany made significant gains, buoyed by factors such as the tax relief package aimed at easing pressure on the economy that was worth several billion euros. On the basis of the entire year through the end of 2025, the emerging markets performed even better than the industrial countries, as measured by the MSCI Emerging Markets. The Chinese equity market was one of the most outstanding performers which continued to significantly recover. This development was boosted by the economic growth in China that was given impetus by expansionary macroeconomic policy. However, the international stock exchanges were hit very hard by the erratic changes of direction in U.S. trade and tariff policy.

In the fiscal year through December 31, 2025, DWS Invest CROCI US Dividends recorded an appreciation of 5.5% per share (USD LC share class; BVI method). Its benchmark, the MSCI USA High Dividend Yield, gained 12.1% in the same period (both percentages in U.S. dollars).

Investment policy in the reporting period

The DWS Invest CROCI US Dividends strategy primarily determined stock selection based on economic valuation after excluding stocks that did not meet various dividend sustainability screens, with the sector allocation directly driven by the stock selection.

In terms of sector allocation, the sub-fund was broadly positioned. The management considered the most interesting securities with regard to dividend sustainability to be in the consumer staples (General Mills, Kraft), health care (Pfizer, Bristol-Myers, Merck), energy (EOG Resources, Oneok), basic materials (PPG and Amcor) and information technology (HP, Amdocs) sectors.

Other information – Not covered by the audit opinion on the annual report

Information on the environmental and/or social characteristics

This product reported in accordance with Article 8(1) of Regulation (EU) 2019/2088 on sustainability-related disclosures in the financial services sector ("SFDR").

Presentation and content requirements for periodic reports for financial products as referred to in Article 8(1) of Regulation (EU) 2019/2088 (SFDR) and in Article 6 of Regulation (EU) 2020/852 (Taxonomy) are available below.

The format used for complete dates in security names in the investment portfolio is "day month year".

The following risk management disclosures (other information) are unaudited and are not covered by the audit opinion on the annual report.

Composition of the reference portfolio (according to CSSF circular 11/512)
MSCI US Investible High Yield (Net)

Market risk exposure (value-at-risk) (according to CSSF circular 11/512)

Lowest market risk exposure	%	105.746
Highest market risk exposure	%	148.699
Average market risk exposure	%	135.728

The values-at-risk were calculated for the period from January 1, 2025, through December 31, 2025, using historical simulation with a 99% confidence level, a 10-day holding period and an effective historical observation period of one year. The risk in a reference portfolio that does not contain derivatives is used as the measurement benchmark. Market risk is the risk to the fund's assets arising from an unfavorable change in market prices. The Company determines the potential market risk by means of the **relative value-at-risk approach** as defined in CSSF circular 11/512.

In the reporting period, the average leverage effect from the use of derivatives was 0.0, whereby the total of the nominal amounts of the derivatives in relation to the fund's assets was used for the calculation (sum-of-notional approach).

The gross exposure generated via derivatives pursuant to point 40 a) of the "Guidelines on ETFs and other UCITS issues" of the European Securities and Markets Authority (ESMA) totaled USD 0.00 as of the reporting date.

Notes on valuation

Under the responsibility of the Board of Directors of the SICAV, the Management Company determines the net asset values per share and performs the valuation of the assets of the fund. The basic provision of price data and price validation are performed in accordance with the method introduced by the Board of Directors of the SICAV on the basis of the legal and regulatory requirements or the principles for valuation methods defined in the SICAV's prospectus.

If no trading prices are available, prices are determined with the aid of valuation models (derived market values) which are agreed between State Street Bank International GmbH, Luxembourg Branch, as external price service provider and the Management Company and which are based as far as possible on market parameters. This procedure is subject to an ongoing monitoring process. The plausibility of price information from third parties is checked through other pricing sources, model calculations or other suitable procedure.

Assets reported in this report are not valued at derived market values.

The management fee / all-in fee rates in effect as of the reporting date for the investment fund units held in the securities portfolio are shown in parentheses. A plus sign means that a performance-based fee may also be charged. As the investment fund held units of other investment funds (target funds) in the reporting period, further costs, charges and fees may have been incurred at the level of these individual target funds.

BVI total expense ratio (TER)

The total expense ratio for the share classes was:

Class LC 1.15% p.a.,	Class NC 2.18% p.a.,
Class TFC 0.62% p.a.,	Class TFD 0.63% p.a.,
Class USD IC 0.58% p.a.,	Class USD IC50 0.41% p.a.,
Class USD ID 0.59% p.a.,	Class USD LC 1.15% p.a.,
Class USD LD 1.15% p.a.,	Class USD TFC 0.62% p.a.

The TER expresses total expenses and fees (excluding transaction costs) as a percentage of a fund's average net assets in relation to the respective share class within a fiscal year.

Transaction costs

The transaction costs paid in the reporting period amounted to USD 53 503.08.

The transaction costs include all costs that were reported or settled separately for the account of the fund in the reporting period and are directly connected to the purchase or sale of assets. Any financial transaction taxes which may have been paid are included in the calculation.

Transactions processed for the account of the fund's assets via closely related companies (based on major holdings of the Deutsche Bank Group)

The share of transactions conducted for the account of the fund's assets via brokers that are closely related companies and persons (share of 5% and above), amounted to 0.00% of all transactions. The total volume was USD 0.00.

Annual report
DWS Invest CROCI World Value

Investment objective and performance in the reporting period

The objective of the investment policy is to achieve capital appreciation that exceeds the benchmark (MSCI World Value). In order to attain this, the sub-fund invests in large cap equities from industrial countries worldwide according to the CROCI methodology and the CROCI "World Value" investment strategy. This strategy selects equities with the lowest positive CROCI Economic Price Earnings Ratio ("CROCI Economic P/E") from an investment universe comprising equities of the largest companies from industrial countries worldwide by market capitalization and for which CROCI Economic P/Es are calculated. The investment strategy aims to achieve balanced specific regional weightings and also limits exposure to a single economic sector to no more than 25%. Equities with low liquidity can also be excluded from selection. The sub-fund's assets are periodically reconstituted in accordance with the investment strategy's rules with the intention that each constituent share is equally weighted. In order to minimize impacts on performance when trading the sub-fund's assets, the sub-fund manager may take necessary steps to reduce the costs related to trading and market impact, including effecting the recomposition in stages over a period of time. Aspects considered when selecting investments include financial strength and also a focus on environmental, social and corporate governance (ESG) criteria.

[2] In USD

"BVI method" performance, i.e., excluding the initial sales charge.
Past performance is not a guide to future results.

As of: December 31, 2025

The capital market environment in the 2025 fiscal year was challenging. This was especially due to geopolitical crises like the Russia-Ukraine war that has been ongoing since February 24, 2022, the escalating conflict in the Middle East, and the intensifying power struggle between the United States and China. Furthermore, the abrupt changes of direction in U.S. trade and tariff policy caused additional uncertainty in the capital markets. On the other hand, the monetary easing that had already begun continued in the reporting period. The European Central Bank (ECB) thus lowered the key interest rate in four steps from 3.00% p.a. to 2.00% p.a. (deposit facility) while the U.S. Federal Reserve (Fed) gradually reduced its key interest rates by 0.75 percentage points to a target range of 3.50% p.a. – 3.75% p.a.

Despite the uncertainty on the markets, caused primarily by geopolitical factors, the international equity markets recorded significant price gains overall in 2025 as measured by the MSCI World, against the backdrop of sometimes considerable volatility. These gains were boosted by the easing of interest rate pressure, improved investor confidence in artificial intelligence and solid corporate profits. Among the markets in the Western industrial countries, the DAX 40 in Germany made significant gains, buoyed by factors such as the tax relief package aimed at easing pressure on the economy that was worth several billion euros. On the basis of the entire year through the end of 2025, the emerging markets performed even better than the industrial countries, as measured by the MSCI Emerging Markets. The Chinese equity market was one of the most outstanding performers which continued to significantly recover. This development was boosted by the economic growth in China that was given impetus by expansionary macroeconomic policy. However, the international stock exchanges were hit very hard by

the erratic changes of direction in U.S. trade and tariff policy.

In the fiscal year through December 31, 2025, DWS Invest CROCI World Value recorded an appreciation of 4.1% per share (LC share class; BVI method). Its benchmark, the MSCI World Value, recorded an increase of 7.5% in the same period (both percentages in euro terms).

Investment policy in the reporting period

The DWS Invest CROCI World Value strategy primarily determined stock selection based on economic valuation subject to regional and sector constraints, with the sector allocation directly driven by the stock selection.

In terms of its sector allocation, the sub-fund was broadly diversified, with a particular investment focus on the health care, financials and industrials sectors. There was also an emphasis on consumer staples, information technology and consumer discretionaries. In terms of country allocation, the portfolio was generally broadly diversified. However, the sub-fund management's investment focus was on the United States, most recently with around 75% of portfolio assets, followed by Japan and European countries.

The following risk management disclosures (other information) are unaudited and are not covered by the audit opinion on the annual report.

Composition of the reference portfolio (according to CSSF circular 11/512)
MSCI World Value (Net) EUR Index

Market risk exposure (value-at-risk) (according to CSSF circular 11/512)

Lowest market risk exposure	%	85.123
Highest market risk exposure	%	113.614
Average market risk exposure	%	98.387

The values-at-risk were calculated for the period from January 1, 2025, through December 31, 2025, using historical simulation with a 99% confidence level, a 10-day holding period and an effective historical observation period of one year. The risk in a reference portfolio that does not contain derivatives is used as the measurement benchmark. Market risk is the risk to the fund's assets arising from an unfavorable change in market prices. The Company determines the potential market risk by means of the **relative value-at-risk approach** as defined in CSSF circular 11/512.

In the reporting period, the average leverage effect from the use of derivatives was 0.0, whereby the total of the nominal amounts of the derivatives in relation to the fund's assets was used for the calculation (sum-of-notional approach).

The gross exposure generated via derivatives pursuant to point 40 a) of the "Guidelines on ETFs and other UCITS issues" of the European Securities and Markets Authority (ESMA) totaled EUR 120 956.63 as of the reporting date.

Notes on valuation

Under the responsibility of the Board of Directors of the SICAV, the Management Company determines the net asset values per share and performs the valuation of the assets of the fund. The basic provision of price data and price validation are performed in accordance with the method introduced by the Board of Directors of the SICAV on the basis of the legal and regulatory requirements or the principles for valuation methods defined in the SICAV's prospectus.

If no trading prices are available, prices are determined with the aid of valuation models (derived market values) which are agreed between State Street Bank International GmbH, Luxembourg Branch, as external price service provider and the Management Company and which are based as far as possible on market parameters. This procedure is subject to an ongoing monitoring process. The plausibility of price information from third parties is checked through other pricing sources, model calculations or other suitable procedure.

Assets reported in this report are not valued at derived market values.

The management fee / all-in fee rates in effect as of the reporting date for the investment fund units held in the securities portfolio are shown in parentheses. A plus sign means that a performance-based fee may also be charged. As the investment fund held units of other investment funds (target funds) in the reporting period, further costs, charges and fees may have been incurred at the level of these individual target funds.

3. Deduction for foreign withholding tax		EUR	-355 229.86
4. Other income		EUR	103.11
Total income		**EUR**	**1 817 107.68**
II. Expenses			
1. Management fee		EUR	-792 077.86
thereof:			
Basic management fee	EUR -779 238.29		
Income from expense cap	EUR 3 696.33		
Administration fee	EUR -16 535.90		
2. Depositary fee		EUR	-2 868.54
3. Auditing, legal and publication costs		EUR	-15 349.87
4. Taxe d'abonnement		EUR	-27 622.77
5. Other expenses		EUR	-48 021.63
Total expenses		**EUR**	**-885 940.67**
III. Net investment income		**EUR**	**931 167.01**
IV. Sale transactions			
Realized gains/losses		EUR	2 787 381.10
Capital gains and losses		**EUR**	**2 787 381.10**
V. Net gain/loss for the fiscal year		**EUR**	**3 718 548.11**

BVI total expense ratio (TER)

The total expense ratio for the share classes was:

Class IC 0.76% p.a.,
Class NC 2.16% p.a.,
Class TFD 0.80% p.a.,
Class USD LC 1.55% p.a.
Class LC 1.55% p.a.,
Class TFC 0.79% p.a.,
Class USD IC 0.76% p.a.,

The TER expresses total expenses and fees (excluding transaction costs) as a percentage of a fund's average net assets in relation to the respective share class within a fiscal year.

Transaction costs

The transaction costs paid in the reporting period amounted to EUR 86 981.19.

The transaction costs include all costs that were reported or settled separately for the account of the fund in the reporting period and are directly connected to the purchase or sale of assets. Any financial transaction taxes which may have been paid are included in the calculation.

Statement of changes in net assets 2025

I. Value of the fund's net assets at the beginning of the fiscal year		**EUR**	**128 324 628.55**

Transactions processed for the account of the fund's assets via closely related companies (based on major holdings of the Deutsche Bank Group)

The share of transactions conducted for the account of the fund's assets via brokers that are closely related companies and persons (share of 5% and above), amounted to 0.00% of all transactions. The total volume was EUR 14.66.

Interim report
DWS Invest Emerging Markets IG Sovereign Debt (in liquidation)

On January 10, 2024, the board of directors of the fund (the "Board of Directors") resolved to place the sub-fund DWS Invest Emerging Markets IG Sovereign Debt in liquidation. To the extent possible, the investment manager liquidated the sub-fund portfolio and sold off the liquid positions. The Board of Directors also resolved on March 12, 2024, to make an initial pro rata payment of liquidation proceeds to the shareholders.

[1] In USD

As set out in the notices to shareholders dated January 11, 2024, and March 12, 2024, the sub-fund holds assets in its portfolio that are affected by sanctions as a result of the Russia/Ukraine crisis. These assets can de facto neither be traded nor transferred. In addition, all payments associated with these assets since the start of the sanctions, including interest/coupon payments and capital repayments to which the sub-fund is entitled, are directly affected by these sanctions. The sub-fund still has no corresponding amounts available in this regard. As a result, the liquidation of the sub-fund cannot yet be completed.

On March 14, 2024, the Board of Directors resolved, in consultation with the Management Company, to make a second pro rata payment to the shareholders. The Management Company made an advance payment from its own funds to the sub-fund in the amount of the coupon payments incurred that have not yet accrued to the sub-fund's assets due to the sanctions, so that this could be paid out to the shareholders. In the course of this process, the sub-fund's claim to these advance coupon payments were ceded to the Management Company. Should the affected coupon payments become available after sanctions are lifted and be higher than the amount paid out to shareholders, a further partial payment will be made to the shareholders to make up the difference. In the event of a lower disbursement of the coupon payments, or if no disbursement at all is made, the Management Company will bear the resulting financial consequences. This does not affect the sub-fund's claim to the remaining assets. As part of this pro rata payment, a partial amount of the cash that the Management Company had so far retained in the sub-fund to cover the costs up until completion of the liquidation process was also paid out to the shareholders. The second pro rata payment was made to shareholders on March 25, 2025.

Together with the Management Company and other service providers of the sub-fund, the Board of Directors is monitoring the situation closely, taking into consideration the interests of the sub-fund's shareholders. However, due to the geopolitical situation, it is currently unclear (i) when further payments of liquidation proceeds can be made and (ii) when the liquidation of the sub-fund can be completed. The shareholders will be notified at least once a year about the status of the liquidation of the sub-fund and in case of further payments of future liquidation proceeds.

Liquidation proceeds that cannot be paid to shareholders with this entitlement will be deposited with the Caisse de Consignation in the Grand Duchy of Luxembourg. Eligible shareholders can claim their proceeds at any time

within 30 years. Otherwise, these proceeds will be transferred to the ownership of the Grand Duchy of Luxembourg.

Annual report
DWS Invest Emerging Markets Opportunities

Investment objective and performance in the reporting period

The objective of the investment policy of DWS Invest Emerging Markets Opportunities is to generate above-average returns. To achieve this objective, the sub-fund invests primarily in interest-bearing securities of issuers with their registered office or principal business activity in an emerging market country. The investment policy can also be implemented using suitable derivative financial instruments.

In the reporting period from the beginning of January through the end of December 2025, DWS Invest Emerging Markets Opportunities recorded an appreciation of 8.4% per share (LC share class; BVI method; in euro).

DWS Invest Emerging Markets Opportunities

Performance of share classes (in EUR)

Share class	ISIN	1 year	3 years	5 years
Class LC	LU1747710736	8.4%	24.8%	-7.0%

As of: December 31, 2025

Investment policy in the reporting period

The capital market environment in 2025 was challenging. This was due in particular to geopolitical crises like the Russia-Ukraine war that has been ongoing since February 24, 2022, the escalated conflict in the Middle East, and the power struggle between the United States and China. Furthermore, the erratic swings in U.S. trade and tariff policy generated additional uncertainty in the capital markets. On the other hand, the easing of monetary policy, which had begun previously, continued during the reporting period. The European Central Bank (ECB) thus lowered the key interest rate in four steps from 3.00% p.a. to 2.00% p.a. (deposit facility) while the U.S. Federal Reserve gradually reduced its key interest rates by 0.75 percentage points to a target range of 3.50% p.a. – 3.75% p.a.

In the international bond markets, the yield curve in 2025 became increasingly steeper at the long end – although this was still moderate – following the previous normalization. In light of the more relaxed interest rate policy of the central banks, bond yields fell noticeably at the short end in some cases. Long-dated government bonds, on the other hand, came under pressure due, for example, to the rise in public deficits and, in some instances, had to accept price declines on a full-year basis, accompanied by rising bond yields. In contrast, corporate bonds as well as bonds from emerging markets and developing countries denominated in euro or U.S. dollar benefited from their relatively high coupons as well as narrowing risk premiums.

In line with its investment policy, the sub-fund invested in higher-yielding bonds with lower credit quality relative to German or U.S. government bonds. Investments were made primarily in government bonds and in corporate bonds of state-owned enterprises as well as in supranational development banks from emerging markets. The issues with investment-grade status (ratings of BBB- or better from the leading rating agencies) held in the portfolio made up approximately 46.9% of the bond assets as of the reporting date. The majority of the remaining investments were high-yield bonds with lower credit quality. In terms of its regional allocation, the bond sub-fund was generally globally positioned.

In terms of issuer structure, the investment focus of the sub-fund was on public issuers due to their greater relative rating stability, solvency and liquidity. Private corporate bonds were only held as remaining investments. As part of its concept, the portfolio management gave a higher weighting to high-yield bonds featuring higher risk premiums, and hence wider yield spreads, for yield reasons. This mainly included issues from the easterly countries of Eastern Europe, Latin America and Africa.

The following risk management disclosures (other information) are unaudited and are not covered by the audit opinion on the annual report.

Composition of the reference portfolio (according to CSSF circular 11/512)
JP Morgan EMBI Global Diversified High Yield Index in EUR

Market risk exposure (value-at-risk) (according to CSSF circular 11/512)

Lowest market risk exposure	%	26.834
Highest market risk exposure	%	55.653
Average market risk exposure	%	37.113

The values-at-risk were calculated for the period from January 1, 2025, through December 31, 2025, using historical simulation with a 99% confidence level, a 10-day holding period and an effective historical observation period of one year. The risk in a reference portfolio that does not contain derivatives is used as the measurement benchmark. Market risk is the risk to the fund's assets arising from an unfavorable change in market prices. The Company determines the potential market risk by means of the **relative value-at-risk approach** as defined in CSSF circular 11/512.

In the reporting period, the average leverage effect from the use of derivatives was 0.6, whereby the total of the nominal amounts of the derivatives in relation to the fund's assets was used for the calculation (sum-of-notional approach).

The gross exposure generated via derivatives pursuant to point 40 a) of the "Guidelines on ETFs and other UCITS issues" of the European Securities and Markets Authority (ESMA) totaled EUR 71 424 455.66 as of the reporting date.

Notes on valuation

Under the responsibility of the Board of Directors of the SICAV, the Management Company determines the net asset values per share and performs the valuation of the assets of the fund. The basic provision of price data and price validation are performed in accordance with the method introduced by the Board of Directors of the SICAV on the basis of the legal and regulatory requirements or the principles for valuation methods defined in the SICAV's prospectus.

If no trading prices are available, prices are determined with the aid of valuation models (derived market values) which are agreed between State Street Bank International GmbH, Luxembourg Branch, as external price service provider and the Management Company and which are based as far as possible on market parameters. This procedure is subject to an ongoing monitoring process. The plausibility of price information from third parties is checked through other pricing sources, model calculations or other suitable procedure.

Assets reported in this report are valued to a minor extent at derived market values.

Russian equities, bonds and depositary receipts such as ADRs/GDRs were fully written down to a memo value of EUR 0.0001 as of March 3, 2022 because either they have been excluded from trading on stock exchanges or western investors have been excluded from the Russian markets. This valuation method will be reviewed at the regular meetings of DWS's Pricing Committee.

From outstanding dividend and interest payments from Russian companies, the fund expected cash inflows of EUR 533 401.51 at the fiscal year-end on December 31, 2025; these payments are not included in the accounts. However, due to the current political situation, it is not possible to forecast whether the dividend and interest payments by the Russian companies will be resumed at a later date.

DWS Invest Emerging Markets Opportunities

Statement of income and expenses (incl. income adjustment)

for the period from January 1, 2025, through December 31, 2025

I.	**Income**		
1.	Interest from securities (before withholding tax)	EUR	11 641 197.47
2.	Interest from investments of liquid assets (before withholding tax)	EUR	143 078.90
3.	Deduction for foreign withholding tax	EUR	-5 864.44
4.	Other income	EUR	521.06
Total income		**EUR**	**11 778 932.99**
II.	**Expenses**		
1.	Management fee	EUR	-454 915.68
	thereof:		
	Basic management fee	EUR -441 752.91	
	Income from expense cap	EUR 13 428.32	
	Administration fee	EUR -26 591.09	
2.	Depositary fee	EUR	-10 843.47
3.	Auditing, legal and publication costs	EUR	-21 742.77
4.	Taxe d'abonnement	EUR	-33 557.44
5.	Other expenses	EUR	-16 096.35
Total expenses		**EUR**	**-537 155.71**
III.	**Net investment income**	**EUR**	**11 241 777.28**
IV.	**Sale transactions**		
	Realized gains/losses	EUR	6 103 734.57

V.	**Net gain/loss for the fiscal year**	**EUR**	**17 345 511.85**

BVI total expense ratio (TER)

The total expense ratio for the share classes was:

Class FC 0.72% p.a.,
Class IC 0.42% p.a.,
Class IC100 0.24% p.a.,
Class ID50 0.30% p.a.,
Class LC 1.20% p.a.,
Class XC 0.28% p.a.

The TER expresses total expenses and fees (excluding transaction costs) as a percentage of a fund's average net assets in relation to the respective share class within a fiscal year.

Transaction costs

The transaction costs paid in the reporting period amounted to EUR 1 156.00.

The transaction costs include all costs that were reported or settled separately for the account of the fund in the reporting period and are directly connected to the purchase or sale of assets. Any financial transaction taxes which may have been paid are included in the calculation.

Statement of changes in net assets 2025

I.	**Value of the fund's net assets at the beginning of the fiscal year**	**EUR**	**181 294 971.79**
1.	Distribution for the previous year	EUR	-1 763 748.28
2.	Net inflows	EUR	7 318 560.36
3.	Income adjustment	EUR	-554 558.75
4.	Net investment income	EUR	11 241 777.28
5.	Realized gains/losses	EUR	6 103 734.57
6.	Net change in unrealized appreciation/depreciation	EUR	332 509.55
II.	**Value of the fund's net assets at the end of the fiscal year**	**EUR**	**203 973 246.52**

Summary of gains/losses 2025

Realized gains/losses (incl. income adjustment)	**EUR**	**6 103 734.57**
from:		
Securities transactions	EUR	-2 904 060.65
Derivatives and other financial futures transactions[1]	EUR	9 007 795.22

Transactions processed for the account of the fund's assets via closely related companies (based on major holdings of the Deutsche Bank Group)

The share of transactions conducted for the account of the fund's assets via brokers that are closely related companies and persons (share of five percent and above), amounted to 3.61% of all transactions. The total volume was EUR 7 231 296.29.

Swing pricing

Swing pricing is a mechanism that is intended to protect shareholders from the negative effects of trading costs arising from subscription and redemption activities. Extensive subscriptions and redemptions within a (sub-)fund may lead to a dilution of the assets of this (sub-)fund, as the net asset value sometimes does not reflect all trading and other costs that are incurred when the portfolio manager must buy or sell securities in order to manage large (net) inflows or outflows in the (sub-)fund. In addition to these costs, substantial order volumes can lead to market prices that are significantly below or above the market prices that apply under ordinary circumstances.

To enhance the investor protection of existing shareholders, a swing pricing mechanism can be applied to compensate for trading costs and other expenses if the aforementioned cumulative (net) inflows or outflows should have a material impact on the (sub-)fund on a valuation date and exceed a predetermined threshold (partial swing pricing). This mechanism can be applied across all (sub-)funds. If swing pricing is introduced for a particular (sub-)fund, this will be disclosed in the special section of the sales prospectus.

The Management Company of the fund will predefine thresholds for the application of the swing pricing mechanism, based, among other things, on current market conditions, available market liquidity and estimated dilution costs. In accordance with these thresholds, the adjustment itself will be initiated automatically. If the (net) inflows or outflows exceed the swing threshold, the net asset value is revised upward if the (sub-)fund sees large net inflows and is revised downward in the event of large net outflows. This adjustment is applied uniformly to all subscriptions and redemptions for the trading day in question. If a performance-based fee applies for the (sub-)fund, the calculation is based on the original net asset value.

The Management Company has established a swing pricing committee that determines the swing factors for each individual (sub-)fund. These swing factors indicate the extent of the net asset value adjustment. The swing pricing committee takes into account the following factors in particular:

– bid-ask spread (fixed-price element),
– impacts on the market (impacts of the transactions on the price),
– additional costs that are incurred as a result of trading activities for the investments.

The appropriateness of the applied swing factors, the operational decisions made in connection with the swing pricing (including the swing threshold), the extent of the adjustment, and the affected (sub-)funds are reviewed at regular intervals.

The amount of the swing pricing adjustment can therefore vary from one (sub-)fund to another and will not generally exceed 2% of the original net asset value per share. The net asset value adjustment is available upon request from the Management Company. In a market environment with extreme illiquidity, the Management Company can, however, increase the swing price adjustment to more than 2% of the original net asset value. Such an increase will be announced on the Management Company's website: www.dws.com.

As the mechanism should only be applied if significant (net) inflows or outflows are expected and it does not apply for normal trading volumes, it is assumed that the net asset value will only be adjusted occasionally.

This (sub-)fund can apply swing pricing but has not done so in the reporting period, as its (net) inflows and outflows did not exceed the relevant threshold previously defined.

Annual report
DWS Invest Enhanced Commodity Strategy

Investment objective and performance in the reporting period

The objective of the investment policy of DWS Invest Enhanced Commodity Strategy is to achieve capital appreciation that exceeds the benchmark Bloomberg Commodity Index Total Return by investing primarily in the commodity markets. In order to achieve this, the sub-fund mainly allocates its assets to commodity-linked investments among a variety of different commodity sectors including, but not limited to, agriculture, industrials, precious metals and energy. In addition, the sub-fund may invest in financial derivative instruments whose underlings include commodity indices. Up to 100% of the sub-fund's assets may be invested in fixed-rate investments. Debt securities without an investment-grade rating may have a maximum share of 10% of net assets of the sub-fund.

In the reporting period from January 1, 2025, through December 31, 2025, DWS Invest Enhanced Commodity Strategy recorded an appreciation of 16.3% per share (USD TFC share class, BVI method). Its benchmark, the Bloomberg Commodity Index, gained 18.1% in the same period (both percentages in U.S. dollar terms).

"BVI method" performance, i.e., excluding the initial sales charge.
Past performance is not a guide to future results.

As of: December 31, 2025

Investment policy in the reporting period

The sub-fund used total return swaps indexed to various commodity indices to gain exposure in commodities.

The precious metals segment performed far better than the global equity market and the wider commodity futures market. The livestock and industrial metals segments also made above-average gains, while energy and agricultural raw materials closed in negative territory on the back of weak gains. In the precious metals sector, the rise in the price of gold made headlines but was surpassed by the growth in the market price for silver, platinum and palladium. In terms of livestock, the cattle prices rose more strongly than pig prices as demand was higher than supply due to falling cattle stocks. Copper fetched the highest prices amongst the industrial metals, followed by aluminum, zinc and nickel. The agricultural sector was shaped by gains for coffee, soybean oil and soybeans, whereas the prices for cocoa, wheat, sugar, soybean meal, cotton and corn fell. With the exception of heating oil and gas oil, the energy sector recorded a negative performance overall; natural gas brought up the rear.

With the exception of heating oil and gas oil, the energy sector recorded a negative performance overall. Natural gas recorded the weakest performance, followed by crude, Brent oil, gasoline and mineral oil. The oil prices fluctuated and macroeconomic factors, e.g., the volatile U.S. dollar price and geopolitical events such as the conflicts in the Middle East and Eastern Europe, had a detrimental effect. The market continued to deliberate on the potential for larger oil extraction volumes in a market where supply was obviously plentiful. The natural gas markets recorded robust LNG

export demand and a high level of production throughout the entire year. The marginal oil price was determined by the impact of the weather. The prices in Europe were particularly weak and less volatile despite low levels of reserves.

Copper fetched the highest prices amongst the industrial metals, followed by aluminum, zinc and nickel. The cooper prices hit new heights against the backdrop of tariff-related disruptions. The market focus turned to one major copper producer that offered Chinese buyers a record markup in comparison with the reference prices. This demonstrated the still strained worldwide price situation and the continuing supply shortages. However, towards the end of the year, volumes demanded by Chinese industrial buyers fell as they were no longer willing to pay the higher prices. A copper shortage was expected for the ROW (without China), as the copper is supplied to the smelting plants in the United States and China that agreed to reduce the run rates for the production of concentrate by more than 10% next year. The figures from China were generally weak over the course of the year, which exacerbated concerns about demand. At the same time, speculation about possible stimulus measures mounted as details of the Chinese government's new Five-Year Plan became known. The rise in aluminum supply was limited and stocks remained low. This made the market susceptible to future shortages. The U.S. market for HRC steel was boosted by reduced supply and longer delivery times. The rise of the nickel prices was partly the result of supply shortages caused by disruptions in the mines and reductions to the production quotas for the coming year.

In the precious metals sector, the rise in the price of gold made headlines but was surpassed by the growth in the market price for silver, platinum and palladium. Demand from central banks and private Asian buyers provided strong support, even at high prices. The markets for platinum and palladium continued to put in a solid performance. They benefited from the improved prospects for combustion engines in Europe and the United States. Furthermore, it was expected that the new trading market for futures and option contracts that are settled physically on the Guangzhou Futures Exchange would improve worldwide pricing and transparency. According to a forecast from the World Platinum Investment Council, the platinum price is expected to stabilize again in 2026 as a result of the higher proportion of recycling and falling demand from investors.

The agricultural sector was shaped by gains for coffee, soybean oil and soybeans, whereas the prices for cocoa, wheat, sugar, soybean meal, cotton and corn fell. The prices for cocoa saw a downturn when the outlook for supply from West Africa improved. It is the first time a worldwide surplus has been forecast for four years. Weather incidents, such as the severe typhoon in Vietnam, threatened the coffee harvest and drove up prices. Poor supply and demand figures had a negative impact on the wheat prices; the stock levels in the United States and throughout the world were the highest for several years. Furthermore, the U.S. Department of Agriculture announced a new trade promotion program for U.S. farmers that might ease the situation for soybean and corn producers who are facing competition and price pressure.

Three of the sub-fund's five alpha strategies recorded a positive alpha. The highest alpha, especially in the first quarter of 2025, was generated by the optimal roll and yield strategy. The third and fourth quarter also closed with a positive alpha; there was no alpha in the second quarter. The momentum factor strategy generated a high alpha in the first and fourth quarters, whereas the alpha was negative in the second and third quarters. The mean reversion strategy performed well in the first and fourth quarters but recorded a negative alpha in the second and third quarters. The hedging trades and tactical trades did not add value, except in the first quarter. The fixed income component made a positive contribution to performance in the first three quarters but its performance was slightly negative in the fourth quarter.

The following risk management disclosures (other information) are unaudited and are not covered by the audit opinion on the annual report.

Composition of the reference portfolio (according to CSSF circular 11/512)
Bloomberg Commodity Index Total Return

Market risk exposure (value-at-risk) (according to CSSF circular 11/512)

Lowest market risk exposure	%	90.910
Highest market risk exposure	%	132.775
Average market risk exposure	%	119.013

The values-at-risk were calculated for the period from January 1, 2025, through December 31, 2025, using historical simulation with a 99% confidence level, a 10-day holding period and an effective historical observation period of one year. The risk in a reference portfolio that does not contain derivatives is used as the measurement benchmark. Market risk is the risk to the fund's assets arising from an unfavorable change in market prices. The Company determines the potential market risk by means of the **relative value-at-risk approach** as defined in CSSF circular 11/512.

In the reporting period, the average leverage effect from the use of derivatives was 1.9, whereby the total of the nominal amounts of the derivatives in relation to the fund's assets was used for the calculation (sum-of-notional approach).

The gross exposure generated via derivatives pursuant to point 40 a) of the "Guidelines on ETFs and other UCITS issues" of the European Securities and Markets Authority (ESMA) totaled USD 179 369 429.73 as of the reporting date. Does not include any forward currency transactions entered into for currency hedging purposes at the level of the share classes.

Notes on valuation

Under the responsibility of the Board of Directors of the SICAV, the Management Company determines the net asset values per share and performs the valuation of the assets of the fund. The basic provision of price data and price validation are performed in accordance with the method introduced by the Board of Directors of the SICAV on the basis of the legal and regulatory requirements or the principles for valuation methods defined in the SICAV's prospectus.

If no trading prices are available, prices are determined with the aid of valuation models (derived market values) which are agreed between State Street Bank International GmbH, Luxembourg Branch, as external price service provider and the Management Company and which are based as far as possible on market parameters. This procedure is subject to an ongoing monitoring process. The plausibility of price information from third parties is checked through other pricing sources, model calculations or other suitable procedure.

Assets reported in this report are not valued at derived market values.

Footnotes

* Floating interest rate.
** Does not include positions with a negative balance, if such exist.

BVI total expense ratio (TER)

The total expense ratio for the share classes was:

Class CHF LC 1.35% p.a.,
Class LC 1.35% p.a.,
Class TFCH 0.94% p.a.,
Class JPY JCH (P) 0.89% p.a.,
Class USD IC 0.76% p.a.,
Class USD TFC 0.90% p.a.
Class IC 0.76% p.a.,
Class LCH 1.38% p.a.,
Class JPY JC 0.86% p.a.,
Class SGD LC 1.36% p.a.,
Class USD LC 1.35% p.a.,

The TER expresses total expenses and fees (excluding transaction costs) as a percentage of a fund's average net assets in relation to the respective share class within a fiscal year.

Transaction costs

The transaction costs paid in the reporting period amounted to USD 17 024.21.

The transaction costs include all costs that were reported or settled separately for the account of the fund in the reporting period and are directly connected to the purchase or sale of assets. Any financial transaction taxes which may have been paid are included in the calculation.

Statement of changes in net assets 2025

I.	**Value of the fund's net assets at the beginning of the fiscal year**	**USD**	**97 261 733.10**

Transactions processed for the account of the fund's assets via closely related companies (based on major holdings of the Deutsche Bank Group)

The share of transactions conducted for the account of the fund's assets via brokers that are closely related companies and persons (share of 5% and above), amounted to 0.00% of all transactions. The total volume was USD 0.00.

Annual report
DWS Invest ESG Asian Bonds

Investment objective and performance in the reporting period

The sub-fund seeks to achieve sustained capital appreciation that exceeds the benchmark (J.P. Morgan JACI Investment Grade Total Return Index). To achieve this objective, the sub-fund invests in interest-bearing securities issued by governments of Asian countries, Asian government agencies, municipal administrations in Asian countries, companies having their registered offices in an Asian country, supranationals (securities issued in Asian currencies) and non-Asian companies (securities issued in Asian currencies). The interest-bearing securities may be denominated in U.S. dollars, in other G7 currencies, or in an Asian currency. The sub-fund's assets are predominately invested in interest-bearing debt securities that have an investment-grade rating (IG) at the time of acquisition. When selecting suitable investments, environmental and social aspects and the principles of good corporate governance (ESG criteria) are taken into consideration.*

The sub-fund DWS Invest ESG Asian Bonds recorded an appreciation of 7.4% per share (USD LC share class; BVI method) in the 2025 fiscal year but underperformed its benchmark, which returned +8.1% (both percentages in U.S. dollar terms).

Past performance is not a guide to future results.

As of: December 31, 2025

Investment policy in the reporting period

The capital market environment in 2025 was challenging. This was due in particular to geopolitical crises like the Russia-Ukraine war that has been ongoing since February 24, 2022, the escalated conflict in the Middle East, and the power struggle between the United States and China. Furthermore, the erratic swings in U.S. trade and tariff policy generated additional uncertainty in the capital markets.

The first half of 2025 was shaped by sudden U.S. trade measures, including drastic tariff increases and the announcement of wide-ranging import duties at the beginning of April. These political changes gave rise to strong interest rate fluctuations. Against this backdrop, the sub-fund acted with

caution and continued to focus its investments on investment-grade (IG) bonds, whereby longer-term high-quality Japanese financials were combined with selective short-term Indian and Philippine IG bonds, thus facilitating flexible duration and risk management. As of the reporting date, the bonds held in the portfolio had investment-grade status (ratings of BBB- or better from the leading rating agencies).

The U.S. government bonds recorded increased volatility throughout 2025 due to uncertainties regarding tariffs, fears of stagflation and changing expectations with respect to interest rate cuts. The yield curve became steeper as the short-term yields fell due to global monetary easing, while long maturity bonds were put under pressure by increasing public deficits and inflation risks. Central banks continued their policy of monetary easing. The European Central Bank (ECB) thus lowered the key interest rate in four steps from 3.00% p.a. to 2.00% p.a. (deposit facility) while the U.S. Federal Reserve gradually reduced its key interest rates by 0.75 percentage points to a target range of 3.50% p.a. – 3.75% p.a.

The duration of the bond portfolio was kept broadly neutral. Instead, the positioning focused on the belly of the yield curve (3–10 years) in order to benefit from an expected steepening that was driven by potential rate cuts at the short maturity date and pressure at the longer maturities end due to the risk of inflation and fiscal risks. Asian corporate bonds were still robust in 2025, supported by strong technical factors such as local offers from regional banks and insurance companies.

The sub-fund's performance was boosted by its focus on high-quality Japanese IG financials (bonds issued by financial service providers), supplemented by highly-selective short-term Indian and Philippine IG bonds. The overweight in Japanese IG financials made a positive contribution, supported by stable interest income and narrowed credit spreads. Selective IG bonds in India (e.g., financial bonds, quasi-government bonds) and the Philippines (financial bonds, government bonds) contributed significant yields, boosted by political factors and robust domestic demand.

The improved market sentiment in China and Hong Kong boosted the performance of the regional dollar bonds in 2025. However, the sub-fund was underweight in these regions, which had a detrimental effect on its relative performance.

The sub-fund's duration policy, which was broadly in line with that of its benchmark, occasionally fell short during intense U.S. government bond rallies; however, it only had a very minor effect on the investment result overall in 2025. The majority of the underperformance was compensated for by the sub-fund's positioning in the belly of the yield curve (3–10 years) that benefited from the movements of a steepening yield curve in the course of the year.

The following risk management disclosures (other information) are unaudited and are not covered by the audit opinion on the annual report.

Composition of the reference portfolio (according to CSSF circular 11/512)
JP Morgan ACI - Investment Grade

Market risk exposure (value-at-risk) (according to CSSF circular 11/512)

Lowest market risk exposure	%	64.385
Highest market risk exposure	%	110.177
Average market risk exposure	%	87.850

The values-at-risk were calculated for the period from January 1, 2025, through December 31, 2025, using historical simulation with a 99% confidence level, a 10-day holding period and an effective historical observation period of one year. The risk in a reference portfolio that does not contain derivatives is used as the measurement benchmark. Market risk is the risk to the fund's assets arising from an unfavorable change in market prices. The Company determines the potential market risk by means of the **relative value-at-risk approach** as defined in CSSF circular 11/512.

In the reporting period, the average leverage effect from the use of derivatives was 0.0, whereby the total of the nominal amounts of the derivatives in relation to the fund's assets was used for the calculation (sum-of-notional approach).

The gross exposure generated via derivatives pursuant to point 40 a) of the "Guidelines on ETFs and other UCITS issues" of the European Securities and Markets Authority (ESMA) totaled USD 3 047 163.95 as of the reporting date. Does not include any forward currency transactions entered into for currency hedging purposes at the level of the share classes.

Market abbreviations

Contracting parties for forward currency transactions

Notes on valuation

Under the responsibility of the Board of Directors of the SICAV, the Management Company determines the net asset values per share and performs the valuation of the assets of the fund. The basic provision of price data and price validation are performed in accordance with the method introduced by the Board of Directors of the SICAV on the basis of the legal and regulatory requirements or the principles for valuation methods defined in the SICAV's prospectus.

If no trading prices are available, prices are determined with the aid of valuation models (derived market values) which are agreed between State Street Bank International GmbH, Luxembourg Branch, as external price service provider and the Management Company and which are based as far as possible on market parameters. This procedure is subject to an ongoing monitoring process. The plausibility of price information from third parties is checked through other pricing sources, model calculations or other suitable procedure.

Assets reported in this report are not valued at derived market values.

Footnotes

* Floating interest rate.

BVI total expense ratio (TER)

The total expense ratio for the share classes was:

Class CHF FCH 0.74% p.a.,	Class FCH 0.74% p.a.,
Class ICH 0.01%[4],	Class LCH 1.24% p.a.,
Class LDH 1.24% p.a.,	Class NCH 1.54% p.a.,
Class ND 1.51% p.a.,	Class NDH 1.54% p.a.,
Class NDQH 1.54% p.a.,	Class PFCH 0.91% p.a.,
Class PFDQH 0.96% p.a.,	Class TFCH 0.74% p.a.,
Class TFDH 0.75% p.a.,	Class SEK LCH 1.23% p.a.,
Class SGD LDMH 1.21% p.a.,	Class USD FC 0.70% p.a.,
Class USD FC100 0.28% p.a.,	Class USD IC 0.47% p.a.,
Class USD IC500 0.18% p.a.,	Class USD IDQ 0.46% p.a.,
Class USD LC 1.22% p.a.,	Class USD LD 1.22% p.a.,
Class USD LDM 1.21% p.a.,	Class USD RC 0.18% p.a.,
Class USD TFC 0.71% p.a.	

The TER expresses total expenses and fees (excluding transaction costs) as a percentage of a fund's average net assets in relation to the respective share class within a fiscal year.

[4] Annualization has not been performed for share classes liquidated during the year.

Transaction costs

The transaction costs paid in the reporting period amounted to EUR 5 328.45.

The transaction costs include all costs that were reported or settled separately for the account of the fund in the reporting period and are directly connected to the purchase or sale of assets. Any financial transaction taxes which may have been paid are included in the calculation.

DWS Invest ESG Asian Bonds

Transactions processed for the account of the fund's assets via closely related companies (based on major holdings of the Deutsche Bank Group)

The share of transactions conducted for the account of the fund's assets via brokers that are closely related companies and persons (share of five percent and above), amounted to 2.39% of all transactions. The total volume was USD 15 037 883.50.

Placement fee / dilution adjustment

In the reporting period, the fund paid a placement fee of 2.9% of the fund's net assets to the distributor. This fee was calculated on the subscription date. The placement fee serves in particular as compensation for distribution. The gross amount of the placement fee was paid in a single payment on the subscription date and simultaneously recognized in the fund's net assets as prepaid expenses. These are amortized on a daily basis over a period of three years from the date of subscription. The remaining position for prepaid expenses per share on each valuation date is calculated on a daily basis by multiplying the net assets of the fund by a factor. The relevant factor is determined through straight-line reduction of the placement fee by a certain percentage on a daily basis over three years from the subscription date. The prepaid expenses position fluctuates during the three years from the subscription date of the fund, since it depends on both the fund's net assets and the predetermined factor.

In addition, a dilution adjustment of up to 3% based on the gross redemption amount was charged for the benefit of the fund's net assets in the reporting period (to be paid by the shareholder).

Further details on the placement fee and the dilution adjustment can be found in the corresponding section of the fund's sales prospectus.

Swing pricing

Swing pricing is a mechanism that is intended to protect shareholders from the negative effects of trading costs arising from subscription and redemption activities. Extensive subscriptions and redemptions within a (sub-)fund may lead to a dilution of the assets of this (sub-)fund, as the net asset value sometimes does not reflect all trading and other costs that are incurred when the portfolio manager must buy or sell securities in order to manage large (net) inflows or outflows in the (sub-)fund. In addition to these costs, substantial order volumes may lead to market prices that are considerably below or above the market prices that apply under normal circumstances.

To enhance the investor protection of existing shareholders, a swing pricing mechanism can be applied to compensate for trading costs and other expenses if the aforementioned cumulative (net) inflows or outflows should have a material impact on the (sub-)fund on a valuation date and exceed a predetermined threshold (partial swing pricing). This mechanism can be applied across all (sub-)funds. If swing pricing is introduced for a particular (sub-)fund, this will be disclosed in the special section of the sales prospectus.

The Management Company of the fund will predefine thresholds for the application of the swing pricing mechanism, based, among other things, on current market conditions, available market liquidity and estimated dilution costs. In accordance with these thresholds, the adjustment itself will be initiated automatically. If the (net) inflows or outflows exceed the swing threshold, the net asset value is revised upward if the (sub-)fund sees large net inflows and is revised downward in the event of large net outflows. This adjustment is applied uniformly to all subscriptions and redemptions for the trading day in question. If a performance-based fee applies for the (sub-)fund, the calculation is based on the original net asset value.

The Management Company has established a swing pricing committee that determines the swing factors for each individual (sub-)fund. These swing factors indicate the extent of the net asset value adjustment. The swing pricing committee takes into account the following factors in particular:

– bid-ask spread (fixed-price element),
– impacts on the market (impacts of the transactions on the price),
– additional costs that are incurred as a result of trading activities for the investments.

The appropriateness of the applied swing factors, the operational decisions made in connection with the swing pricing (including the swing threshold), the extent of the adjustment, and the affected (sub-)funds are reviewed at regular intervals.

The amount of the swing pricing adjustment can therefore vary from one (sub-)fund to another and will not generally exceed 2% of the original net asset value per share. The net asset value adjustment is available upon request from the Management Company. In a market environment with extreme illiquidity, the Management Company can, however, increase the swing price adjustment to more than 2% of the original net asset value. Such an increase will be announced on the Management Company's website: www.dws.com.

As the mechanism should only be applied if significant (net) inflows or outflows are expected and it does not apply for normal trading volumes, it is assumed that the net asset value will only be adjusted occasionally.

This (sub-)fund can apply swing pricing and has done so in the reporting period, as its (net) inflows and outflows exceeded the relevant threshold previously defined. No swing pricing adjustment was applied that would have had an impact on the (sub-)fund's net asset value per share on the last day of the reporting period.

Annual report
DWS Invest ESG Climate Opportunities

(formerly: DWS Invest ESG Climate Tech)

Investment objective and performance in the reporting period

The objective of the investment policy is to generate above-average capital appreciation. To this end, the sub-fund invests at least 75% of its net asset value worldwide in equities of all market capitalizations, equity certificates, participation and dividend-right certificates, convertible bonds and equity warrants. At least 51% of this allocation is invested in issuers that carry out at least part of their economic activities in areas that the sub-fund management considers relevant in the context of climate protection and adaptation to climate change and its effects. Climate protection technologies are to be understood in a broader sense and include the entire value chain of solutions that help to avoid, reduce or bind CO_2 emissions. In addition, at least 10% of the sub-fund's net assets are invested worldwide in issuers that carry out at least part of their economic activities in areas that the sub-fund management considers relevant in the context of climate action and adaptation to climate change and its impacts. This refers to solutions for dealing with climate-related changes that have already occurred or are still expected and in particular for containing the negative consequences or risks for the environment and/or society. In order to assess the relevance for climate protection and adaptation to climate change, the sub-fund management resorts to a proprietary quantitative and/or qualitative methodology when selecting issuers. Please refer to the special section of the sales prospectus for more information on the sub-fund's investment strategy.

"BVI method" performance, i.e., excluding the initial sales charge.
Past performance is not a guide to future results.

As of: December 31, 2025

In the fiscal year from the beginning of January through the end of December 2025, the sub-fund recorded an appreciation of 8.4% per share (LD share class; BVI method; in euro).

Investment policy in the reporting period

In the past fiscal year, the long-term strategy of selecting companies through comprehensive fundamental analysis of individual stocks was maintained. The focus was primarily on companies whose products or services make a significant contribution to decarbonizing the energy mix and decoupling energy consumption from global economic growth, but the portfolio also includes companies that offer solutions for dealing with the irreversible consequences of climate change that have already occurred. Particular attention has always been paid to the quality and sustainability of the business model, the quality of management, the organic growth potential, the solidity of the balance sheet and especially the valuation of a company.

The capital market environment in 2025 was challenging. This was due in particular to geopolitical crises like the Russia-Ukraine war that has been ongoing since February 24, 2022, the escalated conflict in the Middle East, and

the power struggle between the United States and China. Furthermore, the erratic swings in U.S. trade and tariff policy generated additional uncertainty in the capital markets. On the other hand, the easing of monetary policy, which had begun previously, continued during the reporting period. The European Central Bank (ECB) thus lowered the key interest rate in four steps from 3.00% p.a. to 2.00% p.a. (deposit facility) while the U.S. Federal Reserve gradually reduced its key interest rates by 0.75 percentage points to a target range of 3.50% p.a. – 3.75% p.a.

Despite market uncertainty induced mainly by geopolitical factors, the international equity markets, as measured by the MSCI World, recorded appreciable price gains overall in 2025 amid sometimes considerable volatility. These gains were underpinned by the emerging easing of interest rates, increased investor confidence in artificial intelligence, as well as robust corporate profits. Among the markets in Western industrial countries, the DAX 40 in Germany posted significant gains, buoyed by factors such as the multi-billion-euro package of fiscal relief measures. The emerging markets, as measured by the MSCI Emerging Markets, were even able to outperform the industrial countries on a full-year basis through the end of 2025. In this respect, China's equity market was one of the stand-out performers and continued to recover significantly. This trend was supported by Chinese economic growth, which was stimulated by expansionary macroeconomic policies. However, the international stock exchanges were intermittently hit hard by the erratic swings in U.S. trade and tariff policy.

The reporting period now ended began with a significant recovery for clean tech equities. The risk premium for sustainability stocks fell from the previously clearly elevated level. Visibility for investors improved noticeably after "Liberation Day", as the new U.S. government established greater clarity in terms of energy supply, trade policy and foreign policy. At the same time, it became increasingly clear that the massive data center expansion would automatically lead to a considerable rise in energy requirement. This, in turn, is speeding up the expansion of the energy infrastructure, including power generation capacity and grids.

In the United States, a draft budget brought before the Senate made the development of renewable energies more difficult. Tighter deadlines for tax credits had a detrimental effect on projects due to existing grid shortages, even though some disputed issues were mitigated. Solar development companies now have more time for qualification and a proposed excise duty on Chinese components was dropped. At the same time, the act is rolling back key EV incentives, including the 7,500 dollar subsidy for new electric cars and 4,000 dollars for those bought second hand. Furthermore, regulations for non-electric vehicles were eased and California's ban on non-electric vehicles, scheduled for 2035, was blocked. A new tax credit for coal in the steel sector indicated a shift away from former climate policies. However, the overall result was better than many market participants had feared, which narrowed risk premiums even further.

In Europe, a large-scale power cut in Spain and Portugal revealed major weaknesses in the stability of the grid. The incident demonstrated that the high proportion of renewable energies requires better grid voltage management and backup systems. This accelerated investment in energy storage and governments reassessed the ratio of renewable energies, nuclear power and gas. There was noticeably more public debate about infrastructure and energy security and the incident is now seen as a turning point in European energy policy.

The German onshore wind energy market, which flourished in 2025, brought a ray of hope. With record results in terms of licenses and expected new installations amounting to up to 5.3 GW – the highest figure since 2017 – the sector demonstrated strong structural tailwind. In total, 15.1 GW was auctioned off, boosted by improved upper price limits and lower mean prices. Approximately 140 GW of wind power is scheduled to be installed across the European Union by 2030. In the United States, the Revolution Wind offshore project continued to be a positive signal despite regulatory uncertainties.

In China, solar installations achieved the record level of 93 GW – four times that of the previous year – in May 2025 as developers completed projects before new regulations came into force. At the

same time, leading manufacturers reported losses amounting to billions due to cutthroat competition. The government responded with an anti-involutions campaign aimed at combating overcapacity. More stringent efficiency standards could close one third of the polysilicon production and stabilize market prices. Unhealthy price wars are to be brought to an end in the EV sector as well. These reforms boosted the revaluation of solar and electric vehicle equities.

Another trend was the enormous impact of artificial intelligence and the investments in data centers made by the hyperscalers. The United States recorded a sharp rise in consumption after years of stagnating electricity demand. The U.S. Energy Information Administration expects record figures in 2025 and 2026, far in excess of the previous high in 2024. Forecasts indicate a rise in demand of 25% by 2030 and up to 78% by 2050, reflecting an economic structural change in favor of IT and data infrastructure. This led to significant price rises for manufacturers of solar and wind technology, high-voltage cables and transformers, driven by growth speculation and increasing orders.

The clean tech sector has recorded high levels of cash inflow in the past few months overall, boosted by better than expected results of the provisions of the "One Big Beautiful Bill" and increasing evidence of significantly growing electricity needs. In addition, investors are starting to realize that the Trump administration may have to moderate its stance towards renewable energies due to signs of an electricity shortage in the next few years. Renewable energies are still the cheapest form of energy generation and the quickest to construct – especially in comparison with natural gas, coal and nuclear power.

The portfolio management was of the opinion that positive market dynamics, especially the rising demand for electricity, would partially counteract the negative political headlines. Apart from FEOC restrictions and licensing delays, regulatory uncertainty in the sector remained marginal in the short term. This was even more the case as tax credits were fixed and developers have until July 2026 to secure them via safe harbor provisions.

It is also encouraging that the European market – especially Germany – and the Asia Pacific region are still strongly committed to their net zero goals and related courses of action. This contributes to a favorable environment for investment decisions and helps investors and companies equally.

In the year under report, the subfund recorded generally balanced relative performance in comparison to its risk benchmark, the MSCI All Countries World. The sector allocation made a positive contribution but this was largely neutralized by unfavorable stock picks.

The overweight in industrial companies had a positive impact, as did the structural underweight in health care stocks, the fossil fuels sector and consumer discretionaries which was negatively affected by weaker consumer dynamics. In contrast, the underweight in communication services and financials that performed strongly in the course of the year had a negative effect.

The stock picks had a negative impact overall. In the basic materials sector in particular, manufacturers of sustainable packaging materials proved detrimental due to poor end market demand in the field of food, household and personal products. In the technology sector, shortfalls arose due to the lower levels of investment in companies that directly benefited from the AI boom, including producers of GPUs and memory chips. Additional negative contributions came from positions in analog power electronics as well as from the areas of design and simulation software.

In contrast, industrials, especially companies leading the expansion of power grids with, for example, high-voltage cables and grid technology, made very positive selection contributions. Investors became increasingly aware that the rapid expansion of data centers and AI infrastructure needs enormous amounts of electricity and requires a resilient, modernized electricity grid. Companies that benefit indirectly from the expansion of global AI infrastructure, such as through energy supply and electricity management of data center hardware, also had a positive effect. Wind power and solar companies made a contribution to the result due to the improved regulatory framework in the United States, higher auction volumes and greater operative discipline in Europe. The utilities

sector also had a positive effect, especially thanks to integrated energy generating and grid operating companies in Europe.

In terms of region, the overweight in Europe in comparison to the United States was favorable, whereas the underweights in Korea, Canada and Switzerland were detrimental. Energy transmission, renewable energies and industrial energy efficiency were the sectors that made positive contributions. In contrast, sustainable nutrition, circular economy (especially packaging materials) and disaster risk reduction had a negative impact.

The following risk management disclosures (other information) are unaudited and are not covered by the audit opinion on the annual report.

Composition of the reference portfolio (according to CSSF circular 11/512)
MSCI All Country World Index, in EUR

Market risk exposure (value-at-risk) (according to CSSF circular 11/512)

Lowest market risk exposure	%	86.064
Highest market risk exposure	%	120.643
Average market risk exposure	%	107.592

The values-at-risk were calculated for the period from January 1, 2025, through December 31, 2025, using historical simulation with a 99% confidence level, a 10-day holding period and an effective historical observation period of one year. The risk in a reference portfolio that does not contain derivatives is used as the measurement benchmark. Market risk is the risk to the fund's assets arising from an unfavorable change in market prices. The Company determines the potential market risk by means of the **relative value-at-risk approach** as defined in CSSF circular 11/512.

In the reporting period, the average leverage effect from the use of derivatives was 0.3, whereby the total of the nominal amounts of the derivatives in relation to the fund's assets was used for the calculation (sum-of-notional approach).

The gross exposure generated via derivatives pursuant to point 40 a) of the "Guidelines on ETFs and other UCITS issues" of the European Securities and Markets Authority (ESMA) totaled EUR 106 698 382.63 as of the reporting date.

Notes on valuation

Under the responsibility of the Board of Directors of the SICAV, the Management Company determines the net asset values per share and performs the valuation of the assets of the fund. The basic provision of price data and price validation are performed in accordance with the method introduced by the Board of Directors of the SICAV on the basis of the legal and regulatory requirements or the principles for valuation methods defined in the SICAV's prospectus.

If no trading prices are available, prices are determined with the aid of valuation models (derived market values) which are agreed between State Street Bank International GmbH, Luxembourg Branch, as external price service provider and the Management Company and which are based as far as possible on market parameters. This procedure is subject to an ongoing monitoring process. The plausibility of price information from third parties is checked through other pricing sources, model calculations or other suitable procedure.

Assets reported in this report are not valued at derived market values.

BVI total expense ratio (TER)

The total expense ratio for the share classes was:

Class FC 0.91% p.a.,	Class IC 0.58% p.a.,
Class LC 1.62% p.a.,	Class LD 1.62% p.a.,
Class NC 2.12% p.a.,	Class PFC 1.54% p.a.,
Class TFC 0.86% p.a.,	Class TFD 0.85% p.a.,
Class XC 0.45% p.a.,	Class GBP D RD 0.85% p.a.,
Class JPY FC 0.87% p.a.,	Class USD FC 0.85% p.a.,
Class USD LC 1.62% p.a.,	Class USD LCH (P) 1.62% p.a.,
Class USD TFC 0.87% p.a.,	Class USD TFCH (P) 0.88% p.a.

The TER expresses total expenses and fees (excluding transaction costs) as a percentage of a fund's average net assets in relation to the respective share class within a fiscal year.

Transaction costs

The transaction costs paid in the reporting period amounted to EUR 276 485.27.

The transaction costs include all costs that were reported or settled separately for the account of the fund in the reporting period and are directly connected to the purchase or sale of assets. Any financial transaction taxes which may have been paid are included in the calculation.

Statement of changes in net assets 2025

DWS Invest ESG Climate Opportunities (formerly: DWS Invest ESG Climate Tech)

Transactions processed for the account of the fund's assets via closely related companies (based on major holdings of the Deutsche Bank Group)

The share of transactions conducted for the account of the fund's assets via brokers that are closely related companies and persons (share of 5% and above), amounted to 0.00% of all transactions. The total volume was EUR 2 133.91.

Placement fee / dilution adjustment

In the reporting period, the fund paid a placement fee of 2.9% of the fund's net assets to the distributor. This fee was calculated on the subscription date. The placement fee serves in particular as compensation for distribution. The gross amount of the placement fee was paid in a single payment on the subscription date and simultaneously recognized in the fund's net assets as prepaid expenses. These are amortized on a daily basis over a period of three years from the date of subscription. The remaining position for prepaid expenses per share on each valuation date is calculated on a daily basis by multiplying the net assets of the fund by a factor. The relevant factor is determined through straight-line reduction of the placement fee by a certain percentage on a daily basis over three years from the subscription date. The prepaid expenses position fluctuates during the three years from the subscription date of the fund, since it depends on both the fund's net assets and the predetermined factor.

In addition, a dilution adjustment of up to 3% based on the gross redemption amount was charged for the benefit of the fund's net assets in the reporting period (to be paid by the shareholder).

Further details on the placement fee and the dilution adjustment can be found in the corresponding section of the fund's sales prospectus.

Annual report
DWS Invest ESG CROCI Innovation Leaders

Investment objective and performance in the reporting period

The objective of the investment policy is to achieve capital appreciation that exceeds the benchmark (MSCI World TR Net). To achieve this objective, the sub-fund invests in large- and mid-cap companies in any industry (in those countries classified as developed or emerging markets by the CROCI Investment and Valuation Group) that have intellectual capital according to the CROCI methodology and the systematic CROCI Innovation Leaders investment strategy. Intellectual capital is determined by the CROCI Group and is defined as research and development and advertising (brand) assets. Aspects considered when selecting suitable investments include a focus on environmental, social and corporate governance (ESG) criteria. At least 80% of the sub-fund's net assets are invested in assets that meet the promoted environmental and social characteristics. The sub-fund's assets are periodically reconstituted in accordance with the investment strategy's rules with the intention that each constituent equity is weighted by its CROCI Equity Earnings. In order to minimize impacts on performance when trading the sub-fund's assets, the sub-fund manager may take necessary steps to reduce the costs related to trading and market impact, including effecting the recomposition in stages over a period of time.

"BVI method" performance, i.e., excluding the initial sales charge.
Past performance is not a guide to future results.

As of: December 31, 2025

The capital market environment in the 2025 fiscal year was challenging. This was especially due to geopolitical crises like the Russia-Ukraine war that has been ongoing since February 24, 2022, the escalating conflict in the Middle East, and the intensifying power struggle between the United States and China. Furthermore, the abrupt changes of direction in U.S. trade and tariff policy caused additional uncertainty in the capital markets. On the other hand, the monetary easing that had already begun continued in the reporting period. The European Central Bank (ECB) thus lowered the key interest rate in four steps from 3.00% p.a. to 2.00% p.a. (deposit facility) while the U.S. Federal Reserve (Fed) gradually reduced its key interest rates by 0.75 percentage points to a target range of 3.50% p.a. – 3.75% p.a.

Despite the uncertainty on the markets, caused primarily by geopolitical factors, the international equity markets recorded significant price gains overall in 2025 as measured by the MSCI World, against the backdrop of sometimes considerable volatility. These gains were boosted by the easing of interest rate pressure, improved investor confidence in artificial intelligence and solid corporate profits. Among the markets in the Western industrial countries, the DAX 40 in Germany made significant gains, buoyed by factors such as the tax relief package aimed at easing pressure on the economy that was worth several billion euros. On the basis of the entire year through the end of 2025, the emerging markets performed even better than the industrial countries, as measured by the MSCI Emerging Markets. The Chinese equity market was one of the most outstanding performers which continued to significantly recover. This development was boosted by the economic growth in China that was given impetus by expansionary macroeconomic policy. However, the international stock exchanges were hit very hard by the erratic changes of direction in U.S. trade and tariff policy.

In the fiscal year through December 31, 2025, DWS Invest ESG CROCI Innovation Leaders recorded an appreciation of 13.8% per share (RC share class, BVI method). Its benchmark, the MSCI World TR Net EUR, recorded an increase of 7.3% in the same period (both percentages in euro terms).

Investment policy in the reporting period

The sub-fund's strategy primarily sought to invest in global equities of companies that have intellectual capital (either as research and development or as brands), while excluding equities that do not meet criteria for growth, profitability potential, financial risk and environmental, social and governance (ESG) factors, with the sector and country allocation driven by the stock selection.

In terms of sector allocation, this resulted in a strong weighting in information technology, including Apple, Microsoft and Nvidia, as well as in health care (Johnson & Johnson, Eli Lilly), followed by communication services such as Alphabet and Meta. The regional focus was therefore on U.S. equities with the addition of Japanese, European and Asian equities.

The following risk management disclosures (other information) are unaudited and are not covered by the audit opinion on the annual report:

Composition of the reference portfolio (according to CSSF circular 11/512)
MSCI World Net TR Index in EUR

Market risk exposure (value-at-risk) (according to CSSF circular 11/512)

Lowest market risk exposure	%	80.272
Highest market risk exposure	%	109.082
Average market risk exposure	%	90.586

The values-at-risk were calculated for the period from January 1, 2025, through December 31, 2025, using historical simulation with a 99% confidence level, a 10-day holding period and an effective historical observation period of one year. The risk in a reference portfolio that does not contain derivatives is used as the measurement benchmark. Market risk is the risk to the fund's assets arising from an unfavorable change in market prices. The Company determines the potential market risk by means of the **relative value-at-risk approach** as defined in CSSF circular 11/512.

In the reporting period, the average leverage effect from the use of derivatives was 0.0, whereby the total of the nominal amounts of the derivatives in relation to the fund's assets was used for the calculation (sum-of-notional approach).

The gross exposure generated via derivatives pursuant to point 40 a) of the "Guidelines on ETFs and other UCITS issues" of the European Securities and Markets Authority (ESMA) totaled EUR 0.00 as of the reporting date.

Notes on valuation

Under the responsibility of the Board of Directors of the SICAV, the Management Company determines the net asset values per share and performs the valuation of the assets of the fund. The basic provision of price data and price validation are performed in accordance with the method introduced by the Board of Directors of the SICAV on the basis of the legal and regulatory requirements or the principles for valuation methods defined in the SICAV's prospectus.

If no trading prices are available, prices are determined with the aid of valuation models (derived market values) which are agreed between State Street Bank International GmbH, Luxembourg Branch, as external price service provider and the Management Company and which are based as far as possible on market parameters. This procedure is subject to an ongoing monitoring process. The plausibility of price information from third parties is checked through other pricing sources, model calculations or other suitable procedure.

Assets reported in this report are not valued at derived market values.

BVI total expense ratio (TER)

The total expense ratio for the share classes was:

Class RC (formerly: LC) 1.05% p.a.,
Class TFC 0.51% p.a.,
Class XC 0.40% p.a.,
Class USD RC (formerly: USD LC) 1.05% p.a.
Class USD TFC 0.51% p.a.,
Class USD XC 0.40% p.a.

The TER expresses total expenses and fees (excluding transaction costs) as a percentage of a fund's average net assets in relation to the respective share class within a fiscal year.

Transaction costs

The transaction costs paid in the reporting period amounted to EUR 14 715.83.

The transaction costs include all costs that were reported or settled separately for the account of the fund in the reporting period and are directly connected to the purchase or sale of assets. Any financial transaction taxes which may have been paid are included in the calculation.

The share of transactions conducted for the account of the fund's assets via brokers that are closely related companies and persons (share of 5% and above), amounted to 0.00% of all transactions. The total volume was EUR 0.00.

Annual report
DWS Invest ESG Dynamic Opportunities

Investment objective and performance in the reporting period

The sub-fund seeks to generate as high an appreciation as possible. To achieve this objective, it mainly invests in equities of domestic and foreign issuers. In these investments, preference is given to companies that meet demanding requirements regarding market position, growth potential and ongoing corporate strategy. In addition to equities, the sub-fund may also invest in interest-bearing securities, certificates, funds, derivatives and money market instruments. Within the framework of the securities selection process, a company's environmental and social performance and its corporate governance (ESG criteria) are taken into consideration alongside financial strength.*

In the 2025 fiscal year, the sub-fund DWS Invest ESG Dynamic Opportunities achieved an appreciation of 8.7% per share (LC share class; in euro; BVI method).

As of: December 31, 2025

Investment policy in the reporting period

The capital market environment in 2025 was challenging. This was due in particular to geopolitical crises like the Russia-Ukraine war that has been ongoing since February 24, 2022, the escalated conflict in the Middle East, and the power struggle between the United States and China. Furthermore, the erratic swings in U.S. trade and tariff policy generated additional uncertainty in the capital markets. On the other hand, the easing of monetary policy, which had begun previously, continued during the reporting period. The European Central Bank (ECB) thus lowered the key interest rate in four steps from 3.00% p.a. to 2.00% p.a. (deposit facility) while the U.S. Federal Reserve gradually reduced its key interest rates by 0.75 percentage points to a target range of 3.50% p.a. – 3.75% p.a.

Despite market uncertainty induced mainly by geopolitical factors, the international equity markets, as measured by the MSCI World, recorded appreciable price gains overall in 2025 amid sometimes considerable volatility. These gains were underpinned by the emerging easing of interest rates, increased investor confidence in artificial intelligence, as well as robust corporate profits. Among the markets in Western industrial countries, the DAX 40 in Germany posted significant gains, buoyed by factors such as the multi-billion-euro package of fiscal relief measures. The emerging markets, as measured by the MSCI Emerging Markets, were even able to outperform the industrial countries on a full-year basis through the end of 2025. In this respect, China's equity market was one of the stand-out performers and continued to recover significantly. This trend was supported by Chinese economic growth, which was stimulated by expansionary macroeconomic policies. However, the international stock exchanges were intermittently hit hard by the erratic swings in U.S. trade and tariff policy.

In the international bond markets, the yield curve in 2025 became increasingly steeper at the long end – although this was still moderate – following the previous normalization. In light of the more relaxed interest rate policy of the central banks, bond yields fell noticeably at the short end in some cases. Long-dated govern-

ment bonds, on the other hand, came under pressure due, for example, to the rise in public deficits and, in some instances, had to accept price declines on a full-year basis, accompanied by rising bond yields. Corporate bonds, on the other hand, profited from their relatively high coupons as well as narrowing risk premiums.

The sub-fund DWS Invest ESG Dynamic Opportunities invested primarily in equities of domestic and foreign issuers. Equities, which were virtually unchanged year-over-year, remained the focus of investment. The geographical focus for the equity investments remained on securities of companies from the leading industrial countries, especially those from the United States and Europe. In terms of sector allocation, the portfolio management continued to rely on broad diversification. During 2025, investments in industrials, technology and consumer discretionaries were increased and those in communication services, for example, were reduced. Technology equities had the largest sector weight. The equity portfolio contributed substantially to the investment gains, with the biggest gains coming from the areas of technology, finance and utilities. By contrast, equities from the real estate sector disappointed, eroding the sub-fund's appreciation.

The structure of the bond portfolio was adjusted during the course of the year. The government bond weighting was reduced significantly, whereas the allocation in corporate bonds with investment-grade status via an ETF (Exchange Traded Fund) and single issuers was increased. The overall weight of the bond portfolio was thus slightly reduced and the portfolio's duration decreased. In terms of issuers, the portfolio management focused on European and U.S. corporate bonds denominated in euros.

The gold position held in the sub-fund portfolio (via an exchange-traded commodity (ETC) instrument) made a noticeable contribution to the sub-fund's positive overall result. The weighting of this position rose in the course of 2025 despite profit-taking.

The foreign currencies to which the sub-fund had exposure as part of its investments in securities included the U.S. dollar. The exposure to the U.S. dollar via currency futures was significantly reduced as of the beginning of the fiscal year. Nevertheless, the remaining foreign currency weighting eroded the sub-fund's appreciation due to the depreciation of the U.S. dollar against the euro.

Other information – Not covered by the audit opinion on the annual report

Information on the environmental and/or social characteristics

This product reported in accordance with Article 8(1) of Regulation (EU) 2019/2088 on sustainability-related disclosures in the financial services sector ("SFDR").

Presentation and content requirements for periodic reports for financial products as referred to in Article 8(1) of Regulation (EU) 2019/2088 (SFDR) and in Article 6 of Regulation (EU) 2020/852 (Taxonomy) are available at the back of this report.

* Further details are set out in the current sales prospectus.

The format used for complete dates in security names in the investment portfolio is "day month year".

DWS Invest ESG Dynamic Opportunities

The following risk management disclosures (other information) are unaudited and are not covered by the audit opinion on the annual report.

Composition of the reference portfolio (according to CSSF circular 11/512)
80% MSCI All Country World Net TR Index - in EUR, 20% iBoxx Euro Overall Index

Market risk exposure (value-at-risk) (according to CSSF circular 11/512)

Lowest market risk exposure	%	66.058
Highest market risk exposure	%	86.683
Average market risk exposure	%	77.111

The values-at-risk were calculated for the period from January 1, 2025, through December 31, 2025, using historical simulation with a 99% confidence level, a 10-day holding period and an effective historical observation period of one year. The risk in a reference portfolio that does not contain derivatives is used as the measurement benchmark. Market risk is the risk to the fund's assets arising from an unfavorable change in market prices. The Company determines the potential market risk by means of the **relative value-at-risk approach** as defined in CSSF circular 11/512.

In the reporting period, the average leverage effect from the use of derivatives was 0.3, whereby the total of the nominal amounts of the derivatives in relation to the fund's assets was used for the calculation (sum-of-notional approach).

The gross exposure generated via derivatives pursuant to point 40 a) of the "Guidelines on ETFs and other UCITS issues" of the European Securities and Markets Authority (ESMA) totaled EUR 38 179 708.79 as of the reporting date. Does not include any forward currency transactions entered into for currency hedging purposes at the level of the share classes.

Notes on valuation

Under the responsibility of the Board of Directors of the SICAV, the Management Company determines the net asset values per share and performs the valuation of the assets of the fund. The basic provision of price data and price validation are performed in accordance with the method introduced by the Board of Directors of the SICAV on the basis of the legal and regulatory requirements or the principles for valuation methods defined in the SICAV's prospectus.

If no trading prices are available, prices are determined with the aid of valuation models (derived market values) which are agreed between State Street Bank International GmbH, Luxembourg Branch, as external price service provider and the Management Company and which are based as far as possible on market parameters. This procedure is subject to an ongoing monitoring process. The plausibility of price information from third parties is checked through other pricing sources, model calculations or other suitable procedure.

Assets reported in this report are not valued at derived market values.

The management fee / all-in fee rates in effect as of the reporting date for the investment fund units held in the securities portfolio are shown in parentheses. A plus sign means that a performance-based fee may also be charged. As the investment fund held units of other investment funds (target funds) in the reporting period, further costs, charges and fees may have been incurred at the level of these individual target funds.

Footnotes

* Floating interest rate.
** The prepaid placement fee is amortized over a period of three years (as specified in article 13 (f) of the general section of the fund's management regulations).
*** Does not include positions with a negative balance, if such exist.

BVI total expense ratio (TER)

The total expense ratio for the share classes was:

Class FC 0.85% p.a.,
Class IC 0.46% p.a.,
Class LDM 1.29%[4] p.a.,
Class PFC 2.37% p.a.,
Class USD FCH 0.88% p.a.,
Class USD LDMH 0.29%[4].
Class FD 0.85% p.a.,
Class LC 1.40% p.a.,
Class NC 1.90% p.a.,
Class TFC 0.84% p.a.,
Class USD ICH 0.49% p.a.,

The TER expresses total expenses and fees (excluding transaction costs) as a percentage of a fund's average net assets in relation to the respective share class within the fiscal year.

[4] Annualization has not been performed for share classes launched during the year.

Transaction costs

The transaction costs paid in the reporting period amounted to EUR 34 623.40.

The transaction costs include all costs that were reported or settled separately for the account of the fund in the reporting period and are directly connected to the purchase or sale of assets. Any financial transaction taxes which may have been paid are included in the calculation.

Statement of changes in net assets 2025

I.	**Value of the fund's net assets at the beginning of the fiscal year**	**EUR**	**134 344 143.15**

Transactions processed for the account of the fund's assets via closely related companies (based on major holdings of the Deutsche Bank Group)

The share of transactions conducted for the account of the fund's assets via brokers that are closely related companies and persons (share of 5% and above), amounted to 0.00% of all transactions. The total volume was EUR 494.51.

Placement fee / dilution adjustment

In the reporting period, the fund paid a placement fee of 2.9% of the fund's net assets to the distributor. This fee was calculated on the subscription date. The placement fee serves in particular as compensation for distribution. The gross amount of the placement fee was paid in a single payment on the subscription date and simultaneously recognized in the fund's net assets as prepaid expenses. These are amortized on a daily basis over a period of three years from the date of subscription. The remaining position for prepaid expenses per share on each valuation date is calculated on a daily basis by multiplying the net assets of the fund by a factor. The relevant factor is determined through straight-line reduction of the placement fee by a certain percentage on a daily basis over three years from the subscription date. The prepaid expenses position fluctuates during the three years from the subscription date of the fund, since it depends on both the fund's net assets and the predetermined factor.

In addition, a dilution adjustment of up to 3% based on the gross redemption amount was charged for the benefit of the fund's net assets in the reporting period (to be paid by the shareholder).

Further details on the placement fee and the dilution adjustment can be found in the corresponding section of the fund's sales prospectus.

Annual report
DWS Invest ESG Emerging Markets Top Dividend

Investment objective and performance in the reporting period

DWS Invest ESG Emerging Markets Top Dividend invests mainly in companies having their registered offices or their principal business activity in the emerging markets. Dividend yields, as well as their sustainability, amount and growth, are major criteria in the selection of stocks. Aspects considered when selecting suitable investments include a focus on environmental, social and corporate governance (ESG) criteria. At least 80% of the sub-fund's net assets are invested in assets that meet the promoted environmental and social characteristics.*

[1] In USD

"BVI method" performance, i.e., excluding the initial sales charge.
Past performance is not a guide to future results.

As of: December 31, 2025

In the fiscal year through the end of December 2025, the sub-fund recorded an appreciation of 20.6% per share (LC share class; BVI method; in euro).

Investment policy in the reporting period

The capital market environment in 2025 was challenging. This was due in particular to geopolitical crises like the Russia-Ukraine war that has been ongoing since February 24, 2022, the escalated conflict in the Middle East, and the power struggle between the United States and China. Furthermore, the erratic swings in U.S. trade and tariff policy generated additional uncertainty in the capital markets. On the other hand, the easing of monetary policy, which had begun previously, continued during the reporting period. The European Central Bank (ECB) thus lowered the key interest rate in four steps from 3.00% p.a. to 2.00% p.a. (deposit facility) while the U.S. Federal Reserve gradually reduced its key interest rates by 0.75 percentage points to a target range of 3.50% p.a. – 3.75% p.a.

Despite market uncertainty induced mainly by geopolitical factors, the international equity markets, as measured by the MSCI World, recorded appreciable price gains overall in 2025 amid sometimes considerable volatility. These gains were underpinned by the emerging easing of interest rates, increased investor confidence in artificial intelligence, as well as robust corporate profits. The emerging markets, as measured by the MSCI Emerging Markets, were even able to outperform the industrial countries on a full-year basis through the end of 2025. In this respect, China's equity market was one of the stand-out performers and continued to recover significantly. This trend was supported by Chinese economic growth, which was stimulated by expansionary macroeconomic policies. However, the international stock exchanges were intermittently hit hard by the erratic swings in U.S. trade and tariff policy.

In terms of its regional equity allocation, the sub-fund was weighted more strongly in Asia than in other emerging markets. The portfolio management took a constructive view on this region due to its generally more stable fundamentals, such as structurally superior growth momentum, moderate valuations overall, higher currency reserves and lower levels of debt. The effects of U.S. government policy on global trade were closely monitored while the emerging markets coped well with the turmoil in the wake of the tariff increases introduced after "Liberation Day" in April 2025. Furthermore, the weaker U.S. dollar was a boost for the emerging markets.

The focus was on China, Taiwan, South Korea and India. Economic headwind in China due to the continued weakness of the real estate market prompted the portfolio management to make selective investments. The tension between China and the United States continued, with the United States tightening restrictions on exports of semiconductor technology to China, while China continued its efforts to become technologically self-sufficient. Globally operating biotech and pharmaceutical companies from China took the market by surprise with licensing agreements for innovative pharmaceuticals, demonstrating China's leading position in research and development. Investments in Chinese equities attained a positive overall result year-on-year by the end of the reporting period thanks to the communication, consumer goods and financials sectors, even though the market consolidated in the fourth quarter of 2025 after the first three strong quarters in that year.

Investments in Taiwan, which concentrated on the technology sector, increased significantly, driven by the strong demand for chips for artificial intelligence applications that the supply chain in Taiwan was of great importance for.

The largest positive contribution was made by investments in South Korea, primarily due to the focus on memory card producers who benefited greatly from the price increases for memory components caused by the demand for AI. The sub-fund management also anticipated long-term positive effects from the "Value-Up" program of the South Korean government. This program contained a series of market-friendly measures in the style of the Japanese corporate governance reforms.

India made a below-average contribution in the reporting period, mainly due to the positions in IT and finance. The portfolio management's positive long-term view of India did not change. However, it continued to monitor the developments in an environment of slightly fading GDP growth momentum, as the valuations of the Indian market were still too high.

Other information – Not covered by the audit opinion on the annual report

Information on the environmental and/or social characteristics

This product reported in accordance with Article 8(1) of Regulation (EU) 2019/2088 on sustainability-related disclosures in the financial services sector ("SFDR").

Presentation and content requirements for periodic reports for financial products as referred to in Article 8(1) of Regulation (EU) 2019/2088 (SFDR) and in Article 6 of Regulation (EU) 2020/852 (Taxonomy) are available at the back of this report.

The following risk management disclosures (other information) are unaudited and are not covered by the audit opinion on the annual report:

Composition of the reference portfolio (according to CSSF circular 11/512)
MSCI Emerging Markets Net EUR (EUR levels)

Market risk exposure (value-at-risk) (according to CSSF circular 11/512)

Lowest market risk exposure	%	90.061
Highest market risk exposure	%	124.868
Average market risk exposure	%	104.777

The values-at-risk were calculated for the period from January 1, 2025, through December 31, 2025, using historical simulation with a 99% confidence level, a 10-day holding period and an effective historical observation period of one year. The risk in a reference portfolio that does not contain derivatives is used as the measurement benchmark. Market risk is the risk to the fund's assets arising from an unfavorable change in market prices. The Company determines the potential market risk by means of the **relative value-at-risk approach** as defined in CSSF circular 11/512.

In the reporting period, the average leverage effect from the use of derivatives was 0.0, whereby the total of the nominal amounts of the derivatives in relation to the fund's assets was used for the calculation (sum-of-notional approach).

The gross exposure generated via derivatives pursuant to point 40 a) of the "Guidelines on ETFs and other UCITS issues" of the European Securities and Markets Authority (ESMA) totaled EUR 3 527 528.08 as of the reporting date.

Notes on valuation

Under the responsibility of the Board of Directors of the SICAV, the Management Company determines the net asset values per share and performs the valuation of the assets of the fund. The basic provision of price data and price validation are performed in accordance with the method introduced by the Board of Directors of the SICAV on the basis of the legal and regulatory requirements or the principles for valuation methods defined in the SICAV's prospectus.

If no trading prices are available, prices are determined with the aid of valuation models (derived market values) which are agreed between State Street Bank International GmbH, Luxembourg Branch, as external price service provider and the Management Company and which are based as far as possible on market parameters. This procedure is subject to an ongoing monitoring process. The plausibility of price information from third parties is checked through other pricing sources, model calculations or other suitable procedure.

Assets reported in this report are valued to a minor extent at derived market values.

The management fee / all-in fee rates in effect as of the reporting date for the investment fund units held in the securities portfolio are shown in parentheses. A plus sign means that a performance-based fee may also be charged. As the investment fund held units of other investment funds (target funds) in the reporting period, further costs, charges and fees may have been incurred at the level of these individual target funds.

Russian equities, bonds and depositary receipts such as ADRs/GDRs were fully written down to a memo value of EUR 0.0001 as of March 3, 2022 because either they have been excluded from trading on stock exchanges or western investors have been excluded from the Russian markets. This valuation method will be reviewed at the regular meetings of DWS's Pricing Committee.

From outstanding dividend and interest payments from Russian companies, the fund expected cash inflows of EUR 361 263.89 at the fiscal year-end on December 31, 2025; these payments are not included in the accounts. However, due to the current political situation, it is not possible to forecast whether the dividend and interest payments by the Russian companies will be resumed at a later date.

Footnote

* The prepaid placement fee is amortized over a period of three years (as specified in article 13 f "Placement Fee" section in the general section of the fund's management regulations).

[1] For further information, please refer to the notes to the financial statements.

BVI total expense ratio (TER)

The total expense ratio for the share classes was:

Class FC 0.98% p.a.,	Class LC 1.69% p.a.,
Class LD 1.69% p.a.,	Class NC 2.39% p.a.,
Class ND 2.39% p.a.,	Class PFC 2.57% p.a.,
Class PFD 2.15% p.a.,	Class TFC 0.85% p.a.,
Class TFD 0.92% p.a.,	Class USD FC 0.91% p.a.,
Class USD TFC 0.86% p.a.,	Class USD TFD 0.89% p.a.

The TER expresses total expenses and fees (excluding transaction costs) as a percentage of a fund's average net assets in relation to the respective share class within a fiscal year.

Transaction costs

The transaction costs paid in the reporting period amounted to EUR 62 498.15.

The transaction costs include all costs that were reported or settled separately for the account of the fund in the reporting period and are directly connected to the purchase or sale of assets. Any financial transaction taxes paid are included in the calculations.

Statement of changes in net assets 2025

I.	**Value of the fund's net assets at the beginning of the fiscal year**	**EUR**	**98 822 666.53**
1.	Distribution for the previous year	EUR	-892 347.66
2.	Net outflows[3]	EUR	16 173 543.17
3.	Income adjustment	EUR	-2 620 736.33
4.	Net investment income	EUR	2 046 196.34
5.	Realized gains/losses	EUR	1 482 298.54
6.	Net change in unrealized appreciation/depreciation	EUR	19 181 278.50
II.	**Value of the investment fund at the end of the fiscal year**	**EUR**	**134 192 899.09**

[3] Reduced by a dilution fee in the amount of EUR 1 269.61 for the benefit of the fund's assets.

DWS Invest ESG Emerging Markets Top Dividend

Transactions processed for the account of the fund's assets via closely related companies (based on major holdings of the Deutsche Bank Group)

The share of transactions conducted in the reporting period for the account of the fund's assets via brokers that are closely related companies and persons (share of 5% and above) amounted to 0.00% of all transactions. The total volume was EUR 1 390.80.

Placement fee / dilution adjustment

In the reporting period, the fund paid a placement fee of 2.9% of the fund's net assets to the distributor. This fee was calculated on the subscription date. The specified placement fee serves in particular as remuneration for distribution. The gross amount of the placement fee was paid in a single payment on the subscription date and simultaneously recognized in the fund's net assets as prepaid expenses. These are amortized on a daily basis over a period of three years from the date of subscription. The remaining position for prepaid expenses per share on each valuation date is calculated on a daily basis by multiplying the net assets of the fund by a factor. The relevant factor is determined through straight-line reduction of the placement fee by a certain percentage on a daily basis over three years from the subscription date. The prepaid expenses position fluctuates during the three years from the subscription date of the fund, since it depends on both the fund's net assets and the predetermined factor.

In addition, a dilution adjustment of up to 3% based on the gross redemption amount was charged for the benefit of the fund's net assets in the reporting period (to be paid by the shareholder).

Further details on the placement fee and the dilution adjustment can be found in the corresponding section of the fund's sales prospectus.

Swing pricing

Swing pricing is a mechanism that is intended to protect shareholders from the negative effects of trading costs arising from subscription and redemption activities. Extensive subscriptions and redemptions within a (sub-)fund may lead to a dilution of the assets of this (sub-)fund, as the net asset value sometimes does not reflect all trading and other costs that are incurred when the portfolio manager must buy or sell securities in order to manage large (net) inflows or outflows in the (sub-)fund. In addition to these costs, substantial order volumes may lead to market prices that are considerably below or above the market prices that apply under normal circumstances.

To enhance the investor protection of existing shareholders, a swing pricing mechanism can be applied to compensate for trading costs and other expenses if the aforementioned cumulative (net) inflows or outflows should have a material impact on the (sub-)fund on a valuation date and exceed a predetermined threshold (partial swing pricing). This mechanism can be applied across all (sub-)funds. If swing pricing is introduced for a particular (sub-)fund, this will be disclosed in the special section of the sales prospectus.

The Management Company of the fund will predefine thresholds for the application of the swing pricing mechanism, based, among other things, on current market conditions, available market liquidity and estimated dilution costs. In accordance with these thresholds, the adjustment itself will be initiated automatically. If the (net) inflows or outflows exceed the swing threshold, the net asset value is revised upward if the (sub-)fund sees large net inflows and is revised downward in the event of large net outflows. This adjustment is applied uniformly to all subscriptions and redemptions for the trading day in question. If a performance-based fee applies for the (sub-)fund, the calculation is based on the original net asset value.

The Management Company has established a swing pricing committee that determines the swing factors for each individual (sub-)fund. These swing factors indicate the extent of the net asset value adjustment. The swing pricing committee takes into account the following factors in particular:

– bid-ask spread (fixed-price element),
– impacts on the market (impacts of the transactions on the price),
– additional costs that are incurred as a result of trading activities for the investments.

The appropriateness of the applied swing factors, the operational decisions made in connection with the swing pricing (including the swing threshold), the extent of the adjustment, and the affected (sub-)funds are reviewed at regular intervals.

The amount of the swing pricing adjustment can therefore vary from one (sub-)fund to another and will not generally exceed 2% of the original net asset value per share. The net asset value adjustment is available upon request from the Management Company. In a market environment with extreme illiquidity, the Management Company can, however, increase the swing price adjustment to more than 2% of the original net asset value. Such an increase will be announced on the Management Company's website: www.dws.com.

As the mechanism should only be applied if significant (net) inflows or outflows are expected and it does not apply for normal trading volumes, it is assumed that the net asset value will only be adjusted occasionally.

This (sub-)fund can apply swing pricing but has not done so in the reporting period, as its (net) inflows and outflows did not exceed the relevant threshold previously defined.

Annual report
DWS Invest ESG Equity Income

Investment objective and performance in the reporting period

The objective of the investment policy is to generate above-average returns. For this, the sub-fund invests mainly in equities of issuers worldwide from which an above-average dividend yield is expected. The following criteria are of decisive importance when selecting the equities: average dividend yield for the sub-fund above the market average; sustainability and growth of the dividends; prospects for earnings growth; price/earnings ratio. In addition to these criteria, the proven stock-picking process of the portfolio management is applied. This comprises an analysis of the fundamental data of a company, such as asset quality, management expertise, profitability, balance sheet strength, cash flows, competitive position and different valuations. Aspects considered when selecting suitable investments include a focus on environmental, social and corporate governance (ESG) criteria. At least 80% of the sub-fund's net assets are invested in assets that meet the promoted environmental and social characteristics.*

In the reporting period from the beginning of January 2025 through the end of December 2025, DWS Invest ESG Equity Income recorded an appreciation of 7.2% per share (LC share class; BVI method; in euro).

"BVI method" performance, i.e., excluding the initial sales charge.
Past performance is not a guide to future results.

As of: December 31, 2025

Investment policy in the reporting period

A defensive strategy was pursued for the sub-fund. The investment focus was companies with above-average, growing and sustainable dividend payments that had solid balance sheets and good management teams, and whose stocks were traded at attractive ratings.

Further, the company had to have an above-average profile in terms of ecological and social aspects, as well as corporate governance. The portfolio management selected the companies that posi-

tively stood out in the sectoral and regional comparison based on the sustainability criteria examined. On the contrary, companies that did not meet the DWS sustainability standards were excluded from the investment universe. This affected specific sectors that are classified as controversial, including weapons manufacturers and tobacco companies, but also companies that notably violated UN standards and companies that were particularly strongly affected by risks from the effects of climate change.

Portfolio management also sought benefit from long-term, structural growth trends through investments in sectors such as renewable energy sources, energy efficiency or natural ingredients.

Despite market uncertainty induced mainly by geopolitical factors, the international equity markets, as measured by the MSCI World, recorded appreciable price gains overall in 2025 amid sometimes considerable volatility. These gains were underpinned by the emerging easing of interest rates, increased investor confidence in artificial intelligence, as well as robust corporate profits. Among the markets in Western industrial countries, the DAX 40 in Germany posted significant gains, buoyed by factors such as the multi-billion-euro package of fiscal relief measures. The emerging markets, as measured by the MSCI Emerging Markets, were even able to outperform the industrial countries on a full-year basis through the end of 2025. In this respect, China's equity market was one of the stand-out performers and continued to recover significantly. This trend was supported by Chinese economic growth, which was stimulated by expansionary macroeconomic policies. However, the international stock exchanges were intermittently hit hard by the erratic swings in U.S. trade and tariff policy.

The sub-fund recorded single-digit appreciation over the year. The sector allocation and individual stock selection had a negative impact but this was more than compensated for by the regional positioning. The underweight in the United States and the associated underweight in the U.S. dollar (that depreciated against the euro) made a comparatively significant contribution to the sub-fund's more positive appreciation.

The defensive strategic positioning of the sub-fund relative to the broader equity market was expressed in a higher weighting of defensive sectors such as utilities and health care. More cyclical sectors such as consumer discretionaries and information technology had a relatively lower weighting. Participation in the performance of cyclical sectors was achieved through a higher weighting of defensive equities in the basic materials and financials areas.

The sector allocation had a slightly negative effect due to larger cash holdings and the underweight in sectors with low or no dividends, such as information technology and communication. In addition, defensive sectors with high dividends, such as health care, that were overweight in the sub-fund lagged behind the market development. This was partially compensated for by the positive allocation in financials and consumer staples. The underweight in energy also made a positive contribution to the allocation.

Selection effects were negative overall due to the negative impact in the areas of industrials (overweight in equities such as Wolters Kluwer and ADP that were viewed by the market as being companies that could suffer disruption caused by artificial intelligence) and communications (overweight in telecommunications equities that did not perform as strongly). This was partially compensated for by effective selection in the commodities, financials and utilities sectors.

The best performance at individual equity level was recorded by, for example, equities from the commodities sector, such as Wheaton Precious Metals, and from the IT sector, such as Taiwan Semiconductor and Samsung Electronics. Equities such as Smurfit Westrock from the commodities sector, health care equities such as Merck and Motorola Solutions, and Infosys from the technology sector performed more poorly.

At individual equity level, United Health, EDP, Chubb, Infosys, Canadian Railways and Conagra were amongst those sold.

New additions to the sub-fund included Tokyo Marine, Haleon, Chugai, Adidas, ABN Amro and Linde.

The following risk management disclosures (other information) are unaudited and are not covered by the audit opinion on the annual report.

Composition of the reference portfolio (according to CSSF circular 11/512)
MSCI World High Dividend Yield

Market risk exposure (value-at-risk) (according to CSSF circular 11/512)

Lowest market risk exposure	%	83.329
Highest market risk exposure	%	105.586
Average market risk exposure	%	95.206

The values-at-risk were calculated for the period from January 1, 2025, through December 31, 2025, using historical simulation with a 99% confidence level, a 10-day holding period and an effective historical observation period of one year. The risk in a reference portfolio that does not contain derivatives is used as the measurement benchmark. Market risk is the risk to the fund's assets arising from an unfavorable change in market prices. The Company determines the potential market risk by means of the **relative value-at-risk approach** as defined in CSSF circular 11/512.

In the reporting period, the average leverage effect from the use of derivatives was 0.0, whereby the total of the nominal amounts of the derivatives in relation to the fund's assets was used for the calculation (sum-of-notional approach).

The gross exposure generated via derivatives pursuant to point 40 a) of the "Guidelines on ETFs and other UCITS issues" of the European Securities and Markets Authority (ESMA) totaled EUR 0.00 as of the reporting date.

DWS Invest ESG Equity Income

Notes on valuation

Under the responsibility of the Board of Directors of the SICAV, the Management Company determines the net asset values per share and performs the valuation of the assets of the fund. The basic provision of price data and price validation are performed in accordance with the method introduced by the Board of Directors of the SICAV on the basis of the legal and regulatory requirements or the principles for valuation methods defined in the SICAV's prospectus.

If no trading prices are available, prices are determined with the aid of valuation models (derived market values) which are agreed between State Street Bank International GmbH, Luxembourg Branch, as external price service provider and the Management Company and which are based as far as possible on market parameters. This procedure is subject to an ongoing monitoring process. The plausibility of price information from third parties is checked through other pricing sources, model calculations or other suitable procedure.

Assets reported in this report are not valued at derived market values.

Footnotes

* Does not include positions with a negative balance, if such exist.

BVI total expense ratio (TER)

The total expense ratio for the share classes was:

Class CHF LCH (P) 1.60% p.a.,
Class CHF LDH (P) 1.60% p.a.,
Class CHF TFCH (P) 0.85% p.a.,
Class FC 0.82% p.a.,
Class FD 0.83% p.a.,
Class IC 0.54% p.a.,
Class IC250 0.39% p.a.,
Class ID 0.52% p.a.,
Class ID100 0.29% p.a.,
Class LC 1.58% p.a.,
Class LCH (P) 1.61% p.a.,
Class LD 1.58% p.a.,
Class LDM 1.47%[4] p.a.,
Class NC 2.08% p.a.,
Class ND 2.08% p.a.,
Class PFC 1.94% p.a.,
Class PFCH (P) 1.69% p.a.,
Class PFD 1.63% p.a.,
Class TFC 0.83% p.a.,
Class TFCH (P) 0.86% p.a.,
Class TFD 0.83% p.a.,
Class WFD 0.01%[5],
Class XD .0.43% p.a.,
Class GBP D RD 0.82% p.a.,
Class USD FCH (P) 0.85% p.a.,
Class USD IC 0.54% p.a.,
Class USD LCH (P) 1.60% p.a.

The TER expresses total expenses and fees (excluding transaction costs) as a percentage of a fund's average net assets in relation to the respective share class within a fiscal year.

[4] Annualization has not been performed for share classes launched during the year.
[5] Annualization has not been performed for share classes liquidated during the year.

Transaction costs

The transaction costs paid in the reporting period amounted to EUR 1 025 772.55.

The transaction costs include all costs that were reported or settled separately for the account of the fund in the reporting period and are directly connected to the purchase or sale of assets. Any financial transaction taxes paid are included in the calculations.

Statement of changes in net assets 2025

I.	**Value of the fund's net assets at the beginning of the fiscal year**	**EUR**	**2 686 329 861.00**
1.	Distribution for the previous year	EUR	-53 644 442.99
2.	Net outflows[2]	EUR	-156 051 352.43
3.	Income adjustment	EUR	5 459 184.81

Transactions processed for the account of the fund's assets via closely related companies (based on major holdings of the Deutsche Bank Group)

The share of transactions conducted in the reporting period for the account of the fund's assets via brokers that are closely related companies and persons (share of 5% and above) amounted to 0.00% of all transactions. The total volume was EUR 0.00.

Placement fee / dilution adjustment

In the reporting period, the fund paid a placement fee of 2.9% of the fund's net assets to the distributor. This fee was calculated on the subscription date. The specified placement fee serves in particular as remuneration for distribution. The gross amount of the placement fee was paid in a single payment on the subscription date and simultaneously recognized in the fund's net assets as prepaid expenses. These are amortized on a daily basis over a period of three years from the date of subscription. The remaining position for prepaid expenses per share on each valuation date is calculated on a daily basis by multiplying the net assets of the fund by a factor. The relevant factor is determined through straight-line reduction of the placement fee by a certain percentage on a daily basis over three years from the subscription date. The prepaid expenses position fluctuates during the three years from the subscription date of the fund, since it depends on both the fund's net assets and the predetermined factor.

In addition, a dilution adjustment of up to 3% based on the gross redemption amount was charged for the benefit of the fund's net assets in the reporting period (to be paid by the shareholder).

Further details on the placement fee and the dilution adjustment can be found in the corresponding section of the fund's sales prospectus.

Annual report
DWS Invest ESG Euro Bonds (Short)

Investment objective and performance in the reporting period

The sub-fund seeks to generate sustained capital appreciation relative to the benchmark (iBoxx Euro Overall 1-3Y (RI)). To this end, it invests in government bonds, covered bonds (e.g., German Pfandbriefe) and corporate bonds denominated in or hedged against the euro. In its investments, it aligns its portfolio to the short maturity segment; accordingly, the average term to maturity of the bonds and similar investments it holds shall not exceed three years. Aspects considered when selecting investments include financial strength and also a focus on environmental, social and corporate governance (ESG) factors.*

"BVI method" performance, i.e., excluding the initial sales charge.
Past performance is not a guide to future results.

As of: December 31, 2025

The sub-fund DWS Invest ESG Euro Bonds (Short) recorded an appreciation of 2.6% per share (LC share class; BVI method) in the 2025 fiscal year, thus matching its benchmark, which returned +2.6% (both percentages in euro terms).

Investment policy in the reporting period

The capital market environment in 2025 was challenging. This was due in particular to geopolitical crises like the Russia-Ukraine war that has been ongoing since February 24, 2022, the escalated conflict in the Middle East, and the power struggle between the United States and China. Furthermore, the erratic swings in U.S. trade and tariff policy generated additional uncertainty in the capital markets. On the other hand, the easing of monetary policy, which had begun previously, continued during the reporting period. The European Central Bank (ECB) thus lowered the key interest rate in four steps from 3.00% p.a. to 2.00% p.a. (deposit facility) while the U.S. Federal Reserve gradually reduced its key interest rates by 0.75 percentage points to a target range of 3.50% p.a. – 3.75% p.a.

In the international bond markets, the yield curve in 2025 became increasingly steeper at the long end – although this was still moderate – following the previous normalization. In light of the more relaxed interest rate policy of the central banks, bond yields fell noticeably at the short end in some cases. Long-dated government bonds, on the other hand, came under pressure due, for example, to the rise in public deficits and, in some instances, had to accept price declines on a full-year basis, accompanied by rising bond yields. Corporate bonds, on the other hand, profited from their relatively high coupons as well as narrowing risk premiums.

In line with its investment policy, the sub-fund continued to primarily invest in euro issues with shorter maturities. The main investment focus was on government bonds, including bonds of near-government issuers. For yield reasons, the portfolio management also invested in financial services providers, industrial companies and, to a lesser extent, in bonds from emerging markets as well. These securities offered yield spread benefits when compared with German government bonds. Nearly all of the bonds held in the portfolio had investment-grade status (ratings of BBB- or better from the leading rating agencies) as of the reporting

date. To a lesser extent, currency-hedged positions were held in interest-bearing securities that were not denominated in euro. The portfolio management saw greater potential in these bonds. This mainly included bonds from the United States and the United Kingdom. On maturity, the previously held positions in Norway and Canada were reallocated to the local U.S. and U.K. markets. In anticipation of further monetary easing on the part of the Federal Reserve Bank (United States) and the Bank of England (United Kingdom), the portfolio management viewed these markets as having greater potential compared with the euro area.

The credit spread tightening for corporate bonds and bonds from emerging markets made a particularly important contribution to the investment gain of the sub-fund. The active increase of the interest rate sensitivity and the allocation on the yield curve proved to be a profitable strategy against the backdrop of interest rate cuts by the ECB and other central banks. The costs of currency hedging had a negative impact on the relative performance of the sub-fund DWS Invest ESG Euro Bonds (Short) in the reporting period, albeit to a lesser extent.

The following risk management disclosures (other information) are unaudited and are not covered by the audit opinion on the annual report.

Composition of the reference portfolio (according to CSSF circular 11/512)
14.14% of portfolio value

Market risk exposure (value-at-risk) (according to CSSF circular 11/512)

Lowest market risk exposure	%	0.005
Highest market risk exposure	%	0.007
Average market risk exposure	%	0.006

The values-at-risk were calculated for the period from January 1, 2025, through December 31, 2025, using historical simulation with a 99% confidence level, a 10-day holding period and an effective historical observation period of one year. The risk in a reference portfolio that does not contain derivatives is used as the measurement benchmark. Market risk is the risk to the fund's assets arising from an unfavorable change in market prices. The Company determines the potential market risk by means of the **absolute value-at-risk approach** as defined in CSSF circular 11/512.

In the reporting period, the average leverage effect from the use of derivatives was 0.3, whereby the total of the nominal amounts of the derivatives in relation to the fund's assets was used for the calculation (sum-of-notional approach).

The gross exposure generated via derivatives pursuant to point 40 a) of the "Guidelines on ETFs and other UCITS issues" of the European Securities and Markets Authority (ESMA) totaled EUR 249 379 150.11 as of the reporting date. Does not include any forward currency transactions entered into for currency hedging purposes at the level of the share classes.

Notes on valuation

Under the responsibility of the Board of Directors of the SICAV, the Management Company determines the net asset values per share and performs the valuation of the assets of the fund. The basic provision of price data and price validation are performed in accordance with the method introduced by the Board of Directors of the SICAV on the basis of the legal and regulatory requirements or the principles for valuation methods defined in the SICAV's prospectus.

If no trading prices are available, prices are determined with the aid of valuation models (derived market values) which are agreed between State Street Bank International GmbH, Luxembourg Branch, as external price service provider and the Management Company and which are based as far as possible on market parameters. This procedure is subject to an ongoing monitoring process. The plausibility of price information from third parties is checked through other pricing sources, model calculations or other suitable procedure.

Assets reported in this report are not valued at derived market values.

The management fee / all-in fee rates in effect as of the reporting date for the investment fund units held in the securities portfolio are shown in parentheses. A plus sign means that a performance-based fee may also be charged. As the investment fund held units of other investment funds (target funds) in the reporting period, further costs, charges and fees may have been incurred at the level of these individual target funds.

Footnotes

* Floating interest rate.
** Some or all of these securities are lent.
*** The prepaid placement fee is amortized over a period of three years (as specified in article 13 f "Placement Fee" section in the general section of the fund's management regulations).
**** Does not include positions with a negative balance, if such exist.

BVI total expense ratio (TER)

The total expense ratio for the share classes was:

Class FC 0.26% p.a.,	Class IC 0.24% p.a.,
Class IC100 0.17% p.a.,	Class LC 0.48% p.a.,
Class LD 0.48% p.a.,	Class NC 0.79% p.a.,
Class NDQ 0.79% p.a.,	Class PFC 1.22% p.a.,
Class PFDQ 1.26% p.a.,	Class TFC 0.26% p.a.,
Class TFD 0.26% p.a.,	Class SEK LCH 0.51% p.a.

The TER expresses total expenses and fees (excluding transaction costs) as a percentage of a fund's average net assets in relation to the respective share class within a fiscal year.

As well, the additional income from securities lending resulted in a performance-based fee of

Class FC 0.011% p.a.,	Class IC 0.011% p.a.,
Class IC100 0.011% p.a.,	Class LC 0.011% p.a.,
Class LD 0.011% p.a.,	Class NC 0.011% p.a.,
Class NDQ 0.011% p.a.,	Class PFC 0.011% p.a.,
Class PFDQ 0.011% p.a.,	Class TFC 0.011% p.a.,
Class TFD 0.011% p.a.,	Class SEK LCH 0.011% p.a.

of the fund's average net assets in relation to the respective share class.

Transaction costs

The transaction costs paid in the reporting period amounted to EUR 22 499.17.

The transaction costs include all costs that were reported or settled separately for the account of the fund in the reporting period and are directly connected to the purchase or sale of assets. Any financial transaction taxes paid are included in the calculations.

Statement of changes in net assets 2025

I.	**Value of the fund's net assets at the beginning of the fiscal year**	**EUR**	**794 131 219.90**
1.	Distribution for the previous year	EUR	-940 668.74
2.	Net outflows[2]	EUR	-103 406 731.03
3.	Income adjustment	EUR	858 432.86
4.	Net investment income	EUR	16 708 048.45

Transactions processed for the account of the fund's assets via closely related companies (based on major holdings of the Deutsche Bank Group)

The share of transactions conducted in the reporting period for the account of the fund's assets via brokers that are closely related companies and persons (share of 5% and above) amounted to 1.59% of all transactions. The total volume was EUR 18 684 568.41.

Placement fee / dilution adjustment

In the reporting period, the fund paid a placement fee of 2.9% of the fund's net assets to the distributor. This fee was calculated on the subscription date. The specified placement fee serves in particular as remuneration for distribution. The gross amount of the placement fee was paid in a single payment on the subscription date and simultaneously recognized in the fund's net assets as prepaid expenses. These are amortized on a daily basis over a period of three years from the date of subscription. The remaining position for prepaid expenses per share on each valuation date is calculated on a daily basis by multiplying the net assets of the fund by a factor. The relevant factor is determined through straight-line reduction of the placement fee by a certain percentage on a daily basis over three years from the subscription date. The prepaid expenses position fluctuates during the three years from the subscription date of the fund, since it depends on both the fund's net assets and the predetermined factor.

In addition, a dilution adjustment of up to 3% based on the gross redemption amount was charged for the benefit of the fund's net assets in the reporting period (to be paid by the shareholder).

Further details on the placement fee and the dilution adjustment can be found in the corresponding section of the fund's sales prospectus.

Annual report
DWS Invest ESG Euro Corporate Bonds

Investment objective and performance in the reporting period

The bond sub-fund seeks to generate sustained capital appreciation and surpass the performance of the benchmark (iBoxx Euro Corporate). To this end, it invests in euro-denominated corporate bonds. Derivatives are used for hedging and for investment purposes. Aspects considered when selecting investments include financial strength and also a focus on environmental, social and corporate governance (ESG) criteria.*

The sub-fund DWS Invest ESG Euro Corporate Bonds recorded an appreciation of 2.8% per share (LC share class; BVI method) in the 2025 fiscal year, thus not quite matching its benchmark, which returned +3.0% (both percentages in euro terms).

DWS Invest ESG Euro Corporate Bonds

Performance of share classes vs. benchmark (in EUR)

Share class	ISIN	1 year	3 years	5 years
Class LC	LU2001241897	2.8%	17.2%	-2.2%
Class FC	LU2001241384	3.2%	18.4%	-0.6%
Class IC100	LU2233196539	3.6%	19.9%	1.6%
Class TFC	LU2001242275	3.1%	18.3%	-0.8%
Class XC	LU2001182430	3.6%	19.8%	1.3%
iBoxx € Corporate		3.0%	16.5%	-1.1%

"BVI method" performance, i.e., excluding the initial sales charge.
Past performance is not a guide to future results.

As of: December 31, 2025

Investment policy in the reporting period

The capital market environment in 2025 was challenging. This was due in particular to geopolitical crises like the Russia-Ukraine war that has been ongoing since February 24, 2022, the escalated conflict in the Middle East, and the power struggle between the United States and China. Furthermore, the erratic swings in U.S. trade and tariff policy generated additional uncertainty in the capital markets. On the other hand, the easing of monetary policy, which had begun previously, continued during the reporting period. The European Central Bank (ECB) thus lowered the key interest rate in four steps from 3.00% p.a. to 2.00% p.a. (deposit facility) while the U.S. Federal Reserve gradually reduced its key interest rates by 0.75 percentage points to a target range of 3.50% p.a. – 3.75% p.a.

In the international bond markets, the yield curve in 2025 became increasingly steeper at the long end – although this was still moderate – following the previous normalization. In light of the more relaxed interest rate policy of the central banks, bond yields fell noticeably at the short end in some cases. Long-dated government bonds, on the other hand, came under pressure due, for example, to the rise in public deficits and, in some instances, had to accept price declines on a full-year basis, accompanied by rising bond yields. Corporate bonds, on the other hand, profited from their relatively high coupons as well as narrowing risk premiums.

In line with its investment policy, the sub-fund remained focused on corporate bonds and interest-bearing instruments of financial service providers. Regionally, like in previous years, preference was given to issues from Europe and the United States. Most of the bonds held in the portfolio had investment-grade status (ratings of BBB- or better from the leading rating agencies) as of the reporting date. Overall, the sub-fund's investment strategy in 2025 remained focused on exploiting opportunities in the global corporate bond markets while simultaneously managing risks through a broadly diversified allocation and careful bond picking.

The overweighting of industrials had a particularly positive effect on the investment performance of the sub-fund DWS Invest ESG Euro Corporate Bonds, as too did the overweighting of telecommunications, as these two segments were among the strongest during 2025. Furthermore, bond picking in the BBB- segment was successful to an above-average degree. A hedging instrument via derivatives also made a stabilizing contribution to the sub-fund's performance in the volatile market phases of the third quarter of 2025. The regional positioning with an underweighting of German issuers as well as a significant underweighting of French corporate bonds also bolstered performance.

However, the underweighting of financials, especially banking

bonds which turned in a positive performance over the course of 2025, detracted from performance. The underweighting in the oil and gas sector, which was undertaken for sustainability reasons, also adversely affected the sub-fund's performance, as too did the slightly longer duration on average compared to the benchmark. Furthermore, the underweighting of utilities also detracted from the relative performance of the sub-fund DWS Invest ESG Euro Corporate Bonds. This also explains overall why the sub-fund fell short of its benchmark.

The following risk management disclosures (other information) are unaudited and are not covered by the audit opinion on the annual report.

Composition of the reference portfolio (according to CSSF circular 11/512)
Markit iBoxx Euro Corporate Index

Market risk exposure (value-at-risk) (according to CSSF circular 11/512)

Lowest market risk exposure	%	93.515
Highest market risk exposure	%	124.256
Average market risk exposure	%	110.548

The values-at-risk were calculated for the period from January 1, 2025, through December 31, 2025, using historical simulation with a 99% confidence level, a 10-day holding period and an effective historical observation period of one year. The risk in a reference portfolio that does not contain derivatives is used as the measurement benchmark. Market risk is the risk to the fund's assets arising from an unfavorable change in market prices. The Company determines the potential market risk by means of the **relative value-at-risk approach** as defined in CSSF circular 11/512.

In the reporting period, the average leverage effect from the use of derivatives was 0.3, whereby the total of the nominal amounts of the derivatives in relation to the fund's assets was used for the calculation (sum-of-notional approach).

The gross exposure generated via derivatives pursuant to point 40 a) of the "Guidelines on ETFs and other UCITS issues" of the European Securities and Markets Authority (ESMA) totaled EUR 122 202 872.06 as of the reporting date.

Notes on valuation

Under the responsibility of the Board of Directors of the SICAV, the Management Company determines the net asset values per share and performs the valuation of the assets of the fund. The basic provision of price data and price validation are performed in accordance with the method introduced by the Board of Directors of the SICAV on the basis of the legal and regulatory requirements or the principles for valuation methods defined in the SICAV's prospectus.

If no trading prices are available, prices are determined with the aid of valuation models (derived market values) which are agreed between State Street Bank International GmbH, Luxembourg Branch, as external price service provider and the Management Company and which are based as far as possible on market parameters. This procedure is subject to an ongoing monitoring process. The plausibility of price information from third parties is checked through other pricing sources, model calculations or other suitable procedure.

Assets reported in this report are not valued at derived market values.

The management fee / all-in fee rates in effect as of the reporting date for the investment fund units held in the securities portfolio are shown in parentheses. A plus sign means that a performance-based fee may also be charged. As the investment fund held units of other investment funds (target funds) in the reporting period, further costs, charges and fees may have been incurred at the level of these individual target funds.

Footnotes

* Floating interest rate.
** Does not include positions with a negative balance, if such exist.

BVI total expense ratio (TER)

The total expense ratio for the share classes was:

Class FC 0.66% p.a.,
Class IC100 0.23% p.a.,
Class LC 0.98% p.a.,
Class TFC 0.68% p.a.,
Class XC 0.27% p.a.

The TER expresses total expenses and fees (excluding transaction costs) as a percentage of a fund's average net assets in relation to the respective share class within a fiscal year.

Transaction costs

The transaction costs paid in the reporting period amounted to EUR 24 204.68.

The transaction costs include all costs that were reported or settled separately for the account of the fund in the reporting period and are directly connected to the purchase or sale of assets. Any financial transaction taxes paid are included in the calculations.

Statement of changes in net assets 2025

Transactions processed for the account of the fund's assets via closely related companies (based on major holdings of the Deutsche Bank Group)

The share of transactions conducted in the reporting period for the account of the fund's assets via brokers that are closely related companies and persons (share of 5% and above) amounted to 1.41% of all transactions. The total volume was EUR 19 555 482.08.

Swing pricing

Swing pricing is a mechanism that is intended to protect shareholders from the negative effects of trading costs arising from subscription and redemption activities. Extensive subscriptions and redemptions within a (sub-)fund may lead to a dilution of the assets of this (sub-)fund, as the net asset value sometimes does not reflect all trading and other costs that are incurred when the portfolio manager must buy or sell securities in order to manage large (net) inflows or outflows in the (sub-)fund. In addition to these costs, substantial order volumes may lead to market prices that are considerably below or above the market prices that apply under normal circumstances.

To enhance the investor protection of existing shareholders, a swing pricing mechanism can be applied to compensate for trading costs and other expenses if the aforementioned cumulative (net) inflows or outflows should have a material impact on the (sub-)fund on a valuation date and exceed a predetermined threshold (partial swing pricing). This mechanism can be applied across all (sub-)funds. If swing pricing is introduced for a particular (sub-)fund, this will be disclosed in the special section of the sales prospectus.

The Management Company of the fund will predefine thresholds for the application of the swing pricing mechanism, based, among other things, on current market conditions, available market liquidity and estimated dilution costs. In accordance with these thresholds, the adjustment itself will be initiated automatically. If the (net) inflows or outflows exceed the swing threshold, the net asset value is revised upward if the (sub-)fund sees large net inflows and is revised downward in the event of large net outflows. This adjustment is applied uniformly to all subscriptions and redemptions for the trading day in question. If a performance-based fee applies for the (sub-)fund, the calculation is based on the original net asset value.

The Management Company has established a swing pricing committee that determines the swing factors for each individual (sub-)fund. These swing factors indicate the extent of the net asset value adjustment. The swing pricing committee takes into account the following factors in particular:

– bid-ask spread (fixed-price element),
– impacts on the market (impacts of the transactions on the price),
– additional costs that are incurred as a result of trading activities for the investments.

The appropriateness of the applied swing factors, the operational decisions made in connection with the swing pricing (including the swing threshold), the extent of the adjustment, and the affected (sub-)funds are reviewed at regular intervals.

The amount of the swing pricing adjustment can therefore vary from one (sub-)fund to another and will not generally exceed 2% of the original net asset value per share. The net asset value adjustment is available upon request from the Management Company. In a market environment with extreme illiquidity, the Management Company can, however, increase the swing price adjustment to more than 2% of the original net asset value. Such an increase will be announced on the Management Company's website: www.dws.com.

As the mechanism should only be applied if significant (net) inflows or outflows are expected and it does not apply for normal trading volumes, it is assumed that the net asset value will only be adjusted occasionally.

This (sub-)fund can apply swing pricing but has not done so in the reporting period, as its (net) inflows and outflows did not exceed the relevant threshold previously defined.

Annual report
DWS Invest ESG Euro Corporate Bonds Long

Investment objective and performance in the reporting period

The bond sub-fund seeks to generate capital appreciation and surpass the performance of the benchmark (70% iBoxx EUR Corporates 10 Index, 30% iBoxx Euro Corporates 7-10 Index). To this end, the sub-fund invests in corporate bonds denominated in euro that offer returns higher than those of comparable government bonds. Investments are deliberately concentrated almost exclusively on issuers whose credit quality is considered by the market to be relatively good but not first-rate (investment-grade bonds). Aspects considered when selecting investments include financial strength and also a focus on environmental, social and corporate governance (ESG) factors.*

The performance of the sub-fund DWS Invest ESG Euro Corporate Bonds Long remained unchanged at 0.0% per share (FC share class; BVI method) in the 2025 fiscal year and thus stayed on an equal footing with its benchmark, which returned 0.0% (both percentages in euro terms).

DWS Invest ESG Euro Corporate Bonds Long

Performance of share classes vs. benchmark (in EUR)

Share class	ISIN	1 year	Since inception
Class FC	LU2708163717	0.0%	4.5%[1]

"BVI method" performance, i.e., excluding the initial sales charge.
Past performance is not a guide to future results.

As of: December 31, 2025

Investment policy in the reporting period

The capital market environment in 2025 was challenging. This was due in particular to geopolitical crises like the Russia-Ukraine war that has been ongoing since February 24, 2022, the escalated conflict in the Middle East, and the power struggle between the United States and China. Furthermore, the erratic swings in U.S. trade and tariff policy generated additional uncertainty in the capital markets. On the other hand, the easing of monetary policy, which had begun previously, continued during the reporting period. The European Central Bank (ECB) thus lowered the key interest rate in four steps from 3.00% p.a. to 2.00% p.a. (deposit facility) while the U.S. Federal Reserve gradually reduced its key interest rates by 0.75 percentage points to a target range of 3.50% p.a. – 3.75% p.a.

In the international bond markets, the yield curve in 2025 became increasingly steeper at the long end – although this was still moderate – following the previous normalization. In light of the more relaxed interest rate policy of the central banks, bond yields fell noticeably at the short end in some cases. Long-dated government bonds, on the other hand, came under pressure due, for example, to the rise in public deficits and, in some instances, had to accept price declines on a full-year basis, accompanied by rising bond yields. Corporate bonds, on the other hand, profited from their relatively high coupons as well as narrowing risk premiums.

Based on its positive market assessment, the portfolio management increased the weighting of credit risk in its investments within the sub-fund portfolio. This allowed the sub-fund to participate more strongly in the narrowing of risk premiums on corporate bonds, and in the associated price increases, in the reporting period. In addition, corporate bonds from the banking, pharmaceutical, telecommunications, and utilities sectors were favored in the context of sector allocation, which also had a positive impact on the performance of the sub-fund DWS Invest ESG Euro Corporate Bonds Long.

The following risk management disclosures (other information) are unaudited and are not covered by the audit opinion on the annual report.

Composition of the reference portfolio (according to CSSF circular 11/512)
70% iBoxx Euro Corporates 10+ Index, 30% iBoxx Euro Corporate 7-10 Year Index

Market risk exposure (value-at-risk) (according to CSSF circular 11/512)

Lowest market risk exposure	%	97.999
Highest market risk exposure	%	106.675
Average market risk exposure	%	102.466

The values-at-risk were calculated for the period from January 1, 2025, through December 31, 2025, using historical simulation with a 99% confidence level, a 10-day holding period and an effective historical observation period of one year. The risk in a reference portfolio that does not contain derivatives is used as the measurement benchmark. Market risk is the risk to the fund's assets arising from an unfavorable change in market prices. The Company determines the potential market risk by means of the **relative value-at-risk approach** as defined in CSSF circular 11/512.

In the reporting period, the average leverage effect from the use of derivatives was 0.1, whereby the total of the nominal amounts of the derivatives in relation to the fund's assets was used for the calculation (sum-of-notional approach).

The gross exposure generated via derivatives pursuant to point 40 a) of the "Guidelines on ETFs and other UCITS issues" of the European Securities and Markets Authority (ESMA) totaled EUR 3 463 773.00 as of the reporting date.

Notes on valuation

Under the responsibility of the Board of Directors of the SICAV, the Management Company determines the net asset values per share and performs the valuation of the assets of the fund. The basic provision of price data and price validation are performed in accordance with the method introduced by the Board of Directors of the SICAV on the basis of the legal and regulatory requirements or the principles for valuation methods defined in the SICAV's prospectus.

If no trading prices are available, prices are determined with the aid of valuation models (derived market values) which are agreed between State Street Bank International GmbH, Luxembourg Branch, as external price service provider and the Management Company and which are based as far as possible on market parameters. This procedure is subject to an ongoing monitoring process. The plausibility of price information from third parties is checked through other pricing sources, model calculations or other suitable procedure.

Assets reported in this report are not valued at derived market values.

BVI total expense ratio (TER)

The total expense ratio for the share classes was:

Class FC 0.74% p.a.,
Class FD 0.74% p.a.,
Class FD100 0.28% p.a.,
Class IC100 0.24% p.a.,
Class ID100 0.25% p.a.

The TER expresses total expenses and fees (excluding transaction costs) as a percentage of a fund's average net assets in relation to the respective share class within a fiscal year.

Transaction costs

The transaction costs paid in the reporting period amounted to EUR 1 235.20.

The transaction costs include all costs that were reported or settled separately for the account of the fund in the reporting period and are directly connected to the purchase or sale of assets. Any financial transaction taxes paid are included in the calculations.

Transactions processed for the account of the fund's assets via closely related companies (based on major holdings of the Deutsche Bank Group)

The share of transactions conducted in the reporting period for the account of the fund's assets via brokers that are closely related companies and persons (share of 5% and above) amounted to 4.38% of all transactions. The total volume was EUR 967 827.62.

Placement fee / dilution adjustment

In the reporting period, the fund paid a placement fee of 2.9% of the fund's net assets to the distributor. This fee was calculated on the subscription date. The specified placement fee serves in particular as remuneration for distribution. The gross amount of the placement fee was paid in a single payment on the subscription date and simultaneously recognized in the fund's net assets as prepaid expenses. These are amortized on a daily basis over a period of three years from the date of subscription. The remaining position for prepaid expenses per share on each valuation date is calculated on a daily basis by multiplying the net assets of the fund by a factor. The relevant factor is determined through straight-line reduction of the placement fee by a certain percentage on a daily basis over three years from the subscription date. The prepaid expenses position fluctuates during the three years from the subscription date of the fund, since it depends on both the fund's net assets and the predetermined factor.

In addition, a dilution adjustment of up to 3% based on the gross redemption amount was charged for the benefit of the fund's net assets in the reporting period (to be paid by the shareholder).

Further details on the placement fee and the dilution adjustment can be found in the corresponding section of the fund's sales prospectus.

DWS Invest ESG Euro Corporate Bonds Long

Swing pricing

Swing pricing is a mechanism that is intended to protect shareholders from the negative effects of trading costs arising from subscription and redemption activities. Extensive subscriptions and redemptions within a (sub-)fund may lead to a dilution of the assets of this (sub-)fund, as the net asset value sometimes does not reflect all trading and other costs that are incurred when the portfolio manager must buy or sell securities in order to manage large (net) inflows or outflows in the (sub-)fund. In addition to these costs, substantial order volumes may lead to market prices that are considerably below or above the market prices that apply under normal circumstances.

To enhance the investor protection of existing shareholders, a swing pricing mechanism can be applied to compensate for trading costs and other expenses if the aforementioned cumulative (net) inflows or outflows should have a material impact on the (sub-)fund on a valuation date and exceed a predetermined threshold (partial swing pricing). This mechanism can be applied across all (sub-)funds. If swing pricing is introduced for a particular (sub-)fund, this will be disclosed in the special section of the sales prospectus.

The Management Company of the fund will predefine thresholds for the application of the swing pricing mechanism, based, among other things, on current market conditions, available market liquidity and estimated dilution costs. In accordance with these thresholds, the adjustment itself will be initiated automatically. If the (net) inflows or outflows exceed the swing threshold, the net asset value is revised upward if the (sub-)fund sees large net inflows and is revised downward in the event of large net outflows. This adjustment is applied uniformly to all subscriptions and redemptions for the trading day in question. If a performance-based fee applies for the (sub-)fund, the calculation is based on the original net asset value.

The Management Company has established a swing pricing committee that determines the swing factors for each individual (sub-)fund. These swing factors indicate the extent of the net asset value adjustment. The swing pricing committee takes into account the following factors in particular:

- bid-ask spread (fixed-price element),
- impacts on the market (impacts of the transactions on the price),
- additional costs that are incurred as a result of trading activities for the investments.

The appropriateness of the applied swing factors, the operational decisions made in connection with the swing pricing (including the swing threshold), the extent of the adjustment, and the affected (sub-)funds are reviewed at regular intervals.

The amount of the swing pricing adjustment can therefore vary from one (sub-)fund to another and will not generally exceed 2% of the original net asset value per share. The net asset value adjustment is available upon request from the Management Company. In a market environment with extreme illiquidity, the Management Company can, however, increase the swing price adjustment to more than 2% of the original net asset value. Such an increase will be announced on the Management Company's website: www.dws.com.

As the mechanism should only be applied if significant (net) inflows or outflows are expected and it does not apply for normal trading volumes, it is assumed that the net asset value will only be adjusted occasionally.

This (sub-)fund can apply swing pricing but has not done so in the reporting period, as its (net) inflows and outflows did not exceed the relevant threshold previously defined.

Annual report
DWS Invest ESG Euro High Yield

Investment objective and performance in the reporting period

The bond sub-fund seeks to achieve sustained capital appreciation that surpasses the performance of the benchmark (ML Euro High Yield BB-B Constrained). To attain this objective, it invests worldwide in corporate bonds (also from the financial sector) that predominantly do not have an investment-grade rating at the time of acquisition. The non-investment-grade segment comprises bonds with a rating of BB+ and under, including bonds with a D rating and unrated bonds. Aspects considered when selecting investments include financial strength and also a focus on environmental, social and corporate governance (ESG) criteria.*

"BVI method" performance, i.e., excluding the initial sales charge.
Past performance is not a guide to future results.

As of: December 31, 2025

The sub-fund DWS Invest ESG Euro High Yield recorded an appreciation of 4.6% per share (FC share class; BVI method) in the 2025 fiscal year, underperforming its benchmark, which returned +5.5% (both percentages in euro terms).

Investment policy in the reporting period

In accordance with the sub-fund concept, the portfolio management invested globally in predominantly high-yield corporate bonds, focusing on European issues. These high-yield bonds are non-investment-grade interest-bearing securities that are generally traded in the capital markets at considerably higher risk premiums relative to government bonds from the core markets, but offer noticeably higher yields in return. To take account of risk, the portfolio management concentrated its investments on high-yield bonds with ratings of BB and B from the leading rating agencies. In terms of its sector allocation, the portfolio was generally broadly diversified, although bonds from banking, retailing and insurance were favored relative to the benchmark.

The capital market environment in 2025 was challenging. This was due in particular to geopolitical crises like the Russia-Ukraine war that has been ongoing since February 24, 2022, the escalated conflict in the Middle East, and the power struggle between the United States and China. Furthermore, the erratic swings in U.S. trade and tariff policy generated additional uncertainty in the capital markets. On the other hand, the easing of monetary policy, which had begun previously, continued during the reporting period. The European Central Bank (ECB) thus lowered the key interest rate in four steps from 3.00% p.a. to 2.00% p.a. (deposit facility) while the U.S. Federal Reserve gradually reduced its key interest rates by 0.75 percentage points to a target range of 3.50% p.a. – 3.75% p.a.

In the international bond markets, the yield curve in 2025 became increasingly steeper at the long end – although this was still moderate – following the previous normalization. In light of the more relaxed interest rate policy of the central banks, bond yields fell noticeably at the short end in some cases. Long-dated government bonds, on the other hand, came under pressure due, for example, to the rise in public deficits and, in some instances, had to accept price declines on a full-year basis, accompanied by rising bond

yields. Corporate bonds, on the other hand, profited from their relatively high coupons as well as narrowing risk premiums.

One of the main reasons why the sub-fund underperformed its benchmark was its investment in issuers from the capital goods sector. In addition, the underweighting of the telecommunications sector, especially of satellite operators which profited from geopolitical tensions, as well as the underweighting of the energy sector – primarily for ESG reasons – also dampened the relative performance of the sub-fund. In contrast, the sub-fund's investments in banking, insurance and health had a positive effect on its relative performance.

The following risk management disclosures (other information) are unaudited and are not covered by the audit opinion on the annual report.

Composition of the reference portfolio (according to CSSF circular 11/512)
ICE BofA BB-B Rated Euro High Yield Constrained Index

Market risk exposure (value-at-risk) (according to CSSF circular 11/512)

Lowest market risk exposure	%	93.918
Highest market risk exposure	%	111.497
Average market risk exposure	%	101.812

The values-at-risk were calculated for the period from January 1, 2025, through December 31, 2025, using historical simulation with a 99% confidence level, a 10-day holding period and an effective historical observation period of one year. The risk in a reference portfolio that does not contain derivatives is used as the measurement benchmark. Market risk is the risk to the fund's assets arising from an unfavorable change in market prices. The Company determines the potential market risk by means of the **relative value-at-risk approach** as defined in CSSF circular 11/512.

In the reporting period, the average leverage effect from the use of derivatives was 0.2, whereby the total of the nominal amounts of the derivatives in relation to the fund's assets was used for the calculation (sum-of-notional approach).

The gross exposure generated via derivatives pursuant to point 40 a) of the "Guidelines on ETFs and other UCITS issues" of the European Securities and Markets Authority (ESMA) totaled EUR 62 609 150.39 as of the reporting date.

Notes on valuation

Under the responsibility of the Board of Directors of the SICAV, the Management Company determines the net asset values per share and performs the valuation of the assets of the fund. The basic provision of price data and price validation are performed in accordance with the method introduced by the Board of Directors of the SICAV on the basis of the legal and regulatory requirements or the principles for valuation methods defined in the SICAV's prospectus.

If no trading prices are available, prices are determined with the aid of valuation models (derived market values) which are agreed between State Street Bank International GmbH, Luxembourg Branch, as external price service provider and the Management Company and which are based as far as possible on market parameters. This procedure is subject to an ongoing monitoring process. The plausibility of price information from third parties is checked through other pricing sources, model calculations or other suitable procedure.

Assets reported in this report are valued to a minor extent at derived market values.

The management fee / all-in fee rates in effect as of the reporting date for the investment fund units held in the securities portfolio are shown in parentheses. A plus sign means that a performance-based fee may also be charged. As the investment fund held units of other investment funds (target funds) in the reporting period, further costs, charges and fees may have been incurred at the level of these individual target funds.

Footnotes

* Floating interest rate.
** Some or all of these securities are lent.
*** Does not include positions with a negative balance, if such exist.

The TER expresses total expenses and fees (excluding transaction costs) as a percentage of a fund's average net assets in relation to the respective share class within a fiscal year.

As well, the additional income from securities lending resulted in a performance-based fee of

Class FC 0.013% p.a.,	Class FC50 0.013% p.a.,
Class FD 0.013% p.a.,	Class IC 0.013% p.a.,
Class IC50 0.013% p.a.,	Class LC 0.013% p.a.,
Class LD 0.013% p.a.,	Class NC 0.013% p.a.,
Class TFC 0.012% p.a.,	Class TFD 0.013% p.a.,
Class XC 0.013% p.a.,	Class XD 0.013% p.a.

of the fund's average net assets in relation to the respective share class.

Transaction costs

The transaction costs paid in the reporting period amounted to EUR 6 985.88.

The transaction costs include all costs that were reported or settled separately for the account of the fund in the reporting period and are directly connected to the purchase or sale of assets. Any financial transaction taxes paid are included in the calculations.

Swing pricing

Swing pricing is a mechanism that is intended to protect shareholders from the negative effects of trading costs arising from subscription and redemption activities. Extensive subscriptions and redemptions within a (sub-)fund may lead to a dilution of the assets of this (sub-)fund, as the net asset value sometimes does not reflect all trading and other costs that are incurred when the portfolio manager must buy or sell securities in order to manage large (net) inflows or outflows in the (sub-)fund. In addition to these costs, substantial order volumes may lead to market prices that are considerably below or above the market prices that apply under normal circumstances.

To enhance the investor protection of existing shareholders, a swing pricing mechanism can be applied to compensate for trading costs and other expenses if the aforementioned cumulative (net) inflows or outflows should have a material impact on the (sub-)fund on a valuation date and exceed a predetermined threshold (partial swing pricing). This mechanism can be applied across all (sub-)funds. If swing pricing is introduced for a particular (sub-)fund, this will be disclosed in the special section of the sales prospectus.

The Management Company of the fund will predefine thresholds for the application of the swing pricing mechanism, based, among other things, on current market conditions, available market liquidity and estimated dilution costs. In accordance with these thresholds, the adjustment itself will be initiated automatically. If the (net) inflows or outflows exceed the swing threshold, the net asset value is revised upward if the (sub-)fund sees large net inflows and is revised downward in the event of large net outflows. This adjustment is applied uniformly to all subscriptions and redemptions for the trading day in question. If a performance-based fee applies for the (sub-)fund, the calculation is based on the original net asset value.

The Management Company has established a swing pricing committee that determines the swing factors for each individual (sub-)fund. These swing factors indicate the extent of the net asset value adjustment. The swing pricing committee takes into account the following factors in particular:

– bid-ask spread (fixed-price element),
– impacts on the market (impacts of the transactions on the price),
– additional costs that are incurred as a result of trading activities for the investments.

The appropriateness of the applied swing factors, the operational decisions made in connection with the swing pricing (including the swing threshold), the extent of the adjustment, and the affected (sub-)funds are reviewed at regular intervals.

The amount of the swing pricing adjustment can therefore vary from one (sub-)fund to another and will not generally exceed 2% of the original net asset value per share. The net asset value adjustment is available upon request from the Management Company. In a market environment with extreme illiquidity, the Management Company can, however, increase the swing price adjustment to more than 2% of the original net asset value. Such an increase will be announced on the Management Company's website: www.dws.com.

As the mechanism should only be applied if significant (net) inflows or outflows are expected and it does not apply for normal trading volumes, it is assumed that the net asset value will only be adjusted occasionally.

This (sub-)fund can apply swing pricing and has done so in the reporting period, as its (net) inflows and outflows exceeded the relevant threshold previously defined. No swing pricing adjustment was applied that would have had an impact on the (sub-)fund's net asset value per share on the last day of the reporting period.

Annual report
DWS Invest ESG European Small/Mid Cap

Investment objective and performance in the reporting period

The objective of the investment policy of the sub-fund DWS Invest ESG European Small/Mid Cap is to achieve above-average capital appreciation. To this end, the sub-fund invests primarily in equities of small and medium-sized European issuers (small- and mid-caps). Aspects considered when selecting suitable investments include a focus on environmental, social and corporate governance (ESG) criteria. At least 80% of the sub-fund's net assets are invested in assets that meet the promoted environmental and social characteristics.*

[2] In USD

"BVI method" performance, i.e., excluding the initial sales charge.
Past performance is not a guide to future results.

As of: December 31, 2025

In the fiscal year from the beginning of January through the end of December 2025, the portfolio recorded an appreciation of 16.6% per share (LD share class; BVI method; in EUR).

Investment policy in the reporting period

On the one hand, the capital market environment in the fiscal year through the end of December 2025 was shaped by geopolitical risks like the ongoing Russia-Ukraine war, the escalated conflict in the Middle East, the power struggle between the United States and China, as well as the erratic swings in U.S. trade and tariff policy. On the other hand, the easing of monetary policy, which had begun previously, continued during the reporting period. The European Central Bank (ECB) thus lowered the key interest rate in four steps from 3.00% p.a. to 2.00% p.a. (deposit facility) while the U.S. Federal Reserve gradually reduced its key interest rates by 0.75 percentage points to a target range of 3.50% p.a. – 3.75% p.a.

Despite market uncertainty induced mainly by geopolitical factors, the international equity markets recorded appreciable price gains in some cases in the reporting period amid at times considerable volatility. These gains were underpinned by the emerging easing of interest rates and increased investor confidence in artificial intelligence (AI), as well as robust corporate profits.

In the 2025 calendar year, European equities performed significantly better than U.S. equities relative to the previous year's performance. Alongside the ECB's interest rate cuts and increased investor uncertainty with regard to the United States, an improved economic environment in Europe also had a positive effect on performance, boosted by the announcement by European countries that they wanted to invest more in infrastructure and defense. The securities held in the sub-fund's portfolio also benefited from this positive investment environment.

Viewed at sector level, financials, which profited from positive business development overall and exceeded expectations, made a solid contribution to the performance of the sub-fund DWS Invest ESG European Small/Mid Cap. Additional above-average contributions to performance were also generated in industrials. Individual stock picking proved advantageous in this regard.

The following risk management disclosures (other information) are unaudited and are not covered by the audit opinion on the annual report.

Composition of the reference portfolio (according to CSSF circular 11/512)
50% STOXX Europe Mid 200, 50% STOXX Europe Small 200 (Net Return)

Market risk exposure (value-at-risk) (according to CSSF circular 11/512)

Lowest market risk exposure	%	87.921
Highest market risk exposure	%	103.539
Average market risk exposure	%	96.842

The values-at-risk were calculated for the period from January 1, 2025, through December 31, 2025, using historical simulation with a 99% confidence level, a 10-day holding period and an effective historical observation period of one year. The risk in a reference portfolio that does not contain derivatives is used as the measurement benchmark. Market risk is the risk to the fund's assets arising from an unfavorable change in market prices. The Company determines the potential market risk by means of the **relative value-at-risk approach** as defined in CSSF circular 11/512.

In the reporting period, the average leverage effect from the use of derivatives was 0.0, whereby the total of the nominal amounts of the derivatives in relation to the fund's assets was used for the calculation (sum-of-notional approach).

The gross exposure generated via derivatives pursuant to point 40 a) of the "Guidelines on ETFs and other UCITS issues" of the European Securities and Markets Authority (ESMA) totaled EUR 0.00 as of the reporting date.

Notes on valuation

Under the responsibility of the Board of Directors of the SICAV, the Management Company determines the net asset values per share and performs the valuation of the assets of the fund. The basic provision of price data and price validation are performed in accordance with the method introduced by the Board of Directors of the SICAV on the basis of the legal and regulatory requirements or the principles for valuation methods defined in the SICAV's prospectus.

If no trading prices are available, prices are determined with the aid of valuation models (derived market values) which are agreed between State Street Bank International GmbH, Luxembourg Branch, as external price service provider and the Management Company and which are based as far as possible on market parameters. This procedure is subject to an ongoing monitoring process. The plausibility of price information from third parties is checked through other pricing sources, model calculations or other suitable procedure.

Assets reported in this report are not valued at derived market values.

3. Deduction for foreign withholding tax[1]		EUR	77 611.77
4. Other income		EUR	577.94
Total income		**EUR**	**7 105 773.80**
II. Expenses			
1. Management fee		EUR	-1 897 979.02
thereof:			
Basic management fee	EUR -1 876 203.14		
Income from expense cap	EUR 2 494.57		
Administration fee	EUR -24 270.45		
2. Depositary fee		EUR	-13 363.82
3. Auditing, legal and publication costs		EUR	-27 803.63
4. Taxe d'abonnement		EUR	-88 769.85
5. Other expenses		EUR	-78 825.49
Total expenses		**EUR**	**-2 106 741.81**
III. Net investment income		**EUR**	**4 999 031.99**
IV. Sale transactions			
Realized gains/losses		EUR	8 507 461.45
Capital gains and losses		**EUR**	**8 507 461.45**
V. Net gain/loss for the fiscal year		**EUR**	**13 506 493.44**

[1] This includes primarily income from the release of excess accruals in the amount of EUR 384 829.61.

BVI total expense ratio (TER)

The total expense ratio for the share classes was:

Class FC 0.86% p.a.,	Class IC 0.67% p.a.,
Class ID 0.67% p.a.,	Class LC 1.61% p.a.,
Class LD 1.61% p.a.,	Class NC 2.11% p.a.,
Class TFC 0.84% p.a.,	Class TFD 0.86% p.a.,
Class XC 0.45% p.a.,	Class USD LCH 1.63% p.a.

The TER expresses total expenses and fees (excluding transaction costs) as a percentage of a fund's average net assets in relation to the respective share class within a fiscal year.

Transaction costs

The transaction costs paid in the reporting period amounted to EUR 511 407.89.

The transaction costs include all costs that were reported or settled separately for the account of the fund in the reporting period and are directly connected to the purchase or sale of assets. Any financial transaction taxes paid are included in the calculations.

Statement of changes in net assets 2025

Transactions processed for the account of the fund's assets via closely related companies (based on major holdings of the Deutsche Bank Group)

The share of transactions conducted in the reporting period for the account of the fund's assets via brokers that are closely related companies and persons (share of 5% and above) amounted to 0.01% of all transactions. The total volume was EUR 120 025.12.

DWS Invest ESG European Small/Mid Cap

Swing pricing

Swing pricing is a mechanism that is intended to protect shareholders from the negative effects of trading costs arising from subscription and redemption activities.

Extensive subscriptions and redemptions within a (sub-)fund may lead to a dilution of the assets of this (sub-)fund, as the net asset value sometimes does not reflect all trading and other costs that are incurred when the portfolio manager must buy or sell securities in order to manage large (net) inflows or outflows in the (sub-)fund. In addition to these costs, substantial order volumes may lead to market prices that are considerably below or above the market prices that apply under normal circumstances.

To enhance the investor protection of existing shareholders, a swing pricing mechanism can be applied to compensate for trading costs and other expenses if the aforementioned cumulative (net) inflows or outflows should have a material impact on the (sub-)fund on a valuation date and exceed a predetermined threshold (partial swing pricing). This mechanism can be applied across all (sub-)funds. If swing pricing is introduced for a particular (sub-)fund, this will be disclosed in the special section of the sales prospectus.

The Management Company of the fund will predefine thresholds for the application of the swing pricing mechanism, based, among other things, on current market conditions, available market liquidity and estimated dilution costs. In accordance with these thresholds, the adjustment itself will be initiated automatically.

If the (net) inflows or outflows exceed the swing threshold, the net asset value is revised upward if the (sub-)fund sees large net inflows and is revised downward in the event of large net outflows. This adjustment is applied uniformly to all subscriptions and redemptions for the trading day in question. If a performance-based fee applies for the (sub-)fund, the calculation is based on the original net asset value.

The Management Company has established a swing pricing committee that determines the swing factors for each individual (sub-)fund. These swing factors indicate the extent of the net asset value adjustment. The swing pricing committee takes into account the following factors in particular:

– bid-ask spread (fixed-price element),
– impacts on the market (impacts of the transactions on the price),
– additional costs that are incurred as a result of trading activities for the investments.

The appropriateness of the applied swing factors, the operational decisions made in connection with the swing pricing (including the swing threshold), the extent of the adjustment, and the affected (sub-)funds are reviewed at regular intervals.

The amount of the swing pricing adjustment can therefore vary from one (sub-)fund to another and will not generally exceed 2% of the original net asset value per share.

The net asset value adjustment is available upon request from the Management Company. In a market environment with extreme illiquidity, the Management Company can, however, increase the swing price adjustment to more than 2% of the original net asset value. Such an increase will be announced on the Management Company's website: www.dws.com.

As the mechanism should only be applied if significant (net) inflows or outflows are expected and it does not apply for normal trading volumes, it is assumed that the net asset value will only be adjusted occasionally.

This (sub-)fund can apply swing pricing and has done so in the reporting period, as its (net) inflows and outflows exceeded the relevant threshold previously defined. No swing pricing adjustment was applied that would have had an impact on the (sub-)fund's net asset value per share on the last day of the reporting period.

Annual report
DWS Invest ESG Floating Rate Notes

Investment objective and performance in the reporting period

This sub-fund seeks to generate a return in euro. To achieve this objective, it invests in predominantly floating rate government and corporate bonds denominated in euro or hedged against the euro. Aspects considered when selecting investments include financial strength and also a focus on environmental, social and corporate governance (ESG) criteria.* In addition, derivatives may be used as an instrument for portfolio management.

In the 2025 fiscal year, the sub-fund DWS Invest ESG Floating Rate Notes achieved an appreciation of 2.7% per share (LC share class, in euro; BVI method).

DWS Invest ESG Floating Rate Notes

"BVI method" performance, i.e., excluding the initial sales charge.
Past performance is not a guide to future results.

As of: December 31, 2025

Investment policy in the reporting period

The capital market environment in 2025 was challenging. This was due in particular to geopolitical crises like the Russia-Ukraine war that has been ongoing since February 24, 2022, the escalated conflict in the Middle East, and the power struggle between the United States and China. Furthermore, the erratic swings in U.S. trade and tariff policy generated additional uncertainty in the capital markets. On the other hand, the easing of monetary policy, which had begun previously, continued during the reporting period. The European Central Bank (ECB) thus lowered the key interest rate in four steps from 3.00% p.a. to 2.00% p.a. (deposit facility) while the U.S. Federal Reserve gradually reduced its key interest rates by 0.75 percentage points to a target range of 3.50% p.a. – 3.75% p.a.

The investment focus of DWS Invest ESG Floating Rate Notes was on floating rate bonds whose coupons are usually adjusted to the current market interest rate every three months. For yield reasons, the portfolio management invested predominantly in bonds of financial service providers and in corporate bonds with short to medium maturities. The exposure to corporate bonds was expanded against the backdrop of noticeable inflows of capital. Most of the interest-bearing instruments held in the portfolio had investment-grade status (ratings of BBB- or better from the leading rating agencies) as of the end of December 2025. In terms of its regional allocation, the sub-fund was globally positioned, with investments in Europe forming the main focus of investment. Interest-bearing securities from North America and Australia rounded out the portfolio. Foreign currency positions in the portfolio were hedged against the euro.

Due to its portfolio orientation to shorter maturity dates, the interest income received via coupons was the most significant income component of the sub-fund DWS Invest ESG Floating Rate Notes. The narrowing of the credit spreads of the corporate bonds and financials in the portfolio made an additional positive contribution to the sub-fund's investment performance.

DWS Invest ESG Floating Rate Notes

The following risk management disclosures (other information) are unaudited and are not covered by the audit opinion on the annual report.

Presentation of the maximum limit (according to CSSF circular 11/512)
14.14% of portfolio value

Market risk exposure (value-at-risk) (according to CSSF circular 11/512)

Lowest market risk exposure	%	0.001
Highest market risk exposure	%	0.003
Average market risk exposure	%	0.002

The values-at-risk were calculated for the period from January 1, 2025, through December 31, 2025, using historical simulation with a 99% confidence level, a 10-day holding period and an effective historical observation period of one year. The risk in a reference portfolio that does not contain derivatives is used as the measurement benchmark. Market risk is the risk to the fund's assets arising from an unfavorable change in market prices. The Company determines the potential market risk by means of the **absolute value-at-risk approach** as defined in CSSF circular 11/512.

In the reporting period, the average leverage effect from the use of derivatives was 0.2, whereby the total of the nominal amounts of the derivatives in relation to the fund's assets was used for the calculation (sum-of-notional approach).

The gross exposure generated via derivatives pursuant to point 40 a) of the "Guidelines on ETFs and other UCITS issues" of the European Securities and Markets Authority (ESMA) totaled EUR 271 863 425.89 as of the reporting date. Does not include any forward currency transactions entered into for currency hedging purposes at the level of the share classes.

Notes on valuation

Under the responsibility of the Board of Directors of the SICAV, the Management Company determines the net asset values per share and performs the valuation of the assets of the fund. The basic provision of price data and price validation are performed in accordance with the method introduced by the Board of Directors of the SICAV on the basis of the legal and regulatory requirements or the principles for valuation methods defined in the SICAV's prospectus.

If no trading prices are available, prices are determined with the aid of valuation models (derived market values) which are agreed between State Street Bank International GmbH, Luxembourg Branch, as external price service provider and the Management Company and which are based as far as possible on market parameters. This procedure is subject to an ongoing monitoring process. The plausibility of price information from third parties is checked through other pricing sources, model calculations or other suitable procedure.

Assets reported in this report are not valued at derived market values.

BVI total expense ratio (TER)

The total expense ratio for the share classes was:

Class CHF ICH 0.13% p.a.,
Class CHF RCH 0.15% p.a.,
Class CHF TFCH 0.19% p.a.,
Class FC 0.16% p.a.,
Class IC 0.10% p.a.,
Class LC 0.24% p.a.,
Class LD 0.23% p.a.,
Class NC 0.59% p.a.,
Class TFC 0.16% p.a.,
Class GBP CH RD 0.19% p.a.,
Class GBP ICH 0.14% p.a.,
Class GBP LCH (P) 0.27% p.a.,
Class USD ICH 0.13% p.a.,
Class USD LCH 0.26% p.a.,
Class USD TFCH 0.19% p.a.

The TER expresses total expenses and fees (excluding transaction costs) as a percentage of a fund's average net assets in relation to the respective share class within a fiscal year.

Transaction costs

The transaction costs paid in the reporting period amounted to EUR 10 867.00.

The transaction costs include all costs that were reported or settled separately for the account of the fund in the reporting period and are directly connected to the purchase or sale of assets. Any financial transaction taxes paid are included in the calculations.

Statement of changes in net assets 2025

Transactions processed for the account of the fund's assets via closely related companies (based on major holdings of the Deutsche Bank Group)

The share of transactions conducted in the reporting period for the account of the fund's assets via brokers that are closely related companies and persons (share of 5% and above) amounted to 0.86% of all transactions. The total volume was EUR 331 741 847.82.

Annual report
DWS Invest ESG Global Corporate Bonds

Investment objective and performance in the reporting period

The sub-fund seeks to achieve sustained capital appreciation relative to the benchmark (Barclays Global Aggregate Corporate TR (EUR hedged)). To achieve this objective, the sub-fund primarily invests worldwide in corporate bonds denominated in euro or hedged against the euro that have an investment-grade rating at the time of acquisition. It may, however, also include corporate bonds that do not meet these requirements. The sub-fund's assets are also invested mainly in securities of domestic and international issuers highlighting environmental, social and corporate governance (ESG)* factors.

DWS Invest ESG Global Corporate Bonds

"BVI method" performance, i.e., excluding the initial sales charge.
Past performance is not a guide to future results.

As of: December 31, 2025

The sub-fund DWS Invest ESG Global Corporate Bonds recorded an appreciation of 5.1% per share (FC share class; BVI method) in the 2025 fiscal year and thus outperformed its benchmark, which returned +4.8% (both percentages in euro terms).

Investment policy in the reporting period

The capital market environment in 2025 was challenging. This was due in particular to geopolitical crises like the Russia-Ukraine war that has been ongoing since February 24, 2022, the escalated conflict in the Middle East, and the power struggle between the United States and China. Furthermore, the erratic swings in U.S. trade and tariff policy generated additional uncertainty in the capital markets. On the other hand, the easing of monetary policy, which had begun previously, continued during the reporting period. The European Central Bank (ECB) thus lowered the key interest rate in four steps from 3.00% p.a. to 2.00% p.a. (deposit facility) while the U.S. Federal Reserve gradually reduced its key interest rates by 0.75 percentage points to a target range of 3.50% p.a. – 3.75% p.a.

In the international bond markets, the yield curve in 2025 became increasingly steeper at the long end – although this was still moderate – following the previous normalization. In light of the more relaxed interest rate policy of the central banks, bond yields fell noticeably at the short end in some cases. Long-dated government bonds, on the other hand, came under pressure due, for example, to the rise in public deficits and, in some instances, had to accept price declines on a full-year basis, accompanied by rising bond yields. Corporate bonds, on the other hand, profited from their relatively high coupons as well as narrowing risk premiums.

In line with its investment policy, the sub-fund focused on corporate bonds and issues of financial services providers in the 2025 fiscal year also. Regionally, the portfolio management again preferred issues from the United States and Europe, as these markets continued to offer an attractive risk-return profile. In addition, bonds from the emerging markets, predominantly denominated in the U.S. dollar or the euro, were selectively added to the portfolio in order to be able to exploit additional yield differences. As of the reporting date, the names held in the portfolio predominantly had investment-grade status (BBB

and better) while a smaller portion of the investment was allocated to high-yield bonds to improve current income.

During the course of 2025, the duration (average capital commitment) was held slightly above the benchmark level at times, as market participants initially expected a stable to slightly falling yield curve following the 2024 rate cut cycle. Later in 2025, the portfolio management, however, adjusted the duration of the sub-fund portfolio again in the direction of the benchmark, as improved economic data in the United States and Europe at times led to increasing bond yields and accompanying price reductions on bonds. In addition, the credit risk in the sub-fund continued to be above that of the benchmark. This strategic positioning had a positive effect, as corporate bonds turned in a solid performance in an environment where concerns about recession were receding and corporate profits were robust.

Overall, the sub-fund DWS Invest ESG Global Corporate Bonds benefited from narrowing risk premiums (credit spreads), active bond picking and balanced duration management in the 2025 fiscal year. As a whole, this led to the sub-fund outperforming its benchmark in the reporting period.

The following risk management disclosures (other information) are unaudited and are not covered by the audit opinion on the annual report.

Composition of the reference portfolio (according to CSSF circular 11/512)
BBG Global Aggregate Corporate EUR Hedged Index

Market risk exposure (value-at-risk) (according to CSSF circular 11/512)

Lowest market risk exposure	%	92.163
Highest market risk exposure	%	110.804
Average market risk exposure	%	98.759

The values-at-risk were calculated for the period from January 1, 2025, through June 30, 2025, using historical simulation with a 99% confidence level, a 10-day holding period and an effective historical observation period of one year. The risk in a reference portfolio that does not contain derivatives is used as the measurement benchmark. Market risk is the risk to the fund's assets arising from an unfavorable change in market prices. The Company determines the potential market risk by means of the **relative value-at-risk approach** as defined in CSSF circular 11/512.

In the reporting period, the average leverage effect from the use of derivatives was 1.1, whereby the total of the nominal amounts of the derivatives in relation to the fund's assets was used for the calculation (sum-of-notional approach).

The gross exposure generated via derivatives pursuant to point 40 a) of the "Guidelines on ETFs and other UCITS issues" of the European Securities and Markets Authority (ESMA) totaled EUR 819 098 719.67 as of the reporting date.

Notes on valuation

Under the responsibility of the Board of Directors of the SICAV, the Management Company determines the net asset values per share and performs the valuation of the assets of the fund. The basic provision of price data and price validation are performed in accordance with the method introduced by the Board of Directors of the SICAV on the basis of the legal and regulatory requirements or the principles for valuation methods defined in the SICAV's prospectus.

If no trading prices are available, prices are determined with the aid of valuation models (derived market values) which are agreed between State Street Bank International GmbH, Luxembourg Branch, as external price service provider and the Management Company and which are based as far as possible on market parameters. This procedure is subject to an ongoing monitoring process. The plausibility of price information from third parties is checked through other pricing sources, model calculations or other suitable procedure.

Assets reported in this report are not valued at derived market values.

Footnotes

* Floating interest rate.
** Some or all of these securities are lent.
*** Does not include positions with a negative balance, if such exist.

BVI total expense ratio (TER)

The total expense ratio for the share classes was:

Class CHF FCH10 0.53% p.a.,
Class FD10 0.48% p.a.,
Class LC 0.98% p.a.,
Class TFD 0.68% p.a.,
Class XD 0.28% p.a.,
Class USD FCH10 0.53% p.a.
Class FC 0.67% p.a.,
Class ID 0.44% p.a.,
Class TFC 0.67% p.a.,
Class XC 0.28% p.a.,
Class GBP FCH10 0.11%[3],

The TER expresses total expenses and fees (excluding transaction costs) as a percentage of a fund's average net assets in relation to the respective share class within a fiscal year.

As well, the additional income from securities lending resulted in a performance-based fee of

Class CHF FCH10 0.001% p.a.,
Class FD10 0.001% p.a.,
Class FD100 (formerly: XD) 0.001% p.a.,
Class LC 0.001% p.a.,
Class TFD 0.001% p.a.,
Class USD FCH10 0.001% p.a.
Class FC 0.001% p.a.,
Class FC100 (formerly: XC) 0.001% p.a.,
Class ID 0.001% p.a.,
Class TFC 0.001% p.a.,
Class GBP FCH10 <0.001%[3],

of the fund's average net assets in relation to the respective share class.

[3] Annualization has not been performed for share classes launched during the year.

Transaction costs

The transaction costs paid in the reporting period amounted to EUR 28 667.22.

The transaction costs include all costs that were reported or settled separately for the account of the fund in the reporting period and are directly connected to the purchase or sale of assets. Any financial transaction taxes paid are included in the calculations.

Statement of changes in net assets 2025

I.	**Value of the fund's net assets at the beginning of the fiscal year**	**EUR**	**281 113 251.88**
1.	Distribution for the previous year	EUR	-6 570 326.75
2.	Net inflows	EUR	55 933 337.37
3.	Income adjustment	EUR	-2 202 216.06
4.	Net investment income	EUR	14 951 252.90
5.	Realized gains/losses	EUR	14 602 917.50
6.	Net change in unrealized appreciation/depreciation	EUR	-11 422 960.75
II.	**Value of the fund's net assets at the end of the fiscal year**	**EUR**	**346 405 256.09**

Summary of gains/losses 2025

Realized gains/losses (incl. income adjustment)	**EUR**	**14 602 917.50**
from:		
Securities transactions	EUR	-2 733 864.96
(Forward) currency transactions	EUR	422 007.11
Derivatives and other financial futures transactions[2]	EUR	16 914 775.35

Transactions processed for the account of the fund's assets via closely related companies (based on major holdings of the Deutsche Bank Group)

The share of transactions conducted in the reporting period for the account of the fund's assets via brokers that are closely related companies and persons (share of 5% and above) amounted to 1.19% of all transactions. The total volume was EUR 17 083 130.86.

DWS Invest ESG Global Corporate Bonds

Swing pricing

Swing pricing is a mechanism that is intended to protect shareholders from the negative effects of trading costs arising from subscription and redemption activities. Extensive subscriptions and redemptions within a (sub-)fund may lead to a dilution of the assets of this (sub-)fund, as the net asset value sometimes does not reflect all trading and other costs that are incurred when the portfolio manager must buy or sell securities in order to manage large (net) inflows or outflows in the (sub-)fund. In addition to these costs, substantial order volumes may lead to market prices that are considerably below or above the market prices that apply under normal circumstances.

To enhance the investor protection of existing shareholders, a swing pricing mechanism can be applied to compensate for trading costs and other expenses if the aforementioned cumulative (net) inflows or outflows should have a material impact on the (sub-)fund on a valuation date and exceed a predetermined threshold (partial swing pricing). This mechanism can be applied across all (sub-)funds. If swing pricing is introduced for a particular (sub-)fund, this will be disclosed in the special section of the sales prospectus.

The Management Company of the fund will predefine thresholds for the application of the swing pricing mechanism, based, among other things, on current market conditions, available market liquidity and estimated dilution costs. In accordance with these thresholds, the adjustment itself will be initiated automatically. If the (net) inflows or outflows exceed the swing threshold, the net asset value is revised upward if the (sub-)fund sees large net inflows and is revised downward in the event of large net outflows. This adjustment is applied uniformly to all subscriptions and redemptions for the trading day in question. If a performance-based fee applies for the (sub-)fund, the calculation is based on the original net asset value.

The Management Company has established a swing pricing committee that determines the swing factors for each individual (sub-)fund. These swing factors indicate the extent of the net asset value adjustment. The swing pricing committee takes into account the following factors in particular:

– bid-ask spread (fixed-price element),
– impacts on the market (impacts of the transactions on the price),
– additional costs that are incurred as a result of trading activities for the investments.

The appropriateness of the applied swing factors, the operational decisions made in connection with the swing pricing (including the swing threshold), the extent of the adjustment, and the affected (sub-)funds are reviewed at regular intervals.

The amount of the swing pricing adjustment can therefore vary from one (sub-)fund to another and will not generally exceed 2% of the original net asset value per share. The net asset value adjustment is available upon request from the Management Company. In a market environment with extreme illiquidity, the Management Company can, however, increase the swing price adjustment to more than 2% of the original net asset value. Such an increase will be announced on the Management Company's website: www.dws.com.

As the mechanism should only be applied if significant (net) inflows or outflows are expected and it does not apply for normal trading volumes, it is assumed that the net asset value will only be adjusted occasionally.

This (sub-)fund can apply swing pricing and has done so in the reporting period, as its (net) inflows and outflows exceeded the relevant threshold previously defined. No swing pricing adjustment was applied that would have had an impact on the (sub-)fund's net asset value per share on the last day of the reporting period.

Annual report
DWS Invest ESG Global Emerging Markets Equities

Investment objective and performance in the reporting period

The objective of the investment policy is to achieve capital appreciation. To achieve this objective, the sub-fund invests primarily in equities of companies that have their registered offices in an emerging-market country or conduct their principal business activity in emerging-market countries, or which, as holding companies, predominantly hold interests in companies registered in emerging-market countries. A company is viewed as having its principal business activity in emerging-market countries if a significant part of its earnings or revenues is generated there. Emerging markets are countries listed in the MSCI Emerging Markets Index or listed in Standard & Poor's Emerging Market Database (EMDB). Furthermore, countries which are listed as low or middle income (including both lower middle and higher middle income) by the World Bank will be considered as Emerging Markets even if such countries are neither listed in the MSCI Emerging Markets Index nor in the EMDB but must not be included in the MSCI World Index. Aspects considered when selecting suitable investments include a focus on environmental, social and corporate governance (ESG) criteria. At least 80% of the sub-fund's net assets are invested in assets that meet the promoted environmental and social characteristics.

The sub-fund recorded an appreciation of 17.6% per share (LC share class; BVI method; in euro) in the fiscal year through December 31, 2025.

Investment policy in the reporting period

The capital market environment in 2025 was challenging. This was due in particular to geopolitical crises like the Russia-Ukraine war that has been ongoing since February 24, 2022, the escalated conflict in the Middle East, and the power struggle between the United States and China. Furthermore, the erratic swings in U.S. trade and tariff policy generated additional uncertainty in the capital markets. On the other hand, the easing of monetary policy, which had begun previously, continued during the reporting period. The European Central Bank (ECB) thus lowered the key interest rate in four steps from 3.00% p.a. to 2.00% p.a. (deposit facility) while the U.S. Federal Reserve gradually reduced its key interest rates by 0.75 percentage points to a target range of 3.50% p.a. – 3.75% p.a.

Despite market uncertainty induced mainly by geopolitical factors, the international equity markets, as measured by the MSCI World, recorded appreciable price gains overall in 2025 amid sometimes considerable volatility. These

gains were underpinned by the emerging easing of interest rates, increased investor confidence in artificial intelligence, as well as robust corporate profits. Among the markets in Western industrial countries, the DAX 40 in Germany posted significant gains, buoyed by factors such as the multi-billion-euro package of fiscal relief measures. The emerging markets, as measured by the MSCI Emerging Markets, were even able to outperform the industrial countries on a full-year basis through the end of 2025. In this respect, China's equity market was one of the stand-out performers and continued to recover significantly. This trend was supported by Chinese economic growth, which was stimulated by expansionary macroeconomic policies. However, the international stock exchanges were intermittently hit hard by the erratic swings in U.S. trade and tariff policy.

In terms of its regional equity allocation, the sub-fund was weighted more strongly in Asia than in other emerging markets. The portfolio management viewed this region favorably as it was characterized by generally more stable fundamental data, as well as structurally better growth momentum. The effects of U.S. government policy on global trade were closely monitored while the emerging markets coped well with the turmoil in the wake of the tariff increases introduced after "Liberation Day" in April 2025. Furthermore, the weaker U.S. dollar was a boost for the emerging markets.

The focus was on China, India, Taiwan and South Korea. Economic headwind in China due to the continued weakness of the real estate market prompted the portfolio management to make selective investments. The tension between China and the United States continued, with the United States tightening restrictions on exports of semiconductor technology to China, while China continued its efforts to become technologically self-sufficient. Globally operating biotech and pharmaceutical companies from China took the market by surprise with licensing agreements for innovative pharmaceuticals, demonstrating China's leading position in research and development. On an annual basis, Chinese equities achieved a positive result overall through the end of the reporting period thanks to the technology, communications and health care sectors, although the market consolidated in the fourth quarter of 2025 following a strong performance in the first three quarters of 2025. India made a negative contribution in the reporting period, mainly due to the positions in IT, health care and industrials. The portfolio management's positive long-term view of India did not change. However, it continued to monitor the developments in an environment of slightly fading GDP growth momentum, as the valuations of the Indian market were still too high. Investments in Taiwan, which concentrated on the technology sector, increased significantly, driven by the strong demand for chips for artificial intelligence applications that the supply chain in Taiwan was of great importance for. The largest positive contribution was made by investments in South Korea, primarily due to the focus on memory card producers who benefited greatly from the price increases for memory components caused by the demand for AI. The sub-fund management also expected long-term positive effects from the "Value-Up" program of the South Korean government, which comprised a series of market-friendly measures in the style of the Japanese corporate governance reforms.

The following risk management disclosures (other information) are unaudited and are not covered by the audit opinion on the annual report.

Composition of the reference portfolio (according to CSSF circular 11/512)
MSCI Emerging Markets Net EUR (EUR levels)

Market risk exposure (value-at-risk) (according to CSSF circular 11/512)

Lowest market risk exposure	%	87.694
Highest market risk exposure	%	117.486
Average market risk exposure	%	100.033

The values-at-risk were calculated for the period from January 1, 2025, through December 31, 2025, using historical simulation with a 99% confidence level, a 10-day holding period and an effective historical observation period of one year. The risk in a reference portfolio that does not contain derivatives is used as the measurement benchmark. Market risk is the risk to the fund's assets arising from an unfavorable change in market prices. The Company determines the potential market risk by means of the **relative value-at-risk approach** as defined in CSSF circular 11/512.

In the reporting period, the average leverage effect from the use of derivatives was 0.0, whereby the total of the nominal amounts of the derivatives in relation to the fund's assets was used for the calculation (sum-of-notional approach).

The gross exposure generated via derivatives pursuant to point 40 a) of the "Guidelines on ETFs and other UCITS issues" of the European Securities and Markets Authority (ESMA) totaled EUR 0.00 as of the reporting date.

Notes on valuation

Under the responsibility of the Board of Directors of the SICAV, the Management Company determines the net asset values per share and performs the valuation of the assets of the fund. The basic provision of price data and price validation are performed in accordance with the method introduced by the Board of Directors of the SICAV on the basis of the legal and regulatory requirements or the principles for valuation methods defined in the SICAV's prospectus.

If no trading prices are available, prices are determined with the aid of valuation models (derived market values) which are agreed between State Street Bank International GmbH, Luxembourg Branch, as external price service provider and the Management Company and which are based as far as possible on market parameters. This procedure is subject to an ongoing monitoring process. The plausibility of price information from third parties is checked through other pricing sources, model calculations or other suitable procedure.

Assets reported in this report are not valued at derived market values.

Footnote

* The prepaid placement fee is amortized over a period of three years (as specified in article 13 f "Placement Fee" section in the general section of the fund's management regulations).
** Does not include positions with a negative balance, if such exist.

BVI total expense ratio (TER)

The total expense ratio for the share classes was:

Class FC 0.84% p.a.,
Class LC 1.60% p.a.,
Class LD 1.60% p.a.,
Class NC 2.10% p.a.,
Class TFC 0.85% p.a.,
Class TFD 0.83% p.a.,
Class GBP TFD 0.83% p.a.,
Class USD FC 0.85% p.a.,
Class USD LC 1.60% p.a.,
Class USD TFC 0.85% p.a.
Class IC 0.55% p.a.,
Class LCH (P) 1.62% p.a.,
Class MFC 0.46% p.a.,
Class PFC 2.33% p.a.,
Class TFCH (P) 0.86% p.a.,
Class GBP FD50 0.60% p.a.,
Class JPY FC 0.85% p.a.,
Class USD FD50 0.59% p.a.,
Class USD LD 1.60% p.a.,

The TER expresses total expenses and fees (excluding transaction costs) as a percentage of a fund's average net assets in relation to the respective share class within a fiscal year.

Transaction costs

The transaction costs paid in the reporting period amounted to EUR 331 099.43.

The transaction costs include all costs that were reported or settled separately for the account of the fund in the reporting period and are directly connected to the purchase or sale of assets. Any financial transaction taxes paid are included in the calculations.

Statement of changes in net assets 2025

I.	**Value of the fund's net assets at the beginning of the fiscal year**	**EUR**	**561 098 655.58**
1.	Distribution for the previous year	EUR	-464 729.89
2.	Net outflows[2]	EUR	-44 802 918.25
3.	Income adjustment	EUR	1 903 206.47

Transactions processed for the account of the fund's assets via closely related companies (based on major holdings of the Deutsche Bank Group)

The share of transactions conducted in the reporting period for the account of the fund's assets via brokers that are closely related companies and persons (share of 5% and above) amounted to 0.00% of all transactions. The total volume was EUR 0.00.

DWS Invest ESG Global Emerging Markets Equities

Placement fee / dilution adjustment

In the reporting period, the fund paid a placement fee of 2.9% of the fund's net assets to the distributor. This fee was calculated on the subscription date. The specified placement fee serves in particular as remuneration for distribution. The gross amount of the placement fee was paid in a single payment on the subscription date and simultaneously recognized in the fund's net assets as prepaid expenses. These are amortized on a daily basis over a period of three years from the date of subscription. The remaining position for prepaid expenses per share on each valuation date is calculated on a daily basis by multiplying the net assets of the fund by a factor. The relevant factor is determined through straight-line reduction of the placement fee by a certain percentage on a daily basis over three years from the subscription date. The prepaid expenses position fluctuates during the three years from the subscription date of the fund, since it depends on both the fund's net assets and the predetermined factor.

In addition, a dilution adjustment of up to 3% based on the gross redemption amount was charged for the benefit of the fund's net assets in the reporting period (to be paid by the shareholder).

Further details on the placement fee and the dilution adjustment can be found in the corresponding section of the fund's sales prospectus.

Swing pricing

Swing pricing is a mechanism that is intended to protect shareholders from the negative effects of trading costs arising from subscription and redemption activities.

Extensive subscriptions and redemptions within a (sub-)fund may lead to a dilution of the assets of this (sub-)fund, as the net asset value sometimes does not reflect all trading and other costs that are incurred when the portfolio manager must buy or sell securities in order to manage large (net) inflows or outflows in the (sub-)fund. In addition to these costs, substantial order volumes may lead to market prices that are considerably below or above the market prices that apply under normal circumstances.

To enhance the investor protection of existing shareholders, a swing pricing mechanism can be applied to compensate for trading costs and other expenses if the aforementioned cumulative (net) inflows or outflows should have a material impact on the (sub-)fund on a valuation date and exceed a predetermined threshold (partial swing pricing). This mechanism can be applied across all (sub-)funds. If swing pricing is introduced for a particular (sub-)fund, this will be disclosed in the special section of the sales prospectus.
The Management Company of the fund will predefine thresholds for the application of the swing pricing mechanism, based, among other things, on current market conditions, available market liquidity and estimated dilution costs. In accordance with these thresholds, the adjustment itself will be initiated automatically.

If the (net) inflows or outflows exceed the swing threshold, the net asset value is revised upward if the (sub-)fund sees large net inflows and is revised downward in the event of large net outflows. This adjustment is applied uniformly to all subscriptions and redemptions for the trading day in question. If a performance-based fee applies for the (sub-)fund, the calculation is based on the original net asset value.

The Management Company has established a swing pricing committee that determines the swing factors for each individual (sub-)fund. These swing factors indicate the extent of the net asset value adjustment. The swing pricing committee takes into account the following factors in particular:

– bid-ask spread (fixed-price element),
– impacts on the market (impacts of the transactions on the price),
– additional costs that are incurred as a result of trading activities for the investments.

The appropriateness of the applied swing factors, the operational decisions made in connection with the swing pricing (including the swing threshold), the extent of the adjustment, and the affected (sub-)funds are reviewed at regular intervals.

The amount of the swing pricing adjustment can therefore vary from one (sub-)fund to another and will not generally exceed 2% of the original net asset value per share.

The net asset value adjustment is available upon request from the Management Company. In a market environment with extreme illiquidity, the Management Company can, however, increase the swing price adjustment to more than 2% of the original net asset value. Such an increase will be announced on the Management Company's website: www.dws.com.

As the mechanism should only be applied if significant (net) inflows or outflows are expected and it does not apply for normal trading volumes, it is assumed that the net asset value will only be adjusted occasionally.

This (sub-)fund can apply swing pricing but has not done so in the reporting period, as its (net) inflows and outflows did not exceed the relevant threshold previously defined.

Annual report
DWS Invest ESG Mobility (in liquidation)

Investment objective and performance in the reporting period

The objective of the investment policy was to generate above-average capital appreciation. To this end, the sub-fund invested primarily in equities, equity certificates, equity warrant-linked bonds whose underlying warrants are on securities, participation and dividend-right certificates, and equity warrants from issuers whose main field of business is "mobility" or which benefit from mobility. The term "mobility" encompasses various aspects and facets of mobility. In addition to conventional applications such as transport and logistics, it also comprises the changing patterns of accessibility and their impact on lifestyle habits and the world of work. The companies concerned are part of the multi-stage value chain in the mobility sector. They include companies and their suppliers in the transport, logistics and clean energy sectors, autonomous driving, hydrogen applications, battery technologies, cloud computing, real estate, consumer discretionary, IT, online platforms, food delivery service, and sports and lifestyle vehicles. Aspects considered when selecting suitable investments included a focus on environmental, social and corporate governance (ESG) criteria. These aspects were an integral component of the investment strategy.

The sub-fund recorded an appreciation of 3.9% per share (LC share class; in euro; BVI method) in the reporting period from January 1, 2025, through March 6, 2025 (date of last share price calculation).

Past performance is not a guide to future results.

As of: March 6, 2025 (liquidation date)

Investment policy in the reporting period

The capital market environment in the reporting period was challenging. This was due in particular to geopolitical crises like the Russia-Ukraine war that has been ongoing since February 24, 2022, the escalated conflict in the Middle East, and the power struggle between the United States and China. Furthermore, the erratic swings in U.S. trade and tariff policy generated additional uncertainty in the capital markets. On the other hand, the easing of monetary policy, which had begun previously, continued during the reporting period.

In its securities selection, the sub-fund management considered all aspects and nuances of mobility. Spatial mobility: Change in trends in the work environment and leisure time activities, therefore importantly in the way real estate and goods are used. Movement: Traditional means of transport like cars, planes and trains, and new innovations like battery technology, hydrogen and autonomous driving. Lifestyle: Consideration of changing accessibility and its effects on lifestyle, e.g., smart watches, fitness trackers, online shopping and outdoor activities. As part of the investment process with fundamental stock selection, assessment, portfolio design and, not least, monitoring/risk management, the portfolio was broadly positioned. In the spatial mobility segment, the fund invested in securities from the work environment, travel and accommodation areas, among others. In the movement segment, it invested in areas like transport and logistics, electric vehicles and charging technology. In the lifestyle segment, the focus was on smart devices and navigation/tracking. The preferred company characteristics included, in particular, strong balance sheets, large market share or growth potential, high-quality governance, stockholder orientation, high cash flow generation, a cost or technology advantage, scalability & sustainability of the business model and pricing power.

Liquidation

The sub-fund DWS Invest ESG Mobility (in liquidation) was liquidated effective March 6, 2025, following a resolution to that effect adopted by the Board of Directors of the SICAV and the approval of the Luxembourg supervisory authority CSSF. The issue of new shares of the sub-fund was discontinued effective February 12, 2025. Investors could redeem sub-fund shares until February 12, 2025.

Annual financial statements
DWS Invest ESG Mobility (in liquidation)

The following risk management disclosures (other information) are unaudited and are not covered by the audit opinion on the annual report.

Composition of the reference portfolio (according to CSSF circular 11/512)
MSCI World Net TR Index in EUR

Market risk exposure (value-at-risk) (according to CSSF circular 11/512)

Lowest market risk exposure	%	0.025
Highest market risk exposure	%	122.996
Average market risk exposure	%	97.480

The values-at-risk were calculated for the period from January 1, 2025, through June 3, 2025, using historical simulation with a 99% confidence level, a 10-day holding period and an effective historical observation period of one year. The risk in a reference portfolio that does not contain derivatives is used as the measurement benchmark. Market risk is the risk to the fund's assets arising from an unfavorable change in market prices. The Company determines the potential market risk by means of the **relative value-at-risk approach** as defined in CSSF circular 11/512.

In the reporting period, the average leverage effect from the use of derivatives was 0.0, whereby the total of the nominal amounts of the derivatives in relation to the fund's assets was used for the calculation (sum-of-notional approach).

The gross exposure generated via derivatives pursuant to point 40 a) of the "Guidelines on ETFs and other UCITS issues" of the European Securities and Markets Authority (ESMA) totaled EUR 0.00 as of the reporting date.

Notes on valuation

Under the responsibility of the Board of Directors of the SICAV, the Management Company determines the net asset values per share and performs the valuation of the assets of the fund. The basic provision of price data and price validation are performed in accordance with the method introduced by the Board of Directors of the SICAV on the basis of the legal and regulatory requirements or the principles for valuation methods defined in the SICAV's prospectus.

If no trading prices are available, prices are determined with the aid of valuation models (derived market values) which are agreed between State Street Bank International GmbH, Luxembourg Branch, as external price service provider and the Management Company and which are based as far as possible on market parameters. This procedure is subject to an ongoing monitoring process. The plausibility of price information from third parties is checked through other pricing sources, model calculations or other suitable procedure.

Assets reported in this report are not valued at derived market values.

from:		
Securities transactions	EUR	1 345 609.15
(forward) currency transactions	EUR	-868.04
Income adjustment	EUR	-1 344 741.11

DWS Invest ESG Mobility (in liquidation)

Transactions processed for the account of the fund's assets via closely related companies (based on major holdings of the Deutsche Bank Group)

The share of transactions conducted in the reporting period for the account of the fund's assets via brokers that are closely related companies and persons (share of 5% and above) amounted to 0.00% of all transactions. The total volume was EUR 0.00.

Placement fee / dilution adjustment

In the reporting period, the fund paid a placement fee of 2.9% of the fund's net assets to the distributor. This fee was calculated on the subscription date. The specified placement fee serves in particular as remuneration for distribution. The gross amount of the placement fee was paid in a single payment on the subscription date and simultaneously recognized in the fund's net assets as prepaid expenses. These are amortized on a daily basis over a period of three years from the date of subscription. The remaining position for prepaid expenses per share on each valuation date is calculated on a daily basis by multiplying the net assets of the fund by a factor. The relevant factor is determined through straight-line reduction of the placement fee by a certain percentage on a daily basis over three years from the subscription date. The prepaid expenses position fluctuates during the three years from the subscription date of the fund, since it depends on both the fund's net assets and the predetermined factor.

In addition, a dilution adjustment of up to 3% based on the gross redemption amount was charged for the benefit of the fund's net assets in the reporting period (to be paid by the shareholder).

Further details on the placement fee and the dilution adjustment can be found in the corresponding section of the fund's sales prospectus.

Swing pricing

Swing pricing is a mechanism that is intended to protect shareholders from the negative effects of trading costs arising from subscription and redemption activities. Extensive subscriptions and redemptions within a (sub-)fund may lead to a dilution of the assets of this (sub-)fund, as the net asset value sometimes does not reflect all trading and other costs that are incurred when the portfolio manager must buy or sell securities in order to manage large (net) inflows or outflows in the (sub-)fund. In addition to these costs, substantial order volumes may lead to market prices that are considerably below or above the market prices that apply under normal circumstances.

To enhance the investor protection of existing shareholders, a swing pricing mechanism can be applied to compensate for trading costs and other expenses if the aforementioned cumulative (net) inflows or outflows should have a material impact on the (sub-)fund on a valuation date and exceed a predetermined threshold (partial swing pricing). This mechanism can be applied across all (sub-)funds. If swing pricing is introduced for a particular (sub-)fund, this will be disclosed in the special section of the sales prospectus.

The Management Company of the fund will predefine thresholds for the application of the swing pricing mechanism, based, among other things, on current market conditions, available market liquidity and estimated dilution costs. In accordance with these thresholds, the adjustment itself will be initiated automatically. If the (net) inflows or outflows exceed the swing threshold, the net asset value is revised upward if the (sub-)fund sees large net inflows and is revised downward in the event of large net outflows. This adjustment is applied uniformly to all subscriptions and redemptions for the trading day in question. If a performance-based fee applies for the (sub-)fund, the calculation is based on the original net asset value.

The Management Company has established a swing pricing committee that determines the swing factors for each individual (sub-)fund. These swing factors indicate the extent of the net asset value adjustment. The swing pricing committee takes into account the following factors in particular:

– bid-ask spread (fixed-price element),
– impacts on the market (impacts of the transactions on the price),
– additional costs that are incurred as a result of trading activities for the investments.

The appropriateness of the applied swing factors, the operational decisions made in connection with the swing pricing (including the swing threshold), the extent of the adjustment, and the affected (sub-)funds are reviewed at regular intervals.

The amount of the swing pricing adjustment can therefore vary from one (sub-)fund to another and will not generally exceed 2% of the original net asset value per share. The net asset value adjustment is available upon request from the Management Company. In a market environment with extreme illiquidity, the Management Company can, however, increase the swing price adjustment to more than 2% of the original net asset value. Such an increase will be announced on the Management Company's website: www.dws.com.

As the mechanism should only be applied if significant (net) inflows or outflows are expected and it does not apply for normal trading volumes, it is assumed that the net asset value will only be adjusted occasionally.

This (sub-)fund can apply swing pricing and has done so in the reporting period, as its (net) inflows and outflows exceeded the relevant threshold previously defined. No swing pricing adjustment was applied that would have had an impact on the (sub-)fund's net asset value per share on the last day of the reporting period.

Annual report
DWS Invest ESG Multi Asset Income

Investment objective and performance in the reporting period

The objective of the investment policy of the sub-fund DWS Invest ESG Multi Asset Income is to achieve a positive investment performance in the medium to long term while taking the opportunities and risks of the international capital markets into account. To achieve this objective, the sub-fund invests worldwide, particularly in equities, bonds, certificates, funds and cash. The investment focus of the sub-fund is generally on income-oriented assets such as interest-bearing securities and equities. Aspects considered when selecting suitable investments include a focus on environmental, social and corporate governance (ESG) criteria. At least 80% of the sub-fund's net assets are invested in assets that meet the promoted environmental and social characteristics.* The investment policy is also implemented through the use of suitable derivatives. In its investments, the sub-fund management actively and flexibly managed the weighting of the individual asset classes.

DWS Invest ESG Multi Asset Income recorded an appreciation of 15.3% per share (LD share class; BVI method; in euro) in the twelve months through the end of December 2025.

DWS Invest ESG Multi Asset Income

[1] Class TFC launched on November 21, 2023

"BVI method" performance, i.e., excluding the initial sales charge.
Past performance is not a guide to future results.

As of: December 31, 2025

Investment policy in the reporting period

On the one hand, the capital market environment in the fiscal year through the end of December 2025 was shaped by geopolitical risks like the ongoing Russia-Ukraine war, the escalated conflict in the Middle East, the power struggle between the United States and China, as well as the erratic swings in U.S. trade and tariff policy. On the other hand, the easing of monetary policy, which had begun previously, continued during the reporting period. The European Central Bank (ECB) thus lowered the key interest rate in four steps from 3.00% p.a. to 2.00% p.a. (deposit facility) while the U.S. Federal Reserve gradually reduced its key interest rates by 0.75 percentage points to a target range of 3.50% p.a. – 3.75% p.a.

Despite market uncertainty induced mainly by geopolitical factors, the international equity markets, as measured by the MSCI World, recorded appreciable price gains overall in 2025 amid sometimes considerable volatility. These gains were underpinned by the emerging easing of interest rates, increased investor confidence in artificial intelligence, as well as robust corporate profits.

Among the markets in Western industrial countries, the DAX 40 in Germany posted significant gains, buoyed by factors such as the multi-billion-euro package of fiscal relief measures. The emerging markets, as measured by the MSCI Emerging Markets, were even able to outperform the industrial countries on a full-year basis through the end of 2025. In this respect, China's equity market was one of the stand-out performers and continued to recover significantly. This trend was supported by Chinese economic growth, which was stimulated by expansionary macroeconomic policies. However, the international stock exchanges were intermittently hit hard by the erratic swings in U.S. trade and tariff policy.

In the international bond markets, the yield curve in 2025 became increasingly steeper at the long end – although this was still moderate – following the previous normalization. In light of the more relaxed interest rate policy

of the central banks, bond yields fell noticeably at the short end in some cases. Long-dated government bonds, on the other hand, came under pressure due, for example, to the rise in public deficits and, in some instances, had to accept price declines on a full-year basis, accompanied by rising bond yields. Corporate bonds, on the other hand, profited from their relatively high coupons as well as narrowing risk premiums.

Given these circumstances, the sub-fund's investments recorded an overall positive performance in the reporting period.

Within the equity portfolio, the sub-fund management invested globally with an orientation to North America, Europe and Asia, placing its focus on high-dividend positions. The equity allocation was actively managed throughout the year. In the second quarter, the equity allocation was tactically reduced due to uncertainties in connection with the tariff announcements by the U.S. government and was built back up again in the second half of the year. Holdings of equities from the Asian region, especially from the technology and financial segments, were increased. Furthermore, the temporary weakness in pharmaceutical stocks was exploited to build up positions in a targeted manner.

The portfolio was positioned more broadly on the bond side. The focus was on government bonds and on near-government bonds as well as on solid corporate bonds from industrial countries with predominantly an investment-grade rating (BBB- or better from the leading rating agencies). In addition, emerging-market bonds in hard currency were added in and were partially reduced again during the course of the year following a positive performance. High-yield bonds were only selectively added in.

DWS Invest ESG Multi Asset Income

The following risk management disclosures (other information) are unaudited and are not covered by the audit opinion on the annual report:

Composition of the reference portfolio (according to CSSF circular 11/512)
55% MSCI All Country World Net TR Index - in EUR, 35% BBG High Yield 2% Issuer Capped Index EUR Hedged, 10% JP Morgan GBI-EM Global Diversified Index - in EUR

Market risk exposure (value-at-risk) (according to CSSF circular 11/512)

Lowest market risk exposure	%	40.427
Highest market risk exposure	%	78.349
Average market risk exposure	%	69.524

The values-at-risk were calculated for the period from January 1, 2025, through December 31, 2025, using historical simulation with a 99% confidence level, a 10-day holding period and an effective historical observation period of one year. The risk in a reference portfolio that does not contain derivatives is used as the measurement benchmark. Market risk is the risk to the fund's assets arising from an unfavorable change in market prices. The Company determines the potential market risk by means of the **relative value-at-risk approach** as defined in CSSF circular 11/512.

In the reporting period, the average leverage effect from the use of derivatives was 0.8, whereby the total of the nominal amounts of the derivatives in relation to the fund's assets was used for the calculation (sum-of-notional approach).

The gross exposure generated via derivatives pursuant to point 40 a) of the "Guidelines on ETFs and other UCITS issues" of the European Securities and Markets Authority (ESMA) totaled EUR 73 673 340.50 as of the reporting date.

Notes on valuation

Under the responsibility of the Board of Directors of the SICAV, the Management Company determines the net asset values per share and performs the valuation of the assets of the fund. The basic provision of price data and price validation are performed in accordance with the method introduced by the Board of Directors of the SICAV on the basis of the legal and regulatory requirements or the principles for valuation methods defined in the SICAV's prospectus.

If no trading prices are available, prices are determined with the aid of valuation models (derived market values) which are agreed between State Street Bank International GmbH, Luxembourg Branch, as external price service provider and the Management Company and which are based as far as possible on market parameters. This procedure is subject to an ongoing monitoring process. The plausibility of price information from third parties is checked through other pricing sources, model calculations or other suitable procedure.

Assets reported in this report are not valued at derived market values.

The management fee / all-in fee rates in effect as of the reporting date for the investment fund units held in the securities portfolio are shown in parentheses. A plus sign means that a performance-based fee may also be charged. As the investment fund held units of other investment funds (target funds) in the reporting period, further costs, charges and fees may have been incurred at the level of these individual target funds.

Footnotes

* Floating interest rate.
** The prepaid placement fee is amortized over a period of three years (as specified in article 13 (f) of the general section of the fund's management regulations).
*** Does not include positions with a negative balance, if such exist.

BVI total expense ratio (TER)

The total expense ratio for the share classes was:

Class FC 0.65% p.a.,
Class LD 1.30% p.a.,
Class NC 1.62% p.a.,
Class PFD 1.17% p.a.,
Class TFD 0.68% p.a.
Class LC 1.30% p.a.,
Class LDH (P) 1.32% p.a.,
Class ND 1.62% p.a.,
Class TFC 0.66% p.a.,

The TER expresses total expenses and fees (excluding transaction costs) as a percentage of a fund's average net assets in relation to the respective share class within a fiscal year.

Transaction costs

The transaction costs paid in the reporting period amounted to EUR 37 561.50.

The transaction costs include all costs that were reported or settled separately for the account of the fund in the reporting period and are directly connected to the purchase or sale of assets. Any financial transaction taxes paid are included in the calculations.

Statement of changes in net assets 2025

Transactions processed for the account of the fund's assets via closely related companies (based on major holdings of the Deutsche Bank Group)

The share of transactions conducted in the reporting period for the account of the fund's assets via brokers that are closely related companies and persons (share of 5% and above) amounted to 0.05% of all transactions. The total volume was EUR 1 055 329.44.

Placement fee / dilution adjustment

In the reporting period, the fund paid a placement fee of 2.9% of the fund's net assets to the distributor. This fee was calculated on the subscription date. The specified placement fee serves in particular as remuneration for distribution. The gross amount of the placement fee was paid in a single payment on the subscription date and simultaneously recognized in the fund's net assets as prepaid expenses. These are amortized on a daily basis over a period of three years from the date of subscription. The remaining position for prepaid expenses per share on each valuation date is calculated on a daily basis by multiplying the net assets of the fund by a factor. The relevant factor is determined through straight-line reduction of the placement fee by a certain percentage on a daily basis over three years from the subscription date. The prepaid expenses position fluctuates during the three years from the subscription date of the fund, since it depends on both the fund's net assets and the predetermined factor.

In addition, a dilution adjustment of up to 3% based on the gross redemption amount was charged for the benefit of the fund's net assets in the reporting period (to be paid by the shareholder).

Further details on the placement fee and the dilution adjustment can be found in the corresponding section of the fund's sales prospectus.

DWS Invest ESG Multi Asset Income

Swing pricing

Swing pricing is a mechanism that is intended to protect shareholders from the negative effects of trading costs arising from subscription and redemption activities.

Extensive subscriptions and redemptions within a (sub-)fund may lead to a dilution of the assets of this (sub-)fund, as the net asset value sometimes does not reflect all trading and other costs that are incurred when the portfolio manager must buy or sell securities in order to manage large (net) inflows or outflows in the (sub-)fund. In addition to these costs, substantial order volumes may lead to market prices that are considerably below or above the market prices that apply under normal circumstances.

To enhance the investor protection of existing shareholders, a swing pricing mechanism can be applied to compensate for trading costs and other expenses if the aforementioned cumulative (net) inflows or outflows should have a material impact on the (sub-)fund on a valuation date and exceed a predetermined threshold (partial swing pricing). This mechanism can be applied across all (sub-)funds. If swing pricing is introduced for a particular (sub-)fund, this will be disclosed in the special section of the sales prospectus.
The Management Company of the fund will predefine thresholds for the application of the swing pricing mechanism, based, among other things, on current market conditions, available market liquidity and estimated dilution costs. In accordance with these thresholds, the adjustment itself will be initiated automatically.

If the (net) inflows or outflows exceed the swing threshold, the net asset value is revised upward if the (sub-)fund sees large net inflows and is revised downward in the event of large net outflows. This adjustment is applied uniformly to all subscriptions and redemptions for the trading day in question. If a performance-based fee applies for the (sub-)fund, the calculation is based on the original net asset value.

The Management Company has established a swing pricing committee that determines the swing factors for each individual (sub-)fund. These swing factors indicate the extent of the net asset value adjustment. The swing pricing committee takes into account the following factors in particular:

– bid-ask spread (fixed-price element),
– impacts on the market (impacts of the transactions on the price),
– additional costs that are incurred as a result of trading activities for the investments.

The appropriateness of the applied swing factors, the operational decisions made in connection with the swing pricing (including the swing threshold), the extent of the adjustment, and the affected (sub-)funds are reviewed at regular intervals.

The amount of the swing pricing adjustment can therefore vary from one (sub-)fund to another and will not generally exceed 2% of the original net asset value per share.

The net asset value adjustment is available upon request from the Management Company. In a market environment with extreme illiquidity, the Management Company can, however, increase the swing price adjustment to more than 2% of the original net asset value. Such an increase will be announced on the Management Company's website: www.dws.com.

As the mechanism should only be applied if significant (net) inflows or outflows are expected and it does not apply for normal trading volumes, it is assumed that the net asset value will only be adjusted occasionally.

This (sub-)fund can apply swing pricing but has not done so in the reporting period, as its (net) inflows and outflows did not exceed the relevant threshold previously defined.

Annual report
DWS Invest ESG Next Generation Infrastructure

Investment objective and performance in the reporting period

The sub-fund invests in infrastructure segments that have undergone key architectural changes and thus represent a new generation of assets. These next generation assets are closely tied to structural growth trends, such as digitalization, electrification, and decarbonization, and will significantly impact and determine our everyday lives in the near future. The sub-fund is centered around changes in consumption patterns and the demand for "intelligent" and likewise sustainable solutions based on technological progress, e.g., needed for smart cities, smart homes and smart buildings. The sub-fund invests mainly in equities of global issuers that show high environmental, social and corporate governance (ESG) performance beyond their financial success. The ESG performance of a company is its application of recognized environmental, social standards and good corporate governance, which is evaluated separately from financial success. Aspects considered when selecting suitable investments include a focus on environmental, social and corporate governance (ESG) standards.*

In the reporting period from January 1, 2025, through December 31, 2025, the sub-fund recorded an appreciation of 14.5% per share (LC share class; BVI method; in euro).

"BVI method" performance, i.e., excluding the initial sales charge.
Past performance is not a guide to future results.

As of: December 31, 2025

Investment policy in the reporting period

The sub-fund achieved a positive investment performance as of December 31, 2025.

Global equity markets made strong gains despite the volatile geopolitical situation and the uncertain economic climate. In light of "de-dollarization" (i.e., the processing of trade flows without the U.S. dollar) and reflation, gold achieved record yields with a rise of over 64%. The tariff policy dominated the news across a large portion of the year, which led to upheaval in the commodity markets and stirred up fears of stagflation – a phase characterized by slower economic growth with simultaneous higher inflation. The U.S. Federal Reserve, its monetary policy and its independence also became the focus of attention when President Trump endeavored to fill free seats on the Board of Governors with governors who agreed with his opinion that interest rate cuts were necessary. In the end, the Fed's FOMC decided to adopt the easing stance of other central banks and cut interest rates three times in succession through year end. Budgets were another core issue, which led to political change worldwide, and the shutdown in the United States paralyzed public life for 43 days. Investors welcomed the German government's approval of a multi-billion special fund for investment in infrastructure and defense. Japan experienced inflation again for the first time when the country also transitioned to a more expansionary monetary policy. Investors remained loyal to the theme of AI almost the whole year through, as investments in artificial intelligence stimulated interest in data centers and in companies that provided the energy for these. There were also other geopolitical events, although less market-moving, that impacted the lives of many people worldwide. In the Middle East, Israel further extended its military influence in the region and, together

with the United States, attacked nuclear targets in Iran. The United States also took action against the Huthi militia in the Red Sea to protect shipping from attacks. In Europe, the war in Ukraine continued. However, progress was made between Ukraine and the United States, which could take the form of a peace agreement if Russian president Vladimir Putin would be satisfied with less than total victory in his "military special operation". In North and South America, governments moved further to the right in the most recent elections in Chile and Argentina. The United States imposed a naval blockade on sanctioned oil tankers from Venezuela to exert additional pressure on the Maduro government. There appeared to be sufficient supply in the oil markets already. Additional quantities from Russia or Venezuela would exert further price pressure.

Regarding the market for global real estate stocks, the United States turned in a below-average performance from a regional perspective. Outside of the United States, Asia (including Japan) made above-average gains while Australia lagged the most despite double-digit yields, followed by Canada, the United Kingdom and Europe (ex-UK). At sector level in the United States, the outperformance was most prominent in the health care, industrials, regional malls and net lease segments, while specialty real estate, data centers and office real estate fared the worst. Outside of the United States, developers in Japan and Singapore as well as investors in Hong Kong and European retail and mixed-use real estate achieved the largest growth. Conversely, the Australia region, European residential real estate and Scandinavia lagged. Among global infrastructure stocks, companies in Europe and Asia/Pacific stood out from a regional point of view, while North and South America trended weaker despite a positive performance. In Europe, the utilities and transportation segments and the United Kingdom as a region achieved an above-average investment result, while the communications segment slid despite a positive performance. In Asia/Pacific, Japan was the top-performer ahead of Australia. Australia, in turn, led the remainder of the Asian region ex-Japan. In North and South America, Latin American airports were the top performers in the entire infrastructure market, while the remaining segments (utilities, rail, waste disposal, midstream energy and communications) turned in a below-average performance. The communications segment was the only segment that closed the year in negative territory.

The sub-fund achieved a modestly positive investment result in the fiscal year ending December 31, 2025. In terms of contributions to performance, the positioning in European utilities, in infrastructure companies in the United Kingdom and in the European transportation and communications sector had a positive effect. Exposure to the waste management industry as well as base metals and mining in North and South America also made a positive contribution to performance. In contrast, the positioning in the communications and utilities sub-sectors in North and South America had a negative impact on performance. The positions in data center real estate stocks as well as in infrastructure stocks in Asia (ex-Japan) also detracted from performance.

The following risk management disclosures (other information) are unaudited and are not covered by the audit opinion on the annual report:

Composition of the reference portfolio (according to CSSF circular 11/512)
70% MSCI WORLD INFRASTRUCTURE INDEX in EUR, 30% FTSE EPRA Nareit Developed Index (January 1, 2025, through April 24, 2025)

Market risk exposure (value-at-risk) (according to CSSF circular 11/512)

Lowest market risk exposure	%	100.263
Highest market risk exposure	%	142.363
Average market risk exposure	%	122.982

The values-at-risk were calculated for the period from January 1, 2025, through April 24, 2025, using historical simulation with a 99% confidence level, a 10-day holding period and an effective historical observation period of one year. The risk in a reference portfolio that does not contain derivatives is used as the measurement benchmark. Market risk is the risk to the fund's assets arising from an unfavorable change in market prices. The Company determines the potential market risk by means of the **relative value-at-risk approach** as defined in CSSF circular 11/512.

In the reporting period, the average leverage effect from the use of derivatives was 0.0, whereby the total of the nominal amounts of the derivatives in relation to the fund's assets was used for the calculation (sum-of-notional approach).

Composition of the reference portfolio (according to CSSF circular 11/512)
Dow Jones Brookfield Global Infrastructure Net Total Return Index in EUR (April 25, 2025, through December 31, 2025)

Market risk exposure (value-at-risk) (according to CSSF circular 11/512)

Lowest market risk exposure	%	114.860
Highest market risk exposure	%	151.816
Average market risk exposure	%	132.554

DWS Invest ESG Next Generation Infrastructure

The values-at-risk were calculated for the period from April 25, 2025, through December 31, 2025, using historical simulation with a 99% confidence level, a 10-day holding period and an effective historical observation period of one year. The risk in a reference portfolio that does not contain derivatives is used as the measurement benchmark. Market risk is the risk to the fund's assets arising from an unfavorable change in market prices. The Company determines the potential market risk by means of the **relative value-at-risk approach** as defined in CSSF circular 11/512.

In the reporting period, the average leverage effect from the use of derivatives was 0.0, whereby the total of the nominal amounts of the derivatives in relation to the fund's assets was used for the calculation (sum-of-notional approach).

The gross exposure generated via derivatives pursuant to point 40 a) of the "Guidelines on ETFs and other UCITS issues" of the European Securities and Markets Authority (ESMA) totaled EUR 0.00 as of the reporting date.

Notes on valuation

Under the responsibility of the Board of Directors of the SICAV, the Management Company determines the net asset values per share and performs the valuation of the assets of the fund. The basic provision of price data and price validation are performed in accordance with the method introduced by the Board of Directors of the SICAV on the basis of the legal and regulatory requirements or the principles for valuation methods defined in the SICAV's prospectus.

If no trading prices are available, prices are determined with the aid of valuation models (derived market values) which are agreed between State Street Bank International GmbH, Luxembourg Branch, as external price service provider and the Management Company and which are based as far as possible on market parameters. This procedure is subject to an ongoing monitoring process. The plausibility of price information from third parties is checked through other pricing sources, model calculations or other suitable procedure.

Assets reported in this report are not valued at derived market values.

Footnote

* The prepaid placement fee is amortized over a period of three years (as specified in article 13 (f) of the general section of the fund's management regulations).

BVI total expense ratio (TER)

The total expense ratio for the share classes was:

Class FC 0.84% p.a.,	Class FD 0.83% p.a.,
Class LC 1.61% p.a.,	Class LD 1.61% p.a.,
Class NC 2.11% p.a.,	Class PFC 2.36% p.a.,
Class TFC 0.86% p.a.,	Class TFD 0.85% p.a.,
Class XC 0.48% p.a.,	Class XD 0.45% p.a.,
Class USD LC 1.58% p.a.,	Class USD XD 0.45% p.a.

The TER expresses total expenses and fees (excluding transaction costs) as a percentage of a fund's average net assets in relation to the respective share class within a fiscal year.

Transaction costs

The transaction costs paid in the reporting period amounted to EUR 237 828.14.

The transaction costs include all costs that were reported or settled separately for the account of the fund in the reporting period and are directly connected to the purchase or sale of assets. Any financial transaction taxes paid are included in the calculations.

Statement of changes in net assets 2025

Transactions processed for the account of the fund's assets via closely related companies (based on major holdings of the Deutsche Bank Group)

The share of transactions conducted in the reporting period for the account of the fund's assets via brokers that are closely related companies and persons (share of 5% and above) amounted to 0.00% of all transactions. The total volume was EUR 0.00.

Placement fee / dilution adjustment

In the reporting period, the fund paid a placement fee of 2.9% of the fund's net assets to the distributor. This fee was calculated on the subscription date. The specified placement fee serves in particular as remuneration for distribution. The gross amount of the placement fee was paid in a single payment on the subscription date and simultaneously recognized in the fund's net assets as prepaid expenses. These are amortized on a daily basis over a period of three years from the date of subscription. The remaining position for prepaid expenses per share on each valuation date is calculated on a daily basis by multiplying the net assets of the fund by a factor. The relevant factor is determined through straight-line reduction of the placement fee by a certain percentage on a daily basis over three years from the subscription date. The prepaid expenses position fluctuates during the three years from the subscription date of the fund, since it depends on both the fund's net assets and the predetermined factor.

In addition, a dilution adjustment of up to 3% based on the gross redemption amount was charged for the benefit of the fund's net assets in the reporting period (to be paid by the shareholder).

Further details on the placement fee and the dilution adjustment can be found in the corresponding section of the fund's sales prospectus.

In the case of a final distribution, any remaining net income for the fiscal year is reinvested.

Annual report
DWS Invest ESG NextGen Consumer (in liquidation)

Investment objective and performance in the reporting period

The objective of the investment policy was to achieve long-term capital appreciation in euro. To achieve this objective, the sub-fund invested predominantly in equities of companies that benefit from changes in consumer habits driven by millennials and subsequent generations. The sub-fund concentrated on relevant sectors such as food, luxury goods, consumer goods, IT, communication services, mobility, energy, health and education. Aspects considered when selecting suitable investments included a focus on environmental, social and corporate governance (ESG) criteria.*

In the reporting period from the start of January 2025 through the end of March 6, 2025, DWS Invest ESG NextGen Consumer (in liquidation) recorded an appreciation of 3.1% per share (LC share class; BVI method; in euro).

Investment policy in the reporting period

On the one hand, the capital market environment in 2025 was shaped by geopolitical risks like the ongoing Russia-Ukraine war, the escalated conflict in the Middle East, as well as the power struggle between the United States and China. On the other hand, the easing of monetary policy, which had begun previously, continued and supported performance in the international equity markets, as too did increased investor confidence in artificial intelligence, and also robust corporate profits.

"BVI method" performance, i.e., excluding the initial sales charge.
Past performance is not a guide to future results.

As of: March 6, 2025 (liquidation date)

In terms of country allocation, the sub-fund was generally more broadly positioned until its securities positions were sold in preparation for the liquidation, even though U.S. equities were an investment focus. With this orientation, the sub-fund participated in the performance of the international equity markets and achieved a positive investment result overall in the reporting period.

Liquidation

The sub-fund DWS Invest ESG NextGen Consumer (in liquidation) was liquidated effective March 6, 2025, following a resolution to that effect adopted by the Board of Directors of the SICAV and the approval of the Luxembourg supervisory authority CSSF. The issue of new shares of the sub-fund was discontinued effective February 12, 2025. Investors could redeem sub-fund shares until February 12, 2025.

Annual financial statements
DWS Invest ESG NextGen Consumer (in liquidation)

The following risk management disclosures (other information) are unaudited and are not covered by the audit opinion on the annual report.

Composition of the reference portfolio (according to CSSF circular 11/512)
MSCI All Country World Net TR Index - in EUR

Market risk exposure (value-at-risk) (according to CSSF circular 11/512)

Lowest market risk exposure	%	0.009
Highest market risk exposure	%	93.719
Average market risk exposure	%	82.180

The values-at-risk were calculated for the period from January 1, 2025, through March 6, 2025, using historical simulation with a 99% confidence level, a 10-day holding period and an effective historical observation period of one year. The risk in a reference portfolio that does not contain derivatives is used as the measurement benchmark. Market risk is the risk to the fund's assets arising from an unfavorable change in market prices. The Company determines the potential market risk by means of the **relative value-at-risk approach** as defined in CSSF circular 11/512.

In the reporting period, the average leverage effect from the use of derivatives was 0.0, whereby the total of the nominal amounts of the derivatives in relation to the fund's assets was used for the calculation (sum-of-notional approach).

The gross exposure generated via derivatives pursuant to point 40 a) of the "Guidelines on ETFs and other UCITS issues" of the European Securities and Markets Authority (ESMA) totaled EUR 0.00 as of the reporting date.

Notes on valuation

Under the responsibility of the Board of Directors of the SICAV, the Management Company determines the net asset values per share and performs the valuation of the assets of the fund. The basic provision of price data and price validation are performed in accordance with the method introduced by the Board of Directors of the SICAV on the basis of the legal and regulatory requirements or the principles for valuation methods defined in the SICAV's prospectus.

If no trading prices are available, prices are determined with the aid of valuation models (derived market values) which are agreed between State Street Bank International GmbH, Luxembourg Branch, as external price service provider and the Management Company and which are based as far as possible on market parameters. This procedure is subject to an ongoing monitoring process. The plausibility of price information from third parties is checked through other pricing sources, model calculations or other suitable procedure.

Assets reported in this report are not valued at derived market values.

DWS Invest ESG NextGen Consumer (in liquidation)

Statement of income and expenses (incl. income adjustment)

for the period from January 1, 2025, through March 6, 2025 (liquidation date)

I. Income			
1. Dividends (before withholding tax)		EUR	4 286.68
2. Interest from investments of liquid assets (before withholding tax)		EUR	1 270.72
3. Deduction for foreign withholding tax		EUR	-1 286.07
4. Income adjustment		EUR	-4 271.33
Total income		**EUR**	**0.00**
II. Expenses

V. Net gain/loss for the shortened fiscal year		**EUR**	**0.00**

BVI total expense ratio (TER)

The total expense ratio for the share classes was:

Class FC 0.18%[1],
Class FD 0.18%[1],
Class LC 0.34%[1],
Class LD 0.34%[1],
Class TFC 0.18%[1],
Class TFD 0.18%[1],
Class XC 0.10%[1],
Class XD 0.10%[1].

The TER expresses total expenses and fees (excluding transaction costs) as a percentage of a fund's average net assets in relation to the respective share class within a fiscal year.

[1] Annualization has not been performed for share classes liquidated during the year.

Transaction costs

The transaction costs paid in the reporting period amounted to EUR 1 999.37.

The transaction costs include all costs that were reported or settled separately for the account of the fund in the reporting period and are directly connected to the purchase or sale of assets. Any financial transaction taxes paid are included in the calculations.

Statement of changes in net assets 2025

I. Value of the fund's net assets at the beginning of the fiscal year		**EUR**	**5 731 028.62**

2. Income adjustment		EUR	1 215 527.18
3. Realized gains/losses		EUR	0.00
4. Net change in unrealized appreciation/depreciation		EUR	-1 024 166.31
II. Value of the fund's net assets at the end of the fiscal year		**EUR**	**0.00**

Summary of gains/losses 2025

Realized gains/losses (incl. income adjustment)	**EUR**	**0.00**
from:		
Securities transactions	EUR	1 211 071.70
(Forward) currency transactions	EUR	6 428.70
Income adjustment	EUR	-1 217 500.40

Transactions processed for the account of the fund's assets via closely related companies (based on major holdings of the Deutsche Bank Group)

The share of transactions conducted in the reporting period for the account of the fund's assets via brokers that are closely related companies and persons (share of 5% and above) amounted to 0.00% of all transactions. The total volume was EUR 0.00.

Annual report
DWS Invest ESG Qi LowVol World

Investment objective and performance in the reporting period

DWS Invest ESG Qi LowVol World seeks to achieve long-term capital appreciation. To this end, the sub-fund predominantly invests worldwide in equities of international issuers. An attractive risk/opportunity ratio plays an important role in the portfolio composition. In addition, stocks are selected based on the principle of risk diversification (broad portfolio). This involves choosing a basket of securities that are expected to experience low price volatility. The focus is not on maximizing returns compared with the broader equity market. Investment decisions in terms of the selection of securities are based on scientifically sound actuarial analyses. Aspects considered when selecting suitable investments include a focus on environmental, social and corporate governance (ESG) criteria. At least 80% of the sub-fund's net assets are invested in assets that meet the promoted environmental and social characteristics.*

DWS Invest ESG Qi LowVol World recorded an appreciation of 3.4% per share (LC share class; BVI method; in euro) in the 2025 calendar year.

Following its strategy, the defensive sub-fund DWS Invest ESG Qi LowVol World was not able to fully participate in the predominantly positive performance of the market during the reporting period; cyclical positions benefited disproportionately.

DWS Invest ESG Qi LowVol World

[1] In USD

"BVI method" performance, i.e., excluding the initial sales charge.
Past performance is not a guide to future results.

As of: December 31, 2025

Investment policy in the reporting period

The risk-reducing managed volatility strategy is implemented in the DWS Invest ESG Qi LowVol World sub-fund. The strategy is based on a proprietary equity investment process. A core component of this quantitative process is a dynamic multi-factor approach to stock-picking that relies on a company database.

The objective of the investment strategy is to reduce risk compared with the market-capitalized MSCI World Index, which represents the investment universe. The reduced-volatility portfolio was invested on the basis of those equities that were positively valued using the model approach to stock selection relative to the overall market or that could make a contribution to risk diversification.

The risk reduction sought in comparison to a market-capitalized index, i.e., compared to the MSCI World investment universe, resulted in underweightings in, for example, the cyclical sectors of information technology and non-consumer staples, as well as in an overweighting in the defensive sectors of consumer staples and health care.

The capital market environment in 2025 was challenging. This was due in particular to geopolitical crises like the Russia-Ukraine war that has been ongoing since February 24, 2022, the escalated conflict in the Middle East, and the power struggle between the United States and China. Furthermore, the erratic swings in U.S. trade and tariff policy generated additional uncertainty in the capital markets. On the other hand, the easing of monetary policy, which had begun previously, continued during the reporting period. The European Central Bank (ECB) thus lowered the key interest rate in four steps from 3.00% p.a. to 2.00% p.a. (deposit facility) while

the U.S. Federal Reserve gradually reduced its key interest rates by 0.75 percentage points to a target range of 3.50% p.a. – 3.75% p.a.

Despite market uncertainty induced mainly by geopolitical factors, the international equity markets, as measured by the MSCI World, recorded appreciable price gains overall in 2025 amid sometimes considerable volatility. These gains were underpinned by the emerging easing of interest rates, increased investor confidence in artificial intelligence, as well as robust corporate profits. Among the markets in Western industrial countries, the DAX 40 in Germany posted significant gains, buoyed by factors such as the multi-billion-euro package of fiscal relief measures. However, the international stock exchanges were intermittently hit hard by the erratic swings in U.S. trade and tariff policy.

The following risk management disclosures (other information) are unaudited and are not covered by the audit opinion on the annual report.

Composition of the reference portfolio (according to CSSF circular 11/512)
MSCI World Net TR Index in EUR (from January 1, 2025, through April 24, 2025)

Market risk exposure (value-at-risk) (according to CSSF circular 11/512)

Lowest market risk exposure	%	38.931
Highest market risk exposure	%	77.012
Average market risk exposure	%	54.302

The values-at-risk were calculated for the period from January 1, 2025, through April 24, 2025, using historical simulation with a 99% confidence level, a 10-day holding period and an effective historical observation period of one year. The risk in a reference portfolio that does not contain derivatives is used as the measurement benchmark. Market risk is the risk to the fund's assets arising from an unfavorable change in market prices. The Company determines the potential market risk by means of the **relative value-at-risk approach** as defined in CSSF circular 11/512.

In the reporting period, the average leverage effect from the use of derivatives was 0.0, whereby the total of the nominal amounts of the derivatives in relation to the fund's assets was used for the calculation (sum-of-notional approach).

Composition of the reference portfolio (according to CSSF circular 11/512)
MSCI World Minimum Volatility (EUR Optimized) Index - EUR Net (from April 25, 2025, through December 31, 2025)

Market risk exposure (value-at-risk) (according to CSSF circular 11/512)

Lowest market risk exposure	%	97.057
Highest market risk exposure	%	105.997
Average market risk exposure	%	101.755

The values-at-risk were calculated for the period from April 25, 2025, through December 31, 2025, using historical simulation with a 99% confidence level, a 10-day holding period and an effective historical observation period of one year. The risk in a reference portfolio that does not contain derivatives is used as the measurement benchmark. Market risk is the risk to the fund's assets arising from an unfavorable change in market prices. The Company determines the potential market risk by means of the relative value-at-risk approach as defined in CSSF circular 11/512.

In the reporting period, the average leverage effect from the use of derivatives was 0.0, whereby the total of the nominal amounts of the derivatives in relation to the fund's assets was used for the calculation (sum-of-notional approach).

The gross exposure generated via derivatives pursuant to point 40 a) of the "Guidelines on ETFs and other UCITS issues" of the European Securities and Markets Authority (ESMA) totaled EUR 0.00 as of the reporting date.

Notes on valuation

Under the responsibility of the Board of Directors of the SICAV, the Management Company determines the net asset values per share and performs the valuation of the assets of the fund. The basic provision of price data and price validation are performed in accordance with the method introduced by the Board of Directors of the SICAV on the basis of the legal and regulatory requirements or the principles for valuation methods defined in the SICAV's prospectus.

If no trading prices are available, prices are determined with the aid of valuation models (derived market values) which are agreed between State Street Bank International GmbH, Luxembourg Branch, as external price service provider and the Management Company and which are based as far as possible on market parameters. This procedure is subject to an ongoing monitoring process. The plausibility of price information from third parties is checked through other pricing sources, model calculations or other suitable procedure.

Assets reported in this report are not valued at derived market values.

The management fee / all-in fee rates in effect as of the reporting date for the investment fund units held in the securities portfolio are shown in parentheses. A plus sign means that a performance-based fee may also be charged. As the investment fund held units of other investment funds (target funds) in the reporting period, further costs, charges and fees may have been incurred at the level of these individual target funds.

BVI total expense ratio (TER)

The total expense ratio for the share classes was:

Class FC 0.86% p.a.,
Class FC EB 0.50% p.a.,
Class LCH (P) EB 0.51% p.a.,
Class FD 0.86% p.a.,
Class LC 1.35% p.a.,
Class LD 1.36% p.a.,
Class ND 2.06% p.a.,
Class TFC 0.86% p.a.,
Class TFD 0.84% p.a.,
Class USD LC 1.36% p.a.

The TER expresses total expenses and fees (excluding transaction costs) as a percentage of a fund's average net assets in relation to the respective share class within a fiscal year.

Transaction costs

The transaction costs paid in the reporting period amounted to EUR 114 557.73.

The transaction costs include all costs that were reported or settled separately for the account of the fund in the reporting period and are directly connected to the purchase or sale of assets. Any financial transaction taxes paid are included in the calculations.

Statement of changes in net assets 2025

Transactions processed for the account of the fund's assets via closely related companies (based on major holdings of the Deutsche Bank Group)

The share of transactions conducted in the reporting period for the account of the fund's assets via brokers that are closely related companies and persons (share of 5% and above) amounted to 2.28% of all transactions. The total volume was EUR 16 475 527.80.

Annual report
DWS Invest ESG Real Assets

Investment objective and performance in the reporting period

The objective of the investment policy is to achieve positive long-term capital appreciation. To achieve this objective, the sub-fund invests predominantly in exchange-traded real assets. "Real assets" is a collective term for listed real estate, listed infrastructure companies, global natural resource equities as well as certificates on commodities and commodities indices. Aspects considered when selecting investments include financial strength and also a focus on environmental, social and corporate governance (ESG) criteria.*

"BVI method" performance, i.e., excluding the initial sales charge.
Past performance is not a guide to future results.

As of: December 31, 2025

In the reporting period from January 1, 2025, through December 31, 2025, the sub-fund recorded an appreciation of 5.4% per share (LC share class; BVI method; in euro).

Investment policy in the reporting period

Global equity markets made strong gains despite the volatile geopolitical situation and the uncertain economic climate. In light of "de-dollarization" (i.e., the processing of trade flows without the U.S. dollar) and reflation, gold achieved record yields with a rise of over 64%. The tariff policy dominated the news across a large portion of the year, which led to upheaval in the commodity markets and stirred up fears of stagflation – a phase characterized by slower economic growth with simultaneous higher inflation. The U.S. Federal Reserve, its monetary policy and its independence also became the focus of attention when President Trump endeavored to fill free seats on the Board of Governors with governors who agreed with his opinion that interest rate cuts were necessary. In the end, the Fed's FOMC decided to adopt the easing stance of other central banks and cut interest rates three times in succession through year end. Budgets were another core issue, which led to political change worldwide, and the shutdown in the United States paralyzed public life for 43 days. Investors welcomed the German government's approval of a multi-billion special fund for investment in infrastructure and defense. Japan experienced inflation again for the first time when the country also transitioned to a more expansionary monetary policy. Investors remained loyal to the theme of AI almost the whole year through, as investments in artificial intelligence stimulated interest in data centers and in companies that provided the energy for these. There were also other geopolitical events, although less market-moving, that impacted the lives of many people worldwide. In the Middle East, Israel further extended its military influence in the region and, together with the United States, attacked nuclear targets in Iran. The United States also took action against the Huthi militia in the Red Sea to protect shipping from attacks. In Europe, the war in Ukraine continued. However, progress was made between Ukraine and the United States, which could take the form of a peace agreement if Russian president Vladimir Putin would be satisfied with less than total victory in his "military special operation". In North and South America, governments moved further to the right in the most recent elections in Chile and Argentina. The United States imposed a naval blockade

on sanctioned oil tankers from Venezuela to exert additional pressure on the Maduro government. There appeared to be sufficient supply in the oil markets already. Additional quantities from Russia or Venezuela would exert further price pressure.

In the reporting year, global equities performed better than real assets, as the trend in the communications, basic materials, technology, industrial goods and financial sectors boosted the wider equity markets. The performance of the broad equity markets was hampered by the weakness in real estate, consumer discretionaries and consumer staples. Within real assets, commodity equities and commodity futures turned in an above-average performance and outperformed the real assets index. In the United States, the Treasury Inflation-Protected Securities (TIPS), global real estate and global infrastructure segments underperformed despite positive returns.

Within the global real estate segment, performance in the United States was below average from a regional perspective. Outside of the United States, Asia (including Japan) made above-average gains while Australia lagged the most despite double-digit yields, followed by Canada, the United Kingdom and Europe (ex-UK). Among global infrastructure stocks, companies in Europe and Asia/Pacific stood out from a regional point of view, while North and South America trended weaker despite a positive performance. The communications segment was the only infrastructure sector that closed the year in negative territory. The market for real assets was led by commodity stocks, as companies from the metals and mining sector attained very strong double-digit returns. Although agriculture and energy did achieve positive returns, their performance was weaker in relative terms. The precious metals segment performed far better than the global equity market and the wider commodity futures market. The livestock and industrial metals segments also made above-average gains, while energy and agricultural raw materials closed in negative territory on the back of weak gains.

In the reporting period, the sub-fund achieved a positive result (following deduction of fees) and outperformed its benchmark for the portfolio composition (in euro). From a general point of view, the allocation achieved the highest alpha, and stock picking also had a positive effect. Regarding contribution to sub-fund performance, the positioning in the precious metals and mining sub-sectors, in European utility companies, in the American health care sector and in the European transportation sector were the greatest contributors to the positive overall result. Conversely, performance was hampered by the positioning in the following sub-sectors: American data centers, residential real estate and self-storage in the real estate sector. Within the infrastructure sector, the communication and utility companies sub-sectors in North and South America also weighed on the sub-fund's performance, while paper and forestry products were the largest detractor in the global commodities sector.

Other information – Not covered by the audit opinion on the annual report

Information on the environmental and/or social characteristics

This product reported in accordance with Article 8(1) of Regulation (EU) 2019/2088 on sustainability-related disclosures in the financial services sector ("SFDR").

Presentation and content requirements for periodic reports for financial products as referred to in Article 8(1) of Regulation (EU) 2019/2088 (SFDR) and in Article 6 of Regulation (EU) 2020/852 (Taxonomy) are available at the back of this report.

* Further details are set out in the current sales prospectus.

The format used for complete dates in security names in the investment portfolio is "day month year".

DWS Invest ESG Real Assets

The following risk management disclosures (other information) are unaudited and are not covered by the audit opinion on the annual report.

Composition of the reference portfolio (according to CSSF circular 11/512)
27.5% Dow Jones Brookfield Global Infrastructure Net Total Return Index in EUR, 27.5% FTSE EPRA Nareit Developed Net Index EUR, 25% BBG Global Inflation Linked Floating Composite in EUR, 20% S&P Global Natural Resources Net Total Return in EUR

Market risk exposure (value-at-risk) (according to CSSF circular 11/512)

Lowest market risk exposure	%	86.364
Highest market risk exposure	%	108.701
Average market risk exposure	%	94.054

The values-at-risk were calculated for the period from January 1, 2025, through December 31, 2025, using historical simulation with a 99% confidence level, a 10-day holding period and an effective historical observation period of one year. The risk in a reference portfolio that does not contain derivatives is used as the measurement benchmark. Market risk is the risk to the fund's assets arising from an unfavorable change in market prices. The Company determines the potential market risk by means of the **relative value-at-risk approach** as defined in CSSF circular 11/512.

In the reporting period, the average leverage effect from the use of derivatives was 0.0, whereby the total of the nominal amounts of the derivatives in relation to the fund's assets was used for the calculation (sum-of-notional approach).

The gross exposure generated via derivatives pursuant to point 40 a) of the "Guidelines on ETFs and other UCITS issues" of the European Securities and Markets Authority (ESMA) totaled EUR 0.00 as of the reporting date.

Notes on valuation

Under the responsibility of the Board of Directors of the SICAV, the Management Company determines the net asset values per share and performs the valuation of the assets of the fund. The basic provision of price data and price validation are performed in accordance with the method introduced by the Board of Directors of the SICAV on the basis of the legal and regulatory requirements or the principles for valuation methods defined in the SICAV's prospectus.

If no trading prices are available, prices are determined with the aid of valuation models (derived market values) which are agreed between State Street Bank International GmbH, Luxembourg Branch, as external price service provider and the Management Company and which are based as far as possible on market parameters. This procedure is subject to an ongoing monitoring process. The plausibility of price information from third parties is checked through other pricing sources, model calculations or other suitable procedure.

Assets reported in this report are not valued at derived market values.

The management fee / all-in fee rates in effect as of the reporting date for the investment fund units held in the securities portfolio are shown in parentheses. A plus sign means that a performance-based fee may also be charged. As the investment fund held units of other investment funds (target funds) in the reporting period, further costs, charges and fees may have been incurred at the level of these individual target funds.

DWS Invest ESG Real Assets

Statement of income and expenses (incl. income adjustment)

for the period from January 1, 2025, through December 31, 2025

I. Income			
1. Dividends (before withholding tax)		EUR	377 975.47
2. Interest from securities (before withholding tax)		EUR	109 122.97
3. Interest from investments of liquid assets (before withholding tax)		EUR	4 462.06
4. Deduction for foreign withholding tax		EUR	-59 922.51
Total income		**EUR**	**431 637.99**
II. Expenses			
1. Management fee		EUR	-246 225.90
thereof:			
Basic management fee	EUR -239 341.47		
Income from expense cap	EUR 113.75		
Administration fee	EUR -6 998.18		
2. Depositary fee		EUR	-207.00
3. Auditing, legal and publication costs		EUR	-13 989.28
4. Taxe d'abonnement		EUR	-6 402.36
5. Other expenses		EUR	-17 789.42
Total expenses		**EUR**	**-284 613.96**
III. Net investment income		**EUR**	**147 024.03**
IV. Sale transactions			
Realized gains/losses		EUR	1 061 133.01
Capital gains and losses		**EUR**	**1 061 133.01**
V. Net gain/loss for the fiscal year		**EUR**	**1 208 157.04**

BVI total expense ratio (TER)

The total expense ratio for the share classes was:

Class FC 0.91% p.a.,
Class IC 0.70% p.a.,
Class LC 1.76% p.a.,
Class TFC 0.91% p.a.,
Class USD LC 1.77% p.a.,
Class USD TFC 0.91% p.a.,
Class FD 0.90% p.a.,
Class ID 0.69% p.a.,
Class LD 1.71% p.a.,
Class XD 0.47% p.a.,
Class USD LD 1.77% p.a.,
Class USD XD 0.47% p.a.

The TER expresses total expenses and fees (excluding transaction costs) as a percentage of a fund's average net assets in relation to the respective share class within a fiscal year.

Transaction costs

The transaction costs paid in the reporting period amounted to EUR 48 935.69.

The transaction costs include all costs that were reported or settled separately for the account of the fund in the reporting period and are directly connected to the purchase or sale of assets. Any financial transaction taxes paid are included in the calculations.

Statement of changes in net assets 2025

Transactions processed for the account of the fund's assets via closely related companies (based on major holdings of the Deutsche Bank Group)

The share of transactions conducted in the reporting period for the account of the fund's assets via brokers that are closely related companies and persons (share of 5% and above) amounted to 0.00% of all transactions. The total volume was EUR 0.00.

Annual report
DWS Invest ESG Social Focus (in liquidation)

(formerly: DWS Invest ESG Women for Women)

Investment objective

The sub-fund DWS Invest ESG Social Focus (in liquidation) sought to generate an above-average return. To achieve this, it predominantly invested in equities issued by domestic and foreign companies. The sub-fund pursued the sustainable investment goal of exerting a positive influence in terms of social factors and simultaneously offering long-term capital appreciation by investing in companies that focus greatly on diversity and equality in conjunction with sustainable business practices. The sub-fund not only covered topics related to (gender) diversity but was based on a valuation model that also took into account general social issues. It invested in companies that are highly dynamic and show improvement in relation to promoting general diversity within the company (rate-of-change approach), as well as in companies that were already pioneers of diversity in their industry ("best-in-class" approach). In addition, the companies were expected to have a sustainable business model, solid fundamentals and the potential for long-term structural growth. Aspects considered when selecting suitable investments included a focus on environmental, social and corporate governance (ESG) criteria.* These aspects were an integral component of the investment strategy.

DWS Invest ESG Social Focus (in liquidation)

Performance of share classes (in EUR)

Share class	ISIN	Since the beginning of the shortened fiscal year

"BVI method" performance, i.e., excluding the initial sales charge.
Past performance is not a guide to future results.

As of: November 27, 2025 (liquidation date)

Liquidation

According to a notice to shareholders dated November 6, 2025, the Board of Directors of the fund resolved to place the sub-fund DWS Invest ESG Social Focus (in liquidation) (the "sub-fund") into liquidation effective November 6, 2025 ("date of placement into liquidation"). The reason for this was that the net asset value of the sub-fund had reduced to an amount that, in the assessment of the Board of Directors and of the investment manager, was below the minimum amount necessary for the sub-fund to be operated and managed in an economically efficient manner in the best interests of its shareholders. The subscription and redemption of shares of the sub-fund was discontinued effective November 6, 2025. The portfolio manager initiated the planned settlement of the sub-fund portfolio on November 7, 2025. The liquidation proceeds were paid out to shareholders on November 27, 2025.

Liquidation proceeds that were unable to be paid out to the beneficiaries on completion of the liquidation process are deposited with the Caisse de Consignation in the Grand Duchy of Luxembourg. The beneficiaries can request the proceeds to which they are entitled at any time within a period of 30 years. After this period, these proceeds will be transferred to the ownership of the Grand Duchy of Luxembourg.

In the period from the beginning of January 2025 through November 27, 2025 (liquidation date), the sub-fund DWS Invest ESG Social Focus (in liquidation) recorded an appreciation of 3.6% per share (LC share class; in euro; BVI method).

Annual financial statements
DWS Invest ESG Social Focus (formerly: DWS Invest ESG Women for Women) (in liquidation)

The following risk management disclosures (other information) are unaudited and are not covered by the audit opinion on the annual report:

Composition of the reference portfolio (according to CSSF circular 11/512)
MSCI All Country World Net TR Index - in EUR

Market risk exposure (value-at-risk) (according to CSSF circular 11/512)

Lowest market risk exposure	%	0.017
Highest market risk exposure	%	92.629
Average market risk exposure	%	84.568

The values-at-risk were calculated for the period from January 1, 2025, through November 27, 2025, using historical simulation with a 99% confidence level, a 10-day holding period and an effective historical observation period of one year. The risk in a reference portfolio that does not contain derivatives is used as the measurement benchmark. Market risk is the risk to the fund's assets arising from an unfavorable change in market prices. The Company determines the potential market risk by means of the **relative value-at-risk approach** as defined in CSSF circular 11/512.

In the reporting period, the average leverage effect from the use of derivatives was 0.1, whereby the total of the nominal amounts of the derivatives in relation to the fund's assets was used for the calculation (sum-of-notional approach).

The gross exposure generated via derivatives pursuant to point 40 a) of the "Guidelines on ETFs and other UCITS issues" of the European Securities and Markets Authority (ESMA) totaled EUR 0.00 as of the reporting date.

Notes on valuation

Against the backdrop of the resolution adopted by the Board of Directors of the SICAV to put the fund into liquidation effective November 27, 2025, the going-concern basis was relinquished and the financial statements were prepared on the basis of liquidation values. Under the responsibility of the Board of Directors of the SICAV, the Management Company determines the net asset values per share and performs the valuation of the assets of the fund.

If no trading prices are available, prices are determined with the aid of valuation models (derived market values) which are agreed between State Street Bank International GmbH, Luxembourg Branch, as external price service provider and the Management Company and which are based as far as possible on market parameters. This procedure is subject to an ongoing monitoring process. The plausibility of price information from third parties is checked through other pricing sources, model calculations or other suitable procedure.

Assets reported in this report are not valued at derived market values.

The management fee / all-in fee rates in effect as of the reporting date for the investment fund units held in the securities portfolio are shown in parentheses. A plus sign means that a performance-based fee may also be charged. As the investment fund held units of other investment funds (target funds) in the reporting period, further costs, charges and fees may have been incurred at the level of these individual target funds.

BVI total expense ratio (TER)

The total expense ratio for the share classes was:

Class FC 0.82%[1],
Class FD 0.82%[1],
Class LC 1.55%[1],
Class LD 1.55%[1],
Class TFC 0.82%[1],
Class TFD 0.82%[1],
Class XC 0.40%[1],
Class XD 0.41%[1].

The TER expresses total expenses and fees (excluding transaction costs) as a percentage of a fund's average net assets in relation to the respective share class within a fiscal year.

[1] Annualization has not been performed for share classes liquidated during the year.

Transaction costs

The transaction costs paid in the reporting period amounted to EUR 29 765.96.

The transaction costs include all costs that were reported or settled separately for the account of the fund in the reporting period and are directly connected to the purchase or sale of assets. Any financial transaction taxes paid are included in the calculations.

Statement of changes in net assets 2025

from:		
Securities transactions	EUR	10 753 252.19
(Forward) currency transactions	EUR	-2 084 586.95
Income adjustment	EUR	-8 668 665.24

DWS Invest ESG Social Focus (formerly: DWS Invest ESG Women for Women) (in liquidation)

Transactions processed for the account of the fund's assets via closely related companies (based on major holdings of the Deutsche Bank Group)

The share of transactions conducted in the reporting period for the account of the fund's assets via brokers that are closely related companies and persons (share of 5% and above) amounted to 0.00% of all transactions. The total volume was EUR 0.00.

Placement fee / dilution adjustment

In the reporting period, the fund paid a placement fee of 2.9% of the fund's net assets to the distributor. This fee was calculated on the subscription date. The specified placement fee serves in particular as remuneration for distribution. The gross amount of the placement fee was paid in a single payment on the subscription date and simultaneously recognized in the fund's net assets as prepaid expenses. These are amortized on a daily basis over a period of three years from the date of subscription. The remaining position for prepaid expenses per share on each valuation date is calculated on a daily basis by multiplying the net assets of the fund by a factor. The relevant factor is determined through straight-line reduction of the placement fee by a certain percentage on a daily basis over three years from the subscription date. The prepaid expenses position fluctuates during the three years from the subscription date of the fund, since it depends on both the fund's net assets and the predetermined factor.

In addition, a dilution adjustment of up to 3% based on the gross redemption amount was charged for the benefit of the fund's net assets in the reporting period (to be paid by the shareholder).

Further details on the placement fee and the dilution adjustment can be found in the corresponding section of the fund's sales prospectus.

Swing pricing

Swing pricing is a mechanism that is intended to protect shareholders from the negative effects of trading costs arising from subscription and redemption activities. Extensive subscriptions and redemptions within a (sub-)fund may lead to a dilution of the assets of this (sub-)fund, as the net asset value sometimes does not reflect all trading and other costs that are incurred when the portfolio manager must buy or sell securities in order to manage large (net) inflows or outflows in the (sub-)fund. In addition to these costs, substantial order volumes may lead to market prices that are considerably below or above the market prices that apply under normal circumstances.

To enhance the investor protection of existing shareholders, a swing pricing mechanism can be applied to compensate for trading costs and other expenses if the aforementioned cumulative (net) inflows or outflows should have a material impact on the (sub-)fund on a valuation date and exceed a predetermined threshold (partial swing pricing). This mechanism can be applied across all (sub-)funds. If swing pricing is introduced for a particular (sub-)fund, this will be disclosed in the special section of the sales prospectus.

The Management Company of the fund will predefine thresholds for the application of the swing pricing mechanism, based, among other things, on current market conditions, available market liquidity and estimated dilution costs. In accordance with these thresholds, the adjustment itself will be initiated automatically. If the (net) inflows or outflows exceed the swing threshold, the net asset value is revised upward if the (sub-)fund sees large net inflows and is revised downward in the event of large net outflows. This adjustment is applied uniformly to all subscriptions and redemptions for the trading day in question. If a performance-based fee applies for the (sub-)fund, the calculation is based on the original net asset value.

The Management Company has established a swing pricing committee that determines the swing factors for each individual (sub-)fund. These swing factors indicate the extent of the net asset value adjustment. The swing pricing committee takes into account the following factors in particular:

– bid-ask spread (fixed-price element),
– impacts on the market (impacts of the transactions on the price),
– additional costs that are incurred as a result of trading activities for the investments.

The appropriateness of the applied swing factors, the operational decisions made in connection with the swing pricing (including the swing threshold), the extent of the adjustment, and the affected (sub-)funds are reviewed at regular intervals.

The amount of the swing pricing adjustment can therefore vary from one (sub-)fund to another and will not generally exceed 2% of the original net asset value per share. The net asset value adjustment is available upon request from the Management Company. In a market environment with extreme illiquidity, the Management Company can, however, increase the swing price adjustment to more than 2% of the original net asset value. Such an increase will be announced on the Management Company's website: www.dws.com.

As the mechanism should only be applied if significant (net) inflows or outflows are expected and it does not apply for normal trading volumes, it is assumed that the net asset value will only be adjusted occasionally.

This (sub-)fund can apply swing pricing but has not done so in the reporting period, as its (net) inflows and outflows did not exceed the relevant threshold previously defined. No swing pricing adjustment was applied that would have had an impact on the (sub-)fund's net asset value per share on the last day of the reporting period.

Annual report
DWS Invest ESG Top Euroland

Investment objective and performance in the reporting period

The objective of the investment policy of the sub-fund DWS Invest ESG Top Euroland is to generate above-average returns. The net assets of the sub-fund are primarily invested in equities from issuers with their headquarters in a member state of the European Economic and Monetary Union. The sub-fund focuses on larger caps. Moreover, the portfolio management seeks to manage a concentrated portfolio containing some 40–60 different equities. However, the strategy can deviate from the diversification objective mentioned, depending on the market situation. Aspects considered when selecting suitable investments include a focus on environmental, social and corporate governance (ESG) criteria. At least 80% of the sub-fund's net assets are invested in assets that meet the promoted environmental and social characteristics.*

In the fiscal year from the beginning of January through the end of December 2025, the sub-fund recorded an appreciation of 22.6% per share (LC share class; BVI method), while the EURO STOXX 50 benchmark increased 21.9% in the same period (both percentages in euro terms).

"BVI method" performance, i.e., excluding the initial sales charge.
Past performance is not a guide to future results.

As of: December 31, 2025

Investment policy in the reporting period

On the one hand, the capital market environment in the fiscal year through the end of December 2025 was shaped by geopolitical risks like the ongoing Russia-Ukraine war, the escalated conflict in the Middle East, the power struggle between the United States and China, as well as the erratic swings in U.S. trade and tariff policy. On the other hand, the easing of monetary policy, which had begun previously, continued during the reporting period. The European Central Bank (ECB) thus lowered the key interest rate in four steps from 3.00% p.a. to 2.00% p.a. (deposit facility) while the U.S. Federal Reserve gradually reduced its key interest rates by 0.75 percentage points to a target range of 3.50% p.a. – 3.75% p.a.

Despite market uncertainty induced mainly by geopolitical factors, the international equity markets recorded appreciable price gains in some cases in the reporting period amid at times considerable volatility. These gains were underpinned by the emerging easing of interest rates and increased investor confidence in artificial intelligence (AI), as well as robust corporate profits.

In the 2025 calendar year, European equities performed significantly better than U.S. equities relative to the previous year's performance. Alongside the ECB's interest rate cuts and increased investor uncertainty with regard to the United States, an improved economic environment in Europe also had a positive effect on performance, boosted by the announcement by European countries that they wanted to invest more in infrastructure and defense. The equities held in the sub-fund's portfolio also benefited from this advantageous investment environment and achieved a significantly positive performance on the whole.

DWS Invest ESG Top Euroland

The following risk management disclosures (other information) are unaudited and are not covered by the audit opinion on the annual report.

Composition of the reference portfolio (according to CSSF circular 11/512)
STOXX Eurozone 50 (Net Return)

Market risk exposure (value-at-risk) (according to CSSF circular 11/512)

Lowest market risk exposure	%	90.358
Highest market risk exposure	%	118.570
Average market risk exposure	%	96.719

The values-at-risk were calculated for the period from January 1, 2025, through December 31, 2025, using historical simulation with a 99% confidence level, a 10-day holding period and an effective historical observation period of one year. The risk in a reference portfolio that does not contain derivatives is used as the measurement benchmark. Market risk is the risk to the fund's assets arising from an unfavorable change in market prices. The Company determines the potential market risk by means of the **relative value-at-risk approach** as defined in CSSF circular 11/512.

In the reporting period, the average leverage effect from the use of derivatives was 0.0, whereby the total of the nominal amounts of the derivatives in relation to the fund's assets was used for the calculation (sum-of-notional approach).

The gross exposure generated via derivatives pursuant to point 40 a) of the "Guidelines on ETFs and other UCITS issues" of the European Securities and Markets Authority (ESMA) totaled EUR 0.00 as of the reporting date. Does not include any forward currency transactions entered into for currency hedging purposes at the level of the share classes.

Notes on valuation

Under the responsibility of the Board of Directors of the SICAV, the Management Company determines the net asset values per share and performs the valuation of the assets of the fund. The basic provision of price data and price validation are performed in accordance with the method introduced by the Board of Directors of the SICAV on the basis of the legal and regulatory requirements or the principles for valuation methods defined in the SICAV's prospectus.

If no trading prices are available, prices are determined with the aid of valuation models (derived market values) which are agreed between State Street Bank International GmbH, Luxembourg Branch, as external price service provider and the Management Company and which are based as far as possible on market parameters. This procedure is subject to an ongoing monitoring process. The plausibility of price information from third parties is checked through other pricing sources, model calculations or other suitable procedure.

Assets reported in this report are not valued at derived market values.

Footnotes

* The prepaid placement fee is amortized over a period of three years (as specified in article 13 f "Placement Fee" section in the general section of the fund's management regulations).
** Does not include positions with a negative balance, if such exist.

BVI total expense ratio (TER)

The total expense ratio for the share classes was:

Class FC 0.86% p.a.,
Class IC 0.56% p.a.,
Class LD 1.60% p.a.,
Class PFC 2.49% p.a.,
Class TFD 0.85% p.a.,
Class SGD LCH (P) 1.63% p.a.,
Class USD LCH 1.63% p.a.
Class FD 0.84% p.a.,
Class LC 1.60% p.a.,
Class NC 2.30% p.a.,
Class TFC 0.84% p.a.,
Class GBP D RD 0.83% p.a.,
Class USD FCH 0.88% p.a.,

The TER expresses total expenses and fees (excluding transaction costs) as a percentage of a fund's average net assets in relation to the respective share class within a fiscal year.

As well, the additional income from securities lending resulted in a performance-based fee of

Class FC <0.001% p.a.,
Class IC <0.001% p.a.,
Class LD <0.001% p.a.,
Class PFC <0.001% p.a.,
Class TFD <0.001% p.a.,
Class SGD LCH (P) <0.001% p.a.,
Class USD LCH <0.001% p.a.
Class FD <0.001% p.a.,
Class LC <0.001% p.a.,
Class NC <0.001% p.a.,
Class TFC <0.001% p.a.,
Class GBP D RD <0.001% p.a.,
Class USD FCH <0.001% p.a.,

of the fund's average net assets in relation to the respective share class.

Transaction costs

The transaction costs paid in the reporting period amounted to EUR 376 913.47.

The transaction costs include all costs that were reported or settled separately for the account of the fund in the reporting period and are directly connected to the purchase or sale of assets. Any financial transaction taxes paid are included in the calculations.

Statement of changes in net assets 2025

I. Value of the fund's net assets at the beginning of the fiscal year		**EUR**	**359 854 049.47**
1. Distribution for the previous year		EUR	-2 475 540.06
2. Net outflows[2]		EUR	-14 414 303.94
3. Income adjustment		EUR	-741 827.94
4. Net investment income		EUR	4 880 189.57
5. Realized gains/losses		EUR	24 068 677.77
6. Net change in unrealized appreciation/depreciation		EUR	47 297 732.43
II. Value of the fund's net assets at the end of the fiscal year		**EUR**	**418 468 977.30**

[2] Reduced by a dilution fee in the amount of EUR 2 547.46 for the benefit of the fund's assets.

Summary of gains/losses 2025

Realized gains/losses (incl. income adjustment)		**EUR**	**24 068 677.77**
from:			
Securities transactions		EUR	24 410 240.94
Derivatives and other financial futures transactions[3]		EUR	-341 563.17

Transactions processed for the account of the fund's assets via closely related companies (based on major holdings of the Deutsche Bank Group)

The share of transactions conducted in the reporting period for the account of the fund's assets via brokers that are closely related companies and persons (share of 5% and above) amounted to 0.00% of all transactions. The total volume was EUR 0.00.

Placement fee / dilution adjustment

In the reporting period, the fund paid a placement fee of 2.9% of the fund's net assets to the distributor. This fee was calculated on the subscription date. The specified placement fee serves in particular as remuneration for distribution. The gross amount of the placement fee was paid in a single payment on the subscription date and simultaneously recognized in the fund's net assets as prepaid expenses. These are amortized on a daily basis over a period of three years from the date of subscription. The remaining position for prepaid expenses per share on each valuation date is calculated on a daily basis by multiplying the net assets of the fund by a factor. The relevant factor is determined through straight-line reduction of the placement fee by a certain percentage on a daily basis over three years from the subscription date. The prepaid expenses position fluctuates during the three years from the subscription date of the fund, since it depends on both the fund's net assets and the predetermined factor.

In addition, a dilution adjustment of up to 3% based on the gross redemption amount was charged for the benefit of the fund's net assets in the reporting period (to be paid by the shareholder).

Further details on the placement fee and the dilution adjustment can be found in the corresponding section of the fund's sales prospectus.

Swing pricing

Swing pricing is a mechanism that is intended to protect shareholders from the negative effects of trading costs arising from subscription and redemption activities. Extensive subscriptions and redemptions within a (sub-)fund may lead to a dilution of the assets of this (sub-)fund, as the net asset value sometimes does not reflect all trading and other costs that are incurred when the portfolio manager must buy or sell securities in order to manage large (net) inflows or outflows in the (sub-)fund. In addition to these costs, substantial order volumes may lead to market prices that are considerably below or above the market prices that apply under normal circumstances.

To enhance the investor protection of existing shareholders, a swing pricing mechanism can be applied to compensate for trading costs and other expenses if the aforementioned cumulative (net) inflows or outflows should have a material impact on the (sub-)fund on a valuation date and exceed a predetermined threshold (partial swing pricing). This mechanism can be applied across all (sub-)funds. If swing pricing is introduced for a particular (sub-)fund, this will be disclosed in the special section of the sales prospectus.

The Management Company of the fund will predefine thresholds for the application of the swing pricing mechanism, based, among other things, on current market conditions, available market liquidity and estimated dilution costs. In accordance with these thresholds, the adjustment itself will be initiated automatically. If the (net) inflows or outflows exceed the swing threshold, the net asset value is revised upward if the (sub-)fund sees large net inflows and is revised downward in the event of large net outflows. This adjustment is applied uniformly to all subscriptions and redemptions for the trading day in question. If a performance-based fee applies for the (sub-)fund, the calculation is based on the original net asset value.

The Management Company has established a swing pricing committee that determines the swing factors for each individual (sub-)fund. These swing factors indicate the extent of the net asset value adjustment. The swing pricing committee takes into account the following factors in particular:

- bid-ask spread (fixed-price element),
- impacts on the market (impacts of the transactions on the price),
- additional costs that are incurred as a result of trading activities for the investments.

The appropriateness of the applied swing factors, the operational decisions made in connection with the swing pricing (including the swing threshold), the extent of the adjustment, and the affected (sub-)funds are reviewed at regular intervals.

The amount of the swing pricing adjustment can therefore vary from one (sub-)fund to another and will not generally exceed 2% of the original net asset value per share. The net asset value adjustment is available upon request from the Management Company. In a market environment with extreme illiquidity, the Management Company can, however, increase the swing price adjustment to more than 2% of the original net asset value. Such an increase will be announced on the Management Company's website: www.dws.com.

As the mechanism should only be applied if significant (net) inflows or outflows are expected and it does not apply for normal trading volumes, it is assumed that the net asset value will only be adjusted occasionally.

This (sub-)fund can apply swing pricing but has not done so in the reporting period, as its (net) inflows and outflows did not exceed the relevant threshold previously defined.

Annual report
DWS Invest Euro Corporate Bonds

Investment objective and performance in the reporting period

The bond sub-fund seeks to achieve sustained capital appreciation relative to the benchmark (iBoxx Euro Corporate). To this end, it invests in euro-denominated corporate bonds. Derivatives are used for hedging and for investment purposes. Aspects considered when selecting investments include financial strength and also a focus on environmental, social and corporate governance (ESG) factors.*

The sub-fund DWS Invest Euro Corporate Bonds recorded an appreciation of 2.7% per share (LC share class; BVI method) in the 2025 fiscal year but underperformed its benchmark, which returned +3.0% (both percentages in euro terms).

As of: December 31, 2025

Investment policy in the reporting period

The capital market environment in 2025 was challenging. This was due in particular to geopolitical crises like the Russia-Ukraine war that has been ongoing since February 24, 2022, the escalated conflict in the Middle East, and the power struggle between the United States and China. Furthermore, the erratic swings in U.S. trade and tariff policy generated additional uncertainty in the capital markets. On the other hand, the easing of monetary policy, which had begun previously, continued during the reporting period. The European Central Bank (ECB) thus lowered the key interest rate in four steps from 3.00% p.a. to 2.00% p.a. (deposit facility) while the U.S. Federal Reserve gradually reduced its key interest rates by 0.75 percentage points to a target range of 3.50% p.a. – 3.75% p.a.

In the international bond markets, the yield curve in 2025 became increasingly steeper at the long end – although this was still moderate – following the previous normalization. In light of the more relaxed interest rate policy of the central banks, bond yields fell noticeably at the short end in some cases. Long-dated government bonds, on the other hand, came under pressure due, for example, to the rise in public deficits and, in some instances, had to accept price declines on a full-year basis, accompanied by rising bond yields. Corporate bonds, on the other hand, profited from their relatively high coupons as well as narrowing risk premiums.

In line with its investment policy, the sub-fund remained focused on corporate bonds and interest-bearing instruments of financial service providers. In terms of regional allocation, preference was given to issues from Europe and the U.S. Most of the bonds held in the portfolio had investment-grade status

(ratings of BBB- or better from the leading rating agencies) as of the reporting date.

The main reason why the sub-fund fell short of its benchmark was its more defensive orientation with regard to cyclical sectors such as consumer goods (automotive) and energy at the beginning of 2025. In light of the erratic swings in U.S. trade and tariff policy, the portfolio management favored interest-bearing securities from non-cyclical sectors such as health care, telecommunications and utilities.

Following the temporary sell-off in the capital markets – prompted by Donald Trump's "Liberation Day" – the portfolio management increased investments in cyclical sectors, which bolstered the sub-fund's performance in the further course of 2025. The overweighting of bonds of smaller banks and of subordinate banking bonds also made a positive contribution to the absolute investment result, as these performed well in the 2025 investment environment, which was characterized by an appetite for risk.

Other information – Not covered by the audit opinion on the annual report

Information on the environmental and/or social characteristics

This product reported in accordance with Article 8(1) of Regulation (EU) 2019/2088 on sustainability-related disclosures in the financial services sector ("SFDR").

Presentation and content requirements for periodic reports for financial products as referred to in Article 8(1) of Regulation (EU) 2019/2088 (SFDR) and in Article 6 of Regulation (EU) 2020/852 (Taxonomy) are available at the back of this report.

* Further details are set out in the current sales prospectus.

The format used for complete dates in security names in the investment portfolio is "day month year".

The following risk management disclosures (other information) are unaudited and are not covered by the audit opinion on the annual report.

Composition of the reference portfolio (according to CSSF circular 11/512)
Markit iBoxx Euro Corporate Index

Market risk exposure (value-at-risk) (according to CSSF circular 11/512)

Lowest market risk exposure	%	100.144
Highest market risk exposure	%	126.788
Average market risk exposure	%	111.397

The values-at-risk were calculated for the period from January 1, 2025, through June 30, 2025, using historical simulation with a 99% confidence level, a 10-day holding period and an effective historical observation period of one year. The risk in a reference portfolio that does not contain derivatives is used as the measurement benchmark. Market risk is the risk to the fund's assets arising from an unfavorable change in market prices. The Company determines the potential market risk by means of the **relative value-at-risk approach** as defined in CSSF circular 11/512.

In the reporting period, the average leverage effect from the use of derivatives was 0.3, whereby the total of the nominal amounts of the derivatives in relation to the fund's assets was used for the calculation (sum-of-notional approach).

The gross exposure generated via derivatives pursuant to point 40 a) of the "Guidelines on ETFs and other UCITS issues" of the European Securities and Markets Authority (ESMA) totaled EUR 464 458 827.39 as of the reporting date. Does not include any forward currency transactions entered into for currency hedging purposes at the level of the share classes.

Notes on valuation

Under the responsibility of the Board of Directors of the SICAV, the Management Company determines the net asset values per share and performs the valuation of the assets of the fund. The basic provision of price data and price validation are performed in accordance with the method introduced by the Board of Directors of the SICAV on the basis of the legal and regulatory requirements or the principles for valuation methods defined in the SICAV's prospectus.

If no trading prices are available, prices are determined with the aid of valuation models (derived market values) which are agreed between State Street Bank International GmbH, Luxembourg Branch, as external price service provider and the Management Company and which are based as far as possible on market parameters. This procedure is subject to an ongoing monitoring process. The plausibility of price information from third parties is checked through other pricing sources, model calculations or other suitable procedure.

Assets reported in this report are valued to a minor extent at derived market values.

The management fee / all-in fee rates in effect as of the reporting date for the investment fund units held in the securities portfolio are shown in parentheses. A plus sign means that a performance-based fee may also be charged. As the investment fund held units of other investment funds (target funds) in the reporting period, further costs, charges and fees may have been incurred at the level of these individual target funds.

Footnotes

* Floating interest rate.
** Some or all of these securities are lent.
*** The prepaid placement fee is amortized over a period of three years (as specified in article 13 (f) of the general section of the fund's management regulations).
**** Does not include positions with a negative balance, if such exist.

BVI total expense ratio (TER)

The total expense ratio for the share classes was:

Class CHF FCH 0.71% p.a.,	Class FC 0.65% p.a.,
Class FC10 0.45% p.a.,	Class IC 0.43% p.a.,
Class IC100 0.23% p.a.,	Class ID100 0.23% p.a.,
Class LC 0.96% p.a.,	Class LD 0.96% p.a.,
Class LDM 0.92%[4],	Class NC 1.36% p.a.,
Class NDQ 1.36% p.a.,	Class PFC 1.64% p.a.,
Class PFDQ 1.65% p.a.,	Class TFC 0.66% p.a.,
Class TFD 0.67% p.a.,	Class GBP CH RD 0.68% p.a.,
Class SEK LCH 0.98% p.a.,	Class USD FCH 0.68% p.a.

The TER expresses total expenses and fees (excluding transaction costs) as a percentage of a fund's average net assets in relation to the respective share class within a fiscal year.

As well, the additional income from securities lending resulted in a performance-based fee of

Class CHF FCH 0.005% p.a.,	Class FC 0.004% p.a.,
Class FC10 0.005% p.a.,	Class IC 0.005% p.a.,
Class IC100 0.005% p.a.,	Class ID100 0.004% p.a.,
Class LC 0.005% p.a.,	Class LD 0.005% p.a.,
Class LDM 0.004%[4],	Class NC 0.005% p.a.,
Class NDQ 0.005% p.a.,	Class PFC 0.005% p.a.,
Class PFDQ 0.005% p.a.,	Class TFC 0.004% p.a.,
Class TFD 0.005% p.a.,	Class GBP CH RD 0.004% p.a.,
Class SEK LCH 0.005% p.a.,	Class USD FCH 0.005% p.a.

of the fund's average net assets in relation to the respective share class.

[4] Annualization has not been performed for share classes launched during the year.

Transaction costs

The transaction costs paid in the reporting period amounted to EUR 64 486.03.

The transaction costs include all costs that were reported or settled separately for the account of the fund in the reporting period and are directly connected to the purchase or sale of assets. Any financial transaction taxes paid are included in the calculations.

Statement of changes in net assets 2025

I.	**Value of the fund's net assets at the beginning of the fiscal year**	**EUR**	**2 265 117 392.58**

Transactions processed for the account of the fund's assets via closely related companies (based on major holdings of the Deutsche Bank Group)

The share of transactions conducted in the reporting period for the account of the fund's assets via brokers that are closely related companies and persons (share of 5% and above) amounted to 2.16% of all transactions. The total volume was EUR 287 560 200.05.

Placement fee / dilution adjustment

In the reporting period, the fund paid a placement fee of 2.9% of the fund's net assets to the distributor. This fee was calculated on the subscription date. The specified placement fee serves in particular as remuneration for distribution. The gross amount of the placement fee was paid in a single payment on the subscription date and simultaneously recognized in the fund's net assets as prepaid expenses. These are amortized on a daily basis over a period of three years from the date of subscription. The remaining position for prepaid expenses per share on each valuation date is calculated on a daily basis by multiplying the net assets of the fund by a factor. The relevant factor is determined through straight-line reduction of the placement fee by a certain percentage on a daily basis over three years from the subscription date. The prepaid expenses position fluctuates during the three years from the subscription date of the fund, since it depends on both the fund's net assets and the predetermined factor.

In addition, a dilution adjustment of up to 3% based on the gross redemption amount was charged for the benefit of the fund's net assets in the reporting period (to be paid by the shareholder).

Further details on the placement fee and the dilution adjustment can be found in the corresponding section of the fund's sales prospectus.

DWS Invest Euro Corporate Bonds

Swing pricing

Swing pricing is a mechanism that is intended to protect unitholders from the negative effects of trading costs arising from subscription and redemption activities. Extensive subscriptions and redemptions within a (sub-)fund may lead to a dilution of the assets of this (sub-)fund, as the net asset value sometimes does not reflect all trading and other costs that are incurred when the portfolio manager must buy or sell securities in order to manage large (net) inflows or outflows in the (sub-)fund. In addition to these costs, substantial order volumes may lead to market prices that are considerably below or above the market prices that apply under normal circumstances.

To enhance the investor protection of existing shareholders, a swing pricing mechanism can be applied to compensate for trading costs and other expenses if the aforementioned cumulative (net) inflows or outflows should have a material impact on the (sub-)fund on a valuation date and exceed a predetermined threshold (partial swing pricing). This mechanism can be applied across all (sub-)funds. If swing pricing is introduced for a particular (sub-)fund, this will be disclosed in the special section of the sales prospectus.

The Management Company of the fund will predefine thresholds for the application of the swing pricing mechanism, based, among other things, on current market conditions, available market liquidity and estimated dilution costs. In accordance with these thresholds, the adjustment itself will be initiated automatically. If the (net) inflows or outflows exceed the swing threshold, the net asset value is revised upward if the (sub-)fund sees large net inflows and is revised downward in the event of large net outflows. This adjustment is applied uniformly to all subscriptions and redemptions for the trading day in question. If a performance-based fee applies for the (sub-)fund, the calculation is based on the original net asset value.

The Management Company has established a swing pricing committee that determines the swing factors for each individual (sub-)fund. These swing factors indicate the extent of the net asset value adjustment. The swing pricing committee takes into account the following factors in particular:

– bid-ask spread (fixed-price element),
– impacts on the market (impacts of the transactions on the price),
– additional costs that are incurred as a result of trading activities for the investments.

The appropriateness of the applied swing factors, the operational decisions made in connection with the swing pricing (including the swing threshold), the extent of the adjustment, and the affected (sub-)funds are reviewed at regular intervals.

The amount of the swing pricing adjustment can therefore vary from one (sub-)fund to another and will not generally exceed 2% of the original net asset value per share. The net asset value adjustment is available upon request from the Management Company. In a market environment with extreme illiquidity, the Management Company can, however, increase the swing price adjustment to more than 2% of the original net asset value. Such an increase will be announced on the Management Company's website: www.dws.com.

As the mechanism should only be applied if significant (net) inflows or outflows are expected and it does not apply for normal trading volumes, it is assumed that the net asset value will only be adjusted occasionally.

This (sub-)fund can apply swing pricing and has done so in the reporting period, as its (net) inflows and outflows exceeded the relevant threshold previously defined. No swing pricing adjustment was applied that would have had an impact on the (sub-)fund's net asset value per share on the last day of the reporting period..

Annual report
DWS Invest Euro High Yield Corporates

Investment objective and performance in the reporting period

The bond sub-fund seeks to achieve sustained capital appreciation relative to the benchmark (ML Euro BB-B Non-Financial Fixed & FRN High Yield Constrained). To this end, it invests worldwide in corporate bonds, concentrating its investments on high-yield bonds. Aspects considered when selecting investments include financial strength and also a focus on environmental, social and corporate governance (ESG) factors.*

The sub-fund DWS Invest Euro High Yield Corporates achieved an appreciation of 3.3% (LC share class; BVI method) in the 2025 fiscal year, falling short of its benchmark, which returned +5.5% (both percentages in euro terms).

Investment policy in the reporting period

The capital market environment in 2025 was challenging. This was due in particular to geopolitical crises like the Russia-Ukraine war that has been ongoing since February 24, 2022, the escalated conflict in the Middle East, and the power struggle between the United States and China. Furthermore, the erratic swings in U.S. trade and tariff policy generated additional uncertainty in the capital markets. On the other hand, the easing of monetary policy, which had begun previously, continued during the reporting period. The European Central Bank (ECB) thus lowered the key interest rate in four steps from 3.00% p.a. to 2.00% p.a. (deposit facility) while the U.S. Federal Reserve gradually reduced its key interest rates by 0.75 percentage points to a target range of 3.50% p.a. – 3.75% p.a.

In the international bond markets, the yield curve in 2025 became increasingly steeper at the long end – although this was still moderate – following the previous normalization. In light of the more relaxed interest rate policy

"BVI method" performance, i.e., excluding the initial sales charge.
Past performance is not a guide to future results.

As of: December 31, 2025

of the central banks, bond yields fell noticeably at the short end in some cases. Long-dated government bonds, on the other hand, came under pressure due, for example, to the rise in public deficits and, in some instances, had to accept price declines on a full-year basis, accompanied by rising bond yields. Corporate bonds, on the other hand, profited from their relatively high coupons as well as narrowing risk premiums.

The portfolio management continued to invest globally in high-yield corporate bonds, focusing on European issues. These high-yield bonds are non-investment-grade interest-bearing securities that are generally traded in the capital markets at considerably higher risk premiums relative to government bonds from the core markets, but offer noticeably higher yields in return. To take account of risk, the portfolio management concentrated its investments on high-yield bonds with ratings of BB and B from the leading rating agencies. Nevertheless, the sub-fund had less exposure to the BB segment and selectively more exposure to the BBB and CCC rating ranges relative to the benchmark. In terms of its sector allocation, the portfolio was generally broadly diversified, although the sub-fund's portfolio was overweight in financial services providers, media and residential real estate, but underweight in the automotive sector by contrast.

The reasons why the sub-fund fell short of its benchmark were its at times more defensive portfolio orientation, its underweighting of cyclical corporate bonds with a BB rating and its picking of some corporate bonds with a high risk/return profile.

Other information – Not covered by the audit opinion on the annual report

Information on the environmental and/or social characteristics

This product reported in accordance with Article 8(1) of Regulation (EU) 2019/2088 on sustainability-related disclosures in the financial services sector ("SFDR").

Presentation and content requirements for periodic reports for financial products as referred to in Article 8(1) of Regulation (EU) 2019/2088 (SFDR) and in Article 6 of Regulation (EU) 2020/852 (Taxonomy) are available at the back of this report.

* Further details are set out in the current sales prospectus.

The format used for complete dates in security names in the investment portfolio is "day month year".

DWS Invest Euro High Yield Corporates

The following risk management disclosures (other information) are unaudited and are not covered by the audit opinion on the annual report.

Composition of the reference portfolio (according to CSSF circular 11/512)
ICE BofA BB-B Euro HY Non-Financial Fixed & Floating Constrained Index

Market risk exposure (value-at-risk) (according to CSSF circular 11/512)

Lowest market risk exposure	%	88.968
Highest market risk exposure	%	121.101
Average market risk exposure	%	102.083

The values-at-risk were calculated for the period from January 1, 2025, through December 31, 2025, using historical simulation with a 99% confidence level, a 10-day holding period and an effective historical observation period of one year. The risk in a reference portfolio that does not contain derivatives is used as the measurement benchmark. Market risk is the risk to the fund's assets arising from an unfavorable change in market prices. The Company determines the potential market risk by means of the **relative value-at-risk approach** as defined in CSSF circular 11/512.

In the reporting period, the average leverage effect from the use of derivatives was 0.2, whereby the total of the nominal amounts of the derivatives in relation to the fund's assets was used for the calculation (sum-of-notional approach).

The gross exposure generated via derivatives pursuant to point 40 a) of the "Guidelines on ETFs and other UCITS issues" of the European Securities and Markets Authority (ESMA) totaled EUR 461 408 515.65 as of the reporting date. Does not include any forward currency transactions entered into for currency hedging purposes at the level of the share classes.

Notes on valuation

Under the responsibility of the Board of Directors of the SICAV, the Management Company determines the net asset values per share and performs the valuation of the assets of the fund. The basic provision of price data and price validation are performed in accordance with the method introduced by the Board of Directors of the SICAV on the basis of the legal and regulatory requirements or the principles for valuation methods defined in the SICAV's prospectus.

If no trading prices are available, prices are determined with the aid of valuation models (derived market values) which are agreed between State Street Bank International GmbH, Luxembourg Branch, as external price service provider and the Management Company and which are based as far as possible on market parameters. This procedure is subject to an ongoing monitoring process. The plausibility of price information from third parties is checked through other pricing sources, model calculations or other suitable procedure.

Assets reported in this report are valued to a minor extent at derived market values.

The management fee / all-in fee rates in effect as of the reporting date for the investment fund units held in the securities portfolio are shown in parentheses. A plus sign means that a performance-based fee may also be charged. As the investment fund held units of other investment funds (target funds) in the reporting period, further costs, charges and fees may have been incurred at the level of these individual target funds.

Footnotes

* Floating interest rate.
** Some or all of these securities are lent.
*** The prepaid placement fee is amortized over a period of three years (as specified in article 13 (f) of the general section of the fund's management regulations).
**** Does not include positions with a negative balance, if such exist.
***** As of the reporting date, two securities lending transactions involved overlending (i.e., the securities lent exceeded the positions held in the portfolio). This was due solely to differences in scheduling and technical aspects during processing. The positions were fully closed out after the reporting date.

BVI total expense ratio (TER)

The total expense ratio for the share classes was:

Class CHF FCH 0.76% p.a.,	Class CHF ICH50 0.40% p.a.,
Class CHF TFCH 0.74% p.a.,	Class FC 0.73% p.a.,
Class FD 0.73% p.a.,	Class FD50 0.43% p.a.,
Class IC 0.49% p.a.,	Class IC50 0.39% p.a.,
Class ID 0.50% p.a.,	Class ID50 0.39% p.a.,
Class IDQ50 - 2.29% p.a.,	Class LC 1.18% p.a.,
Class LD 1.18% p.a.,	Class LDM 1.20% p.a.,
Class NC 1.58% p.a.,	Class ND 1.58% p.a.,
Class NDQ 1.58% p.a.,	Class PFC 1.83% p.a.,
Class PFD 1.33% p.a.,	Class PFDQ 1.89% p.a.,
Class RDQ 0.24% p.a.,	Class TFC 0.73% p.a.,
Class TFD 0.73% p.a.,	Class SEK LCH 1.21% p.a.,
Class USD FCH 0.76% p.a.,	Class USD LCH 1.21% p.a.,
Class USD LDMH 1.21% p.a.,	Class USD TFCH 0.75% p.a.

The TER expresses total expenses and fees (excluding transaction costs) as a percentage of a fund's average net assets in relation to the respective share class within a fiscal year.

As well, the additional income from securities lending resulted in a performance-based fee of

Class CHF FCH 0.035% p.a.,	Class CHF ICH50 0.035% p.a.,
Class CHF TFCH 0.035% p.a.,	Class FC 0.034% p.a.,
Class FD 0.035% p.a.,	Class FD50 0.035% p.a.,
Class IC 0.035% p.a.,	Class IC50 0.035% p.a.,
Class ID 0.034% p.a.,	Class ID50 0.035% p.a.,
Class IDQ50 0.035% p.a.,	Class LC 0.035% p.a.,
Class LD 0.035% p.a.,	Class LDM 0.034% p.a.,
Class NC 0.035% p.a.,	Class ND 0.035% p.a.,
Class NDQ 0.035% p.a.,	Class PFC 0.035% p.a.,
Class PFD 0.035% p.a.,	Class PFDQ 0.035% p.a.,
Class RDQ 0.034% p.a.,	Class TFC 0.035% p.a.,
Class TFD 0.035% p.a.,	Class SEK LCH 0.035% p.a.,
Class USD FCH 0.035% p.a.,	Class USD LCH 0.035% p.a.,
Class USD LDMH 0.035% p.a.,	Class USD TFCH 0.035% p.a.

of the fund's average net assets in relation to the respective share class.

Transaction costs

The transaction costs paid in the reporting period amounted to EUR 26 928.58.

The transaction costs include all costs that were reported or settled separately for the account of the fund in the reporting period and are directly connected to the purchase or sale of assets. Any financial transaction taxes paid are included in the calculations.

Statement of changes in net assets 2025

I.	**Value of the fund's net assets at the beginning of the fiscal year**	**EUR**	**2 861 503 001.26**
1.	Distribution for the previous year	EUR	-53 611 182.23
2.	Net outflows[2]	EUR	29 272 449.71
3.	Income adjustment	EUR	2 461 172.58
4.	Net investment income	EUR	146 525 497.15
5.	Realized gains/losses	EUR	23 298 297.21
6.	Net change in unrealized appreciation/depreciation	EUR	-67 090 942.05
II.	**Value of the fund's net assets at the end of the fiscal year**	**EUR**	**2 942 358 293.63**

[2] Reduced by a dilution fee in the amount of EUR 133 960.67 for the benefit of the fund's assets.

Summary of gains/losses 2025

Realized gains/losses (incl. income adjustment)	**EUR**	**23 298 297.21**
from:		
Securities transactions	EUR	20 648 614.71
(Forward) currency transactions	EUR	-966 967.13
Derivatives and other financial futures transactions[3]	EUR	3 616 649.63

DWS Invest Euro High Yield Corporates

Transactions processed for the account of the fund's assets via closely related companies (based on major holdings of the Deutsche Bank Group)

The share of transactions conducted in the reporting period for the account of the fund's assets via brokers that are closely related companies and persons (share of 5% and above) amounted to 2.12% of all transactions. The total volume was EUR 308 353 670.07.

Placement fee / dilution adjustment

In the reporting period, the fund paid a placement fee of 2.9% of the fund's net assets to the distributor. This fee was calculated on the subscription date. The specified placement fee serves in particular as remuneration for distribution. The gross amount of the placement fee was paid in a single payment on the subscription date and simultaneously recognized in the fund's net assets as prepaid expenses. These are amortized on a daily basis over a period of three years from the date of subscription. The remaining amount of prepaid expenses attributable to each unit on each valuation date is calculated on a daily basis by multiplying the fund's net assets by a factor. The relevant factor is determined through straight-line reduction of the placement fee by a certain percentage on a daily basis over three years from the subscription date. The prepaid expenses position fluctuates during the three years from the subscription date of the fund, since it depends on both the fund's net assets and the predetermined factor.

In addition, a dilution adjustment of up to 3% based on the gross redemption amount was charged for the benefit of the fund's net assets in the reporting period (to be paid by the shareholder).

Further details on the placement fee and the dilution adjustment can be found in the corresponding section of the fund's sales prospectus.

Swing pricing

Swing pricing is a mechanism that is intended to protect shareholders from the negative effects of trading costs arising from subscription and redemption activities.

Extensive subscriptions and redemptions within a (sub-)fund may lead to a dilution of the assets of this (sub-)fund, as the net asset value sometimes does not reflect all trading and other costs that are incurred when the portfolio manager must buy or sell securities in order to manage large (net) inflows or outflows in the (sub-)fund. In addition to these costs, substantial order volumes may lead to market prices that are considerably below or above the market prices that apply under normal circumstances.

To enhance the investor protection of existing shareholders, a swing pricing mechanism can be applied to compensate for trading costs and other expenses if the aforementioned cumulative (net) inflows or outflows should have a material impact on the (sub-)fund on a valuation date and exceed a predetermined threshold (partial swing pricing). This mechanism can be applied across all (sub-)funds. If swing pricing is introduced for a particular (sub-)fund, this will be disclosed in the special section of the sales prospectus.

The Management Company of the fund will predefine thresholds for the application of the swing pricing mechanism, based, among other things, on current market conditions, available market liquidity and estimated dilution costs. In accordance with these thresholds, the adjustment itself will be initiated automatically.

If the (net) inflows or outflows exceed the swing threshold, the net asset value is revised upward if the (sub-)fund sees large net inflows and is revised downward in the event of large net outflows. This adjustment is applied uniformly to all subscriptions and redemptions for the trading day in question. If a performance-based fee applies for the (sub-)fund, the calculation is based on the original net asset value.

The Management Company has established a swing pricing committee that determines the swing factors for each individual (sub-)fund. These swing factors indicate the extent of the net asset value adjustment. The swing pricing committee takes into account the following factors in particular:

– bid-ask spread (fixed-price element),
– impacts on the market (impacts of the transactions on the price),
– additional costs that are incurred as a result of trading activities for the investments.

The appropriateness of the applied swing factors, the operational decisions made in connection with the swing pricing (including the swing threshold), the extent of the adjustment, and the affected (sub-)funds are reviewed at regular intervals.

The amount of the swing pricing adjustment can therefore vary from one (sub-)fund to another and will not generally exceed 2% of the original net asset value per share.

The net asset value adjustment is available upon request from the Management Company. In a market environment with extreme illiquidity, the Management Company can, however, increase the swing price adjustment to more than 2% of the original net asset value. Such an increase will be announced on the Management Company's website: www.dws.com.

As the mechanism should only be applied if significant (net) inflows or outflows are expected and it does not apply for normal trading volumes, it is assumed that the net asset value will only be adjusted occasionally.

This (sub-)fund can apply swing pricing and has done so in the reporting period, as its (net) inflows and outflows exceeded the relevant threshold previously defined. No swing pricing adjustment was applied that would have had an impact on the (sub-)fund's net asset value per share on the last day of the reporting period.

Annual report
DWS Invest Euro-Gov Bonds

Investment objective and performance in the reporting period

DWS Invest Euro-Gov Bonds seeks to generate sustained capital appreciation relative to the benchmark (iBoxx Sovereign Eurozone Overall). To achieve this objective, the sub-fund invests primarily in government bonds and bonds of government institutions denominated in euro. Eligible government institutions include central banks, government authorities, regional and local authorities and supranationals. Aspects considered when selecting investments include financial strength and also a focus on environmental, social and corporate governance (ESG) criteria.*

[1] Class FC100 launched on February 15, 2022

"BVI method" performance, i.e., excluding the initial sales charge.
Past performance is not a guide to future results.

As of: December 31, 2025

The sub-fund DWS Invest Euro-Gov Bonds recorded an depreciation of 0.2% per share (LC share class; BVI method) in the 2025 fiscal year, thus underperforming its benchmark, which returned +0.6% (both percentages in euro terms).

Investment policy in the reporting period

The sub-fund's portfolio was broadly diversified in general. In line with the investment policy, the portfolio management invested in government issues from the euro area. In terms of regional allocation, it had reduced the weighting of interest-bearing instruments from the core markets, for example Germany, because of their initially low yields. Instead, the management preferred interest-bearing securities from Italy and France. Issues from France were increasingly built up in the second half of 2025. Bonds from southern European euro countries, above all Italy and Spain, were initially overweighted in the second half of 2025 but then scaled back slightly. The bonds held in the portfolio had investment-grade status (ratings of BBB- or better from the leading rating agencies) as of the reporting date. Government bonds from issuers outside the euro area rounded out the portfolio.

The capital market environment in 2025 was challenging. This was due in particular to geopolitical crises like the Russia-Ukraine war that has been ongoing since February 24, 2022, the escalated conflict in the Middle East, and the power struggle between the United States and China. Furthermore, the erratic swings in U.S. trade and tariff policy generated additional uncertainty in the capital markets. On the other hand, the easing of monetary policy, which had begun previously, continued during the reporting period. The European Central Bank (ECB) thus lowered the key interest rate in four steps from 3.00% p.a. to 2.00% p.a. (deposit facility) while the U.S. Federal Reserve gradually reduced its key interest rates by 0.75 percentage points to a target range of 3.50% p.a. – 3.75% p.a.

In the international bond markets, the yield curve in 2025 became increasingly steeper at the long end – although this was still moderate – following the previous normalization. In light of the more relaxed interest rate policy of the central banks, bond yields fell noticeably at the short end in some cases. Long-dated government bonds, on the other hand, came under pressure due, for example, to the rise in public deficits and, in some instances, had to accept price declines on a full-year basis, accompanied by rising bond yields. Corporate bonds, on the other hand, profited from their relatively high coupons as well as narrowing risk premiums.

Yields of longer-term German government bonds rose in 2025. This initially caused price declines in the sub-fund portfolio. In contrast, shorter maturities exhibited stable to falling yields over the year. Therefore, the strategy to be overweight in the shorter and longer maturities range and underweight in the medium maturity segment was revised. Due to the steeper yield curve, the portfolio management increased investments in the medium maturity segment, as potential returns seemed to be more attractive there due to "roll-off" effects. The yield spreads between the non-government interest-bearing securities (such as mortgage bonds) held in the portfolio and German government bonds narrowed, enabling the sub-fund to benefit from the higher coupon revenue of these interest-bearing instruments.

The main reason why the sub-fund underperformed its benchmark was the unexpected extent of the rise in yields on bonds with a ten-year term to maturity in March 2025, which noticeably impacted the price of the longer-term interest-bearing instruments held in the portfolio.

The following risk management disclosures (other information) are unaudited and are not covered by the audit opinion on the annual report.

Composition of the reference portfolio (according to CSSF circular 11/512)
Markit iBoxx Eurozone Index

Market risk exposure (value-at-risk) (according to CSSF circular 11/512)

Lowest market risk exposure	%	93.379
Highest market risk exposure	%	121.665
Average market risk exposure	%	105.414

The values-at-risk were calculated for the period from January 1, 2025, through December 31, 2025, using historical simulation with a 99% confidence level, a 10-day holding period and an effective historical observation period of one year. The risk in a reference portfolio that does not contain derivatives is used as the measurement benchmark. Market risk is the risk to the fund's assets arising from an unfavorable change in market prices. The Company determines the potential market risk by means of the **relative value-at-risk approach** as defined in CSSF circular 11/512.

In the reporting period, the average leverage effect from the use of derivatives was 0.1, whereby the total of the nominal amounts of the derivatives in relation to the fund's assets was used for the calculation (sum-of-notional approach).

The gross exposure generated via derivatives pursuant to point 40 a) of the "Guidelines on ETFs and other UCITS issues" of the European Securities and Markets Authority (ESMA) totaled EUR 105 530 700.00 as of the reporting date.

Notes on valuation

Under the responsibility of the Board of Directors of the SICAV, the Management Company determines the net asset values per share and performs the valuation of the assets of the fund. The basic provision of price data and price validation are performed in accordance with the method introduced by the Board of Directors of the SICAV on the basis of the legal and regulatory requirements or the principles for valuation methods defined in the SICAV's prospectus.

If no trading prices are available, prices are determined with the aid of valuation models (derived market values) which are agreed between State Street Bank International GmbH, Luxembourg Branch, as external price service provider and the Management Company and which are based as far as possible on market parameters. This procedure is subject to an ongoing monitoring process. The plausibility of price information from third parties is checked through other pricing sources, model calculations or other suitable procedure.

Assets reported in this report are not valued at derived market values.

The management fee / all-in fee rates in effect as of the reporting date for the investment fund units held in the securities portfolio are shown in parentheses. A plus sign means that a performance-based fee may also be charged. As the investment fund held units of other investment funds (target funds) in the reporting period, further costs, charges and fees may have been incurred at the level of these individual target funds.

Footnote

* Some or all of these securities are lent.
** Does not include positions with a negative balance, if such exist.

Statement of income and expenses (incl. income adjustment)

for the period from January 1, 2025, through December 31, 2025

I. Income			
1. Interest from securities (before withholding tax)	EUR		22 179 351.07
2. Interest from investments of liquid assets (before withholding tax)	EUR		32 218.49
3. Income from securities loans	EUR		375 222.22
4. Other income	EUR		2 187.48
Total income	**EUR**		**22 588 979.26**
II. Expenses			
1. Management fee	EUR		-2 799 199.06
thereof:			
Basic management fee	EUR	-2 788 230.49	
Income from expense cap	EUR	30 870.92	
Administration fee	EUR	-41 839.49	
2. Depositary fee	EUR		-51 533.11
3. Auditing, legal and publication costs	EUR		-59 568.65
4. Taxe d'abonnement [1]	EUR		1 935 965.85
5. Other expenses	EUR		-218 413.19
thereof:			
Performance-based fee from securities lending income	EUR	-112 566.67	
Other	EUR	-105 846.52	
Total expenses	**EUR**		**-1 192 748.16**
III. Net investment income	**EUR**		**21 396 231.10**
IV. Sale transactions			
Realized gains/losses	EUR		-26 561 764.63
Capital gains and losses	**EUR**		**-26 561 764.63**
V. Net gain/loss for the fiscal year	**EUR**		**-5 165 533.53**

[1] This includes primarily income from the release of excess accruals in the amount of EUR 2 229 127.13.

BVI total expense ratio (TER)

The total expense ratio for the share classes was:

Class FC 0.44% p.a.,	Class FC100 0.19% p.a.,
Class IC 0.34% p.a.,	Class IC100 0.18% p.a.,
Class ID100 0.18% p.a.,	Class LC 0.68% p.a.,
Class LD 0.68% p.a.,	Class NC 1.28% p.a.,
Class TFC 0.43% p.a.,	Class TFD 0.43% p.a.

The TER expresses total expenses and fees (excluding transaction costs) as a percentage of a fund's average net assets in relation to the respective share class within a fiscal year.

As well, the additional income from securities lending resulted in a performance-based fee of

Class FC 0.016% p.a.,	Class FC100 0.019% p.a.,
Class IC 0.017% p.a.,	Class IC100 0.017% p.a.,
Class ID100 0.017% p.a.,	Class LC 0.017% p.a.,
Class LD 0.017% p.a.,	Class NC 0.017% p.a.,
Class TFC 0.019% p.a.,	Class TFD 0.017% p.a.

of the fund's average net assets in relation to the respective share class.

Transaction costs

The transaction costs paid in the reporting period amounted to EUR 19 108.28.

The transaction costs include all costs that were reported or settled separately for the account of the fund in the reporting period and are directly connected to the purchase or sale of assets. Any financial transaction taxes paid are included in the calculations.

Transactions processed for the account of the fund's assets via closely related companies (based on major holdings of the Deutsche Bank Group)

The share of transactions conducted in the reporting period for the account of the fund's assets via brokers that are closely related companies and persons (share of 5% and above) amounted to 2.79% of all transactions. The total volume was EUR 50 381 302.04.

Annual report
DWS Invest European Equity High Conviction

Investment objective and performance in the reporting period

The objective of the investment policy of the sub-fund DWS Invest European Equity High Conviction was to achieve the highest possible appreciation of capital invested in euro. Equities, interest-bearing securities, convertible debentures and warrant-linked bonds, participation and dividend-right certificates, equity warrants and index certificates could be purchased for the sub-fund's assets. At least 75% of the sub-fund's assets were invested in equities of issuers having their headquarters in a member state of the EU, the United Kingdom, Norway and/or Iceland.

The focus was on companies that have a good market position, future-oriented products and competent management. Furthermore, the companies were expected to concentrate on their strengths and pursue a strategy that sought a yield-oriented use of resources and above-average profit growth. In addition to these criteria, the companies were expected to have shareholder-centered information policies, including detailed information about accounting and regular communication with investors. Accordingly, shares of companies were acquired that were expected to achieve results and/or share prices that were above average relative to the broad market. Up to 25% could be invested in interest-bearing securities, money market instruments and bank balances. Aspects considered when selecting investments included financial strength and also a focus on environmental, social and corporate governance (ESG) factors.*

DWS Invest European Equity High Conviction

Performance of share classes vs. benchmark (in EUR)

Share class	ISIN	1 year	3 years	5 years
Class LC	LU0145634076	22.2%	42.2%	40.5%

MSCI Europe		20.1%	50.3%	69.7%

[1] In USD

"BVI method" performance, i.e., excluding the initial sales charge.
Past performance is not a guide to future results.

As of: December 31, 2025

The sub-fund recorded an appreciation of 22.2% per share (LC share class; BVI method) in the fiscal year from the beginning of January through the end of December 2025, while the benchmark MSCI Europe index posted an appreciation of 20.1% in the same period (both percentages in euro terms).

Investment policy in the reporting period

On the one hand, the capital market environment in the fiscal year through the end of December 2025 was shaped by geopolitical risks like the ongoing Russia-Ukraine war, the escalated conflict in the Middle East, the power struggle between the United States and China, as well as the erratic swings in U.S. trade and tariff policy. On the other hand, the easing of monetary policy, which had begun previously, continued during the reporting period. The European Central Bank (ECB) thus lowered the key interest rate in four steps from 3.00% p.a. to 2.00% p.a. (deposit facility) while the U.S. Federal Reserve gradually reduced its key interest rates by 0.75 percentage points to a target range of 3.50% p.a. – 3.75% p.a.

Despite market uncertainty induced mainly by geopolitical factors, the international equity markets recorded appreciable price gains in some cases in the reporting period amid at times considerable volatility. These gains were underpinned by the emerging easing of interest rates and increased investor confidence in artificial intelligence (AI), as well as robust corporate profits.

In the 2025 calendar year, European equities performed significantly better than U.S. equities relative to the previous year's performance. Alongside the ECB's interest rate cuts and increased investor uncertainty with regard to the United States, an improved economic environment in Europe also had a positive effect on performance, boosted by the announcement by European countries that they wanted to

invest more in infrastructure and defense. Against this backdrop, the European securities contained in the portfolio also recorded a significantly positive performance overall in the reporting period.

In this market environment, the equity selection contributed materially to the sub-fund's outperformance of its benchmark.

The sub-fund's positioning with respect to the health care sector was the greatest performance profit-maker in comparison to the benchmark. The equity selection was the reason for the positive contribution. The German corporate group Fresenius was among the individual equities that made the greatest contribution.

The performance benefited also from the positioning within the consumer staples sector. An underweighting of this sector had a positive effect whereby manufacturers of alcoholic drinks such as Diageo were not held in the portfolio. These companies suffered due to feared tariffs in their business with the United States and negative volumes in several regions.

However, the underweighting in information technology, and especially in ASM lithography, made a negative contribution.

Other information – Not covered by the audit opinion on the annual report

Information on the environmental and/or social characteristics

This product reported in accordance with Article 8(1) of Regulation (EU) 2019/2088 on sustainability-related disclosures in the financial services sector ("SFDR").

Presentation and content requirements for periodic reports for financial products as referred to in Article 8(1) of Regulation (EU) 2019/2088 (SFDR) and in Article 6 of Regulation (EU) 2020/852 (Taxonomy) are available at the back of this report.

* Further details are set out in the current sales prospectus.

The format used for complete dates in security names in the investment portfolio is "day month year".

The following risk management disclosures (other information) are unaudited and are not covered by the audit opinion on the annual report.

Composition of the reference portfolio (according to CSSF circular 11/512)
MSCI Europe Net Index in EUR

Market risk exposure (value-at-risk) (according to CSSF circular 11/512)

Lowest market risk exposure	%	87.871
Highest market risk exposure	%	99.906
Average market risk exposure	%	96.589

The values-at-risk were calculated for the period from January 1, 2025, through December 31, 2025, using historical simulation with a 99% confidence level, a 10-day holding period and an effective historical observation period of one year. The risk in a reference portfolio that does not contain derivatives is used as the measurement benchmark. Market risk is the risk to the fund's assets arising from an unfavorable change in market prices. The Company determines the potential market risk by means of the **relative value-at-risk approach** as defined in CSSF circular 11/512.

In the reporting period, the average leverage effect from the use of derivatives was 0.0, whereby the total of the nominal amounts of the derivatives in relation to the fund's assets was used for the calculation (sum-of-notional approach).

The gross exposure generated via derivatives pursuant to point 40 a) of the "Guidelines on ETFs and other UCITS issues" of the European Securities and Markets Authority (ESMA) totaled EUR 0.00 as of the reporting date.

Notes on valuation

Under the responsibility of the Board of Directors of the SICAV, the Management Company determines the net asset values per share and performs the valuation of the assets of the fund. The basic provision of price data and price validation are performed in accordance with the method introduced by the Board of Directors of the SICAV on the basis of the legal and regulatory requirements or the principles for valuation methods defined in the SICAV's prospectus.

If no trading prices are available, prices are determined with the aid of valuation models (derived market values) which are agreed between State Street Bank International GmbH, Luxembourg Branch, as external price service provider and the Management Company and which are based as far as possible on market parameters. This procedure is subject to an ongoing monitoring process. The plausibility of price information from third parties is checked through other pricing sources, model calculations or other suitable procedure.

Assets reported in this report are valued to a minor extent at derived market values.

The management fee / all-in fee rates in effect as of the reporting date for the investment fund units held in the securities portfolio are shown in parentheses. A plus sign means that a performance-based fee may also be charged. As the investment fund held units of other investment funds (target funds) in the reporting period, further costs, charges and fees may have been incurred at the level of these individual target funds.

BVI total expense ratio (TER)

The total expense ratio for the share classes was:

Class FC 0.91% p.a.,
Class LD 1.72% p.a.,
Class TFC 0.91% p.a.,
Class USD LC 1.72% p.a.
Class LC 1.72% p.a.,
Class NC 2.42% p.a.,
Class TFD 0.92% p.a.,

The TER expresses total expenses and fees (excluding transaction costs) as a percentage of a fund's average net assets in relation to the respective share class within a fiscal year.

Transaction costs

The transaction costs paid in the reporting period amounted to EUR 73 803.08.

The transaction costs include all costs that were reported or settled separately for the account of the fund in the reporting period and are directly connected to the purchase or sale of assets. Any financial transaction taxes paid are included in the calculations.

Statement of changes in net assets 2025

Transactions processed for the account of the fund's assets via closely related companies (based on major holdings of the Deutsche Bank Group)

The share of transactions conducted in the reporting period for the account of the fund's assets via brokers that are closely related companies and persons (share of 5% and above) amounted to 0.00% of all transactions. The total volume was EUR 0.00.

Annual report
DWS Invest German Equities

Investment objective and performance in the reporting period

The sub-fund seeks to achieve sustained capital appreciation in the medium to long term relative to the benchmark (CDAX UCITS Capped). To achieve this objective, it invests mainly in equities of German issuers, with an emphasis placed on a broad market investment in blue-chip stocks and in selected small- and mid-caps. Aspects considered when selecting investments include financial strength and also a focus on environmental, social and corporate governance (ESG) criteria.*

The sub-fund DWS Invest German Equities recorded an appreciation of 19.0% per share (LC share class; BVI method) in the 2025 fiscal year but underperformed its benchmark, which returned +24.0% (both percentages in euro terms).

DWS Invest German Equities

"BVI method" performance, i.e., excluding the initial sales charge.
Past performance is not a guide to future results.

As of: December 31, 2025

Investment policy in the reporting period

The capital market environment in 2025 was challenging. This was due in particular to geopolitical crises like the Russia-Ukraine war that has been ongoing since February 24, 2022, the escalated conflict in the Middle East, and the power struggle between the United States and China. Furthermore, the erratic swings in U.S. trade and tariff policy generated additional uncertainty in the capital markets. On the other hand, the easing of monetary policy, which had begun previously, continued during the reporting period. The European Central Bank (ECB) thus lowered the key interest rate in four steps from 3.00% p.a. to 2.00% p.a. (deposit facility) while the U.S. Federal Reserve gradually reduced its key interest rates by 0.75 percentage points to a target range of 3.50% p.a. – 3.75% p.a.

Despite market uncertainty induced mainly by geopolitical factors, the international equity markets, as measured by the MSCI World, recorded appreciable price gains overall in 2025 amid sometimes considerable volatility. These gains were underpinned by the emerging easing of interest rates, increased investor confidence in artificial intelligence, as well as robust corporate profits. Among the markets in Western industrial countries, the DAX 40 in Germany posted significant gains, buoyed by factors such as the multi-billion-euro package of fiscal relief measures. The emerging markets, as measured by the MSCI Emerging Markets, were even able to outperform the industrial countries on a full-year basis through the end of 2025. In this respect, China's equity market was one of the stand-out performers and continued to recover significantly. This trend was supported by Chinese economic growth, which was stimulated by expansionary macroeconomic policies. However, the international stock exchanges were intermittently hit hard by the erratic swings in U.S. trade and tariff policy.

In terms of sector allocation, the equity sub-fund was generally broadly diversified in the reporting period, although there was a focus on investments in industrials, financial service providers and information technology. With this orientation, the sub-fund participated noticeably in the price rises in the German equity market, which were underpinned to some extent by the package of fiscal relief measures introduced by the German government. Industrials

such as Siemens Energy, banking stocks such as Deutsche Bank or Commerzbank, utilities focused on Germany and Europe such as RWE and infrastructure stocks such as Heidelberg Materials thus posted strong gains, for example.

From mid-May 2025 onward, DWS Invest German Equities was also able to invest in stocks from the defense industry – another beneficiary of increased government spending – while taking ESG criteria into account. However, the equity sub-fund was unable to participate in the price gains already accumulated in this sector up to that point. This was the main reason why it did not achieve the return of the benchmark.

Other information – Not covered by the audit opinion on the annual report

Information on the environmental and/or social characteristics

This product reported in accordance with Article 8(1) of Regulation (EU) 2019/2088 on sustainability-related disclosures in the financial services sector ("SFDR").

Presentation and content requirements for periodic reports for financial products as referred to in Article 8(1) of Regulation (EU) 2019/2088 (SFDR) and in Article 6 of Regulation (EU) 2020/852 (Taxonomy) are available at the back of this report.

* Further details are set out in the current sales prospectus.

The format used for complete dates in security names in the investment portfolio is "day month year".

DWS Invest German Equities

The following risk management disclosures (other information) are unaudited and are not covered by the audit opinion on the annual report:

Composition of the reference portfolio (according to CSSF circular 11/512)
CDAX UCITS Capped EUR (Net Return) Index

Market risk exposure (value-at-risk) (according to CSSF circular 11/512)

Lowest market risk exposure	%	98.993
Highest market risk exposure	%	115.944
Average market risk exposure	%	105.556

The values-at-risk were calculated for the period from January 1, 2025, through December 31, 2025, using historical simulation with a 99% confidence level, a 10-day holding period and an effective historical observation period of one year. The risk in a reference portfolio that does not contain derivatives is used as the measurement benchmark. Market risk is the risk to the fund's assets arising from an unfavorable change in market prices. The Company determines the potential market risk by means of the **relative value-at-risk approach** as defined in CSSF circular 11/512.

In the reporting period, the average leverage effect from the use of derivatives was 0.1, whereby the total of the nominal amounts of the derivatives in relation to the fund's assets was used for the calculation (sum-of-notional approach).

The gross exposure generated via derivatives pursuant to point 40 a) of the "Guidelines on ETFs and other UCITS issues" of the European Securities and Markets Authority (ESMA) totaled EUR 16 124 109.25 as of the reporting date. Does not include any forward currency transactions entered into for currency hedging purposes at the level of the share classes.

Notes on valuation

Under the responsibility of the Board of Directors of the SICAV, the Management Company determines the net asset values per share and performs the valuation of the assets of the fund. The basic provision of price data and price validation are performed in accordance with the method introduced by the Board of Directors of the SICAV on the basis of the legal and regulatory requirements or the principles for valuation methods defined in the SICAV's prospectus.

If no trading prices are available, prices are determined with the aid of valuation models (derived market values) which are agreed between State Street Bank International GmbH, Luxembourg Branch, as external price service provider and the Management Company and which are based as far as possible on market parameters. This procedure is subject to an ongoing monitoring process. The plausibility of price information from third parties is checked through other pricing sources, model calculations or other suitable procedure.

Assets reported in this report are not valued at derived market values.

The management fee / all-in fee rates in effect as of the reporting date for the investment fund units held in the securities portfolio are shown in parentheses. A plus sign means that a performance-based fee may also be charged. As the investment fund held units of other investment funds (target funds) in the reporting period, further costs, charges and fees may have been incurred at the level of these individual target funds.

Footnote

* The prepaid placement fee is amortized over a period of three years (as specified in article 13 f "Placement Fee" section in the general section of the fund's management regulations).
** Does not include positions with a negative balance, if such exist.

BVI total expense ratio (TER)

The total expense ratio for the share classes was:

Class FC 0.87% p.a.,
Class LD 1.62% p.a.,
Class PFC 2.60% p.a.,
Class TFD 0.87% p.a.,
Class USD FCH 0.88% p.a.,
Class USD LCH 1.64% p.a.
Class LC 1.62% p.a.,
Class NC 2.32% p.a.,
Class TFC 0.87% p.a.,
Class GBP CH RD 0.89% p.a.,
Class USD LC 1.61% p.a.,

The TER expresses total expenses and fees (excluding transaction costs) as a percentage of a fund's average net assets in relation to the respective share class within a fiscal year.

Transaction costs
The transaction costs paid in the reporting period amounted to EUR 64 269.70.

The transaction costs include all costs that were reported or settled separately for the account of the fund in the reporting period and are directly connected to the purchase or sale of assets. Any financial transaction taxes paid are included in the calculations.

Statement of changes in net assets 2025

Transactions processed for the account of the fund's assets via closely related companies (based on major holdings of the Deutsche Bank Group)

The share of transactions conducted in the reporting period for the account of the fund's assets via brokers that are closely related companies and persons (share of 5% and above) amounted to 0.20% of all transactions. The total volume was EUR 792 138.20.

Placement fee / dilution adjustment

In the reporting period, the fund paid a placement fee of 2.9% of the fund's net assets to the distributor. This fee was calculated on the subscription date. The specified placement fee serves in particular as remuneration for distribution. The gross amount of the placement fee was paid in a single payment on the subscription date and simultaneously recognized in the fund's net assets as prepaid expenses. These are amortized on a daily basis over a period of three years from the date of subscription. The remaining position for prepaid expenses per share on each valuation date is calculated on a daily basis by multiplying the net assets of the fund by a factor. The relevant factor is determined through straight-line reduction of the placement fee by a certain percentage on a daily basis over three years from the subscription date. The prepaid expenses position fluctuates during the three years from the subscription date of the fund, since it depends on both the fund's net assets and the predetermined factor.

In addition, a dilution adjustment of up to 3% based on the gross redemption amount was charged for the benefit of the fund's net assets in the reporting period (to be paid by the shareholder).

Further details on the placement fee and the dilution adjustment can be found in the corresponding section of the fund's sales prospectus.

In the case of a final distribution, any remaining net income for the fiscal year is reinvested.

Annual report
DWS Invest Global Agribusiness

Investment objective and performance in the reporting period

DWS Invest Global Agribusiness invests mainly in equities of domestic and foreign issuers that are predominantly active in, or benefit from, the agricultural industry. The agricultural industry includes companies involved in the cultivation, harvesting, planning, production, processing and sale of agricultural products, as well as those providing services in these areas. Aspects considered when selecting investments include financial strength and also a focus on environmental, social and corporate governance (ESG) factors.*

DWS Invest Global Agribusiness recorded a decline of 6.4% per share (LC share class; BVI method; in euro) in the fiscal year through the end of December 2025.

"BVI method" performance, i.e., excluding the initial sales charge.
Past performance is not a guide to future results.

As of: December 31, 2025

Investment policy in the reporting period

On the one hand, the capital market environment in the fiscal year through the end of December 2025 was shaped by geopolitical risks, especially the ongoing Russia-Ukraine war, the conflict in the Middle East, as well as the power struggle between the United States and China, including erratic swings in U.S. trade and tariff policy. On the other hand, the easing of monetary policy, which had begun previously, continued during the reporting period. The European Central Bank (ECB) thus lowered the key interest rate in four steps from 3.00% p.a. to 2.00% p.a. (deposit facility) while the U.S. Federal Reserve gradually reduced its key interest rates by 0.75 percentage points to a target range of 3.50% p.a. to 3.75% p.a.

In 2025, the international equity markets posted noticeable price gains on the whole. However, equities connected to the agricultural industry posted a weaker performance. This is explained mainly by the price development of various agricultural raw materials. The corn price ended 2025 down approximately 4%, as growing U.S. warehouse stocks and trade disputes with China initially weighed on prices before a later agreement between the United States and China contributed to a certain stabilization. Wheat prices fell by around 8% during the year, influenced by fluctuating harvest expectations, geopolitical risks in the Black Sea, as well as advancements in the peace talks between Russia and Ukraine. Soybeans, in contrast, closed the year up 3%. Prices had climbed significantly early in the fourth quarter due to anticipated Chinese purchases but lost most of these gains again when the actual purchases did not live up to expectations. Prices for fertilizers also noticeably weakened due to higher stock levels, which led to corresponding sales losses for companies.

The sub-fund's investment universe, however, also offered investment opportunities in more remote industries such as restaurants, delivery services and aquaculture. On the one hand, these areas are more growth-oriented

and, on the other hand, exhibit a low or even negative correlation with traditional agribusiness equities. Accordingly, their performance is (virtually) independent of the prices of agricultural raw materials. Against this backdrop, the sub-fund management adopted a balanced approach throughout the entire reporting period and invested in equities of various industries in a targeted way.

Categorized by sector, the sub-fund was, first and foremost, invested in consumer staples (e.g., supermarkets, food producers, food distributors), basic materials (e.g., fertilizer manufacturers, seeds and crop protection), industrials (e.g., logistics, transportation, agricultural machinery), as well as in consumer discretionaries (e.g., restaurants, delivery services) at the fiscal year-end. In addition, there were further positions in other segments.

At the level of individual stocks, WH Group, Sociedad Quimica y Minera de Chile and Nutrien posted the highest positive contributions to performance. In contrast, the largest negative contributions came from FMC, Meituan and Ag Growth.

Other information – Not covered by the audit opinion on the annual report

Information on the environmental and/or social characteristics

This product reported in accordance with Article 8(1) of Regulation (EU) 2019/2088 on sustainability-related disclosures in the financial services sector ("SFDR").

Presentation and content requirements for periodic reports for financial products as referred to in Article 8(1) of Regulation (EU) 2019/2088 (SFDR) and in Article 6 of Regulation (EU) 2020/852 (Taxonomy) are available at the back of this report.

* Further details are set out in the current sales prospectus.

The format used for complete dates in security names in the investment portfolio is "day month year".

DWS Invest Global Agribusiness

The following risk management disclosures (other information) are unaudited and are not covered by the audit opinion on the annual report.

Composition of the reference portfolio (according to CSSF circular 11/512)
S&P Global Agribusiness Equity Price Index

Market risk exposure (value-at-risk) (according to CSSF circular 11/512)

Lowest market risk exposure	%	68.404
Highest market risk exposure	%	99.962
Average market risk exposure	%	87.009

The values-at-risk were calculated for the period from January 1, 2025, through December 31, 2025, using historical simulation with a 99% confidence level, a 10-day holding period and an effective historical observation period of one year. The risk in a reference portfolio that does not contain derivatives is used as the measurement benchmark. Market risk is the risk to the fund's assets arising from an unfavorable change in market prices. The Company determines the potential market risk by means of the **relative value-at-risk approach** as defined in CSSF circular 11/512.

In the reporting period, the average leverage effect from the use of derivatives was 0.0, whereby the total of the nominal amounts of the derivatives in relation to the fund's assets was used for the calculation (sum-of-notional approach).

The gross exposure generated via derivatives pursuant to point 40 a) of the "Guidelines on ETFs and other UCITS issues" of the European Securities and Markets Authority (ESMA) totaled USD 0.00 as of the reporting date.

Notes on valuation

Under the responsibility of the Board of Directors of the SICAV, the Management Company determines the net asset values per share and performs the valuation of the assets of the fund. The basic provision of price data and price validation are performed in accordance with the method introduced by the Board of Directors of the SICAV on the basis of the legal and regulatory requirements or the principles for valuation methods defined in the SICAV's prospectus.

If no trading prices are available, prices are determined with the aid of valuation models (derived market values) which are agreed between State Street Bank International GmbH, Luxembourg Branch, as external price service provider and the Management Company and which are based as far as possible on market parameters. This procedure is subject to an ongoing monitoring process. The plausibility of price information from third parties is checked through other pricing sources, model calculations or other suitable procedure.

Assets reported in this report are not valued at derived market values.

[1] For further information, please refer to the notes to the financial statements.

BVI total expense ratio (TER)

The total expense ratio for the share classes was:

Class FC 0.91% p.a.,
Class IC 0.59% p.a.,
Class LC 1.69% p.a.,
Class LD 1.69% p.a.,
Class NC 2.39% p.a.,
Class PFC 2.36% p.a.,
Class TFC 0.91% p.a.,
Class TFD 0.91% p.a.,
Class GBP D RD 0.91% p.a.,
Class GBP LD DS 1.69% p.a.,
Class SGD LC 1.69% p.a.,
Class USD FC 0.91% p.a.,
Class USD IC 0.04%[2],
Class USD LC 1.69% p.a.,
Class USD TFC 0.91% p.a.

The TER expresses total expenses and fees (excluding transaction costs) as a percentage of a fund's average net assets in relation to the respective share class within a fiscal year.

[2] Annualization has not been performed for share classes liquidated during the year.

Transaction costs

The transaction costs paid in the reporting period amounted to EUR 82 157.95.

The transaction costs include all costs that were reported or settled separately for the account of the fund in the reporting period and are directly connected to the purchase or sale of assets. Any financial transaction taxes paid are included in the calculations.

Statement of changes in net assets 2025

I.	**Value of the fund's net assets at the beginning of the fiscal year**	**USD**	**290 497 173.41**
1.	Distribution for the previous year	USD	-49 038.82

Transactions processed for the account of the fund's assets via closely related companies (based on major holdings of the Deutsche Bank Group)

The share of transactions conducted in the reporting period for the account of the fund's assets via brokers that are closely related companies and persons (share of 5% and above) amounted to 0.00% of all transactions. The total volume was USD 0.00.

Placement fee / dilution adjustment

In the reporting period, the fund paid a placement fee of 2.9% of the fund's net assets to the distributor. This fee was calculated on the subscription date. The specified placement fee serves in particular as remuneration for distribution. The gross amount of the placement fee was paid in a single payment on the subscription date and simultaneously recognized in the fund's net assets as prepaid expenses. These are amortized on a daily basis over a period of three years from the date of subscription. The remaining position for prepaid expenses per share on each valuation date is calculated on a daily basis by multiplying the net assets of the fund by a factor. The relevant factor is determined through straight-line reduction of the placement fee by a certain percentage on a daily basis over three years from the subscription date. The prepaid expenses position fluctuates during the three years from the subscription date of the fund, since it depends on both the fund's net assets and the predetermined factor.

In addition, a dilution adjustment of up to 3% based on the gross redemption amount was charged for the benefit of the fund's net assets in the reporting period (to be paid by the shareholder).

Further details on the placement fee and the dilution adjustment can be found in the corresponding section of the fund's sales prospectus.

DWS Invest Global Agribusiness

Swing pricing

Swing pricing is a mechanism that is intended to protect shareholders from the negative effects of trading costs arising from subscription and redemption activities.

Extensive subscriptions and redemptions within a (sub-)fund may lead to a dilution of the assets of this (sub-)fund, as the net asset value sometimes does not reflect all trading and other costs that are incurred when the portfolio manager must buy or sell securities in order to manage large (net) inflows or outflows in the (sub-)fund. In addition to these costs, substantial order volumes may lead to market prices that are considerably below or above the market prices that apply under normal circumstances.

To enhance the investor protection of existing shareholders, a swing pricing mechanism can be applied to compensate for trading costs and other expenses if the aforementioned cumulative (net) inflows or outflows should have a material impact on the (sub-)fund on a valuation date and exceed a predetermined threshold (partial swing pricing). This mechanism can be applied across all (sub-)funds. If swing pricing is introduced for a particular (sub-)fund, this will be disclosed in the special section of the sales prospectus.
The Management Company of the fund will predefine thresholds for the application of the swing pricing mechanism, based, among other things, on current market conditions, available market liquidity and estimated dilution costs. In accordance with these thresholds, the adjustment itself will be initiated automatically.

If the (net) inflows or outflows exceed the swing threshold, the net asset value is revised upward if the (sub-)fund sees large net inflows and is revised downward in the event of large net outflows. This adjustment is applied uniformly to all subscriptions and redemptions for the trading day in question. If a performance-based fee applies for the (sub-)fund, the calculation is based on the original net asset value.

The Management Company has established a swing pricing committee that determines the swing factors for each individual (sub-)fund. These swing factors indicate the extent of the net asset value adjustment. The swing pricing committee takes into account the following factors in particular:

– bid-ask spread (fixed-price element),
– impacts on the market (impacts of the transactions on the price),
– additional costs that are incurred as a result of trading activities for the investments.

The appropriateness of the applied swing factors, the operational decisions made in connection with the swing pricing (including the swing threshold), the extent of the adjustment, and the affected (sub-)funds are reviewed at regular intervals.

The amount of the swing pricing adjustment can therefore vary from one (sub-)fund to another and will not generally exceed 2% of the original net asset value per share.

The net asset value adjustment is available upon request from the Management Company. In a market environment with extreme illiquidity, the Management Company can, however, increase the swing price adjustment to more than 2% of the original net asset value. Such an increase will be announced on the Management Company's website: www.dws.com.

As the mechanism should only be applied if significant (net) inflows or outflows are expected and it does not apply for normal trading volumes, it is assumed that the net asset value will only be adjusted occasionally.

This (sub-)fund can apply swing pricing and has done so in the reporting period, as its (net) inflows and outflows exceeded the relevant threshold previously defined. No swing pricing adjustment was applied that would have had an impact on the (sub-)fund's net asset value per share on the last day of the reporting period.

Annual report
DWS Invest Global Bonds

Investment objective and performance in the reporting period

The sub-fund DWS Invest Global Bonds seeks to achieve sustained capital appreciation. To this end, it invests worldwide in government bonds, bonds of quasi-government issuers, corporate bonds and asset-backed bonds. Eligible quasi-government issuers include central banks, government authorities, local authorities and supranational institutions. Corporate bonds with a rating below investment-grade and bonds from issuers from emerging markets may also be included. Aspects considered when selecting investments include financial strength and also a focus on environmental, social and corporate governance (ESG) criteria.*

In the 2025 fiscal year, the sub-fund DWS Invest Global Bonds achieved an appreciation of 4.4% per share (FC share class, in euro; BVI method).

As of: December 31, 2025

Investment policy in the reporting period

In view of the different monetary objectives and challenges of the leading central banks, the portfolio management further reduced the foreign currency positions in the sub-fund, especially the U.S. dollar weighting in favor of the base currency (euro). In terms of securities selection, corporate bonds continued to be the focus; the portfolio management viewed them to have favorable entry prices, especially during volatile market phases. Furthermore, floating-rate instruments were included in the sub-fund's portfolio at times to limit the interest rate sensitivity in the very volatile investment environment.

The capital market environment in 2025 was challenging. This was due in particular to geopolitical crises like the Russia-Ukraine war that has been ongoing since February 24, 2022, the escalated conflict in the Middle East, and the power struggle between the United States and China. Furthermore, the erratic swings in U.S. trade and tariff policy generated additional uncertainty in the capital markets. On the other hand, the easing of monetary policy, which had begun previously, continued during the reporting period. The European Central Bank (ECB) thus lowered the key interest rate in four steps from 3.00% p.a. to 2.00% p.a. (deposit facility) while the U.S. Federal Reserve gradually reduced its key interest rates by 0.75 percentage points to a target range of 3.50% p.a. – 3.75% p.a.

In the international bond markets, the yield curve in 2025 became increasingly steeper at the long end – although this was still moderate – following the previous normalization. In light of the

more relaxed interest rate policy of the central banks, bond yields fell noticeably at the short end in some cases. Long-dated government bonds, on the other hand, came under pressure due, for example, to the rise in public deficits and, in some instances, had to accept price declines on a full-year basis, accompanied by rising bond yields. Corporate bonds, on the other hand, profited from their relatively high coupons as well as narrowing risk premiums.

Due to market volatility, many investment strategies with a short holding horizon were used. Duration management, in particular, was carried out very tactically.

With regard to corporate bonds, the portfolio management invested not only in investment-grade bonds (rating of BBB or better from the leading rating agencies) but also in subordinate bonds. The portfolio management considered that new issues often provided attractive entry opportunities in this segment.

With regard to government bonds, French interest-bearing instruments with highly volatile yield spreads relative to euro reference bonds represented a good investment opportunity viewed across the entire year. In addition, the sub-fund's country allocation was further diversified and investments in government bonds from developing countries as well as in financially weaker countries in the European Union were stepped up.

The following risk management disclosures (other information) are unaudited and are not covered by the audit opinion on the annual report:

Presentation of the maximum limit (according to CSSF circular 11/512)
14.14% of portfolio value

Market risk exposure (value-at-risk) (according to CSSF circular 11/512)

Lowest market risk exposure	%	0.007
Highest market risk exposure	%	0.012
Average market risk exposure	%	0.009

The values-at-risk were calculated for the period from January 1, 2025, through December 31, 2025, using historical simulation with a 99% confidence level, a 10-day holding period and an effective historical observation period of one year. The risk in a reference portfolio that does not contain derivatives is used as the measurement benchmark. Market risk is the risk to the fund's assets arising from an unfavorable change in market prices. The Company determines the potential market risk by means of the absolute value-at-risk approach as defined in CSSF circular 11/512.

In the reporting period, the average leverage effect from the use of derivatives was 0.1, whereby the total of the nominal amounts of the derivatives in relation to the fund's assets was used for the calculation (sum-of-notional approach).

The gross exposure generated via derivatives pursuant to point 40 a) of the "Guidelines on ETFs and other UCITS issues" of the European Securities and Markets Authority (ESMA) totaled EUR 19 400 800.01 as of the reporting date. Does not include any forward currency transactions entered into for currency hedging purposes at the level of the share classes.

Notes on valuation

Under the responsibility of the Board of Directors of the SICAV, the Management Company determines the net asset values per share and performs the valuation of the assets of the fund. The basic provision of price data and price validation are performed in accordance with the method introduced by the Board of Directors of the SICAV on the basis of the legal and regulatory requirements or the principles for valuation methods defined in the SICAV's prospectus.

If no trading prices are available, prices are determined with the aid of valuation models (derived market values) which are agreed between State Street Bank International GmbH, Luxembourg Branch, as external price service provider and the Management Company and which are based as far as possible on market parameters. This procedure is subject to an ongoing monitoring process. The plausibility of price information from third parties is checked through other pricing sources, model calculations or other suitable procedure.

Assets reported in this report are not valued at derived market values.

The management fee / all-in fee rates in effect as of the reporting date for the investment fund units held in the securities portfolio are shown in parentheses. A plus sign means that a performance-based fee may also be charged. As the investment fund held units of other investment funds (target funds) in the reporting period, further costs, charges and fees may have been incurred at the level of these individual target funds.

Footnotes

* Some or all of these securities are lent.
** Floating interest rate.
** Does not include positions with a negative balance, if such exist.

BVI total expense ratio (TER)

The total expense ratio for the share classes was:

Class CHF LCH 1.05% p.a.,
Class FD 0.62% p.a.,
Class LC 1.06% p.a.,
Class NC 1.55% p.a.,
Class TFC 0.66% p.a.,
Class GBP CH RD 0.67% p.a.,
Class GBP IDH 0.44% p.a.,
Class USD FCH 0.65% p.a.,
Class USD TFCH 0.65% p.a.
Class FC 0.62% p.a.,
Class IC 0.41% p.a.,
Class LD 1.06% p.a.,
Class NDQ 1.55% p.a.,
Class TFD 0.51% p.a.,
Class GBP DH RD 0.65% p.a.,
Class SEK LCH 1.08% p.a.,
Class USD LCH 1.08% p.a.,

The TER expresses total expenses and fees (excluding transaction costs) as a percentage of a fund's average net assets in relation to the respective share class within a fiscal year.

As well, the additional income from securities lending resulted in a performance-based fee of

Class CHF LCH 0.012% p.a.,
Class FD 0.013% p.a.,
Class LC 0.013% p.a.,
Class NC 0.013% p.a.,
Class TFC 0.010% p.a.,
Class GBP CH RD 0.015% p.a.,
Class GBP IDH 0.012% p.a.,
Class USD FCH 0.012% p.a.,
Class USD TFCH 0.012% p.a.
Class FC 0.012% p.a.,
Class IC 0.013% p.a.,
Class LD 0.012% p.a.,
Class NDQ 0.013% p.a.,
Class TFD 0.011% p.a.,
Class GBP DH RD 0.012% p.a.,
Class SEK LCH 0.013% p.a.,
Class USD LCH 0.012% p.a.,

of the fund's average net assets in relation to the respective share class.

Transaction costs

The transaction costs paid in the reporting period amounted to EUR 8 172.88.

The transaction costs include all costs that were reported or settled separately for the account of the fund in the reporting period and are directly connected to the purchase or sale of assets. Any financial transaction taxes paid are included in the calculations.

Statement of changes in net assets 2025

Transactions processed for the account of the fund's assets via closely related companies (based on major holdings of the Deutsche Bank Group)

The share of transactions conducted in the reporting period for the account of the fund's assets via brokers that are closely related companies and persons (share of 5% and above) amounted to 4.12% of all transactions. The total volume was EUR 12 650 459.45.

Annual report
DWS Invest Global Growth Leaders

Investment objective and performance in the reporting period

The sub-fund DWS Invest Global Growth Leaders seeks to achieve long-term capital appreciation. To this end, the sub-fund invests mainly in equities of companies considered global growth leaders. As part of the "Global Growth Leaders" strategy, companies are selected that are expected to post sales and/or earnings growth and/or margins above the broad market average. In addition, the portfolio can include equities of all market capitalizations, equity certificates, participation and dividend right certificates, convertible bonds and equity warrants issued by foreign and domestic companies. Up to 20% of the sub-fund's assets may be invested in equities of companies registered in emerging markets. Aspects considered when selecting investments include financial strength and also a focus on environmental, social and corporate governance (ESG) criteria.*

The sub-fund DWS Invest Global Growth Leaders recorded a depreciation of 1.5% per share (LC share class; BVI method) in the 2025 fiscal year, and thus fell short of its benchmark, which returned +9.5% (both percentages in euro terms).

Investment policy in the reporting period

The portfolio management placed its investment focus on companies that in its view had promising business models and strong balance sheets. When selecting individual stocks, it focused particularly on the companies' expected revenue growth and margins.

The capital market environment in 2025 was challenging. This was due in particular to geopolitical crises like the Russia-Ukraine war that has been ongoing since February 24, 2022, the escalated conflict in the Middle East, and the power struggle between the United States and China. Furthermore, the erratic swings in U.S. trade and tariff policy generated additional uncertainty in the capital markets. On the other hand, the easing of monetary policy, which had begun previously, continued during the reporting period. The European Central Bank (ECB) thus lowered the key interest rate in four steps from 3.00% p.a. to 2.00% p.a. (deposit facility) while the U.S. Federal Reserve gradually reduced its key interest rates by 0.75 percentage points to a target range of 3.50% p.a. – 3.75% p.a.

Despite market uncertainty induced mainly by geopolitical factors, the international equity markets, as measured by the MSCI World, recorded appreciable price gains overall in 2025 amid sometimes considerable volatility. These gains were underpinned by the emerging easing of interest rates, increased investor confidence in artificial intelligence, as well as robust corporate profits. Among the markets in Western industrial countries, the DAX 40 in Germany posted significant gains, buoyed by factors such as the multi-billion-euro package of fiscal relief measures. The emerging markets, as measured by the MSCI Emerging Markets, were even able to outperform the industrial countries on a full-year basis through the end of 2025. In this respect, China's equity market was one of the stand-out performers and continued to recover significantly. This trend was supported by Chinese economic growth, which was stimulated by expansionary macroeconomic policies. However, the international stock exchanges were intermittently hit hard by the erratic swings in U.S. trade and tariff policy.

One reason for the sub-fund's weaker performance relative to the benchmark was its slight underweighting in the technology sector, while the overweight in the communication services

sector, financials and consumer discretionary had a positive effect on the sub-fund's performance. In the technology sector, the overweighting in the software segment particularly hampered the sub-fund's performance. While artificial intelligence (AI) was initially perceived as a tailwind for software, concerns spread in the market as of the end of July 2025 that AI could pose a challenge to software or even replace it altogether. These concerns included, among other factors, competition from AI providers who could develop their own applications, and also the availability of AI-supported programming tools that could enable companies to generate their own software applications. On the other side, semiconductor manufacturers presented a mixed picture, driven mainly by the erratic swings in U.S. tariff policy. However, semiconductor stocks were able to post significant price gains toward the end of the fiscal year due to constantly growing investments in AI infrastructure. In the industrial sector, stockpicking in cyclical consumer stocks and financials made an especially positive contribution to the performance of the sub-fund DWS Invest Global Growth Leaders.

At country level, the sub-fund benefited from its overweight in Taiwan and China, while the slight underweight in the United States and the higher weighting in the Netherlands detracted from its performance.

The following risk management disclosures (other information) are unaudited and are not covered by the audit opinion on the annual report.

Composition of the reference portfolio (according to CSSF circular 11/512)
50% MSCI World All Country Information Technology Index, 50% MSCI Developed World Growth Index (NET) in EUR

Market risk exposure (value-at-risk) (according to CSSF circular 11/512)

Lowest market risk exposure	%	89.549
Highest market risk exposure	%	102.577
Average market risk exposure	%	96.823

The values-at-risk were calculated for the period from January 1, 2025, through December 31, 2025, using historical simulation with a 99% confidence level, a 10-day holding period and an effective historical observation period of one year. The risk in a reference portfolio that does not contain derivatives is used as the measurement benchmark. Market risk is the risk to the fund's assets arising from an unfavorable change in market prices. The Company determines the potential market risk by means of the **relative value-at-risk approach** as defined in CSSF circular 11/512.

In the reporting period, the average leverage effect from the use of derivatives was 0.0, whereby the total of the nominal amounts of the derivatives in relation to the fund's assets was used for the calculation (sum-of-notional approach).

The gross exposure generated via derivatives pursuant to point 40 a) of the "Guidelines on ETFs and other UCITS issues" of the European Securities and Markets Authority (ESMA) totaled EUR 0.00 as of the reporting date.

DWS Invest Global Growth Leaders

Notes on valuation

Under the responsibility of the Board of Directors of the SICAV, the Management Company determines the net asset values per share and performs the valuation of the assets of the fund. The basic provision of price data and price validation are performed in accordance with the method introduced by the Board of Directors of the SICAV on the basis of the legal and regulatory requirements or the principles for valuation methods defined in the SICAV's prospectus.

If no trading prices are available, prices are determined with the aid of valuation models (derived market values) which are agreed between State Street Bank International GmbH, Luxembourg Branch, as external price service provider and the Management Company and which are based as far as possible on market parameters. This procedure is subject to an ongoing monitoring process. The plausibility of price information from third parties is checked through other pricing sources, model calculations or other suitable procedure.

Assets reported in this report are not valued at derived market values.

BVI total expense ratio (TER)

The total expense ratio for the share classes was:

Class FC 0.91% p.a., Class LC 1.77% p.a., Class LD 1.77% p.a., Class TFC 0.91% p.a., Class XC 0.45% p.a.

The TER expresses total expenses and fees (excluding transaction costs) as a percentage of a fund's average net assets in relation to the respective share class within a fiscal year.

Transaction costs

The transaction costs paid in the reporting period amounted to EUR 3 658.86.

The transaction costs include all costs that were reported or settled separately for the account of the fund in the reporting period and are directly connected to the purchase or sale of assets. Any financial transaction taxes paid are included in the calculations.

Statement of changes in net assets 2025

Transactions processed for the account of the fund's assets via closely related companies (based on major holdings of the Deutsche Bank Group)

The share of transactions conducted in the reporting period for the account of the fund's assets via brokers that are closely related companies and persons (share of 5% and above) amounted to 0.00% of all transactions. The total volume was EUR 0.00.

Swing pricing

Swing pricing is a mechanism that is intended to protect shareholders from the negative effects of trading costs arising from subscription and redemption activities. Extensive subscriptions and redemptions within a (sub-)fund may lead to a dilution of the assets of this (sub-)fund, as the net asset value sometimes does not reflect all trading and other costs that are incurred when the portfolio manager must buy or sell securities in order to manage large (net) inflows or outflows in the (sub-)fund. In addition to these costs, substantial order volumes may lead to market prices that are considerably below or above the market prices that apply under normal circumstances.

To enhance the investor protection of existing shareholders, a swing pricing mechanism can be applied to compensate for trading costs and other expenses if the aforementioned cumulative (net) inflows or outflows should have a material impact on the (sub-)fund on a valuation date and exceed a predetermined threshold (partial swing pricing). This mechanism can be applied across all (sub-)funds. If swing pricing is introduced for a particular (sub-)fund, this will be disclosed in the special section of the sales prospectus.

The Management Company of the fund will predefine thresholds for the application of the swing pricing mechanism, based, among other things, on current market conditions, available market liquidity and estimated dilution costs. In accordance with these thresholds, the adjustment itself will be initiated automatically. If the (net) inflows or outflows exceed the swing threshold, the net asset value is revised upward if the (sub-)fund sees large net inflows and is revised downward in the event of large net outflows. This adjustment is applied uniformly to all subscriptions and redemptions for the trading day in question. If a performance-based fee applies for the (sub-)fund, the calculation is based on the original net asset value.

The Management Company has established a swing pricing committee that determines the swing factors for each individual (sub-)fund. These swing factors indicate the extent of the net asset value adjustment. The swing pricing committee takes into account the following factors in particular:

– bid-ask spread (fixed-price element),
– impacts on the market (impacts of the transactions on the price),
– additional costs that are incurred as a result of trading activities for the investments.

The appropriateness of the applied swing factors, the operational decisions made in connection with the swing pricing (including the swing threshold), the extent of the adjustment, and the affected (sub-)funds are reviewed at regular intervals.

The amount of the swing pricing adjustment can therefore vary from one (sub-)fund to another and will not generally exceed 2% of the original net asset value per share. The net asset value adjustment is available upon request from the Management Company. In a market environment with extreme illiquidity, the Management Company can, however, increase the swing price adjustment to more than 2% of the original net asset value. Such an increase will be announced on the Management Company's website: www.dws.com.

As the mechanism should only be applied if significant (net) inflows or outflows are expected and it does not apply for normal trading volumes, it is assumed that the net asset value will only be adjusted occasionally.

This (sub-)fund can apply swing pricing but has not done so in the reporting period, as its (net) inflows and outflows did not exceed the relevant threshold previously defined. No swing pricing adjustment was applied that would have had an impact on the (sub-)fund's net asset value per share on the last day of the reporting period.

Annual report
DWS Invest Global High Yield Corporates (in liquidation)

Investment objective

The bond sub-fund sought to generate above-average returns that exceed the benchmark (ICE BoA ML Global High Yield Developed Markets Non-Fin Constrained hedged to USD). To attain this objective, it invested worldwide primarily in corporate bonds with non-investment-grade status at the time of acquisition. It was also able to invest in equities, equity certificates and dividend rights. Aspects considered when selecting investments included financial strength and also a focus on environmental, social and corporate governance (ESG) factors.*

Liquidation

According to the notice to shareholders dated March 14, 2025, the board of directors of the fund (the "Board of Directors") resolved to place the sub-fund DWS Invest Global High Yield Corporates (in liquidation) (the "sub-fund") into liquidation in accordance with article 16.2 of the Articles of Incorporation and section 15 B of the general section of the sales prospectus effective March 14, 2025 ("date of placement into liquidation").

As a result of large-scale redemption requests by institutional investors, the value of the sub-fund's net assets would likely have fallen below an amount that, in the opinion of the Board of Directors and the portfolio management, would have been necessary to enable the sub-fund to be operated and managed in an economically efficient manner in the best interests of the shareholders.

DWS Invest Global High Yield Corporates (in liquidation)

"BVI method" performance, i.e., excluding the initial sales charge.
Past performance is not a guide to future results.

As of: March 25, 2025 (liquidation date)

To ensure the equal treatment of all shareholders in the sub-fund, the subscription and redemption of shares was discontinued effective March 14, 2025. The portfolio management started to liquidate the sub-fund portfolio as of March 17, 2025. The liquidation process could at any time have caused the sub-fund portfolio to deviate from the investment strategy and/or the risk-spreading requirements in the sales prospectus. This took place taking into consideration the best interests of the shareholders. All liquidation and transaction costs were charged to the sub-fund. Once the portfolio management had completed the liquidation of all assets and all costs had been taken into consideration, the liquidation proceeds were paid out to shareholders on March 25, 2025 ("completion of the liquidation process").

Liquidation proceeds that were unable to be paid out to the beneficiaries on completion of the liquidation process are deposited with the Caisse de Consignation in the Grand Duchy of Luxembourg. The beneficiaries can request the proceeds to which they are entitled at any time within a period of 30 years. After this period, these proceeds will be transferred to the ownership of the Grand Duchy of Luxembourg.

In the period from the beginning of January 2025 through March 25,

2025 (liquidation date), the sub-fund DWS Invest Global High Yield Corporates (in liquidation) recorded an appreciation of 0.8% (USD FC share class; BVI method). Its benchmark rose 1.7% in the same period (both percentages in U.S. dollar terms).

Annual financial statements
DWS Invest Global High Yield Corporates (in liquidation)

The following risk management disclosures (other information) are unaudited and are not covered by the audit opinion on the annual report.

Composition of the reference portfolio (according to CSSF circular 11/512)
ICE BofA Non-Financial Dev Markets High Yield Constrained 100% USD hedged

Market risk exposure (value-at-risk) (according to CSSF circular 11/512)

Lowest market risk exposure	%	0.001
Highest market risk exposure	%	99.882
Average market risk exposure	%	85.182

The values-at-risk were calculated for the period from January 1, 2025, through March 25, 2025, using historical simulation with a 99% confidence level, a 10-day holding period and an effective historical observation period of one year. The risk in a reference portfolio that does not contain derivatives is used as the measurement benchmark. Market risk is the risk to the fund's assets arising from an unfavorable change in market prices. The Company determines the potential market risk by means of the **relative value-at-risk approach** as defined in CSSF circular 11/512.

In the reporting period, the average leverage effect from the use of derivatives was 0.3, whereby the total of the nominal amounts of the derivatives in relation to the fund's assets was used for the calculation (sum-of-notional approach).

The gross exposure generated via derivatives pursuant to point 40 a) of the "Guidelines on ETFs and other UCITS issues" of the European Securities and Markets Authority (ESMA) totaled USD 0.00 as of the reporting date. Does not include any forward currency transactions entered into for currency hedging purposes at the level of the share classes.

Notes on valuation

Under the responsibility of the Board of Directors of the SICAV, the Management Company determines the net asset values per share and performs the valuation of the assets of the fund. The basic provision of price data and price validation are performed in accordance with the method introduced by the Board of Directors of the SICAV on the basis of the legal and regulatory requirements or the principles for valuation methods defined in the SICAV's prospectus.

If no trading prices are available, prices are determined with the aid of valuation models (derived market values) which are agreed between State Street Bank International GmbH, Luxembourg Branch, as external price service provider and the Management Company and which are based as far as possible on market parameters. This procedure is subject to an ongoing monitoring process. The plausibility of price information from third parties is checked through other pricing sources, model calculations or other suitable procedure.

Assets reported in this report are not valued at derived market values.

DWS Invest Global High Yield Corporates (in liquidation)

Statement of income and expenses (incl. income adjustment)

for the period from January 1, 2025, through March 25, 2025 (liquidation date)

I. Income			
1. Interest from securities (before withholding tax)		USD	724 568.85
2. Interest from investments of liquid assets (before withholding tax)		USD	26 856.35
3. Income from investment fund units		USD	31 315.10
4. Deduction for foreign withholding tax[1]		USD	654.39
5. Income adjustment		USD	-783 394.69
Total income		**USD**	**0.00**
II. Expenses			
1. Management fee		USD	-271.54
thereof:			
Basic management fee	USD -32 156.97		
Income from expense cap	USD 40 140.15		
Administration fee	USD -8 254.72		
2. Depositary fee		USD	-768.55
3. Auditing, legal and publication costs		USD	-25 639.48
4. Taxe d'abonnement[2]		USD	78.32
5. Other expenses		USD	-12 931.70
thereof:			
Other	USD -12 931.70		
6. Income adjustment		USD	39 532.95
Total expenses		**USD**	**0.00**
III. Net investment income		**USD**	**0.00**
IV. Sale transactions			
Realized gains/losses		USD	-1 037 857.27
Income adjustment and reimbursed expenses		USD	1 037 857.27
Capital gains/losses		**USD**	**0.00**
V. Net gain/loss for the shortened fiscal year		**USD**	**0.00**

[1] This includes primarily income from the release of excess accruals in the amount of USD 3 211.95.
[2] This includes primarily income from the release of excess accruals in the amount of USD 6 951.56.

BVI total expense ratio (TER)

The total expense ratio for the share classes was:

Class CHF ICH50 0.10%[3],
Class FCH 0.18%[3],
Class TFCH 0.18%[3],
Class GBP TFDQH 0.18%[3],
Class USD IC 0.12%[3],
Class USD LD 0.29%[3],
Class USD XC 0.05%[3].
Class CHF XCH 0.06%[3],
Class ICH 0.12%[3],
Class XCH 0.06%[3],
Class USD FC 0.17%[3],
Class USD IC50 0.09%[3],
Class USD TFC 0.17%[3],

The TER expresses total expenses and fees (excluding transaction costs) as a percentage of a fund's average net assets in relation to the respective share class within a fiscal year.

[3] Annualization has not been performed for share classes liquidated during the year.

Transaction costs

The transaction costs paid in the reporting period amounted to EUR 5 021.74.

The transaction costs include all costs that were reported or settled separately for the account of the fund in the reporting period and are directly connected to the purchase or sale of assets. Any financial transaction taxes paid are included in the calculations.

Statement of changes in net assets 2025

I. Value of the fund's net assets at the beginning of the fiscal year		**USD**	**54 776 572.44**
1. Distribution for the previous year		USD	-15 737.90
2. Net outflows		USD	-55 964 510.33
3. Income adjustment and reimbursed expenses		USD	-293 995.53
4. Realized gains/losses		USD	0.00
6. Net change in unrealized appreciation/depreciation		USD	1 497 671.32
II. Value of the fund's net assets at the end of the fiscal year		**USD**	**0.00**

Summary of gains/losses 2025

Realized gains/losses (incl. income adjustment)	**USD**	**0.00**
from:		
Securities transactions	USD	-487 780.95
(Forward) currency transactions	USD	-550 076.32
Income adjustment and reimbursed expenses	USD	1 037 857.27

Transactions processed for the account of the fund's assets via closely related companies (based on major holdings of the Deutsche Bank Group)

The share of transactions conducted in the reporting period for the account of the fund's assets via brokers that are closely related companies and persons (share of 5% and above) amounted to 0.00% of all transactions. The total volume was USD 0.00.

DWS Invest Global High Yield Corporates (in liquidation)

Swing pricing

Swing pricing is a mechanism that is intended to protect shareholders from the negative effects of trading costs arising from subscription and redemption activities.

Extensive subscriptions and redemptions within a (sub-)fund may lead to a dilution of the assets of this (sub-)fund, as the net asset value sometimes does not reflect all trading and other costs that are incurred when the portfolio manager must buy or sell securities in order to manage large (net) inflows or outflows in the (sub-)fund. In addition to these costs, substantial order volumes may lead to market prices that are considerably below or above the market prices that apply under normal circumstances.

To enhance the investor protection of existing shareholders, a swing pricing mechanism can be applied to compensate for trading costs and other expenses if the aforementioned cumulative (net) inflows or outflows should have a material impact on the (sub-)fund on a valuation date and exceed a predetermined threshold (partial swing pricing). This mechanism can be applied across all (sub-)funds. If swing pricing is introduced for a particular (sub-)fund, this will be disclosed in the special section of the sales prospectus.
The Management Company of the fund will predefine thresholds for the application of the swing pricing mechanism, based, among other things, on current market conditions, available market liquidity and estimated dilution costs. In accordance with these thresholds, the adjustment itself will be initiated automatically.

If the (net) inflows or outflows exceed the swing threshold, the net asset value is revised upward if the (sub-)fund sees large net inflows and is revised downward in the event of large net outflows. This adjustment is applied uniformly to all subscriptions and redemptions for the trading day in question. If a performance-based fee applies for the (sub-)fund, the calculation is based on the original net asset value.

The Management Company has established a swing pricing committee that determines the swing factors for each individual (sub-)fund. These swing factors indicate the extent of the net asset value adjustment. The swing pricing committee takes into account the following factors in particular:

– bid-ask spread (fixed-price element),
– impacts on the market (impacts of the transactions on the price),
– additional costs that are incurred as a result of trading activities for the investments.

The appropriateness of the applied swing factors, the operational decisions made in connection with the swing pricing (including the swing threshold), the extent of the adjustment, and the affected (sub-)funds are reviewed at regular intervals.

The amount of the swing pricing adjustment can therefore vary from one (sub-)fund to another and will not generally exceed 2% of the original net asset value per share.

The net asset value adjustment is available upon request from the Management Company. In a market environment with extreme illiquidity, the Management Company can, however, increase the swing price adjustment to more than 2% of the original net asset value. Such an increase will be announced on the Management Company's website: www.dws.com.

As the mechanism should only be applied if significant (net) inflows or outflows are expected and it does not apply for normal trading volumes, it is assumed that the net asset value will only be adjusted occasionally.

This (sub-)fund can apply swing pricing but has not done so in the reporting period, as its (net) inflows and outflows did not exceed the relevant threshold previously defined.

Annual report
DWS Invest Global Infrastructure

Investment objective and performance in the reporting period

The objective of DWS Invest Global Infrastructure is to generate capital appreciation. In order to achieve this, the sub-fund invests primarily in equities of issuers whose activities are focused on the global infrastructure segment. The infrastructure segment includes transport, energy, water and communication, in addition to social infrastructure. Aspects considered when selecting investments include financial strength and also a focus on environmental, social and corporate governance (ESG) criteria.* In the fiscal year from January 1 through December 31, 2025, the sub-fund recorded a depreciation of 0.4% per share (LC share class; BVI method; in euro).

Investment policy in the reporting period

The sub-fund delivered negative nominal returns for the twelve-month period ending December 31, 2025, and fell short of the broader equity market, as measured by the MSCI World Index in euro.

Global equity markets made strong gains despite the volatile geopolitical situation and the uncertain economic climate. In light of "de-dollarization" (i.e., the processing of trade flows without the U.S. dollar) and reflation, gold achieved record yields with a rise of over 64%. The tariff policy dominated the news across a large portion of the year, which led to upheaval in the commodity markets and stirred up fears of stagflation – a phase characterized

Class USD LC[6]	LU0329761661	12.5%	25.0%	35.3%

by slower economic growth with simultaneous higher inflation. The U.S. Federal Reserve, its monetary policy and its independence also became the focus of attention when President Trump endeavored to fill free seats on the Board of Governors with governors who agreed with his opinion that interest rate cuts were necessary. In the end, the Fed's FOMC decided to adopt the easing stance of other central banks and cut interest rates three times in succession through year end. Budgets were another core issue, which led to political change worldwide, and the shutdown in the United States paralyzed public life for 43 days. Investors welcomed the German government's approval of a multi-billion special fund for investment in infrastructure and defense. Japan experienced inflation again for the first time when the country also transitioned to a more expansionary monetary policy. Investors remained loyal to the theme of AI almost the whole year through, as investments in artificial intelligence stimulated interest in data centers and in companies that provided the energy for these. There were also other geopolitical events, although less market-moving, that impacted the lives of many people worldwide. In the Middle East, Israel further extended its military influence in the region and, together with the United States, attacked nuclear targets in Iran. The United States also took action against the Huthi militia in the Red Sea to protect shipping from attacks. In Europe, the war in Ukraine continued. However, progress was made between Ukraine and the United States, which could take the form of a peace agreement if Russian president Vladimir Putin would be satisfied with less than total victory in his "military special operation". In North and South America, governments moved further to the right in the most recent elections in Chile and Argentina. The United States imposed a naval blockade on sanctioned oil tankers from Venezuela to exert additional pressure on the Maduro government. There appeared to be sufficient supply in the oil markets already. Additional quantities from Russia or Venezuela would exert further price pressure.

Among global infrastructure stocks, companies in Europe and Asia/Pacific stood out from a regional point of view, while North and South America trended weaker despite a positive performance. In Europe, the utilities and transportation segments and the United Kingdom as a region achieved an above-average investment result, while the communications segment slid despite a positive performance. In Asia/Pacific, Japan was the top-performer ahead of Australia. Australia, in turn, led the remainder of the Asian region ex-Japan. In North and South America, Latin American airports were the top performers in the entire infrastructure market, while the remaining segments (utilities, rail, waste disposal, midstream energy and communications) turned in a below-average performance. The communications segment was the only segment that closed the year in negative territory.

For the twelve months ending December 31, 2025, the sub-fund's relative performance was characterized by unfavorable broader sector allocation and positive equity selection. In the allocation, the overweighting in the weak communications sector (both in Europe as well as North and South America) was the leading detractor. An overweighting in the American rail sector and an underweighting in the American midstream energy sector had a positive effect.

Stockpicking in the American midstream energy sector made a solid contribution to the relative per-

formance. The sub-fund profited from an underweighting in the LNG company Cheniere Energy, Inc., which posted an annual deficit and was by far the worst performer – both against its peers in its category and also in the larger infrastructure group. The overweightings in DT Midstream, Inc. and Williams Companies, Inc. made a positive contribution to the investment result. The relative performance was also boosted by stockpicking in the European transportation sector, whereby the positions in Fraport AG and Eiffage SA had a particularly positive effect but the lack of exposure to Ferrovial SE was a detractor. The sub-fund's worst relative performance was in the category of American utilities, followed by the European communications sector. The largest detractor – both within the category and also in the entire portfolio – was a position in PG&E Corp. Its share price was dragged under by another company that caused severe wildfires and brought renewed attention to the risk in California. The underweighting of Fortis, Inc. and Consolidated Edison, Inc. also detracted from the investment result. On the positive side, some of the fund's leading individual stocks were in the utilities sector in the North and South America region, and included the Brazilian utility Companhia de Saneamento Básico do Estado de São Paulo, CenterPoint Energy, Inc. and NiSource Energy Inc.

The following risk management disclosures (other information) are unaudited and are not covered by the audit opinion on the annual report.

Composition of the reference portfolio (according to CSSF circular 11/512)
DJ Brookfield Global Infrastructure Net total in EUR

Market risk exposure (value-at-risk) (according to CSSF circular 11/512)

Lowest market risk exposure	%	95.768
Highest market risk exposure	%	109.528
Average market risk exposure	%	102.007

The values-at-risk were calculated for the period from January 1, 2025, through December 31, 2025, using historical simulation with a 99% confidence level, a 10-day holding period and an effective historical observation period of one year. The risk in a reference portfolio that does not contain derivatives is used as the measurement benchmark. Market risk is the risk to the fund's assets arising from an unfavorable change in market prices. The Company determines the potential market risk by means of the **relative value-at-risk approach** as defined in CSSF circular 11/512.

In the reporting period, the average leverage effect from the use of derivatives was 0.0, whereby the total of the nominal amounts of the derivatives in relation to the fund's assets was used for the calculation (sum-of-notional approach).

The gross exposure generated via derivatives pursuant to point 40 a) of the "Guidelines on ETFs and other UCITS issues" of the European Securities and Markets Authority (ESMA) totaled EUR 0.00 as of the reporting date. Does not include any forward currency transactions entered into for currency hedging purposes at the level of the share classes.

Notes on valuation

Under the responsibility of the Board of Directors of the SICAV, the Management Company determines the net asset values per share and performs the valuation of the assets of the fund. The basic provision of price data and price validation are performed in accordance with the method introduced by the Board of Directors of the SICAV on the basis of the legal and regulatory requirements or the principles for valuation methods defined in the SICAV's prospectus.

If no trading prices are available, prices are determined with the aid of valuation models (derived market values) which are agreed between State Street Bank International GmbH, Luxembourg Branch, as external price service provider and the Management Company and which are based as far as possible on market parameters. This procedure is subject to an ongoing monitoring process. The plausibility of price information from third parties is checked through other pricing sources, model calculations or other suitable procedure.

Assets reported in this report are not valued at derived market values.

Footnotes

*The prepaid placement fee is amortized over a period of three years (as specified in article 13 f "Placement Fee" section in the general section of the fund's management regulations).
** Does not include positions with a negative balance, if such exist.

The TER expresses total expenses and fees (excluding transaction costs) as a percentage of a fund's average net assets in relation to the respective share class within a fiscal year.

[2] Annualization has not been performed for share classes launched during the year.

Transaction costs

The transaction costs paid in the reporting period amounted to EUR 1 501 671.34.

The transaction costs include all costs that were reported or settled separately for the account of the fund in the reporting period and are directly connected to the purchase or sale of assets. Any financial transaction taxes paid are included in the calculations.

Statement of changes in net assets 2025

I.	**Value of the fund's net assets at the beginning of the fiscal year**	**EUR**	**2 438 650 835.86**
1.	Distribution for the previous year	EUR	-45 278 363.83
2.	Net outflows[2]	EUR	-57 011 232.89
3.	Income adjustment and reimbursed expenses	EUR	2 165 331.96
4.	Net investment income	EUR	39 556 213.39
5.	Realized gains/losses	EUR	93 425 335.58
6.	Net change in unrealized appreciation/depreciation	EUR	-135 351 362.06
II.	**Value of the fund's net assets at the end of the fiscal year**	**EUR**	**2 336 156 758.01**

[2] Reduced by a dilution fee in the amount of EUR 112 505.10 for the benefit of the fund's assets.

Summary of gains/losses 2025

Realized gains/losses (incl. income adjustment)	**EUR**	**93 425 335.58**
from:		
Securities transactions	EUR	92 607 549.87
Derivatives and other financial futures transactions[3]	EUR	817 785.71

DWS Invest Global Infrastructure

Transactions processed for the account of the fund's assets via closely related companies (based on major holdings of the Deutsche Bank Group)

The share of transactions conducted in the reporting period for the account of the fund's assets via brokers that are closely related companies and persons (share of 5% and above) amounted to 0.00% of all transactions. The total volume was EUR 0.00.

Placement fee / dilution adjustment

In the reporting period, the fund paid a placement fee of 2.9% of the fund's net assets to the distributor. This fee was calculated on the subscription date. The specified placement fee serves in particular as remuneration for distribution. The gross amount of the placement fee was paid in a single payment on the subscription date and simultaneously recognized in the fund's net assets as prepaid expenses. These are amortized on a daily basis over a period of three years from the date of subscription. The remaining position for prepaid expenses per share on each valuation date is calculated on a daily basis by multiplying the net assets of the fund by a factor. The relevant factor is determined through straight-line reduction of the placement fee by a certain percentage on a daily basis over three years from the subscription date. The prepaid expenses position fluctuates during the three years from the subscription date of the fund, since it depends on both the fund's net assets and the predetermined factor.

In addition, a dilution adjustment of up to 3% based on the gross redemption amount was charged for the benefit of the fund's net assets in the reporting period (to be paid by the shareholder).

Further details on the placement fee and the dilution adjustment can be found in the corresponding section of the fund's sales prospectus.

Annual report
DWS Invest Global Real Estate Securities

Investment objective and performance in the reporting period

DWS Invest Global Real Estate Securities invests mainly in equities of listed companies that own, develop or manage real estate, provided that these equities are considered transferable securities. Aspects considered when selecting investments include financial strength and also a focus on environmental, social and corporate governance (ESG) criteria.* In the fiscal year through December 31, 2025, DWS Invest Global Real Estate Securities recorded an appreciation of 9.6% per share (USD FC share class; BVI method; in U.S. dollar terms).

Investment policy in the reporting period

Global real estate securities delivered modestly positive nominal returns for the twelve months ending December 31, 2025, but underperformed the broader market as measured by MSCI World. Within the global real estate segment, performance in the United States was below average from a regional perspective. Outside of the United States, Asia (including Japan) made above-average gains while Australia lagged the most despite double-digit yields, followed by Canada, the United Kingdom and Europe (ex-UK). At sector level in the United States, the outperformance was most prominent in the health care, industrials, regional malls and net lease segments, while specialty real estate, data centers and office real estate fared the worst. Outside of the United States, developers in Japan and Singapore as well as investors in Hong Kong and European retail and mixed-use real estate achieved the largest growth. Conversely, the Australia region, European residential real estate and Scandinavia lagged.

Global equity markets made strong gains despite the volatile geopolitical situation and the uncertain economic climate. In light of "de-dollarization" (i.e., the processing of trade flows without the U.S. dollar) and reflation, gold achieved record yields with a rise of over 64%. The tariff policy dominated the news across a large portion of the year, which led to upheaval in the commodity markets and stirred up fears of stagflation – a phase characterized by slower economic growth with simultaneous higher inflation. The U.S. Federal Reserve, its monetary policy and its independence also became the focus of attention when President Trump endeavored to fill free seats on the Board of Governors with governors who agreed with his opinion that

"BVI method" performance, i.e., excluding the initial sales charge.
Past performance is not a guide to future results.

As of: December 31, 2025

interest rate cuts were necessary. In the end, the Fed's FOMC decided to adopt the easing stance of other central banks and cut interest rates three times in succession through year end. Budgets were another core issue, which led to political change worldwide, and the shutdown in the United States paralyzed public life for 43 days. Investors welcomed the German government's approval of a multi-billion special fund for investment in infrastructure and defense. Japan experienced inflation again for the first time when the country also transitioned to a more expansionary monetary policy. Investors remained loyal to the theme of AI almost the whole year through, as investments in artificial intelligence stimulated interest in data centers and in companies that provided the energy for these. There were also other geopolitical events, although less market-moving, that impacted the lives of many people worldwide. In the Middle East, Israel further extended its military influence in the region and, together with the United States, attacked nuclear targets in Iran. The United States also took action against the Huthi militia in the Red Sea to protect shipping from attacks. In Europe, the war in Ukraine continued. However, progress was made between Ukraine and the United States, which could take the form of a peace agreement if Russian president Vladimir Putin would be satisfied with less than total victory in his "military special operation". In North and South America, governments moved further to the right in the most recent elections in Chile and Argentina. The United States imposed a naval blockade on sanctioned oil tankers from Venezuela to exert additional pressure on the Maduro government. There appeared to be sufficient supply in the oil markets already. Additional quantities from Russia or Venezuela would exert further price pressure.

In the twelve-month period through December 31, 2025, the sub-fund's relative performance was hampered by its selection of equities. By region, Australia and Asia contributed the most to the relative performance. In contrast, the regional positioning in North and South America was the largest detractor.

The most unfavorable factor was stockpicking in the American health care sector (overweighting of Healthpeak Properties, Inc.) and in the self-storage segment (overweighting of Agree Realty Corporation), whereas positive effects resulted from the European real estate segment (overweightings of Aedifica SA and TAG Immobilien AG) and the American hotel real estate segment (overweighting of Host Hotels & Resorts, Inc.). The allocation turned out to be slightly negative overall. The negative effects in the American self-storage segment and in the Asia region were almost completely compensated for by the positive effects from American office real estate and Australian REITS.

Other information – Not covered by the audit opinion on the annual report

Information on the environmental and/or social characteristics

This product reported in accordance with Article 8(1) of Regulation (EU) 2019/2088 on sustainability-related disclosures in the financial services sector ("SFDR").

Presentation and content requirements for periodic reports for financial products as referred to in Article 8(1) of Regulation (EU) 2019/2088 (SFDR) and in Article 6 of Regulation (EU) 2020/852 (Taxonomy) are available at the back of this report.

* Further details are set out in the current sales prospectus.

The format used for complete dates in security names in the investment portfolio is "day month year".

The following risk management disclosures (other information) are unaudited and are not covered by the audit opinion on the annual report:

Composition of the reference portfolio (according to CSSF circular 11/512)
FTSE EPRA Nareit Developed Index (Gross) in USD

Market risk exposure (value-at-risk) (according to CSSF circular 11/512)

Lowest market risk exposure	%	98.661
Highest market risk exposure	%	106.095
Average market risk exposure	%	101.971

The values-at-risk were calculated for the period from January 1, 2025, through December 31, 2025, using historical simulation with a 99% confidence level, a 10-day holding period and an effective historical observation period of one year. The risk in a reference portfolio that does not contain derivatives is used as the measurement benchmark. Market risk is the risk to the fund's assets arising from an unfavorable change in market prices. The Company determines the potential market risk by means of the **relative value-at-risk approach** as defined in CSSF circular 11/512.

In the reporting period, the average leverage effect from the use of derivatives was 0.0, whereby the total of the nominal amounts of the derivatives in relation to the fund's assets was used for the calculation (sum-of-notional approach).

The gross exposure generated via derivatives pursuant to point 40 a) of the "Guidelines on ETFs and other UCITS issues" of the European Securities and Markets Authority (ESMA) totaled USD 0.00 as of the reporting date.

Notes on valuation

Under the responsibility of the Board of Directors of the SICAV, the Management Company determines the net asset values per share and performs the valuation of the assets of the fund. The basic provision of price data and price validation are performed in accordance with the method introduced by the Board of Directors of the SICAV on the basis of the legal and regulatory requirements or the principles for valuation methods defined in the SICAV's prospectus.

If no trading prices are available, prices are determined with the aid of valuation models (derived market values) which are agreed between State Street Bank International GmbH, Luxembourg Branch, as external price service provider and the Management Company and which are based as far as possible on market parameters. This procedure is subject to an ongoing monitoring process. The plausibility of price information from third parties is checked through other pricing sources, model calculations or other suitable procedure.

Assets reported in this report are not valued at derived market values.

BVI total expense ratio (TER)

The total expense ratio for the share classes was:

Class CHF ICH (P) 0.68% p.a.,
Class CHF ICH (P) 100 0.48% p.a.,
Class CHF LDH (P) 1.62% p.a.,
Class CHF TFCH (P) 0.85% p.a.,
Class FC 0.85% p.a.,
Class FD 0.85% p.a.,
Class FDH (P) 0.87% p.a.,
Class IC100 0.46% p.a.,
Class LC 1.59% p.a.,
Class LD 1.59% p.a.,
Class LDM 1.49%[2],
Class RD 0.26%[2],
Class GBP D RD 0.82% p.a.,
Class GBP DH (P) RD 0.85% p.a.,
Class USD FC 0.85% p.a.,
Class USD FC100 0.49% p.a.,
Class USD FDM 0.52%[2],
Class USD ID 0.65% p.a.,
Class USD LC 1.60% p.a.,
Class USD LDMH (P) 1.62% p.a.,
Class USD TFC 0.85% p.a.

The TER expresses total expenses and fees (excluding transaction costs) as a percentage of a fund's average net assets in relation to the respective share class within a fiscal year.

[2] Annualization has not been performed for share classes launched during the year.

Transaction costs

The transaction costs paid in the reporting period amounted to USD 449 052.44.

The transaction costs include all costs that were reported or settled separately for the account of the fund in the reporting period and are directly connected to the purchase or sale of assets. Any financial transaction taxes paid are included in the calculations.

Investment policy in the reporting period

Global equity markets made strong gains despite the volatile geopolitical situation and the uncertain economic climate. In light of "de-dollarization" (i.e., the processing of trade flows without the U.S. dollar) and reflation, gold achieved record yields with a rise of over 64%. The tariff policy dominated the news across a large portion of the year, which led to upheaval in the commodity markets and stirred up fears of stagflation – a phase characterized by slower economic growth with simultaneous higher inflation. The U.S. Federal Reserve, its monetary policy and its independence also became the focus of attention when President Trump endeavored to fill free seats on the Board of Governors with governors who agreed with his opinion that interest rate cuts were necessary. In the end, the Fed's FOMC decided to adopt the easing stance of other central banks and cut interest rates three times in succession through year end. Budgets were another core issue, which led to political change worldwide, and the shutdown in the United States paralyzed public life for 43 days. Investors welcomed the German government's approval of a multi-billion special fund for investment in infrastructure and defense. Japan experienced inflation again for the first time when the country also transitioned to a more expansionary monetary policy. Investors remained loyal to the theme of AI almost the whole year through, as investments in artificial intelligence stimulated interest in data centers and in companies that provided the energy for these. There were also other geopolitical events, although less market-moving, that impacted the lives of many people worldwide. In the Middle East, Israel further extended its military influence in the region and, together with the United States, attacked nuclear targets in Iran. The United States also took action against the Huthi militia in the Red Sea to protect shipping from attacks. In Europe, the war in Ukraine continued. However, progress was made between Ukraine and the United States, which could take the form of a peace agreement if Russian president Vladimir Putin would be satisfied with less than total victory in his "military special operation". In North and South America, governments moved further to the right in the most recent elections in Chile and Argentina. The United States imposed a naval blockade on sanctioned oil tankers from Venezuela to exert additional pressure on the Maduro government. There appeared to be sufficient supply in the oil markets already. Additional quantities from Russia or Venezuela would exert further price pressure.

In the precious metals sector, the rise in the price of gold made headlines but was surpassed by the growth in the market price for silver, platinum and palladium. Demand from central banks and private Asian buyers provided strong support, even at high prices. The markets for platinum and palladium continued to put in

a solid performance. They benefited from the improved prospects for combustion engines in Europe and the United States. Furthermore, it was expected that the new trading market for futures and option contracts that are settled physically on the Guangzhou Futures Exchange would improve worldwide pricing and transparency. According to a forecast from the World Platinum Investment Council, the platinum price is expected to stabilize again in 2026 as a result of the higher proportion of recycling and falling demand from investors.

Precious metals continued to remain attractive as a hedge against macro and geopolitical risks, with demand now anchored in the increasing of government gold reserves and purchases by Asian private investors. Geopolitical risks, which have been viewed with concern, additionally drove up the price of gold. The portfolio management expected to see continued robust demand for gold on the part of central banks, as the foreign-policy decisions by the United States could provide incentive for further de-dollarization (i.e., the processing of trade flows without the U.S. dollar) so as to be less dependent on the United States.

The most successful portfolio positions in the reporting period were Newmont, Gold Fields Ltd. and AngloGold Ashanti PLC. These companies benefited from the steep rise in the price of gold. Conversely, only a few companies posted a negative performance in the reporting period. The performance laggards included Americas Gold and Silver Corp. and Nevada King Gold Corp. In the case of Americas Gold and Silver Corp., the negative contribution to the investment result was due to the time at which the investment was made, as the equities achieved a positive return for the year as a whole. Nevada King weakened slightly in the second half of the year and lagged behind competitors.

DWS Invest Gold and Precious Metals Equities

The following risk management disclosures (other information) are unaudited and are not covered by the audit opinion on the annual report:

Composition of the reference portfolio (according to CSSF circular 11/512)
S&P BMI Gold and Precious Metals Gross Index

Market risk exposure (value-at-risk) (according to CSSF circular 11/512)

Lowest market risk exposure	%	100.788
Highest market risk exposure	%	115.429
Average market risk exposure	%	106.800

The values-at-risk were calculated for the period from January 1, 2025, through December 31, 2025, using historical simulation with a 99% confidence level, a 10-day holding period and an effective historical observation period of one year. The risk in a reference portfolio that does not contain derivatives is used as the measurement benchmark. Market risk is the risk to the fund's assets arising from an unfavorable change in market prices. The Company determines the potential market risk by means of the **relative value-at-risk approach** as defined in CSSF circular 11/512.

In the reporting period, the average leverage effect from the use of derivatives was 0.0, whereby the total of the nominal amounts of the derivatives in relation to the fund's assets was used for the calculation (sum-of-notional approach).

The gross exposure generated via derivatives pursuant to point 40 a) of the "Guidelines on ETFs and other UCITS issues" of the European Securities and Markets Authority (ESMA) totaled USD 1 207 368.23 as of the reporting date.

Notes on valuation

Under the responsibility of the Board of Directors of the SICAV, the Management Company determines the net asset values per share and performs the valuation of the assets of the fund. The basic provision of price data and price validation are performed in accordance with the method introduced by the Board of Directors of the SICAV on the basis of the legal and regulatory requirements or the principles for valuation methods defined in the SICAV's prospectus.

If no trading prices are available, prices are determined with the aid of valuation models (derived market values) which are agreed between State Street Bank International GmbH, Luxembourg Branch, as external price service provider and the Management Company and which are based as far as possible on market parameters. This procedure is subject to an ongoing monitoring process. The plausibility of price information from third parties is checked through other pricing sources, model calculations or other suitable procedure.

Assets reported in this report are valued to a minor extent at derived market values.

Russian equities, bonds and depositary receipts such as ADRs/GDRs were fully written down to a memo value of EUR 0.0001 as of March 3, 2022 because either they have been excluded from trading on stock exchanges or western investors have been excluded from the Russian markets. This valuation method will be reviewed at the regular meetings of DWS's Pricing Committee.

The fund expected cash inflows of USD 477 033.40 from outstanding dividend and interest payments by Russian companies as of the end of the fiscal year on December 31, 2025, which are accounted for off the books. However, due to the current political situation, it is not possible to forecast whether the dividend and interest payments by the Russian companies will be resumed at a later date.

BVI total expense ratio (TER)

The total expense ratio for the share classes was:

Class FC 0.85% p.a.,
Class LC 1.61%,
Class LD 1.61% p.a.,
Class NC 2.31% p.a.,
Class TFC 0.86% p.a.,
Class USD LC 1.61% p.a.,
Class USD LDM 0.50%[2],
Class USD TFC 0.87% p.a.

The TER expresses total expenses and fees (excluding transaction costs) as a percentage of a fund's average net assets in relation to the respective share class within a fiscal year.

[2] Annualization has not been performed for share classes launched during the year.

Transaction costs

The transaction costs paid in the reporting period amounted to USD 1 571 763.48.

The transaction costs include all costs that were reported or settled separately for the account of the fund in the reporting period and are directly connected to the purchase or sale of assets. Any financial transaction taxes paid are included in the calculations.

Statement of changes in net assets 2025

Transactions processed for the account of the fund's assets via closely related companies (based on major holdings of the Deutsche Bank Group)

The share of transactions conducted in the reporting period for the account of the fund's assets via brokers that are closely related companies and persons (share of 5% and above) amounted to 0.00% of all transactions. The total volume was USD 0.00.

Annual report
DWS Invest Latin American Equities

Investment objective and performance in the reporting period

The sub-fund DWS Invest Latin American Equities focuses its investments on companies which have their registered offices in Latin America or conduct their business activities predominantly in Latin America. In the reporting period from January 1 through December 31, 2025, the sub-fund achieved an appreciation of 37.1% per share (LC share class; BVI method). Its benchmark, the MSCI EM Latin America 10/40 Net TR, rose by 37.5% in the same period (both percentages in euro terms).

Investment policy in the reporting period

2025 proved to be a good year for higher-risk investments – despite extreme tariff-related upheaval and the flaring up of geopolitical conflicts. The equity markets were supported not only be AI euphoria but also by investments, profit growth, falling inflation and the expectation of further rate cuts in 2026. Unlike in previous years, markets outside of the United States were top performers, driven by the weakness of the U.S. dollar, relatively attractive valuations and some profit taking in the technology sector. The global equity markets defied the chaotic tariff policy of the Trump administration and the armed conflicts in Ukraine and in the Middle East. On April 2, Trump presented a program of "reciprocal" tariffs that had historical parallels with the 1930s. The equity markets then plummeted and volatility increased significantly. The tariffs announced on "Liberation Day" shook confidence in assets denominated in the U.S. dollar and led to a jump in yields on 10-year government bonds amid a sell-off of the U.S. dollar. Negative sentiment surrounding the U.S. dollar, especially in the first half of the year, resulted from the deteriorated budget situation, the reversal of the narrative of an above-average performance by the U.S. market, and the political unpredictability of the U.S. president. All of this pointed to a future structural withdrawal of foreign investors from U.S. stocks. China's control of the refining of rare earths proved an effective bargaining chip against the threatened U.S. tariffs. Trump and Xi ultimately agreed to suspend the tariff increases for the next twelve months. The longer-term decoupling of political spheres of influence, economic interests and supply chain structures between the two countries continued to be high on the agenda. Growth momentum in China weakened somewhat toward the end of the year. Politically, the emphasis was on the anti-involution drive, the value creation chain in the technology sector, the consumer climate and municipal debt. The impressive financial success and low development costs of the Chinese AI company DeepSeek cast doubts on the up-to-then undisputed leading role of the United States in AI and on the enormous investment in ultra-modern AI chips and the construction of data centers. In the commodities sector, precious metals and industrial metals made strong gains. These were balanced out to some extent by the weak oil price, which was impacted by oversupply, the withdrawal of cuts in supply quantities by OPEC+, and Trump's efforts to force a ceasefire between Russia and Ukraine.

The Brazilian equity market experienced a rally in 2025, triggered by the hope of imminent interest rate cuts, attractive valuations, inflows of foreign capital, decent corporate profits and expectations linked to the elections. Throughout the entire year, high interest rates and optimism about a possible regime change in the 2026 presidential elections caused foreign capital to flow into the market. Market sentiment fluctuated back and forth due to the influence of the data from political polls as the popularity of President Lula's government saw an upturn in the second half of the year. The Brazilian real (BRL) increased in value. It benefited from the weakness of the U.S. dollar, attractive valuations, light positioning and a high carry. Brazil easily defended its position as the country with the highest real interest rates amongst the major economies. In December, the Brazilian market crashed after incarcerated ex-president Jair Bolsonaro "selected" his son Flávio as the right-wing candidate for the presidential election in October 2026. Investors had banked on the nomination of Tarcísio de Freitas, governor of the federal state of São Paulo. Flávio's candidacy threatened to split electoral votes against Lula and increase the chances of the incumbent president being re-elected. Inflation fell to below 4.5% by the end of the year and was thus within the target range (3% +/- 1.5 percentage points). Despite this, the Brazilian Central Bank (BCB) was unmoved and kept the key interest rate at 15.00% after rigidly tightening the monetary policy to stem baseless inflation expectations.

Mexico surpassed Brazil in 2025 despite negative profit adjustments. The Mexican central bank (Banxico) reduced the key interest rate from 10.00% to 7.00% in four increments of 50 basis points each in the first half of the year and in four further increments of 25 basis points each in the second half of the year. The reason for this was falling inflation, which stabilized at the upper end of the target range of 3% ± 1%. Remittances from abroad decreased continuously. This reflected the weaker labor market, border closures and the fear of deportations. President Sheinbaum reiterated her intention to maintain budgetary discipline and aimed for a deficit of 4.1% for the 2026 budget as well as a stable debt to GDP ratio of 52.3%,

The markets in the Andes, especially Chile, Columbia and Peru, made strong gains in 2025. The reasons for the strong performance were the expansionary central bank policy, the higher risk propensity worldwide, the relative decoupling from Trump's tariffs, higher metal prices and market-friendly political developments. In Chile, prospects of a functioning government improved due to the victory of the right-wing conservative Jose Antonio Kast in the presidential election, economic growth and the implementation of political measures. The Chilean central bank (BCCh) cut the key interest rate by 50 basis points to 4.5% It was thus reacting to further falls in inflation, which was nearing the target of 3%. The labor market and weak borrowing dynamics were counterbalanced by high wage growth and increasing commodity prices. In Columbia, BanRep left the key interest rate at 9.25% since April and justified this based on strong domestic demand and fiscal imbalances. Developments in Columbia were shaped by a combination of an oversold market, attractive valuations, an improving credit cycle and hopes of a regime change in 2026. The Peruvian central bank (BCRP) cut the key interest rate from 5.00% to 4.25% as growth was robust, inflation was well-anchored and the trading environment supported the currency. President Boluarte was removed from office in October by the country's congress far in advance of the regular elections in April 2026.

Argentina's prospects improved significantly when President Milei achieved a clear election victory in the mid-term elections. The country recorded a stable exchange rate, positive market sentiment and inflows of deposits in U.S. dollars. Trump's unequivocal support also had a positive effect. Furthermore, Argentina entered into a new agreement with the IMF and was upgraded again by Moody's. Inflation weakened despite the elimination of capital controls and a partial liberalization of the currency market.

From a sector perspective, the most important positive factors affecting the investment result were the underweighting of the sub-fund in consumer staples and the overweighting in utilities, IT and health care. The underweighting in financials and an overweighting in real estate particularly had a negative impact. In terms of stockpicking, it was especially consumer staples, finan-

cials and industrials that made a positive contribution. The largest negative contributions came from the health care, basic materials and utilities sectors.

As of the end of the reporting period, the most significant overweightings were in real estate, consumer discretionaries, industrials and utilities. The fund continued to invest in high-quality companies that achieved above average returns on equity (ROE) with relatively low levels of debt on their balance sheets. The most relevant underweightings were in consumer staples and in financials. The fund management reduced the positioning in these sectors due to the weak economy and a turnaround in the credit cycle (especially in Brazil). Although the economies in Brazil and Mexico slowed in the second half of 2025 as expected, investments in high-quality domestic long-term themes with a high carry and low dependency on GDP growth were retained.

At country level, the sub-fund profited from an overweighting in Peru and an underweighting in Mexico. The sub-fund's performance was negatively impacted by the positioning in Argentina outside of the benchmark, as well as by the underweightings in Chile and Columbia. Stockpicking in Brazil, Chile, Mexico and Columbia had a positive effect, while stockpicking in Peru had a slightly negative effect.

At the end of the year, the portfolio was slightly overweighted in Brazil and underweighted in Mexico, Chile, Peru and Columbia.

In addition, there were smaller positions outside of the benchmark in Argentina and Panama. The overweighting in Brazil was reduced. The reason for this was the two-fold headwind of very high interest rates and the somewhat asymmetrical upside potential, which was seen in the binary outcome of the election next year ahead the announcement of Flávio Bolsonaro's candidacy. The underweighting in Mexico was attributable to the ongoing pressure due to Trump's erratic immigration and tariff policies, as well as to declining remittances and budget consolidations with corresponding effects on consumption and growth.

DWS Invest Latin American Equities

The following risk management disclosures (other information) are unaudited and are not covered by the audit opinion on the annual report:

Composition of the reference portfolio (according to CSSF circular 11/512)
MSCI EM Latin America 10/40 Gross Index (in EUR)

Market risk exposure (value-at-risk) (according to CSSF circular 11/512)

Lowest market risk exposure	%	85.586
Highest market risk exposure	%	121.292
Average market risk exposure	%	104.222

The values-at-risk were calculated for the period from January 1, 2025, through December 31, 2025, using historical simulation with a 99% confidence level, a 10-day holding period and an effective historical observation period of one year. The risk in a reference portfolio that does not contain derivatives is used as the measurement benchmark. Market risk is the risk to the fund's assets arising from an unfavorable change in market prices. The Company determines the potential market risk by means of the **relative value-at-risk approach** as defined in CSSF circular 11/512.

In the reporting period, the average leverage effect from the use of derivatives was 0.0, whereby the total of the nominal amounts of the derivatives in relation to the fund's assets was used for the calculation (sum-of-notional approach).

The gross exposure generated via derivatives pursuant to point 40 a) of the "Guidelines on ETFs and other UCITS issues" of the European Securities and Markets Authority (ESMA) totaled EUR 0.00 as of the reporting date.

Notes on valuation

Under the responsibility of the Board of Directors of the SICAV, the Management Company determines the net asset values per share and performs the valuation of the assets of the fund. The basic provision of price data and price validation are performed in accordance with the method introduced by the Board of Directors of the SICAV on the basis of the legal and regulatory requirements or the principles for valuation methods defined in the SICAV's prospectus.

If no trading prices are available, prices are determined with the aid of valuation models (derived market values) which are agreed between State Street Bank International GmbH, Luxembourg Branch, as external price service provider and the Management Company and which are based as far as possible on market parameters. This procedure is subject to an ongoing monitoring process. The plausibility of price information from third parties is checked through other pricing sources, model calculations or other suitable procedure.

Assets reported in this report are not valued at derived market values.

BVI total expense ratio (TER)

The total expense ratio for the share classes was:

Class FC 0.94% p.a.,
Class FC25 0.03%[2] p.a.,
Class FC50 0.39% p.a.,
Class IC 0.55% p.a.,
Class LC 1.84% p.a.,
Class NC 2.49% p.a.,
Class TFC 0.94% p.a.,
Class GBP IC 0.52% p.a.,
Class USD IC 0.55% p.a.,
Class USD LC 1.83% p.a.,
Class USD TFC 0.84% p.a.

The TER expresses total expenses and fees (excluding transaction costs) as a percentage of a fund's average net assets in relation to the respective share class within a fiscal year.

[2] Annualization has not been performed for share classes launched during the year.

Transaction costs

The transaction costs paid in the reporting period amounted to EUR 2 083 785.61.

The transaction costs include all costs that were reported or settled separately for the account of the fund in the reporting period and are directly connected to the purchase or sale of assets. Any financial transaction taxes paid are included in the calculations.

Statement of changes in net assets 2025

I.	**Value of the fund's net assets at the beginning of the fiscal year**	**EUR**	**922 195 963.65**

Transactions processed for the account of the fund's assets via closely related companies (based on major holdings of the Deutsche Bank Group)

The share of transactions conducted in the reporting period for the account of the fund's assets via brokers that are closely related companies and persons (share of 5% and above) amounted to 0.00% of all transactions. The total volume was EUR 0.00.

DWS Invest Latin American Equities

Swing pricing

Swing pricing is a mechanism that is intended to protect shareholders from the negative effects of trading costs arising from subscription and redemption activities.

Extensive subscriptions and redemptions within a (sub-)fund may lead to a dilution of the assets of this (sub-)fund, as the net asset value sometimes does not reflect all trading and other costs that are incurred when the portfolio manager must buy or sell securities in order to manage large (net) inflows or outflows in the (sub-)fund. In addition to these costs, substantial order volumes may lead to market prices that are considerably below or above the market prices that apply under normal circumstances.

To enhance the investor protection of existing shareholders, a swing pricing mechanism can be applied to compensate for trading costs and other expenses if the aforementioned cumulative (net) inflows or outflows should have a material impact on the (sub-)fund on a valuation date and exceed a predetermined threshold (partial swing pricing). This mechanism can be applied across all (sub-)funds. If swing pricing is introduced for a particular (sub-)fund, this will be disclosed in the special section of the sales prospectus.
The Management Company of the fund will predefine thresholds for the application of the swing pricing mechanism, based, among other things, on current market conditions, available market liquidity and estimated dilution costs. In accordance with these thresholds, the adjustment itself will be initiated automatically.

If the (net) inflows or outflows exceed the swing threshold, the net asset value is revised upward if the (sub-)fund sees large net inflows and is revised downward in the event of large net outflows. This adjustment is applied uniformly to all subscriptions and redemptions for the trading day in question. If a performance-based fee applies for the (sub-)fund, the calculation is based on the original net asset value.

The Management Company has established a swing pricing committee that determines the swing factors for each individual (sub-)fund. These swing factors indicate the extent of the net asset value adjustment. The swing pricing committee takes into account the following factors in particular:

– bid-ask spread (fixed-price element),
– impacts on the market (impacts of the transactions on the price),
– additional costs that are incurred as a result of trading activities for the investments.

The appropriateness of the applied swing factors, the operational decisions made in connection with the swing pricing (including the swing threshold), the extent of the adjustment, and the affected (sub-)funds are reviewed at regular intervals.

The amount of the swing pricing adjustment can therefore vary from one (sub-)fund to another and will not generally exceed 2% of the original net asset value per share.

The net asset value adjustment is available upon request from the Management Company. In a market environment with extreme illiquidity, the Management Company can, however, increase the swing price adjustment to more than 2% of the original net asset value. Such an increase will be announced on the Management Company's website: www.dws.com.

As the mechanism should only be applied if significant (net) inflows or outflows are expected and it does not apply for normal trading volumes, it is assumed that the net asset value will only be adjusted occasionally.

This (sub-)fund can apply swing pricing but has not done so in the reporting period, as its (net) inflows and outflows did not exceed the relevant threshold previously defined.

Annual report
DWS Invest Metaverse (in liquidation)

Investment objective and performance in the reporting period

The objective of the investment policy is to achieve long-term capital appreciation. To achieve this objective, DWS Invest Metaverse (in liquidation) invests predominantly in equities of companies that will benefit from the development of the digital world, especially the metaverse, or are currently connected with this. They include enterprises that provide computing power and virtual content for the metaverse (digital, virtual space), as well as companies that offer devices such as hardware and wearables for the virtual world and new digital payment methods (cryptocurrencies, digital lending).

In the twelve months through the end of December 2025, the sub-fund DWS Invest Metaverse (in liquidation) recorded an appreciation of 9.3% per share (LC share class; BVI method; in euro).

DWS Invest Metaverse (in liquidation)

Performance of share classes (in EUR)

Share class	ISIN	1 year	Since inception[1]
Class LC	LU2576371582	9.3%	61.8%
Class FC	LU2576371400	10.2%	65.7%
Class LD	LU2576371665	9.3%	61.8%
Class TFC	LU2576371749	10.2%	65.8%
Class XC	LU2576371822	10.7%	67.9%

[1] Classes LC, FC, LD, TFC and XC launched on February 15, 2023

"BVI method" performance, i.e., excluding the initial sales charge.
Past performance is not a guide to future results.

As of: December 31, 2025

Investment policy in the reporting period

The capital market environment in 2025 was challenging. This was due in particular to geopolitical crises like the Russia-Ukraine war that has been ongoing since February 24, 2022, the escalated conflict in the Middle East, and the power struggle between the United States and China. Furthermore, the erratic swings in U.S. trade and tariff policy generated additional uncertainty in the capital markets. On the other hand, the easing of monetary policy, which had begun previously, continued during the reporting period. The European Central Bank (ECB) thus lowered the key interest rate in four steps from 3.00% p.a. to 2.00% p.a. (deposit facility) while the U.S. Federal Reserve gradually reduced its key interest rates by 0.75 percentage points to a target range of 3.50% p.a. – 3.75% p.a.

Despite market uncertainty induced mainly by geopolitical factors, the international equity markets, as measured by the MSCI World, recorded appreciable price gains overall in 2025 amid sometimes considerable volatility. These gains were underpinned by the emerging easing of interest rates, increased investor confidence in artificial intelligence, as well as robust corporate profits. Among the markets in Western industrial countries, the DAX 40 in Germany posted significant gains, buoyed by factors such as the multi-billion-euro package of fiscal relief measures. The emerging markets, as measured by the MSCI Emerging Markets, were even able to outperform the industrial countries on a full-year basis through the end of 2025. In this respect, China's equity market was one of the stand-out performers and continued to recover significantly. This trend was supported by Chinese economic growth, which was stimulated by expansionary macroeconomic policies. However, the international stock exchanges were intermittently hit hard by the erratic swings in U.S. trade and tariff policy.

Investments in the sub-fund portfolio focused especially on the information technology and communication services sectors. In following this strategy, the sub-fund participated in the above-average price increases in these sectors. Consumer discretionaries and financials likewise had a positive impact on the sub-fund's performance.

In terms of country allocation, the sub-fund benefited particularly from its positioning in the United States, but its positioning in Asian markets including Taiwan, Singapore, Japan and China also contributed positively to the sub-fund's overall performance.

Within the framework of its stock-picking, the sub-fund benefited in particular from its investments in the communications and service sectors, including Reddit and Alphabet. With its Gemini 3.5 model,

Alphabet was finally able to shake off the narrative that had previously been circulating that it was an AI loser. Solid revenue growth in its Search and Cloud divisions also underpinned this development.

In the information technology sector, Iren and Samsung impressed. Demand for data center capacity and storage solutions for the ongoing expansion of modern data centers continues to surpass supply. Both companies were able to profit significantly, on both the revenue side and the margin side.

While the sub-fund management largely remained loyal to its sector and country allocation during the reporting period, it also made selective additions particularly in the information technology and communication services sectors.

The following risk management disclosures (other information) are unaudited and are not covered by the audit opinion on the annual report.

Composition of the reference portfolio (according to CSSF circular 11/512)
50% MSCI World Information Tech Index Net Return in EUR, 35% MSCI World Communication Services Index (Net) in EUR, 15% MSCI All Country World Index, in EUR

Market risk exposure (value-at-risk) (according to CSSF circular 11/512)

Lowest market risk exposure	%	73.727
Highest market risk exposure	%	105.991
Average market risk exposure	%	87.648

The values-at-risk were calculated for the period from January 1, 2025, through December 31, 2025, using historical simulation with a 99% confidence level, a 10-day holding period and an effective historical observation period of one year. The risk in a reference portfolio that does not contain derivatives is used as the measurement benchmark. Market risk is the risk to the fund's assets arising from an unfavorable change in market prices. The Company determines the potential market risk by means of the **relative value-at-risk approach** as defined in CSSF circular 11/512.

In the reporting period, the average leverage effect from the use of derivatives was 0.0, whereby the total of the nominal amounts of the derivatives in relation to the fund's assets was used for the calculation (sum-of-notional approach).

The gross exposure generated via derivatives pursuant to point 40 a) of the "Guidelines on ETFs and other UCITS issues" of the European Securities and Markets Authority (ESMA) totaled EUR 0.00 as of the reporting date.

Notes on valuation

Against the backdrop of the resolution adopted by the Board of Directors of the SICAV to put the fund into liquidation effective April 13, 2025, the going-concern basis was relinquished and the financial statements were prepared on the basis of liquidation values. Under the responsibility of the Board of Directors of the SICAV, the Management Company determines the net asset values per share and performs the valuation of the assets of the fund.

If no trading prices are available, prices are determined with the aid of valuation models (derived market values) which are agreed between State Street Bank International GmbH, Luxembourg Branch, as external price service provider and the Management Company and which are based as far as possible on market parameters. This procedure is subject to an ongoing monitoring process. The plausibility of price information from third parties is checked through other pricing sources, model calculations or other suitable procedure.

Assets reported in this report are not valued at derived market values.

DWS Invest Metaverse (in liquidation)

Statement of income and expenses (incl. income adjustment)

for the period from January 1, 2025, through December 31, 2025

I. Income			
1. Dividends (before withholding tax)		EUR	48 582.14
2. Interest from investments of liquid assets (before withholding tax)		EUR	3 861.71
3. Deduction for foreign withholding tax		EUR	-7 416.86
Total income		**EUR**	**45 026.99**
II. Expenses			
1. Management fee		EUR	-7 418.66
thereof:			
Basic management fee	EUR -32 665.29		
Income from expense cap	EUR 36 652.87		
Administration fee	EUR -11 406.24		
2. Depositary fee		EUR	-1 099.37
3. Auditing, legal and publication costs		EUR	-12 298.57
4. Taxe d'abonnement		EUR	-4 149.42
5. Other expenses		EUR	-17 030.58
thereof:			
Distribution costs	EUR -12 420.14		
Other	EUR -4 610.44		
Total expenses		**EUR**	**-41 996.60**
III. Net investment income		**EUR**	**3 030.39**
IV. Sale transactions			
Realized gains/losses		EUR	351 182.80
Capital gains/losses		**EUR**	**351 182.80**
V. Net gain/loss for the fiscal year		**EUR**	**354 213.19**

BVI total expense ratio (TER)

The total expense ratio for the share classes was:

Class FC 0.91% p.a.,
Class LC 1.77% p.a.,
Class LD 1.77% p.a.,
Class TFC 0.91% p.a.,
Class XC 0.45% p.a.

The TER expresses total expenses and fees (excluding transaction costs) as a percentage of a fund's average net assets in relation to the respective share class within a fiscal year.

Transaction costs

The transaction costs paid in the reporting period amounted to EUR 1 185.89.

The transaction costs include all costs that were reported or settled separately for the account of the fund in the reporting period and are directly connected to the purchase or sale of assets. Any financial transaction taxes paid are included in the calculations.

Statement of changes in net assets 2025

I. Value of the fund's net assets at the beginning of the fiscal year		**EUR**	**7 895 981.08**
1. Distribution for the previous year		EUR	-39.80
2. Net inflows		EUR	8 617.05
3. Income adjustment and reimbursed expenses		EUR	-5.67
4. Net investment income		EUR	3 030.39
5. Realized gains/losses		EUR	351 182.80
6. Net change in unrealized appreciation/depreciation		EUR	489 189.64
II. Value of the fund's net assets at the end of the fiscal year		**EUR**	**8 747 955.49**

Summary of gains/losses 2025

Realized gains/losses (incl. income adjustment)		**EUR**	**351 182.80**
from:			
Securities transactions		EUR	367 319.55
Derivatives and other financial futures transactions[1]		EUR	-16 136.75

[1] This item may include options transactions or swap transactions and/or transactions from warrants and credit derivatives.

Transactions processed for the account of the fund's assets via closely related companies (based on major holdings of the Deutsche Bank Group)

The share of transactions conducted in the reporting period for the account of the fund's assets via brokers that are closely related companies and persons (share of 5% and above) amounted to 0.00% of all transactions. The total volume was EUR 0.00.

Placement fee / dilution adjustment

In the reporting period, the fund paid a placement fee of 2.9% of the fund's net assets to the distributor. This fee was calculated on the subscription date. The specified placement fee serves in particular as remuneration for distribution. The gross amount of the placement fee was paid in a single payment on the subscription date and simultaneously recognized in the fund's net assets as prepaid expenses. These are amortized on a daily basis over a period of three years from the date of subscription. The remaining position for prepaid expenses per share on each valuation date is calculated on a daily basis by multiplying the net assets of the fund by a factor. The relevant factor is determined through straight-line reduction of the placement fee by a certain percentage on a daily basis over three years from the subscription date. The prepaid expenses position fluctuates during the three years from the subscription date of the fund, since it depends on both the fund's net assets and the predetermined factor.

In addition, a dilution adjustment of up to 3% based on the gross redemption amount was charged for the benefit of the fund's net assets in the reporting period (to be paid by the shareholder).

Further details on the placement fee and the dilution adjustment can be found in the corresponding section of the fund's sales prospectus.

Swing pricing

Swing pricing is a mechanism that is intended to protect shareholders from the negative effects of trading costs arising from subscription and redemption activities. Extensive subscriptions and redemptions within a (sub-)fund may lead to a dilution of the assets of this (sub-)fund, as the net asset value sometimes does not reflect all trading and other costs that are incurred when the portfolio manager must buy or sell securities in order to manage large (net) inflows or outflows in the (sub-)fund. In addition to these costs, substantial order volumes can lead to market prices that are significantly below or above the market prices that apply under ordinary circumstances.

To enhance the investor protection of existing shareholders, a swing pricing mechanism can be applied to compensate for trading costs and other expenses if the aforementioned cumulative (net) inflows or outflows should have a material impact on the (sub-)fund on a valuation date and exceed a predetermined threshold (partial swing pricing). This mechanism can be applied across all (sub-)funds. If swing pricing is introduced for a particular (sub-)fund, this will be disclosed in the special section of the sales prospectus.

The Management Company of the fund will predefine thresholds for the application of the swing pricing mechanism, based, among other things, on current market conditions, available market liquidity and estimated dilution costs. In accordance with these thresholds, the adjustment itself will be initiated automatically. If the (net) inflows or outflows exceed the swing threshold, the net asset value is revised upward if the (sub-)fund sees large net inflows and is revised downward in the event of large net outflows. This adjustment is applied uniformly to all subscriptions and redemptions for the trading day in question. If a performance-based fee applies for the (sub-)fund, the calculation is based on the original net asset value.

The Management Company has established a swing pricing committee that determines the swing factors for each individual (sub-)fund. These swing factors indicate the extent of the net asset value adjustment. The swing pricing committee takes into account the following factors in particular:

- bid-ask spread (fixed-price element),
- impacts on the market (impacts of the transactions on the price),
- additional costs that are incurred as a result of trading activities for the investments.

The appropriateness of the applied swing factors, the operational decisions made in connection with the swing pricing (including the swing threshold), the extent of the adjustment, and the affected (sub-)funds are reviewed at regular intervals.

The amount of the swing pricing adjustment can therefore vary from one (sub-)fund to another and will not generally exceed 2% of the original net asset value per share. The net asset value adjustment is available upon request from the Management Company. In a market environment with extreme illiquidity, the Management Company can, however, increase the swing price adjustment to more than 2% of the original net asset value. Such an increase will be announced on the Management Company's website: www.dws.com.

As the mechanism should only be applied if significant (net) inflows or outflows are expected and it does not apply for normal trading volumes, it is assumed that the net asset value will only be adjusted occasionally.

This (sub-)fund can apply swing pricing and has done so in the reporting period, as its (net) inflows and outflows exceeded the relevant threshold previously defined. No swing pricing adjustment was applied that would have had an impact on the (sub-)fund's net asset value per share on the last day of the reporting period.

Annual report
DWS Invest Multi Opportunities

Investment objective and performance in the reporting period

DWS Invest Multi Opportunities seeks to generate above-average returns. To attain this objective, the sub-fund invests in equities, interest-bearing securities, certificates such as share, bond and index certificates, investment funds, derivatives, convertible and warrant-linked bonds whose warrants are on securities, warrants for securities, participation and dividend-right certificates, as well as in money market instruments and liquid assets. The portfolio manager weights these asset classes in the sub-fund portfolio based on its assessment of the market situation and can, if necessary, invest all of the sub-fund assets in one of these categories. Furthermore, the investment policy is also implemented through the use of suitable derivatives (financial instruments whose value depends on the performance of one or more underlyings, e.g., a security). Aspects considered when selecting investments include financial strength and also a focus on environmental, social and corporate governance (ESG) factors.*

In the reporting period from the beginning of January through the end of December 2025, the sub-fund recorded an appreciation of 7.5% per share (LC share class; BVI method; in euro).

"BVI method" performance, i.e., excluding the initial sales charge.
Past performance is not a guide to future results.

As of: December 31, 2025

Investment policy in the reporting period

On the equity side, the portfolio management mainly invested in industrial countries, especially in Europe and the United States.

In terms of sector allocation, the equity portfolio was generally broadly diversified. In its bond investments, the sub-fund was globally positioned in the reporting period. In terms of issuers, the portfolio management invested in corporate bonds and high-yield bonds, among others.

The capital market environment in 2025 was challenging. This was due in particular to geopolitical crises like the Russia-Ukraine war that has been ongoing since February 24, 2022, the escalated conflict in the Middle East, and the power struggle between the United States and China. Furthermore, the erratic swings in U.S.

trade and tariff policy generated additional uncertainty in the capital markets. On the other hand, the easing of monetary policy, which had begun previously, continued during the reporting period. The European Central Bank (ECB) thus lowered the key interest rate in four steps from 3.00% p.a. to 2.00% p.a. (deposit facility) while the U.S. Federal Reserve gradually reduced its key interest rates by 0.75 percentage points to a target range of 3.50% p.a. – 3.75% p.a.

Despite market uncertainty induced mainly by geopolitical factors, the international equity markets, as measured by the MSCI World, recorded appreciable price gains overall in 2025 amid sometimes considerable volatility. These gains were underpinned by the emerging easing of interest rates, increased investor confidence in artificial intelligence, as well as robust corporate profits. Among the markets in Western industrial countries, the DAX 40 in Germany posted significant gains, buoyed by factors such as the multi-billion-euro package of fiscal relief measures. The emerging markets, as measured by the MSCI Emerging Markets, were even able to outperform the industrial countries on a full-year basis through the end of 2025. In this respect, China's equity market was one of the stand-out performers and continued to recover significantly. This trend was supported by Chinese economic growth, which was stimulated by expansionary macroeconomic policies. However, the international stock exchanges were intermittently hit hard by the erratic swings in U.S. trade and tariff policy.

In the international bond markets, the yield curve in 2025 became increasingly steeper at the long end – although this was still moderate – following the previous normalization. In light of the more relaxed interest rate policy of the central banks, bond yields fell noticeably at the short end in some cases. Long-dated government bonds, on the other hand, came under pressure due, for example, to the rise in public deficits and, in some instances, had to accept price declines on a full-year basis, accompanied by rising bond yields. Corporate bonds, on the other hand, profited from their relatively high coupons as well as narrowing risk premiums.

In relation to its positions in opportunity-oriented asset classes, the portfolio management maintained its preference for equities over bonds; the sub-fund's investments in the reporting period recorded a positive performance overall.

The following risk management disclosures (other information) are unaudited and are not covered by the audit opinion on the annual report.

Composition of the reference portfolio (according to CSSF circular 11/512)
60% MSCI All Country World Index, in EUR, 40% iBoxx Euro Overall Index

Market risk exposure (value-at-risk) (according to CSSF circular 11/512)

Lowest market risk exposure	%	59.218
Highest market risk exposure	%	96.214
Average market risk exposure	%	80.169

The values-at-risk were calculated for the period from January 1, 2025, through December 31, 2025, using historical simulation with a 99% confidence level, a 10-day holding period and an effective historical observation period of one year. The risk in a reference portfolio that does not contain derivatives is used as the measurement benchmark. Market risk is the risk to the fund's assets arising from an unfavorable change in market prices. The Company determines the potential market risk by means of the **relative value-at-risk approach** as defined in CSSF circular 11/512.

In the reporting period, the average leverage effect from the use of derivatives was 0.4, whereby the total of the nominal amounts of the derivatives in relation to the fund's assets was used for the calculation (sum-of-notional approach).

The gross exposure generated via derivatives pursuant to point 40 a) of the "Guidelines on ETFs and other UCITS issues" of the European Securities and Markets Authority (ESMA) totaled EUR 71 593 849.21 as of the reporting date. Does not include any forward currency transactions entered into for currency hedging purposes at the level of the share classes.

Notes on valuation

Under the responsibility of the Board of Directors of the SICAV, the Management Company determines the net asset values per share and performs the valuation of the assets of the fund. The basic provision of price data and price validation are performed in accordance with the method introduced by the Board of Directors of the SICAV on the basis of the legal and regulatory requirements or the principles for valuation methods defined in the SICAV's prospectus.

If no trading prices are available, prices are determined with the aid of valuation models (derived market values) which are agreed between State Street Bank International GmbH, Luxembourg Branch, as external price service provider and the Management Company and which are based as far as possible on market parameters. This procedure is subject to an ongoing monitoring process. The plausibility of price information from third parties is checked through other pricing sources, model calculations or other suitable procedure.

Assets reported in this report are not valued at derived market values.

The management fee / all-in fee rates in effect as of the reporting date for the investment fund units held in the securities portfolio are shown in parentheses. A plus sign means that a performance-based fee may also be charged. As the investment fund held units of other investment funds (target funds) in the reporting period, further costs, charges and fees may have been incurred at the level of these individual target funds.

Footnotes

* Floating interest rate.
** The prepaid placement fee is amortized over a period of three years (as specified in article 13 (f) of the general section of the fund's management regulations).
*** Does not include positions with a negative balance, if such exist.

BVI total expense ratio (TER)

The total expense ratio for the share classes was:

Class AUD LCH 1.28% p.a.,	Class AUD LDMH 1.29% p.a.,
Class RMB LDMH 1.28% p.a.,	Class FC 0.71% p.a.,
Class FD 0.70% p.a.,	Class LC 1.26% p.a.,
Class LD 1.26% p.a.,	Class LDM 1.17% p.a.,
Class LDQ 1.26% p.a.,	Class NC 1.76% p.a.,
Class NDQ 1.76% p.a.,	Class PFC 2.08% p.a.,
Class PFDQ 2.15% p.a.,	Class TFC 0.72% p.a.,
Class TFD 0.66% p.a.,	Class GBP CH RD 0.71% p.a.,
Class HKD LDMH 1.29% p.a.,	Class SEK LCH 1.29% p.a.,
Class SGD LDMH 1.28% p.a.,	Class USD FCH 0.74% p.a.,
Class USD LCH 1.29% p.a.,	Class USD LDMH 1.29% p.a.,
Class USD RDMH 0.55% p.a.,	Class USD TFCH 0.73% p.a.

The TER expresses total expenses and fees (excluding transaction costs) as a percentage of a fund's average net assets in relation to the respective share class within a fiscal year.

Further costs, charges and fees were incurred at the level of the target funds. The fund invested more than 20% of its assets in target funds. If the target funds publish a TER themselves, this will be taken into account at fund level (synthetic TER). If a TER is not published at target fund level, the all-in fee / management fee will be used for the calculation. The synthetic TER was:

Class AUD LCH 1.48% p.a.,	Class AUD LDMH 1.49% p.a.,
Class RMB LDMH 1.47% p.a.,	Class FC 0.91% p.a.,
Class FD 0.90% p.a.,	Class LC 1.46% p.a.,
Class LD 1.46% p.a.,	Class LDM 1.37% p.a.,
Class LDQ 1.46% p.a.,	Class NC 1.96% p.a.,
Class NDQ 1.96% p.a.,	Class PFC 2.28% p.a.,
Class PFDQ 2.35% p.a.,	Class TFC 0.92% p.a.,
Class TFD 0.86% p.a.,	Class GBP CH RD 0.91% p.a.,
Class HKD LDMH 1.48% p.a.,	Class SEK LCH 1.48% p.a.,
Class SGD LDMH 1.48% p.a.,	Class USD FCH 0.94% p.a.,
Class USD LCH 1.49% p.a.,	Class USD LDMH 1.49% p.a.,
Class USD RDMH 0.74% p.a.,	Class USD TFCH 0.93% p.a.

As well, the additional income from securities lending resulted in a performance-based fee of

Class AUD LCH 0.004% p.a.,	Class AUD LDMH 0.006% p.a.,
Class RMB LDMH 0.006% p.a.,	Class FC 0.006% p.a.,
Class FD 0.006% p.a.,	Class LC 0.006% p.a.,
Class LD 0.006% p.a.,	Class LDM 0.003% p.a.,
Class LDQ 0.006% p.a.,	Class NC 0.006% p.a.,
Class NDQ 0.006% p.a.,	Class PFC 0.006% p.a.,
Class PFDQ 0.006% p.a.,	Class TFC 0.004% p.a.,
Class TFD 0.006% p.a.,	Class GBP CH RD 0.006% p.a.,
Class HKD LDMH 0.006% p.a.,	Class SEK LCH 0.006% p.a.,
Class SGD LDMH 0.006% p.a.,	Class USD FCH 0.006% p.a.,
Class USD LCH 0.006% p.a.,	Class USD LDMH 0.006% p.a.,
Class USD RDMH 0.006% p.a.,	Class USD TFCH 0.006% p.a.

of the fund's average net assets in relation to the respective share class.

Transaction costs

The transaction costs paid in the reporting period amounted to EUR 35 456.09.

The transaction costs include all costs that were reported or settled separately for the account of the fund in the reporting period and are directly connected to the purchase or sale of assets. Any financial transaction taxes paid are included in the calculations.

Statement of changes in net assets 2025

I.	**Value of the fund's net assets at the beginning of the fiscal year**	**EUR**	**271 569 787.86**
1.	Distribution for the previous year	EUR	-3 818 587.84
2.	Net outflows[2]	EUR	-33 676 253.37

Transactions processed for the account of the fund's assets via closely related companies (based on major holdings of the Deutsche Bank Group)

The share of transactions conducted for the account of the fund's assets via brokers that are closely related companies and persons (share of five percent and above), amounted to 0.08 percent of all transactions. The total volume was EUR 1 165 282.39.

Placement fee / dilution adjustment

In the reporting period, the fund paid a placement fee of 2.9% of the fund's net assets to the distributor. This fee was calculated on the subscription date. The specified placement fee serves in particular as remuneration for distribution. The gross amount of the placement fee was paid in a single payment on the subscription date and simultaneously recognized in the fund's net assets as prepaid expenses. These are amortized on a daily basis over a period of three years from the date of subscription. The remaining position for prepaid expenses per share on each valuation date is calculated on a daily basis by multiplying the net assets of the fund by a factor. The relevant factor is determined through straight-line reduction of the placement fee by a certain percentage on a daily basis over three years from the subscription date. The prepaid expenses position fluctuates during the three years from the subscription date of the fund, since it depends on both the fund's net assets and the predetermined factor.

In addition, a dilution adjustment of up to 3% based on the gross redemption amount was charged for the benefit of the fund's net assets in the reporting period (to be paid by the shareholder).

Further details on the placement fee and the dilution adjustment can be found in the corresponding section of the fund's sales prospectus.

Annual report
DWS Invest Net Zero Transition

Investment objective and performance in the reporting period

The objective of the investment policy is to generate capital appreciation and surpass the performance of the benchmark (MSCI ACWI Climate Change Index). To this end, at least 90% of the sub-fund's assets are invested in equities worldwide. Up to 30% of the sub-fund's assets may be invested in equities of companies that have their registered offices in an emerging-market country or conduct their principal business activity in emerging-market countries, or which, as holding companies, predominantly hold interests in companies registered in an emerging-market country. In line with the promoted environmental and social characteristics, the sub-fund predominantly selects companies that (i) have already set themselves decarbonization targets or are in the process of doing so, and/or (ii) as providers of climate solutions (such as companies from the fields of renewable energy or energy-efficient technologies) contribute to achieving Net Zero with their products and services, and/or (iii) are companies with which DWS is working toward Net Zero within the framework of its engagement policies. Aspects considered when selecting suitable investments include a focus on environmental, social and corporate governance (ESG) standards. At least 80% of the sub-fund's assets are invested primarily in investments that fulfill the defined standards for the promoted environmental and social characteristics and the carbon emission reduction strategy.*

DWS Invest Net Zero Transition

Performance of share classes vs. benchmark (in EUR)

Share class	ISIN	1 year	Since inception[1]
Class LC	LU2708164285	12.5%	44.6%
Class FC	LU2708164103	13.5%	47.1%
Class LD	LU2708164368	12.5%	44.6%
Class TFC	LU2708164442	13.5%	47.1%
Class XC	LU2708164525	14.0%	48.4%
MSCI ACWI Climate Change Index (RI)		7.5%	42.7%

"BVI method" performance, i.e., excluding the initial sales charge.
Past performance is not a guide to future results.

As of: December 31, 2025

In the reporting period from the beginning of January through the end of December 2025, the sub-fund recorded an appreciation of 12.5% per share (LC share class; BVI method). Its benchmark (MSCI ACWI Climate Change Index) recorded a gain of 7.5% in the same period (both percentages in euro terms).

Investment policy in the reporting period

In the reporting period, the sub-fund pursued long-term equity selection based on comprehensive fundamental analysis, with a focus on business model quality, management, organic growth, balance sheet strength and valuation. A universe that can be invested in was defined based on the global equity universe and according to CTB criteria. There was a focus on leading companies in the climate transformation as well as on providers of climate solutions, complemented by ESG filters and CTB exclusions. The portfolio was constructed with reference to a benchmark, with 40-60 focused quality equities, clear decarbonization requirements, a high investment ratio and controlled use of derivatives.

The capital market environment in 2025 was challenging. This was due in particular to geopolitical crises like the Russia-Ukraine war that has been ongoing since February 24, 2022, the escalated conflict in the Middle East, and the power struggle between the United States and China. Furthermore, the erratic swings in U.S. trade and tariff policy generated additional uncertainty in the capital markets. On the other hand, the easing of monetary policy, which had begun previously, continued during the reporting period. The European Central Bank (ECB) thus lowered the key interest rate in four steps from 3.00% p.a. to 2.00% p.a. (deposit facility) while the U.S. Federal Reserve gradually reduced its key interest rates by 0.75 percentage points to a target range of 3.50% p.a. – 3.75% p.a.

Despite market uncertainty induced mainly by geopolitical factors, the international equity markets, as measured by the MSCI World, recorded appreciable price gains overall in 2025 amid sometimes considerable volatility. These gains were underpinned by the emerging easing of interest

rates, increased investor confidence in artificial intelligence, as well as robust corporate profits. Among the markets in Western industrial countries, the DAX 40 in Germany posted significant gains, buoyed by factors such as the multi-billion-euro package of fiscal relief measures. The emerging markets, as measured by the MSCI Emerging Markets, were even able to outperform the industrial countries on a full-year basis through the end of 2025. In this respect, China's equity market was one of the stand-out performers and continued to recover significantly. This trend was supported by Chinese economic growth, which was stimulated by expansionary macroeconomic policies. However, the international stock exchanges were intermittently hit hard by the erratic swings in U.S. trade and tariff policy. Against this backdrop, the securities contained in the portfolio also recorded a positive relative performance overall in the reporting period.

The main performance drivers were very successful stockpicking as well as positive effects from the regional allocation. The sector allocation, however, made a slightly negative contribution.

A moderate overweighting in industrials as well as an underweighting in financials detracted from the relative performance. However, an overweighting of the health care sector as well as underweightings in real estate, consumer discretionaries and consumer staples, which were affected by weaker fundamental trends, had a positive effect.

The underweighting of Korea, Canada and Switzerland had a particularly negative impact. However, multiple positions made positive contributions: The underweighting of the United States relative to Europe proved advantageous, as too did the overweighting of Taiwan and China, which benefited from a recovery in the technology sector as well as from fiscal support measures.

Stock picking was the key performance driver. Within the technology sector, analog semiconductors and software detracted from performance, while low exposure to high-performing memory manufacturers additionally had a negative impact. In the basic materials sector, industrial gas manufacturers and packaging manufacturers dampened performance as a result of weak consumption.
