In contrast, the financial sector made positive contributions, driven by European banks, which benefited from a stable interest rate environment and robust economic activity. Stockpicking in the industrial sector was also successful: Companies from the solar energy sector well as service providers for data center and AI infrastructure benefited from the strong structural growth in demand. In the health care sector, European pharma companies – supported by continued dynamic demand for GLP-1 therapies and a broad pipeline of allergy medications – contributed substantially to the outperformance.

Composition of the reference portfolio (according to CSSF circular 11/512)
MSCI ACWI CLIMATE CHANGE NR Index in EUR

Market risk exposure (value-at-risk) (according to CSSF circular 11/512)

Lowest market risk exposure	%	89.768
Highest market risk exposure	%	108.302
Average market risk exposure	%	99.943

The values-at-risk were calculated for the period from January 1, 2025, through December 31, 2025, using historical simulation with a 99% confidence level, a 10-day holding period and an effective historical observation period of one year. The risk in a reference portfolio that does not contain derivatives is used as the measurement benchmark. Market risk is the risk to the fund's assets arising from an unfavorable change in market prices. The Company determines the potential market risk by means of the **relative value-at-risk approach** as defined in CSSF circular 11/512.

In the reporting period, the average leverage effect from the use of derivatives was 0.2, whereby the total of the nominal amounts of the derivatives in relation to the fund's assets was used for the calculation (sum-of-notional approach).

The gross exposure generated via derivatives pursuant to point 40 a) of the "Guidelines on ETFs and other UCITS issues" of the European Securities and Markets Authority (ESMA) totaled EUR 975 877.66 as of the reporting date.

Notes on valuation

Under the responsibility of the Board of Directors of the SICAV, the Management Company determines the net asset values per share and performs the valuation of the assets of the fund. The basic provision of price data and price validation are performed in accordance with the method introduced by the Board of Directors of the SICAV on the basis of the legal and regulatory requirements or the principles for valuation methods defined in the SICAV's prospectus.

If no trading prices are available, prices are determined with the aid of valuation models (derived market values) which are agreed between State Street Bank International GmbH, Luxembourg Branch, as external price service provider and the Management Company and which are based as far as possible on market parameters. This procedure is subject to an ongoing monitoring process. The plausibility of price information from third parties is checked through other pricing sources, model calculations or other suitable procedure.

Assets reported in this report are not valued at derived market values.

BVI total expense ratio (TER)

The total expense ratio for the share classes was:

Class FC 0.91% p.a.,
Class LC 1.78% p.a.,
Class LD 1.78% p.a.,
Class TFC 0.91% p.a.,
Class XC 0.45% p.a.

The TER expresses total expenses and fees (excluding transaction costs) as a percentage of a fund's average net assets in relation to the respective share class within a fiscal year.

Transaction costs

The transaction costs paid in the reporting period amounted to EUR 6 895.38.

The transaction costs include all costs that were reported or settled separately for the account of the fund in the reporting period and are directly connected to the purchase or sale of assets. Any financial transaction taxes paid are included in the calculations.

Statement of changes in net assets 2025

Transactions processed for the account of the fund's assets via closely related companies (based on major holdings of the Deutsche Bank Group)

The share of transactions conducted in the reporting period for the account of the fund's assets via brokers that are closely related companies and persons (share of 5% and above) amounted to 0.00% of all transactions. The total volume was EUR 73.77.

Placement fee / dilution adjustment

In the reporting period, the fund paid a placement fee of 2.9% of the fund's net assets to the distributor. This fee was calculated on the subscription date. The specified placement fee serves in particular as remuneration for distribution. The gross amount of the placement fee was paid in a single payment on the subscription date and simultaneously recognized in the fund's net assets as prepaid expenses. These are amortized on a daily basis over a period of three years from the date of subscription. The remaining position for prepaid expenses per share on each valuation date is calculated on a daily basis by multiplying the net assets of the fund by a factor. The relevant factor is determined through straight-line reduction of the placement fee by a certain percentage on a daily basis over three years from the subscription date. The prepaid expenses position fluctuates during the three years from the subscription date of the fund, since it depends on both the fund's net assets and the predetermined factor.

In addition, a dilution adjustment of up to 3% based on the gross redemption amount was charged for the benefit of the fund's net assets in the reporting period (to be paid by the shareholder).

Further details on the placement fee and the dilution adjustment can be found in the corresponding section of the fund's sales prospectus.

DWS Invest Net Zero Transition

Swing pricing

Swing pricing is a mechanism that is intended to protect shareholders from the negative effects of trading costs arising from subscription and redemption activities. Extensive subscriptions and redemptions within a (sub-)fund may lead to a dilution of the assets of this (sub-)fund, as the net asset value sometimes does not reflect all trading and other costs that are incurred when the portfolio manager must buy or sell securities in order to manage large (net) inflows or outflows in the (sub-)fund. In addition to these costs, substantial order volumes can lead to market prices that are significantly below or above the market prices that apply under ordinary circumstances.

To enhance the investor protection of existing shareholders, a swing pricing mechanism can be applied to compensate for trading costs and other expenses if the aforementioned cumulative (net) inflows or outflows should have a material impact on the (sub-)fund on a valuation date and exceed a predetermined threshold (partial swing pricing). This mechanism can be applied across all (sub-)funds. If swing pricing is introduced for a particular (sub-)fund, this will be disclosed in the special section of the sales prospectus.

The Management Company of the fund will predefine thresholds for the application of the swing pricing mechanism, based, among other things, on current market conditions, available market liquidity and estimated dilution costs. In accordance with these thresholds, the adjustment itself will be initiated automatically. If the (net) inflows or outflows exceed the swing threshold, the net asset value is revised upward if the (sub-)fund sees large net inflows and is revised downward in the event of large net outflows. This adjustment is applied uniformly to all subscriptions and redemptions for the trading day in question. If a performance-based fee applies for the (sub-)fund, the calculation is based on the original net asset value.

The Management Company has established a swing pricing committee that determines the swing factors for each individual (sub-)fund. These swing factors indicate the extent of the net asset value adjustment. The swing pricing committee takes into account the following factors in particular:

- bid-ask spread (fixed-price element),
- impacts on the market (impacts of the transactions on the price),
- additional costs that are incurred as a result of trading activities for the investments.

The appropriateness of the applied swing factors, the operational decisions made in connection with the swing pricing (including the swing threshold), the extent of the adjustment, and the affected (sub-)funds are reviewed at regular intervals.

The amount of the swing pricing adjustment can therefore vary from one (sub-)fund to another and will not generally exceed 2% of the original net asset value per share. The net asset value adjustment is available upon request from the Management Company. In a market environment with extreme illiquidity, the Management Company can, however, increase the swing price adjustment to more than 2% of the original net asset value. Such an increase will be announced on the Management Company's website: www.dws.com.

As the mechanism should only be applied if significant (net) inflows or outflows are expected and it does not apply for normal trading volumes, it is assumed that the net asset value will only be adjusted occasionally.

This (sub-)fund can apply swing pricing and has done so in the reporting period, as its (net) inflows and outflows exceeded the relevant threshold previously defined. No swing pricing adjustment was applied that would have had an impact on the (sub-)fund's net asset value per share on the last day of the reporting period.

Annual report
DWS Invest Net Zero Transition Euro Corporate Bonds

(formerly: DWS Invest Low Carbon Corporate Bonds)

Investment objective and performance in the reporting period

The sub-fund DWS Invest Net Zero Transition Euro Corporate Bonds seeks to generate an above-average return that exceeds the benchmark (Bloomberg MSCI Euro Corporate SRI PAB Index). To achieve this, it invests in interest-bearing debt securities issued by companies worldwide that are very low carbon emitters, as well as in corporate issuers that are transitioning to low-emission operations. Within the scope of the promoted environmental and social characteristics, the sub-fund endeavors to reduce carbon emissions with a view to achieving the long-term global warming objectives of the Paris Agreement adopted under the United Nations Framework Convention on Climate Change. At least 75% of the sub-fund's assets are invested worldwide in interest-bearing securities that have an investment-grade rating at the time of acquisition.*

The sub-fund DWS Invest Net Zero Transition Euro Corporate Bonds recorded an appreciation of 2.5% per share (LD share class; BVI method) in the 2025 fiscal year but underperformed its benchmark, which returned +3.0% (both percentages in euro terms).

Investment policy in the reporting period

The capital market environment in 2025 was challenging. This was due in particular to geopolitical crises like the Russia-Ukraine war that has been ongoing since February 24, 2022, the escalated conflict in the Middle East, and the power struggle between the United States and China. Furthermore, the erratic swings in U.S. trade and tariff policy generated additional uncertainty in the capital markets. On the other hand, the easing of monetary policy, which had begun previously, continued during the reporting period. The European Central Bank (ECB) thus lowered the key interest rate in four steps from 3.00% p.a. to 2.00% p.a. (deposit facility) while the U.S. Federal Reserve gradually reduced its key interest rates by 0.75 percentage points to a target range of 3.50% p.a. – 3.75% p.a.

In the international bond markets, the yield curve in 2025 became increasingly steeper at the long end – although this was still moderate – following the previous normalization. In light of the more relaxed interest rate policy of the central banks, bond yields fell noticeably at the short end in some cases. Long-dated government bonds, on the other hand, came under pressure due, for example, to the rise in public deficits and, in some instances, had to accept price declines on a full-year basis, accompanied by rising bond yields. Corporate bonds, on the other hand, profited from their relatively high coupons as well as narrowing risk premiums.

In line with its investment strategy, the sub-fund continued to be almost fully invested in corporate bonds, including in bonds issued by financial service providers. Most of the issues held in the bond portfolio had an investment-grade rating (BBB- or better from the leading rating agencies) as of the reporting date. Like in previous years, the investment focus in terms of regional allocation was on interest-bearing instruments from the United States and Europe. Overall, the sub-fund's basic orientation in 2025 remained focused on exploiting opportunities in the market for corporate bonds with low carbon intensity, while simultaneously managing risks through a broadly diversified allocation and careful selection of issuers.

The overweighting in industrials as well as the overweighting in telecommunications had a particularly positive impact and these contributed significantly to the relative performance during the course of the year. In addition, the bonds picked in the BBB segment recorded an above-average performance. At regional level, the underweighting of German issuers as well as the significant underweighting of French corporate bonds supported the sub-fund's performance, while the overweighting of Australian issuers almost made a positive contribution to the result.

In contrast, the underweighting of the financial sector, especially banks (which were among the strongest market segments in 2025), detracted from performance, as too did the, on average, slightly longer duration compared to the benchmark. This also explains why the sub-fund fell short of its benchmark.

The following risk management disclosures (other information) are unaudited and are not covered by the audit opinion on the annual report.

Composition of the reference portfolio (according to CSSF circular 11/512)
Solactive ISS Paris Aligned Select Euro Corporate IG Index (January 1, 2025, through April 24, 2025)

Market risk exposure (value-at-risk) (according to CSSF circular 11/512)

Lowest market risk exposure	%	101.139
Highest market risk exposure	%	129.543
Average market risk exposure	%	113.797

The values-at-risk were calculated for the period from January 1, 2025, through April 24, 2025, using historical simulation with a 99% confidence level, a 10-day holding period and an effective historical observation period of one year. The risk in a reference portfolio that does not contain derivatives is used as the measurement benchmark. Market risk is the risk to the fund's assets arising from an unfavorable change in market prices. The Company determines the potential market risk by means of the **relative value-at-risk approach** as defined in CSSF circular 11/512.

In the reporting period, the average leverage effect from the use of derivatives was 0.3, whereby the total of the nominal amounts of the derivatives in relation to the fund's assets was used for the calculation (sum-of-notional approach).

Composition of the reference portfolio (according to CSSF circular 11/512)
Bloomberg MSCI Euro Corporate SRI PAB Index (April 25, 2025, through December 31, 2025)

Notes on valuation

Under the responsibility of the Board of Directors of the SICAV, the Management Company determines the net asset values per share and performs the valuation of the assets of the fund. The basic provision of price data and price validation are performed in accordance with the method introduced by the Board of Directors of the SICAV on the basis of the legal and regulatory requirements or the principles for valuation methods defined in the SICAV's prospectus.

If no trading prices are available, prices are determined with the aid of valuation models (derived market values) which are agreed between State Street Bank International GmbH, Luxembourg Branch, as external price service provider and the Management Company and which are based as far as possible on market parameters. This procedure is subject to an ongoing monitoring process. The plausibility of price information from third parties is checked through other pricing sources, model calculations or other suitable procedure.

Assets reported in this report are valued to a minor extent at derived market values.

Footnotes

* Floating interest rate.

BVI total expense ratio (TER)

The total expense ratio for the share classes was:

Class FC 0.74% p.a.,
Class LD 1.08% p.a.,
Class XD 0.28% p.a.,
Class USD XCH 0.30% p.a.
Class FD 0.73% p.a.,
Class TFD 0.73% p.a.,
Class USD LDH 1.11% p.a.,

The TER expresses total expenses and fees (excluding transaction costs) as a percentage of a fund's average net assets in relation to the respective share class within a fiscal year.

Transaction costs

The transaction costs paid in the reporting period amounted to EUR 9 919.91.

The transaction costs include all costs that were reported or settled separately for the account of the fund in the reporting period and are directly connected to the purchase or sale of assets. Any financial transaction taxes paid are included in the calculations.

Statement of changes in net assets 2025

I.	**Value of the fund's net assets at the beginning of the fiscal year**	**EUR**	**43 410 802.21**
1.	Distribution for the previous year	EUR	-927 061.05

Transactions processed for the account of the fund's assets via closely related companies (based on major holdings of the Deutsche Bank Group)

The share of transactions conducted for the account of the fund's assets via brokers that are closely related companies and persons (share of five percent and above), amounted to 1.50 percent of all transactions. The total volume was EUR 4 505 455.35.

Swing pricing

Swing pricing is a mechanism that is intended to protect shareholders from the negative effects of trading costs arising from subscription and redemption activities.

Extensive subscriptions and redemptions within a (sub-)fund may lead to a dilution of the assets of this (sub-)fund, as the net asset value sometimes does not reflect all trading and other costs that are incurred when the portfolio manager must buy or sell securities in order to manage large (net) inflows or outflows in the (sub-)fund. In addition to these costs, substantial order volumes may lead to market prices that are considerably below or above the market prices that apply under normal circumstances.

To enhance the investor protection of existing shareholders, a swing pricing mechanism can be applied to compensate for trading costs and other expenses if the aforementioned cumulative (net) inflows or outflows should have a material impact on the (sub-)fund on a valuation date and exceed a predetermined threshold (partial swing pricing). This mechanism can be applied across all (sub-)funds. If swing pricing is introduced for a particular (sub-)fund, this will be disclosed in the special section of the sales prospectus.
The Management Company of the fund will predefine thresholds for the application of the swing pricing mechanism, based, among other things, on current market conditions, available market liquidity and estimated dilution costs. In accordance with these thresholds, the adjustment itself will be initiated automatically.

If the (net) inflows or outflows exceed the swing threshold, the net asset value is revised upward if the (sub-)fund sees large net inflows and is revised downward in the event of large net outflows. This adjustment is applied uniformly to all subscriptions and redemptions for the trading day in question. If a performance-based fee applies for the (sub-)fund, the calculation is based on the original net asset value.

The Management Company has established a swing pricing committee that determines the swing factors for each individual (sub-)fund. These swing factors indicate the extent of the net asset value adjustment. The swing pricing committee takes into account the following factors in particular:

– bid-ask spread (fixed-price element),
– impacts on the market (impacts of the transactions on the price),
– additional costs that are incurred as a result of trading activities for the investments.

The appropriateness of the applied swing factors, the operational decisions made in connection with the swing pricing (including the swing threshold), the extent of the adjustment, and the affected (sub-)funds are reviewed at regular intervals.

The amount of the swing pricing adjustment can therefore vary from one (sub-)fund to another and will not generally exceed 2% of the original net asset value per share.

The net asset value adjustment is available upon request from the Management Company. In a market environment with extreme illiquidity, the Management Company can, however, increase the swing price adjustment to more than 2% of the original net asset value. Such an increase will be announced on the Management Company's website: www.dws.com.

As the mechanism should only be applied if significant (net) inflows or outflows are expected and it does not apply for normal trading volumes, it is assumed that the net asset value will only be adjusted occasionally.

This (sub-)fund can apply swing pricing but has not done so in the reporting period, as its (net) inflows and outflows did not exceed the relevant threshold previously defined.

Annual report
DWS Invest Nomura Japan Growth

Investment objective and performance in the reporting period

In the reporting period from the beginning of January 2025 through the end of December 2025, DWS Invest Nomura Japan Growth, which invests in equities of Japanese companies, recorded an appreciation of 23.1% per share (JPY FC share class; BVI method; in JPY).

DWS Invest Nomura Japan Growth

Performance of share classes (in JPY)

Share class	ISIN	1 year	3 years	5 years
Class JPY FC	LU1342482384	23.1%	85.7%	84.1%
Class JPY MFC	LU2206602224	23.4%	87.3%	87.0%

"BVI method" performance, i.e., excluding the initial sales charge.
Past performance is not a guide to future results.

As of: December 31, 2025

Investment policy in the reporting period

In the first half of the year, the Japanese equity market was characterized by volatility and was influenced by rising long-term yields in the United States and announcements of more stringent U.S. export restrictions for semiconductors to China. However, there were repeated recovery phases, as the AI investment plans announced by major domestic technology companies were well received. In February, the market was impacted by the additional tariffs decreed by President Trump and also by the appreciation of the yen as a result of the anticipated, highly probable interest rate hike by the Bank of Japan (BOJ). The weakness persisted in March in light of uncertainty regarding U.S. trade policy and the situation in Ukraine. The market recovered in April when a temporary suspension of U.S. tariffs and a wave of announced share buyback programs invoked positive reactions. Investor sentiment improved further in May thanks to the prudent stance of the BOJ, advancements in tariff negotiations and share buybacks by large companies.

In the second half of the year, a telephone conversation between the U.S. president and the Chinese head of state eased tensions in the Middle East. At the same time, increasing expectations of rate cuts by the Fed supported the market and the TOPIX rose in the middle of the year. As of July, the market was boosted by tariff reduction agreements, growing expectations regarding the next government and strong profits by major U.S. cloud companies. The TOPIX reached new record highs in August and September. In October, political expectations surrounding the election of the president of the Liberal Democratic Party, the depreciation of the yen and the spillover effects of expected rate cuts in the United States provided a tailwind and the market surged.

Toward the end of the year, multiple corporate groups reported solid results for the third quarter (July through September), which supported the market in November. In December, the Policy Board of the BOJ increased the key interest rate by 0.25% in an environment that was characterized by expected interest rate cuts by the Fed and widespread investor interest in AI equities. As the Board did not signal further increases with any great emphasis, the step was received positively and the market remained in robust shape at the end of the year. In the year as a whole, trade policy, monetary policy, AI investments and the profits of large companies were the primary factors that determined the direction of the market.

Financials were in demand in the reporting period amid continued incremental interest rate increases by the Bank of Japan. In addition, non-ferrous metals and mining equities piqued buying interest in light of rising commodity prices. There was also more of a spotlight on equities from the construction industry, as the more tense supply-demand situation – driven by higher domestic investments and labor shortages – led to a significant improvement in profitability. Equities related to semiconductor manufacturing plants were also in demand amid high expectations surrounding AI and data centers. Value stocks ultimately performed much better than growth stocks, which was detrimental to the subfund as a growth-oriented vehicle.

With regard to sector structure, the electric appliances, foods, information & communication, transportation and pharmaceuticals sectors made a positive contribution to performance, while banks, non-ferrous metals, other

products, chemicals and the construction industry made a negative contribution.

At the level of individual stocks, the positions in Mitsui E&S, Marubeni, Toyota Tsusho, Mitsubishi Estate and Osaka Gas had a positive effect on performance, which the positions in SoftBank Group, Sysmex, Shin-Etsu Chemical, JEOL and Seven & I Holdings had a negative effect.

The sector-weight allocations were a result of the bottom-up stock selection. Accordingly, the sub-fund management did not deliberately weight specific sectors based on sectoral views. The sub-fund continued to be structurally overweight in sectors such as electric appliances and machinery. The main reason why the portfolio is tilted toward these sectors stems from the sub-fund's investment philosophy of investing in highly competitive companies that are able to maintain their competitiveness and achieve high profit growth over the medium to long term. In the context of the Japanese equity market, companies that possess strong competitiveness tend to be concentrated within export-oriented sectors such as electric appliances and machinery.

Looking at individual stocks, one of the best performance contributors was Mitsui E&S. The company's share price rose in the expectation that demand for cranes, which is usually strongest in Asia, would also rise in U.S business with harbor crane systems, as the geopolitical risks raised awareness of the necessity for such specialized cranes. In addition, business involving ships' engines benefited from environmental regulations, which provided a tailwind. Increasing momentum in favor of a revival of the Japanese shipbuilding industry had a positive effect, as this was reflected in investor expectations and boosted the share price.

One of the worst performance contributors, in contrast, was Sysmex. The share price tumbled after the company trimmed is profit forecast. The reasons for this were adjustments to warehouse stocks by the local distribution partner in China as a result of government measures to stem health care costs, as well as a temporary stoppage due to problems upgrading its core IT system in Japan.

A new position was established in Fujitsu. In the portfolio management's opinion, the robust demand for the DX series – driven by the renovation of core systems at private companies and the standardization of systems in local administrations – will continue into the foreseeable future. In this environment, the company is in a good starting position to be awarded major projects. The company further reorganized is hardware and international business and divested subsidiaries that were not part of the core business. At the same time, profitability in the core business of IT services improved due to price increases, relocation of development into its own organization and offshoring. Furthermore, the company expanded the number of high-margin projects, especially through its Uvance offering. Based on these factors, the portfolio management considered that an improvement in returns on equity (ROE) is to be expected in the medium-to long term and opened a position.

The following risk management disclosures (other information) are unaudited and are not covered by the audit opinion on the annual report.

Composition of the reference portfolio (according to CSSF circular 11/512)
Tokyo Stock Price (TOPIX) Index

Market risk exposure (value-at-risk) (according to CSSF circular 11/512)

Lowest market risk exposure	%	98.400
Highest market risk exposure	%	115.196
Average market risk exposure	%	105.110

The values-at-risk were calculated for the period from January 1, 2025, through December 31, 2025, using historical simulation with a 99% confidence level, a 10-day holding period and an effective historical observation period of one year. The risk in a reference portfolio that does not contain derivatives is used as the measurement benchmark. Market risk is the risk to the fund's assets arising from an unfavorable change in market prices. The Company determines the potential market risk by means of the **relative value-at-risk approach** as defined in CSSF circular 11/512.

In the reporting period, the average leverage effect from the use of derivatives was 0.0, whereby the total of the nominal amounts of the derivatives in relation to the fund's assets was used for the calculation (sum-of-notional approach).

The gross exposure generated via derivatives pursuant to point 40 a) of the "Guidelines on ETFs and other UCITS issues" of the European Securities and Markets Authority (ESMA) totaled JPY 0.00 as of the reporting date. Does not include any forward currency transactions entered into for currency hedging purposes at the level of the share classes.

Notes on valuation

Under the responsibility of the Board of Directors of the SICAV, the Management Company determines the net asset values per share and performs the valuation of the assets of the fund. The basic provision of price data and price validation are performed in accordance with the method introduced by the Board of Directors of the SICAV on the basis of the legal and regulatory requirements or the principles for valuation methods defined in the SICAV's prospectus.

If no trading prices are available, prices are determined with the aid of valuation models (derived market values) which are agreed between State Street Bank International GmbH, Luxembourg Branch, as external price service provider and the Management Company and which are based as far as possible on market parameters. This procedure is subject to an ongoing monitoring process. The plausibility of price information from third parties is checked through other pricing sources, model calculations or other suitable procedure.

Assets reported in this report are not valued at derived market values.

V. Net gain/loss for the shortened fiscal year		**JPY**	**1 653 925 668.00**

BVI total expense ratio (TER)

The total expense ratio for the share classes was:

Class JPY FC 0.85% p.a., Class JPY MFC 0.56% p.a.

The TER expresses total expenses and fees (excluding transaction costs) as a percentage of a fund's average net assets in relation to the respective share class within a fiscal year.

Transaction costs

The transaction costs paid in the reporting period amounted to JPY 14 634 467.00.

The transaction costs include all costs that were reported or settled separately for the account of the fund in the reporting period and are directly connected to the purchase or sale of assets. Any financial transaction taxes paid are included in the calculations.

Statement of changes in net assets 2025

Transactions processed for the account of the fund's assets via closely related companies (based on major holdings of the Deutsche Bank Group)

The share of transactions conducted in the reporting period for the account of the fund's assets via brokers that are closely related companies and persons (share of 5% and above) amounted to 0.00% of all transactions. The total volume was JPY 0.00.

Annual report
DWS Invest SDG Corporate Bonds

Investment objective and performance in the reporting period

The sub-fund DWS Invest SDG Corporate Bonds seeks to generate above-average returns. To this end, it invests predominantly in interest-bearing securities of corporate issuers (private and public-private issuers) worldwide that make a positive contribution to the United Nations Sustainable Development Goals (UN SDGs) or that finance special projects relating to environmental, social and corporate governance issues (ESG issues).* At least 70% of the sub-fund's assets are invested worldwide in interest-bearing securities that have an investment-grade rating at the time of the acquisition. Derivatives may be used for investment purposes.

In the 2025 fiscal year, the sub-fund DWS Invest SDG Corporate Bonds achieved an appreciation of 3.5% per share (LC share class, in euro; BVI method).

DWS Invest SDG Corporate Bonds

Performance of share classes (in EUR)

Share class	ISIN	1 year	3 years	Since inception[1]
Class LC	LU2442814435	3.5%	19.1%	7.0%

"BVI method" performance, i.e., excluding the initial sales charge.
Past performance is not a guide to future results.

As of: December 31, 2025

Investment policy in the reporting period

The capital market environment in 2025 was challenging. This was due in particular to geopolitical crises like the Russia-Ukraine war that has been ongoing since February 24, 2022, the escalated conflict in the Middle East, and the power struggle between the United States and China. Furthermore, the erratic swings in U.S. trade and tariff policy generated additional uncertainty in the capital markets. On the other hand, the easing of monetary policy, which had begun previously, continued during the reporting period. The European Central Bank (ECB) thus lowered the key interest rate in four steps from 3.00% p.a. to 2.00% p.a. (deposit facility) while the U.S. Federal Reserve gradually reduced its key interest rates by 0.75 percentage points to a target range of 3.50% p.a. – 3.75% p.a.

In the international bond markets, the yield curve in 2025 became increasingly steeper at the long end – although this was still moderate – following the previous normalization. In light of the more relaxed interest rate policy of the central banks, bond yields fell noticeably at the short end in some cases. Long-dated government bonds, on the other hand, came under pressure due, for example, to the rise in public deficits and, in some instances, had to accept price declines on a full-year basis, accompanied by rising bond yields. Corporate bonds, on the other hand, profited from their relatively high coupons as well as narrowing risk premiums.

With its investments, the portfolio management assured a balanced allocation across sectors of industry and rating categories. Foreign-currency positions were hedged through derivatives. Due to – what the portfolio management considered to be – attractive interest rate premiums, bonds that had a BBB rating from the leading rating agencies were overweighted. Sustainability-linked bonds (SLBs – bonds from companies with medium-term targets in the ESG field) from the high-yield segment were added to the portfolio. Alongside green bonds, SLBs were the sub-fund's investment focus; however, the sub-fund was not immune to the developments on the volatile bond markets.

In terms of sectors, financials, transportation and capital goods made positive contributions to performance. In addition, bond picking was successful to an above-average extent among bonds with lower ratings (BBB- and below). Hedging instruments in the form of derivatives also made a stabilizing contribution to the sub-fund's performance in the volatile market phases. The regional positioning in Swedish and Southern European bonds also had a bolstering effect, as these made a positive contribution to performance. However, the lower weighting in the consumer goods sector, both cyclical and non-cyclical, detracted from performance. The oil and gas sector,

which was underweighted in the portfolio for sustainability reasons, was a drag on the sub-fund's performance, as too was the lower weighting in the utilities sector. In regional terms, the positioning in U.S. and British bonds detracted from the investment result.

Other information – Not covered by the audit opinion on the annual report

Information on the environmental and/or social characteristics

This product reported in accordance with Article 8(1) of Regulation (EU) 2019/2088 on sustainability-related disclosures in the financial services sector ("SFDR").

Presentation and content requirements for periodic reports for financial products as referred to in Article 8(1) of Regulation (EU) 2019/2088 (SFDR) and in Article 6 of Regulation (EU) 2020/852 (Taxonomy) are available at the back of this report.

* Further details are set out in the current sales prospectus.

The format used for complete dates in security names in the investment portfolio is "day month year".

The following risk management disclosures (other information) are unaudited and are not covered by the audit opinion on the annual report:

Presentation of the maximum limit (according to CSSF circular 11/512)
14.14% of portfolio value

Market risk exposure (value-at-risk) (according to CSSF circular 11/512)

Lowest market risk exposure	%	0.013
Highest market risk exposure	%	0.018
Average market risk exposure	%	0.015

The values-at-risk were calculated for the period from January 1, 2025, through December 31, 2025, using historical simulation with a 99% confidence level, a 10-day holding period and an effective historical observation period of one year. The risk in a reference portfolio that does not contain derivatives is used as the measurement benchmark. Market risk is the risk to the fund's assets arising from an unfavorable change in market prices. The Company determines the potential market risk by means of the **absolute value-at-risk approach** as defined in CSSF circular 11/512.

In the reporting period, the average leverage effect from the use of derivatives was 0.2, whereby the total of the nominal amounts of the derivatives in relation to the fund's assets was used for the calculation (sum-of-notional approach).

The gross exposure generated via derivatives pursuant to point 40 a) of the "Guidelines on ETFs and other UCITS issues" of the European Securities and Markets Authority (ESMA) totaled EUR 3 353 707.69 as of the reporting date.

Notes on valuation

Under the responsibility of the Board of Directors of the SICAV, the Management Company determines the net asset values per share and performs the valuation of the assets of the fund. The basic provision of price data and price validation are performed in accordance with the method introduced by the Board of Directors of the SICAV on the basis of the legal and regulatory requirements or the principles for valuation methods defined in the SICAV's prospectus.

If no trading prices are available, prices are determined with the aid of valuation models (derived market values) which are agreed between State Street Bank International GmbH, Luxembourg Branch, as external price service provider and the Management Company and which are based as far as possible on market parameters. This procedure is subject to an ongoing monitoring process. The plausibility of price information from third parties is checked through other pricing sources, model calculations or other suitable procedure.

Assets reported in this report are not valued at derived market values.

V.	**Net gain/loss for the fiscal year**		**EUR**	**635 702.02**

[1] This includes primarily income from the release of excess accruals in the amount of EUR 1 555.84.

BVI total expense ratio (TER)

The total expense ratio for the share classes was:

Class FC 0.51% p.a., Class LC 0.62% p.a.,
Class TFC 0.51% p.a., Class XC 0.28% p.a.

The TER expresses total expenses and fees (excluding transaction costs) as a percentage of a fund's average net assets in relation to the respective share class within a fiscal year.

Transaction costs

The transaction costs paid in the reporting period amounted to EUR 3 560.08.

The transaction costs include all costs that were reported or settled separately for the account of the fund in the reporting period and are directly connected to the purchase or sale of assets. Any financial transaction taxes paid are included in the calculations.

Statement of changes in net assets 2025

I.	**Value of the fund's net assets at the beginning of the fiscal year**	**EUR**	**10 485 023.39**

Transactions processed for the account of the fund's assets via closely related companies (based on major holdings of the Deutsche Bank Group)

The share of transactions conducted for the account of the fund's assets via brokers that are closely related companies and persons (share of five percent and above), amounted to 2.69 percent of all transactions. The total volume was EUR 2 018 336.62.

Placement fee / dilution adjustment

In the reporting period, the fund paid a placement fee of 2.9% of the fund's net assets to the distributor. This fee was calculated on the subscription date. The specified placement fee serves in particular as remuneration for distribution. The gross amount of the placement fee was paid in a single payment on the subscription date and simultaneously recognized in the fund's net assets as prepaid expenses. These are amortized on a daily basis over a period of three years from the date of subscription. The remaining position for prepaid expenses per share on each valuation date is calculated on a daily basis by multiplying the net assets of the fund by a factor. The relevant factor is determined through straight-line reduction of the placement fee by a certain percentage on a daily basis over three years from the subscription date. The prepaid expenses position fluctuates during the three years from the subscription date of the fund, since it depends on both the fund's net assets and the predetermined factor.

In addition, a dilution adjustment of up to 3% based on the gross redemption amount was charged for the benefit of the fund's net assets in the reporting period (to be paid by the shareholder).

Further details on the placement fee and the dilution adjustment can be found in the corresponding section of the fund's sales prospectus.

Swing pricing

Swing pricing is a mechanism that is intended to protect shareholders from the negative effects of trading costs arising from subscription and redemption activities. Extensive subscriptions and redemptions within a (sub-)fund may lead to a dilution of the assets of this (sub-)fund, as the net asset value sometimes does not reflect all trading and other costs that are incurred when the portfolio manager must buy or sell securities in order to manage large (net) inflows or outflows in the (sub-)fund. In addition to these costs, substantial order volumes may lead to market prices that are considerably below or above the market prices that apply under normal circumstances.

To enhance the investor protection of existing shareholders, a swing pricing mechanism can be applied to compensate for trading costs and other expenses if the aforementioned cumulative (net) inflows or outflows should have a material impact on the (sub-)fund on a valuation date and exceed a predetermined threshold (partial swing pricing). This mechanism can be applied across all (sub-)funds. If swing pricing is introduced for a particular (sub-)fund, this will be disclosed in the special section of the sales prospectus.

The Management Company of the fund will predefine thresholds for the application of the swing pricing mechanism, based, among other things, on current market conditions, available market liquidity and estimated dilution costs. In accordance with these thresholds, the adjustment itself will be initiated automatically. If the (net) inflows or outflows exceed the swing threshold, the net asset value is revised upward if the (sub-)fund sees large net inflows and is revised downward in the event of large net outflows. This adjustment is applied uniformly to all subscriptions and redemptions for the trading day in question. If a performance-based fee applies for the (sub-)fund, the calculation is based on the original net asset value.

The Management Company has established a swing pricing committee that determines the swing factors for each individual (sub-)fund. These swing factors indicate the extent of the net asset value adjustment. The swing pricing committee takes into account the following factors in particular:

– bid-ask spread (fixed-price element),
– impacts on the market (impacts of the transactions on the price),
– additional costs that are incurred as a result of trading activities for the investments.

The appropriateness of the applied swing factors, the operational decisions made in connection with the swing pricing (including the swing threshold), the extent of the adjustment, and the affected (sub-)funds are reviewed at regular intervals.

The amount of the swing pricing adjustment can therefore vary from one (sub-)fund to another and will not generally exceed 2% of the original net asset value per share. The net asset value adjustment is available upon request from the Management Company. In a market environment with extreme illiquidity, the Management Company can, however, increase the swing price adjustment to more than 2% of the original net asset value. Such an increase will be announced on the Management Company's website: www.dws.com.

As the mechanism should only be applied if significant (net) inflows or outflows are expected and it does not apply for normal trading volumes, it is assumed that the net asset value will only be adjusted occasionally.

This (sub-)fund can apply swing pricing but has not done so in the reporting period, as its (net) inflows and outflows did not exceed the relevant threshold previously defined.

Annual report
DWS Invest SDG Global Equities

Investment objective and performance in the reporting period

The objective of the investment policy is to generate above-average capital appreciation. To achieve this, the sub-fund's assets are predominantly invested in securities of issuers that, according to the sub-fund management's assessment, benefit from present or future geopolitical, societal and economic trends and themes. Aspects considered when selecting suitable investments include a focus on environmental, social and corporate governance (ESG) criteria. At least 80% of the sub-fund's net assets are invested in assets that meet the promoted environmental and social characteristics that contribute to one or more of the United Nation's SDGs.

In the twelve months through the end of December 2025, the sub-fund recorded an appreciation of 8.3% per share (LC share class; BVI method; in euro).

"BVI method" performance, i.e., excluding the initial sales charge.
Past performance is not a guide to future results.

As of: December 31, 2025

Investment policy in the reporting period

The global investment focus of the sub-fund was on equities that aim to post relevant revenue in the area of the United Nations Sustainable Development Goals (SDGs).

The capital market environment in 2025 was challenging. This was due in particular to geopolitical crises like the Russia-Ukraine war that has been ongoing since February 24, 2022, the escalated conflict in the Middle East, and the power struggle between the United States and China. Furthermore, the erratic swings in U.S. trade and tariff policy generated additional uncertainty in the capital markets. On the other hand, the easing of monetary policy, which had begun previously, continued during the reporting period. The European Central Bank (ECB) thus lowered the key interest rate in four steps from 3.00% p.a. to 2.00% p.a. (deposit facility) while the U.S. Federal Reserve gradually reduced its key interest rates by 0.75 percentage points to a target range of 3.50% p.a. – 3.75% p.a.

Despite market uncertainty induced mainly by geopolitical factors, the international equity markets, as measured by the MSCI World, recorded appreciable price gains overall in 2025 amid sometimes considerable volatility. These gains were underpinned by the emerging easing of interest rates, increased investor confidence in artificial intelligence, as well as robust corporate profits. Among the markets in Western industrial countries, the DAX 40 in Germany posted significant gains, buoyed by factors such as the multi-billion-euro package of fiscal relief measures. The emerging markets, as measured by the MSCI Emerging Markets, were even able to outperform the industrial countries on a full-year basis through

the end of 2025. In this respect, China's equity market was one of the stand-out performers and continued to recover significantly. This trend was supported by Chinese economic growth, which was stimulated by expansionary macroeconomic policies. However, the international stock exchanges were intermittently hit hard by the erratic swings in U.S. trade and tariff policy.

Health care was one focus of investment. This segment contained a large number of companies with high potential SDG sales/contributions. However, the sector was not able to keep pace with the general market throughout the reporting period. In contrast, the industrials sector recorded a solid development and the high weighting of the sector made a positive contribution to performance. Due to the fact that there are not many companies in the financials sector that make a significant contribution to the SDGs, this was underweight. As this sector outperformed the general market, this was detrimental to the sub-fund. The underweight in the technology sector did not make a positive contribution to outperforming the general market.

Companies that pursued significant business activities in the United States and were heavily dependent on the regulatory environment recorded a weak phase at the beginning of 2025 amid the inauguration of the new U.S. president. These included, for example, companies from the renewable energies sector. Some of these were, however, able to recover significantly during the course of the year. This was due, on the one hand, to the fact that regulatory uncertainty had receded due to the introduction of corresponding legislation and, on the other hand, to the fact that the expansion of data centers for artificial intelligence required low-cost energy sources that were quickly available.

The stocks with the best performance in the portfolio included Comfort Systems and Taiwan Semiconductor, which benefited from the boom in the artificial intelligence area, as well as Quanta Services, which benefited from the increased demand for cleaner energy/reduced emissions and data centers. Medtronic, which had a larger weighting in the fund, also put in a positive performance against the backdrop of better implementation of its business strategy.

However, individual positions from the environmental services sector, such as waste management, recorded a weaker share price performance. Falling waste volumes were a cause for concern here. In addition, UnitedHealth was among the losers in the reporting period. The company had to revise its annual figures for 2025 downward on several occasions. Its cost ratio increased sharply due to higher uptake of medical services and also due to more expensive specialist drugs.

In the reporting period, the fund disposed of its investments in UnitedHealth, Procter & Gamble and Equinix, among others.

The following risk management disclosures (other information) are unaudited and are not covered by the audit opinion on the annual report.

Composition of the reference portfolio (according to CSSF circular 11/512)
MSCI All Country World Index, in EUR

Market risk exposure (value-at-risk) (according to CSSF circular 11/512)

Lowest market risk exposure	%	72.119
Highest market risk exposure	%	96.031
Average market risk exposure	%	85.519

The values-at-risk were calculated for the period from January 1, 2025, through December 31, 2025, using historical simulation with a 99% confidence level, a 10-day holding period and an effective historical observation period of one year. The risk in a reference portfolio that does not contain derivatives is used as the measurement benchmark. Market risk is the risk to the fund's assets arising from an unfavorable change in market prices. The Company determines the potential market risk by means of the **relative value-at-risk approach** as defined in CSSF circular 11/512.

In the reporting period, the average leverage effect from the use of derivatives was 0.0, whereby the total of the nominal amounts of the derivatives in relation to the fund's assets was used for the calculation (sum-of-notional approach).

The gross exposure generated via derivatives pursuant to point 40 a) of the "Guidelines on ETFs and other UCITS issues" of the European Securities and Markets Authority (ESMA) totaled EUR 40 429 896.25 as of the reporting date.

Notes on valuation

Under the responsibility of the Board of Directors of the SICAV, the Management Company determines the net asset values per share and performs the valuation of the assets of the fund. The basic provision of price data and price validation are performed in accordance with the method introduced by the Board of Directors of the SICAV on the basis of the legal and regulatory requirements or the principles for valuation methods defined in the SICAV's prospectus.

If no trading prices are available, prices are determined with the aid of valuation models (derived market values) which are agreed between State Street Bank International GmbH, Luxembourg Branch, as external price service provider and the Management Company and which are based as far as possible on market parameters. This procedure is subject to an ongoing monitoring process. The plausibility of price information from third parties is checked through other pricing sources, model calculations or other suitable procedure.

Assets reported in this report are not valued at derived market values.

The management fee / all-in fee rates in effect as of the reporting date for the investment fund units held in the securities portfolio are shown in parentheses. A plus sign means that a performance-based fee may also be charged. As the investment fund held units of other investment funds (target funds) in the reporting period, further costs, charges and fees may have been incurred at the level of these individual target funds.

BVI total expense ratio (TER)

The total expense ratio for the share classes was:

Class FC 0.82% p.a.,
Class IC 0.54% p.a.,
Class IC250 0.39% p.a.,
Class LC 1.58% p.a.,
Class LDM 1.20%[3],
Class PFC 2.16% p.a.,
Class TFD 0.81% p.a.,
Class GBP D RD 0.81% p.a.,
Class USD LCH (P) 1.60% p.a.,
Class FD 0.81% p.a.,
Class IC100 0.44% p.a.,
Class ID 0.52% p.a.,
Class LD 1.58% p.a.,
Class NC 2.08% p.a.,
Class TFC 0.83% p.a.,
Class XC 0.43% p.a.,
Class USD IC50 0.47% p.a.,
Class USD TFCH (P) 0.84% p.a.

The TER expresses total expenses and fees (excluding transaction costs) as a percentage of a fund's average net assets in relation to the respective share class within a fiscal year.

[3] Annualization has not been performed for share classes launched during the year.

Transaction costs

The transaction costs paid in the reporting period amounted to EUR 683 642.33.

The transaction costs include all costs that were reported or settled separately for the account of the fund in the reporting period and are directly connected to the purchase or sale of assets. Any financial transaction taxes paid are included in the calculations.

Statement of changes in net assets 2025

Transactions processed for the account of the fund's assets via closely related companies (based on major holdings of the Deutsche Bank Group)

The share of transactions conducted in the reporting period for the account of the fund's assets via brokers that are closely related companies and persons (share of 5% and above) amounted to 0.00% of all transactions. The total volume was EUR 11 252.41.

Placement fee / dilution adjustment

In the reporting period, the fund paid a placement fee of 2.9% of the fund's net assets to the distributor. This fee was calculated on the subscription date. The specified placement fee serves in particular as remuneration for distribution. The gross amount of the placement fee was paid in a single payment on the subscription date and simultaneously recognized in the fund's net assets as prepaid expenses. These are amortized on a daily basis over a period of three years from the date of subscription. The remaining position for prepaid expenses per share on each valuation date is calculated on a daily basis by multiplying the net assets of the fund by a factor. The relevant factor is determined through straight-line reduction of the placement fee by a certain percentage on a daily basis over three years from the subscription date. The prepaid expenses position fluctuates during the three years from the subscription date of the fund, since it depends on both the fund's net assets and the predetermined factor.

In addition, a dilution adjustment of up to 3% based on the gross redemption amount was charged for the benefit of the fund's net assets in the reporting period (to be paid by the shareholder).

Further details on the placement fee and the dilution adjustment can be found in the corresponding section of the fund's sales prospectus.

Annual report
DWS Invest Short Duration Credit

Investment objective and performance in the reporting period

DWS Invest Short Duration Credit seeks to achieve sustained capital appreciation. As a bond sub-fund with a duration of zero to three years, it takes advantage of the interest rate and yield differentials of corporate bonds to comparable government bonds. The international credit markets constitute its investment universe. Aspects considered when selecting investments include financial strength and also a focus on environmental, social and corporate governance (ESG) factors.*

"BVI method" performance, i.e., excluding the initial sales charge.
Past performance is not a guide to future results.

As of: December 31, 2025

The sub-fund DWS Invest Short Duration Credit recorded an appreciation of 3.4% (LC share class; BVI method) in the 2025 fiscal year, therefore outperforming its benchmark, which returned +3.3% (both percentages in euro terms).

Investment policy in the reporting period

The portfolio management continued to invest across various sectors in short-term corporate bonds and in bonds from financial services providers. Higher-yielding, subordinated issues were also selectively added. Regionally, the investment focus was on bonds from Europe and the United States. When selecting individual issues, the sub-fund placed its investment focus on issues with investment-grade ratings, i.e., bonds rated at least BBB- or better by the leading rating agencies. The sub-fund also included non-investment-grade names (high-yield bonds) for yield reasons, preferring securities from the top segment (BB rating).

The capital market environment in 2025 was challenging. This was due in particular to geopolitical crises like the Russia-Ukraine war that has been ongoing since February 24, 2022, the escalated conflict in the Middle East, and the power struggle between the United States and China. Furthermore, the erratic swings in U.S. trade and tariff policy generated additional uncertainty in the capital markets. On the other hand, the easing of monetary policy, which had begun previously, continued during the reporting period. The European Central Bank (ECB) thus lowered the key interest rate in four steps from 3.00% p.a. to 2.00% p.a. (deposit facility) while the U.S. Federal Reserve gradually reduced its key interest rates by 0.75 percentage points to a target range of 3.50% p.a. – 3.75% p.a.

In the international bond markets, the yield curve in 2025 became increasingly steeper at the long end – although this was still moderate – following the previous normalization. In light of the more relaxed interest rate policy of the central banks, bond yields fell noticeably at the short end in some cases. Long-dated government bonds, on the other hand, came under pressure due, for example, to the rise in public deficits and, in some instances, had to accept price declines on a full-year basis, accompanied by rising bond yields. Corporate bonds, on the other hand, profited from their relatively high coupons as well as narrowing risk premiums.

A key reason for the sub-fund's outperformance of its benchmark was the overweighting of bonds from the automotive, utilities and real estate sectors, which were among the strongest sectors in 2025. In contrast, the sectoral

underweighting in health care as well as in financials – especially banks, which were among the strongest market segments in 2025, had a dampening effect on the relative performance.

In addition, the sub-fund benefited from its increased allocation in the BBB segment as well as from adding in high-yield bonds, which were among the most important performance drivers. The selective investment in short-term subordinate bonds of highly-rated investment grade issuers also made a positive contribution to performance.

DWS Invest Short Duration Credit

The following risk management disclosures (other information) are unaudited and are not covered by the audit opinion on the annual report:

Presentation of the maximum limit (according to CSSF circular 11/512)
14.14% of portfolio value

Market risk exposure (value-at-risk) (according to CSSF circular 11/512)

Lowest market risk exposure	%	0.004
Highest market risk exposure	%	0.008
Average market risk exposure	%	0.005

The values-at-risk were calculated for the period from January 1, 2025, through December 31, 2025, using historical simulation with a 99% confidence level, a 10-day holding period and an effective historical observation period of one year. The risk in a reference portfolio that does not contain derivatives is used as the measurement benchmark. Market risk is the risk to the fund's assets arising from an unfavorable change in market prices. The Company determines the potential market risk by means of the **absolute value-at-risk approach** as defined in CSSF circular 11/512.

In the reporting period, the average leverage effect from the use of derivatives was 0.1, whereby the total of the nominal amounts of the derivatives in relation to the fund's assets was used for the calculation (sum-of-notional approach).

The gross exposure generated via derivatives pursuant to point 40 a) of the "Guidelines on ETFs and other UCITS issues" of the European Securities and Markets Authority (ESMA) totaled EUR 64 866 303.23 as of the reporting date.

Notes on valuation

Under the responsibility of the Board of Directors of the SICAV, the Management Company determines the net asset values per share and performs the valuation of the assets of the fund. The basic provision of price data and price validation are performed in accordance with the method introduced by the Board of Directors of the SICAV on the basis of the legal and regulatory requirements or the principles for valuation methods defined in the SICAV's prospectus.

If no trading prices are available, prices are determined with the aid of valuation models (derived market values) which are agreed between State Street Bank International GmbH, Luxembourg Branch, as external price service provider and the Management Company and which are based as far as possible on market parameters. This procedure is subject to an ongoing monitoring process. The plausibility of price information from third parties is checked through other pricing sources, model calculations or other suitable procedure.

Assets reported in this report are not valued at derived market values.

Footnotes

* Floating interest rate.
** Some or all of these securities are lent.
*** The prepaid placement fee is amortized over a period of three years (as specified in article 13 (f) of the general section of the fund's management regulations).
**** Does not include positions with a negative balance, if such exist.

BVI total expense ratio (TER)

The total expense ratio for the share classes was:

Class FC 0.40% p.a.,	Class IC 0.30% p.a.,
Class IC50 0.24% p.a.,	Class ID 0.29% p.a.,
Class ID50 0.21% p.a.,	Class LC 0.69% p.a.,
Class LD 0.70% p.a.,	Class NC 1.30% p.a.,
Class PFC 1.33% p.a.,	Class TFC 0.55% p.a.

The TER expresses total expenses and fees (excluding transaction costs) as a percentage of a fund's average net assets in relation to the respective share class within a fiscal year.

As well, the additional income from securities lending resulted in a performance-based fee of

Class FC 0.004% p.a.,	Class IC 0.004% p.a.,
Class IC50 0.004% p.a.,	Class ID 0.004% p.a.,
Class ID50 0.004% p.a.,	Class LC 0.004% p.a.,
Class LD 0.004% p.a.,	Class NC 0.004% p.a.,
Class PFC 0.004% p.a.,	Class TFC 0.004% p.a.

of the fund's average net assets in relation to the respective share class.

Transaction costs

The transaction costs paid in the reporting period amounted to EUR 8 660.51.

The transaction costs include all costs that were reported or settled separately for the account of the fund in the reporting period and are directly connected to the purchase or sale of assets. Any financial transaction taxes paid are included in the calculations.

Statement of changes in net assets 2025

I.	**Value of the fund's net asset at the beginning of the fiscal year**	**EUR**	**549 166 247.81**

Transactions processed for the account of the fund's assets via closely related companies (based on major holdings of the Deutsche Bank Group)

The share of transactions conducted in the reporting period for the account of the fund's assets via brokers that are closely related companies and persons (share of five percent and above) amounted to 5.25% of all transactions. The total volume was EUR 148 410 524.69.

Placement fee / dilution adjustment

In the reporting period, the fund paid a placement fee of 2.9% of the fund's net assets to the distributor. This fee was calculated on the subscription date. The specified placement fee serves in particular as remuneration for distribution. The gross amount of the placement fee was paid in a single payment on the subscription date and simultaneously recognized in the fund's net assets as prepaid expenses. These are amortized on a daily basis over a period of three years from the date of subscription. The remaining position for prepaid expenses per share on each valuation date is calculated on a daily basis by multiplying the net assets of the fund by a factor. The relevant factor is determined through straight-line reduction of the placement fee by a certain percentage on a daily basis over three years from the subscription date. The prepaid expenses position fluctuates during the three years from the subscription date of the fund, since it depends on both the fund's net assets and the predetermined factor.

In addition, a dilution adjustment of up to 3% based on the gross redemption amount was charged for the benefit of the fund's net assets in the reporting period (to be paid by the shareholder).

Further details on the placement fee and the dilution adjustment can be found in the corresponding section of the fund's sales prospectus.

DWS Invest Short Duration Credit

Swing pricing

Swing pricing is a mechanism that is intended to protect shareholders from the negative effects of trading costs arising from subscription and redemption activities.

Extensive subscriptions and redemptions within a (sub-)fund may lead to a dilution of the assets of this (sub-)fund, as the net asset value sometimes does not reflect all trading and other costs that are incurred when the portfolio manager must buy or sell securities in order to manage large (net) inflows or outflows in the (sub-)fund. In addition to these costs, substantial order volumes may lead to market prices that are considerably below or above the market prices that apply under normal circumstances.

To enhance the investor protection of existing shareholders, a swing pricing mechanism can be applied to compensate for trading costs and other expenses if the aforementioned cumulative (net) inflows or outflows should have a material impact on the (sub-)fund on a valuation date and exceed a predetermined threshold (partial swing pricing). This mechanism can be applied across all (sub-)funds. If swing pricing is introduced for a particular (sub-)fund, this will be disclosed in the special section of the sales prospectus.

The Management Company of the fund will predefine thresholds for the application of the swing pricing mechanism, based, among other things, on current market conditions, available market liquidity and estimated dilution costs. In accordance with these thresholds, the adjustment itself will be initiated automatically.

If the (net) inflows or outflows exceed the swing threshold, the net asset value is revised upward if the (sub-)fund sees large net inflows and is revised downward in the event of large net outflows. This adjustment is applied uniformly to all subscriptions and redemptions for the trading day in question. If a performance-based fee applies for the (sub-)fund, the calculation is based on the original net asset value.

The Management Company has established a swing pricing committee that determines the swing factors for each individual (sub-)fund. These swing factors indicate the extent of the net asset value adjustment. The swing pricing committee takes into account the following factors in particular:

– bid-ask spread (fixed-price element),
– impacts on the market (impacts of the transactions on the price),
– additional costs that are incurred as a result of trading activities for the investments.

The appropriateness of the applied swing factors, the operational decisions made in connection with the swing pricing (including the swing threshold), the extent of the adjustment, and the affected (sub-)funds are reviewed at regular intervals.

The amount of the swing pricing adjustment can therefore vary from one (sub-)fund to another and will not generally exceed 2% of the original net asset value per share.

The net asset value adjustment is available upon request from the Management Company. In a market environment with extreme illiquidity, the Management Company can, however, increase the swing price adjustment to more than 2% of the original net asset value. Such an increase will be announced on the Management Company's website: www.dws.com.

As the mechanism should only be applied if significant (net) inflows or outflows are expected and it does not apply for normal trading volumes, it is assumed that the net asset value will only be adjusted occasionally.

This (sub-)fund can apply swing pricing and has done so in the reporting period, as its (net) inflows and outflows exceeded the relevant threshold previously defined. No swing pricing adjustment was applied that would have had an impact on the (sub-)fund's net asset value per share on the last day of the reporting period.

Annual report
DWS Invest Short Duration Income

Investment objective and performance in the reporting period

The sub-fund DWS Invest Short Duration Income seeks to generate above-average returns. To achieve this objective, it invests worldwide in bonds, money market instruments and liquid assets. At least 70% of the sub-fund's assets are invested in bonds with terms to maturity ranging from zero to three years. Up to 25% of the sub-fund's assets may be invested in convertible bonds, convertible debentures and warrant-linked bonds. Up to 20% may be invested in asset-backed or mortgage-backed securities. Derivatives may be used for investment purposes. All non-euro investments are largely hedged against exchange rate risks. Aspects considered when selecting investments include financial strength and also a focus on environmental, social and corporate governance (ESG) factors.*

The sub-fund DWS Invest Short Duration Income recorded an appreciation of 3.5% (LC share class; BVI method) in the 2025 fiscal year, and thus outperformed its benchmark, which returned +2.8% (both percentages in euro terms).

As of: December 31, 2025

Investment policy in the reporting period

The capital market environment in 2025 was challenging. This was due in particular to geopolitical crises like the Russia-Ukraine war that has been ongoing since February 24, 2022, the escalated conflict in the Middle East, and the power struggle between the United States and China. Furthermore, the erratic swings in U.S. trade and tariff policy generated additional uncertainty in the capital markets. On the other hand, the easing of monetary policy, which had begun previously, continued during the reporting period. The European Central Bank (ECB) thus lowered the key interest rate in four steps from 3.00% p.a. to 2.00% p.a. (deposit facility) while the U.S. Federal Reserve gradually reduced its key interest rates by 0.75 percentage points to a target range of 3.50% p.a. – 3.75% p.a.

In the international bond markets, the yield curve in 2025 became increasingly steeper at the long end – although this was still moderate – following the previous normalization. In light of the more relaxed interest rate policy of the central banks, bond yields fell noticeably at the short end in some cases. Long-dated government bonds, on the other hand, came under pressure due, for example, to the rise in public deficits and, in some instances, had to accept price declines on a full-year basis, accompanied by rising bond yields. Corporate bonds, on the other hand, profited from their relatively high coupons as well as narrowing risk premiums.

The portfolio management invested globally in government bonds from the leading industrial countries as well as in securities of government issuers from emerging markets. It also invested in corporate bonds and interest-bearing securities of financial services providers (financials).

Mortgage bonds and covered bonds rounded out the portfolio. With regard to stock selection, the sub-fund predominantly placed its investment focus on issues with investment-grade ratings, meaning those rated BBB- or better by the leading rating agencies. Nevertheless, it also included non-investment-grade names for yield reasons, preferring securities from the top segment (BB rating). In anticipation of a narrowing of risk premiums, the proportion of bonds from the emerging markets was maintained at a stable investment level in the reporting period; this primarily involved investments in government bonds and interest-bearing instruments of near-government issuers.

Despite major geopolitical uncertainty, corporate bonds and emerging-market bonds proved to be a driving factor in the sub-fund's relative performance. Alongside the narrowing of risk premiums, the successful management of interest rate sensitivity in the reporting period made a positive contribution to performance. There was a preference for bonds from the U.S. capital market. These benefited from the easing of monetary policy by the U.S. Federal Reserve. Unlike in the previous year, the change in the yield curves did not have any noteworthy influence on the sub-fund's relative performance. Additional income was posted in 2025 due to the active hedging strategy for the foreign currency positions.

The following risk management disclosures (other information) are unaudited and are not covered by the audit opinion on the annual report:

Composition of the reference portfolio (according to CSSF circular 11/512)
14.14% of portfolio value

Market risk exposure (value-at-risk) (according to CSSF circular 11/512)

Lowest market risk exposure	%	0.004
Highest market risk exposure	%	0.008
Average market risk exposure	%	0.006

The values-at-risk were calculated for the period from January 1, 2025, through December 31, 2025, using historical simulation with a 99% confidence level, a 10-day holding period and an effective historical observation period of one year. The risk in a reference portfolio that does not contain derivatives is used as the measurement benchmark. Market risk is the risk to the fund's assets arising from an unfavorable change in market prices. The Company determines the potential market risk by means of the **absolute value-at-risk approach** as defined in CSSF circular 11/512.

In the reporting period, the average leverage effect from the use of derivatives was 0.8, whereby the total of the nominal amounts of the derivatives in relation to the fund's assets was used for the calculation (sum-of-notional approach).

The gross exposure generated via derivatives pursuant to point 40 a) of the "Guidelines on ETFs and other UCITS issues" of the European Securities and Markets Authority (ESMA) totaled EUR 60 611 574.71 as of the reporting date.

Notes on valuation

Under the responsibility of the Board of Directors of the SICAV, the Management Company determines the net asset values per share and performs the valuation of the assets of the fund. The basic provision of price data and price validation are performed in accordance with the method introduced by the Board of Directors of the SICAV on the basis of the legal and regulatory requirements or the principles for valuation methods defined in the SICAV's prospectus.

If no trading prices are available, prices are determined with the aid of valuation models (derived market values) which are agreed between State Street Bank International GmbH, Luxembourg Branch, as external price service provider and the Management Company and which are based as far as possible on market parameters. This procedure is subject to an ongoing monitoring process. The plausibility of price information from third parties is checked through other pricing sources, model calculations or other suitable procedure.

Assets reported in this report are valued to a minor extent at derived market values.

The management fee / all-in fee rates in effect as of the reporting date for the investment fund units held in the securities portfolio are shown in parentheses. A plus sign means that a performance-based fee may also be charged. As the investment fund held units of other investment funds (target funds) in the reporting period, further costs, charges and fees may have been incurred at the level of these individual target funds.

Footnotes

* Floating interest rate.
** The prepaid placement fee is amortized over a period of three years (as specified in article 13 f "Placement Fee" section in the general section of the fund's management regulations).
*** Does not include positions with a negative balance, if such exist.

BVI total expense ratio (TER)

The total expense ratio for the share classes was:

Class CHF ICH25 0.30% p.a.,
Class FD 0.56% p.a.,
Class ID50 0.21% p.a.,
Class LD 0.74% p.a.,
Class PFC 1.34% p.a.,
Class TFD 0.56% p.a.,
Class USD LCH 0.77% p.a.,
Class FC 0.57% p.a.,
Class IC50 0.22% p.a.,
Class LC 0.74% p.a.,
Class NC 1.29% p.a.,
Class TFC 0.56% p.a.,
Class USD FCH 0.59% p.a.,
Class USD TFCH 0.59% p.a.

The TER expresses total expenses and fees (excluding transaction costs) as a percentage of a fund's average net assets in relation to the respective share class within a fiscal year.

As well, the additional income from securities lending resulted in a performance-based fee of

Class CHF ICH25 0.001% p.a.,
Class FD 0.001% p.a.,
Class ID50 0.001% p.a.,
Class LD 0.001% p.a.,
Class PFC 0.002% p.a.,
Class TFD 0.001% p.a.,
Class USD LCH 0.001% p.a.,
Class FC 0.001% p.a.,
Class IC50 0.001% p.a.,
Class LC 0.002% p.a.,
Class NC 0.001% p.a.,
Class TFC 0.001% p.a.,
Class USD FCH 0.001% p.a.,
Class USD TFCH 0.001% p.a.,

Transaction costs

The transaction costs paid in the reporting period amounted to EUR 5 294.89.

The transaction costs include all costs that were reported or settled separately for the account of the fund in the reporting period and are directly connected to the purchase or sale of assets. Any financial transaction taxes paid are included in the calculations.

Statement of changes in net assets 2025

I.	**Value of the fund's net assets at the beginning of the fiscal year**	**EUR**	**74 373 558.47**
1.	Distribution for the previous year	EUR	-151 053.72
2.	Net outflows[2]	EUR	15 197 577.79
3.	Income adjustment and reimbursed expenses	EUR	-591 450.79
4.	Net investment income	EUR	2 658 005.75
5.	Realized gains/losses	EUR	2 719 278.80
6.	Net change in unrealized appreciation/depreciation	EUR	-2 983 086.04
II.	**Value of the fund's net assets at the end of the fiscal year**	**EUR**	**91 222 830.26**

[2] Reduced by a dilution fee in the amount of EUR 5 976.68 for the benefit of the fund's assets.

Summary of gains/losses 2025

Realized gains/losses (incl. income adjustment)	**EUR**	**2 719 278.80**
from:		
Securities transactions	EUR	-828 112.42
(Forward) currency transactions	EUR	173 217.38
Derivatives and other financial futures transactions[3]	EUR	3 374 173.84

[3] This item may include options transactions or swap transactions and/or transactions from warrants and credit derivatives.

Transactions processed for the account of the fund's assets via closely related companies (based on major holdings of the Deutsche Bank Group)

The share of transactions conducted for the account of the fund's assets via brokers that are closely related companies and persons (share of five percent and above), amounted to 2.24 percent of all transactions. The total volume was EUR 2 830 712.41.

Placement fee / dilution adjustment

In the reporting period, the fund paid a placement fee of 2.9% of the fund's net assets to the distributor. This fee was calculated on the subscription date. The specified placement fee serves in particular as remuneration for distribution. The gross amount of the placement fee was paid in a single payment on the subscription date and simultaneously recognized in the fund's net assets as prepaid expenses. These are amortized on a daily basis over a period of three years from the date of subscription. The remaining position for prepaid expenses per share on each valuation date is calculated on a daily basis by multiplying the net assets of the fund by a factor. The relevant factor is determined through straight-line reduction of the placement fee by a certain percentage on a daily basis over three years from the subscription date. The prepaid expenses position fluctuates during the three years from the subscription date of the fund, since it depends on both the fund's net assets and the predetermined factor.

In addition, a dilution adjustment of up to 3% based on the gross redemption amount was charged for the benefit of the fund's net assets in the reporting period (to be paid by the shareholder).

Further details on the placement fee and the dilution adjustment can be found in the corresponding section of the fund's sales prospectus.

In the case of a final distribution, any remaining net income for the fiscal year is reinvested.

Annual report
DWS Invest StepIn Akkumula

Investment objective and performance in the reporting period

The objective of the investment policy is to generate above-average returns for the sub-fund. To this end, the sub-fund will invest in fixed-income securities such as interest-bearing securities, convertible bonds, money market instruments, deposits with credit institutions and bond funds ("fixed-income securities") as well as in equities and/or equity-like securities and equity funds ("equities"). Funds that predominantly have fixed-income securities are classified as bond funds and funds that predominantly have equities are classified as equity funds. Investments in fixed-income securities and equities are predominantly held via direct investments. As of the inception date, the sub-fund's assets were primarily invested in Italian government bonds. The portfolio management intends gradually reducing the respective share of fixed-income securities step-by-step over a period of three years and simultaneously increasing the share invested in equities to at least 90%. The sub-fund's assets shall be reallocated monthly ("step-by-step") into equities over a period of three years (the "reallocation period"). The portfolio management intends increasing the respective equity share in each monthly step (monthly "StepIn") by 2.5%. The sub-fund may use suitable derivative financial instruments and techniques for hedging purposes, for efficient portfolio management or for investment purposes. These especially include – but are not limited to – futures contracts, futures, options and swaps (including credit default swaps).

DWS Invest StepIn Akkumula

Performance of share classes (in EUR)

Share class	ISIN	Since inception[1]
Class LC	LU2963696674	3.6%
Class NC	LU2963696757	3.2%
Class PFC	LU2963696831	2.8%

[1] Classes LC, NC and PFC launched on March 14, 2025

"BVI method" performance, i.e., excluding the initial sales charge.
Past performance is not a guide to future results.

As of: December 31, 2025

In the period from its inception on March 14, 2025, through the end of December 2025, the sub-fund recorded an appreciation of 3.6% per share (LC share class, BVI method).

Investment policy in the reporting period

On the inception date, the sub-fund's portfolio comprised primarily fixed-income securities that were then gradually reallocated to equities every month. The equity portfolio most recently made up a share of 27% of the total sub-fund assets and invested primarily in the information technology sector, including in Alphabet, Taiwan Semiconductor Manufacturing and NVIDIA. On the bond side (around 67% of the sub-fund's assets as of the reporting date), the sub-fund invested predominantly in Italian government bonds with short- to medium-term maturities that were geared toward the intended reallocation schedule.

The capital market environment in 2025 was challenging. This was due in particular to geopolitical crises like the Russia-Ukraine war that has been ongoing since February 24, 2022, the escalated conflict in the Middle East, and the power struggle between the United States and China. Furthermore, the erratic swings in U.S. trade and tariff policy generated additional uncertainty in the capital markets. On the other hand, the easing of monetary policy, which had begun previously, continued during the reporting period. The European Central Bank (ECB) thus lowered the key interest rate in four steps from 3.00% p.a. to 2.00% p.a. (deposit facility) while the U.S. Federal Reserve gradually reduced its key interest rates by 0.75 percentage points to a target range of 3.50% p.a. – 3.75% p.a.

Despite market uncertainty induced mainly by geopolitical factors, the international equity markets, as measured by the MSCI World, recorded appreciable price gains overall in 2025 amid sometimes considerable volatility. These gains were underpinned by the emerging easing of interest rates, increased investor confidence in artificial intelligence, as well as robust corporate profits. Among the markets in Western industrial countries, the DAX 40 in Germany posted significant gains, buoyed by factors such as the multi-billion-euro package of fiscal relief measures. The emerging markets, as measured by the MSCI Emerging Markets, were even able to

outperform the industrial countries on a full-year basis through the end of 2025. In this respect, China's equity market was one of the stand-out performers and continued to recover significantly. This trend was supported by Chinese economic growth, which was stimulated by expansionary macroeconomic policies. However, the international stock exchanges were intermittently hit hard by the erratic swings in U.S. trade and tariff policy.

In the international bond markets, the yield curve in 2025 became increasingly steeper at the long end – although this was still moderate – following the previous normalization. In light of the more relaxed interest rate policy of the central banks, bond yields fell noticeably at the short end in some cases. Long-dated government bonds, on the other hand, came under pressure due, for example, to the rise in public deficits and, in some instances, had to accept price declines on a full-year basis, accompanied by rising bond yields. Corporate bonds, on the other hand, profited from their relatively high coupons as well as narrowing risk premiums.

The following risk management disclosures (other information) are unaudited and are not covered by the audit opinion on the annual report:

Composition of the reference portfolio (according to CSSF circular 11/512)
70% ICE BofA 1-10 Year Italy Government Index, 30% MSCI World Net TR Index in EUR

Market risk exposure (value-at-risk) (according to CSSF circular 11/512)

Lowest market risk exposure	%	14.213
Highest market risk exposure	%	70.589
Average market risk exposure	%	40.199

The values-at-risk were calculated for the period from March 14, 2025, through December 31, 2025, using historical simulation with a 99% confidence level, a 10-day holding period and an effective historical observation period of one year. The risk in a reference portfolio that does not contain derivatives is used as the measurement benchmark. Market risk is the risk to the fund's assets arising from an unfavorable change in market prices. The Company determines the potential market risk by means of the **relative value-at-risk approach** as defined in CSSF circular 11/512.

In the reporting period, the average leverage effect from the use of derivatives was 0.0, whereby the total of the nominal amounts of the derivatives in relation to the fund's assets was used for the calculation (sum-of-notional approach).

The gross exposure generated via derivatives pursuant to point 40 a) of the "Guidelines on ETFs and other UCITS issues" of the European Securities and Markets Authority (ESMA) totaled EUR 0.00 as of the reporting date.

Notes on valuation

Under the responsibility of the Board of Directors of the SICAV, the Management Company determines the net asset values per share and performs the valuation of the assets of the fund. The basic provision of price data and price validation are performed in accordance with the method introduced by the Board of Directors of the SICAV on the basis of the legal and regulatory requirements or the principles for valuation methods defined in the SICAV's prospectus.

If no trading prices are available, prices are determined with the aid of valuation models (derived market values) which are agreed between State Street Bank International GmbH, Luxembourg Branch, as external price service provider and the Management Company and which are based as far as possible on market parameters. This procedure is subject to an ongoing monitoring process. The plausibility of price information from third parties is checked through other pricing sources, model calculations or other suitable procedure.

Assets reported in this report are not valued at derived market values.

The management fee / all-in fee rates in effect as of the reporting date for the investment fund units held in the securities portfolio are shown in parentheses. A plus sign means that a performance-based fee may also be charged. As the investment fund held units of other investment funds (target funds) in the reporting period, further costs, charges and fees may have been incurred at the level of these individual target funds.

Footnote

* The prepaid placement fee is amortized over a period of three years (as specified in article 13 f "Placement Fee" section in the general section of the fund's management regulations).

BVI total expense ratio (TER)

The total expense ratio for the share classes was:

Class LC 1.29%[4], Class NC 1.69%[4], Class PFC 2.06%[4]

The TER expresses total expenses and fees (excluding transaction costs) as a percentage of a fund's average net assets in relation to the respective share class within a fiscal year.

[4] Annualization has not been performed for share classes launched during the year.

Transaction costs

The transaction costs paid in the reporting period amounted to EUR 70 606.76.

The transaction costs include all costs that were reported or settled separately for the account of the fund in the reporting period and are directly connected to the purchase or sale of assets. Any financial transaction taxes paid are included in the calculations.

Statement of changes in net assets 2025

Transactions processed for the account of the fund's assets via closely related companies (based on major holdings of the Deutsche Bank Group)

The share of transactions conducted for the account of the fund's assets via brokers that are closely related companies and persons (share of five percent and above), amounted to 1.04 percent of all transactions. The total volume was EUR 5 650 941.31.

Placement fee / dilution adjustment

In the reporting period, the fund paid a placement fee of 2.9% of the fund's net assets to the distributor. This fee was calculated on the subscription date. The specified placement fee serves in particular as remuneration for distribution. The gross amount of the placement fee was paid in a single payment on the subscription date and simultaneously recognized in the fund's net assets as prepaid expenses. These are amortized on a daily basis over a period of three years from the date of subscription. The remaining position for prepaid expenses per share on each valuation date is calculated on a daily basis by multiplying the net assets of the fund by a factor. The relevant factor is determined through straight-line reduction of the placement fee by a certain percentage on a daily basis over three years from the subscription date. The prepaid expenses position fluctuates during the three years from the subscription date of the fund, since it depends on both the fund's net assets and the predetermined factor.

In addition, a dilution adjustment of up to 3% based on the gross redemption amount was charged for the benefit of the fund's net assets in the reporting period (to be paid by the shareholder).

Further details on the placement fee and the dilution adjustment can be found in the corresponding section of the fund's sales prospectus.

In the case of a final distribution, any remaining net income for the fiscal year is reinvested.

Swing pricing

Swing pricing is a mechanism that is intended to protect shareholders from the negative effects of trading costs arising from subscription and redemption activities. Extensive subscriptions and redemptions within a (sub-)fund may lead to a dilution of the assets of this (sub-)fund, as the net asset value sometimes does not reflect all trading and other costs that are incurred when the portfolio manager must buy or sell securities in order to manage large (net) inflows or outflows in the (sub-)fund. In addition to these costs, substantial order volumes may lead to market prices that are considerably below or above the market prices that apply under normal circumstances.

To enhance the investor protection of existing shareholders, a swing pricing mechanism can be applied to compensate for trading costs and other expenses if the aforementioned cumulative (net) inflows or outflows should have a material impact on the (sub-)fund on a valuation date and exceed a predetermined threshold (partial swing pricing). This mechanism can be applied across all (sub-)funds. If swing pricing is introduced for a particular (sub-)fund, this will be disclosed in the special section of the sales prospectus.

The Management Company of the fund will predefine thresholds for the application of the swing pricing mechanism, based, among other things, on current market conditions, available market liquidity and estimated dilution costs. In accordance with these thresholds, the adjustment itself will be initiated automatically. If the (net) inflows or outflows exceed the swing threshold, the net asset value is revised upward if the (sub-)fund sees large net inflows and is revised downward in the event of large net outflows. This adjustment is applied uniformly to all subscriptions and redemptions for the trading day in question. If a performance-based fee applies for the (sub-)fund, the calculation is based on the original net asset value.

The Management Company has established a swing pricing committee that determines the swing factors for each individual (sub-)fund. These swing factors indicate the extent of the net asset value adjustment. The swing pricing committee takes into account the following factors in particular:

– bid-ask spread (fixed-price element),
– impacts on the market (impacts of the transactions on the price),
– additional costs that are incurred as a result of trading activities for the investments.

The appropriateness of the applied swing factors, the operational decisions made in connection with the swing pricing (including the swing threshold), the extent of the adjustment, and the affected (sub-)funds are reviewed at regular intervals.

The amount of the swing pricing adjustment can therefore vary from one (sub-)fund to another and will not generally exceed 2% of the original net asset value per share. The net asset value adjustment is available upon request from the Management Company. In a market environment with extreme illiquidity, the Management Company can, however, increase the swing price adjustment to more than 2% of the original net asset value. Such an increase will be announced on the Management Company's website: www.dws.com.

As the mechanism should only be applied if significant (net) inflows or outflows are expected and it does not apply for normal trading volumes, it is assumed that the net asset value will only be adjusted occasionally.

This (sub-)fund can apply swing pricing but has not done so in the reporting period, as its (net) inflows and outflows did not exceed the relevant threshold previously defined. No swing pricing adjustment was applied that would have had an impact on the (sub-)fund's net asset value per share on the last day of the reporting period.

Annual report
DWS Invest StepIn Global Equities

Investment objective and performance in the reporting period

The objective of the investment policy is to generate capital appreciation and surpass the performance of the benchmark (MSCI World TR Net). To this end, the sub-fund invested in interest-bearing securities, convertible bonds, convertible debentures, warrant-linked bonds, investment funds, money market instruments or liquid assets at inception and pursued a monthly reallocation mechanism over a period of three years, which ultimately culminated in an equity target portfolio. At least 51% of the target portfolio is invested in equities of well-established, growth-oriented domestic and foreign companies. The sub-fund management ensures flexible weighting and, where necessary, additionally invests in fixed rate securities (for defensive purposes). During the three-year reallocation period, the percentage of the assets attributed to equities, equity-like securities, and equity derivatives increased and resulted in higher income as well as in higher risks. When selecting investments, environmental and social aspects and the principles of good corporate governance (ESG aspects) are taken into consideration alongside financial performance.

In the twelve months through the end of December 2025, the sub-fund recorded an appreciation of 8.3% per share (LC share class; BVI method). Its benchmark posted an appreciation of 7.3% in the same period (both percentages in euro terms).

DWS Invest StepIn Global Equities

Performance of share classes vs. benchmark (in EUR)

Share class	ISIN	1 year	3 years	5 years
Class LC	LU1532502512	8.3%	44.0%	60.6%
Class NC	LU1532502603	7.8%	41.9%	56.8%
Class PFC	LU1532502785	7.3%	41.4%	56.8%
MSCI World		7.3%	62.5%	87.0%

"BVI method" performance, i.e., excluding the initial sales charge.
Past performance is not a guide to future results.

As of: December 31, 2025

Investment policy in the reporting period

The sub-fund's overall portfolio comprised a basket of target funds. The equity portfolio, which most recently represented a share of around 98% of total sub-fund assets, invested in the funds DWS Invest II Global Equity High Conviction, DWS Invest Top Dividend and DWS ESG Akkumula, among others. On the bond side, the sub-fund invested in Deutsche Managed Euro Fund.

The capital market environment in 2025 was challenging. This was due in particular to geopolitical crises like the Russia-Ukraine war that has been ongoing since February 24, 2022, the escalated conflict in the Middle East, and the power struggle between the United States and China. Furthermore, the erratic swings in U.S. trade and tariff policy generated additional uncertainty in the capital markets. On the other hand, the easing of monetary policy, which had begun previously, continued during the reporting period. The European Central Bank (ECB) thus lowered the key interest rate in four steps from 3.00% p.a. to 2.00% p.a. (deposit facility) while the U.S. Federal Reserve gradually reduced its key interest rates by 0.75 percentage points to a target range of 3.50% p.a. – 3.75% p.a.

Despite market uncertainty induced mainly by geopolitical factors, the international equity markets, as measured by the MSCI World, recorded appreciable price gains overall in 2025 amid sometimes considerable volatility. These gains were underpinned by the emerging easing of interest rates, increased investor confidence in artificial intelligence, as well as robust corporate profits. Among the markets in Western industrial countries, the DAX 40 in Germany posted significant gains, buoyed by factors such as the multi-billion-euro package of fiscal relief measures. The emerging markets, as measured by the MSCI Emerging Markets, were even able to outperform the industrial countries on a full-year basis through the end of 2025. In this respect, China's equity market was one of the stand-out performers and continued to recover significantly. This trend was supported by Chinese economic growth, which was stimulated by expansionary macroeconomic policies. However, the international stock exchanges were intermittently hit hard by the erratic swings in U.S. trade and tariff policy.

In the international bond markets, the yield curve in 2025 became increasingly steeper at the long end – although this was still moderate – following the previous normalization. In light of the more relaxed interest rate policy of the central banks, bond yields fell noticeably at the short end in some cases. Long-dated government bonds, on the other hand, came under pressure due, for example, to the rise in public deficits and, in some instances, had to accept price declines on a full-year basis, accompanied by rising bond yields. Corporate bonds, on the other hand, profited from their relatively high coupons as well as narrowing risk premiums.

The following risk management disclosures (other information) are unaudited and are not covered by the audit opinion on the annual report:

Composition of the reference portfolio (according to CSSF circular 11/512)
MSCI World Net TR Index in EUR

Market risk exposure (value-at-risk) (according to CSSF circular 11/512)

Lowest market risk exposure	%	70.775
Highest market risk exposure	%	87.214
Average market risk exposure	%	79.520

The values-at-risk were calculated for the period from January 1, 2025, through December 31, 2025, using historical simulation with a 99% confidence level, a 10-day holding period and an effective historical observation period of one year. The risk in a reference portfolio that does not contain derivatives is used as the measurement benchmark. Market risk is the risk to the fund's assets arising from an unfavorable change in market prices. The Company determines the potential market risk by means of the **relative value-at-risk approach** as defined in CSSF circular 11/512.

In the reporting period, the average leverage effect from the use of derivatives was 0.0, whereby the total of the nominal amounts of the derivatives in relation to the fund's assets was used for the calculation (sum-of-notional approach).

The gross exposure generated via derivatives pursuant to point 40 a) of the "Guidelines on ETFs and other UCITS issues" of the European Securities and Markets Authority (ESMA) totaled EUR 0.00 as of the reporting date.

DWS Invest StepIn Global Equities

Notes on valuation

Under the responsibility of the Board of Directors of the SICAV, the Management Company determines the net asset values per share and performs the valuation of the assets of the fund. The basic provision of price data and price validation are performed in accordance with the method introduced by the Board of Directors of the SICAV on the basis of the legal and regulatory requirements or the principles for valuation methods defined in the SICAV's prospectus.

If no trading prices are available, prices are determined with the aid of valuation models (derived market values) which are agreed between State Street Bank International GmbH, Luxembourg Branch, as external price service provider and the Management Company and which are based as far as possible on market parameters. This procedure is subject to an ongoing monitoring process. The plausibility of price information from third parties is checked through other pricing sources, model calculations or other suitable procedure.

Assets reported in this report are not valued at derived market values.

The management fee / all-in fee rates in effect as of the reporting date for the investment fund units held in the securities portfolio are shown in parentheses. A plus sign means that a performance-based fee may also be charged. As the investment fund held units of other investment funds (target funds) in the reporting period, further costs, charges and fees may have been incurred at the level of these individual target funds.

Footnote

* The prepaid placement fee is amortized over a period of three years (as specified in article 13 f "Placement Fee" section in the general section of the fund's management regulations).

[1] For further information, please refer to the notes to the financial statements.

BVI total expense ratio (TER)

The total expense ratio for the share classes was:

Class LC 0.69% p.a., Class NC 1.18% p.a., Class PFC 1.57% p.a.

The TER expresses total expenses and fees (excluding transaction costs) as a percentage of a fund's average net assets in relation to the respective share class within a fiscal year.

Further costs, charges and fees were incurred at the level of the target funds. The fund invested more than 20% of its assets in target funds. If the target funds publish a TER themselves, this will be taken into account at fund level (synthetic TER). If a TER is not published at target fund level, the all-in fee / management fee will be used for the calculation. The synthetic TER was:

Class LC 1.54% p.a., Class NC 2.03% p.a., Class PFC 2.42% p.a.

Transaction costs

The transaction costs paid in the reporting period amounted to EUR 610.00.

The transaction costs include all costs that were reported or settled separately for the account of the fund in the reporting period and are directly connected to the purchase or sale of assets. Any financial transaction taxes paid are included in the calculations.

Statement of changes in net assets 2025

I.	**Value of the fund's net assets at the beginning of the fiscal year**	**EUR**	**30 958 798.94**

Transactions processed for the account of the fund's assets via closely related companies (based on major holdings of the Deutsche Bank Group)

The share of transactions conducted in the reporting period for the account of the fund's assets via brokers that are closely related companies and persons (share of 5% and above) amounted to 0.00% of all transactions. The total volume was EUR 0.00.

DWS Invest StepIn Global Equities

Placement fee / dilution adjustment

In the reporting period, the fund paid a placement fee of 2.9% of the fund's net assets to the distributor. This fee was calculated on the subscription date. The specified placement fee serves in particular as remuneration for distribution. The gross amount of the placement fee was paid in a single payment on the subscription date and simultaneously recognized in the fund's net assets as prepaid expenses. These are amortized on a daily basis over a period of three years from the date of subscription. The remaining position for prepaid expenses per share on each valuation date is calculated on a daily basis by multiplying the net assets of the fund by a factor. The relevant factor is determined through straight-line reduction of the placement fee by a certain percentage on a daily basis over three years from the subscription date. The prepaid expenses position fluctuates during the three years from the subscription date of the fund, since it depends on both the fund's net assets and the predetermined factor.

In addition, a dilution adjustment of up to 3% based on the gross redemption amount was charged for the benefit of the fund's net assets in the reporting period (to be paid by the shareholder).

Further details on the placement fee and the dilution adjustment can be found in the corresponding section of the fund's sales prospectus.

Annual report
DWS Invest Top Asia

Investment objective and performance in the reporting period

The objective of the investment policy is to generate capital appreciation and surpass the performance of the benchmark (MSCI AC Asia ex Japan TR net). To this end, the sub-fund invests at least 70% of the sub-fund's assets in equities of companies having their registered offices or their principal business activity in Asia (ex Japan). A company is viewed as having its principal business activity in Asia (ex Japan) if the greatest part of its earnings or revenues is generated there. Considered as Asian (ex Japan) issuers are companies having their registered office or principal business activity in Hong Kong, India, Indonesia, Korea, Malaysia, the Philippines, Singapore, Taiwan, Thailand and the People's Republic of China. The securities issued by these issuers may be listed on Chinese stock exchanges (including the Shenzhen-Hong Kong and Shanghai-Hong Kong Stock Connect) or other foreign stock exchanges or may be traded on other regulated markets in a member country of the Organisation for Economic Co-operation and Development (OECD) that operates regularly and is recognized and open to the public. When selecting investments, environmental and social aspects and the principles of good corporate governance (ESG aspects) are taken into consideration alongside financial performance.

The sub-fund recorded an appreciation of 14.6% per share (LC share class; BVI method) in the fiscal year through December 31, 2025.

"BVI method" performance, i.e., excluding the initial sales charge.
Past performance is not a guide to future results.

As of: December 31, 2025

Its benchmark rose by 16.3% (both percentages in euro terms).

Investment policy in the reporting period

Asian equity markets surged again in the past reporting period despite macroeconomic and geopolitical uncertainties. While political instability in South Korea generated uncertainty in equity markets across the region early on in the reporting period, a raft of stimulus measures introduced in China and the rate cut by the U.S. Federal Reserve provided a tailwind. At the beginning of the year, concerns spread about the introduction of import tariffs for the United States' trading partners and their impact on economic growth and companies in the respective countries. In March and April, the actual announcement and introduction of tariffs led to a temporary setback in equity markets around the world and a weakening of the U.S. dollar. Throughout the summer months and into the fall, announcements about trade agreements being reached between the U.S. and individual countries such South Korea gave a boost to the equity markets. Asian equity markets rallied at the end of the past reporting period, with some hitting fresh highs in local currency. The topic of artificial intelligence, accompanied by investment plans and capacity expansion, continued to be a major driver of share price performance. We saw multiple rate cuts by central banks in both the United States and Europe. In addition, many central banks in Asia, for example in India, Indonesia and China, lowered their key interest rates in an effort to stimulate economic growth.

Within Asia, South Korea was by far the best market in the region. Although stocks in South Korea

had taken a large hit at the end of the previous calendar year due to political uncertainty, encouraging reports from memory chip manufacturers in 2025 – driven by artificial intelligence – led to substantial equity market gains. The Korean utilities and defense sectors were another key driver of the strong market performance, supported by rising global infrastructure and defense spending. Reforms aimed at improving companies' capital utilization also gave a boost to the Korean market. China also recorded encouraging growth. Together with the Chinese government's stimulus package, the announcement of competitive language models in the field of artificial intelligence propelled prices higher. The goal of achieving technological independence invigorated the technology sector. Individual segments of consumer specialties also recorded encouraging gains. Moreover, the gradual negotiation of tariffs between the United States and China partially eased trade tensions.

Taiwan also performed very positively, mainly on the back of strong demand for the high-performance chips needed for artificial intelligence. Many contract manufacturers for chips and components are headquartered in Taiwan.

In contrast, the Indian market performed significantly worse than the region due to relatively high valuations and less of a connection to the technology sector.

Individual stock selection within Korea and India made a particularly positive contribution to the sub-fund's performance. SK Hynix and SK Square are particularly noteworthy, as they profited from exploding demand for high-performance memory chips. In India, highlights were Shriram Finance and Ashok Leyland. By contrast, the stock picks for China and Thailand put a damper on performance.

At the sector level, the positioning in financials, industrials, utilities, communications, pharma and energy stocks contributed positively, whereas exposure to real estate and consumer stocks weighed on performance. The technology sector had a near-neutral impact on overall performance. In the reporting period, the weighting in Korea was increased while the weighting in India was reduced. At sector level, positions in industrials, technology stocks and financials were build up. In contrast, consumer goods stocks were reduced.

The following risk management disclosures (other information) are unaudited and are not covered by the audit opinion on the annual report.

Composition of the reference portfolio (according to CSSF circular 11/512)
MSCI AC Asia ex Japan Net Index in EUR

Market risk exposure (value-at-risk) (according to CSSF circular 11/512)

Lowest market risk exposure	%	91.846
Highest market risk exposure	%	119.379
Average market risk exposure	%	104.782

The values-at-risk were calculated for the period from January 1, 2025, through December 31, 2025, using historical simulation with a 99% confidence level, a 10-day holding period and an effective historical observation period of one year. The risk in a reference portfolio that does not contain derivatives is used as the measurement benchmark. Market risk is the risk to the fund's assets arising from an unfavorable change in market prices. The Company determines the potential market risk by means of the relative value-at-risk approach as defined in CSSF circular 11/512.

In the reporting period, the average leverage effect from the use of derivatives was 0.0, whereby the total of the nominal amounts of the derivatives in relation to the fund's assets was used for the calculation (sum-of-notional approach).

The gross exposure generated via derivatives pursuant to point 40 a) of the "Guidelines on ETFs and other UCITS issues" of the European Securities and Markets Authority (ESMA) totaled EUR 0.00 as of the reporting date.

Notes on valuation

Under the responsibility of the Board of Directors of the SICAV, the Management Company determines the net asset values per share and performs the valuation of the assets of the fund. The basic provision of price data and price validation are performed in accordance with the method introduced by the Board of Directors of the SICAV on the basis of the legal and regulatory requirements or the principles for valuation methods defined in the SICAV's prospectus.

If no trading prices are available, prices are determined with the aid of valuation models (derived market values) which are agreed between State Street Bank International GmbH, Luxembourg Branch, as external price service provider and the Management Company and which are based as far as possible on market parameters. This procedure is subject to an ongoing monitoring process. The plausibility of price information from third parties is checked through other pricing sources, model calculations or other suitable procedure.

Assets reported in this report are not valued at derived market values.

The management fee / all-in fee rates in effect as of the reporting date for the investment fund units held in the securities portfolio are shown in parentheses. A plus sign means that a performance-based fee may also be charged. As the investment fund held units of other investment funds (target funds) in the reporting period, further costs, charges and fees may have been incurred at the level of these individual target funds.

BVI total expense ratio (TER)

The total expense ratio for the share classes was:

Class FC 0.87% p.a.,	Class LC 1.62% p.a.,
Class LD 1.62% p.a.,	Class NC 2.32% p.a.,
Class TFC 0.87% p.a.,	Class TFD 0.85% p.a.,
Class GBP D RD 0.86% p.a.,	Class USD FC 0.87% p.a.,
Class USD LC 1.62% p.a.,	Class USD TFC 0.83% p.a.

The TER expresses total expenses and fees (excluding transaction costs) as a percentage of a fund's average net assets in relation to the respective share class within a fiscal year.

Transaction costs

The transaction costs paid in the reporting period amounted to EUR 366 109.47.

The transaction costs include all costs that were reported or settled separately for the account of the fund in the reporting period and are directly connected to the purchase or sale of assets. Any financial transaction taxes paid are included in the calculations.

Statement of changes in net assets 2025

I.	**Value of the fund's net assets at the beginning of the fiscal year**	**EUR**	**295 023 974.55**

Transactions processed for the account of the fund's assets via closely related companies (based on major holdings of the Deutsche Bank Group)

The share of transactions conducted in the reporting period for the account of the fund's assets via brokers that are closely related companies and persons (share of 5% and above) amounted to 0.00% of all transactions. The total volume was EUR 0.00.

DWS Invest Top Asia

Swing pricing

Swing pricing is a mechanism that is intended to protect shareholders from the negative effects of trading costs arising from subscription and redemption activities. Extensive subscriptions and redemptions within a (sub-)fund may lead to a dilution of the assets of this (sub-)fund, as the net asset value sometimes does not reflect all trading and other costs that are incurred when the portfolio manager must buy or sell securities in order to manage large (net) inflows or outflows in the (sub-)fund. In addition to these costs, substantial order volumes may lead to market prices that are considerably below or above the market prices that apply under normal circumstances.

To enhance the investor protection of existing shareholders, a swing pricing mechanism can be applied to compensate for trading costs and other expenses if the aforementioned cumulative (net) inflows or outflows should have a material impact on the (sub-)fund on a valuation date and exceed a predetermined threshold (partial swing pricing). This mechanism can be applied across all (sub-)funds. If swing pricing is introduced for a particular (sub-)fund, this will be disclosed in the special section of the sales prospectus.

The Management Company of the fund will predefine thresholds for the application of the swing pricing mechanism, based, among other things, on current market conditions, available market liquidity and estimated dilution costs. In accordance with these thresholds, the adjustment itself will be initiated automatically. If the (net) inflows or outflows exceed the swing threshold, the net asset value is revised upward if the (sub-)fund sees large net inflows and is revised downward in the event of large net outflows. This adjustment is applied uniformly to all subscriptions and redemptions for the trading day in question. If a performance-based fee applies for the (sub-)fund, the calculation is based on the original net asset value.

The Management Company has established a swing pricing committee that determines the swing factors for each individual (sub-)fund. These swing factors indicate the extent of the net asset value adjustment. The swing pricing committee takes into account the following factors in particular:

– bid-ask spread (fixed-price element),
– impacts on the market (impacts of the transactions on the price),
– additional costs that are incurred as a result of trading activities for the investments.

The appropriateness of the applied swing factors, the operational decisions made in connection with the swing pricing (including the swing threshold), the extent of the adjustment, and the affected (sub-)funds are reviewed at regular intervals.

The amount of the swing pricing adjustment can therefore vary from one (sub-)fund to another and will not generally exceed 2% of the original net asset value per share. The net asset value adjustment is available upon request from the Management Company. In a market environment with extreme illiquidity, the Management Company can, however, increase the swing price adjustment to more than 2% of the original net asset value. Such an increase will be announced on the Management Company's website: www.dws.com.

As the mechanism should only be applied if significant (net) inflows or outflows are expected and it does not apply for normal trading volumes, it is assumed that the net asset value will only be adjusted occasionally.

This (sub-)fund can apply swing pricing but has not done so in the reporting period, as its (net) inflows and outflows did not exceed the relevant threshold previously defined.

Annual report
DWS Invest Top Dividend

Investment objective and performance in the reporting period

DWS Invest Top Dividend seeks to generate capital appreciation in the medium to long term. For this, the sub-fund invests mainly in equities of domestic and foreign issuers from which an above-average dividend yield is expected. Dividend yield is a key criterion in the selection of individual stocks. However, the dividend yields need not necessarily be above the market average. Aspects considered when selecting investments include financial strength and also a focus on environmental, social and corporate governance (ESG) factors.*

The sub-fund recorded an appreciation of 13.8% per share (LC share class; BVI method; in euro) in the fiscal year through December 31, 2025.

Investment policy in the reporting period

On the one hand, the capital market environment in the fiscal year through the end of December 2025 was shaped by geopolitical risks like the ongoing Russia-Ukraine war, the escalated conflict in the Middle East, the power struggle between the United States and China, as well as the erratic swings in U.S. trade and tariff policy. On the other hand, the easing of monetary policy, which had begun previously, continued during the reporting period. The European Central Bank (ECB) thus lowered the key interest rate in four steps from 3.00% p.a. to 2.00% p.a. (deposit facility) while the U.S. Federal Reserve gradually reduced its key interest rates by

"BVI method" performance, i.e., excluding the initial sales charge.
Past performance is not a guide to future results.

As of: December 31, 2025

0.75 percentage points to a target range of 3.50% p.a. – 3.75% p.a.

Despite market uncertainty induced mainly by geopolitical factors, the international equity markets, as measured by the MSCI World, recorded appreciable price gains overall in 2025 amid sometimes considerable volatility. These gains were underpinned by the emerging easing of interest rates, increased investor confidence in artificial intelligence, as well as robust corporate profits. Among the markets in Western industrial countries, the DAX 40 in Germany posted significant gains, buoyed by factors such as the multi-billion-euro package of fiscal relief measures. The emerging markets, as measured by the MSCI Emerging Markets, were even able to outperform the industrial countries on a full-year basis through the end of 2025. However, the international stock exchanges were intermittently hit hard by the erratic swings in U.S. trade and tariff policy.

For strategic reasons, the subfund's investment focus continued to be on companies that pay above-average dividends to their investors. These include both more defensive stocks, e.g., from segments such as consumer staples, telecommunications, health care, insurance and utilities, and more cyclically sensitive sectors such as energy and basic materials.

The overweighting of financials, basic materials and the weighting in gold (comprising gold ETCs and gold mine stocks) made an above-average contribution to performance.

At the level of individual stocks, Agnico Eagle Mines, TSMC and Samsung Electronics made the largest positive contributions to performance.

On the other hand, the U.S. health care stocks UnitedHealth and Merck & Co. as well as Mondelez turned in a below-average performance.

Other information – Not covered by the audit opinion on the annual report

Information on the environmental and/or social characteristics

This product reported in accordance with Article 8(1) of Regulation (EU) 2019/2088 on sustainability-related disclosures in the financial services sector ("SFDR").

Presentation and content requirements for periodic reports for financial products as referred to in Article 8(1) of Regulation (EU) 2019/2088 (SFDR) and in Article 6 of Regulation (EU) 2020/852 (Taxonomy) are available at the back of this report.

* Further details are set out in the current sales prospectus.

The format used for complete dates in security names in the investment portfolio is "day month year".

The following risk management disclosures (other information) are unaudited and are not covered by the audit opinion on the annual report.

Composition of the reference portfolio (according to CSSF circular 11/512)
MSCI World High Dividend Yield

Market risk exposure (value-at-risk) (according to CSSF circular 11/512)

Lowest market risk exposure	%	69.434
Highest market risk exposure	%	96.008
Average market risk exposure	%	82.517

The values-at-risk were calculated for the period from January 1, 2025, through December 31, 2025, using historical simulation with a 99% confidence level, a 10-day holding period and an effective historical observation period of one year. The risk in a reference portfolio that does not contain derivatives is used as the measurement benchmark. Market risk is the risk to the fund's assets arising from an unfavorable change in market prices. The Company determines the potential market risk by means of the **relative value-at-risk approach** as defined in CSSF circular 11/512.

In the reporting period, the average leverage effect from the use of derivatives was 0.0, whereby the total of the nominal amounts of the derivatives in relation to the fund's assets was used for the calculation (sum-of-notional approach).

The gross exposure generated via derivatives pursuant to point 40 a) of the "Guidelines on ETFs and other UCITS issues" of the European Securities and Markets Authority (ESMA) totaled EUR 0.00 as of the reporting date.

Notes on valuation

Under the responsibility of the Board of Directors of the SICAV, the Management Company determines the net asset values per share and performs the valuation of the assets of the fund. The basic provision of price data and price validation are performed in accordance with the method introduced by the Board of Directors of the SICAV on the basis of the legal and regulatory requirements or the principles for valuation methods defined in the SICAV's prospectus.

If no trading prices are available, prices are determined with the aid of valuation models (derived market values) which are agreed between State Street Bank International GmbH, Luxembourg Branch, as external price service provider and the Management Company and which are based as far as possible on market parameters. This procedure is subject to an ongoing monitoring process. The plausibility of price information from third parties is checked through other pricing sources, model calculations or other suitable procedure.

Assets reported in this report are valued to a minor extent at derived market values.

The management fee / all-in fee rates in effect as of the reporting date for the investment fund units held in the securities portfolio are shown in parentheses. A plus sign means that a performance-based fee may also be charged. As the investment fund held units of other investment funds (target funds) in the reporting period, further costs, charges and fees may have been incurred at the level of these individual target funds.

Footnotes

* Some or all of these securities are lent.
** The prepaid placement fee is amortized over a period of three years (as specified in article 13 (f) of the general section of the fund's management regulations).
*** Does not include positions with a negative balance, if such exist.

DWS Invest Top Dividend

Transactions processed for the account of the fund's assets via closely related companies (based on major holdings of the Deutsche Bank Group)

The share of transactions conducted in the reporting period for the account of the fund's assets via brokers that are closely related companies and persons (share of 5% and above) amounted to 0.00% of all transactions. The total volume was EUR 202 546.00.

Placement fee / dilution adjustment

In the reporting period, the fund paid a placement fee of 2.9% of the fund's net assets to the distributor. This fee was calculated on the subscription date. The specified placement fee serves in particular as remuneration for distribution. The gross amount of the placement fee was paid in a single payment on the subscription date and simultaneously recognized in the fund's net assets as prepaid expenses. These are amortized on a daily basis over a period of three years from the date of subscription. The remaining position for prepaid expenses per share on each valuation date is calculated on a daily basis by multiplying the net assets of the fund by a factor. The relevant factor is determined through straight-line reduction of the placement fee by a certain percentage on a daily basis over three years from the subscription date. The prepaid expenses position fluctuates during the three years from the subscription date of the fund, since it depends on both the fund's net assets and the predetermined factor.

In addition, a dilution adjustment of up to 3% based on the gross redemption amount was charged for the benefit of the fund's net assets in the reporting period (to be paid by the shareholder).

Further details on the placement fee and the dilution adjustment can be found in the corresponding section of the fund's sales prospectus.

Annual report
DWS Invest WellCare
(formerly: DWS Invest ESG Healthy Living

Investment objective and performance in the reporting period

The objective of the investment policy is to generate above-average capital appreciation. To achieve this objective, the sub-fund invests predominantly in equity securities of companies in the health care and wellness sector. The health care and wellness sector includes companies that offer technologies, products or services related to modern treatment methods, early detection and/or prevention. Modern treatment methods are defined as therapies, devices and practices that improve the health care outcome and the experience for the patient and provider. Early detection refers to methods for detecting an illness or condition at an early stage, often before symptoms occur. The objective is to reduce the general health care burden for patients and the health care system through early intervention. The sub-fund's assets are invested in equities of all market capitalizations, equity certificates, participation and dividend-right certificates, convertible bonds and equity warrants issued by international companies.

In the twelve months through the end of December 2025, the sub-fund recorded a depreciation of 8.5% per share (LC share class; BVI method).

Investment policy in the reporting period

The capital market environment in 2025 was challenging. This was due in particular to geopolitical crises like the Russia-Ukraine war that has been ongoing since February 24, 2022, the escalated conflict in the Middle East, and the power struggle between the United States and China. Furthermore, the erratic swings in U.S. trade and tariff policy generated additional uncertainty in the capital markets. On the other hand, the easing of monetary policy, which had begun previously, continued during the reporting period. The European Central Bank (ECB) thus lowered the key interest rate in four steps from 3.00% p.a. to 2.00% p.a. (deposit facility) while the U.S. Federal Reserve gradually reduced its key interest rates by 0.75 percentage points to a target range of 3.50% p.a. – 3.75% p.a.

Despite market uncertainty induced mainly by geopolitical factors, the international equity markets, as measured by the MSCI World, recorded appreciable price gains overall in 2025 amid sometimes considerable volatility. These gains were underpinned by the emerging easing of interest rates, increased investor confidence in artificial intelligence, as well as robust corporate profits.

Among the markets in Western industrial countries, the DAX 40 in Germany posted significant gains, buoyed by factors such as the multi-billion-euro package of fiscal relief measures. The emerging markets, as measured by the MSCI Emerging Markets, were even able to outperform the industrial countries on a full-year basis through the end of 2025. In this respect, China's equity market was one of the stand-out performers and continued to recover significantly. This trend was supported by Chinese economic growth, which was stimulated by expansionary macroeconomic policies. However, the international stock exchanges were intermittently hit hard by the erratic swings in U.S. trade and tariff policy.

In terms of the performance of the different sectors in the reporting period, the more cyclical market segments in particular found favor with investors, especially IT positions as well communication services and industrials. This was similar to the previous year. It was companies from these sectors that

benefited in particular from the expansion of computing capacity for the use of artificial intelligence. Against this backdrop, the health care sector, was unable to keep pace with the general market trend. The ongoing political focus on the sector also had a negative impact, even though agreements between some pharmaceutical manufacturers and the new U.S. administration led to price recoveries at the end of the year.

An assessment of the individual health care segments yielded a mixed picture.

The aforementioned agreements on drug price regulation, which turned out to be less restrictive than expected, helped pharmaceutical stocks to make significant price gains. The prospect of interest rate reductions by the U.S. Federal Reserve and improved financing conditions also boosted biotechnology stocks in particular. On the other hand, the market prices for many U.S. health insurance companies collapsed as profitability deteriorated significantly, especially in the business divisions that were reliant on refunds from the U.S. government. Although equities of medical technology providers and of laboratory equipment providers did, in fact, make price gains, these did not keep pace with the significant increases in the biopharmaceutical sector.

Due to the influences described above, the sub-fund was not able to keep pace with the performance of the broader market. The performance relative to the health care sector was also significantly weaker. This was due, in particular, to the sub-fund's structural underweighting in the therapeutic sector – especially in the biopharmaceutical sector. On the other hand, the relatively weaker performance among medical technology providers and laboratory equipment suppliers and weak prices for some positions in the consumer goods sector detracted from performance. The latter were impacted by weak consumer sentiment, especially in the United States.

The following risk management disclosures (other information) are unaudited and are not covered by the audit opinion on the annual report.

Composition of the reference portfolio (according to CSSF circular 11/512)
MSCI World Health Care Index Net Return in EUR

Market risk exposure (value-at-risk) (according to CSSF circular 11/512)

Lowest market risk exposure	%	89.130
Highest market risk exposure	%	117.988
Average market risk exposure	%	102.886

The values-at-risk were calculated for the period from January 1, 2025, through December 31, 2025, using historical simulation with a 99% confidence level, a 10-day holding period and an effective historical observation period of one year. The risk in a reference portfolio that does not contain derivatives is used as the measurement benchmark. Market risk is the risk to the fund's assets arising from an unfavorable change in market prices. The Company determines the potential market risk by means of the **relative value-at-risk approach** as defined in CSSF circular 11/512.

In the reporting period, the average leverage effect from the use of derivatives was 0.0, whereby the total of the nominal amounts of the derivatives in relation to the fund's assets was used for the calculation (sum-of-notional approach).

The gross exposure generated via derivatives pursuant to point 40 a) of the "Guidelines on ETFs and other UCITS issues" of the European Securities and Markets Authority (ESMA) totaled EUR 0.00 as of the reporting date.

Notes on valuation

Under the responsibility of the Board of Directors of the SICAV, the Management Company determines the net asset values per share and performs the valuation of the assets of the fund. The basic provision of price data and price validation are performed in accordance with the method introduced by the Board of Directors of the SICAV on the basis of the legal and regulatory requirements or the principles for valuation methods defined in the SICAV's prospectus.

If no trading prices are available, prices are determined with the aid of valuation models (derived market values) which are agreed between State Street Bank International GmbH, Luxembourg Branch, as external price service provider and the Management Company and which are based as far as possible on market parameters. This procedure is subject to an ongoing monitoring process. The plausibility of price information from third parties is checked through other pricing sources, model calculations or other suitable procedure.

Assets reported in this report are not valued at derived market values.

The management fee / all-in fee rates in effect as of the reporting date for the investment fund units held in the securities portfolio are shown in parentheses. A plus sign means that a performance-based fee may also be charged. As the investment fund held units of other investment funds (target funds) in the reporting period, further costs, charges and fees may have been incurred at the level of these individual target funds.

DWS Invest WellCare (formerly: DWS Invest ESG Healthy Living)

Statement of income and expenses (incl. income adjustment)

for the period from January 1, 2025, through December 31, 2025

I.	**Income**			
1.	Dividends (before withholding tax)		EUR	4 073 594.80
2.	Interest from investments of liquid assets (before withholding tax)		EUR	424 583.41
3.	Deduction for foreign withholding tax		EUR	-486 952.96
Total income			**EUR**	**4 011 225.25**
II.	**Expenses**			
1.	Management fee		EUR	-1 030 394.87
	thereof:			
	Basic management fee	EUR -1 010 370.28		
	Administration fee	EUR -20 024.59		
2.	Depositary fee		EUR	-10 872.68
3.	Auditing, legal and publication costs		EUR	-23 669.51
4.	Taxe d'abonnement[1]		EUR	585.23
5.	Other expenses		EUR	-20 847.36
	thereof:			
	Other	EUR -20 847.36		
Total expenses			**EUR**	**-1 085 199.19**
III. Net investment income			**EUR**	**2 926 026.06**
IV.	**Sale transactions**			
	Realized gains/losses		EUR	-6 342 237.54
Capital gains and losses			**EUR**	**-6 342 237.54**
V. Net gain/loss for the fiscal year			**EUR**	**-3 416 211.48**

[1] This includes primarily income from the release of excess accruals in the amount of EUR 26 481.44.

BVI total expense ratio (TER)

The total expense ratio for the share classes was:

Class FC 0.81% p.a.,
Class FD 0.81% p.a.,
Class LC 1.58% p.a.,
Class LD 1.57% p.a.,
Class MFC 0.44% p.a.,
Class TFC 0.81% p.a.,
Class XC 0.38% p.a.

The TER expresses total expenses and fees (excluding transaction costs) as a percentage of a fund's average net assets in relation to the respective share class within a fiscal year.

Transaction costs

The transaction costs paid in the reporting period amounted to EUR 29 741.38.

The transaction costs include all costs that were reported or settled separately for the account of the fund in the reporting period and are directly connected to the purchase or sale of assets. Any financial transaction taxes paid are included in the calculations.

Statement of changes in net assets 2025

I.	**Value of the fund's net assets at the beginning of the fiscal year**	**EUR**	**329 126 725.79**
1.	Distribution for the previous year	EUR	-105.48
2.	Net outflows	EUR	-56 106 404.78
3.	Income adjustment	EUR	-35 307.98
4.	Net investment income	EUR	2 926 026.06
5.	Realized gains/losses	EUR	-6 342 237.54
6.	Net change in unrealized appreciation/depreciation	EUR	-19 235 331.67
II.	**Value of the fund's net assets at the end of the fiscal year**	**EUR**	**250 333 364.40**

Summary of gains/losses 2025

Realized gains/losses (incl. income adjustment)	**EUR**	**-6 342 237.54**

* The portfolio compositions, incomes, expenses and changes in net assets of the sub-funds managed in foreign currencies were converted into euro at the exchange rates stated below. The attached financial statements represent the assets and liabilities of the individual sub-funds as well as of the fund as a whole. The financial statements for the respective sub-fund are prepared in the currency specified in the sales prospectus while the financial statements for the fund are prepared in its base currency. If the currency of a sub-fund differs from the fund's base currency, the following is carried out within the scope of the consolidation of the individual sub-fund currencies into the fund's base currency: the difference between the net assets of the sub-fund at the beginning of the reporting period converted at exchange rates applicable at the beginning of the reporting period and the value of the net assets of the sub-fund calculated at exchange rates applicable at the end of the reporting period is shown as "Exchange rate valuation differences on the fund's assets at the beginning of the reporting period" in the consolidated statement of changes in net assets for the fund.
Fiscal year-end 2025. . . . . USD 1.176300 = EUR 1
Fiscal year-end 2024. . . . . USD 1.037650 = EUR 1
Fiscal year-end 2025. . . . . JPY 183.838103 = EUR 1
Fiscal year-end 2024. . . . . JPY 163.465240 = EUR 1

** The fund's consolidated net assets, the consolidated statement of income and expenses and the consolidated statement of changes in net assets correspond to the sum of the results of the individual sub-funds. In the case of investments between sub-funds (in which one sub-fund invests in another sub-fund of the same umbrella fund), the corresponding accounts of the fund were not the object of an elimination for the purposes of the respective consolidated presentation of the results.

*** In the case of derivatives and forward transactions, the amount reported as "total assets" comprises the positive balance of the netted individual positions within the same type of product, while negative balances are included under "total liabilities."

[1] The sub-fund was liquidated on January 10, 2024.

[2] The sub-fund was launched on March 13, 2025.

* The portfolio compositions, incomes, expenses and changes in net assets of the sub-funds managed in foreign currencies were converted into euro at the exchange rates stated below. The attached financial statements represent the assets and liabilities of the individual sub-funds as well as of the fund as a whole. The financial statements for the respective sub-fund are prepared in the currency specified in the sales prospectus while the financial statements for the fund are prepared in its base currency. If the currency of a sub-fund differs from the fund's base currency, the following is carried out within the scope of the consolidation of the individual sub-fund currencies into the fund's base currency: the difference between the net assets of the sub-fund at the beginning of the reporting period converted at exchange rates applicable at the beginning of the reporting period and the value of the net assets of the sub-fund calculated at exchange rates applicable at the end of the reporting period is shown as "Exchange rate valuation differences on the fund's assets at the beginning of the reporting period" in the consolidated statement of changes in net assets for the fund.
Fiscal year-end 2025. . . . . USD 1.176300 = EUR 1
Fiscal year-end 2024. . . . . USD 1.037650 = EUR 1
Fiscal year-end 2025. . . . . JPY 183.838103 = EUR 1
Fiscal year-end 2024. . . . . JPY 163.465240 = EUR 1

** The fund's consolidated net assets, the consolidated statement of income and expenses and the consolidated statement of changes in net assets correspond to the sum of the results of the individual sub-funds. In the case of investments between sub-funds (in which one sub-fund invests in another sub-fund of the same umbrella fund), the corresponding accounts of the fund were not the object of an elimination for the purposes of the respective consolidated presentation of the results.

*** In the case of derivatives and forward transactions, the amount reported as "total assets" comprises the positive balance of the netted individual positions within the same type of product, while negative balances are included under "total liabilities."

[1] The sub-fund was liquidated on January 10, 2024.

[2] The sub-fund was launched on March 13, 2025.

* The portfolio compositions, incomes, expenses and changes in net assets of the sub-funds managed in foreign currencies were converted into euro at the exchange rates stated below. The attached financial statements represent the assets and liabilities of the individual sub-funds as well as of the fund as a whole. The financial statements for the respective sub-fund are prepared in the currency specified in the sales prospectus while the financial statements for the fund are prepared in its base currency. If the currency of a sub-fund differs from the fund's base currency, the following is carried out within the scope of the consolidation of the individual sub-fund currencies into the fund's base currency: the difference between the net assets of the sub-fund at the beginning of the reporting period converted at exchange rates applicable at the beginning of the reporting period and the value of the net assets of the sub-fund calculated at exchange rates applicable at the end of the reporting period is shown as "Exchange rate valuation differences on the fund's assets at the beginning of the reporting period" in the consolidated statement of changes in net assets for the fund.
Fiscal year-end 2025. . . . . USD 1.176300 = EUR 1
Fiscal year-end 2024. . . . . USD 1.037650 = EUR 1
Fiscal year-end 2025. . . . . JPY 183.838103 = EUR 1
Fiscal year-end 2024. . . . . JPY 163.465240 = EUR 1

** The fund's consolidated net assets, the consolidated statement of income and expenses and the consolidated statement of changes in net assets correspond to the sum of the results of the individual sub-funds. In the case of investments between sub-funds (in which one sub-fund invests in another sub-fund of the same umbrella fund), the corresponding accounts of the fund were not the object of an elimination for the purposes of the respective consolidated presentation of the results.

*** In the case of derivatives and forward transactions, the amount reported as "total assets" comprises the positive balance of the netted individual positions within the same type of product, while negative balances are included under "total liabilities."

[1] The sub-fund was liquidated on January 10, 2024.

[2] The sub-fund was launched on March 13, 2025.

* The portfolio compositions, incomes, expenses and changes in net assets of the sub-funds managed in foreign currencies were converted into euro at the exchange rates stated below. The attached financial statements represent the assets and liabilities of the individual sub-funds as well as of the fund as a whole. The financial statements for the respective sub-fund are prepared in the currency specified in the sales prospectus while the financial statements for the fund are prepared in its base currency. If the currency of a sub-fund differs from the fund's base currency, the following is carried out within the scope of the consolidation of the individual sub-fund currencies into the fund's base currency: the difference between the net assets of the sub-fund at the beginning of the reporting period converted at exchange rates applicable at the beginning of the reporting period and the value of the net assets of the sub-fund calculated at exchange rates applicable at the end of the reporting period is shown as "Exchange rate valuation differences on the fund's assets at the beginning of the reporting period" in the consolidated statement of changes in net assets for the fund.
Fiscal year-end 2025. . . . . USD 1.176300 = EUR 1
Fiscal year-end 2024. . . . . USD 1.037650 = EUR 1
Fiscal year-end 2025. . . . . JPY 183.838103 = EUR 1
Fiscal year-end 2024. . . . . JPY 163.465240 = EUR 1

** The fund's consolidated net assets, the consolidated statement of income and expenses and the consolidated statement of changes in net assets correspond to the sum of the results of the individual sub-funds. In the case of investments between sub-funds (in which one sub-fund invests in another sub-fund of the same umbrella fund), the corresponding accounts of the fund were not the object of an elimination for the purposes of the respective consolidated presentation of the results.
For the purpose of consolidation of the liquidated sub-fund and for reasons of comparability, the disclosure of the income adjustment and reimbursed expense amounts attributable to the individual income adjustment and reimbursed expense items was changed (in contrast to the individual presentation of the income adjustment and reimbursed expenses in the form of a separate presentation of the total amount) in favor of attributing the individual income adjustment and reimbursed expense components to the respective income adjustment and reimbursed expense items.

[1] The sub-fund was launched on March 13, 2025.

* The portfolio compositions, incomes, expenses and changes in net assets of the sub-funds managed in foreign currencies were converted into euro at the exchange rates stated below. The attached financial statements represent the assets and liabilities of the individual sub-funds as well as of the fund as a whole. The financial statements for the respective sub-fund are prepared in the currency specified in the sales prospectus while the financial statements for the fund are prepared in its base currency. If the currency of a sub-fund differs from the fund's base currency, the following is carried out within the scope of the consolidation of the individual sub-fund currencies into the fund's base currency: the difference between the net assets of the sub-fund at the beginning of the reporting period converted at exchange rates applicable at the beginning of the reporting period and the value of the net assets of the sub-fund calculated at exchange rates applicable at the end of the reporting period is shown as "Exchange rate valuation differences on the fund's assets at the beginning of the reporting period" in the consolidated statement of changes in net assets for the fund.
Fiscal year-end 2025. . . . . USD 1.176300 = EUR 1
Fiscal year-end 2024. . . . . USD 1.037650 = EUR 1
Fiscal year-end 2025. . . . . JPY 183.838103 = EUR 1
Fiscal year-end 2024. . . . . JPY 163.465240 = EUR 1

** The fund's consolidated net assets, the consolidated statement of income and expenses and the consolidated statement of changes in net assets correspond to the sum of the results of the individual sub-funds. In the case of investments between sub-funds (in which one sub-fund invests in another sub-fund of the same umbrella fund), the corresponding accounts of the fund were not the object of an elimination for the purposes of the respective consolidated presentation of the results.
For the purpose of consolidation of the liquidated sub-fund and for reasons of comparability, the disclosure of the income adjustment and reimbursed expense amounts attributable to the individual income adjustment and reimbursed expense items was changed (in contrast to the individual presentation of the income adjustment and reimbursed expenses in the form of a separate presentation of the total amount) in favor of attributing the individual income adjustment and reimbursed expense components to the respective income adjustment and reimbursed expense items.

[1] The sub-fund was launched on March 13, 2025.

* The portfolio compositions, incomes, expenses and changes in net assets of the sub-funds managed in foreign currencies were converted into euro at the exchange rates stated below. The attached financial statements represent the assets and liabilities of the individual sub-funds as well as of the fund as a whole. The financial statements for the respective sub-fund are prepared in the currency specified in the sales prospectus while the financial statements for the fund are prepared in its base currency. If the currency of a sub-fund differs from the fund's base currency, the following is carried out within the scope of the consolidation of the individual sub-fund currencies into the fund's base currency: the difference between the net assets of the sub-fund at the beginning of the reporting period converted at exchange rates applicable at the beginning of the reporting period and the value of the net assets of the sub-fund calculated at exchange rates applicable at the end of the reporting period is shown as "Exchange rate valuation differences on the fund's assets at the beginning of the reporting period" in the consolidated statement of changes in net assets for the fund.
Fiscal year-end 2025. . . . . USD 1.176300 = EUR 1
Fiscal year-end 2024. . . . . USD 1.037650 = EUR 1
Fiscal year-end 2025. . . . . JPY 183.838103 = EUR 1
Fiscal year-end 2024. . . . . JPY 163.465240 = EUR 1

** The fund's consolidated net assets, the consolidated statement of income and expenses and the consolidated statement of changes in net assets correspond to the sum of the results of the individual sub-funds. In the case of investments between sub-funds (in which one sub-fund invests in another sub-fund of the same umbrella fund), the corresponding accounts of the fund were not the object of an elimination for the purposes of the respective consolidated presentation of the results.
For the purpose of consolidation of the liquidated sub-fund and for reasons of comparability, the disclosure of the income adjustment and reimbursed expense amounts attributable to the individual income adjustment and reimbursed expense items was changed (in contrast to the individual presentation of the income adjustment and reimbursed expenses in the form of a separate presentation of the total amount) in favor of attributing the individual income adjustment and reimbursed expense components to the respective income adjustment and reimbursed expense items.

[1] The sub-fund was launched on March 13, 2025.

* The portfolio compositions, incomes, expenses and changes in net assets of the sub-funds managed in foreign currencies were converted into euro at the exchange rates stated below. The attached financial statements represent the assets and liabilities of the individual sub-funds as well as of the fund as a whole. The financial statements for the respective sub-fund are prepared in the currency specified in the sales prospectus while the financial statements for the fund are prepared in its base currency. If the currency of a sub-fund differs from the fund's base currency, the following is carried out within the scope of the consolidation of the individual sub-fund currencies into the fund's base currency: the difference between the net assets of the sub-fund at the beginning of the reporting period converted at exchange rates applicable at the beginning of the reporting period and the value of the net assets of the sub-fund calculated at exchange rates applicable at the end of the reporting period is shown as "Exchange rate valuation differences on the fund's assets at the beginning of the reporting period" in the consolidated statement of changes in net assets for the fund.
Fiscal year-end 2025. . . . . USD 1.176300 = EUR 1
Fiscal year-end 2024. . . . . USD 1.037650 = EUR 1
Fiscal year-end 2025. . . . . JPY 183.838103 = EUR 1
Fiscal year-end 2024. . . . . JPY 163.465240 = EUR 1

** The fund's consolidated net assets, the consolidated statement of income and expenses and the consolidated statement of changes in net assets correspond to the sum of the results of the individual sub-funds. In the case of investments between sub-funds (in which one sub-fund invests in another sub-fund of the same umbrella fund), the corresponding accounts of the fund were not the object of an elimination for the purposes of the respective consolidated presentation of the results.

The attached financial statements represent the assets and liabilities of the individual sub-funds as well as of the fund as a whole. The financial statements for the respective sub-fund are prepared in the currency specified in the sales prospectus while the financial statements for the fund are prepared in its base currency. If the currency of a sub-fund differs from the fund's base currency, the following is carried out within the scope of the consolidation of the individual sub-fund currencies into the fund's base currency: the difference between the net assets of the sub-fund at the beginning of the reporting period converted at exchange rates applicable at the beginning of the reporting period and the value of the net assets of the sub-fund calculated at exchange rates applicable at the end of the reporting period is shown as "Exchange rate valuation differences on the fund's assets at the beginning of the reporting period" in the consolidated statement of changes in net assets for the fund.
Fiscal year-end 2025. . . . . USD 1.176300 = EUR 1
Fiscal year-end 2024. . . . . USD 1.037650 = EUR 1
Fiscal year-end 2025. . . . . JPY 183.838103 = EUR 1
Fiscal year-end 2024. . . . . JPY 163.465240 = EUR 1

** The fund's consolidated net assets, the consolidated statement of income and expenses and the consolidated statement of changes in net assets correspond to the sum of the results of the individual sub-funds. In the case of investments between sub-funds (in which one sub-fund invests in another sub-fund of the same umbrella fund), the corresponding accounts of the fund were not the object of an elimination for the purposes of the respective consolidated presentation of the results.

[1] The sub-fund was liquidated on June 3, 2025.

REPORT OF THE RÉVISEUR D'ENTREPRISES AGRÉÉ

Audit opinion

We have audited the annual financial statements of DWS Invest, SICAV ("the Fund") and its respective sub-funds, which comprise the statement of net assets, including the statement of investments in the securities portfolio and other net assets as of December 31, 2025, the statement of income and expenses and the statement of changes in net assets for the fiscal year then ended, as well as notes to the financial statements, with a summary of significant accounting policies.

In our opinion, the accompanying annual financial statements give a true and fair view of the financial position of the Fund and its respective sub-funds as of December 31, 2025, and of the results of its operations and changes in its net assets for the fiscal year then ended in accordance with Luxembourg legal and regulatory requirements relating to the preparation and presentation of financial statements.

Basis for the audit opinion

We conducted our audit in accordance with the Law of July 23, 2016, on the audit profession ("Law of July 23, 2016") and with International Standards on Auditing ("ISAs") as adopted for Luxembourg by the Commission de Surveillance du Secteur Financier ("CSSF"). Our responsibilities under the Law of July 23, 2016, and the ISAs as adopted in Luxembourg by the CSSF are further described in the "Responsibilities of the réviseur d'entreprises agréé for the audit of the financial statements" section. We are also independent of the Fund in accordance with the International Ethics Standards Board for Accountants' Code of Ethics for Professional Accountants, including International Independence Standards, ("IESBA Code") as adopted for Luxembourg by the CSSF together with the ethical requirements that are relevant to our audit of the financial statements, and we have fulfilled our other ethical responsibilities in accordance with these ethical requirements. We believe that the audit evidence we have obtained is sufficient and appropriate to provide a basis for our audit opinion.

Highlighting of a fact

We refer to the disclosure in the notes on valuation of the investment portfolio of these financial statements in which it is pointed out that the Board of Directors of the Fund has resolved to close the sub-fund DWS Invest Metaverse effective April 13, 2026. The financial statements of the sub-fund concerned were therefore not prepared using the going concern basis of accounting. Our audit opinion has not been modified with respect to this fact.

Other information

The Board of Directors of the Fund is responsible for the other information. The other information comprises the information included in the annual report, but does not include the financial statements and our report of the réviseur d'entreprises agréé thereon.

Our audit opinion on the financial statements does not cover the other information and we will not express any form of assurance conclusion thereon.

In connection with our audit of the financial statements, our responsibility is to read the other information and, in doing so, consider whether the other information is materially inconsistent with the financial statements or our knowledge obtained in the audit, or otherwise appears to be materially misstated. If, based on the work we have performed, we conclude that there is a material misstatement of this other information, we are required to report this fact. We have nothing to report in this regard.

Responsibilities of the Board of Directors of the Fund for the financial statements

The Board of Directors of the Fund is responsible for the preparation and factual presentation of the financial statements in accordance with Luxembourg legal and regulatory requirements relating to the preparation and presentation of financial statements, and for such internal control as the Board of Directors of the Fund determines necessary to enable the preparation of financial statements that are free from material misstatements, whether due to fraud or error.

In preparing the annual financial statements, the Board of Directors of the Fund is responsible for assessing the ability of the Fund and of its respective sub-funds to continue as a going concern, disclosing, as applicable, matters related to going concern and using the going concern basis of accounting unless the Board of Directors of the Fund intends either to liquidate the Fund or close any of its individual sub-funds or to cease operations, or has no realistic alternative but to do so.

Responsibilities of the réviseur d'entreprises agréé for the audit of the financial statements

The objective of our audit is to obtain reasonable assurance about whether the financial statements as a whole are free from material misstatement, whether due to fraud or error, and to issue a report of the réviseur d'entreprises agréé that includes our opinion. Reasonable assurance is a high level of assurance, but is not a guarantee that an audit conducted in accordance with the Law of July 23, 2016, and with ISAs as adopted for Luxembourg by the CSSF will always detect a material misstatement when it exists. Misstatements can arise from fraud or error and are considered material if, individually or in the aggregate, they could reasonably be expected to influence the economic decisions of users taken on the basis of these financial statements.

As part of an audit in accordance with the Law of July 23, 2016, and with ISAs as adopted for Luxembourg by the CSSF, we exercise professional judgment and maintain professional skepticism throughout the audit.

We also:

- Identify and assess the risks of material misstatement of the financial statements, whether due to fraud or error, design and perform audit procedures responsive to those risks, and obtain audit evidence that is sufficient and appropriate to provide a basis for our opinion. The risk of not detecting a material misstatement resulting from fraud is higher than for one resulting from error, as fraud may involve collusion, forgery, intentional omissions, misrepresentations, or the override of internal control.

- Obtain an understanding of internal control relevant to the audit in order to design audit procedures that are appropriate in the circumstances, but not for the purpose of expressing an opinion on the effectiveness of the Fund's internal control.

- Evaluate the appropriateness of accounting policies used and the reasonableness of accounting estimates and related disclosures made by the Board of Directors of the Fund.

- Conclude on the appropriateness of the use by the Board of Directors of the Fund of the going concern basis of accounting and, based on the audit evidence obtained, whether a material uncertainty exists related to events or conditions that may cast significant doubt on the ability of the Fund or of any of its individual sub-funds to continue as a going concern. If we conclude that a material uncertainty exists, we are required to draw attention in the report of the réviseur d'entreprises agréé to the related disclosures in the financial statements or, if such disclosures are inadequate, to modify our opinion. Our conclusions are based on the audit evidence obtained up to the date of the report of the réviseur d'entreprises agréé.

- Evaluate the overall presentation, structure and content of the financial statements, including the disclosures, and whether the financial statements represent the underlying transactions and events in a manner that achieves fair presentation.

We communicate with those charged with governance regarding, among other matters, the planned scope and timing of the audit and significant audit findings, including any significant deficiencies in internal control that we identify during our audit.

Luxembourg, April 2, 2026

KPMG Audit S.à r.l.
Cabinet de révision agréé

Pia Schanz

Other information – Not covered by the audit opinion on the annual report

Supplementary information

Fees and investments of the members of the Board of Directors

Fees and investments of the members of the Board of Directors for the fiscal year ended December 31, 2024

Upon the approval of the shareholders at the general meeting of the company on April 23, 2025, the annual remuneration of the independent member of the Board of Directors based on the number of sub-funds of the company at the end of the fiscal year was approved. The independent member of the Board of Directors received EUR 20 000 for the fiscal year ended December 31, 2024. The external member of the Board of Directors received EUR 10 000 for the fiscal year ended December 31, 2024.

The remuneration of the independent members of the Board of Directors is paid by the Management Company.

To clarify: Non-independent members of the Board of Directors do not receive remuneration for their function as members of the Board of Directors or other contributions in kind from the company or the Management Company.

Fees and investments of the members of the Board of Directors for the fiscal year ended December 31, 2025

The general meeting of the shareholders of the company, which is to take place on April 22, 2026, will approve the annual remuneration for the independent member and the external member of the Board of Directors for the fiscal year ended December 31, 2025. The amount earmarked for the independent member of the Board of Directors is EUR 20 000 and is based on the number of sub-funds at the end of the fiscal year ended December 31, 2025. The amount earmarked for the external member of the Board of Directors is EUR 10 000 and is based on the number of sub-funds at the end of the fiscal year ended December 31, 2025.

The remuneration of the independent and the external members of the Board of Directors is paid by the Management Company.

To clarify: Non-independent members of the Board of Directors do not receive remuneration for their function as members of the Board of Directors or other contributions in kind from the company or the Management Company.

Remuneration disclosure

DWS Investment S.A. (the "Company") is a subsidiary in DWS Group GmbH & Co. KGaA ("DWS KGaA"), and is subject to the regulatory requirements of the Fifth Directive on Undertakings for Collective Investment in Transferable Securities ("UCITS V Directive") and the Alternative Investment Fund Management Directive ("AIFM Directive") as well as the European Securities and Markets Authority's Guidelines on Sound Remuneration Policies ("ESMA Guidelines") with regard to the design of its remuneration system.

Remuneration Policy & Governance

The Company is governed by the Group-wide Compensation Policy that DWS KGaA has adopted for itself and all of its subsidiaries ("DWS Group" or only "Group").
In line with the Group structure, committees have been set up to ensure the appropriateness of the compensation system and compliance with regulatory requirements on compensation and are responsible for reviewing it.

As such the DWS Compensation Committee was tasked by the DWS KGaA Executive Board with developing and designing sustainable compensation principles, making recommendations on overall compensation and ensuring appropriate governance and oversight with regard to compensation and benefits for the Group.

Furthermore, the Remuneration Committee was established to support the Supervisory Board of DWS KGaA in monitoring the appropriate structure of the remuneration systems for all Group employees. This is done by testing the consistency of the remuneration strategy with the business and risk strategy and taking into account the effects of the remuneration system on the group-wide risk, capital and liquidity management.

The internal annual review at DWS Group level concluded the design of the remuneration system to be appropriate and no significant irregularities were recognized.

Compensation structure

Employee compensation consists of fixed and variable compensation.

Fixed compensation remunerates employees for their skills, experience and competencies, commensurate with the requirements, size and scope of their role.

Variable compensation takes into account performance at group, divisional and individual level. Variable compensation generally consists of two elements – the "Franchise Component" and the "Individual Component".

The Franchise Component is determined based upon the performance of three Key Performance Indicators (KPIs) at DWS Group level. For the performance year 2025 these were: Adjusted Cost Income Ratio ("CIR"), long-term Net Flows and ESG metrics.

The individual component of variable compensation takes into account a number of financial and non-financial factors, relativities within the peer group, and retention considerations. Variable compensation can be reduced accordingly or cancelled completely in the event of negative performance contributions or misconduct. In principle, it is only granted and paid out if the granting is affordable for the Group. Guaranteed variable compensation is not normally granted to employees. On an exceptional basis, guaranteed variable compensation can be granted to new hires but only during their first year of employment.

The compensation strategy is designed to achieve an appropriate balance between fixed and variable compensation. This helps to align employee compensation with the interests of customers, investors and shareholders, as well as to industry standards. At the same time, it ensures that fixed compensation represents a sufficiently high proportion of total compensation to allow the Group full flexibility in granting variable compensation.

Determination of variable compensation and appropriate risk-adjustment

The total amount of variable compensation is subject to appropriate risk-adjustment measures which include ex-ante and ex-post risk adjustments. The robust methodology is designed to ensure that the determination of variable compensation reflects Group's risk-adjusted performance as well as the capital and liquidity position.

A number of considerations are used in assessing the performance of the business units. Performance is assessed in the context of financial and non-financial targets based on balanced scorecards. The allocation of variable compensation to the infrastructure areas and in particular to the control functions depends on the overall results of the Group, but not on the results of the business areas they oversee.

Principles for determining variable compensation apply at individual employee level which detail the factors and metrics that must be taken into account when making IVC decisions. These include, for instance, investment performance, client retention, culture considerations, and objective setting and performance assessment based on the "Total Performance" approach. Furthermore, any control function inputs and disciplinary sanctions and their impact on the VC have to be considered as well.

Sustainable Compensation

Sustainability and sustainability risks are an essential part that determine the variable compensation. Therefore, the remuneration policy is fully in line and consistent with sustainability risks. Hence, DWS Group incentivises behaviour that benefits both interest of clients and the long-term performance of the firm. Relevant sustainability factors are reviewed on a regular basis and incorporated in the design of the compensation system.

Compensation for 2025

The DWS Compensation Committee has monitored the affordability of VC for 2025 and determined that the Group's capital and liquidity levels remain above regulatory minimum requirements, and internal risk appetite threshold.

As part of the overall 2025 variable compensation granted in March 2026, the Franchise Component is awarded to eligible employees in line with the assessment of the defined KPIs. The Executive Board recognizing the considerable contribution of employees and determined a target achievement rate of 100.0% for 2025.

Identification of Material Risk Takers

In accordance with the regulatory requirements, the Company has identified Material Risk Takers. The identification process was carried out in accordance with the Group's policies and is based on an assessment of the impact of the following categories of staff on the risk profile of the Company or on a fund it manages: (a) Board Members/Senior Management, (b) Portfolio/Investment managers, (c) Control Functions, (d) Staff heading Administration, Marketing and Human Resources, (e) other individuals (Risk Takers) in a significant position of influence, (f) other employees in the same remuneration bracket as other Risk Takers, whose roles have an impact on the risk profile of the Company or the Group. At least 40% of the VC for Material Risk Takers is deferred. Additionally, at least 50% of both, the upfront and the deferred proportion, are granted in the Group share-based instruments or fund-linked instruments for Key Investment Professionals. All deferred components are subject to a number of performance conditions and forfeiture provisions which ensure an appropriate ex-post risk adjustment. In case the VC is lower than EUR 50,000, the Material Risk Takers receive their entire variable compensation in cash without any deferral.

Aggregate Compensation Information for the Company for 2025[1]

Number of employees on an annual average		116
Total Compensation[2]	EUR	18 151 675
Fixed Pay	EUR	14 627 423
Variable Compensation	EUR	3 524 252
Thereof: Carried Interest	EUR	0
Total Compensation for Senior Management[3]	EUR	1 658 571
Total Compensation for other Material Risk Takers[4]	EUR	0
Total Compensation for Control Function employees	EUR	2 587 454

1 In cases where portfolio or risk management activities have been delegated by the Company, the compensation data for delegates are not included in the table.
2 Considering various elements of remuneration as defined in the ESMA Guidelines which may include monetary payments or benefits (such as cash, shares, options, pension contributions) or none (directly) monetary benefits (such as fringe benefits or special allowances for car, mobile phone, etc.).
3 Senior Management refers to the members of the Management Board of the Company, only. Members of the Management Board meet the definition of managers. Apart from the members of Senior Management, no further managers have been identified.
4 Identified risk takers with control functions are shown in the line "Control Function employees".

Remuneration Disclosure

DWS Investment GmbH (the "Company") is a subsidiary of DWS Group GmbH & Co. KGaA ("DWS KGaA"), and is subject to the regulatory requirements of the Fifth Directive on Undertakings for Collective Investment in Transferable Securities ("UCITS V Directive") and the Alternative Investment Fund Management Directive ("AIFM Directive") as well as the European Securities and Markets Authority's Guidelines on Sound Remuneration Policies ("ESMA Guidelines") with regard to the design of its remuneration system.

Remuneration Policy & Governance

The Company is governed by the Group-wide Compensation Policy that DWS KGaA has adopted for itself and all of its subsidiaries ("DWS Group" or only "Group").

In line with the Group structure, committees have been set up to ensure the appropriateness of the compensation system and compliance with regulatory requirements on compensation and are responsible for reviewing it.

As such the DWS Compensation Committee was tasked by the DWS KGaA Executive Board with developing and designing sustainable compensation principles, making recommendations on overall compensation and ensuring appropriate governance and oversight with regard to compensation and benefits for the Group.

Furthermore, the Remuneration Committee was established to support the Supervisory Board of DWS KGaA in monitoring the appropriate structure of the remuneration systems for all Group employees. This is done by testing the consistency of the remuneration strategy with the business and risk strategy and taking into account the effects of the remuneration system on the group-wide risk, capital and liquidity management.

The internal annual review at DWS Group level concluded the design of the remuneration system to be appropriate and no significant irregularities were recognized.

Compensation structure

Employee compensation consists of fixed and variable compensation.

Fixed compensation remunerates employees for their skills, experience and competencies, commensurate with the requirements, size and scope of their role.

Variable compensation takes into account performance at group, divisional and individual level. Variable compensation generally consists of two elements – the "Franchise Component" and the "Individual Component".

The Franchise Component is determined based upon the performance of three Key Performance Indicators (KPIs) at DWS Group level. For the performance year 2025 these were: Adjusted Cost Income Ratio ("CIR"), long-term Net Flows and ESG metrics.

The individual component of variable compensation takes into account a number of financial and non-financial factors, relativities within the peer group, and retention considerations. Variable compensation can be reduced accordingly or cancelled completely in the event of negative performance contributions or misconduct. In principle, it is only granted and paid out if the granting is affordable for the Group. Guaranteed variable compensation is not normally granted to employees. On an exceptional basis, guaranteed variable compensation can be granted to new hires but only during their first year of employment.

The total amount of variable compensation is subject to appropriate risk-adjustment measures which include ex-ante and ex-post risk adjustments. The robust methodology is designed to ensure that the determination of variable compensation reflects Group's risk-adjusted performance as well as the capital and liquidity position.

A number of considerations are used in assessing the performance of the business units. Performance is assessed in the context of financial and non-financial targets based on balanced scorecards. The allocation of variable compensation to the infrastructure areas and in particular to the control functions depends on the overall results of the Group, but not on the results of the business areas they oversee.

Principles for determining variable compensation apply at individual employee level which detail the factors and metrics that must be taken into account when making IVC decisions. These include, for instance, investment performance, client retention, culture considerations, and objective setting and performance assessment based on the "Total Performance" approach. Furthermore, any control function inputs and disciplinary sanctions and their impact on the VC have to be considered as well.

Sustainable Compensation

Sustainability and sustainability risks are an essential part that determine the variable compensation. Therefore, the remuneration policy is fully in line and consistent with sustainability risks. Hence, DWS Group incentivises behaviour that benefits both interest of clients and the long-term performance of the firm. Relevant sustainability factors are reviewed on a regular basis and incorporated in the design of the compensation system.

Compensation for 2025

The DWS Compensation Committee has monitored the affordability of VC for 2025 and determined that the Group's capital and liquidity levels remain above regulatory minimum requirements, and internal risk appetite threshold.

As part of the overall 2025 variable compensation granted in March 2026, the Franchise Component is awarded to eligible employees in line with the assessment of the defined KPIs. The Executive Board recognizing the considerable contribution of employees and determined a target achievement rate of 100.0% for 2025.

Identification of Material Risk Takers

In accordance with the regulatory requirements, the Company has identified Material Risk Takers. The identification process was carried out in accordance with the Group's policies and is based on an assessment of the impact of the following categories of staff on the risk profile of the Company or on a fund it manages: (a) Board Members/Senior Management, (b) Portfolio/Investment managers, (c) Control Functions, (d) Staff heading Administration, Marketing and Human Resources, (e) other individuals (Risk Takers) in a significant position of influence, (f) other employees in the same remuneration bracket as other Risk Takers, whose roles have an impact on the risk profile of the Company or the Group. At least 40% of the VC for Material Risk Takers is deferred. Additionally, at least 50% of both, the upfront and the deferred proportion, are granted in the Group share-based instruments or fund-linked instruments for Key Investment Professionals. All deferred components are subject to a number of performance conditions and forfeiture provisions which ensure an appropriate ex-post risk adjustment. In case the VC is lower than EUR 50,000, the Material Risk Takers receive their entire variable compensation in cash without any deferral.

Aggregate Compensation Information for the Company for 2025[1]

Number of employees on an annual average		422
Total Compensation	EUR	95 185 668
Fixed Pay	EUR	52 593 104
Variable Compensation	EUR	42 592 564
Thereof: Carried Interest	EUR	0
Total Compensation for Senior Management[2]	EUR	4 439 634
Total Compensation for other Material Risk Takers	EUR	12 892 273
Total Compensation for Control Function employees	EUR	2 570 298

1 In cases where portfolio or risk management activities have been delegated by the Company, the compensation data for delegates are not included in the table.
2 Senior Management refers to the members of the Management Board of the Company, only. Members of the Management Board meet the definition of managers. Apart from the members of Senior Management, no further managers have been identified.

Information pursuant to Regulation (EU) 2015/2365 on transparency of securities financing transactions (SFTs) and of reuse and amending Regulation (EU) No. 648/2012 – Statement in accordance with Section A

In the reporting period, there were no securities financing transactions according to the above Regulation for the following sub-funds:

Other	-	-	-

Quality/Qualities:

Insofar as securities lending transactions, reverse repurchase agreements or transactions with OTC derivatives (except forward currency transactions) are concluded, collateral in one of the following forms is provided to the fund:

– Liquid assets such as cash, short-term bank deposits, money market instruments according to the definition in Directive 2007/16/EC of March 19, 2007, letters of credit and first-demand guarantees that are issued by top-rated credit institutions not affiliated with the counterparty, or bonds issued by an OECD member country or its local authorities or by supranational institutions and authorities at local, regional or international level, regardless of their term to maturity;

– Units of a collective investment undertaking investing in money market instruments that calculates a net asset value daily and has a rating of AAA or an equivalent rating;

– Units of a UCITS that invests predominantly in the bonds and equities listed under the next two indents;

– Bonds, regardless of their term to maturity, that have a minimum rating of low investment-grade;

– Equities admitted to or traded in a regulated market in a member state of the European Union or on an exchange in an OECD member country, provided that these equities are included in a major index.

The Management Company reserves the right to restrict the permissibility of the aforementioned collateral.
Furthermore, the Management Company reserves the right to deviate from the aforementioned criteria in exceptional cases.

Additional information on collateral requirements can be found in the sales prospectus for the fund.

8. Income and cost portions (before income adjustment)

	Income portion of the fund		
Absolute	21 023.37	-	-
In % of gross income	70.00%	-	-
Cost portion of the fund	-	-	-

	Income portion of the Management Company		
Absolute	8 409.35	-	-
In % of gross income	30.00%	-	-
Cost portion of the Management Company	-	-	-

	Income portion of third parties		
Absolute	-	-	-
In % of gross income	-	-	-
Cost portion of third parties	-	-	-

If the (sub-)fund has carried out securities lending, the (sub-)fund pays 33% of the gross revenues generated from securities lending as costs/fees to the Management Company and retains 67% of the gross revenues generated from such transactions. Out of the 33%, the Management Company retains 5% for its own coordination and oversight tasks and pays the direct costs (e.g., transaction and collateral management costs) to external service providers. The remaining amount (after deduction of the Management Company costs and the direct costs) is paid to DWS Investment GmbH for supporting the Management Company in initiating, preparing and implementing securities lending and borrowing.

For simple reverse repurchase agreement transactions (if permitted), i.e., those which are not used to reinvest cash collateral received under securities lending and borrowing or repurchase agreement transactions, the respective (sub-)fund retains 100% of the gross revenues, less the transaction costs that the (sub-)fund pays as direct costs to an external service provider.

The Management Company is a related party to DWS Investment GmbH.

If the (sub-)fund has entered into repurchase agreement transactions, these are currently simple reverse repurchase agreement transactions, and not other (reverse) repurchase agreement transactions. In case other (reverse) repurchase agreement transactions will be used, the sales prospectus will be updated accordingly. The (sub-)fund will then pay up to 33% of the gross revenues generated from (reverse) repurchase agreement transactions as costs/fees to the Management Company and retain at least 67% of the gross revenues generated from such transactions. Out of the maximum of 33%, the Management Company will retain 5% for its own coordination and oversight tasks and will pay the direct costs (e.g., transaction and collateral management costs) to external service providers. The remaining amount (after deduction of the Management Company costs and the direct costs) will be paid to DWS Investment GmbH for supporting the Management Company in initiating, preparing and implementing (reverse) repurchase agreement transactions.

Type(s):			
Bank balances	-	-	-
Bonds	-	-	1 202 710.62
Shares	-	-	-
Other	-	-	-

Quality/Qualities:

Insofar as securities lending transactions, reverse repurchase agreements or transactions with OTC derivatives (except forward currency transactions) are concluded, collateral in one of the following forms is provided to the fund:

– Liquid assets such as cash, short-term bank deposits, money market instruments according to the definition in Directive 2007/16/EC of March 19, 2007, letters of credit and first-demand guarantees that are issued by top-rated credit institutions not affiliated with the counterparty, or bonds issued by an OECD member country or its local authorities or by supranational institutions and authorities at local, regional or international level, regardless of their term to maturity;

– Units of a collective investment undertaking investing in money market instruments that calculates a net asset value daily and has a rating of AAA or an equivalent rating;

– Units of a UCITS that invests predominantly in the bonds and equities listed under the next two indents;

– Bonds, regardless of their term to maturity, that have a minimum rating of low investment-grade;

– Equities admitted to or traded in a regulated market in a member state of the European Union or on an exchange in an OECD member country, provided that these equities are included in a major index.

The Management Company reserves the right to restrict the permissibility of the aforementioned collateral.
Furthermore, the Management Company reserves the right to deviate from the aforementioned criteria in exceptional cases.

Additional information on collateral requirements can be found in the sales prospectus for the fund.

Cost portion of the Management Company	-	-	-

	Income portion of third parties		
Absolute	-	-	-
In % of gross income	-	-	-
Cost portion of third parties	-	-	-

If the (sub-)fund has carried out securities lending, the (sub-)fund pays 33% of the gross revenues generated from securities lending as costs/fees to the Management Company and retains 67% of the gross revenues generated from such transactions. Out of the 33%, the Management Company retains 5% for its own coordination and oversight tasks and pays the direct costs (e.g., transaction and collateral management costs) to external service providers. The remaining amount (after deduction of the Management Company costs and the direct costs) is paid to DWS Investment GmbH for supporting the Management Company in initiating, preparing and implementing securities lending and borrowing.

For simple reverse repurchase agreement transactions (if permitted), i.e., those which are not used to reinvest cash collateral received under securities lending and borrowing or repurchase agreement transactions, the respective (sub-)fund retains 100% of the gross revenues, less the transaction costs that the (sub-)fund pays as direct costs to an external service provider.

The Management Company is a related party to DWS Investment GmbH.

If the (sub-)fund has entered into repurchase agreement transactions, these are currently simple reverse repurchase agreement transactions, and not other (reverse) repurchase agreement transactions. In case other (reverse) repurchase agreement transactions will be used, the sales prospectus will be updated accordingly. The (sub-)fund will then pay up to 33% of the gross revenues generated from (reverse) repurchase agreement transactions as costs/fees to the Management Company and retain at least 67% of the gross revenues generated from such transactions. Out of the maximum of 33%, the Management Company will retain 5% for its own coordination and oversight tasks and will pay the direct costs (e.g., transaction and collateral management costs) to external service providers. The remaining amount (after deduction of the Management Company costs and the direct costs) will be paid to DWS Investment GmbH for supporting the Management Company in initiating, preparing and implementing (reverse) repurchase agreement transactions.

Type(s):			
Bank balances	-	-	-
Bonds	1 967 093.81	-	-
Shares	480 888.89	-	-
Other	-	-	-

Quality/Qualities:

Insofar as securities lending transactions, reverse repurchase agreements or transactions with OTC derivatives (except forward currency transactions) are concluded, collateral in one of the following forms is provided to the fund:

– Liquid assets such as cash, short-term bank deposits, money market instruments according to the definition in Directive 2007/16/EC of March 19, 2007, letters of credit and first-demand guarantees that are issued by top-rated credit institutions not affiliated with the counterparty, or bonds issued by an OECD member country or its local authorities or by supranational institutions and authorities at local, regional or international level, regardless of their term to maturity;

– Units of a collective investment undertaking investing in money market instruments that calculates a net asset value daily and has a rating of AAA or an equivalent rating;

– Units of a UCITS that invests predominantly in the bonds and equities listed under the next two indents;

– Bonds, regardless of their term to maturity, that have a minimum rating of low investment-grade;

– Equities admitted to or traded in a regulated market in a member state of the European Union or on an exchange in an OECD member country, provided that these equities are included in a major index.

The Management Company reserves the right to restrict the permissibility of the aforementioned collateral.
Furthermore, the Management Company reserves the right to deviate from the aforementioned criteria in exceptional cases.

Additional information on collateral requirements can be found in the sales prospectus for the fund.

Cost portion of the fund	-	-	-
	Income portion of the Management Company		
Absolute	3 394.88	-	-
In % of gross income	30.00%	-	-
Cost portion of the Management Company	-	-	-
	Income portion of third parties		
Absolute	-	-	-
In % of gross income	-	-	-
Cost portion of third parties	-	-	-

If the (sub-)fund has carried out securities lending, the (sub-)fund pays 33% of the gross revenues generated from securities lending as costs/fees to the Management Company and retains 67% of the gross revenues generated from such transactions. Out of the 33%, the Management Company retains 5% for its own coordination and oversight tasks and pays the direct costs (e.g., transaction and collateral management costs) to external service providers. The remaining amount (after deduction of the Management Company costs and the direct costs) is paid to DWS Investment GmbH for supporting the Management Company in initiating, preparing and implementing securities lending and borrowing.

For simple reverse repurchase agreement transactions (if permitted), i.e., those which are not used to reinvest cash collateral received under securities lending and borrowing or repurchase agreement transactions, the respective (sub-)fund retains 100% of the gross revenues, less the transaction costs that the (sub-)fund pays as direct costs to an external service provider.

The Management Company is a related party to DWS Investment GmbH.

If the (sub-)fund has entered into repurchase agreement transactions, these are currently simple reverse repurchase agreement transactions, and not other (reverse) repurchase agreement transactions. In case other (reverse) repurchase agreement transactions will be used, the sales prospectus will be updated accordingly. The (sub-)fund will then pay up to 33% of the gross revenues generated from (reverse) repurchase agreement transactions as costs/fees to the Management Company and retain at least 67% of the gross revenues generated from such transactions. Out of the maximum of 33%, the Management Company will retain 5% for its own coordination and oversight tasks and will pay the direct costs (e.g., transaction and collateral management costs) to external service providers. The remaining amount (after deduction of the Management Company costs and the direct costs) will be paid to DWS Investment GmbH for supporting the Management Company in initiating, preparing and implementing (reverse) repurchase agreement transactions.

In % of gross income	-	-	-
Cost portion of third parties	-	-	-

If the (sub-)fund has carried out securities lending, the (sub-)fund pays 33% of the gross revenues generated from securities lending as costs/fees to the Management Company and retains 67% of the gross revenues generated from such transactions. Out of the 33%, the Management Company retains 5% for its own coordination and oversight tasks and pays the direct costs (e.g., transaction and collateral management costs) to external service providers. The remaining amount (after deduction of the Management Company costs and the direct costs) is paid to DWS Investment GmbH for supporting the Management Company in initiating, preparing and implementing securities lending and borrowing.

For simple reverse repurchase agreement transactions (if permitted), i.e., those which are not used to reinvest cash collateral received under securities lending and borrowing or repurchase agreement transactions, the respective (sub-)fund retains 100% of the gross revenues, less the transaction costs that the (sub-)fund pays as direct costs to an external service provider.

The Management Company is a related party to DWS Investment GmbH.

If the (sub-)fund has entered into repurchase agreement transactions, these are currently simple reverse repurchase agreement transactions, and not other (reverse) repurchase agreement transactions. In case other (reverse) repurchase agreement transactions will be used, the sales prospectus will be updated accordingly. The (sub-)fund will then pay up to 33% of the gross revenues generated from (reverse) repurchase agreement transactions as costs/fees to the Management Company and retain at least 67% of the gross revenues generated from such transactions. Out of the maximum of 33%, the Management Company will retain 5% for its own coordination and oversight tasks and will pay the direct costs (e.g., transaction and collateral management costs) to external service providers. The remaining amount (after deduction of the Management Company costs and the direct costs) will be paid to DWS Investment GmbH for supporting the Management Company in initiating, preparing and implementing (reverse) repurchase agreement transactions.

Quality/Qualities:

Insofar as securities lending transactions, reverse repurchase agreements or transactions with OTC derivatives (except forward currency transactions) are concluded, collateral in one of the following forms is provided to the fund:

– Liquid assets such as cash, short-term bank deposits, money market instruments according to the definition in Directive 2007/16/EC of March 19, 2007, letters of credit and first-demand guarantees that are issued by top-rated credit institutions not affiliated with the counterparty, or bonds issued by an OECD member country or its local authorities or by supranational institutions and authorities at local, regional or international level, regardless of their term to maturity;

– Units of a collective investment undertaking investing in money market instruments that calculates a net asset value daily and has a rating of AAA or an equivalent rating;

– Units of a UCITS that invests predominantly in the bonds and equities listed under the next two indents;

– Bonds, regardless of their term to maturity, that have a minimum rating of low investment-grade;

– Equities admitted to or traded in a regulated market in a member state of the European Union or on an exchange in an OECD member country, provided that these equities are included in a major index.

The Management Company reserves the right to restrict the permissibility of the aforementioned collateral.
Furthermore, the Management Company reserves the right to deviate from the aforementioned criteria in exceptional cases.

Additional information on collateral requirements can be found in the sales prospectus for the fund.

If the (sub-)fund has carried out securities lending, the (sub-)fund pays 33% of the gross revenues generated from securities lending as costs/fees to the Management Company and retains 67% of the gross revenues generated from such transactions. Out of the 33%, the Management Company retains 5% for its own coordination and oversight tasks and pays the direct costs (e.g., transaction and collateral management costs) to external service providers. The remaining amount (after deduction of the Management Company costs and the direct costs) is paid to DWS Investment GmbH for supporting the Management Company in initiating, preparing and implementing securities lending and borrowing.

For simple reverse repurchase agreement transactions (if permitted), i.e., those which are not used to reinvest cash collateral received under securities lending and borrowing or repurchase agreement transactions, the respective (sub-)fund retains 100% of the gross revenues, less the transaction costs that the (sub-)fund pays as direct costs to an external service provider.

The Management Company is a related party to DWS Investment GmbH.

If the (sub-)fund has entered into repurchase agreement transactions, these are currently simple reverse repurchase agreement transactions, and not other (reverse) repurchase agreement transactions. In case other (reverse) repurchase agreement transactions will be used, the sales prospectus will be updated accordingly. The (sub-)fund will then pay up to 33% of the gross revenues generated from (reverse) repurchase agreement transactions as costs/fees to the Management Company and retain at least 67% of the gross revenues generated from such transactions. Out of the maximum of 33%, the Management Company will retain 5% for its own coordination and oversight tasks and will pay the direct costs (e.g., transaction and collateral management costs) to external service providers. The remaining amount (after deduction of the Management Company costs and the direct costs) will be paid to DWS Investment GmbH for supporting the Management Company in initiating, preparing and implementing (reverse) repurchase agreement transactions.

Quality/Qualities:

Insofar as securities lending transactions, reverse repurchase agreements or transactions with OTC derivatives (except forward currency transactions) are concluded, collateral in one of the following forms is provided to the fund:

– Liquid assets such as cash, short-term bank deposits, money market instruments according to the definition in Directive 2007/16/EC of March 19, 2007, letters of credit and first-demand guarantees that are issued by top-rated credit institutions not affiliated with the counterparty, or bonds issued by an OECD member country or its local authorities or by supranational institutions and authorities at local, regional or international level, regardless of their term to maturity;

– Units of a collective investment undertaking investing in money market instruments that calculates a net asset value daily and has a rating of AAA or an equivalent rating;

– Units of a UCITS that invests predominantly in the bonds and equities listed under the next two indents;

– Bonds, regardless of their term to maturity, that have a minimum rating of low investment-grade;

– Equities admitted to or traded in a regulated market in a member state of the European Union or on an exchange in an OECD member country, provided that these equities are included in a major index.

The Management Company reserves the right to restrict the permissibility of the aforementioned collateral.
Furthermore, the Management Company reserves the right to deviate from the aforementioned criteria in exceptional cases.

Additional information on collateral requirements can be found in the sales prospectus for the fund.

If the (sub-)fund has carried out securities lending, the (sub-)fund pays 33% of the gross revenues generated from securities lending as costs/fees to the Management Company and retains 67% of the gross revenues generated from such transactions. Out of the 33%, the Management Company retains 5% for its own coordination and oversight tasks and pays the direct costs (e.g., transaction and collateral management costs) to external service providers. The remaining amount (after deduction of the Management Company costs and the direct costs) is paid to DWS Investment GmbH for supporting the Management Company in initiating, preparing and implementing securities lending and borrowing.

For simple reverse repurchase agreement transactions (if permitted), i.e., those which are not used to reinvest cash collateral received under securities lending and borrowing or repurchase agreement transactions, the respective (sub-)fund retains 100% of the gross revenues, less the transaction costs that the (sub-)fund pays as direct costs to an external service provider.

The Management Company is a related party to DWS Investment GmbH.

If the (sub-)fund has entered into repurchase agreement transactions, these are currently simple reverse repurchase agreement transactions, and not other (reverse) repurchase agreement transactions. In case other (reverse) repurchase agreement transactions will be used, the sales prospectus will be updated accordingly. The (sub-)fund will then pay up to 33% of the gross revenues generated from (reverse) repurchase agreement transactions as costs/fees to the Management Company and retain at least 67% of the gross revenues generated from such transactions. Out of the maximum of 33%, the Management Company will retain 5% for its own coordination and oversight tasks and will pay the direct costs (e.g., transaction and collateral management costs) to external service providers. The remaining amount (after deduction of the Management Company costs and the direct costs) will be paid to DWS Investment GmbH for supporting the Management Company in initiating, preparing and implementing (reverse) repurchase agreement transactions.

Periodic disclosure for financial products referred to in Article 8, paragraph 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

Product name: DWS Invest Artificial Intelligence

Legal entity identifier: 549300ES0V84WWN1ZR97

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

Yes	No
☐ it made **sustainable investments with an environmental objective:** ___%	☒ It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of 19.22% of sustainable investments.
☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy	☐ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
	☒ with a social objective
☐ It made **sustainable investments with a social objective:** ___%	☐ It promoted E/S characteristics, but did **not make any sustainable investments**

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities.** That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

To what extent were the environmental and/or social characteristics promoted by this financial product met?

This sub-fund promoted environmental and social characteristics related to a general consideration of ESG criteria by excluding, for example, investments in companies with the worst norm-related issues towards international standards and/or investments in companies whose involvement in controversial sectors exceeded predefined revenue thresholds.

Further, this sub-fund promoted a proportion of sustainable investments in accordance with article 2(17) of the regulation on sustainability-related disclosures in the financial services sector (SFDR).

This sub-fund had not designated a reference benchmark for the purpose of attaining the environmental and social characteristics promoted.

No derivatives were used to attain the environmental or social characteristics promoted by the sub-fund.

How did the sustainability indicators perform?

The attainment of the promoted environmental and social characteristics as well as the sustainable investment was assessed via the application of an in-house ESG assessment methodology and ESG specific exclusion thresholds as further described in the section "What actions have been taken to meet the environmental and/or social characteristics during the reference period?". The methodology applied different assessment approaches that were used as sustainability indicators which were:

• **Norm Controversy Assessment** used as an indicator for a company's exposure to norm-related issues towards international standards.
Performance: No investments in suboptimal assets

• **Freedom House Status** used as an indicator for the political and civil liberties of a country.
Performance: No investments in suboptimal assets

• **Exposure to controversial sectors** used as an indicator for a company's involvement in controversial sectors.
Performance: 0%

• **Exposure to controversial weapons** used as an indicator for a company's involvement in controversial weapons.
Performance: 0%

• **Sustainability Investment Assessment** used as an indicator to measure the proportion of sustainable investments pursuant to article 2(17) SFDR.
Performance: 19.22%

Please see the section entitled “What actions have been taken to meet the environmental and/or social characteristics during the reference period?” for a description of the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted, including the exclusion criteria, and the assessment methodology for determining whether and to what extent assets met the defined environmental and/or social characteristics (including the turnover thresholds defined for the xclusions). This section contains further information on the sustainability indicators. The values from the DWS front office system are used to calculate the sustainability indicators. This means that there may be minor deviations from the other market values that appear in the annual report, which are derived from the fund accounting system.

…and compared to previous periods?

Attainment of the promoted environmental and social characteristics at portfolio level was measured in the previous years on the basis of the following sustainability indicators:

DWS Invest Artificial Intelligence

Indicators Performance	30/12/2024	29/12/2023	30/12/2022

The disclosure of the sustainability indicators has been revised compared with the prior-year report. The assessment methodology is unchanged. Additional information on the currently valid sustainability indicators is provided in the section entitled “What actions have been taken to meet the environmental and/or social characteristics during the reference period?”.
Information about taking into account the principal adverse impacts on sustainability factors is provided in the section entitled “How did this financial product consider principal adverse impacts on sustainability factors?”

DWS ESG-Assessment Scale

In the following assessment categories, the assets received one of six possible scores, with "A" being the best score and "F" being the worst score.

Criteria	Involvement in controversial sectors *(1)	Involvement in controversial weapons	Norm Assessment *(6)	ESG Quality Assessment	SDG- Assessment	Climat & Transition Risk Assessment
A	Non-involvement	Confirmed non-involvement	Confirmed no issues	True leader in ESG (>= 87.5 DWS ESG score)	True SDG contributor (>= 87.5 SDG score)	True climate leader (>= 87.5 score)
B	Remote involvement	Alleged	Violations of lesser degree	ESG leader (75-87.5 DWS ESG score)	SDG contributor (75-87.5 SDG score)	Climate solution provider(75-87.5 score)
C	0% - 5%	Dual-Purpose *(2)	Violations of lesser degree	ESG upper midfield (50-75 DWS ESG score)	SDG upper midfield (50-75 SDG score)	Low transition risk (50-75 score)
D	5% - 10% (coal: 5% - 10%)	Owning *(3)/ Owned *(4)	Violation of lesser degree	ESG lower midfield (25-50 DWS ESG score)	SDG lower midfield (25-50 SDG score)	Mod. transition risk (25-50 score)
E	10% - 25% (coal: 15% - 25%)	Component Producer *(5)	High severity or re-assessed highest violation *(7)	ESG laggard (12.5-25 DWS ESG score)	SDG obstructer (12.5-25 SDG score)	High transition risk (12.5-25 score)
F	>= 25%	Weapon producer	Highest severity / global compact violation *(8)	True laggard in ESG (0-12.5 DWS ESG score)	Significant SDG obstructer (0-12.5 SDG score)	Excessive transition risk (0-12.5 score)

*(1) Revenue share thresholds as per standard scheme. Sub-Granularity available. Thresholds can be individually set.

*(2) Encompasses e.g.. weapon-carrying systems such as combat aircraft that carry non-controversial weapons as well as controversial ones.

*(3) Owning more than 20% equity.

*(4) Being owned by more than 50% of company involved in grade E or F.

*(5) Single purpose key component.

*(6) Includes ILO controversies as well as corporate governance and product issues.

*(7) In its ongoing assessment, DWS takes into account the violation(s) of international standards – observed via data from ESG data vendors – such as the UN Global Compact, but also possible ESG data vendor errors identified, future expected developments of these violations as well as the willingness of the issuer to engage in dialogue regarding corporate decisions in this regard.

*(8) An F-grade can be considered a reconfirmed violation of the United Nations Global Compact rule framework for corporate behavior.

What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?

Sustainable investments contributed to at least one of the Sustainable Development Goals of the United Nations (UN SDGs) that relate to environmental and/or social objectives, such as good health and well-being or climate action and/or to at least one other environmental objective such as climate change adaption or climate change mitigation (as defined under the EU Taxonomy).

The extent of the contribution to individual sustainable investment objectives varied depending on the actual investments held in the portfolio.

DWS determind the contribution to a sustainable investment objective based on its Sustainability Investment Assessment which used data from one or several data providers, public sources and/or internal assessments. An investment's positive contribution to an environmental and/or social objective was assessed based on the revenues which a company generated from the actual economic activities making such contribution (activity-based approach). Where a positive contribution was determined, the investment was considered sustainable if the issuer passed the Do No significant Harm ("DNSH") assessment and the company followed good governance practices.

The share of sustainable investments in the portfolio as defined in article 2(17) SFDR was therefore calculated in proportion to the economic activities of the issuers that were considered as sustainable (activity-based approach). Notwithstanding the preceding, in the case of use-of-proceeds bonds that were considered as sustainable investment, the value of the entire bond was counted towards the portfolio's share of sustainable investments.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

The sustainable investments in which the sub-fund invested were assessed to ensure they did not cause significant harm to any environmental or social sustainable investment objective. This was achieved by taking into account the indicators for principal adverse impacts on sustainability factors (dependent on relevance) as described below. If a significant harm was identified, the investment could not have been considered sustainable.

How were the indicators for adverse impacts on sustainability factors taken into account?

The Sustainability Investment Assessment systematically integrated the mandatory principal adverse indicators on sustainability factors (dependent on relevance) from Table 1 and relevant indicators from Tables 2 and 3 of Annex I of the Commission Delegated Regulation (EU) 2022/1288 supplementing the SFDR. Taking into account these principal adverse impacts, DWS had established quantitative thresholds and/or qualitative values to assess a significant harm on any of the environmental or social sustainable investment objectives. These values were set based upon various external and internal factors, such as data availability or market developments and may have been adapted going forward.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The alignment of sustainable investments with, amongst others, the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights was evaluated through the Norm Controversy Assessment (as further described below). Companies with the worst Norm Controversy Assessment of "F" were excluded as an investment.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union Criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU Criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU Criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

How did this financial product consider principal adverse impacts on sustainability factors?

The sub-fund considered the following principal adverse impacts on sustainability factors from Annex I of the Commission Delegated Regulation (EU) 2022/1288 supplementing the SFDR:

• Exposure to companies active in the fossil fuel sector (no. 4);

• Violations of the United Nations Global Compact principles and OECD Guidelines for Multinational Enterprises (no. 10); and

• Exposure to controversial weapons (no. 14).

DWS Invest Artificial Intelligence

Indicators	Description	Performance
Principal Adverse Impact		
PAII - 04. Exposure to companies active in the fossil fuel sector	Share of investments in companies active in the fossil fuel sector	0 % of assets
PAII - 10. Violations of UNGC principles and OECD Guidelines for Multinational Enterprises	Share of investments in investee companies that have been involved in violations of the UNGC principles or OECD Guidelines for Multinational Enterprises	0 % of assets
PAII - 14. Exposure to controversial weapons	Share of investments in investee companies involved in the manufacture or selling of controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)	0 % of assets

As of: December 30, 2025

The Principal Adverse Impact Indicators (PAIIs) are calculated on the basis of the data in the DWS back office and front office systems, which are primarily based on the data of external ESG data providers. If there is no data on individual PAIIs for individual securities or their issuers, either because no data is available or the PAII is not applicable to the particular issuer or security, these securities or issuers are not included in the calculation of the PAII. With target fund investments, a look-through of the target fund holdings is performed if appropriate data is available. The calculation method for the individual PAI indicators may change in subsequent reporting periods due to evolving market standards, a change in the treatment of securities of certain types of instruments (such as derivatives) or as a result of regulatory clarifications.
Moreover, improved data availability may have an effect on the reported PAIIs in subsequent reporting periods.
The values from the DWS front office system are used to calculate the PAIIs. This means that there may be minor deviations from the other market values that appear in the annual report, which are derived from the fund accounting system.

What were the top investments of this financial product?

DWS Invest Artificial Intelligence

Largest investments	Breakdown by sector according to NACE Codes	in % of average portfolio volume	Breakdown by country
Taiwan Semiconductor Manufacturing Co.	C - Manufacturing	6.4 %	Taiwan
NVIDIA Corp.	C - Manufacturing	6.4 %	United States
Alphabet Cl.A	J - Information and communication	6.1 %	United States
Microsoft Corp.	J - Information and communication	5.1 %	United States
Meta Platforms	J - Information and communication	4.6 %	United States
Amazon.com	G - Wholesale and retail trade; repair of motor vehicles and motorcycles	4.3 %	United States
Arista Net	C - Manufacturing	2.7 %	United States
Tencent Holdings	J - Information and communication	2.2 %	China
Apple	G - Wholesale and retail trade; repair of motor vehicles and motorcycles	1.9 %	United States
Applied Materials	C - Manufacturing	1.8 %	United States

ServiceNow	J - Information and communication	1.7 %	United States
ASML Holding	M - Professional, scientific and technical activities	1.7 %	Netherlands
Mercadolibre	G - Wholesale and retail trade; repair of motor vehicles and motorcycles	1.7 %	United States
SK Hynix	C - Manufacturing	1.6 %	South Korea

for the period from January 01, 2025, through December 30, 2025

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is:
for the period from January 01, 2025, through December 31, 2025

What was the proportion of sustainability-related investments?

The proportion of sustainability-related investments as of the reporting date was 98.91% of portfolio assets.
Proportion of sustainability-related investments for the previous years:
30/12/2024: 97.15%
29/12/2023: 96.85%
30/12/2022: 99.58%

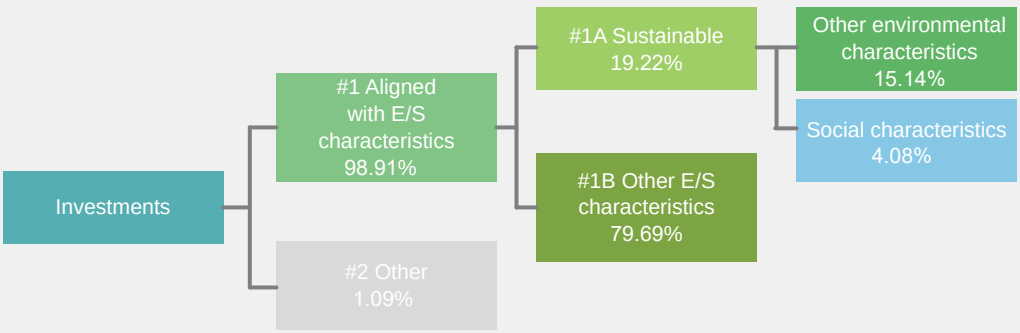
Asset allocation describes the share of investments in specific assets.

What was the asset allocation?

This sub-fund invested 98.91% of its net assets in investments that were aligned with the promoted environmental and social characteristics (#1 Aligned with E/S characteristics). Within this category, 19.22% of the sub-fund's net assets qualified as sustainable investments (#1A Sustainable). Thereof the share of sustainable investments with an environmental objective that was not compliant with the EU Taxonomy was 15.14% of the sub-fund's net assets and the share of socially sustainable investments was 4.08% of the sub-fund's net assets. The share of sustainable investments with an environmental objective that was not compliant with the EU Taxonomy and of socially sustainable investments depended on the market situation and the investable investment universe.

1.09% of the sub-fund's net assets have been invested in assets which were either out-of-scope of the ESG assessment methodology or for which ESG data coverage was incomplete (#2 Other) as further detailed in the section "What investments were included under "#2 Other", what was their purpose and were there any minimum environmental or social safeguards?".

A more detailed description of the specific asset allocation of this sub-fund can be found in the Special Section of the Sales Prospectus.



#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:
- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

In which economic sectors were the investments made?

DWS Invest Artificial Intelligence

NACE-Code	Breakdown by sector according to NACE Codes	in % of portfolio volume
C	Manufacturing	38.4 %
G	Wholesale and retail trade; repair of motor vehicles and motorcycles	8.4 %
J	Information and communication	33.8 %
K	Financial and insurance activities	5.4 %
M	Professional, scientific and technical activities	5.2 %
S	Other services activities	0.3 %
NA	Other	8.5 %
Exposure to companies active in the fossil fuel sector		0.0 %

As of: December 30, 2025

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The sub-fund did not commit to invest a proportion of sustainable investments with an environmental objective aligned with the EU Taxonomy. Therefore, the promoted minimum percentage of environmentally sustainable investments aligned with the EU Taxonomy was 0% of the sub-fund's net assets. However, certain investments' underlying economic activities may have been aligned with the EU Taxonomy.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are economic activities for yet low-carbon alternatives are not yet available and that have greenhouse gas emission levels corresponding to the best performance.

Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy[1]?

☐ Yes:

☐ In fossil gas ☐ In nuclear energy

☒ No

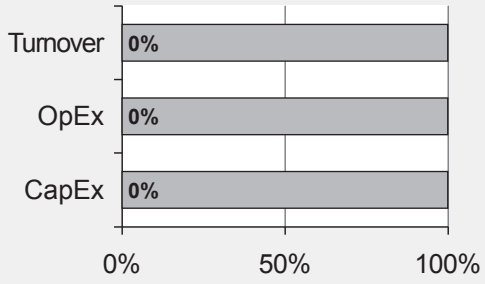
The sub-fund did not take into account the Taxonomy-alignment of companies active in the fossil gas and/or nuclear energy sectors.

[1] Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do no significant harm to any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Taxonomy-aligned activities are expressed as a share of:
- turnover reflecting the share of revenue from green activities of investee companies.
- capital expenditure (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- operational expenditure (OpEx) reflecting the green operational activities of investee companies.

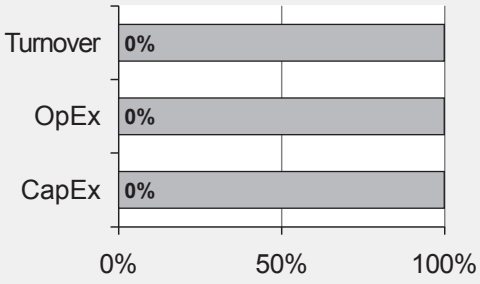
The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy-alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy-alignment only in relation to the investments of the financial product other than sovereign bonds.

1. Taxonomy-alignment of investments **including sovereign bonds***



Taxonomy-aligned: Fossil gas	0.00%
Taxonomy-aligned: Nuclear	0.00%
Taxonomy-aligned (no gas and nuclear)	0.00%
Taxonomy-aligned	0.00%
Non Taxonomy-aligned	100.00%

2. Taxonomy-alignment of investments **excluding sovereign bonds***



Taxonomy-aligned: Fossil gas	0.00%
Taxonomy-aligned: Nuclear	0.00%
Taxonomy-aligned (no gas and nuclear)	0.00%
Taxonomy-aligned	0.00%
Non Taxonomy-aligned	100.00%

This graph represents 100% of the total investments.

**For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures*

What was the share of investments made in transitional and enabling activities?

The sub-fund was not committed to a share of investments in transitional or enabling activities.

How did the percentage of investments that are aligned with the EU Taxonomy compare with previous reference periods?

The promoted proportion of environmentally sustainable investments in accordance with Regulation (EU) 2020/852 (Taxonomy Regulation) was 0% of the fund's assets in the current as well as previous reference periods. It may, however, have been the case that some sustainable investments were nevertheless aligned with an environmental objective of the Taxonomy Regulation.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the Regulation (EU) 2020/852.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The share of sustainable investments with an environmental objective that were not aligned with the EU Taxonomy was 15.14% of the sub-fund's net assets.

Shares of sustainable investments in previous reporting periods:

reporting period	sustainable investments (total)	with environmental objective	socially sustainable
30/12/2024	15.67%	11.78%	3.89%
29/12/2023	12.54%	8.50%	4.04%
30/12/2022	17.79%	--	--

What was the share of socially sustainable investments?

The share of socially sustainable investments was 4.08% of the sub-fund's net

assets. Shares of sustainable investments in previous reporting periods:

reporting period	sustainable investments (total)	with environmental objective	socially sustainable
30/12/2024	15.67%	11.78%	3.89%
29/12/2023	12.54%	8.50%	4.04%
30/12/2022	17.79%	--	--

What investments were included under "other", what was their purpose and were there any minimum environmental or social safeguards?

98.91% of the sub-fund's net assets were aligned with the promoted environmental and social characteristics (#1 Aligned with E/S characteristics). 1.09% of the sub-fund's net assets have been invested in assets which were either out-of-scope of the ESG assessment methodology or for which ESG data coverage was incomplete (#2 Other). Full ESG data coverage was required for the assessment of direct investments in companies in relation to good governance practices.

Assets under "#2 Other" could include all asset classes as foreseen in the specific investment policy, such as sight deposits with credit institutions and derivatives. These assets could have been used by the portfolio management for performance, risk diversification, liquidity and hedging purposes.

Minimum environmental or social safeguards were not or only partially considered for the sub-fund's investments falling within "#2 Other".

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

This sub-fund pursued a strategy based on equities as main investment strategy. At least 70% of the sub-fund's assets were invested in equities of all market capitalizations, stock certificates, participation and dividend right certificates, convertible bonds and equity warrants issued by foreign and domestic companies whose business benefit from/or was currently related to the evolution of artificial intelligence. At least 60% of the sub-fund`s assets were invested in equities.
Further details regarding the main investment strategy are specified in the Special Section of the Sales Prospectus.
98.91% of the sub-fund's net assets were allocated to investments that met the promoted environmental and social characteristics as described in the following sections. The alignment of the portfolio with the binding elements of the investment strategy used to attain the promoted environmental and social characteristics was continuously controlled via the sub-fund's investment guidelines monitoring.

ESG assessment methodology

The sub-fund aimed to achieve the promoted environmental and social characteristics by assessing potential assets via an in-house ESG assessment methodology, regardless of their economic prospects for success, and by applying exclusion criteria based on this assessment.

The ESG assessment methodology was using a proprietary software tool which sourced data from one or several ESG data providers, public sources and/or internal assessments to derive overall assessments. The methodology applied to derive such overall assessments could have been based on different methods, such as prioritizing one data vendor, worst-of or averaging approach. Internal assessments may take into account factors such as an issuer's future expected ESG developments, plausibility of data with regard to past or future events, the willingness to engage in dialogue on ESG matters and/or ESG-related decisions of a company. Further, internal ESG assessments for investee companies might have considered the relevance of the exclusion criteria for the market sector of the investee company.

The proprietary software tool used, amongst others, the approaches described below to evaluate the adherence to the promoted ESG characteristics and whether investee companies followed good governance practices. The assessment approaches included, for example, exclusions related to revenues generated from controversial sectors or the exposure to such controversial sectors. In some of the assessment approaches, issuers received one of six possible assessments, with "A" representing the best and "F" the worst assessment. If an issuer was excluded based on one assessment approach, the sub-fund was prohibited from investing in that issuer.

Depending on the investable universe, the portfolio allocation and the exposure to certain sectors, the assessment approaches described below had been more or less relevant which was reflected in the number of issuers actually excluded.

• Norm Controversy Assessment

The Norm Controversy Assessment evaluated the behaviour of companies in relation to generally accepted international standards and principles of responsible business conduct within, amongst others, the framework of the principles of the United Nations Global Compact, the United Nations Guiding Principles, the standards of the International Labour Organization and the OECD Guidelines for Multinational Enterprises. Examples of topics covered within these standards and principles included, but were not limited to, human rights violations, violations of workers' rights, child or forced labour, negative environmental impacts and business ethics. The Norm Controversy Assessment evaluated reported violations of the aforementioned international standards. Companies with the worst Norm Controversy Assessment of “F” were excluded as an investment.

• Freedom House Status

Freedom House is an international non-governmental organization that classifies countries by their degree of political and civil liberties. Based on the Freedom House Status, countries that were classified as “not free” were excluded as an investment.

• Exposure to controversial sectors

Companies that were involved in certain business areas and business activities in controversial areas ("controversial sectors") were excluded according to their share of total revenues generated in such controversial sectors as followed:

a. Manufacturing and/or distribution of civil handguns or ammunition: 5% or more
b. Manufacturing of tobacco products: 5% or more
c. Mining of oil sand: 5% or more
d. Companies that derived 25% or more from thermal coal mining and thermal coal-based power generation as well as companies with thermal coal expansion plans, such as additional expansion of coal mining, coal production or coal usage. Companies with thermal coal expansion plans were excluded based on an internal identification methodology. In the event of exceptional circumstances, such as measured imposed by a government to address challenges in the energy sector, the Management Company may decide to temporarily suspend the application of the coal-related exclusions to individual companies/geographical regions.

• Exposure to controversial weapons

Companies were excluded if they were identified as being involved in the manufacturing or selling of controversial weapons or key components of controversial weapons (anti-personnel mines, cluster munitions, and/or chemical and biological weapons). In addition, the shareholdings within a group structure might have been taken into consideration for the exclusions.

• Use-of-Proceeds Bond Assessment

This assessment was specific to the nature of this instrument and an investment in use-of-proceeds bonds was permitted only if the following criteria were met. Firstly, all use-of-proceeds bonds were checked for compliance with the Climate Bonds Standards, similar industry standards for green bonds, social bonds or sustainability bonds (such as ICMA Principles) or the EU Green Bond Standard or whether bonds have been subject to an independent review. Secondly, certain ESG criteria were applied in relation to the issuer of the bonds which could lead to the exclusion of issuers and their bonds as an investment.

• Target Fund Assessment

Target funds were evaluated in relation to the underlying companies and were eligible if these companies were aligned with the criteria of the Norm Controversy Assessment and the exposure to controversial weapons (anti-personnel mines, cluster munitions, and/or chemical weapons and biological weapons). Investment in companies with the worst Norm Controversy Assessment of "F" was permitted up to a determined threshold. Considering the tolerance threshold, diversity of data vendors and methodologies, the available data coverage as well as the target fund portfolio rebalancing, this sub-fund may have been indirectly exposed to certain assets that would be excluded if invested directly or for which data coverage was limited or not available.

Sustainability Investment Assessment

Further, for the proportion of sustainable investments, DWS measured the contribution to one or several UN SDGs and/or to other environmental sustainable objectives via its Sustainability Investment Assessment which evaluated potential investments in relation to different criteria to conclude whether an investment could have been considered as sustainable as further detailed in the section "What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?".

The applied ESG investment strategy did not pursue a committed minimum reduction of the scope of the investments.

The assessment of the good governance practices of the investee companies (including assessments related to sound management structures, employee relations, remuneration of staff and tax compliance) was part of the Norm Controversy Assessment which evaluated a company's behavior within generally accepted international standards and principles of responsible business conduct. Companies with the worst Norm Controversy Assessment of "F" were excluded as an investment.

How did this financial product perform compared to the reference sustainable benchmark?

This sub-fund had not designated a reference benchmark to determine whether it was aligned with the environmental and social characteristics that it promoted.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Periodic disclosure for financial products referred to in Article 8, paragraph 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

Product name: DWS Invest Conservative Opportunities

Legal entity identifier: 254900EU3HZY3WWB3Z34

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

Yes	No
☐ it made **sustainable investments with an environmental objective:** ___%	☒ It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of 23.19% of sustainable investments.
☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy	☐ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
	☒ with a social objective
☐ It made **sustainable investments with a social objective:** ___%	☐ It promoted E/S characteristics, but did **not make any sustainable investments**

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities.** That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

To what extent were the environmental and/or social characteristics promoted by this financial product met?

This sub-fund promoted environmental and social characteristics related to a general consideration of ESG criteria by excluding, for example, investments in companies with the worst norm-related issues towards international standards and/or investments in companies whose involvement in controversial sectors exceeded predefined revenue thresholds.

Further, this sub-fund promoted a proportion of sustainable investments in accordance with article 2(17) of the regulation on sustainability-related disclosures in the financial services sector (SFDR).

This sub-fund had not designated a reference benchmark for the purpose of attaining the environmental and social characteristics promoted.

No derivatives were used to attain the environmental or social characteristics promoted by the sub-fund.

How did the sustainability indicators perform?

The attainment of the promoted environmental and social characteristics as well as the sustainable investment was assessed via the application of an in-house ESG assessment methodology and ESG specific exclusion thresholds as further described in the section "What actions have been taken to meet the environmental and/or social characteristics during the reference period?". The methodology applied different assessment approaches that were used as sustainability indicators which were:

• **Norm Controversy Assessment** used as an indicator for a company's exposure to norm-related issues towards international standards.
Performance: No investments in suboptimal assets

• **Freedom House Status** used as an indicator for the political and civil liberties of a country.
Performance: No investments in suboptimal assets

• **Exposure to controversial sectors** used as an indicator for a company's involvement in controversial sectors.
Performance: 0%

• **Exposure to controversial weapons** used as an indicator for a company's involvement in controversial weapons.
Performance: 0%

• **Sustainability Investment Assessment** used as an indicator to measure the proportion of sustainable investments pursuant to article 2(17) SFDR.
Performance: 23.19%

Please see the section entitled “What actions have been taken to meet the environmental and/or social characteristics during the reference period?” for a description of the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted, including the exclusion criteria, and the assessment methodology for determining whether and to what extent assets met the defined environmental and/or social characteristics (including the turnover thresholds defined for the xclusions). This section contains further information on the sustainability indicators. The values from the DWS front office system are used to calculate the sustainability indicators. This means that there may be minor deviations from the other market values that appear in the annual report, which are derived from the fund accounting system.

…and compared to previous periods?

Attainment of the promoted environmental and social characteristics at portfolio level was measured in the previous years on the basis of the following sustainability indicators:

DWS Invest Conservative Opportunities

The disclosure of the sustainability indicators has been revised compared with the prior-year report. The assessment methodology is unchanged. Additional information on the currently valid sustainability indicators is provided in the section entitled “What actions have been taken to meet the environmental and/or social characteristics during the reference period?”.
Information about taking into account the principal adverse impacts on sustainability factors is provided in the section entitled “How did this financial product consider principal adverse impacts on sustainability factors?”

DWS ESG-Assessment Scale

In the following assessment categories, the assets received one of six possible scores, with "A" being the best score and "F" being the worst score.

Criteria	Involvement in controversial sectors *(1)	Involvement in controversial weapons	Norm Assessment *(6)	ESG Quality Assessment	SDG- Assessment	Climat & Transition Risk Assessment
A	Non-involvement	Confirmed non-involvement	Confirmed no issues	True leader in ESG (>= 87.5 DWS ESG score)	True SDG contributor (>= 87.5 SDG score)	True climate leader (>= 87.5 score)
B	Remote involvement	Alleged	Violations of lesser degree	ESG leader (75-87.5 DWS ESG score)	SDG contributor (75-87.5 SDG score)	Climate solution provider(75-87.5 score)
C	0% - 5%	Dual-Purpose *(2)	Violations of lesser degree	ESG upper midfield (50-75 DWS ESG score)	SDG upper midfield (50-75 SDG score)	Low transition risk (50-75 score)
D	5% - 10% (coal: 5% - 10%)	Owning *(3)/ Owned *(4)	Violation of lesser degree	ESG lower midfield (25-50 DWS ESG score)	SDG lower midfield (25-50 SDG score)	Mod. transition risk (25-50 score)
E	10% - 25% (coal: 15% - 25%)	Component Producer *(5)	High severity or re-assessed highest violation *(7)	ESG laggard (12.5-25 DWS ESG score)	SDG obstructer (12.5-25 SDG score)	High transition risk (12.5-25 score)
F	>= 25%	Weapon producer	Highest severity / global compact violation *(8)	True laggard in ESG (0-12.5 DWS ESG score)	Significant SDG obstructer (0-12.5 SDG score)	Excessive transition risk (0-12.5 score)

*(1) Revenue share thresholds as per standard scheme. Sub-Granularity available. Thresholds can be individually set.

*(2) Encompasses e.g.. weapon-carrying systems such as combat aircraft that carry non-controversial weapons as well as controversial ones.

*(3) Owning more than 20% equity.

*(4) Being owned by more than 50% of company involved in grade E or F.

*(5) Single purpose key component.

*(6) Includes ILO controversies as well as corporate governance and product issues.

*(7) In its ongoing assessment, DWS takes into account the violation(s) of international standards – observed via data from ESG data vendors – such as the UN Global Compact, but also possible ESG data vendor errors identified, future expected developments of these violations as well as the willingness of the issuer to engage in dialogue regarding corporate decisions in this regard.

*(8) An F-grade can be considered a reconfirmed violation of the United Nations Global Compact rule framework for corporate behavior.

What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?

Sustainable investments contributed to at least one of the Sustainable Development Goals of the United Nations (UN SDGs) that relate to environmental and/or social objectives, such as good health and well-being or climate action and/or to at least one other environmental objective such as climate change adaption or climate change mitigation (as defined under the EU Taxonomy).

The extent of the contribution to individual sustainable investment objectives varied depending on the actual investments held in the portfolio.

DWS determind the contribution to a sustainable investment objective based on its Sustainability Investment Assessment which used data from one or several data providers, public sources and/or internal assessments. An investment's positive contribution to an environmental and/or social objective was assessed based on the revenues which a company generated from the actual economic activities making such contribution (activity-based approach). Where a positive contribution was determined, the investment was considered sustainable if the issuer passed the Do No significant Harm ("DNSH") assessment and the company followed good governance practices.

The share of sustainable investments in the portfolio as defined in article 2(17) SFDR was therefore calculated in proportion to the economic activities of the issuers that were considered as sustainable (activity-based approach). Notwithstanding the preceding, in the case of use-of-proceeds bonds that were considered as sustainable investment, the value of the entire bond was counted towards the portfolio's share of sustainable investments.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

The sustainable investments in which the sub-fund invested were assessed to ensure they did not cause significant harm to any environmental or social sustainable investment objective. This was achieved by taking into account the indicators for principal adverse impacts on sustainability factors (dependent on relevance) as described below. If a significant harm was identified, the investment could not have been considered sustainable.

How were the indicators for adverse impacts on sustainability factors taken into account?

The Sustainability Investment Assessment systematically integrated the mandatory principal adverse indicators on sustainability factors (dependent on relevance) from Table 1 and relevant indicators from Tables 2 and 3 of Annex I of the Commission Delegated Regulation (EU) 2022/1288 supplementing the SFDR. Taking into account these principal adverse impacts, DWS had established quantitative thresholds and/or qualitative values to assess a significant harm on any of the environmental or social sustainable investment objectives. These values were set based upon various external and internal factors, such as data availability or market developments and may have been adapted going forward.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The alignment of sustainable investments with, amongst others, the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights was evaluated through the Norm Controversy Assessment (as further described below). Companies with the worst Norm Controversy Assessment of “F” were excluded as an investment.

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union Criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU Criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU Criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

How did this financial product consider principal adverse impacts on sustainability factors?

The sub-fund considered the following principal adverse impacts on sustainability factors from Annex I of the Commission Delegated Regulation (EU) 2022/1288 supplementing the SFDR:

• Exposure to companies active in the fossil fuel sector (no. 4);

• Violations of the United Nations Global Compact principles and OECD Guidelines for Multinational Enterprises (no. 10); and

• Exposure to controversial weapons (no. 14).

DWS Invest Conservative Opportunities

Indicators	Description	Performance

Principal Adverse Impact

PAII - 04. Exposure to companies active in the fossil fuel sector	Share of investments in companies active in the fossil fuel sector	8.39 % of assets
PAII - 10. Violations of UNGC principles and OECD Guidelines for Multinational Enterprises	Share of investments in investee companies that have been involved in violations of the UNGC principles or OECD Guidelines for Multinational Enterprises	0.01 % of assets
PAII - 14. Exposure to controversial weapons	Share of investments in investee companies involved in the manufacture or selling of controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)	0 % of assets

As of: December 30, 2025

The Principal Adverse Impact Indicators (PAIIs) are calculated on the basis of the data in the DWS back office and front office systems, which are primarily based on the data of external ESG data providers. If there is no data on individual PAIIs for individual securities or their issuers, either because no data is available or the PAII is not applicable to the particular issuer or security, these securities or issuers are not included in the calculation of the PAII. With target fund investments, a look-through of the target fund holdings is performed if appropriate data is available. The calculation method for the individual PAI indicators may change in subsequent reporting periods due to evolving market standards, a change in the treatment of securities of certain types of instruments (such as derivatives) or as a result of regulatory clarifications.
Moreover, improved data availability may have an effect on the reported PAIIs in subsequent reporting periods.
The values from the DWS front office system are used to calculate the PAIIs. This means that there may be minor deviations from the other market values that appear in the annual report, which are derived from the fund accounting system.

What were the top investments of this financial product?

DWS Invest Conservative Opportunities

for the period from January 01, 2025, through December 30, 2025

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is:
for the period from January 01, 2025, through December 31, 2025

What was the proportion of sustainability-related investments?

The proportion of sustainability-related investments as of the reporting date was 91.55% of portfolio assets.
Proportion of sustainability-related investments for the previous years:

30/12/2024: 90.48 %
29/12/2023: 91.62 %
30/12/2022: 91.66 %

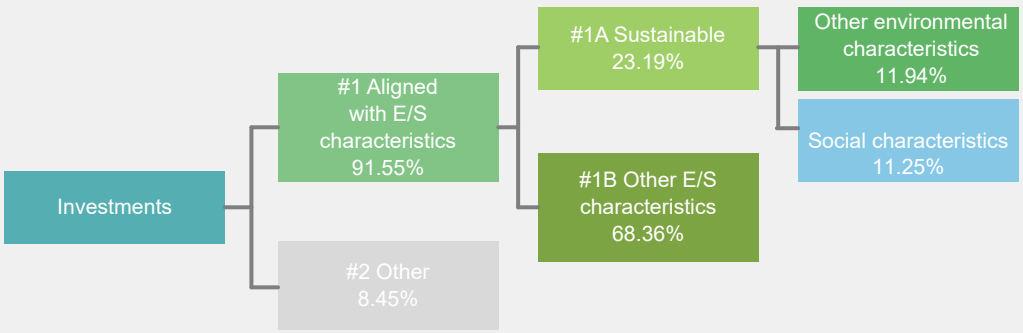
Asset allocation describes the share of investments in specific assets.

What was the asset allocation?

This sub-fund invested 91.55% of its net assets in investments that were aligned with the promoted environmental and social characteristics (#1 Aligned with E/S characteristics). Within this category, 23.19% of the sub-fund's net assets qualified as sustainable investments (#1A Sustainable). Thereof the share of sustainable investments with an environmental objective that was not compliant with the EU Taxonomy was 11.94 of the sub-fund's net assets and the share of socially sustainable investments was 11.25% of the sub-fund's net assets. The share of sustainable investments with an environmental objective that was not compliant with the EU Taxonomy and of socially sustainable investments depended on the market situation and the investable investment universe.

8.45% of the sub-fund's net assets have been invested in assets which were either out-of-scope of the ESG assessment methodology or for which ESG data coverage was incomplete (#2 Other) as further detailed in the section "What investments were included under "#2 Other", what was their purpose and were there any minimum environmental or social safeguards?".

A more detailed description of the specific asset allocation of this sub-fund can be found in the Special Section of the Sales Prospectus.



#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:
- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

In which economic sectors were the investments made?

DWS Invest Conservative Opportunities

NACE-Code	Breakdown by sector according to NACE Codes	in % of portfolio volume
B	Mining and quarrying	1.1 %
C	Manufacturing	2.4 %
J	Information and communication	1.2 %
K	Financial and insurance activities	84.6 %
M	Professional, scientific and technical activities	1.6 %
O	Public administration and defence; compulsory social security	2.4 %
NA	Other	6.7 %

NACE-Code	Breakdown by sector according to NACE Codes	in % of portfolio volume
Exposure to companies active in the fossil fuel sector		8.4 %

As of: December 30, 2025

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The sub-fund did not commit to invest a proportion of sustainable investments with an environmental objective aligned with the EU Taxonomy. Therefore, the promoted minimum percentage of environmentally sustainable investments aligned with the EU Taxonomy was 0% of the sub-fund's net assets. However, certain investments' underlying economic activities may have been aligned with the EU Taxonomy.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are economic activities for yet low-carbon alternatives are not yet available and that have greenhouse gas emission levels corresponding to the best performance.

Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy[1]?

☐ Yes:

☐ In fossil gas ☐ In nuclear energy

☒ No

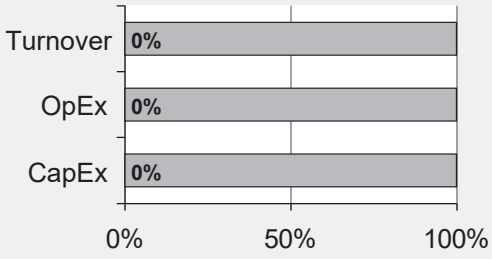
The sub-fund did not take into account the Taxonomy-alignment of companies active in the fossil gas and/or nuclear energy sectors.

[1] Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do no significant harm to any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Taxonomy-aligned activities are expressed as a share of:
- turnover reflecting the share of revenue from green activities of investee companies.
- capital expenditure (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- operational expenditure (OpEx) reflecting the green operational activities of investee companies.

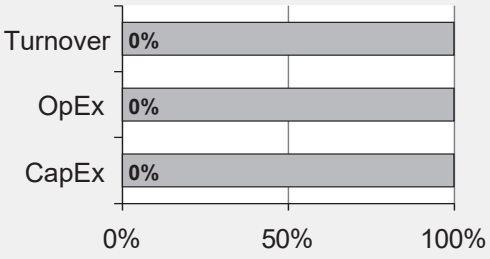
The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy-alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy-alignment only in relation to the investments of the financial product other than sovereign bonds.

1. Taxonomy-alignment of investments **including sovereign bonds***



Taxonomy-aligned: Fossil gas	0.00%
Taxonomy-aligned: Nuclear	0.00%
Taxonomy-aligned (no gas and nuclear)	0.00%
Taxonomy-aligned	0.00%
Non Taxonomy-aligned	100.00%

2. Taxonomy-alignment of investments **excluding sovereign bonds***



Taxonomy-aligned: Fossil gas	0.00%
Taxonomy-aligned: Nuclear	0.00%
Taxonomy-aligned (no gas and nuclear)	0.00%
Taxonomy-aligned	0.00%
Non Taxonomy-aligned	100.00%

This graph represents 100% of the total investments.

**For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures*

What was the share of investments made in transitional and enabling activities?

The sub-fund was not committed to a share of investments in transitional or enabling activities.

How did the percentage of investments that are aligned with the EU Taxonomy compare with previous reference periods?

The promoted proportion of environmentally sustainable investments in accordance with Regulation (EU) 2020/852 (Taxonomy Regulation) was 0% of the fund's assets in the current as well as previous reference periods. It may, however, have been the case that some sustainable investments were nevertheless aligned with an environmental objective of the Taxonomy Regulation.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the Regulation (EU) 2020/852.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The share of sustainable investments with an environmental objective that were not aligned with the EU Taxonomy was 11.94 of the sub-fund's net assets.

Shares of sustainable investments in previous reporting periods:

reporting period	sustainable investments (total)	with environmental objective	socially sustainable
30/12/2024	18.10%	9.35%	8.75%
29/12/2023	12.09%	6.31%	5.78%
30/12/2022	12.91%	--	--

What was the share of socially sustainable investments?

The share of socially sustainable investments was 11.25% of the sub-fund’s net assets. Shares of sustainable investments in previous reporting periods:

reporting period	sustainable investments (total)	with environmental objective	socially sustainable
30/12/2024	18.10%	9.35%	8.75%
29/12/2023	12.09%	6.31%	5.78%
30/12/2022	12.91%	--	--

What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?

91.55% of the sub-fund’s net assets were aligned with the promoted environmental and social characteristics (#1 Aligned with E/S characteristics). 8.45% of the sub-fund’s net assets have been invested in assets which were either out-of-scope of the ESG assessment methodology or for which ESG data coverage was incomplete (#2 Other). Full ESG data coverage was required for the assessment of direct investments in companies in relation to good governance practices.

Assets under “#2 Other” could include all asset classes as foreseen in the specific investment policy, such as sight deposits with credit institutions and derivatives. These assets could have been used by the portfolio management for performance, risk diversification, liquidity and hedging purposes.

Minimum environmental or social safeguards were not or only partially considered for the sub-fund’s investments falling within “#2 Other”.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

This sub-fund pursued a strategy based on multiple asset classes as main investment strategy. The sub-fund combined eligible investment vehicles from different asset classes in order to achieve a defensive risk-reward investment profile and targeted an annualized volatility between 2% and 5% over a rolling 5-year period. The sub-fund may invested in equities, in interest-bearing securities, in certificates, in investment funds, in derivatives, in convertible and warrant-linked bonds whose warrants relate to securities, in warrants on securities, in participation and dividend-right certificates, in money market instruments and cash. At least 25% of the sub-fund's assets were invested in investment funds such as equity, balanced, bond and money market funds. In addition the sub-fund may invested in equities, in interest-bearing securities, in certificates on, for example, equities, bonds and indices, in derivatives, in convertible and warrant-linked bonds, in warrants on securities, in participation and dividend-right certificates, in money market instruments and cash.

Further details regarding the main investment strategy are specified in the Special Section of the Sales Prospectus.

91.55% of the sub-fund’s net assets were allocated to investments that met the promoted environmental and social characteristics as described in the following sections. The alignment of the portfolio with the binding elements of the investment strategy used to attain the promoted environmental and social characteristics was continuously controlled via the sub-fund’s investment guidelines monitoring.

ESG assessment methodology

The sub-fund aimed to achieve the promoted environmental and social characteristics by assessing potential assets via an in-house ESG assessment methodology, regardless of their economic prospects for success, and by applying exclusion criteria based on this assessment.

The ESG assessment methodology was using a proprietary software tool which sourced data from one or several ESG data providers, public sources and/or internal assessments to derive overall assessments. The methodology applied to derive such overall assessments could have been based on different methods, such as prioritizing one data vendor, worst-of or averaging approach. Internal assessments may take into account factors such as an issuer’s future expected ESG developments, plausibility of data with regard to past or future events, the willingness to engage in dialogue on ESG matters and/or ESG-related decisions of a company. Further, internal ESG assessments for investee companies might have considered the relevance of the exclusion criteria for the market sector of the investee company.

The proprietary software tool used, amongst others, the approaches described below to evaluate the adherence to the promoted ESG characteristics and whether investee companies followed good governance practices. The assessment approaches included, for example, exclusions related to revenues generated from controversial sectors or the exposure to such controversial sectors. In some of the assessment approaches, issuers received one of six possible assessments, with "A" representing the best and "F" the worst assessment. If an issuer was excluded based on one assessment approach, the sub-fund was prohibited from investing in that issuer.

Depending on the investable universe, the portfolio allocation and the exposure to certain sectors, the assessment approaches described below had been more or less relevant which was reflected in the number of issuers actually excluded.

• **Norm Controversy Assessment**

The Norm Controversy Assessment evaluated the behaviour of companies in relation to generally accepted international standards and principles of responsible business conduct within, amongst others, the framework of the principles of the United Nations Global Compact, the United Nations Guiding Principles, the standards of the International Labour Organization and the OECD Guidelines for Multinational Enterprises. Examples of topics covered within these standards and principles included, but were not limited to, human rights violations, violations of workers' rights, child or forced labour, negative environmental impacts and business ethics. The Norm Controversy Assessment evaluated reported violations of the aforementioned international standards. Companies with the worst Norm Controversy Assessment of “F” were excluded as an investment.

• **Freedom House Status**

Freedom House is an international non-governmental organization that classifies countries by their degree of political and civil liberties. Based on the Freedom House Status, countries that were classified as “not free” were excluded as an investment.

• **Exposure to controversial sectors**

Companies that were involved in certain business areas and business activities in controversial areas ("controversial sectors") were excluded according to their share of total revenues generated in such controversial sectors as followed:

a. Manufacturing and/or distribution of civil handguns or ammunition: 5% or more
b. Manufacturing of tobacco products: 5% or more
c. Mining of oil sand: 5% or more
d. Companies that derived 25% or more from thermal coal mining and thermal coal-based power generation as well as companies with thermal coal expansion plans, such as additional expansion of coal mining, coal production or coal usage. Companies with thermal coal expansion plans were excluded based on an internal identification methodology. In the event of exceptional circumstances, such as measured imposed by a government to address challenges in the energy sector, the Management Company may decide to temporarily suspend the application of the coal-related exclusions to individual companies/geographical regions.

• **Exposure to controversial weapons**

Companies were excluded if they were identified as being involved in the manufacturing or selling of controversial weapons or key components of controversial weapons (anti-personnel mines, cluster munitions, and/or chemical and biological weapons). In addition, the shareholdings within a group structure might have been taken into consideration for the exclusions.

• **Use-of-Proceeds Bond Assessment**

This assessment was specific to the nature of this instrument and an investment in use-of-proceeds bonds was permitted only if the following criteria were met. Firstly, all use-of-proceeds bonds were checked for compliance with the Climate Bonds Standards, similar industry standards for green bonds, social bonds or sustainability bonds (such as ICMA Principles) or the EU Green Bond Standard or whether bonds had been subject to an independent review. Secondly, certain ESG criteria were applied in relation to the issuer of the bonds which could have led to the exclusion of issuers and their bonds as an investment.

In particular, investments in use-of-proceeds bonds were prohibited based on the following issuer criteria:

- Sovereign issuers classified as "not free" by Freedom House;
- Companies with the worst Norm Controversy Assessment of "F" as referred to above;
- Companies that manufactured tobacco products: 5% or more;
- Companies with involvement in controversial weapons as referred to above; or
- Companies with identified thermal coal expansion plans as referred to above.

• **Target Fund Assessment**

Target funds were evaluated in relation to the underlying companies and were eligible if these companies were aligned with the criteria of the Norm Controversy Assessment and the exposure to controversial weapons (anti-personnel mines, cluster munitions, and/or chemical weapons and biological weapons). Investment in companies with the worst Norm Controversy Assessment of "F" was permitted up to a determined threshold. Considering the tolerance threshold, diversity of data vendors and methodologies, the available data coverage as well as the target fund portfolio rebalancing, this sub-fund had been indirectly exposed to certain assets that would have been excluded if invested directly or for which data coverage was limited or not available.

Sustainability Investment Assessment

Further, for the proportion of sustainable investments, DWS measured the contribution to one or several UN SDGs and/or to other environmental sustainable objectives via its Sustainability Investment Assessment which evaluated potential investments in relation to different criteria to conclude whether an investment could have been considered as sustainable as further detailed in the section "What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?".

The applied ESG investment strategy did not pursue a committed minimum reduction of the scope of the investments.

The assessment of the good governance practices of the investee companies (including assessments related to sound management structures, employee relations, remuneration of staff and tax compliance) was part of the Norm Controversy Assessment which evaluated a company's behavior within generally accepted international standards and principles of responsible business conduct. Companies with the worst Norm Controversy Assessment of "F" were excluded as an investment.

How did this financial product perform compared to the reference sustainable benchmark?

This sub-fund had not designated a reference benchmark to determine whether it was aligned with the environmental and social characteristics that it promoted.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Periodic disclosure for financial products referred to in Article 9, paragraphs 1 to 4a, of Regulation (EU) 2019/2088 and Article 5, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities.** That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name: DWS Invest Conservative Sustainable Bonds

Legal entity identifier: 254900KO3XJKO0H7U940

ISIN: LU2708163634

Sustainable investment objective

Did this financial product have a sustainable investment objective?

X **Yes**	**No**
X it made **sustainable investments with an environmental objective:** 68.73 %	It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of ___% of sustainable investments.
in economic activities that qualify as environmentally sustainable under the EU Taxonomy	with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
X in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
	with a social objective
X It made **sustainable investments with a social objective:** 30.44 %	It promoted E/S characteristics, but did **not make any sustainable investments**

Sustainability indicators measure how the sustainable objectives of this financial product are attained.

To what extent was the sustainable investment objective of this financial product met?

The sustainable investment objective of this sub-fund was to finance environmentally beneficial projects or activities.

The sub-fund invested at least 80% of its net assets in green bonds where the use of proceeds was limited to projects with environmental and/or climate benefits (use of proceeds bonds) which typically contributed
(i) to at least one of the Sustainable Development Goals of the United Nations (UN SDGs), such as clean water and sanitation, affordable and clean energy, industry, innovation and infrastructure, sustainable cities and communities, climate action and/or life on land and/or
(ii) to at least one other environmental objective such as climate change adaptation and/or climate change mitigation (as defined under the EU Taxonomy).

The sub-fund may have also invested in social bonds where the use of proceeds was targeted to projects with social benefits, but without a minimum commitment in terms of investment allocation at portfolio level.

Use of proceeds bonds were devoted to (re)finance projects or activities with positive environmental and/or social impacts. The decisive difference to conventional bonds was that the issuers of use of proceeds bonds invested the issue proceeds in environmentally and/or socially beneficial projects or activities, and hereby directly contributed to the sustainable objective of the sub-fund.

The sub-fund had not designated a reference benchmark for the purpose of attaining its sustainable investment objective.

No derivatives were used to attain the environmental or social characteristics promoted by the sub-fund.

How did the sustainability indicators perform?

The attainment of the sustainable investment objective was assessed via the application of an in-house assessment methodology and ESG specific exclusion thresholds as further described in the section “What actions have been taken to attain the sustainable investment objective during the reference period?”. The methodology applied different assessment approaches that were used as sustainability indicators which were:

• **Use of Proceeds Bond Assessment** used as an indicator for qualifying a bond as a use of proceeds bond that follows the Climate Bonds Standards, similar industry standards for green bonds, social bonds or sustainability bonds (such as ICMA Principles) or the EU Green Bond Standard or is subject to an independent review.
Performance: No investments in invalid assets, except the ones below

• **Norm Controversy Assessment** used as an indicator for a company’s exposure to norm-related issues towards international standards.
Performance: No investments in invalid assets, except the ones below

• **Exposure to controversial sectors** used as an indicator for a company’s involvement in controversial sectors.
Performance: No investments in invalid assets, except the ones below

• **Freedom House Status** used as an indicator for the political and civil liberties of a country. Performance: No investments in invalid assets, except the ones below

• **Exposure to investments subject to the EU Paris-aligned Benchmark exclusion criteria** as set forth in article 12(1) of Commission Delegated Regulation 2020/1818 (PAB-Exclusions) as described below.
Performance: No investments in invalid assets, except the ones below

• **Sustainability Investment Assessment** used as an indicator to measure the proportion of sustainable investments pursuant to article 2(17) of the regulation on sustainability-related disclosures in the financial services sector (SFDR).
Performance: 99.17 %

Please see the section entitled “What actions were taken to meet the environmental and/or social characteristics during the reference period?” for a description of the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted, including the exclusion criteria, and the assessment methodology for determining whether and to what extent assets met the defined environmental and/or social characteristics (including the turnover thresholds defined for the exclusions). This section contains further information on the sustainability indicators.
The values from the DWS front office system are used to calculate the sustainability indicators. This means that there may be minor deviations from the other market values that appear in the annual report, which are derived from the fund accounting system

…and compared to previous periods?

Attainment of the promoted environmental and social characteristics at portfolio level was measured in the previous years on the basis of the following sustainability indicators:

DWS Invest Conservative Sustainable Bonds

Indicators	Description	30.12.2024	29.12.2023
• **DWS Use of Proceeds Bond Assessment** was used as indicator for qualifying a bond as use of proceeds bond that followed recognized industry standards and to check whether the issuer met defined ESG criteria. This assessment comprised:			
1. Check for compliance with the ICMA Principles for green bonds, social bonds or sustainability bonds.		No investments in invalid assets	No investments in invalid assets
2. Exclusion of:			
- Companies and sovereign issuers with the worst DWS ESG Quality Assessment score in the peer group comparison (i.e., a letter score of “F”);		No investments in invalid assets	No investments in invalid assets
- Sovereign issuers labelled as “not free” by Freedom House;		No investments in invalid assets	No investments in invalid assets
- Companies with the worst DWS Norm Assessment score (i.e., a letter score of “F”);		No investments in invalid assets	No investments in invalid assets
- Companies that are directly involved in one or more very severe, unresolved controversies related to the UN Global Compact;		No investments in invalid assets	No investments in invalid assets
- Companies with involvement in controversial weapons; or		No investments in invalid assets	No investments in invalid assets
- Companies with identified coal expansion plans.		No investments in invalid assets	No investments in invalid assets
• **DWS Methodology for determining sustainable investments pursuant to Article 2(17) SFDR (Sustainability Investment Assessment)** was used as indicator to measure the proportion of sustainable investments.		99.61 %	99.45%

The disclosure of the sustainability indicators has been revised compared with the prior-year report. The assessment methodology is unchanged. Additional information on the currently valid sustainability indicators is provided in the section entitled “What actions were taken to meet the environmental and/or social characteristics during the reference period?”

Information about taking into account the principal adverse impacts on sustainability factors is provided in the section entitled “How did this financial product consider principal adverse impacts on sustainability factors?”

How did the sustainable investments not cause significant harm to any sustainable investment objective?

The sustainable investments in which the sub-fund invests were assessed to ensure they did not cause significant harm to any environmental or social investment objective. This was achieved by taking into account the indicators for principal adverse impacts on sustainability factors
(dependent on relevance) as described below. If a significant harm was identified, the investment could not be considered sustainable.

How were the indicators for adverse impacts on sustainability factors taken into account?

The Sustainability Investment Assessment systematically integrated the mandatory principal adverse indicators on sustainability factors (dependent on relevance) from Table 1 and relevant indicators from Tables 2 and 3 of Annex I of the Commission Delegated Regulation (EU) 2022/1288 supplementing the SFDR. Taking into account these principal adverse impacts, DWS had established quantitative thresholds and/or qualitative values to assess a significant harm on any of the environmental or social sustainable investment objectives. These values were set based upon various external and internal factors, such as data availability or market developments and may have been adapted going forward. These values may have been set at issuer or use of proceeds bond level.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The alignment of sustainable investments with, amongst others, the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights was evaluated through the Norm Controversy Assessment (as further described below). Companies with the worst Norm Controversy Assessment of "F" were excluded as an investment.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti‑corruption and anti‑bribery matters.

How did this financial product consider principal adverse impacts on sustainability factors?

The sub-fund considered the mandatory principal adverse impacts on sustainability factors (dependent on relevance) from Table 1 and relevant indicators from Tables 2 and 3 of Annex I of the Commission Delegated Regulation EU 2022/1288 supplementing the SFDR in relation to the sustainable investments in the portfolio of the sub-fund.
Principal adverse impacts were considered as part of the DNSH assessment under article 2(17) SFDR as described above in section "How were the indicators for adverse impacts on sustainability factors taken into account?". The investment strategy did not apply a dedicated steering mechanism of the values of principal adverse impact indicators at overall portfolio level.

DWS Invest Conservative Sustainable Bonds

Indicators	Description	Performance
Principal Adverse Impacts		
PAII - 01. GHG emissions	Sum of the current value of investments of company i, divided by the investee company's enterprise value and multiplied by company's cope 1+2+3 GHG emissions.	3874.80 tCO2e
PAII - 02. Carbon Footprint - EUR	The carbon footprint is expressed as tonnes of CO2 emissions per million EUR invested. The CO2 emissions of an issuer are normalised by its enterprise value including cash (EVIC)	182.76 / Million EUR
PAII - 03. Carbon Intensity	Weighted average carbon intensity scope 1+2+3	630.79 tCO2e / Million EUR
PAII - 04. Exposure to companies active in the fossil fuel sector	Share of investments in companies active in the fossil fuel sector	11.63 % of assets
PAII - 05. Share of non-renewable energy consumption and production	The company's energy consumption and/or production from non-renewable sources as a percentage of total energy use and/or generation	62.51 % of assets
PAII - 06. Energy consumption (GWh) per million EUR revenue	Energy consumption in GWh per million EUR of revenue of investee companies, per high impact climate sector	A: 0 GWh / €M Income B: 0 GWh / €M Income C: 0.59 GWh / €M Income D: 1.28 GWh / €M Income E: 0.66 GWh / €M income F: 0.23 GWh / €M Income G: 0.83 GWh / €M Income H: 1.9 GWh / €M Income L: 0 GWh / €M Income NA: 0.05 GWh / €M Income
PAII - 07. Activities negatively affecting biodiversity sensitive areas	Share of investments in investee companies with sites/ operations located in or near to biodiversity-sensitive areas where activities of those investee companies negatively affect those areas	4.97 % of assets
PAII - 08. Emissions to water	Waste water discharged (metric tons) into surface waters as a result of industrial or manufacturing activities.	4.31 % of assets
PAII - 09. Hazardous waste ratio	Tonnes of hazardous waste and radioactive waste generated by investee companies per million EUR invested, expressed as a weighted average	0.94 % of assets
PAII - 10. Violations of UNGC principles and OECD Guidelines for Multinational Enterprises	Share of investments in investee companies that have been involved in violations of the UNGC principles or OECD Guidelines for Multinational Enterprises	0 % of assets
PAII - 11. Lack of processes and compliance mechanisms for UNGC principles and OECD Guidelines	Share of investments in investee companies without policies to monitor compliance with the UNGC principles or OECD Guidelines for Multinational Enterprises or grievance /complaints handling mechanisms to address violations of the UNGC principles or OECD Guidelines for Multinational Enterprises	0.92 % of assets
PAII - 12. Unadjusted gender pay gap	Average unadjusted gender pay gap of investee companies	12.61 % of assets
PAII - 13. Board gender diversity	Average ratio of female to male board members in investee companies, expressed as a percentage of all board members	41.31 % of assets
PAII - 14. Exposure to controversial weapons	Share of investments in investee companies involved in the manufacture or selling of controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)	0 % of assets
PAII - 15. GHG intensity	GHG intensity of investee countries	187.78 tCO2e / Mio. € GDP
PAII - 16. Investee countries subject to social violations	Relative number of investee countries subject to social violations, as referred to in international treaties and conventions, United Nations principles and, where applicable, national law	0 % of assets

As of: December 30, 2025

The Principal Adverse Impact Indicators (PAIIs) are calculated on the basis of the data in the DWS back office and front office systems, which are primarily based on the data of external ESG data providers. If there is no data on individual PAIIs for individual securities or their issuers, either because no data is available or the PAII is not applicable to the particular issuer or security, these securities or issuers are not included in the calculation of the PAII. With target fund investments, a look-through of the target fund holdings is performed if appropriate data is available. The calculation method for the individual PAI indicators may change in subsequent reporting periods due to evolving market standards, a change in the treatment of securities of certain types of instruments (such as derivatives) or as a result of regulatory clarifications.
Moreover, improved data availability may have an effect on the reported PAIIs in subsequent reporting periods.
The values from the DWS front office system are used to calculate the PAIIs. This means that there may be minor deviations from the other market values that appear in the annual report, which are derived from the fund accounting system.

What were the top investments of this financial product?

DWS Invest Conservative Sustainable Bonds

Largest investments	Breakdown by sector / issuer	in % of average portfolio volume	Breakdown by country
Belgium 18/22.04.33 S.86	O - Public administration and defence; compulsory social security	1.8 %	Belgium
Germany 20/15.08.30	O - Public administration and defence; compulsory social security	1.8 %	Germany
Austria 23/25.05.2029	O Public administration and defence; compulsory social security	1.6 %	Austria
Germany 20/10.10.25 S.G	O - Public administration and defence; compulsory social security	1.4 %	Germany
European Union 20/04.10.30	O - Public administration and defence; compulsory social security	1.3 %	Eurozone
Germany 22/15.10.2027 S.G	O - Public administration and defence; compulsory social security	1.3 %	Germany
Ireland 18/18.03.31	O - Public administration and defence; compulsory social security	1.3 %	Ireland
Slovenia 23/11.03.2033	O - Public administration and defence; compulsory social security	1.3 %	Slowenia
Bundesrepub. Deutschland 21/15.08.31	O - Public administration and defence; compulsory social security	1.2 %	Germany
KfW 20/15.09.28 MTN	K - Financial and insurance activities	1.2 %	Germany

Caisse Amortism. Dette Soc. 24/24.09.2027 MTN	O - Public administration and defence; compulsory social security	1.1 %	France
Region Wallonne 24/06.12.2030 MTN	O - Public administration and defence; compulsory social security	1.1 %	Belgium
Deutsche Kreditbank 18/02.10.28	K - Financial and insurance activities	1.1 %	Germany

for the period from January 01, 2025, through December 31, 2025

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is:
for the period from January 01, 2025, through December 31, 2025

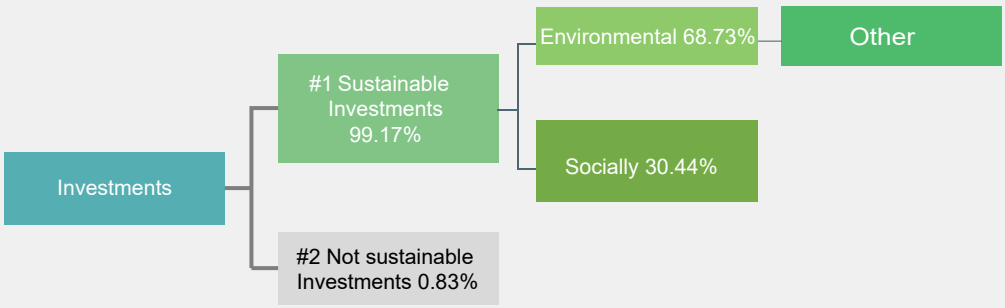
What was the proportion of sustainability-related investments?

The proportion of sustainability-related investments as of the reporting date was 99,17% of portfolio assets.
Proportion of sustainability-related investments for the previous year:
30/12/2024: 99.61 %
29/12/2023: 98.58 %

Asset allocation describes the share of investments in specific assets.

What was the asset allocation?

This sub-fund invested 99.17% of its net assets in sustainable investments (#1 Sustainable). Thereof the share of sustainable investments with an environmental objective that was not compliant with the EU Taxonomy was 68.73% of the sub-fund's net assets and the share of socially sustainable investments was 30.44% of the sub-fund's net assets. The share of sustainable investments with an environmental objective that was not compliant with the EU Taxonomy, and of socially sustainable investments, depended on the market situation and the investable investment universe.
0.83% of the net assets of the sub-fund were invested in investments that did not qualify as sustainable investments (#2 Not sustainable) as further detailed in the section "What investments were included under “not sustainable”, what was their purpose and were there any minimum environmental or social safeguards?".
A more detailed description of the specific asset allocation of this sub-fund can be found in the Special Section of the Sales Prospectus.



#1 Sustainable covers sustainable investments with environmental or social objectives.
#2 Not sustainable includes investments which do not qualify as sustainable investments.

In which economic sectors were the investments made?

DWS Invest Corporate Green Bonds

NACE - Code	Breakdown by sector according to NACE Codes	in % of portfolio volume
C	Manufacturing	2.0 %
D	Electricity, gas, steam and air conditioning supply	2.4 %
K	Financial and insurance activities	50.5 %
M	Professional, scientific and technical activities	4.3 %
O	Public administration and defence; compulsory social security	38.0 %
NA	Other	2.8 %
Exposure to companies active in the fossil fuel sector		16.8 %

As of: December 31,2025

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The sub-fund did not commit to invest a minimum proportion of sustainable investments with an environmental objective aligned with the EU Taxonomy. Therefore, the percentage of environmentally sustainable investments aligned with the EU Taxonomy was 0% of the sub-fund’s net assets. However, certain investments’ underlying economic activities may have been aligned with the EU Taxonomy.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities Directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities Are economic activities for yet low-carbon alternatives are not yet available and that have greenhouse gas emission levels corresponding to the best performance.

Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy[1]?

☐ Yes:

☐ In fossil gas ☐ In nuclear energy

☒ No

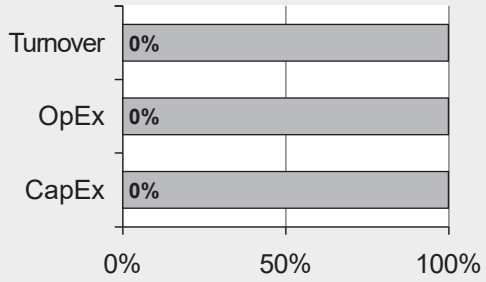
The sub-fund did not take into account the taxonomy-conformity of investments in the fossil gas and/or nuclear energy sectors.

[1] Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do no significant harm to any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Taxonomy-aligned activities are expressed as a share of:
- turnover reflecting the share of revenue from green activities of investee companies.
- capital expenditure (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- operational expenditure (OpEx) reflecting the green operational activities of investee companies.

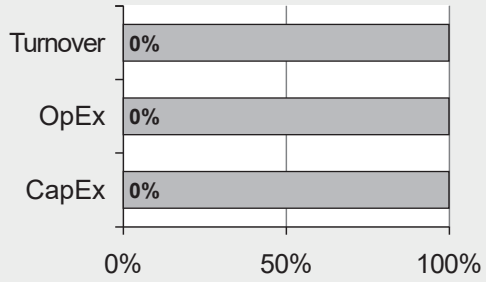
The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy-alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy-alignment only in relation to the investments of the financial product other than sovereign bonds.

1. Taxonomy-alignment of investments **including sovereign bonds***



Taxonomy-aligned: Fossil gas	0.00%
Taxonomy-aligned: Nuclear	0.00%
Taxonomy-aligned (no gas and nuclear)	0.00%
Taxonomy-aligned	0.00%
Non Taxonomy-aligned	100.00%

2. Taxonomy-alignment of investments **excluding sovereign bonds***



Taxonomy-aligned: Fossil gas	0.00%
Taxonomy-aligned: Nuclear	0.00%
Taxonomy-aligned (no gas and nuclear)	0.00%
Taxonomy-aligned	0.00%
Non Taxonomy-aligned	100.00%

This graph represents 100% of the total investments.

**For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures*

What was the share of investments made in transitional and enabling activities?

The sub-fund was not committed to a minimum share of investments in transitional or enabling activities.

How did the percentage of investments that are aligned with the EU Taxonomy compare with previous reference periods?

The promoted proportion of environmentally sustainable investments in accordance with Regulation (EU) 2020/852 (Taxonomy Regulation) was 0% of the fund's assets in the current as well as previous reference periods. It may, however, have been the case that some sustainable investments were nevertheless aligned with an environmental objective of the Taxonomy Regulation.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The share of sustainable investments with an environmental objective that were not aligned with the EU Taxonomy was 68.73%.

Shares of sustainable investments in previous reporting period:

reporting period	sustainable investments (total)	with environmental objective	socially sustainable
30/12/2024	99.61%	68.14%	31.47%
29/12/2023	99.45%	71.46%	27.99%

What was the share of socially sustainable investments?

The share of socially sustainable investments was 30.44%.

Shares of sustainable investments in previous reporting period:

reporting period	sustainable investments (total)	with environmental objective	socially sustainable
30/12/2024	99.61%	68.14%	31.47%
29/12/2023	99.45%	71.46%	27.99%

What investments were included under “not sustainable”, what was their purpose and were there any minimum environmental or social safeguards?

99.17% of the sub-fund’s net assets were aligned with the sustainable investment objective. 0.83% of the sub-fund’s net assets were invested in assets that re not considered sustainable (#2 Not sustainable). These assets we could have included all asset classes as foreseen in the specific investment policy and were used by the portfolio management for liquidity and/or hedging purposes.

The proportion and use of assets that were not considered sustainable did not affect the delivery of the sustainable investment objective, as these investments were neutral to such objective.

Minimum environmental or social safeguards, including amongst others the PAB-Exclusions, were at least considered for relevant investments in the context of liquidity management such as for money market funds. The PAB-Exclusions were, in particular, not applied for sight deposits with credit institutions and certain derivative instruments.

What actions have been taken to attain the sustainable investment objective during the reference period?

This sub-fund pursued a strategy based on bonds as main investment strategy. The sub-fund's assets were predominantly invested in interest-bearing debt securities from issuers domiciled in OECD member countries that financed special ESG related/themed projects (use of proceeds bonds, that represented a group of sustainable bonds). All of the sub-fund's assets could have invested in interest-bearing debt securities that had an investment grade status at the time of the acquisition. The average duration of the sub-fund's assets was limited to a maximum of 5 years. All investments must have been denominated in a currency from OECD members. The sub-fund manager aimed to hedge any currency risk versus the Euro in the portfolio.

Further details regarding the main investment strategy are specified in the Special Section of the Sales Prospectus.

99.17% of the sub-fund's net assets were allocated to investments that met the sustainable investment objective as described in the following sections. The alignment of the portfolio with the binding elements of the investment strategy used to attain the sustainable investment objective as well as the PAB-Exclusions was continuously controlled via the sub-fund's investment guidelines monitoring.

The sub-fund aimed to achieve its sustainable investment objective by assessing potential assets via an in-house ESG assessment methodology that was based on a proprietary software tool which sourced data from one or several ESG data providers, public sources and/or internal assessments to derive overall assessments. The methodology applied to derive such overall assessments could be based on different methods, such as prioritizing one data vendor, worst-of or averaging approach. Internal assessments may have taken into account factors such as an issuer's future expected ESG developments, plausibility of data with regard to past or future events, the willingness to engage in dialogue on ESG matters and/or ESG-related decisions of a company. Further, internal ESG assessments for investee companies may have considered the relevance of the exclusion criteria for the market sector of the investee company.

The proprietary software tool used, amongst others, the approaches described below to assess use of proceed bonds and the ESG quality of an issuer including, for example, exclusions related to revenues generated from controversial sectors or the exposure to such controversial sectors. In some of the assessment approaches, issuers received one of six possible assessments, with "A" representing the best and "F" the worst assessment. If an issuer was excluded based on one assessment approach, the sub-fund was prohibited from investing in that issuer.

Depending on the investable universe, the portfolio allocation and the exposure to certain sectors, the assessment approaches described below may have been more or less relevant which was reflected in the number of issuers being actually excluded.

Use of Proceeds Bond Assessment

The use of proceeds bonds were checked for compliance with the Green Bond Standards, a two-stage process.

1. In a first stage, use of proceeds bonds were checked for compliance with the Green Bond Standards, similar industry standards for green bonds, social bonds or sustainability bonds (such as ICMA Principles) or the EU Green Bond Standard or whether bonds have been subject to an independent review. These standards focused, for example on the use of proceeds, the selection of the projects financed by these proceeds and the proceeds impact. Further, where sufficient data was available, use of proceeds bonds were checked for compliance with the below described PAB-Exclusions (except for c.) at the level of projects or activities financed by such use of proceeds bonds.

2. In a second stage, and if a bond complied with the requirements described for the first stage, the ESG quality of the issuer was assessed in relation to defined minimum standards in respect to environmental and social factors with the following assessment approaches:

• PAB-Exclusions

The sub-fund excluded all of the following companies:

a. companies involved in controversial weapons (manufacturing or selling of anti-personnel mines, cluster munitions, chemical weapons and biological weapons) as assessed as part of the assessment of the "Exposure to controversial weapons" described below;
b. companies involved in the cultivation and production of tobacco;
c. companies that were found in violation of the United Nations Global Compact principles or the OECD Guidelines for Multinational Enterprises (assessed as part of the "Norm Controversy Assessment" as described below).

Where no sufficient data was available for the evaluation of the PAB-Exclusions at use of proceeds bond level, the issuer was in addition evaluated and excluded based on the following:

d. companies that derived 1% or more of their revenues from exploration, mining, extraction, distribution or refining of hard coal and lignite;
e. companies that derived 10% or more of their revenues from the exploration, extraction, distribution or refining of oil fuels;
f. companies that derived 50% or more of their revenues from the exploration, extraction, manufacturing or distribution of gaseous fuels;
g. companies that derived 50% or more of their revenues from electricity generation with a GHG intensity of more than 100 g CO2 e/kWh.

Green bonds identified as issued under the EU Green Bond Standards were least assessed for the PAB-Exclusions a) to c) on issuer level.

• Norm Controversy Assessment
The Norm Controversy Assessment evaluated the behaviour of companies in relation to generally accepted international standards and principles of responsible business conduct within, amongst others, the framework of the principles of the United Nations Global Compact, the United Nations Guiding Principles, the standards of the International Labour Organization and the OECD Guidelines for Multinational Enterprises. Examples of topics covered within these standards and principles included, but were not limited to, human rights violations, violations of workers' rights, child or forced labour, negative environmental impacts and business ethics. The Norm Controversy Assessment evaluated reported violations of the aforementioned international standards. Companies with the worst Norm Controversy Assessment of “F” were excluded as an investment.

• Exposure to controversial sectors
Companies that were involved in certain business areas and business activities in controversial areas (“controversial sectors”) were excluded according to their share of total revenues generated in such controversial sectors as follows:

a. companies that derived more than 0% of their revenues from unconventional extraction of crude oil and/or natural gas (including oil sand, oil shale/shale gas, arctic drilling);
b. companies that derived 5% or more of their revenues from nuclear power generation and/or uranium mining and/or uranium enrichment;
c. Companies with thermal coal expansion plans, such as additional coal mining, coal production or coal usage. Companies with thermal coal expansion plans were excluded based on an internal identification methodology.

• Freedom House Status
Freedom House is an international non-governmental organization that classifies countries by their degree of political and civil liberties. Based on the Freedom House Status, countries that were classified as "not free" were excluded as an investment.

• Exposure to controversial weapons
Companies were excluded if they were identified as being involved in the manufacturing or selling of controversial weapons or key components of controversial weapons or other related specific activities (anti-personnel mines, cluster munitions, chemical and biological weapons, blinding laser weapons, weapons with non-detectable fragments, depleted uranium weapons/munitions and/or incendiary weapons using white phosphorus). In addition, the shareholdings within a group structure may have been taken into consideration for the exclusions.

Sustainability Investment Assessment
Further, DWS measured the bonds via its Sustainability Investment Assessment which evaluated potential investments in relation to different criteria to determine whether an investment could have been considered as sustainable. The Sustainability Investment Assessment was based on data from one or several data providers, public sources and/or internal assessments.

DWS determined whether the bond made a positive contribution to a sustainable investment objective as described above. Where a positive contribution was determined, the investment was considered sustainable if no significant harm was identified and the company followed good governance practices.

The share of sustainable investments in the portfolio as defined in article 2(17) SFDR was calculated based on the value of the entire use of proceeds bonds that were considered as sustainable investments.

The assessment of the good governance practices of the investee companies (including assessments related to sound management structures, employee relations, remuneration of staff and tax compliance) was part of the Norm Controversy Assessment which evaluated a company's behavior within generally accepted international standards and principles of responsible business conduct. Companies with the worst Norm Controversy Assessment of "F" were excluded as an investment.

How did this financial product perform compared to the reference sustainable benchmark?

This sub-fund has not designated a reference benchmark to meet the sustainable investment objective.

Reference benchmarks are indexes to measure whether the financial product attains the sustainable investment objectives.

Periodic disclosure for financial products referred to in Article 8, paragraph 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

Product name: DWS Invest Convertibles

Legal entity identifier: 22TBFQY7IVP2I86LED50

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

Yes	No
☐ it made **sustainable investments with an environmental objective:** ___%	☒ It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of 18.25% of sustainable investments.
☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy	☐ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
	☒ with a social objective
☐ It made **sustainable investments with a social objective:** ___%	☐ It promoted E/S characteristics, but did **not make any sustainable investments**

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities.** That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

To what extent were the environmental and/or social characteristics promoted by this financial product met?

This sub-fund promoted environmental and social characteristics related to a general consideration of ESG criteria by excluding, for example, investments in companies with the worst norm-related issues towards international standards and/or investments in companies whose involvement in controversial sectors exceeded predefined revenue thresholds.

Further, this sub-fund promoted a proportion of sustainable investments in accordance with article 2(17) of the regulation on sustainability-related disclosures in the financial services sector (SFDR).

This sub-fund had not designated a reference benchmark for the purpose of attaining the environmental and social characteristics promoted.

No derivatives were used to attain the environmental or social characteristics promoted by the sub-fund.

How did the sustainability indicators perform?

The attainment of the promoted environmental and social characteristics as well as the sustainable investment was assessed via the application of an in-house ESG assessment methodology and ESG specific exclusion thresholds as further described in the section "What actions have been taken to meet the environmental and/or social characteristics during the reference period?". The methodology applied different assessment approaches that were used as sustainability indicators which were:

• **Norm Controversy Assessment** used as an indicator for a company's exposure to norm-related issues towards international standards.
Performance: No investments in suboptimal assets

• **Freedom House Status** used as an indicator for the political and civil liberties of a country.
Performance: No investments in suboptimal assets

• **Exposure to controversial sectors** used as an indicator for a company's involvement in controversial sectors.
Performance: 0%

• **Exposure to controversial weapons** used as an indicator for a company's involvement in controversial weapons.
Performance: 0%

• **Sustainability Investment Assessment** used as an indicator to measure the proportion of sustainable investments pursuant to article 2(17) SFDR.
Performance: 18.25%

Please see the section entitled “What actions have been taken to meet the environmental and/or social characteristics during the reference period?” for a description of the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted, including the exclusion criteria, and the assessment methodology for determining whether and to what extent assets met the defined environmental and/or social characteristics (including the turnover thresholds defined for the xclusions). This section contains further information on the sustainability indicators. The values from the DWS front office system are used to calculate the sustainability indicators. This means that there may be minor deviations from the other market values that appear in the annual report, which are derived from the fund accounting system.

…and compared to previous periods?

Attainment of the promoted environmental and social characteristics at portfolio level was measured in the previous years on the basis of the following sustainability indicators:

DWS Invest Convertibles

The disclosure of the sustainability indicators has been revised compared with the prior-year report. The assessment methodology is unchanged. Additional information on the currently valid sustainability indicators is provided in the section entitled “What actions have been taken to meet the environmental and/or social characteristics during the reference period?”.
Information about taking into account the principal adverse impacts on sustainability factors is provided in the section entitled “How did this financial product consider principal adverse impacts on sustainability factors?”

DWS ESG-Assessment Scale

In the following assessment categories, the assets received one of six possible scores, with "A" being the best score and "F" being the worst score.

Criteria	Involvement in controversial sectors *(1)	Involvement in controversial weapons	Norm Assessment *(6)	ESG Quality Assessment	SDG- Assessment	Climat & Transition Risk Assessment
A	Non-involvement	Confirmed non-involvement	Confirmed no issues	True leader in ESG (>= 87.5 DWS ESG score)	True SDG contributor (>= 87.5 SDG score)	True climate leader (>= 87.5 score)
B	Remote involvement	Alleged	Violations of lesser degree	ESG leader (75-87.5 DWS ESG score)	SDG contributor (75-87.5 SDG score)	Climate solution provider(75-87.5 score)
C	0% - 5%	Dual-Purpose *(2)	Violations of lesser degree	ESG upper midfield (50-75 DWS ESG score)	SDG upper midfield (50-75 SDG score)	Low transition risk (50-75 score)
D	5% - 10% (coal: 5% - 10%)	Owning *(3)/ Owned *(4)	Violation of lesser degree	ESG lower midfield (25-50 DWS ESG score)	SDG lower midfield (25-50 SDG score)	Mod. transition risk (25-50 score)
E	10% - 25% (coal: 15% - 25%)	Component Producer *(5)	High severity or re-assessed highest violation *(7)	ESG laggard (12.5-25 DWS ESG score)	SDG obstructer (12.5-25 SDG score)	High transition risk (12.5-25 score)
F	>= 25%	Weapon producer	Highest severity / global compact violation *(8)	True laggard in ESG (0-12.5 DWS ESG score)	Significant SDG obstructer (0-12.5 SDG score)	Excessive transition risk (0-12.5 score)

*(1) Revenue share thresholds as per standard scheme. Sub-Granularity available. Thresholds can be individually set.

*(2) Encompasses e.g.. weapon-carrying systems such as combat aircraft that carry non-controversial weapons as well as controversial ones.

*(3) Owning more than 20% equity.

*(4) Being owned by more than 50% of company involved in grade E or F.

*(5) Single purpose key component.

*(6) Includes ILO controversies as well as corporate governance and product issues.

*(7) In its ongoing assessment, DWS takes into account the violation(s) of international standards – observed via data from ESG data vendors – such as the UN Global Compact, but also possible ESG data vendor errors identified, future expected developments of these violations as well as the willingness of the issuer to engage in dialogue regarding corporate decisions in this regard.

*(8) An F-grade can be considered a reconfirmed violation of the United Nations Global Compact rule framework for corporate behavior.

What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?

Sustainable investments contributed to at least one of the Sustainable Development Goals of the United Nations (UN SDGs) that relate to environmental and/or social objectives, such as good health and well-being or climate action and/or to at least one other environmental objective such as climate change adaption or climate change mitigation (as defined under the EU Taxonomy).

The extent of the contribution to individual sustainable investment objectives varied depending on the actual investments held in the portfolio.

DWS determind the contribution to a sustainable investment objective based on its Sustainability Investment Assessment which used data from one or several data providers, public sources and/or internal assessments. An investment's positive contribution to an environmental and/or social objective was assessed based on the revenues which a company generated from the actual economic activities making such contribution (activity-based approach). Where a positive contribution was determined, the investment was considered sustainable if the issuer passed the Do No significant Harm ("DNSH") assessment and the company followed good governance practices.

The share of sustainable investments in the portfolio as defined in article 2(17) SFDR was therefore calculated in proportion to the economic activities of the issuers that were considered as sustainable (activity-based approach). Notwithstanding the preceding, in the case of use-of-proceeds bonds that were considered as sustainable investment, the value of the entire bond was counted towards the portfolio's share of sustainable investments.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

The sustainable investments in which the sub-fund invested were assessed to ensure they did not cause significant harm to any environmental or social sustainable investment objective. This was achieved by taking into account the indicators for principal adverse impacts on sustainability factors (dependent on relevance) as described below. If a significant harm was identified, the investment could not have been considered sustainable.

How were the indicators for adverse impacts on sustainability factors taken into account?

The Sustainability Investment Assessment systematically integrated the mandatory principal adverse indicators on sustainability factors (dependent on relevance) from Table 1 and relevant indicators from Tables 2 and 3 of Annex I of the Commission Delegated Regulation (EU) 2022/1288 supplementing the SFDR. Taking into account these principal adverse impacts, DWS had established quantitative thresholds and/or qualitative values to assess a significant harm on any of the environmental or social sustainable investment objectives. These values were set based upon various external and internal factors, such as data availability or market developments and may have been adapted going forward.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The alignment of sustainable investments with, amongst others, the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights was evaluated through the Norm Controversy Assessment (as further described below). Companies with the worst Norm Controversy Assessment of “F” were excluded as an investment.

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union Criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU Criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU Criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

How did this financial product consider principal adverse impacts on sustainability factors?

The sub-fund considered the following principal adverse impacts on sustainability factors from Annex I of the Commission Delegated Regulation (EU) 2022/1288 supplementing the SFDR:

• Exposure to companies active in the fossil fue sector (no. 4);

• iolations of the United Nations Global Compact principles and OECD Guidelines for Multinational Enterprises (no. 10); and

• Exposure to controversial weapons (no. 14)

DWS Invest Convertibles

Indicators	Description	Performance
Principal Adverse Impact		
PAII - 04. Exposure to companies active in the fossil fuel sector	Share of investments in companies active in the fossil fuel sector	11.23 % of assets
PAII - 10. Violations of UNGC principles and OECD Guidelines for Multinational Enterprises	Share of investments in investee companies that have been involved in violations of the UNGC principles or OECD Guidelines for Multinational Enterprises	0 % of assets
PAII - 14. Exposure to controversial weapons	Share of investments in investee companies involved in the manufacture or selling of controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)	0 % of assets

As of: December 30, 2025

The Principal Adverse Impact Indicators (PAIIs) are calculated on the basis of the data in the DWS back office and front office systems, which are primarily based on the data of external ESG data providers. If there is no data on individual PAIIs for individual securities or their issuers, either because no data is available or the PAII is not applicable to the particular issuer or security, these securities or issuers are not included in the calculation of the PAII. With target fund investments, a look-through of the target fund holdings is performed if appropriate data is available. The calculation method for the individual PAI indicators may change in subsequent reporting periods due to evolving market standards, a change in the treatment of securities of certain types of instruments (such as derivatives) or as a result of regulatory clarifications.
Moreover, improved data availability may have an effect on the reported PAIIs in subsequent reporting periods.
The values from the DWS front office system are used to calculate the PAIIs. This means that there may be minor deviations from the other market values that appear in the annual report, which are derived from the fund accounting system.

What were the top investments of this financial product?

DWS Invest Convertibles

Largest investments	Breakdown by sector according to NACE Codes	in % of average portfolio volume	Breakdown by country
Deutsche Managed Euro Fund Z-Class	K - Financial and insurance activities	2.4 %	Ireland

for the period from January 01, 2025, through December 30, 2025

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is:
for the period from January 01, 2025, through December 31, 2025

What was the proportion of sustainability-related investments?

The proportion of sustainability-related investments as of the reporting date was 97.87% of portfolio assets.
Proportion of sustainability-related investments for the previous years:
30/12/2024: 97.58%
29/12/2023: 97.09%
30/12/2022: 98.77%

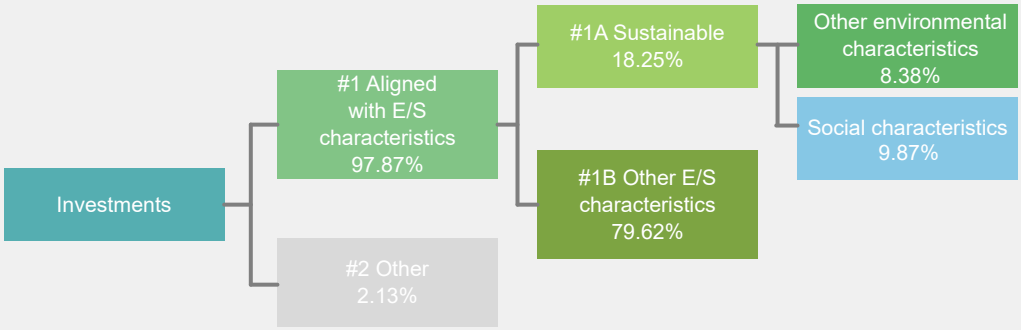
Asset allocation describes the share of investments in specific assets.

What was the asset allocation?

This sub-fund invested 97.87% of its net assets in investments that were aligned with the promoted environmental and social characteristics (#1 Aligned with E/S characteristics). Within this category, 18.25% of the sub-fund's net assets qualified as sustainable investments (#1A Sustainable). Thereof the share of sustainable investments with an environmental objective that was not compliant with the EU Taxonomy was 8.38% of the sub-fund's net assets and the share of socially sustainable investments was 9.87% of the sub-fund's net assets. The share of sustainable investments with an environmental objective that was not compliant with the EU Taxonomy and of socially sustainable investments depended on the market situation and the investable investment universe.

2.13% of the sub-fund's net assets have been invested in assets which were either out-of-scope of the ESG assessment methodology or for which ESG data coverage was incomplete (#2 Other) as further detailed in the section "What investments were included under "#2 Other", what was their purpose and were there any minimum environmental or social safeguards?".

A more detailed description of the specific asset allocation of this sub-fund can be found in the Special Section of the Sales Prospectus.



#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:
- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

In which economic sectors were the investments made?

DWS Invest Convertibles

NACE-Code	Breakdown by sector according to NACE Codes	in % of portfolio volume
B	Mining and quarrying	2.3 %
C	Manufacturing	15.0 %
D	Electricity, gas, steam and air conditioning supply	9.4 %
G	Wholesale and retail trade; repair of motor vehicles and motorcycles	3.1 %
H	Transporting and storage	1.7 %
I	Accommodation and food service activities	0.3 %
J	Information and communication	10.2 %
K	Financial and insurance activities	22.1 %
L	Real estate activities	0.3 %
M	Professional, scientific and technical activities	12.8 %
N	Administrative and support service activities	1.4 %
O	Public administration and defence; compulsory social security	1.0 %
Q	Human health and social work activities	0.5 %
R	Arts, entertainment and recreation	1.1 %
NA	Other	18.8 %
Exposure to companies active in the fossil fuel sector		11.23 %

As of: December 30, 2025

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The sub-fund did not commit to invest a proportion of sustainable investments with an environmental objective aligned with the EU Taxonomy. Therefore, the promoted minimum percentage of environmentally sustainable investments aligned with the EU Taxonomy was 0% of the sub-fund's net assets. However, certain investments' underlying economic activities may have been aligned with the EU Taxonomy.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are economic activities for yet low-carbon alternatives are not yet available and that have greenhouse gas emission levels corresponding to the best performance.

Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy[1]?

☐ Yes:

☐ In fossil gas ☐ In nuclear energy

☒ No

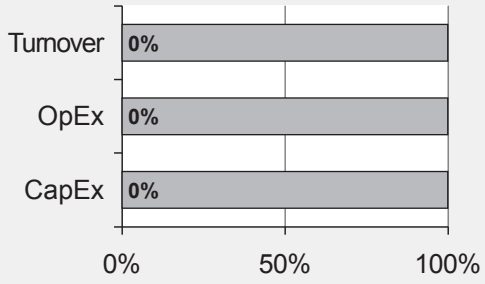
The sub-fund did not take into account the Taxonomy-alignment of companies active in the fossil gas and/or nuclear energy sectors.

[1] Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do no significant harm to any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Taxonomy-aligned activities are expressed as a share of:
- turnover reflecting the share of revenue from green activities of investee companies.
- capital expenditure (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- operational expenditure (OpEx) reflecting the green operational activities of investee companies.

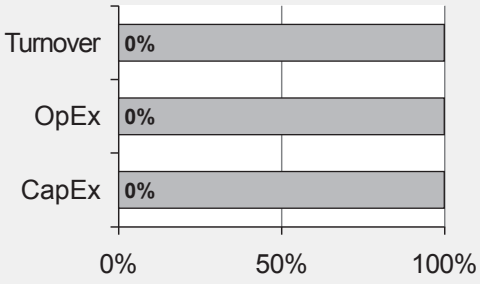
The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy-alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy-alignment only in relation to the investments of the financial product other than sovereign bonds.

1. Taxonomy-alignment of investments **including sovereign bonds***



Taxonomy-aligned: Fossil gas	0.00%
Taxonomy-aligned: Nuclear	0.00%
Taxonomy-aligned (no gas and nuclear)	0.00%
Taxonomy-aligned	0.00%
Non Taxonomy-aligned	100.00%

2. Taxonomy-alignment of investments **excluding sovereign bonds***



Taxonomy-aligned: Fossil gas	0.00%
Taxonomy-aligned: Nuclear	0.00%
Taxonomy-aligned (no gas and nuclear)	0.00%
Taxonomy-aligned	0.00%
Non Taxonomy-aligned	100.00%

This graph represents 100% of the total investments.

**For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures*

What was the share of investments made in transitional and enabling activities?

The sub-fund was not committed to a share of investments in transitional or enabling activities.

How did the percentage of investments that are aligned with the EU Taxonomy compare with previous reference periods?

The promoted proportion of environmentally sustainable investments in accordance with Regulation (EU) 2020/852 (Taxonomy Regulation) was 0% of the fund's assets in the current as well as previous reference periods. It may, however, have been the case that some sustainable investments were nevertheless aligned with an environmental objective of the Taxonomy Regulation.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the Regulation (EU) 2020/852.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The share of sustainable investments with an environmental objective that were not aligned with the EU Taxonomy was 8.38% of the sub-fund's net assets.

Shares of sustainable investments in previous reporting periods:

reporting period	sustainable investments (total)	with environmental objective	socially sustainable
30/12/2024	22.25%	12.52%	9.73%
29/12/2023	24.17%	8.88%	15.29%
30/12/2022	20.55%	--	--

What was the share of socially sustainable investments?

The share of socially sustainable investments was 9.87% of the sub-fund’s net

assets. Shares of sustainable investments in previous reporting periods:

reporting period	sustainable investments (total)	with environmental objective	socially sustainable
30/12/2024	22.25%	12.52%	9.73%
29/12/2023	24.17%	8.88%	15.29%
30/12/2022	20.55%	--	--

What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?

97.87% of the sub-fund’s net assets were aligned with the promoted environmental and social characteristics (#1 Aligned with E/S characteristics). 2.13% of the sub-fund’s net assets have been invested in assets which were either out-of-scope of the ESG assessment methodology or for which ESG data coverage was incomplete (#2 Other). Full ESG data coverage was required for the assessment of direct investments in companies in relation to good governance practices.

Assets under “#2 Other” could include all asset classes as foreseen in the specific investment policy, such as sight deposits with credit institutions and derivatives. These assets could have been used by the portfolio management for performance, risk diversification, liquidity and hedging purposes.

Minimum environmental or social safeguards were not or only partially considered for the sub-fund’s investments falling within “#2 Other”.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

This sub-fund pursued a strategy based on multiple asset classes as main investment strategy. At least 70% of the sub-fund's assets should be invested in convertible bonds, warrant-linked bonds and similar convertible instruments of national and international issuers. Up to 30% of the sub-fund's assets may have been invested in fixed-interest and variable-interest securities excluding conversion rights and in equities, equity warrants and participation certificates, with the aggregate percentage of equities, equity warrants and participation certificates not to exceed 10%. A maximum of 20% of the sub-fund´s assets may have been invested in securities such as A-Shares, B-Shares, bonds and other securities listed and traded in Mainland China.

Further details regarding the main investment strategy were specified in the Special Section of the Sales Prospectus.

97.87% of the sub-fund's net assets were allocated to investments that met the promoted environmental and social characteristics as described in the following sections. The alignment of the portfolio with the binding elements of the investment strategy used to attain the promoted environmental and social characteristics was continuously controlled via the sub-fund's investment guidelines monitoring.

ESG assessment methodology

The sub-fund aimed to achieve the promoted environmental and social characteristics by assessing potential assets via an in-house ESG assessment methodology, regardless of their economic prospects for success, and by applying exclusion criteria based on this assessment.

The ESG assessment methodology was using a proprietary software tool which sourced data from one or several ESG data providers, public sources and/or internal assessments to derive overall assessments. The methodology applied to derive such overall assessments could have been based on different methods, such as prioritizing one data vendor, worst-of or averaging approach. Internal assessments may take into account factors such as an issuer's future expected ESG developments, plausibility of data with regard to past or future events, the willingness to engage in dialogue on ESG matters and/or ESG-related decisions of a company. Further, internal ESG assessments for investee companies might have considered the relevance of the exclusion criteria for the market sector of the investee company.

The proprietary software tool used, amongst others, the approaches described below to evaluate the adherence to the promoted ESG characteristics and whether investee companies followed good governance practices. The assessment approaches included, for example, exclusions related to revenues generated from controversial sectors or the exposure to such controversial sectors. In some of the assessment approaches, issuers received one of six possible assessments, with "A" representing the best and "F" the worst assessment. If an issuer was excluded based on one assessment approach, the sub-fund was prohibited from investing in that issuer.

Depending on the investable universe, the portfolio allocation and the exposure to certain sectors, the assessment approaches described below had been more or less relevant which was reflected in the number of issuers actually excluded.

• Norm Controversy Assessment

The Norm Controversy Assessment evaluated the behaviour of companies in relation to generally accepted international standards and principles of responsible business conduct within, amongst others, the framework of the principles of the United Nations Global Compact, the United Nations Guiding Principles, the standards of the International Labour Organization and the OECD Guidelines for Multinational Enterprises. Examples of topics covered within these standards and principles included, but were not limited to, human rights violations, violations of workers' rights, child or forced labour, negative environmental impacts and business ethics. The Norm Controversy Assessment evaluated reported violations of the aforementioned international standards. Companies with the worst Norm Controversy Assessment of “F” were excluded as an investment.

• Freedom House Status

Freedom House is an international non-governmental organization that classifies countries by their degree of political and civil liberties. Based on the Freedom House Status, countries that were classified as “not free” were excluded as an investment.

• **Exposure to controversial sectors**

Companies that were involved in certain business areas and business activities in controversial areas ("controversial sectors") were excluded according to their share of total revenues generated in such controversial sectors as followed:

a. Manufacturing and/or distribution of civil handguns or ammunition: 5% or more
b. Manufacturing of tobacco products: 5% or more
c. Mining of oil sand: 5% or more
d. Companies that derived 25% or more from thermal coal mining and thermal coal-based power generation as well as companies with thermal coal expansion plans, such as additional expansion of coal mining, coal production or coal usage. Companies with thermal coal expansion plans were excluded based on an internal identification methodology. In the event of exceptional circumstances, such as measured imposed by a government to address challenges in the energy sector, the Management Company may decide to temporarily suspend the application of the coal-related exclusions to individual companies/geographical regions.

• **Exposure to controversial weapons**

Companies were excluded if they were identified as being involved in the manufacturing or selling of controversial weapons or key components of controversial weapons (anti-personnel mines, cluster munitions, and/or chemical and biological weapons). In addition, the shareholdings within a group structure might have been taken into consideration for the exclusions.

• **Use-of-Proceeds Bond Assessment**

This assessment was specific to the nature of this instrument and an investment in use-of-proceeds bonds was permitted only if the following criteria were met. Firstly, all use-of-proceeds bonds were checked for compliance with the Climate Bonds Standards, similar industry standards for green bonds, social bonds or sustainability bonds (such as ICMA Principles) or the EU Green Bond Standard or whether bonds had been subject to an independent review. Secondly, certain ESG criteria were applied in relation to the issuer of the bonds which could have led to the exclusion of issuers and their bonds as an investment.

In particular, investments in use-of-proceeds bonds were prohibited based on the following issuer criteria:
- Sovereign issuers classified as "not free" by Freedom House;
- Companies with the worst Norm Controversy Assessment of "F" as referred to above;
- Companies that manufactured tobacco products: 5% or more;
- Companies with involvement in controversial weapons as referred to above; or
- Companies with identified thermal coal expansion plans as referred to above.

• **Target Fund Assessment**

Target funds were evaluated in relation to the underlying companies and were eligible if these companies were aligned with the criteria of the Norm Controversy Assessment and the exposure to controversial weapons (anti-personnel mines, cluster munitions, and/or chemical weapons and biological weapons). Investment in companies with the worst Norm Controversy Assessment of "F" was permitted up to a determined threshold. Considering the tolerance threshold, diversity of data vendors and methodologies, the available data coverage as well as the target fund portfolio rebalancing, this sub-fund had been indirectly exposed to certain assets that would have been excluded if invested directly or for which data coverage was limited or not available.

Sustainability Investment Assessment

Further, for the proportion of sustainable investments, DWS measured the contribution to one or several UN SDGs and/or to other environmental sustainable objectives via its Sustainability Investment Assessment which evaluated potential investments in relation to different criteria to conclude whether an investment could have been considered as sustainable as further detailed in the section “What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?”.

The applied ESG investment strategy did not pursue a committed minimum reduction of the scope of the investments.

The assessment of the good governance practices of the investee companies (including assessments related to sound management structures, employee relations, remuneration of staff and tax compliance) was part of the Norm Controversy Assessment which evaluated a company’s behavior within generally accepted international standards and principles of responsible business conduct. Companies with the worst Norm Controversy Assessment of “F” were excluded as an investment.

How did this financial product perform compared to the reference sustainable benchmark?

This sub-fund had not designated a reference benchmark to determine whether it was aligned with the environmental and social characteristics that it promoted.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Periodic disclosure for financial products referred to in Article 9, paragraphs 1 to 4a, of Regulation (EU) 2019/2088 and Article 5, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

Product name: DWS Invest Corporate Green Bonds

Legal entity identifier: 549300WYDG1U2NN4WJ19

Sustainable investment objective

Did this financial product have a sustainable investment objective?

X Yes	No
X it made **sustainable investments with an environmental objective:** 92.33%	It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of ___% of sustainable investments.
in economic activities that qualify as environmentally sustainable under the EU Taxonomy	with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
X in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
	with a social objective
It made **sustainable investments with a social objective:** ___ %	It promoted E/S characteristics, but did **not make any sustainable investments**

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities.** That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Sustainability indicators measure how the sustainable objectives of this financial product are attained.

To what extent was the sustainable investment objective of this financial product met?

The sustainable investment objective of this sub-fund was to finance environmentally beneficial projects or activities.

The sub-fund invested at least 80% of its net assets in green bonds where the use of proceeds was limited to projects with environmental and/or climate benefits (use of proceeds bonds) which typically contributed
(i) to at least one of the Sustainable Development Goals of the United Nations (UN SDGs), such as clean water and sanitation, affordable and clean energy, industry, innovation and infrastructure, sustainable cities and communities, climate action and/or life on land and/or
(ii) to at least one other environmental objective such as climate change adaptation and/or climate change mitigation (as defined under the EU Taxonomy).

The sub-fund may have also invested in social bonds where the use of proceeds was targeted to projects with social benefits, but without a minimum commitment in terms of investment allocation at portfolio level.

Use of proceeds bonds were devoted to (re)finance projects or activities with positive environmental and/or social impacts. The decisive difference to conventional bonds was that the issuers of use of proceeds bonds invested the issue proceeds in environmentally and/or socially beneficial projects or activities, and hereby directly contributed to the sustainable objective of the sub-fund.

The sub-fund had not designated a reference benchmark for the purpose of attaining its sustainable investment objective.

No derivatives were used to attain the environmental or social characteristics promoted by the sub-fund.

How did the sustainability indicators perform?

The attainment of the sustainable investment objective was assessed via the application of an in-house assessment methodology and ESG specific exclusion thresholds as further described in the section “What actions have been taken to attain the sustainable investment objective during the reference period?”. The methodology applied different assessment approaches that were used as sustainability indicators which were:

• **Use of Proceeds Bond Assessment** used as an indicator for qualifying a bond as a use of proceeds bond that follows the Climate Bonds Standards, similar industry standards for green bonds, social bonds or sustainability bonds (such as ICMA Principles) or the EU Green Bond Standard or is subject to an independent review.
Performance: No investments in invalid assets, except the ones below

• **Norm Controversy Assessment** used as an indicator for a company’s exposure to norm-related issues towards international standards.
Performance: No investments in invalid assets, except the ones below

• **Exposure to controversial sectors** used as an indicator for a company’s involvement in controversial sectors.
Performance: No investments in invalid assets, except the ones below

• **Freedom House Status** used as an indicator for the political and civil liberties of a country.
Performance: No investments in invalid assets, except the ones below

• **Exposure to investments subject to the EU Paris-aligned Benchmark exclusion criteria** as set forth in article 12(1) of Commission Delegated Regulation 2020/1818 (PAB-Exclusions) as described below.
Performance: No investments in invalid assets, except the ones below

• **Sustainability Investment Assessment** used as an indicator to measure the proportion of sustainable investments pursuant to article 2(17) of the regulation on sustainability-related disclosures in the financial services sector (SFDR).
Performance: 92.33 %

Please note: The ESG-specific exclusion criteria were not met due to an investment of 0.44% in ELECTRICITE DE FRANCE SA - FR001400QR88 on 25 April 2025. Reason therefore was a guideline change. On 12 June 2025, ELECTRICITE DE FRANCE SA - FR001400QR88 was sold.

Please see the section entitled “What actions were taken to meet the environmental and/or social characteristics during the reference period?” for a description of the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted, including the exclusion criteria, and the assessment methodology for determining whether and to what extent assets met the defined environmental and/or social characteristics (including the turnover thresholds defined for the exclusions). This section contains further information on the sustainability indicators.
The values from the DWS front office system are used to calculate the sustainability indicators. This means that there may be minor deviations from the other market values that appear in the annual report, which are derived from the fund accounting system

…and compared to previous periods?

Attainment of the promoted environmental and social characteristics at portfolio level was measured in the previous years on the basis of the following sustainability indicators:

DWS Invest Corporate Green Bonds

Indicators	Description	30.12.2024	29.12.2023
• **DWS Use of Proceeds Bond Assessment** was used as indicator for qualifying a bond as use of proceeds bond that followed recognized industry standards and to check whether the issuer met defined ESG criteria. This assessment comprised:			
1. Check for compliance with the ICMA Principles for green bonds, social bonds or sustainability bonds.		No investments in invalid assets	No investments in invalid assets
2. Exclusion of:			
- Companies and sovereign issuers with the worst DWS ESG Quality Assessment score in the peer group comparison (i.e., a letter score of “F”);		No investments in invalid assets	No investments in invalid assets
- Sovereign issuers labelled as “not free” by Freedom House;		No investments in invalid assets	No investments in invalid assets
- Companies with the worst DWS Norm Assessment score (i.e., a letter score of “F”);		No investments in invalid assets	No investments in invalid assets
- Companies that are directly involved in one or more very severe, unresolved controversies related to the UN Global Compact;		No investments in invalid assets	No investments in invalid assets
- Companies with involvement in controversial weapons; or		No investments in invalid assets	No investments in invalid assets
- Companies with identified coal expansion plans.		No investments in invalid assets	No investments in invalid assets
• **DWS Methodology for determining sustainable investments pursuant to Article 2(17) SFDR (Sustainability Investment Assessment)** was used as indicator to measure the proportion of sustainable investments.		95.99 %	94.61%

The disclosure of the sustainability indicators has been revised compared with the prior-year report. The assessment methodology is unchanged. Additional information on the currently valid sustainability indicators is provided in the section entitled “What actions were taken to meet the environmental and/or social characteristics during the reference period?”

Information about taking into account the principal adverse impacts on sustainability factors is provided in the section entitled “How did this financial product consider principal adverse impacts on sustainability factors?”

DWS ESG-Assessment Scale

In the following assessment categories, the assets received one of six possible scores, with "A" being the best score and "F" being the worst score.

Criteria	Involvement in controversial sectors *(1)	Involvement in controversial weapons	Norm Assessment *(6)	ESG Quality Assessment	SDG- Assessment	Climat & Transition Risk Assessment
A	Non-involvement	Confirmed non-involvement	Confirmed no issues	True leader in ESG (>= 87.5 DWS ESG score)	True SDG contributor (>= 87.5 SDG score)	True climate leader (>= 87.5 score)
B	Remote involvement	Alleged	Violations of lesser degree	ESG leader (75-87.5 DWS ESG score)	SDG contributor (75-87.5 SDG score)	Climate solution provider(75-87.5 score)
C	0% - 5%	Dual-Purpose *(2)	Violations of lesser degree	ESG upper midfield (50-75 DWS ESG score)	SDG upper midfield (50-75 SDG score)	Low transition risk (50-75 score)
D	5% - 10% (coal: 5% - 10%	Owning *(3)/ Owned *(4)	Violation of lesser degree	ESG lower midfield (25-50 DWS ESG score)	SDG lower midfield (25-50 SDG score)	Mod. transition risk (25-50 score)
E	10% - 25% (coal: 15% - 25%)	Component Producer *(5)	High severity or re-assessed highest violation *(7)	ESG laggard (12.5-25 DWS ESG score)	SDG obstructer (12.5-25 SDG score)	High transition risk (12.5-25 score)
F	>= 25%	Weapon producer	Highest severity / global compact violation *(8)	True laggard in ESG (0-12.5 DWS ESG score)	Significant SDG obstructer (0-12.5 SDG score)	Excessive transition risk (0-12.5 score)

*(1) Revenue share thresholds as per standard scheme. Sub-Granularity available. Thresholds can be individually set.

*(2) Encompasses e.g.. weapon-carrying systems such as combat aircraft that carry non-controversial weapons as well as controversial ones.

*(3) Owning more than 20% equity.

*(4) Being owned by more than 50% of company involved in grade E or F.

*(5) Single purpose key component.

*(6) Includes ILO controversies as well as corporate governance and product issues.

*(7) In its ongoing assessment, DWS takes into account the violation(s) of international standards – observed via data from ESG data vendors – such as the UN Global Compact, but also possible ESG data vendor errors identified, future expected developments of these violations as well as the willingness of the issuer to engage in dialogue regarding corporate decisions in this regard.

*(8) An F-grade can be considered a reconfirmed violation of the United Nations Global Compact rule framework for corporate behavior.

How did the sustainable investments not cause significant harm to any sustainable investment objective?

The sustainable investments in which the sub-fund invests were assessed to ensure they did not cause significant harm to any environmental or social investment objective. This was achieved by taking into account the indicators for principal adverse impacts on sustainability factors
(dependent on relevance) as described below. If a significant harm was identified, the investment could not be considered sustainable.

How were the indicators for adverse impacts on sustainability factors taken into account?

The Sustainability Investment Assessment systematically integrated the mandatory principal adverse indicators on sustainability factors (dependent on relevance) from Table 1 and relevant indicators from Tables 2 and 3 of Annex I of the Commission Delegated Regulation (EU) 2022/1288 supplementing the SFDR. Taking into account these principal adverse impacts, DWS had established quantitative thresholds and/or qualitative values to assess a significant harm on any of the environmental or social sustainable investment objectives. These values were set based upon various external and internal factors, such as data availability or market developments and may have been adapted going forward. These values may have been set at issuer or use of proceeds bond level.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The alignment of sustainable investments with, amongst others, the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights was evaluated through the Norm Controversy Assessment (as further described below). Companies with the worst Norm Controversy Assessment of "F" were excluded as an investment.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti‑corruption and anti‑bribery matters.

How did this financial product consider principal adverse impacts on sustainability factors?

The sub-fund considered the mandatory principal adverse impacts on sustainability factors (dependent on relevance) from Table 1 and relevant indicators from Tables 2 and 3 of Annex I of the Commission Delegated Regulation EU 2022/1288 supplementing the SFDR in relation to the sustainable investments in the portfolio of the sub-fund.
Principal adverse impacts were considered as part of the DNSH assessment under article 2(17) SFDR as described above in section "How were the indicators for adverse impacts on sustainability factors taken into account?". The investment strategy did not apply a dedicated steering mechanism of the values of principal adverse impact indicators at overall portfolio level.

DWS Invest Corporate Green Bonds

Indicators	Description	Performance
Principal Adverse Impacts		
PAII - 01. GHG emissions	Sum of the current value of investments of company i, divided by the investee company's enterprise value and multiplied by company's cope 1+2+3 GHG emissions.	159.082.46 tCO2e
PAII - 02. Carbon Footprint - EUR	The carbon footprint is expressed as tonnes of CO2 emissions per million EUR invested. The CO2 emissions of an issuer are normalised by its enterprise value including cash (EVIC)	373.38 tCO2e / Million EUR
PAII - 03. Carbon Intensity	Weighted average carbon intensity scope 1+2+3	720.42 tCO2e / Million EUR
PAII - 04. Exposure to companies active in the fossil fuel sector	Share of investments in companies active in the fossil fuel sector	19.37 % of assets
PAII - 05. Share of non-renewable energy consumption and production	The company's energy consumption and/or production from non-renewable sources as a percentage of total energy use and/or generation	61.06 % of assets
PAII - 06. Energy consumption (GWh) per million EUR revenue	Energy consumption in GWh per million EUR of revenue of investee companies, per high impact climate sector	A: 0 GWh / €M Income B: 0 GWh / €M Income C: 1.12 GWh / €M Income D: 1.49 GWh / €M Income E: 0.66 GWh / €M Income F: 0.15 GWh / €M Income G: 0.53 GWh / €M Income H: 1.52 GWh / €M Income L: 0.89 GWh / €M Income NA: 0.05 GWh / €M Income
PAII - 07. Activities negatively affecting biodiversity sensitive areas	Share of investments in investee companies with sites/ operations located in or near to biodiversity-sensitive areas where activities of those investee companies negatively affect those areas	6.84 % of assets
PAII - 08. Emissions to water	Waste water discharged (metric tons) into surface waters as a result of industrial or manufacturing activities.	2.50 % of assets
PAII - 09. Hazardous waste ratio	Tonnes of hazardous waste and radioactive waste generated by investee companies per million EUR invested, expressed as a weighted average	0.98 % of assets
PAII - 10. Violations of UNGC principles and OECD Guidelines for Multinational Enterprises	Share of investments in investee companies that have been involved in violations of the UNGC principles or OECD Guidelines for Multinational Enterprises	0.00 % of assets
PAII - 11. Lack of processes and compliance mechanisms for UNGC principles and OECD Guidelines	Share of investments in investee companies without policies to monitor compliance with the UNGC principles or OECD Guidelines for Multinational Enterprises or grievance /complaints handling mechanisms to address violations of the UNGC principles or OECD Guidelines for Multinational Enterprises	0.57 % of assets
PAII - 12. Unadjusted gender pay gap	Average unadjusted gender pay gap of investee companies	12.95 % of assets
PAII - 13. Board gender diversity	Average ratio of female to male board members in investee companies, expressed as a percentage of all board members	41.42 % of assets
PAII - 14. Exposure to controversial weapons	Share of investments in investee companies involved in the manufacture or selling of controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)	0.00 % of assets
PAII - 15. GHG intensity	GHG intensity of investee countries	165.43 tCO2e / €M GDP
PAII - 16. Investee countries subject to social violations	Relative number of investee countries subject to social violations, as referred to in international treaties and conventions, United Nations principles and, where applicable, national law	0.00 % of assets

As of: December 31, 2025

The Principal Adverse Impact Indicators (PAIIs) are calculated on the basis of the data in the DWS back office and front office systems, which are primarily based on the data of external ESG data providers. If there is no data on individual PAIIs for individual securities or their issuers, either because no data is available or the PAII is not applicable to the particular issuer or security, these securities or issuers are not included in the calculation of the PAII. With target fund investments, a look-through of the target fund holdings is performed if appropriate data is available. The calculation method for the individual PAI indicators may change in subsequent reporting periods due to evolving market standards, a change in the treatment of securities of certain types of instruments (such as derivatives) or as a result of regulatory clarifications.
Moreover, improved data availability may have an effect on the reported PAIIs in subsequent reporting periods.
The values from the DWS front office system are used to calculate the PAIIs. This means that there may be minor deviations from the other market values that appear in the annual report, which are derived from the fund accounting system.

What were the top investments of this financial product?

DWS Invest Corporate Green Bonds

Largest investments	Breakdown by sector / issuer	in % of average portfolio volume	Breakdown by country
Telia Company 20/11.05.81	J-Information and communication	1,2 %	Sweden

for the period from January 01, 2025, through December 31, 2025

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is:
for the period from January 01, 2025, through December 31, 2025

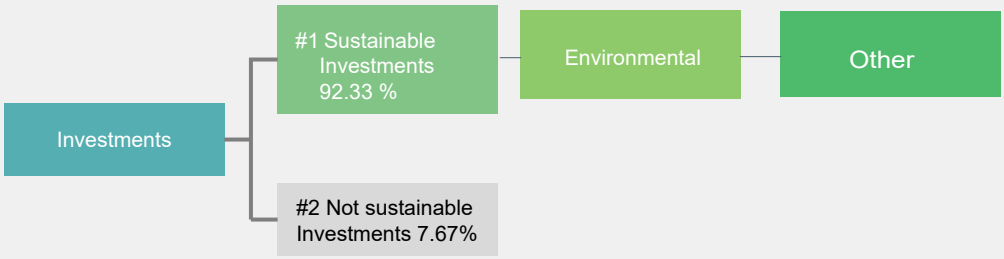
What was the proportion of sustainability-related investments?

Asset allocation describes the share of investments in specific assets.

The proportion of sustainability-related investments as of the reporting date was 92.33% of portfolio assets.
Proportion of sustainablility-related investments for the previous years:
30.12.2024: 95.99%
29.12.2023: 97.57%
30.12.2022: 91.50%

What was the asset allocation?

This sub-fund invested 92.33% of its net assets in sustainable investments (#1 Sustainable). Thereof the share of sustainable investments with an environmental objective that was not compliant with the EU Taxonomy was 92.33% of the net assets of the sub-fund.
7.67% of the net assets of the sub-fund were invested in investments that did not qualify as sustainable investments (#2 Not sustainable) as further detailed in the section “What investments were included under “not sustainable”, what was their purpose and were there any minimum environmental or social safeguards?".
A more detailed description of the specific asset allocation of this sub-fund can be found in the Special Section of the Sales Prospectus.



#1 Sustainable covers sustainable investments with environmental or social objectives.
#2 Not sustainable includes investments which do not qualify as sustainable investments.

In which economic sectors were the investments made?

DWS Invest Corporate Green Bonds

NACE - Code	Breakdown by sector according to NACE Codes	in % of portfolio volume
C	Manufacturing	6.8 %
D	Electricity, gas, steam and air conditioning supply	10.2 %
F	Construction	2.0 %
H	Transporting and storage	1.7 %
J	Information and communication	2.0 %
K	Financial and insurance activities	47.0 %
L	Real estate activities	2.4 %
M	Professional, scientific and technical activities	15.3 %
O	Public administration and defence; compulsory social security	0.6 %
NA	Other	12.0 %
Exposure to companies active in the fossil fuel sector		19.4 %

As of: December 31,2025

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The sub-fund did not commit to invest a minimum proportion of sustainable investments with an environmental objective aligned with the EU Taxonomy. Therefore, the percentage of environmentally sustainable investments aligned with the EU Taxonomy was 0% of the sub-fund's net assets. However, certain investments' underlying economic activities may have been aligned with the EU Taxonomy.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities Directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities Are economic activities for yet low-carbon alternatives are not yet available and that have greenhouse gas emission levels corresponding to the best performance.

Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy[1]?

☐ Yes:

☐ In fossil gas ☐ In nuclear energy

X No

The sub-fund did not take into account the taxonomy-conformity of investments in the fossil gas and/or nuclear energy sectors.

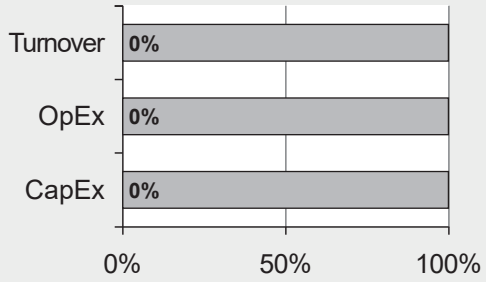
---

[1] Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do no significant harm to any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Taxonomy-aligned activities are expressed as a share of:
- turnover reflecting the share of revenue from green activities of investee companies.
- capital expenditure (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- operational expenditure (OpEx) reflecting the green operational activities of investee companies.

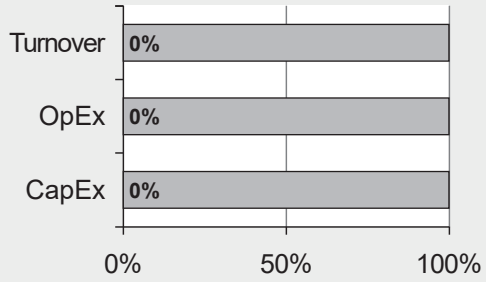
The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy-alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy-alignment only in relation to the investments of the financial product other than sovereign bonds.

1. Taxonomy-alignment of investments **including sovereign bonds***



Taxonomy-aligned: Fossil gas	0.00%
Taxonomy-aligned: Nuclear	0.00%
Taxonomy-aligned (no gas and nuclear)	0.00%
Taxonomy-aligned	0.00%
Non Taxonomy-aligned	100.00%

2. Taxonomy-alignment of investments **excluding sovereign bonds***



Taxonomy-aligned: Fossil gas	0.00%
Taxonomy-aligned: Nuclear	0.00%
Taxonomy-aligned (no gas and nuclear)	0.00%
Taxonomy-aligned	0.00%
Non Taxonomy-aligned	100.00%

This graph represents 100% of the total investments.

**For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures*

What was the share of investments made in transitional and enabling activities?

The sub-fund was not committed to a minimum share of investments in transitional or enabling activities.

How did the percentage of investments that are aligned with the EU Taxonomy compare with previous reference periods?

The promoted proportion of environmentally sustainable investments in accordance with Regulation (EU) 2020/852 (Taxonomy Regulation) was 0% of the fund's assets in the current as well as previous reference periods. It may, however, have been the case that some sustainable investments were nevertheless aligned with an environmental objective of the Taxonomy Regulation.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

What was the share of sustainable investments with an environmental objective that were not aligned with the EU Taxonomy?

The Sub-Fund invested 92.33% of its net assets in environmentally sustainable investments that did not comply with compliant with the EU taxonomy.

The shares of previous years were:
30.12.2024: 95.99%
29.12.2023: 82.59%
30.12.2022: 90.98%.

What was the share of socially sustainable investments?

The sub-fund did not commit to a minimum share of sustainable investments with a social objective.

What investments were included under “not sustainable”, what was their purpose and were there any minimum environmental or social safeguards?

92.33% of the sub-fund’s net assets were aligned with the sustainable investment objective. 7.67% of the sub-fund’s net assets were invested in assets that re not considered sustainable (#2 Not sustainable). These assets we could have included all asset classes as foreseen in the specific investment policy and were used by the portfolio management for liquidity and/or hedging purposes. The proportion and use of assets that were not considered sustainable did not affect the delivery of the sustainable investment objective, as these investments were neutral to such objective.

Minimum environmental or social safeguards, including amongst others the PAB-Exclusions, were at least considered for relevant investments in the context of liquidity management such as for money market funds. The PAB-Exclusions were, in particular, not applied for sight deposits with credit institutions and certain derivative instruments.

What actions have been taken to attain the sustainable investment objective during the reference period?

This sub-fund pursued a strategy based on bonds as main investment strategy. The sub- fund's assets were predominantly invested in interest-bearing debt securities issued by public, private and semi-private issuers worldwide. At least 80% of the sub-fund's assets should be invested globally in interest-bearing debt securities denominated in Euro or hedged against the Euro that had an investment grade status at the time of the acquisition. A maximum of 20% of the sub-fund's assets could be invested into interest-bearing debt securities denominated in Euro or hedged against the Euro with a non-investment grade status with a minimum credit rating of B3 (rated by Moody's) or B- (rated by S&P and Fitch) at time of acquisition. Further details regarding the main investment strategy are specified in the Special Section of the Sales Prospectus.

92.33% of the sub-fund's net assets were allocated to investments that met the sustainable investment objective as described in the following sections. The alignment of the portfolio with the binding elements of the investment strategy used to attain the sustainable investment objective as well as the PAB-Exclusions was continuously controlled via the sub-fund's investment guidelines monitoring.

The sub-fund aimed to achieve its sustainable investment objective by assessing potential assets via an in-house ESG assessment methodology that was based on a proprietary software tool which sourced data from one or several ESG data providers, public sources and/or internal assessments to derive overall assessments. The methodology applied to derive such overall assessments could be based on different methods, such as prioritizing one data vendor, worst-of or averaging approach. Internal assessments may have taken into account factors such as an issuer's future expected ESG developments, plausibility of data with regard to past or future events, the willingness to engage in dialogue on ESG matters and/or ESG-related decisions of a company. Further, internal ESG assessments for investee companies may have considered the relevance of the exclusion criteria for the market sector of the investee company.

The proprietary software tool used, amongst others, the approaches described below to assess use of proceed bonds and the ESG quality of an issuer including, for example, exclusions related to revenues generated from controversial sectors or the exposure to such controversial sectors. In some of the assessment approaches, issuers received one of six possible assessments, with "A" representing the best and "F" the worst assessment. If an issuer was excluded based on one assessment approach, the sub-fund was prohibited from investing in that issuer.

Depending on the investable universe, the portfolio allocation and the exposure to certain sectors, the assessment approaches described below may have been more or less relevant which was reflected in the number of issuers being actually excluded.

Use of Proceeds Bond Assessment
The use of proceeds bonds financing environmentally and/or socially beneficial projects was assessed in a two-stage process.

1. In a first stage, use of proceeds bonds were checked for compliance with the Climate Bonds Standards, similar industry standards for green bonds, social bonds or sustainability bonds (such as ICMA Principles) or the EU Green Bond Standard or whether bonds have been subject to an independent review. These standards focused, for example on the use of proceeds, the selection of the projects financed by these proceeds and the proceeds impact. Further, where sufficient data was available, use of proceeds bonds were checked for compliance with the below described PAB-Exclusions (except for c.) at the level of projects or activities financed by such use of proceeds bonds.

2. In a second stage, and if a bond complied with the requirements described for the first stage, the ESG quality of the issuer was assessed in relation to defined minimum standards in respect to environmental and social factors with the following assessment approaches:

• PAB-Exclusions
The sub-fund excluded all of the following companies:

a. companies involved in controversial weapons (manufacturing or selling of anti-personnel mines, cluster munitions, chemical weapons and biological weapons) as assessed as part of the assessment of the "Exposure to controversial weapons" described below;
b. companies involved in the cultivation and production of tobacco;
c. companies that were found in violation of the United Nations Global Compact principles or the OECD Guidelines for Multinational Enterprises (assessed as part of the "Norm Controversy Assessment" as described below).

Where no sufficient data was available for the evaluation of the PAB-Exclusions at use of proceeds bond level, the issuer was in addition evaluated and excluded based on the following:

d. companies that derived 1% or more of their revenues from exploration, mining, extraction, distribution or refining of hard coal and lignite;
e. companies that derived 10% or more of their revenues from the exploration, extraction, distribution or refining of oil fuels;
f. companies that derived 50% or more of their revenues from the exploration, extraction, manufacturing or distribution of gaseous fuels;
g. companies that derived 50% or more of their revenues from electricity generation with a GHG intensity of more than 100 g CO2 e/kWh.

Green bonds identified as issued under the EU Green Bond Standards were least assessed for the PAB-Exclusions a) to c) on issuer level.

• Norm Controversy Assessment
The Norm Controversy Assessment evaluated the behaviour of companies in relation to generally accepted international standards and principles of responsible business conduct within, amongst others, the framework of the principles of the United Nations Global Compact, the United Nations Guiding Principles, the standards of the International Labour Organization and the OECD Guidelines for Multinational Enterprises. Examples of topics covered within these standards and principles included, but were not limited to, human rights violations, violations of workers' rights, child or forced labour, negative environmental impacts and business ethics. The Norm Controversy Assessment evaluated reported violations of the aforementioned international standards. Companies with the worst Norm Controversy Assessment of “F” were excluded as an investment.

• Exposure to controversial sectors
Companies that were involved in certain business areas and business activities in controversial areas (“controversial sectors”) were excluded according to their share of total revenues generated in such controversial sectors as follows:

a. companies that derived more than 0% of their revenues from unconventional extraction of crude oil and/or natural gas (including oil sand, oil shale/shale gas, arctic drilling);
b. companies that derived 5% or more of their revenues from nuclear power generation and/or uranium mining and/or uranium enrichment;
c. Companies with thermal coal expansion plans, such as additional coal mining, coal production or coal usage. Companies with thermal coal expansion plans were excluded based on an internal identification methodology.

• Freedom House Status
Freedom House is an international non-governmental organization that classifies countries by their degree of political and civil liberties. Based on the Freedom House Status, countries that were classified as "not free" were excluded as an investment.

• Exposure to controversial weapons
Companies were excluded if they were identified as being involved in the manufacturing or selling of controversial weapons or key components of controversial weapons or other related specific activities (anti-personnel mines, cluster munitions, chemical and biological weapons, blinding laser weapons, weapons with non-detectable fragments, depleted uranium weapons/munitions and/or incendiary weapons using white phosphorus). In addition, the shareholdings within a group structure may have been taken into consideration for the exclusions.

Sustainability Investment Assessment
Further, DWS measured the bonds via its Sustainability Investment Assessment which evaluated potential investments in relation to different criteria to determine whether an investment could have been considered as sustainable. The Sustainability Investment Assessment was based on data from one or several data providers, public sources and/or internal assessments.

DWS determined whether the bond made a positive contribution to a sustainable investment objective as described above. Where a positive contribution was determined, the investment was considered sustainable if no significant harm was identified and the company followed good governance practices.

The share of sustainable investments in the portfolio as defined in article 2(17) SFDR was calculated based on the value of the entire use of proceeds bonds that were considered as sustainable investments.

The assessment of the good governance practices of the investee companies (including assessments related to sound management structures, employee relations, remuneration of staff and tax compliance) was part of the Norm Controversy Assessment which evaluated a company's behavior within generally accepted international standards and principles of responsible business conduct. Companies with the worst Norm Controversy Assessment of "F" were excluded as an investment.

How did this financial product perform compared to the reference sustainable benchmark?

This sub-fund has not designated a reference benchmark to meet the sustainable investment objective.

Reference benchmarks are indexes to measure whether the financial product attains the sustainable investment objectives.

Periodic disclosure for financial products referred to in Article 8, paragraph 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

Product name: DWS Invest Corporate Hybrid Bonds

Legal entity identifier: 549300TC4X3ECLFVCW74

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

Yes	No
☐ it made **sustainable investments with an environmental objective:** ___%	☒ It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of 36.57% of sustainable investments.
☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy	☐ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
	☒ with a social objective
☐ It made **sustainable investments with a social objective:** ___%	☐ It promoted E/S characteristics, but did **not make any sustainable investments**

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities.** That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

To what extent were the environmental and/or social characteristics promoted by this financial product met?

This sub-fund promoted environmental and social characteristics related to a general consideration of ESG criteria by excluding, for example, investments in companies with the worst norm-related issues towards international standards and/or investments in companies whose involvement in controversial sectors exceeded predefined revenue thresholds.

Further, this sub-fund promoted a proportion of sustainable investments in accordance with article 2(17) of the regulation on sustainability-related disclosures in the financial services sector (SFDR).

This sub-fund had not designated a reference benchmark for the purpose of attaining the environmental and social characteristics promoted.

No derivatives were used to attain the environmental or social characteristics promoted by the sub-fund.

How did the sustainability indicators perform?

The attainment of the promoted environmental and social characteristics as well as the sustainable investment was assessed via the application of an in-house ESG assessment methodology and ESG specific exclusion thresholds as further described in the section "What actions have been taken to meet the environmental and/or social characteristics during the reference period?". The methodology applied different assessment approaches that were used as sustainability indicators which were:

• **Norm Controversy Assessment** used as an indicator for a company's exposure to norm-related issues towards international standards.
Performance: No investments in suboptimal assets

• **Freedom House Status** used as an indicator for the political and civil liberties of a country.
Performance: No investments in suboptimal assets

• **Exposure to controversial sectors** used as an indicator for a company's involvement in controversial sectors.
Performance: 0%

• **Exposure to controversial weapons** used as an indicator for a company's involvement in controversial weapons.
Performance: 0%

• **Sustainability Investment Assessment** used as an indicator to measure the proportion of sustainable investments pursuant to article 2(17) SFDR.
Performance: 36.57%

Please see the section entitled “What actions have been taken to meet the environmental and/or social characteristics during the reference period?” for a description of the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted, including the exclusion criteria, and the assessment methodology for determining whether and to what extent assets met the defined environmental and/or social characteristics (including the turnover thresholds defined for the xclusions). This section contains further information on the sustainability indicators. The values from the DWS front office system are used to calculate the sustainability indicators. This means that there may be minor deviations from the other market values that appear in the annual report, which are derived from the fund accounting system.

…and compared to previous periods?

Attainment of the promoted environmental and social characteristics at portfolio level was measured in the previous years on the basis of the following sustainability indicators:

DWS Invest Corporate Hybrid Bonds

Indicators Performance	30/12/2024	29/12/2023	30/12/2022

The disclosure of the sustainability indicators has been revised compared with the prior-year report. The assessment methodology is unchanged. Additional information on the currently valid sustainability indicators is provided in the section entitled “What actions have been taken to meet the environmental and/or social characteristics during the reference period?”.
Information about taking into account the principal adverse impacts on sustainability factors is provided in the section entitled “How did this financial product consider principal adverse impacts on sustainability factors?”

DWS ESG-Assessment Scale

In the following assessment categories, the assets received one of six possible scores, with "A" being the best score and "F" being the worst score.

Criteria	Involvement in controversial sectors *(1)	Involvement in controversial weapons	Norm Assessment *(6)	ESG Quality Assessment	SDG- Assessment	Climat & Transition Risk Assessment
A	Non-involvement	Confirmed non-involvement	Confirmed no issues	True leader in ESG (>= 87.5 DWS ESG score)	True SDG contributor (>= 87.5 SDG score)	True climate leader (>= 87.5 score)
B	Remote involvement	Alleged	Violations of lesser degree	ESG leader (75-87.5 DWS ESG score)	SDG contributor (75-87.5 SDG score)	Climate solution provider(75-87.5 score)
C	0% - 5%	Dual-Purpose *(2)	Violations of lesser degree	ESG upper midfield (50-75 DWS ESG score)	SDG upper midfield (50-75 SDG score)	Low transition risk (50-75 score)
D	5% - 10% (coal: 5% - 10%)	Owning *(3)/ Owned *(4)	Violation of lesser degree	ESG lower midfield (25-50 DWS ESG score)	SDG lower midfield (25-50 SDG score)	Mod. transition risk (25-50 score)
E	10% - 25% (coal: 15% - 25%)	Component Producer *(5)	High severity or re-assessed highest violation *(7)	ESG laggard (12.5-25 DWS ESG score)	SDG obstructer (12.5-25 SDG score)	High transition risk (12.5-25 score)
F	>= 25%	Weapon producer	Highest severity / global compact violation *(8)	True laggard in ESG (0-12.5 DWS ESG score)	Significant SDG obstructer (0-12.5 SDG score)	Excessive transition risk (0-12.5 score)

*(1) Revenue share thresholds as per standard scheme. Sub-Granularity available. Thresholds can be individually set.

*(2) Encompasses e.g.. weapon-carrying systems such as combat aircraft that carry non-controversial weapons as well as controversial ones.

*(3) Owning more than 20% equity.

*(4) Being owned by more than 50% of company involved in grade E or F.

*(5) Single purpose key component.

*(6) Includes ILO controversies as well as corporate governance and product issues.

*(7) In its ongoing assessment, DWS takes into account the violation(s) of international standards – observed via data from ESG data vendors – such as the UN Global Compact, but also possible ESG data vendor errors identified, future expected developments of these violations as well as the willingness of the issuer to engage in dialogue regarding corporate decisions in this regard.

*(8) An F-grade can be considered a reconfirmed violation of the United Nations Global Compact rule framework for corporate behavior.

What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?

Sustainable investments contributed to at least one of the Sustainable Development Goals of the United Nations (UN SDGs) that relate to environmental and/or social objectives, such as good health and well-being or climate action and/or to at least one other environmental objective such as climate change adaption or climate change mitigation (as defined under the EU Taxonomy).

The extent of the contribution to individual sustainable investment objectives varied depending on the actual investments held in the portfolio.

DWS determind the contribution to a sustainable investment objective based on its Sustainability Investment Assessment which used data from one or several data providers, public sources and/or internal assessments. An investment's positive contribution to an environmental and/or social objective was assessed based on the revenues which a company generated from the actual economic activities making such contribution (activity-based approach). Where a positive contribution was determined, the investment was considered sustainable if the issuer passed the Do No significant Harm ("DNSH") assessment and the company followed good governance practices.

The share of sustainable investments in the portfolio as defined in article 2(17) SFDR was therefore calculated in proportion to the economic activities of the issuers that were considered as sustainable (activity-based approach). Notwithstanding the preceding, in the case of use-of-proceeds bonds that were considered as sustainable investment, the value of the entire bond was counted towards the portfolio's share of sustainable investments.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

The sustainable investments in which the sub-fund invested were assessed to ensure they did not cause significant harm to any environmental or social sustainable investment objective. This was achieved by taking into account the indicators for principal adverse impacts on sustainability factors (dependent on relevance) as described below. If a significant harm was identified, the investment could not have been considered sustainable.

How were the indicators for adverse impacts on sustainability factors taken into account?

The Sustainability Investment Assessment systematically integrated the mandatory principal adverse indicators on sustainability factors (dependent on relevance) from Table 1 and relevant indicators from Tables 2 and 3 of Annex I of the Commission Delegated Regulation (EU) 2022/1288 supplementing the SFDR. Taking into account these principal adverse impacts, DWS had established quantitative thresholds and/or qualitative values to assess a significant harm on any of the environmental or social sustainable investment objectives. These values were set based upon various external and internal factors, such as data availability or market developments and may have been adapted going forward.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The alignment of sustainable investments with, amongst others, the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights was evaluated through the Norm Controversy Assessment (as further described below). Companies with the worst Norm Controversy Assessment of “F” were excluded as an investment.

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union Criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU Criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU Criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

How did this financial product consider principal adverse impacts on sustainability factors?

The sub-fund considered the following principal adverse impacts on sustainability factors from Annex I of the Commission Delegated Regulation (EU) 2022/1288 supplementing the SFDR:

• Exposure to companies active in the fossil fue sector (no. 4);

• iolations of the United Nations Global Compact principles and OECD Guidelines for Multinational Enterprises (no. 10); and

• Exposure to controversial weapons (no. 14)

DWS Invest Corporate Hybrid Bonds

Indicators	Description	Performance
Principal Adverse Impact		
PAII - 04. Exposure to companies active in the fossil fuel sector	Share of investments in companies active in the fossil fuel sector	58.98 % of assets
PAII - 10. Violations of UNGC principles and OECD Guidelines for Multinational Enterprises	Share of investments in investee companies that have been involved in violations of the UNGC principles or OECD Guidelines for Multinational Enterprises	0 % of assets
PAII - 14. Exposure to controversial weapons	Share of investments in investee companies involved in the manufacture or selling of controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)	0 % of assets

As of: December 30, 2025

The Principal Adverse Impact Indicators (PAIIs) are calculated on the basis of the data in the DWS back office and front office systems, which are primarily based on the data of external ESG data providers. If there is no data on individual PAIIs for individual securities or their issuers, either because no data is available or the PAII is not applicable to the particular issuer or security, these securities or issuers are not included in the calculation of the PAII. With target fund investments, a look-through of the target fund holdings is performed if appropriate data is available. The calculation method for the individual PAI indicators may change in subsequent reporting periods due to evolving market standards, a change in the treatment of securities of certain types of instruments (such as derivatives) or as a result of regulatory clarifications.
Moreover, improved data availability may have an effect on the reported PAIIs in subsequent reporting periods.
The values from the DWS front office system are used to calculate the PAIIs. This means that there may be minor deviations from the other market values that appear in the annual report, which are derived from the fund accounting system.

What were the top investments of this financial product?

DWS Invest Corporate Hybrid Bonds

Largest investments	Breakdown by sector according to NACE Codes	in % of average portfolio volume	Breakdown by country
Southern 21/15.09.81	D - Electricity, gas, steam and air conditioning supply	3.1 %	United States

for the period from January 01, 2025, through December 30, 2025

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is:
for the period from January 01, 2025, through December 31, 2025

What was the proportion of sustainability-related investments?

The proportion of sustainability-related investments as of the reporting date was 98.77% of portfolio assets.
Proportion of sustainability-related investments for the previous years:
30/12/2024: 94.85%
29/12/2023: 89.83%
30/12/2022: 95.73%

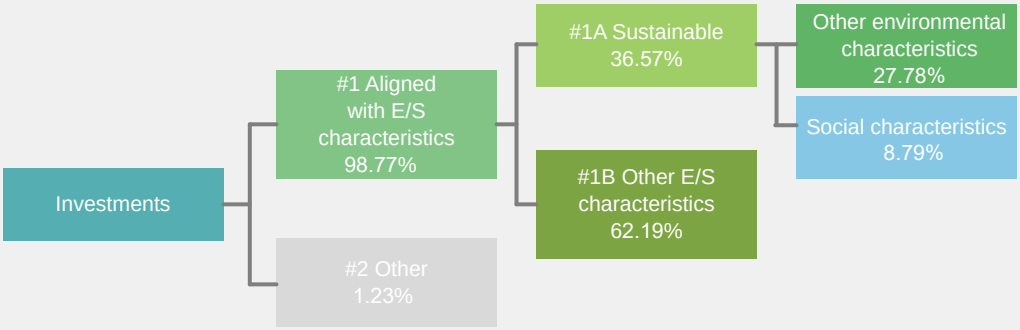
Asset allocation describes the share of investments in specific assets.

What was the asset allocation?

This sub-fund invested 98.77% of its net assets in investments that were aligned with the promoted environmental and social characteristics (#1 Aligned with E/S characteristics). Within this category, 36.57% of the sub-fund's net assets qualified as sustainable investments (#1A Sustainable). Thereof the share of sustainable investments with an environmental objective that was not compliant with the EU Taxonomy was 27.78% of the sub-fund's net assets and the share of socially sustainable investments was 8.79% of the sub-fund's net assets. The share of sustainable investments with an environmental objective that was not compliant with the EU Taxonomy and of socially sustainable investments depended on the market situation and the investable investment universe.

1.23% of the sub-fund's net assets have been invested in assets which were either out-of-scope of the ESG assessment methodology or for which ESG data coverage was incomplete (#2 Other) as further detailed in the section "What investments were included under "#2 Other", what was their purpose and were there any minimum environmental or social safeguards?".

A more detailed description of the specific asset allocation of this sub-fund can be found in the Special Section of the Sales Prospectus.



#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:
- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

In which economic sectors were the investments made?

DWS Invest Corporate Hybrid Bonds

NACE-Code	Breakdown by sector according to NACE Codes	in % of portfolio volume
B	Mining and quarrying	2.3 %
C	Manufacturing	6.7 %
D	Electricity, gas, steam and air conditioning supply	21.9 %
E	Water supply; sewerage; waste managment and remediation activities	0.4 %
F	Construction	1.0 %
G	Wholesale and retail trade; repair of motor vehicles and motorcycles	1.5 %
H	Transporting and storage	1.5 %
J	Information and communication	10.1 %
K	Financial and insurance activities	19.5 %
L	Real estate activities	0.7 %
M	Professional, scientific and technical activities	28.1 %
N	Administrative and support service activities	0.5 %
NA	Other	5.8 %
Exposure to companies active in the fossil fuel sector		59.0 %

As of: December 30, 2025

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The sub-fund did not commit to invest a proportion of sustainable investments with an environmental objective aligned with the EU Taxonomy. Therefore, the promoted minimum percentage of environmentally sustainable investments aligned with the EU Taxonomy was 0% of the sub-fund's net assets. However, certain investments' underlying economic activities may have been aligned with the EU Taxonomy.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are economic activities for yet low-carbon alternatives are not yet available and that have greenhouse gas emission levels corresponding to the best performance.

Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy[1]?

☐ Yes:

☐ In fossil gas ☐ In nuclear energy

☒ No

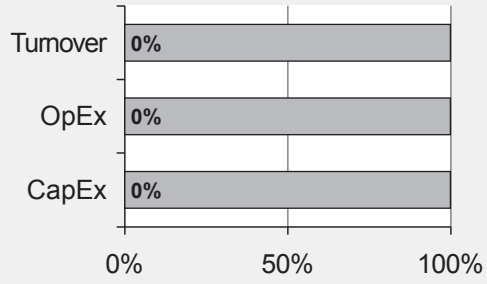
The sub-fund did not take into account the Taxonomy-alignment of companies active in the fossil gas and/or nuclear energy sectors.

[1] Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do no significant harm to any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Taxonomy-aligned activities are expressed as a share of:
- turnover reflecting the share of revenue from green activities of investee companies.
- capital expenditure (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- operational expenditure (OpEx) reflecting the green operational activities of investee companies.

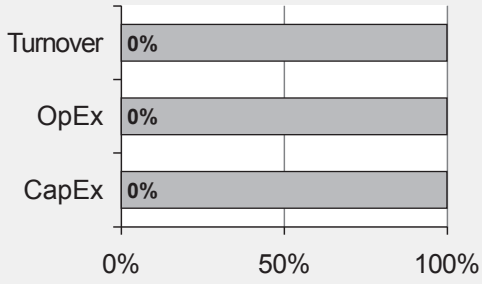
The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy-alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy-alignment only in relation to the investments of the financial product other than sovereign bonds.

1. Taxonomy-alignment of investments **including sovereign bonds***



Taxonomy-aligned: Fossil gas	0.00%
Taxonomy-aligned: Nuclear	0.00%
Taxonomy-aligned (no gas and nuclear)	0.00%
Taxonomy-aligned	0.00%
Non Taxonomy-aligned	100.00%

2. Taxonomy-alignment of investments **excluding sovereign bonds***



Taxonomy-aligned: Fossil gas	0.00%
Taxonomy-aligned: Nuclear	0.00%
Taxonomy-aligned (no gas and nuclear)	0.00%
Taxonomy-aligned	0.00%
Non Taxonomy-aligned	100.00%

This graph represents 100% of the total investments.

**For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures*

What was the share of investments made in transitional and enabling activities?

The sub-fund was not committed to a share of investments in transitional or enabling activities.

How did the percentage of investments that are aligned with the EU Taxonomy compare with previous reference periods?

The promoted proportion of environmentally sustainable investments in accordance with Regulation (EU) 2020/852 (Taxonomy Regulation) was 0% of the fund's assets in the current as well as previous reference periods. It may, however, have been the case that some sustainable investments were nevertheless aligned with an environmental objective of the Taxonomy Regulation.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the Regulation (EU) 2020/852.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The share of sustainable investments with an environmental objective that were not aligned with the EU Taxonomy was 27.78% of the sub-fund's net assets.

Shares of sustainable investments in previous reporting periods:

reporting period	sustainable investments (total)	with environmental objective	socially sustainable
30/12/2024	31.10%	28.12%	2.98%
29/12/2023	29.80%	27.12%	2.68%
30/12/2022	20.69%	--	--

What was the share of socially sustainable investments?

The share of socially sustainable investments was 8.79% of the sub-fund’s net

assets. Shares of sustainable investments in previous reporting periods:

reporting period	sustainable investments (total)	with environmental objective	socially sustainable
30/12/2024	31.10%	28.12%	2.98%
29/12/2023	29.80%	27.12%	2.68%
30/12/2022	20.69%	--	--

What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?

98.77% of the sub-fund’s net assets were aligned with the promoted environmental and social characteristics (#1 Aligned with E/S characteristics). 1.23% of the sub-fund’s net assets have been invested in assets which were either out-of-scope of the ESG assessment methodology or for which ESG data coverage was incomplete (#2 Other). Full ESG data coverage was required for the assessment of direct investments in companies in relation to good governance practices.

Assets under “#2 Other” could include all asset classes as foreseen in the specific investment policy, such as sight deposits with credit institutions and derivatives. These assets could have been used by the portfolio management for performance, risk diversification, liquidity and hedging purposes.

Minimum environmental or social safeguards were not or only partially considered for the sub-fund’s investments falling within “#2 Other”.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

This sub-fund pursued a strategy based on bonds as main investment strategy. The sub-fund's assets were invested globally in interest-bearing securities, in convertible bonds, in warrant-linked bonds whose underlying warrants relate to securities, in participation and dividend-right certificates, in derivatives as well as in money market instruments and liquid assets. At least 50% of the sub-fund's assets should have been invested globally in hybrid bonds issued by corporate issuers. Up to 100% of the sub-fund's assets may have been invested in subordinated bonds.

Further details regarding the main investment strategy are specified in the Special Section of the Sales Prospectus.

98.77% of the sub-fund's net assets were allocated to investments that met the promoted environmental and social characteristics as described in the following sections. The alignment of the portfolio with the binding elements of the investment strategy used to attain the promoted environmental and social characteristics was continuously controlled via the sub-fund's investment guidelines monitoring.

ESG assessment methodology

The sub-fund aimed to achieve the promoted environmental and social characteristics by assessing potential assets via an in-house ESG assessment methodology, regardless of their economic prospects for success, and by applying exclusion criteria based on this assessment.

The ESG assessment methodology was using a proprietary software tool which sourced data from one or several ESG data providers, public sources and/or internal assessments to derive overall assessments. The methodology applied to derive such overall assessments could have been based on different methods, such as prioritizing one data vendor, worst-of or averaging approach. Internal assessments may take into account factors such as an issuer's future expected ESG developments, plausibility of data with regard to past or future events, the willingness to engage in dialogue on ESG matters and/or ESG-related decisions of a company. Further, internal ESG assessments for investee companies might have considered the relevance of the exclusion criteria for the market sector of the investee company.

The proprietary software tool used, amongst others, the approaches described below to evaluate the adherence to the promoted ESG characteristics and whether investee companies followed good governance practices. The assessment approaches included, for example, exclusions related to revenues generated from controversial sectors or the exposure to such controversial sectors. In some of the assessment approaches, issuers received one of six possible assessments, with "A" representing the best and "F" the worst assessment. If an issuer was excluded based on one assessment approach, the sub-fund was prohibited from investing in that issuer.

Depending on the investable universe, the portfolio allocation and the exposure to certain sectors, the assessment approaches described below had been more or less relevant which was reflected in the number of issuers actually excluded.

• Norm Controversy Assessment

The Norm Controversy Assessment evaluated the behaviour of companies in relation to generally accepted international standards and principles of responsible business conduct within, amongst others, the framework of the principles of the United Nations Global Compact, the United Nations Guiding Principles, the standards of the International Labour Organization and the OECD Guidelines for Multinational Enterprises. Examples of topics covered within these standards and principles included, but were not limited to, human rights violations, violations of workers' rights, child or forced labour, negative environmental impacts and business ethics. The Norm Controversy Assessment evaluated reported violations of the aforementioned international standards. Companies with the worst Norm Controversy Assessment of “F” were excluded as an investment.

• Freedom House Status

Freedom House is an international non-governmental organization that classifies countries by their degree of political and civil liberties. Based on the Freedom House Status, countries that were classified as “not free” were excluded as an investment.

• Exposure to controversial sectors

Companies that were involved in certain business areas and business activities in controversial areas ("controversial sectors") were excluded according to their share of total revenues generated in such controversial sectors as followed:

a. Manufacturing and/or distribution of civil handguns or ammunition: 5% or more
b. Manufacturing of tobacco products: 5% or more
c. Mining of oil sand: 5% or more
d. Companies that derived 25% or more from thermal coal mining and thermal coal-based power generation as well as companies with thermal coal expansion plans, such as additional expansion of coal mining, coal production or coal usage. Companies with thermal coal expansion plans were excluded based on an internal identification methodology. In the event of exceptional circumstances, such as measured imposed by a government to address challenges in the energy sector, the Management Company may decide to temporarily suspend the application of the coal-related exclusions to individual companies/geographical regions.

• Exposure to controversial weapons

Companies were excluded if they were identified as being involved in the manufacturing or selling of controversial weapons or key components of controversial weapons (anti-personnel mines, cluster munitions, and/or chemical and biological weapons). In addition, the shareholdings within a group structure might have been taken into consideration for the exclusions.

• Use-of-Proceeds Bond Assessment

This assessment was specific to the nature of this instrument and an investment in use-of-proceeds bonds was permitted only if the following criteria were met. Firstly, all use-of-proceeds bonds were checked for compliance with the Climate Bonds Standards, similar industry standards for green bonds, social bonds or sustainability bonds (such as ICMA Principles) or the EU Green Bond Standard or whether bonds had been subject to an independent review. Secondly, certain ESG criteria were applied in relation to the issuer of the bonds which could have led to the exclusion of issuers and their bonds as an investment.

In particular, investments in use-of-proceeds bonds were prohibited based on the following issuer criteria:
- Sovereign issuers classified as "not free" by Freedom House;
- Companies with the worst Norm Controversy Assessment of "F" as referred to above;
- Companies that manufactured tobacco products: 5% or more;
- Companies with involvement in controversial weapons as referred to above; or
- Companies with identified thermal coal expansion plans as referred to above.

• Target Fund Assessment

Target funds were evaluated in relation to the underlying companies and were eligible if these companies were aligned with the criteria of the Norm Controversy Assessment and the exposure to controversial weapons (anti-personnel mines, cluster munitions, and/or chemical weapons and biological weapons). Investment in companies with the worst Norm Controversy Assessment of "F" was permitted up to a determined threshold. Considering the tolerance threshold, diversity of data vendors and methodologies, the available data coverage as well as the target fund portfolio rebalancing, this sub-fund had been indirectly exposed to certain assets that would have been excluded if invested directly or for which data coverage was limited or not available.

Sustainability Investment Assessment

Further, for the proportion of sustainable investments, DWS measured the contribution to one or several UN SDGs and/or to other environmental sustainable objectives via its Sustainability Investment Assessment which evaluated potential investments in relation to different criteria to conclude whether an investment could have been considered as sustainable as further detailed in the section “What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?”.

The applied ESG investment strategy did not pursue a committed minimum reduction of the scope of the investments.

The assessment of the good governance practices of the investee companies (including assessments related to sound management structures, employee relations, remuneration of staff and tax compliance) was part of the Norm Controversy Assessment which evaluated a company’s behavior within generally accepted international standards and principles of responsible business conduct. Companies with the worst Norm Controversy Assessment of “F” were excluded as an investment.

How did this financial product perform compared to the reference sustainable benchmark?

This sub-fund had not designated a reference benchmark to determine whether it was aligned with the environmental and social characteristics that it promoted.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Periodic disclosure for financial products referred to in Article 8, paragraph 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

Product name: DWS Invest Credit Opportunities

Legal entity identifier: 5493000JDDVBZ8UZSN12

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

Yes	No
☐ it made **sustainable investments with an environmental objective:** ___%	☒ It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of 29.83% of sustainable investments.
☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy	☐ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
	☒ with a social objective
☐ It made **sustainable investments with a social objective:** ___%	☐ It promoted E/S characteristics, but did **not make any sustainable investments**

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities.** That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

To what extent were the environmental and/or social characteristics promoted by this financial product met?

This sub-fund promoted environmental and social characteristics related to a general consideration of ESG criteria by excluding, for example, investments in companies with the worst norm-related issues towards international standards and/or investments in companies whose involvement in controversial sectors exceeded predefined revenue thresholds.

Further, this sub-fund promoted a proportion of sustainable investments in accordance with article 2(17) of the regulation on sustainability-related disclosures in the financial services sector (SFDR).

This sub-fund had not designated a reference benchmark for the purpose of attaining the environmental and social characteristics promoted.

No derivatives were used to attain the environmental or social characteristics promoted by the sub-fund.

How did the sustainability indicators perform?

The attainment of the promoted environmental and social characteristics as well as the sustainable investment was assessed via the application of an in-house ESG assessment methodology and ESG specific exclusion thresholds as further described in the section "What actions have been taken to meet the environmental and/or social characteristics during the reference period?". The methodology applied different assessment approaches that were used as sustainability indicators which were:

• **Norm Controversy Assessment** used as an indicator for a company's exposure to norm-related issues towards international standards.
Performance: No investments in suboptimal assets

• **Freedom House Status** used as an indicator for the political and civil liberties of a country.
Performance: No investments in suboptimal assets

• **Exposure to controversial sectors** used as an indicator for a company's involvement in controversial sectors.
Performance: 0%

• **Exposure to controversial weapons** used as an indicator for a company's involvement in controversial weapons.
Performance: 0%

• **Sustainability Investment Assessment** used as an indicator to measure the proportion of sustainable investments pursuant to article 2(17) SFDR.
Performance: 29.83%

Please see the section entitled “What actions have been taken to meet the environmental and/or social characteristics during the reference period?” for a description of the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted, including the exclusion criteria, and the assessment methodology for determining whether and to what extent assets met the defined environmental and/or social characteristics (including the turnover thresholds defined for the xclusions). This section contains further information on the sustainability indicators. The values from the DWS front office system are used to calculate the sustainability indicators. This means that there may be minor deviations from the other market values that appear in the annual report, which are derived from the fund accounting system.

…and compared to previous periods?

Attainment of the promoted environmental and social characteristics at portfolio level was measured in the previous years on the basis of the following sustainability indicators:

The disclosure of the sustainability indicators has been revised compared with the prior-year report. The assessment methodology is unchanged. Additional information on the currently valid sustainability indicators is provided in the section entitled “What actions have been taken to meet the environmental and/or social characteristics during the reference period?”.
Information about taking into account the principal adverse impacts on sustainability factors is provided in the section entitled “How did this financial product consider principal adverse impacts on sustainability factors?”

DWS ESG-Assessment Scale

In the following assessment categories, the assets received one of six possible scores, with "A" being the best score and "F" being the worst score.

Criteria	Involvement in controversial sectors *(1)	Involvement in controversial weapons	Norm Assessment *(6)	ESG Quality Assessment	SDG- Assessment	Climat & Transition Risk Assessment
A	Non-involvement	Confirmed non-involvement	Confirmed no issues	True leader in ESG (>= 87.5 DWS ESG score)	True SDG contributor (>= 87.5 SDG score)	True climate leader (>= 87.5 score)
B	Remote involvement	Alleged	Violations of lesser degree	ESG leader (75-87.5 DWS ESG score)	SDG contributor (75-87.5 SDG score)	Climate solution provider(75-87.5 score)
C	0% - 5%	Dual-Purpose *(2)	Violations of lesser degree	ESG upper midfield (50-75 DWS ESG score)	SDG upper midfield (50-75 SDG score)	Low transition risk (50-75 score)
D	5% - 10% (coal: 5% - 10%)	Owning *(3)/ Owned *(4)	Violation of lesser degree	ESG lower midfield (25-50 DWS ESG score)	SDG lower midfield (25-50 SDG score)	Mod. transition risk (25-50 score)
E	10% - 25% (coal: 15% - 25%)	Component Producer *(5)	High severity or re-assessed highest violation *(7)	ESG laggard (12.5-25 DWS ESG score)	SDG obstructer (12.5-25 SDG score)	High transition risk (12.5-25 score)
F	>= 25%	Weapon producer	Highest severity / global compact violation *(8)	True laggard in ESG (0-12.5 DWS ESG score)	Significant SDG obstructer (0-12.5 SDG score)	Excessive transition risk (0-12.5 score)

*(1) Revenue share thresholds as per standard scheme. Sub-Granularity available. Thresholds can be individually set.

*(2) Encompasses e.g.. weapon-carrying systems such as combat aircraft that carry non-controversial weapons as well as controversial ones.

*(3) Owning more than 20% equity.

*(4) Being owned by more than 50% of company involved in grade E or F.

*(5) Single purpose key component.

*(6) Includes ILO controversies as well as corporate governance and product issues.

*(7) In its ongoing assessment, DWS takes into account the violation(s) of international standards – observed via data from ESG data vendors – such as the UN Global Compact, but also possible ESG data vendor errors identified, future expected developments of these violations as well as the willingness of the issuer to engage in dialogue regarding corporate decisions in this regard.

*(8) An F-grade can be considered a reconfirmed violation of the United Nations Global Compact rule framework for corporate behavior.

What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?

Sustainable investments contributed to at least one of the Sustainable Development Goals of the United Nations (UN SDGs) that relate to environmental and/or social objectives, such as good health and well-being or climate action and/or to at least one other environmental objective such as climate change adaption or climate change mitigation (as defined under the EU Taxonomy).

The extent of the contribution to individual sustainable investment objectives varied depending on the actual investments held in the portfolio.

DWS determind the contribution to a sustainable investment objective based on its Sustainability Investment Assessment which used data from one or several data providers, public sources and/or internal assessments. An investment's positive contribution to an environmental and/or social objective was assessed based on the revenues which a company generated from the actual economic activities making such contribution (activity-based approach). Where a positive contribution was determined, the investment was considered sustainable if the issuer passed the Do No significant Harm ("DNSH") assessment and the company followed good governance practices.

The share of sustainable investments in the portfolio as defined in article 2(17) SFDR was therefore calculated in proportion to the economic activities of the issuers that were considered as sustainable (activity-based approach). Notwithstanding the preceding, in the case of use-of-proceeds bonds that were considered as sustainable investment, the value of the entire bond was counted towards the portfolio's share of sustainable investments.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

The sustainable investments in which the sub-fund invested were assessed to ensure they did not cause significant harm to any environmental or social sustainable investment objective. This was achieved by taking into account the indicators for principal adverse impacts on sustainability factors (dependent on relevance) as described below. If a significant harm was identified, the investment could not have been considered sustainable.

How were the indicators for adverse impacts on sustainability factors taken into account?

The Sustainability Investment Assessment systematically integrated the mandatory principal adverse indicators on sustainability factors (dependent on relevance) from Table 1 and relevant indicators from Tables 2 and 3 of Annex I of the Commission Delegated Regulation (EU) 2022/1288 supplementing the SFDR. Taking into account these principal adverse impacts, DWS had established quantitative thresholds and/or qualitative values to assess a significant harm on any of the environmental or social sustainable investment objectives. These values were set based upon various external and internal factors, such as data availability or market developments and may have been adapted going forward.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The alignment of sustainable investments with, amongst others, the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights was evaluated through the Norm Controversy Assessment (as further described below). Companies with the worst Norm Controversy Assessment of “F” were excluded as an investment.

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union Criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU Criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU Criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

How did this financial product consider principal adverse impacts on sustainability factors?

The sub-fund considered the following principal adverse impacts on sustainability factors from Annex I of the Commission Delegated Regulation (EU) 2022/1288 supplementing the SFDR:

• Exposure to companies active in the fossil fuel sector (no. 4);

• Violations of the United Nations Global Compact principles and OECD Guidelines for Multinational Enterprises (no. 10); and

• Exposure to controversial weapons (no. 14).

DWS Invest Credit Opportunities

Indicators	Description	Performance
Principal Adverse Impact		
PAII - 04. Exposure to companies active in the fossil fuel sector	Share of investments in companies active in the fossil fuel sector	27.61 % of assets
PAII - 10. Violations of UNGC principles and OECD Guidelines for Multinational Enterprises	Share of investments in investee companies that have been involved in violations of the UNGC principles or OECD Guidelines for Multinational Enterprises	0 % of assets
PAII - 14. Exposure to controversial weapons	Share of investments in investee companies involved in the manufacture or selling of controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)	0 % of assets

As of: December 30, 2025

The Principal Adverse Impact Indicators (PAIIs) are calculated on the basis of the data in the DWS back office and front office systems, which are primarily based on the data of external ESG data providers. If there is no data on individual PAIIs for individual securities or their issuers, either because no data is available or the PAII is not applicable to the particular issuer or security, these securities or issuers are not included in the calculation of the PAII. With target fund investments, a look-through of the target fund holdings is performed if appropriate data is available. The calculation method for the individual PAI indicators may change in subsequent reporting periods due to evolving market standards, a change in the treatment of securities of certain types of instruments (such as derivatives) or as a result of regulatory clarifications.
Moreover, improved data availability may have an effect on the reported PAIIs in subsequent reporting periods.
The values from the DWS front office system are used to calculate the PAIIs. This means that there may be minor deviations from the other market values that appear in the annual report, which are derived from the fund accounting system.

What were the top investments of this financial product?

for the period from January 01, 2025, through December 30, 2025

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is:
for the period from January 01, 2025, through December 31, 2025

What was the proportion of sustainability-related investments?

The proportion of sustainability-related investments as of the reporting date was 88.06% of portfolio assets.
Proportion of sustainability-related investments for the previous years:

30/12/2024: 87.98 %
29/12/2023: 95.12 %
30/12/2022: 99.24 %

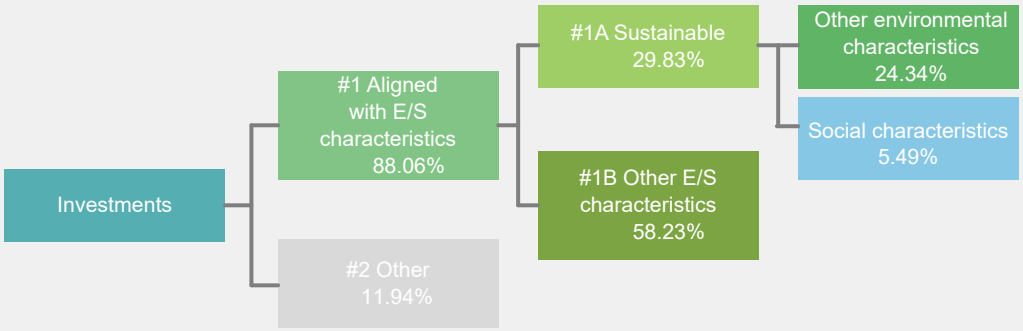
Asset allocation describes the share of investments in specific assets.

What was the asset allocation?

This sub-fund invested 88,06% of its net assets in investments that were aligned with the promoted environmental and social characteristics (#1 Aligned with E/S characteristics). Within this category, 29.83%of the sub-fund's net assets qualified as sustainable investments (#1A Sustainable). Thereof the share of sustainable investments with an environmental objective that was not compliant with the EU Taxonomy was 24.34% of the sub-fund's net assets and the share of socially sustainable investments was 5.49% of the sub-fund's net assets. The share of sustainable investments with an environmental objective that was not compliant with the EU Taxonomy and of socially sustainable investments depended on the market situation and the investable investment universe.

11.94% of the sub-fund's net assets have been invested in assets which were either out-of-scope of the ESG assessment methodology or for which ESG data coverage was incomplete (#2 Other) as further detailed in the section "What investments were included under "#2 Other", what was their purpose and were there any minimum environmental or social safeguards?".

A more detailed description of the specific asset allocation of this sub-fund can be found in the Special Section of the Sales Prospectus.



#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:
- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

In which economic sectors were the investments made?

DWS Invest Credit Opportunities

DWS Invest Credit Opportunities

NACE-Code	Breakdown by sector according to NACE Codes	in % of portfolio volume
NA	Other	19.4 %
Exposure to companies active in the fossil fuel sector		27.6 %

As of: December 30, 2025

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The sub-fund did not commit to invest a proportion of sustainable investments with an environmental objective aligned with the EU Taxonomy. Therefore, the promoted minimum percentage of environmentally sustainable investments aligned with the EU Taxonomy was 0% of the sub-fund's net assets. However, certain investments' underlying economic activities may have been aligned with the EU Taxonomy.

Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy[1]?

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are economic activities for yet low-carbon alternatives are not yet available and that have greenhouse gas emission levels corresponding to the best performance.

☐ Yes:

☐ In fossil gas ☐ In nuclear energy

☒ No

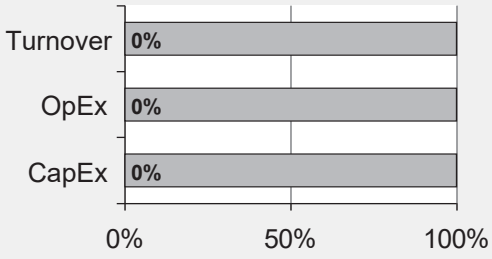
The sub-fund did not take into account the Taxonomy-alignment of companies active in the fossil gas and/or nuclear energy sectors.

[1] Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do no significant harm to any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Taxonomy-aligned activities are expressed as a share of:
- turnover reflecting the share of revenue from green activities of investee companies.
- capital expenditure (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- operational expenditure (OpEx) reflecting the green operational activities of investee companies.

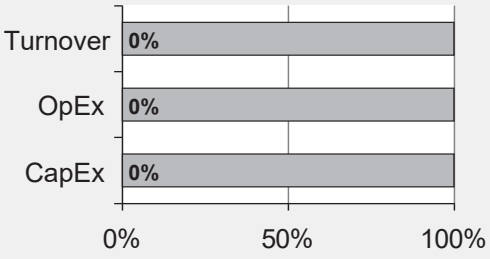
The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy-alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy-alignment only in relation to the investments of the financial product other than sovereign bonds.

1. Taxonomy-alignment of investments **including sovereign bonds***



Taxonomy-aligned: Fossil gas	0.00%
Taxonomy-aligned: Nuclear	0.00%
Taxonomy-aligned (no gas and nuclear)	0.00%
Taxonomy-aligned	0.00%
Non Taxonomy-aligned	100.00%

2. Taxonomy-alignment of investments **excluding sovereign bonds***



Taxonomy-aligned: Fossil gas	0.00%
Taxonomy-aligned: Nuclear	0.00%
Taxonomy-aligned (no gas and nuclear)	0.00%
Taxonomy-aligned	0.00%
Non Taxonomy-aligned	100.00%

This graph represents 100% of the total investments.

**For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures*

What was the share of investments made in transitional and enabling activities?

The sub-fund was not committed to a share of investments in transitional or enabling activities.

How did the percentage of investments that are aligned with the EU Taxonomy compare with previous reference periods?

The promoted proportion of environmentally sustainable investments in accordance with Regulation (EU) 2020/852 (Taxonomy Regulation) was 0% of the fund's assets in the current as well as previous reference periods. It may, however, have been the case that some sustainable investments were nevertheless aligned with an environmental objective of the Taxonomy Regulation.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the Regulation (EU) 2020/852.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The share of sustainable investments with an environmental objective that were not aligned with the EU Taxonomy was 24.34% of the sub-fund's net assets.

Shares of sustainable investments in previous reporting periods:

reporting period	sustainable investments (total)	with environmental objective	socially sustainable
30/12/2024	26.99%	23.39%	3.60%
29/12/2023	24.20%	18.22%	5.98%
30/12/2022	19.30%	--	--

What was the share of socially sustainable investments?

The share of socially sustainable investments was 5.49% of the sub-fund's

net assets. Shares of sustainable investments in previous reporting periods:

reporting period	sustainable investments (total)	with environmental objective	socially sustainable
30/12/2024	26.99%	23.39%	3.60%
29/12/2023	24.20%	18.22%	5.98%
30/12/2022	19.30%	--	--

What investments were included under "other", what was their purpose and were there any minimum environmental or social safeguards?

88.06% of the sub-fund's net assets were aligned with the promoted environmental and social characteristics (#1 Aligned with E/S characteristics). 11.94% of the sub-fund's net assets have been invested in assets which were either out-of-scope of the ESG assessment methodology or for which ESG data coverage was incomplete (#2 Other). Full ESG data coverage was required for the assessment of direct investments in companies in relation to good governance practices.

Assets under "#2 Other" could include all asset classes as foreseen in the specific investment policy, such as sight deposits with credit institutions and derivatives. These assets could have been used by the portfolio management for performance, risk diversification, liquidity and hedging purposes.

Minimum environmental or social safeguards were not or only partially considered for the sub-fund's investments falling within "#2 Other".

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

This sub-fund pursued a strategy based on bonds as main investment strategy. The sub-fund's assets were invested worldwide in government bonds, bonds of near-government issuers, asset backed securities and covered bonds. Near-government issuers include central banks, government authorities, regional authorities and supra-national institutions. Corporate bonds and bonds of emerging-market issuers may have been included. At least 70% of the sub-fund’s assets were invested in interest-bearing securities with a minimum credit rating of B3 (rated by Moody’s) or B- (rated by S&P and Fitch). At least 95% of the sub-fund’s assets were in EUR or hedged into EUR. Defaulted securities were actively pursued for investment opportunities, notwithstanding their elevated exposure to risks, including credit, liquidity, default, and market risks.
Further details regarding the main investment strategy are specified in the Special Section of the Sales Prospectus.

88.06% of the sub-fund’s net assets were allocated to investments that meet the promoted environmental and social characteristics as described in the following sections. The alignment of the portfolio with the binding elements of the investment strategy used to attain the promoted environmental and social characteristics was continuously controlled via the sub-fund’s investment guidelines monitoring.

ESG assessment methodology

The sub-fund aimed to achieve the promoted environmental and social characteristics by assessing potential assets via an in-house ESG assessment methodology, regardless of their economic prospects for success, and by applying exclusion criteria based on this assessment.

The ESG assessment methodology was using a proprietary software tool which sourced data from one or several ESG data providers, public sources and/or internal assessments to derive overall assessments. The methodology applied to derive such overall assessments could have been based on different methods, such as prioritizing one data vendor, worst-of or averaging approach. Internal assessments may take into account factors such as an issuer’s future expected ESG developments, plausibility of data with regard to past or future events, the willingness to engage in dialogue on ESG matters and/or ESG-related decisions of a company. Further, internal ESG assessments for investee companies might have considered the relevance of the exclusion criteria for the market sector of the investee company.

The proprietary software tool used, amongst others, the approaches described below to evaluate the adherence to the promoted ESG characteristics and whether investee companies followed good governance practices. The assessment approaches included, for example, exclusions related to revenues generated from controversial sectors or the exposure to such controversial sectors. In some of the assessment approaches, issuers received one of six possible assessments, with "A" representing the best and "F" the worst assessment. If an issuer was excluded based on one assessment approach, the sub-fund was prohibited from investing in that issuer.

Depending on the investable universe, the portfolio allocation and the exposure to certain sectors, the assessment approaches described below had been more or less relevant which was reflected in the number of issuers actually excluded.

• **Norm Controversy Assessment**

The Norm Controversy Assessment evaluated the behaviour of companies in relation to generally accepted international standards and principles of responsible business conduct within, amongst others, the framework of the principles of the United Nations Global Compact, the United Nations Guiding Principles, the standards of the International Labour Organization and the OECD Guidelines for Multinational Enterprises. Examples of topics covered within these standards and principles included, but were not limited to, human rights violations, violations of workers' rights, child or forced labour, negative environmental impacts and business ethics. The Norm Controversy Assessment evaluated reported violations of the aforementioned international standards. Companies with the worst Norm Controversy Assessment of “F” were excluded as an investment.

• **Freedom House Status**

Freedom House is an international non-governmental organization that classifies countries by their degree of political and civil liberties. Based on the Freedom House Status, countries that were classified as “not free” were excluded as an investment.

• **Exposure to controversial sectors**

Companies that were involved in certain business areas and business activities in controversial areas ("controversial sectors") were excluded according to their share of total revenues generated in such controversial sectors as followed:

a. Manufacturing and/or distribution of civil handguns or ammunition: 5% or more
b. Manufacturing of tobacco products: 5% or more
c. Mining of oil sand: 5% or more
d. Companies that derived 25% or more from thermal coal mining and thermal coal-based power generation as well as companies with thermal coal expansion plans, such as additional expansion of coal mining, coal production or coal usage. Companies with thermal coal expansion plans were excluded based on an internal identification methodology. In the event of exceptional circumstances, such as measured imposed by a government to address challenges in the energy sector, the Management Company may decide to temporarily suspend the application of the coal-related exclusions to individual companies/geographical regions.

• **Exposure to controversial weapons**

Companies were excluded if they were identified as being involved in the manufacturing or selling of controversial weapons or key components of controversial weapons (anti-personnel mines, cluster munitions, and/or chemical and biological weapons). In addition, the shareholdings within a group structure might have been taken into consideration for the exclusions.

• **Use-of-Proceeds Bond Assessment**

This assessment was specific to the nature of this instrument and an investment in use-of-proceeds bonds was permitted only if the following criteria were met. Firstly, all use-of-proceeds bonds were checked for compliance with the Climate Bonds Standards, similar industry standards for green bonds, social bonds or sustainability bonds (such as ICMA Principles) or the EU Green Bond Standard or whether bonds had been subject to an independent review. Secondly, certain ESG criteria were applied in relation to the issuer of the bonds which could have led to the exclusion of issuers and their bonds as an investment.

In particular, investments in use-of-proceeds bonds were prohibited based on the following issuer criteria:

- Sovereign issuers classified as "not free" by Freedom House;
- Companies with the worst Norm Controversy Assessment of "F" as referred to above;
- Companies that manufactured tobacco products: 5% or more;
- Companies with involvement in controversial weapons as referred to above; or
- Companies with identified thermal coal expansion plans as referred to above.

• **Target Fund Assessment**

Target funds were evaluated in relation to the underlying companies and were eligible if these companies were aligned with the criteria of the Norm Controversy Assessment and the exposure to controversial weapons (anti-personnel mines, cluster munitions, and/or chemical weapons and biological weapons). Investment in companies with the worst Norm Controversy Assessment of "F" was permitted up to a determined threshold. Considering the tolerance threshold, diversity of data vendors and methodologies, the available data coverage as well as the target fund portfolio rebalancing, this sub-fund had been indirectly exposed to certain assets that would have been excluded if invested directly or for which data coverage was limited or not available.

Sustainability Investment Assessment

Further, for the proportion of sustainable investments, DWS measured the contribution to one or several UN SDGs and/or to other environmental sustainable objectives via its Sustainability Investment Assessment which evaluated potential investments in relation to different criteria to conclude whether an investment could have been considered as sustainable as further detailed in the section "What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?".

The applied ESG investment strategy did not pursue a committed minimum reduction of the scope of the investments.

The assessment of the good governance practices of the investee companies (including assessments related to sound management structures, employee relations, remuneration of staff and tax compliance) was part of the Norm Controversy Assessment which evaluated a company's behavior within generally accepted international standards and principles of responsible business conduct. Companies with the worst Norm Controversy Assessment of "F" were excluded as an investment.

How did this financial product perform compared to the reference sustainable benchmark?

This sub-fund had not designated a reference benchmark to determine whether it was aligned with the environmental and social characteristics that it promoted.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Periodic disclosure for financial products referred to in Article 8, paragraph 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

Product name: DWS Invest Critical Technologies

Legal entity identifier: 5493004OG6D9KT3Z2K15

Note: The Sub-Fund has been reclassified from Article 8 to Article 6 of Regulation (EU) 2019/2088 on sustainability-related disclosures in the financial services sector (SFDR) with effect from 25 April 2025. The following information therefore relates exclusively to the period 01 January 2025 to 24 April 2025.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities.** That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

☐ **Yes**	☒ **No**
☐ it made **sustainable investments with an environmental objective:** ___%	☒ It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of 15.96% of sustainable investments.
☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy	☐ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
	☐ with a social objective
☐ It made **sustainable investments with a social objective:** ___%	☐ It promoted E/S characteristics, but did **not make any sustainable investments**

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

To what extent were the environmental and/or social characteristics promoted by this financial product met?

This sub-fund promoted environmental and social characteristics related to climate, governance and social norms as well as general ESG quality through the avoidance of (1) issuers exposed to excessive climate and transition risks, (2) companies with the worst DWS Norm Assessment (i.e. as regards compliance with international standards of corporate governance, human rights and labour rights, customer and environmental safety and business ethics), (3) companies with very severe unresolved controversies regarding the principles of the United Nations Global Compact (UN Global Compact), (4) issuers scored among the worst in terms of environmental, social and governance risks compared to their peer group, (5) countries flagged as "not free" by Freedom House, (6) companies whose involvement in controversial sectors exceeds a predefined revenue threshold, and/or (7) companies involved in controversial weapons.

This sub-fund further promoted a minimum proportion of environmentally sustainable investments with a positive contribution to one or several of the United Nations Sustainable Development Goals (UN SDGs).

This sub-fund had not designated a reference benchmark for the purpose of attaining the environmental and social characteristics promoted.

No derivatives were used to attain the environmental or social characteristics promoted by the sub-fund.

How did the sustainability indicators perform?

The attainment of the promoted environmental and social characteristics as well as the sustainable investment was assessed via the application of an in-house ESG assessment methodology and ESG specific exclusion thresholds as further described in the section “What actions have been taken to meet the environmental and/or social characteristics during the reference period?”. The methodology applied different assessment approaches that were used as sustainability indicators which were:

• **DWS Climate and Transition Risk Assessment** is used as indicator for an issuer’s exposure to climate and transition risks.
Performance: No investments in suboptimal assets

• **DWS Norm Assessment** is used as indicator for a company’s exposure to norm-related issues towards international standards.
Performance: No investments in suboptimal assets

• **UN Global Compact-Assessment** is used as indicator for whether a company is directly involved in one or more very severe, unresolved controversies related to the principles of the UN Global Compact.
Performance: No investments in suboptimal assets

• **DWS ESG Quality Assessment** is used as indicator for comparison of an issuer’s environmental, social and governance risks in relation to its peer group.
Performance: No investments in suboptimal assets

• **Freedom House Status** is used as indicator for the political-civil freedom of a country.
Performance: No investments in suboptimal assets

• **Exposure to controversial sectors** is used as indicator for a company’s involvement in controversial sectors.
Performance: 0%

• **DWS exclusions for controversial weapons** is used as indicator for a company’s involvement in controversial weapons.
Performance: 0%

• **DWS-Methodology for determining sustainable investments pursuant to Article 2(17) SFDR (DWS Sustainability Investment Assessment)** is used as indicator to measure the proportion of sustainable investments.
Performance: 15.96% as of 03/31/2025

Please see the section entitled “What actions have been taken to meet the environmental and/or social characteristics during the reference period?” for a description of the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted, including the exclusion criteria, and the assessment methodology for determining whether and to what extent assets met the defined environmental and/or social characteristics (including the turnover thresholds defined for the xclusions). This section contains further information on the sustainability indicators. The values from the DWS front office system are used to calculate the sustainability indicators. This means that there may be minor deviations from the other market values that appear in the annual report, which are derived from the fund accounting system.

…and compared to previous periods?

Attainment of the promoted environmental and social characteristics at portfolio level was measured in the previous year on the basis of the following sustainability indicators:

Depleted uranium weapons D	-	-	0.00	% of assets
Depleted uranium weapons E	-	-	0.00	% of assets
Depleted uranium weapons F	-	-	0.00	% of assets
Involvement in controversial weapons	0.00	0.00	-	% of assets
Nuclear weapons D	-	-	0.00	% of assets
Nuclear weapons E	-	-	0.00	% of assets
Nuclear weapons F	-	-	0.00	% of assets

The disclosure of the sustainability indicators has been revised compared with the prior-year report. The assessment methodology is unchanged. Additional information on the currently valid sustainability indicators is provided in the section entitled “What actions have been taken to meet the environmental and/or social characteristics during the reference period?”.
Information about taking into account the principal adverse impacts on sustainability factors is provided in the section entitled “How did this financial product consider principal adverse impacts on sustainability factors?”

DWS ESG-Assessment Scale

In the following assessment categories, the assets received one of six possible scores, with "A" being the best score and "F" being the worst score.

Criteria	Involvement in controversial sectors *(1)	Involvement in controversial weapons	Norm Assessment *(6)	ESG Quality Assessment	SDG- Assessment	Climat & Transition Risk Assessment
A	Non-involvement	Confirmed non-involvement	Confirmed no issues	True leader in ESG (>= 87.5 DWS ESG score)	True SDG contributor (>= 87.5 SDG score)	True climate leader (>= 87.5 score)
B	Remote involvement	Alleged	Violations of lesser degree	ESG leader (75-87.5 DWS ESG score)	SDG contributor (75-87.5 SDG score)	Climate solution provider(75-87.5 score)
C	0% - 5%	Dual-Purpose *(2)	Violations of lesser degree	ESG upper midfield (50-75 DWS ESG score)	SDG upper midfield (50-75 SDG score)	Low transition risk (50-75 score)
D	5% - 10% (coal: 5% - 10%)	Owning *(3)/ Owned *(4)	Violation of lesser degree	ESG lower midfield (25-50 DWS ESG score)	SDG lower midfield (25-50 SDG score)	Mod. transition risk (25-50 score)
E	10% - 25% (coal: 15% - 25%)	Component Producer *(5)	High severity or re-assessed highest violation *(7)	ESG laggard (12.5-25 DWS ESG score)	SDG obstructer (12.5-25 SDG score)	High transition risk (12.5-25 score)
F	>= 25%	Weapon producer	Highest severity / global compact violation *(8)	True laggard in ESG (0-12.5 DWS ESG score)	Significant SDG obstructer (0-12.5 SDG score)	Excessive transition risk (0-12.5 score)

*(1) Revenue share thresholds as per standard scheme. Sub-Granularity available. Thresholds can be individually set.

*(2) Encompasses e.g.. weapon-carrying systems such as combat aircraft that carry non-controversial weapons as well as controversial ones.

*(3) Owning more than 20% equity.

*(4) Being owned by more than 50% of company involved in grade E or F.

*(5) Single purpose key component.

*(6) Includes ILO controversies as well as corporate governance and product issues.

*(7) In its ongoing assessment, DWS takes into account the violation(s) of international standards – observed via data from ESG data vendors – such as the UN Global Compact, but also possible ESG data vendor errors identified, future expected developments of these violations as well as the willingness of the issuer to engage in dialogue regarding corporate decisions in this regard.

*(8) An F-grade can be considered a reconfirmed violation of the United Nations Global Compact rule framework for corporate behavior.

What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?

The sub-fund partially invested in sustainable investments according to article 2(17) SFDR. Such sustainable investments contributed to at least one of the UN SDGs that relate to environmental objectives, such as the following (non-exhaustive list):

• Goal 12: Responsible consumption and production
• Goal 13: Climate action
• Goal 14: Life below water
• Goal 15: Life on land

The extent of the contribution to individual UN SDGs varied depending on the actual investments in the portfolio.

DWS determined the contribution to the UN SDGs based on its DWS Sustainability Investment Assessment, in which various criteria were used to assess the potential assets with regard to whether an investment can be considered as sustainable. As part of this assessment methodology, it was determined whether (1) an investment made a positive contribution to one or more UN SDGs, (2) the issuer passed the Do Not Significantly Harm ("DNSH") assessment and (3) the company followed good governance practices.

The DWS Sustainability Investment Assessment used data from several data providers, public sources and/or internal assessments based on a defined assessment and classification methodology to determine whether an investment is sustainable. Investments that made a positive contribution to the UN SDGs were assessed based on revenues, capital expenditure (CapEx) and/or operational expenditure (OpEx), depending on the asset. Where a positive contribution was determined, the investment was deemed sustainable if the issuer passed the DNSH assessment and the company followed good governance practices.

The share of sustainable investments as defined in article 2(17) SFDR in the portfolio was calculated in proportion to the economic activities of the issuers that qualified as sustainable. Notwithstanding the preceding, in the case of use-of-proceeds bonds that qualified as sustainable investment, the value of the entire bond was counted towards the share of sustainable investments.

The sub-fund did not commit to target a minimum proportion of sustainable investments with an environmental objective aligned with the EU Taxonomy.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

The DNSH assessment was an integral part of the DWS Sustainability Investment Assessment and evaluated whether an issuer with a contribution to a UN SDG caused significant harm to any of these objectives. In case that a significant harm was identified, the issuer failed the DNSH assessment and the investment could not be considered sustainable.

How were the indicators for adverse impacts on sustainability factors taken into account?

As part of the DNSH assessment under article 2(17) SFDR, the DWS Sustainability Investment Assessment systematically integrated the mandatory principal adverse indicators on sustainability factors (dependent on relevance) from Table 1 and relevant indicators from Tables 2 and 3 of Annex I of the Commission Delegated Regulation (EU) 2022/1288 supplementing the Sustainable Finance Disclosure Regulation (SFDR). Taking into account these adverse impacts, DWS had established quantitative thresholds and/or qualitative values to determine if an issuer significantly harmed any of the environmental or social objectives. These values were set based upon various external and internal factors, such as data availability or market developments and could be adapted going forward.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

As part of its sustainability investment assessment, DWS further evaluated through its DWS Norm Assessment the alignment of a company with international norms. This included checks in relation to adherence to international norms, for example, the OECD Guidelines for Multinational Enterprises, the UN Guiding Principles on Business and Human Rights, the principles of the UN Global Compact and the standards of the International Labour Organization. Companies with the worst DWS Norm Assessment score (i.e., a letter score of "F") could not be considered sustainable and were excluded as an investment.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union Criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU Criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU Criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

How did this financial product consider principal adverse impacts on sustainability factors?

The sub-fund considered the following principal adverse impacts on sustainability factors from Annex I of the Commission Delegated Regulation (EU) 2022/1288 supplementing the SFDR:

• Greenhouse gas (GHG) emissions (no. 1);
• Carbon footprint (no. 2);
• GHG intensity of investee companies (no. 3);
• Exposure to companies active in the fossil fuel sector (no. 4);
• Violations of United Nations Global Compact principles and OECD Guidelines for Multinational Enterprises (no. 10); and
• Exposure to controversial weapons (no. 14).

For sustainable investments, the principal adverse impacts are also considered in the DNSH assessment as described above in section "How have the indicators for adverse impacts on sustainability factors been taken into account?".

DWS Invest Critical Technologies

Indicators	Description	Performance
Principal Adverse Impact		
PAII - 01. GHG emissions	Sum of the current value of investments of company i, divided by the investee company's enterprise value and multiplied by company's cope 1+2+3 GHG emissions.	20,197.92 tCO2e
PAII - 02. Carbon Footprint - EUR	The carbon footprint is expressed as tonnes of CO2 emissions per million EUR invested. The CO2 emissions of an issuer are normalised by its enterprise value including cash (EVIC)	734.06 tCO2e / million EUR
PAII - 03. Carbon Intensity	Weighted average carbon intensity scope 1+2+3	1,983.12 tCO2e / million EUR
PAII - 04. Exposure to companies active in the fossil fuel sector	Share of investments in companies active in the fossil fuel sector	44.48 % of assets
PAII - 10. Violations of UNGC principles and OECD Guidelines for Multinational Enterprises	Share of investments in investee companies that have been involved in violations of the UNGC principles or OECD Guidelines for Multinational Enterprises	0 % of assets
PAII - 14. Exposure to controversial weapons	Share of investments in investee companies involved in the manufacture or selling of controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)	0 % of assets

As of: April 24, 2025

The Principal Adverse Impact Indicators (PAIIs) are calculated on the basis of the data in the DWS back office and front office systems, which are primarily based on the data of external ESG data providers. If there is no data on individual PAIIs for individual securities or their issuers, either because no data is available or the PAII is not applicable to the particular issuer or security, these securities or issuers are not included in the calculation of the PAII. With target fund investments, a look-through of the target fund holdings is performed if appropriate data is available. The calculation method for the individual PAI indicators may change in subsequent reporting periods due to evolving market standards, a change in the treatment of securities of certain types of instruments (such as derivatives) or as a result of regulatory clarifications.
Moreover, improved data availability may have an effect on the reported PAIIs in subsequent reporting periods.
The values from the DWS front office system are used to calculate the PAIIs. This means that there may be minor deviations from the other market values that appear in the annual report, which are derived from the fund accounting system.

What were the top investments of this financial product?

DWS Invest Critical Technologies

Largest investments	Breakdown by sector according to NACE Codes	in % of average portfolio volume	Breakdown by country
GE Aerospace	C - Manufacturing	5.0 %	United States
Howmet Aerospace	C - Manufacturing	4.7 %	United States
Deutsche Managed Euro Fund Z-Class	K - Financial and insurance activities	3.5 %	Ireland
Eaton Corporation	C - Manufacturing	2.9 %	United States

PTC	J - Information and communication	1.5 %	United States

for the period from January 01, 2025, through April 24, 2025

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is:
for the period from January 01, 2025, through April 24, 2025

What was the proportion of sustainability-related investments?

The proportion of sustainability-related investments as of the reporting date was 100% of portfolio assets as of 03/31/2025.
Proportion of sustainability-related investments for the previous years:
30/12/2024: 99.23%
29/12/2023: 99.03%
30/12/2022: 91.52%

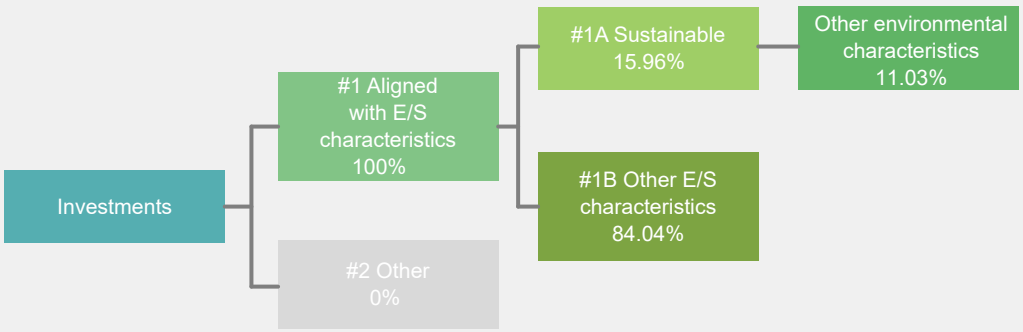
Asset allocation describes the share of investments in specific assets.

What was the asset allocation?

As of 03/31/2025 this sub-fund invested 100% of its net assets in investments that were aligned with the promoted environmental and social characteristics (#1 Aligned with E/S characteristics). Within this category, 15.96% of the sub-fund's net assets qualified as sustainable investments (#1A Sustainable). Thereof the share of sustainable investments with an environmental objective that was not compliant with the EU Taxonomy was 11.03% of the sub-fund's net assets. The share of sustainable investments with an environmental objective that was not compliant with the EU Taxonomy depended on the market situation and the investable investment universe.

0% of the sub-fund's net assets were invested in all permissible assets for which either the DWS ESG assessment methodology was not applied or for which ESG data coverage was incomplete (#2 Other). Within this share, investments of up to 20% of the sub-fund's net assets were tolerated in assets for which there was no complete data coverage with respect to the above-described ESG assessment approaches and exclusions. This tolerance did not apply to the assessment of good governance practices (by means of the DWS Norm Assessment).

A more detailed description of the specific asset allocation of this sub-fund can be found in the Special Section of the Sales Prospectus.



#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:
- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

In which economic sectors were the investments made?

DWS Invest Critical Technologies

NACE-Code	Breakdown by sector according to NACE Codes	in % of portfolio volume
B	Mining and quarrying	0.8 %
C	Manufacturing	42.0 %
D	Electricity, gas, steam and air conditioning supply	1.7 %
E	Water supply; sewerage; waste managment and remediation activities	2.3 %
F	Construction	3.1 %
G	Wholesale and retail trade; repair of motor vehicles and motorcycles	2.5 %
H	Transporting and storage	10.2 %
J	Information and communication	7.4 %
K	Financial and insurance activities	7.7 %
M	Professional, scientific and technical activities	16.5 %
N	Administrative and support service activities	0.3 %
Q	Human health and social work activities	0.3 %
NA	Other	5.2 %
Exposure to companies active in the fossil fuel sector		44.5 %

As of: April 24, 2025

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The sub-fund did not commit to invest a proportion of sustainable investments with an environmental objective aligned with the EU Taxonomy. Therefore, the promoted minimum percentage of environmentally sustainable investments aligned with the EU Taxonomy was 0% of the sub-fund's net assets. However, certain investments' underlying economic activities may have been aligned with the EU Taxonomy.

Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy[1]?

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are economic activities for yet low-carbon alternatives are not yet available and that have greenhouse gas emission levels corresponding to the best performance.

☐ Yes:

☐ In fossil gas ☐ In nuclear energy

☒ No

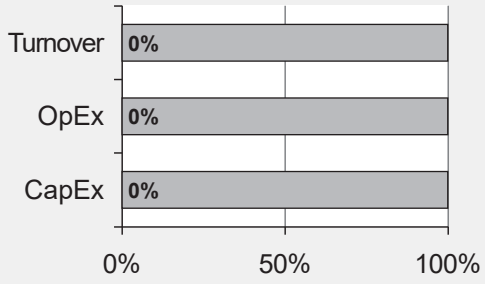
The sub-fund did not take into account the Taxonomy-alignment of companies active in the fossil gas and/or nuclear energy sectors. Nevertheless, it could happen that the Sub-Fund also invested in issuers that were also active in these areas as part of the investment strategy.

[1] Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do no significant harm to any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Taxonomy-aligned activities are expressed as a share of:
- turnover reflecting the share of revenue from green activities of investee companies.
- capital expenditure (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- operational expenditure (OpEx) reflecting the green operational activities of investee companies.

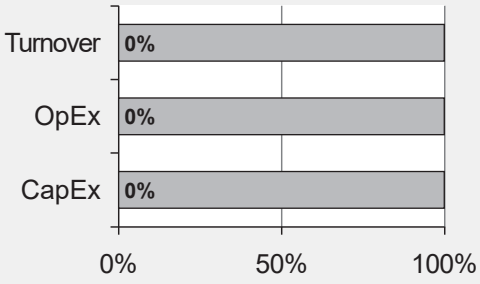
The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy-alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy-alignment only in relation to the investments of the financial product other than sovereign bonds.

1. Taxonomy-alignment of investments **including sovereign bonds***



Taxonomy-aligned: Fossil gas	0.00%
Taxonomy-aligned: Nuclear	0.00%
Taxonomy-aligned (no gas and nuclear)	0.00%
Taxonomy-aligned	0.00%
Non Taxonomy-aligned	100.00%

2. Taxonomy-alignment of investments **excluding sovereign bonds***



Taxonomy-aligned: Fossil gas	0.00%
Taxonomy-aligned: Nuclear	0.00%
Taxonomy-aligned (no gas and nuclear)	0.00%
Taxonomy-aligned	0.00%
Non Taxonomy-aligned	100.00%

This graph represents 100% of the total investments.

**For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures*

What was the share of investments made in transitional and enabling activities?

The sub-fund was not committed to a share of investments in transitional or enabling activities.

How did the percentage of investments that are aligned with the EU Taxonomy compare with previous reference periods?

The promoted proportion of environmentally sustainable investments in accordance with Regulation (EU) 2020/852 (Taxonomy Regulation) was 0% of the fund's assets in the current as well as previous reference periods. It may, however, have been the case that some sustainable investments were nevertheless aligned with an environmental objective of the Taxonomy Regulation.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the Regulation (EU) 2020/852.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy is 11.03% as of 03/31/2025.

Shares of sustainable investements in previous reporting periods:

reporting period	sustainable investments (total)	with environmental objective	socially sustainable
30/12/2024	16.09%	11.53%	--
29/12/2023	16.90%	16.90%	--
30/12/2022	12.89%	--	--

What was the share of socially sustainable investments?

The sub-fund has not yet made a minimum allocation to socially sustainable investments pursuant to Article 2(17) SFDR.

Shares of sustainable investements in previous reporting periods:

reporting period	sustainable investments (total)	with environmental objective	socially sustainable
30/12/2024	16.09%	11.53%	--
29/12/2023	16.90%	16.90%	--
30/12/2022	12.89%	--	--

What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?

As of 31.03.2025, 100% of the net assets of the sub-fund were in aligned with environmental and social characteristics (#1 Aligned with E/S characteristics). 0% of net sub-fund assets were invested in investments for which the ESG assessment methodology was not applicable or for which full ESG data coverage was incomplete (#2 Other investments). Within this share, investments of up to 20% of the sub-fund’s net assets were tolerated in assets for which there was no complete data coverage with respect to the above described ESG assessment approaches and exclusions. This tolerance did not apply to the assessment of good governance practices (by means of the DWS Norm Assessment).

These other investments could have included all asset classes as foreseen in the specific investment policy, including deposits with credit institutions and derivatives.

Other investments could have used by the portfolio management for performance, diversification, liquidity and hedging purposes.

Minimum environmental or social safeguards were not or only partially considered for this sub-fund within the other investments.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

This sub-fund pursued a strategy based on equities as its main investment strategy. At least two-thirds of the sub-fund's assets were invested in equities of German and foreign issuers. In doing so, investments were made in equities that were active in the areas of the provision of forward-looking infrastructure and the production of future-oriented industrial goods and that derived at least 20% of their revenues in these areas. Up to one-third of the sub-fund's assets was invested in money market instruments and bank balances, respectively.
Further details regarding the main investment strategy are specified in the Special Section of the Sales Prospectus.
The sub-fund's assets were predominantly allocated into investments that complied with the defined standards in respect to the promoted environmental and social characteristics as described in the following sections. The sub-fund's strategy in relation to the promoted environmental and social characteristics was an integral part of the DWS ESG assessment methodology, which was continuously monitored via the sub-fund's investment guidelines.

DWS ESG assessment methodology
The sub-fund aimed to achieve the promoted environmental and social characteristics by assessing potential assets through an in-house DWS ESG assessment methodology, regardless of their economic prospects for success, and by applying exclusion criteria based on this assessment. The DWS ESG assessment methodology was based on the DWS ESG database, which used data from several ESG data providers, public sources, and/or internal assessments to arrive at derived overall scores. Internal assessments took into account factors such as an issuer's future expected ESG developments, plausibility of data with regard to past or future events, the willingness to engage in dialogue on ESG matters, and ESG-related decisions of a company.

The DWS ESG database derived coded scores within different assessment approaches, as detailed below. Individual assessment approaches were based on a letter scale from "A" to "F." Each issuer received one of six possible scores, with "A" representing the highest score and "F" representing the lowest score on the scale. Within other assessment approaches, the DWS ESG database provided separate assessments, including those related to revenues earned from controversial sectors or the degree of involvement in controversial weapons. If an issuer's score in one assessment approach was deemed insufficient, the sub-fund was prohibited from investing in that issuer or that asset, even if this issuer or asset would generally be eligible according to the other assessment approaches.

The DWS ESG database used, among others, the following assessment approaches to evaluate whether issuers/assets complied with the promoted environmental and social characteristics and whether companies in which investments were made applied good governance practices:

• **DWS Climate and Transition Risk Assessment**
The DWS Climate and Transition Risk Assessment evaluated issuers in the context of climate change and environmental changes, for example, with respect to greenhouse gas reduction and water conservation. Issuers that contributed less to climate change and other negative environmental changes or were less exposed to these risks received better scores. Issuers with an excessive climate and transition risk profile (i.e., a letter score of "F") were excluded as an investment.

• **DWS Norm Assessment**
The DWS Norm Assessment evaluated the behavior of companies, for example, within the framework of the principles of the UN Global Compact, the standards of the International Labour Organization, and behavior within generally accepted international standards and principles. The DWS Norm Assessment examines, for example, human rights violations, violations of workers' rights, child or forced labor, adverse environmental impacts, and business ethics. The assessment considers violations of the aforementioned international standards. These were assessed using data from ESG data providers and/or other available information, such as the expected future developments of these violations as well as the willingness of the company to engage in a dialogue on related business decisions. Companies with the worst DWS Norm Assessment score (i.e., a letter score of "F") were excluded as an investment.

• **UN Global Compact Assessment**
In addition to the DWS Norm Assessment, companies were excluded if they were directly involved in one or more very severe, unresolved controversies related to the principles of the UN Global Compact.

• **DWS ESG Quality Assessment**
The DWS ESG Quality Assessment distinguished between companies and sovereign issuers.

For companies, the DWS ESG Quality Assessment allowed for a peer group comparison based on cross-vendor consensus on the overall ESG assessment (best-in-class approach), for example,

concerning the handling of environmental changes, product safety, employee management, or corporate ethics. The peer group for companies was made up from the same industry sector. Companies that scored higher in this comparison received a better score, while companies that scored lower in the comparison received a worse score. Companies with the lowest score relative to their peer group (i.e., a letter score of “F”) were excluded as an investment.

For sovereign issuers, the DWS ESG Quality Assessment assessed a country based on numerous ESG criteria. Indicators for environmental aspects were, for example, handling of climate change, natural resources, and vulnerability to disasters; indicators for social aspects included the attitude to child labor, equality, and prevailing social conditions; and indicators for good governance were, for example, the political system, the existence of institutions, and the rule of law. In addition, the DWS ESG Quality Assessment explicitly considered the civil and democratic liberties of a country. Sovereign issuers with the lowest score in the peer group comparison (separate groups for developed countries and emerging markets) (i.e., a letter score of “F”) were excluded as an investment.

• **Freedom House status**
Freedom House is an international non-governmental organization that classifies countries by their degree of political freedom and civil liberties. Based on the Freedom House status, countries that were labeled as “not free” by Freedom House were excluded..

• **Exposure to controversial sectors**
Investments in companies that were involved in certain business areas and business activities in controversial areas (“controversial sectors”) were excluded. Companies were excluded from the portfolio as follows, according to their share of total revenues generated in controversial sectors.

Revenue thresholds for exclusion of controversial sectors:

• Manufacturing of products and/or provision of services in the defence industry: at least 5%
• Manufacturing and/or distribution of civil handguns or ammunition: at least 5%
• Manufacturing of tobacco products: at least 5%
• Manufacturing of products in and/or provision of services for the gambling industry: at least 5%
• Manufacturing of adult entertainment: at least 5%
• Manufacturing of palm oil: at least 5%
• Nuclear power generation and/or uranium mining and/or uranium enrichment: at least 5%
• Extraction of crude oil: at least 10%
• Unconventional extraction of crude oil and/or natural gas (including oil sand, oil shale/shale gas, Arctic drilling): more than 0%
• Coal mining: at least 1%
• Power generation from coal: at least 10%
• Coal mining and oil extraction: at least 10%
• Power generation from and other use of fossil fuels (excluding natural gas): at least 10%
• Mining and exploration of and services in connection with oil sand and oil shale: at least 10%

The sub-fund excluded companies with coal expansion plans, such as additional coal mining, coal production or coal usage, based on an internal identification methodology.

The aforementioned coal-related exclusions only applied to so-called thermal coal, i.e., coal that was used in power stations for energy production.

• **DWS exclusions for controversial weapons**
Companies were excluded if they were identified as manufacturers or manufacturers of key components of anti-personnel mines, cluster munitions, chemical and biological weapons, nuclear weapons, depleted uranium weapons, or uranium munitions. In addition, the shareholdings within a group structure were also taken into consideration for the exclusions. Furthermore, companies that were identified as manufacturers or manufacturers of key components of incendiary bombs containing white phosphorus were excluded.

• **DWS Use of Proceeds Bond Assessment**
Deviating from the assessment approaches described above, an investment in bonds of excluded issuers was nevertheless permitted if the particular requirements for use-of-proceeds bonds were met. In this case, the bond was first checked for compliance with the ICMA Principles for green bonds, social bonds, or sustainability bonds. In addition, a defined minimum of ESG criteria was checked in relation to the issuer of the bond, and issuers and their bonds that did not meet these criteria were excluded.

• **DWS Target Fund Assessment**
The DWS ESG database assessed target funds in accordance with the DWS Climate and Transition Risk Assessment, DWS Norm Assessment, UN Global Compact Assessment, DWS ESG Quality

Assessment, the Freedom House Status, and with respect to investments in companies that were considered to be manufacturers or manufacturers of key components of anti-personnel mines, cluster munitions, chemical and biological weapons (the shareholdings within a group structure were taken into consideration accordingly). The assessment methods for target funds were based on examining the entire target fund portfolio, taking into account the investments within the target fund portfolio. Depending on the respective assessment approach, exclusion criteria (such as tolerance thresholds) that resulted in the exclusion of the target fund were defined. Accordingly, assets might have been invested within the portfolios of the target funds that were not compliant with the DWS standards for issuers.

• **Non-ESG assessed asset classes**
Not every asset of the sub-fund was assessed by the DWS ESG assessment methodology. This applied in particular to the following asset classes:

Derivatives were currently not used to attain the environmental and social characteristics promoted by the sub-fund and were therefore not taken into account for the calculation of the minimum proportion of assets that complied with these characteristics. However, derivatives on individual issuers were only acquired for the sub-fund if the issuers of the underlyings complied with the DWS ESG assessment methodology.

Deposits with credit institutions were not evaluated via the DWS ESG assessment methodology.

DWS methodology for determining sustainable investments was defined in article 2 (17) SFDR (DWS Sustainability Investment Assessment)
Further, for the proportion of sustainable investments DWS measured the contribution to one or several UN SDGs via its DWS Sustainability Investment Assessment which evaluated potential investments in relation to different criteria to conclude that an investment can be considered as sustainable.

The applied ESG investment strategy did not pursue a committed minimum reduction of the scope of the investments.

The assessment of the good governance practices of the investee companies was based on the DWS Norm Assessment. Accordingly, the assessed investee companies followed good governance practices.

How did this financial product perform compared to the reference sustainable benchmark?

This sub-fund has not designated a specific reference benchmark to determine its alignment with the environmental and/or social characteristics it promotes.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Periodic disclosure for financial products referred to in Article 8, paragraph 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

Product name: DWS Invest CROCI Euro

Legal entity identifier: 549300E42GKGVU82TT24

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

Yes	No
☐ it made **sustainable investments with an environmental objective:** ___%	☒ It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of 14.66% of sustainable investments.
☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy	☐ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
	☒ with a social objective
☐ It made **sustainable investments with a social objective:** ___%	☐ It promoted E/S characteristics, but did **not make any sustainable investments**

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities.** That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

To what extent were the environmental and/or social characteristics promoted by this financial product met?

This sub-fund promoted environmental and social characteristics related to a general consideration of ESG criteria by excluding, for example, investments in companies with the worst norm-related issues towards international standards and/or investments in companies whose involvement in controversial sectors exceeded predefined revenue thresholds.

Further, this sub-fund promoted a proportion of sustainable investments in accordance with article 2(17) of the regulation on sustainability-related disclosures in the financial services sector (SFDR).

This sub-fund had not designated a reference benchmark for the purpose of attaining the environmental and social characteristics promoted.

No derivatives were used to attain the environmental or social characteristics promoted by the sub-fund.

How did the sustainability indicators perform?

The attainment of the promoted environmental and social characteristics as well as the sustainable investment was assessed via the application of an in-house ESG assessment methodology and ESG specific exclusion thresholds as further described in the section "What actions have been taken to meet the environmental and/or social characteristics during the reference period?". The methodology applied different assessment approaches that were used as sustainability indicators which were:

• **Norm Controversy Assessment** used as an indicator for a company's exposure to norm-related issues towards international standards.
Performance: No investments in suboptimal assets

• **Freedom House Status** used as an indicator for the political and civil liberties of a country.
Performance: No investments in suboptimal assets

• **Exposure to controversial sectors** used as an indicator for a company's involvement in controversial sectors.
Performance: 0%

• **Exposure to controversial weapons** used as an indicator for a company's involvement in controversial weapons.
Performance: 0%

• **Sustainability Investment Assessment** used as an indicator to measure the proportion of sustainable investments pursuant to article 2(17) SFDR.
Performance: 14.66%

Please see the section entitled “What actions have been taken to meet the environmental and/or social characteristics during the reference period?” for a description of the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted, including the exclusion criteria, and the assessment methodology for determining whether and to what extent assets met the defined environmental and/or social characteristics (including the turnover thresholds defined for the xclusions). This section contains further information on the sustainability indicators. The values from the DWS front office system are used to calculate the sustainability indicators. This means that there may be minor deviations from the other market values that appear in the annual report, which are derived from the fund accounting system.

…and compared to previous periods?

Attainment of the promoted environmental and social characteristics at portfolio level was measured in the previous years on the basis of the following sustainability indicators:

DWS Invest CROCI Euro

Indicators Performance	30/12/2024	29/12/2023	30/12/2022

The disclosure of the sustainability indicators has been revised compared with the prior-year report. The assessment methodology is unchanged. Additional information on the currently valid sustainability indicators is provided in the section entitled “What actions have been taken to meet the environmental and/or social characteristics during the reference period?”.
Information about taking into account the principal adverse impacts on sustainability factors is provided in the section entitled “How did this financial product consider principal adverse impacts on sustainability factors?”

DWS ESG-Assessment Scale

In the following assessment categories, the assets received one of six possible scores, with "A" being the best score and "F" being the worst score.

Criteria	Involvement in controversial sectors *(1)	Involvement in controversial weapons	Norm Assessment *(6)	ESG Quality Assessment	SDG- Assessment	Climat & Transition Risk Assessment
A	Non-involvement	Confirmed non-involvement	Confirmed no issues	True leader in ESG (>= 87.5 DWS ESG score)	True SDG contributor (>= 87.5 SDG score)	True climate leader (>= 87.5 score)
B	Remote involvement	Alleged	Violations of lesser degree	ESG leader (75-87.5 DWS ESG score)	SDG contributor (75-87.5 SDG score)	Climate solution provider(75-87.5 score)
C	0% - 5%	Dual-Purpose *(2)	Violations of lesser degree	ESG upper midfield (50-75 DWS ESG score)	SDG upper midfield (50-75 SDG score)	Low transition risk (50-75 score)
D	5% - 10% (coal: 5% - 10%)	Owning *(3)/ Owned *(4)	Violation of lesser degree	ESG lower midfield (25-50 DWS ESG score)	SDG lower midfield (25-50 SDG score)	Mod. transition risk (25-50 score)
E	10% - 25% (coal: 15% - 25%)	Component Producer *(5)	High severity or re-assessed highest violation *(7)	ESG laggard (12.5-25 DWS ESG score)	SDG obstructer (12.5-25 SDG score)	High transition risk (12.5-25 score)
F	>= 25%	Weapon producer	Highest severity / global compact violation *(8)	True laggard in ESG (0-12.5 DWS ESG score)	Significant SDG obstructer (0-12.5 SDG score)	Excessive transition risk (0-12.5 score)

*(1) Revenue share thresholds as per standard scheme. Sub-Granularity available. Thresholds can be individually set.

*(2) Encompasses e.g.. weapon-carrying systems such as combat aircraft that carry non-controversial weapons as well as controversial ones.

*(3) Owning more than 20% equity.

*(4) Being owned by more than 50% of company involved in grade E or F.

*(5) Single purpose key component.

*(6) Includes ILO controversies as well as corporate governance and product issues.

*(7) In its ongoing assessment, DWS takes into account the violation(s) of international standards – observed via data from ESG data vendors – such as the UN Global Compact, but also possible ESG data vendor errors identified, future expected developments of these violations as well as the willingness of the issuer to engage in dialogue regarding corporate decisions in this regard.

*(8) An F-grade can be considered a reconfirmed violation of the United Nations Global Compact rule framework for corporate behavior.

What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?

Sustainable investments contributed to at least one of the Sustainable Development Goals of the United Nations (UN SDGs) that relate to environmental and/or social objectives, such as good health and well-being or climate action and/or to at least one other environmental objective such as climate change adaption or climate change mitigation (as defined under the EU Taxonomy).

The extent of the contribution to individual sustainable investment objectives varied depending on the actual investments held in the portfolio.

DWS determind the contribution to a sustainable investment objective based on its Sustainability Investment Assessment which used data from one or several data providers, public sources and/or internal assessments. An investment's positive contribution to an environmental and/or social objective was assessed based on the revenues which a company generated from the actual economic activities making such contribution (activity-based approach). Where a positive contribution was determined, the investment was considered sustainable if the issuer passed the Do No significant Harm ("DNSH") assessment and the company followed good governance practices.

The share of sustainable investments in the portfolio as defined in article 2(17) SFDR was therefore calculated in proportion to the economic activities of the issuers that were considered as sustainable (activity-based approach). Notwithstanding the preceding, in the case of use-of-proceeds bonds that were considered as sustainable investment, the value of the entire bond was counted towards the portfolio's share of sustainable investments.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

The sustainable investments in which the sub-fund invested were assessed to ensure they did not cause significant harm to any environmental or social sustainable investment objective. This was achieved by taking into account the indicators for principal adverse impacts on sustainability factors (dependent on relevance) as described below. If a significant harm was identified, the investment could not have been considered sustainable.

How were the indicators for adverse impacts on sustainability factors taken into account?

The Sustainability Investment Assessment systematically integrated the mandatory principal adverse indicators on sustainability factors (dependent on relevance) from Table 1 and relevant indicators from Tables 2 and 3 of Annex I of the Commission Delegated Regulation (EU) 2022/1288 supplementing the SFDR. Taking into account these principal adverse impacts, DWS had established quantitative thresholds and/or qualitative values to assess a significant harm on any of the environmental or social sustainable investment objectives. These values were set based upon various external and internal factors, such as data availability or market developments and may have been adapted going forward.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The alignment of sustainable investments with, amongst others, the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights was evaluated through the Norm Controversy Assessment (as further described below). Companies with the worst Norm Controversy Assessment of “F” were excluded as an investment.

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union Criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU Criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU Criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

How did this financial product consider principal adverse impacts on sustainability factors?

The sub-fund considered the following principal adverse impacts on sustainability factors from Annex I of the Commission Delegated Regulation (EU) 2022/1288 supplementing the SFDR:

• Exposure to companies active in the fossil fue sector (no. 4);

• iolations of the United Nations Global Compact principles and OECD Guidelines for Multinational Enterprises (no. 10); and

• Exposure to controversial weapons (no. 14)

DWS Invest CROCI Euro

Indicators	Description	Performance
Principal Adverse Impact		
PAII - 04. Exposure to companies active in the fossil fuel sector	Share of investments in companies active in the fossil fuel sector	13.5 % of assets
PAII - 10. Violations of UNGC principles and OECD Guidelines for Multinational Enterprises	Share of investments in investee companies that have been involved in violations of the UNGC principles or OECD Guidelines for Multinational Enterprises	0 % of assets
PAII - 14. Exposure to controversial weapons	Share of investments in investee companies involved in the manufacture or selling of controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)	0 % of assets

As of: December 30, 2025

The Principal Adverse Impact Indicators (PAIIs) are calculated on the basis of the data in the DWS back office and front office systems, which are primarily based on the data of external ESG data providers. If there is no data on individual PAIIs for individual securities or their issuers, either because no data is available or the PAII is not applicable to the particular issuer or security, these securities or issuers are not included in the calculation of the PAII. With target fund investments, a look-through of the target fund holdings is performed if appropriate data is available. The calculation method for the individual PAI indicators may change in subsequent reporting periods due to evolving market standards, a change in the treatment of securities of certain types of instruments (such as derivatives) or as a result of regulatory clarifications.
Moreover, improved data availability may have an effect on the reported PAIIs in subsequent reporting periods.
The values from the DWS front office system are used to calculate the PAIIs. This means that there may be minor deviations from the other market values that appear in the annual report, which are derived from the fund accounting system.

What were the top investments of this financial product?

DWS Invest CROCI Euro

Largest investments	Breakdown by sector according to NACE Codes	in % of average portfolio volume	Breakdown by country
E.ON Reg.	M - Professional, scientific and technical activities	3.4 %	Germany
Terna Rete Elettrica Nazionale	D - Electricity, gas, steam and air conditioning supply	3.4 %	Italy
Engie	M - Professional, scientific and technical activities	3.4 %	France
Merck	C - Manufacturing	3.3 %	Germany
Nokia	C - Manufacturing	3.3 %	Finland
VINCI	M - Professional, scientific and technical activities	3.3 %	France
ACCOR	M - Professional, scientific and technical activities	3.3 %	France
TotalEnergies	M - Professional, scientific and technical activities	3.3 %	France

Groupe Danone (C.R.)	M - Professional, scientific and technical activities	3.3 %	France
Henkel Pref.	C - Manufacturing	3.3 %	Germany
Compagnie de Saint-Gobain (C.R.)	M - Professional, scientific and technical activities	3.3 %	France

for the period from January 01, 2025, through December 30, 2025

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is:
for the period from January 01, 2025, through December 31, 2025

What was the proportion of sustainability-related investments?

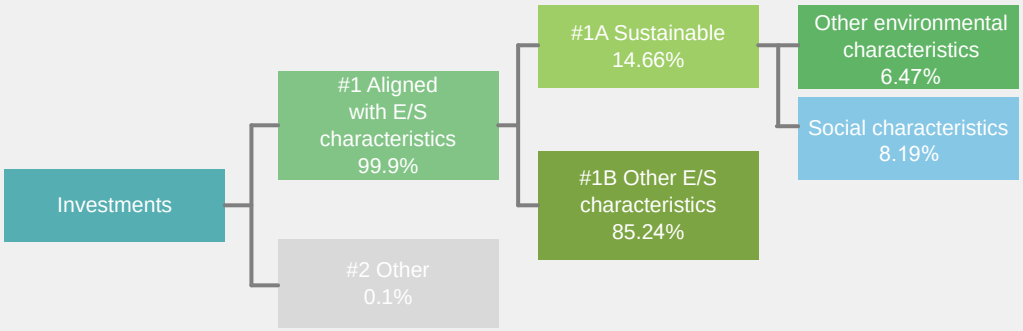
The proportion of sustainability-related investments as of the reporting date was 99.90% of portfolio assets.
Proportion of sustainability-related investments for the previous years:
30/12/2024: 99.84%
29/12/2023: 99.98%
30/12/2022: 100.00%

Asset allocation describes the share of investments in specific assets.

What was the asset allocation?

This sub-fund invested 99.9% of its net assets in investments that were aligned with the promoted environmental and social characteristics (#1 Aligned with E/S characteristics). Within this category, 14.66% of the sub-fund's net assets qualified as sustainable investments (#1A Sustainable). Thereof the share of sustainable investments with an environmental objective that was not compliant with the EU Taxonomy was 6.47% of the sub-fund's net assets and the share of socially sustainable investments was 8.19% of the sub-fund's net assets. The share of sustainable investments with an environmental objective that was not compliant with the EU Taxonomy and of socially sustainable investments depended on the market situation and the investable investment universe.

0.1% of the sub-fund's net assets have been invested in assets which were either out-of-scope of the ESG assessment methodology or for which ESG data coverage was incomplete (#2 Other) as further detailed in the section "What investments were included under "#2 Other", what was their purpose and were there any minimum environmental or social safeguards?".



#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:
- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

In which economic sectors were the investments made?

DWS Invest CROCI Euro

NACE-Code	Breakdown by sector according to NACE Codes	in % of portfolio volume
C	Manufacturing	29.7 %
D	Electricity, gas, steam and air conditioning supply	3.4 %
H	Transporting and storage	6.6 %
K	Financial and insurance activities	19.9 %
M	Professional, scientific and technical activities	36.3 %
NA	Other	4.1 %
Exposure to companies active in the fossil fuel sector		13.5 %

As of: December 30, 2025

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The sub-fund did not commit to invest a proportion of sustainable investments with an environmental objective aligned with the EU Taxonomy. Therefore, the promoted minimum percentage of environmentally sustainable investments aligned with the EU Taxonomy was 0% of the sub-fund's net assets. However, certain investments' underlying economic activities may have been aligned with the EU Taxonomy.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are economic activities for yet low-carbon alternatives are not yet available and that have greenhouse gas emission levels corresponding to the best performance.

Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy[1]?

☐ Yes:

☐ In fossil gas ☐ In nuclear energy

☒ No

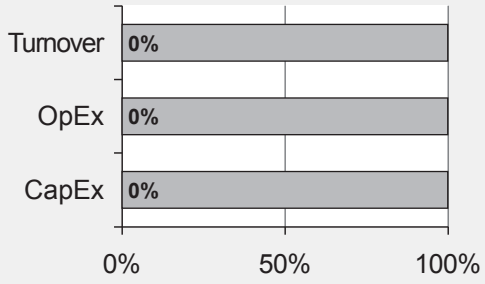
The sub-fund did not take into account the Taxonomy-alignment of companies active in the fossil gas and/or nuclear energy sectors.

[1] Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do no significant harm to any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Taxonomy-aligned activities are expressed as a share of:
- turnover reflecting the share of revenue from green activities of investee companies.
- capital expenditure (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- operational expenditure (OpEx) reflecting the green operational activities of investee companies.

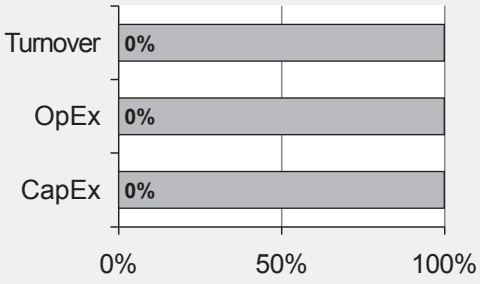
The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy-alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy-alignment only in relation to the investments of the financial product other than sovereign bonds.

1. Taxonomy-alignment of investments **including sovereign bonds***



Taxonomy-aligned: Fossil gas	0.00%
Taxonomy-aligned: Nuclear	0.00%
Taxonomy-aligned (no gas and nuclear)	0.00%
Taxonomy-aligned	0.00%
Non Taxonomy-aligned	100.00%

2. Taxonomy-alignment of investments **excluding sovereign bonds***



Taxonomy-aligned: Fossil gas	0.00%
Taxonomy-aligned: Nuclear	0.00%
Taxonomy-aligned (no gas and nuclear)	0.00%
Taxonomy-aligned	0.00%
Non Taxonomy-aligned	100.00%

This graph represents 100% of the total investments.

**For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures*

What was the share of investments made in transitional and enabling activities?

The sub-fund was not committed to a share of investments in transitional or enabling activities.

How did the percentage of investments that are aligned with the EU Taxonomy compare with previous reference periods?

The promoted proportion of environmentally sustainable investments in accordance with Regulation (EU) 2020/852 (Taxonomy Regulation) was 0% of the fund's assets in the current as well as previous reference periods. It may, however, have been the case that some sustainable investments were nevertheless aligned with an environmental objective of the Taxonomy Regulation.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the Regulation (EU) 2020/852.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The share of sustainable investments with an environmental objective that were not aligned with the EU Taxonomy was 6.47% of the sub-fund's net assets.

Shares of sustainable investments in previous reporting periods:

reporting period	sustainable investments (total)	with environmental objective	socially sustainable
30/12/2024	22.08%	12.85%	9.23%
29/12/2023	19.85%	10.05%	9.80%
30/12/2022	21.58%	--	--

What was the share of socially sustainable investments?

The share of socially sustainable investments was 8.19% of the sub-fund’s

net assets. Shares of sustainable investments in previous reporting periods:

reporting period	sustainable investments (total)	with environmental objective	socially sustainable
30/12/2024	22.08%	12.85%	9.23%
29/12/2023	19.85%	10.05%	9.80%
30/12/2022	21.58%	--	--

What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?

99.9% of this sub-fund´s net assets were aligned with the promoted environmental and social characteristics (#1 Aligned with E/S characteristics). 0.1% of the sub-fund's net assets were invested in assets which were either out-of-scope of the ESG assessment methodology or for which ESG data coverage was incomplete (#2 Other). Full ESG data coverage was required for the assessment of direct investments in companies in relation to good governance practices.

Assets under “#2 Other” could include all asset classes as foreseen in the specific investment policy, such as sight deposits with credit institutions and derivatives. These assets could include investments whose ESG assessment had deteriorated post-acquisition for a period of potentially up to three months.

These assets could be used by the portfolio management for performance, risk diversification, liquidity and hedging purposes.

Minimum environmental or social safeguards were not or only partially considered for the sub-fund´s investments falling within “#2 Other”.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

This sub-fund pursued a strategy based on equities as main investment strategy. At least 60% of the sub-fund's assets were invested in large cap Eurozone equities that were considered undervalued according to the CROCI methodology and the CROCI Euro investment strategy. At least 75% of the sub-fund's assets were invested in equities of issuers having their headquarters in a member state of the European Economic and Monetary Union (EMU).
Further details regarding the main investment strategy are specified in the Special Section of the Sales Prospectus.

At least 51% of the sub-fund's net assets were allocated to investments that met the promoted environmental and social characteristics as described in the following sections. The alignment of the portfolio with the binding elements of the investment strategy used to attain the promoted environmental and social characteristics was continuously controlled via the sub-fund's investment guidelines monitoring.

ESG assessment methodology

The sub-fund aimed to achieve the promoted environmental and social characteristics by assessing potential assets via an in-house ESG assessment methodology, regardless of their economic prospects for success, and by applying exclusion criteria based on this assessment.

The ESG assessment methodology was using a proprietary software tool which sourced data from one or several ESG data providers, public sources and/or internal assessments to derive overall assessments. The methodology applied to derive such overall assessments could have been based on different methods, such as prioritizing one data vendor, worst-of or averaging approach. Internal assessments may have taken into account factors such as an issuer's future expected ESG developments, plausibility of data with regard to past or future events, the willingness to engage in dialogue on ESG matters and/or ESG-related decisions of a company. Further, internal ESG assessments for investee companies may considered the relevance of the exclusion criteria for the market sector of the investee company.

The proprietary software tool used, amongst others, the approaches described below to evaluate the adherence to the promoted ESG characteristics and whether investee companies followed good governance practices. The assessment approaches included, for example, exclusions related to revenues generated from controversial sectors or the exposure to such controversial sectors. In some of the assessment approaches, issuers received one of six possible assessments, with "A" representing the best and “F” the worst assessment. If an issuer was excluded based on one assessment approach, the sub-fund was prohibited from investing in that issuer.

Given the periodical reconstitution of the sub-fund’s portfolio, the sub-fund may held an investment whose ESG assessment had deteriorated post its acquisition by the sub-fund management. While the sub-management ensured continued monitoring of the promoted environmental and social characteristics, the sub-fund’s portfolio may contained such deteriorated asset for a period of potentially up to three months.

Depending on the investable universe, the portfolio allocation and the exposure to certain sectors, the assessment approaches described below may have been more or less relevant which was reflected in the number of issuers being actually excluded.

• Norm Controversy Assessment

The Norm Controversy Assessment evaluated the behaviour of companies in relation to generally accepted international standards and principles of responsible business conduct within, amongst others, the framework of the principles of the United Nations Global Compact, the United Nations Guiding Principles, the standards of the International Labour Organization and the OECD Guidelines for Multinational Enterprises. Examples of topics covered within these standards and principles included, but were not limited to, human rights violations, violations of workers' rights, child or forced labour, negative environmental impacts and business ethics. The Norm Controversy Assessment evaluated reported violations of the aforementioned international standards. Companies with the worst Norm Controversy Assessment of "F" were excluded as an investment.

• Freedom House Status

Freedom House is an international non-governmental organization that classifies countries by their degree of political and civil liberties. Based on the Freedom House Status, countries that were classified as “not free” were excluded as an investment.

• Exposure to controversial sectors

Companies that were involved in certain business areas and business activities in controversial areas ("controversial sectors") were excluded according to their share of total revenues generated in such controversial sectors as followed:

a. Manufacturing and/or distribution of civil handguns or ammunition: 5% or more
b. Manufacturing of tobacco products: 5% or more
c. Mining of oil sand: 5% or more
d. Companies that derived 25% or more from thermal coal mining and thermal coal-based power generation as well as companies with thermal coal expansion plans, such as additional expansion of coal mining, coal production or coal usage. Companies with thermal coal expansion plans were excluded based on an internal identification methodology. In the event of exceptional circumstances, such as measured imposed by a government to address challenges in the energy sector, the Management Company may decide to temporarily suspend the application of the coal-related exclusions to individual companies/geographical regions.

• Exposure to controversial weapons

Companies were excluded if they were identified as being involved in the manufacturing or selling of controversial weapons or key components of controversial weapons (anti-personnel mines, cluster munitions, and/or chemical and biological weapons). In addition, the shareholdings within a group structure might have been taken into consideration for the exclusions.

• Use-of-Proceeds Bond Assessment

This assessment was specific to the nature of this instrument and an investment in use-of-proceeds bonds was permitted only if the following criteria were met. Firstly, all use-of-proceeds bonds were checked for compliance with the Climate Bonds Standards, similar industry standards for green bonds, social bonds or sustainability bonds (such as ICMA Principles) or the EU Green Bond Standard or whether bonds have been subject to an independent review. Secondly, certain ESG criteria were applied in relation to the issuer of the bonds which could lead to the exclusion of issuers and their bonds as an investment.

• Target Fund Assessment

Target funds were evaluated in relation to the underlying companies and were eligible if these companies were aligned with the criteria of the Norm Controversy Assessment and the exposure to controversial weapons (anti-personnel mines, cluster munitions, and/or chemical weapons and biological weapons). Investment in companies with the worst Norm Controversy Assessment of "F" was permitted up to a determined threshold. Considering the tolerance threshold, diversity of data vendors and methodologies, the available data coverage as well as the target fund portfolio rebalancing, this sub-fund may have been indirectly exposed to certain assets that would be excluded if invested directly or for which data coverage was limited or not available.

Sustainability Investment Assessment

Further, for the proportion of sustainable investments, DWS measured the contribution to one or several UN SDGs and/or to other environmental sustainable objectives via its Sustainability Investment Assessment which evaluated potential investments in relation to different criteria to conclude whether an investment could have been considered as sustainable as further detailed in the section "What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?".

The applied ESG investment strategy did not pursue a committed minimum reduction of the scope of the investments.

The assessment of the good governance practices of the investee companies (including assessments related to sound management structures, employee relations, remuneration of staff and tax compliance) was part of the Norm Controversy Assessment which evaluated a company's behavior within generally accepted international standards and principles of responsible business conduct. Companies with the worst Norm Controversy Assessment of "F" were excluded as an investment.

How did this financial product perform compared to the reference sustainable benchmark?

This sub-fund had not designated a reference benchmark to determine whether it was aligned with the environmental and social characteristics that it promoted.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Periodic disclosure for financial products referred to in Article 8, paragraph 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

Product name: DWS Invest CROCI Global Dividends

Legal entity identifier: 549300ACRXW8VM9MW354

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

Yes	No
☐ it made **sustainable investments with an environmental objective:** ___%	☐ It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of ___% of sustainable investments.
☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy	☐ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	☐ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
	☐ with a social objective
☐ It made **sustainable investments with a social objective:** ___%	☒ It promoted E/S characteristics, but did **not make any sustainable investments**

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities.** That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

To what extent were the environmental and/or social characteristics promoted by this financial product met?

This sub-fund promoted environmental and social characteristics related to a general consideration of ESG criteria by excluding, for example, investments in companies with the worst norm-related issues towards international standards and/or investments in companies whose involvement in controversial sectors exceeded predefined revenue thresholds.

This sub-fund had not designated a reference benchmark for the purpose of attaining the environmental and social characteristics promoted.

No derivatives were used to attain the environmental or social characteristics promoted by the sub-fund.

How did the sustainability indicators perform?

The attainment of the promoted environmental and social characteristics was assessed via the application of an in-house ESG assessment methodology and ESG specific exclusion thresholds as further described in the section "What actions have been taken to meet the environmental and/or social characteristics during the reference period?". The methodology applied different assessment approaches that were used as sustainability indicators which were:

• **Norm Controversy Assessment** used as an indicator for a company's exposure to norm-related issues towards international standards.
Performance: No investments in suboptimal assets

• **Freedom House Status** used as an indicator for the political and civil liberties of a country.
Performance: No investments in suboptimal assets

• **Exposure to controversial sectors** used as an indicator for a company's involvement in controversial sectors.
Performance: 0%

• **Exposure to controversial weapons** used as an indicator for a company's involvement in controversial weapons.
Performance: 0%

Please see the section entitled “What actions have been taken to meet the environmental and/or social characteristics during the reference period?” for a description of the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted, including the exclusion criteria, and the assessment methodology for determining whether and to what extent assets met the defined environmental and/or social characteristics (including the turnover thresholds defined for the xclusions). This section contains further information on the sustainability indicators. The values from the DWS front office system are used to calculate the sustainability indicators. This means that there may be minor deviations from the other market values that appear in the annual report, which are derived from the fund accounting system.

…and compared to previous periods?

Attainment of the promoted environmental and social characteristics at portfolio level was measured in the previous years on the basis of the following sustainability indicators:

DWS Invest CROCI Global Dividends

Indicators Performance	30/12/2024	29/12/2023	30/12/2022

The disclosure of the sustainability indicators has been revised compared with the prior-year report. The assessment methodology is unchanged. Additional information on the currently valid sustainability indicators is provided in the section entitled “What actions have been taken to meet the environmental and/or social characteristics during the reference period?”.
Information about taking into account the principal adverse impacts on sustainability factors is provided in the section entitled “How did this financial product consider principal adverse impacts on sustainability factors?”

DWS ESG-Assessment Scale

In the following assessment categories, the assets received one of six possible scores, with "A" being the best score and "F" being the worst score.

Criteria	Involvement in controversial sectors *(1)	Involvement in controversial weapons	Norm Assessment *(6)	ESG Quality Assessment	SDG- Assessment	Climat & Transition Risk Assessment
A	Non-involvement	Confirmed non-involvement	Confirmed no issues	True leader in ESG (>= 87.5 DWS ESG score)	True SDG contributor (>= 87.5 SDG score)	True climate leader (>= 87.5 score)
B	Remote involvement	Alleged	Violations of lesser degree	ESG leader (75-87.5 DWS ESG score)	SDG contributor (75-87.5 SDG score)	Climate solution provider(75-87.5 score)
C	0% - 5%	Dual-Purpose *(2)	Violations of lesser degree	ESG upper midfield (50-75 DWS ESG score)	SDG upper midfield (50-75 SDG score)	Low transition risk (50-75 score)
D	5% - 10% (coal: 5% - 10%	Owning *(3)/ Owned *(4)	Violation of lesser degree	ESG lower midfield (25-50 DWS ESG score)	SDG lower midfield (25-50 SDG score)	Mod. transition risk (25-50 score)
E	10% - 25% (coal: 15% - 25%)	Component Producer *(5)	High severity or re-assessed highest violation *(7)	ESG laggard (12.5-25 DWS ESG score)	SDG obstructer (12.5-25 SDG score)	High transition risk (12.5-25 score)
F	>= 25%	Weapon producer	Highest severity / global compact violation *(8)	True laggard in ESG (0-12.5 DWS ESG score)	Significant SDG obstructer (0-12.5 SDG score)	Excessive transition risk (0-12.5 score)

*(1) Revenue share thresholds as per standard scheme. Sub-Granularity available. Thresholds can be individually set.

*(2) Encompasses e.g.. weapon-carrying systems such as combat aircraft that carry non-controversial weapons as well as controversial ones.

*(3) Owning more than 20% equity.

*(4) Being owned by more than 50% of company involved in grade E or F.

*(5) Single purpose key component.

*(6) Includes ILO controversies as well as corporate governance and product issues.

*(7) In its ongoing assessment, DWS takes into account the violation(s) of international standards – observed via data from ESG data vendors – such as the UN Global Compact, but also possible ESG data vendor errors identified, future expected developments of these violations as well as the willingness of the issuer to engage in dialogue regarding corporate decisions in this regard.

*(8) An F-grade can be considered a reconfirmed violation of the United Nations Global Compact rule framework for corporate behavior.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union Criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU Criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU Criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

How did this financial product consider principal adverse impacts on sustainability factors?

The sub-fund considered the following principal adverse impacts on sustainability factors from Annex I of the Commission Delegated Regulation (EU) 2022/1288 supplementing the SFDR:

• Exposure to companies active in the fossil fuel sector (no. 4);

• Violations of the United Nations Global Compact principles and OECD Guidelines for Multinational Enterprises (no. 10); and

• Exposure to controversial weapons (no. 14).

DWS Invest CROCI Global Dividends

Indicators	Description	Performance
Principal Adverse Impact		
PAII - 04. Exposure to companies active in the fossil fuel sector	Share of investments in companies active in the fossil fuel sector	12.06 % of assets
PAII - 10. Violations of UNGC principles and OECD Guidelines for Multinational Enterprises	Share of investments in investee companies that have been involved in violations of the UNGC principles or OECD Guidelines for Multinational Enterprises	0 % of assets
PAII - 14. Exposure to controversial weapons	Share of investments in investee companies involved in the manufacture or selling of controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)	0 % of assets

As of: December 30, 2025

The Principal Adverse Impact Indicators (PAIIs) are calculated on the basis of the data in the DWS back office and front office systems, which are primarily based on the data of external ESG data providers. If there is no data on individual PAIIs for individual securities or their issuers, either because no data is available or the PAII is not applicable to the particular issuer or security, these securities or issuers are not included in the calculation of the PAII. With target fund investments, a look-through of the target fund holdings is performed if appropriate data is available. The calculation method for the individual PAI indicators may change in subsequent reporting periods due to evolving market standards, a change in the treatment of securities of certain types of instruments (such as derivatives) or as a result of regulatory clarifications.
Moreover, improved data availability may have an effect on the reported PAIIs in subsequent reporting periods.
The values from the DWS front office system are used to calculate the PAIIs. This means that there may be minor deviations from the other market values that appear in the annual report, which are derived from the fund accounting system.

What were the top investments of this financial product?

DWS Invest CROCI Global Dividends

Largest investments	Breakdown by sector according to NACE Codes	in % of average portfolio volume	Breakdown by country
Shionogi & Co.	C - Manufacturing	2.1 %	Japan
Takeda Pharmaceutical Co.	C - Manufacturing	2.1 %	Japan
Gsk	C - Manufacturing	2.1 %	United Kingdom

for the period from January 01, 2025, through December 30, 2025

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is:
for the period from January 01, 2025, through December 31, 2025

What was the proportion of sustainability-related investments?

The proportion of sustainability-related investments as of the reporting date was 99.88% of portfolio assets.
Proportion of sustainability-related investments for the previous years:
30/12/2024: 99.96%
29/12/2023: 99.94%
30/12/2022: 100.00%

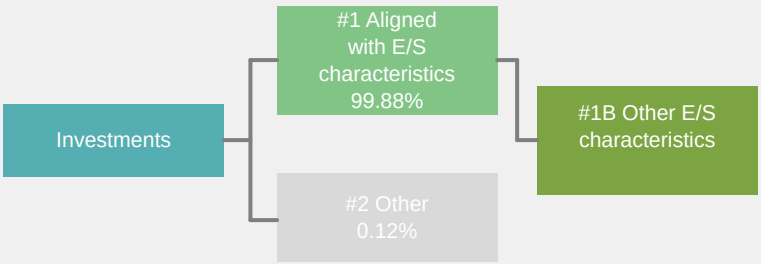
Asset allocation describes the share of investments in specific assets.

What was the asset allocation?

This sub-fund invested 99.88% of its net assets in investments that were aligned with the promoted environmental and social characteristics (#1 Aligned with E/S characteristics).

0.12% of the sub-fund's net assets have been invested in assets which were either out-of-scope of the ESG assessment methodology or for which ESG data coverage was incomplete (#2 Other) as further detailed in the section "What investments were included under "#2 Other", what was their purpose and were there any minimum environmental or social safeguards?".

A more detailed description of the specific asset allocation of this sub-fund can be found in the Special Section of the Sales Prospectus.



#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

In which economic sectors were the investments made?

DWS Invest CROCI Global Dividends

NACE-Code	Breakdown by sector according to NACE Codes	in % of portfolio volume
B	Mining and quarrying	10.2 %
C	Manufacturing	63.1 %
D	Electricity, gas, steam and air conditioning supply	2.0 %
G	Wholesale and retail trade; repair of motor vehicles and motorcycles	2.1 %
H	Transporting and storage	2.1 %
K	Financial and insurance activities	0.0 %
M	Professional, scientific and technical activities	20.0 %
NA	Other	0.5 %
Exposure to companies active in the fossil fuel sector		12.1 %

As of: December 30, 2025

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The sub-fund did not commit to invest a proportion of sustainable investments with an environmental objective aligned with the EU Taxonomy. Therefore, the promoted minimum percentage of environmentally sustainable investments aligned with the EU Taxonomy was 0% of the sub-fund's net assets. However, certain investments' underlying economic activities may have been aligned with the EU Taxonomy.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are economic activities for yet low-carbon alternatives are not yet available and that have greenhouse gas emission levels corresponding to the best performance.

Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy[1]?

☐ Yes:

☐ In fossil gas ☐ In nuclear energy

☒ No

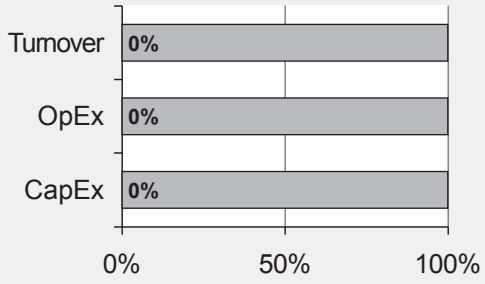
The sub-fund did not take into account the Taxonomy-alignment of companies active in the fossil gas and/or nuclear energy sectors.

[1] Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do no significant harm to any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Taxonomy-aligned activities are expressed as a share of:
- turnover reflecting the share of revenue from green activities of investee companies.
- capital expenditure (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- operational expenditure (OpEx) reflecting the green operational activities of investee companies.

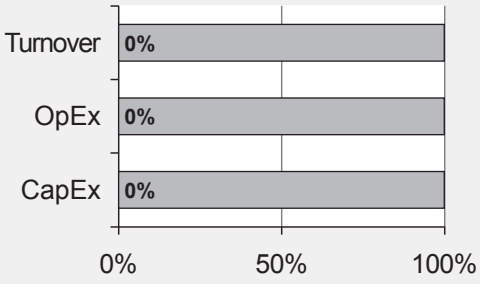
The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy-alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy-alignment only in relation to the investments of the financial product other than sovereign bonds.

1. Taxonomy-alignment of investments **including sovereign bonds***



Taxonomy-aligned: Fossil gas	0.00%
Taxonomy-aligned: Nuclear	0.00%
Taxonomy-aligned (no gas and nuclear)	0.00%
Taxonomy-aligned	0.00%
Non Taxonomy-aligned	100.00%

2. Taxonomy-alignment of investments **excluding sovereign bonds***



Taxonomy-aligned: Fossil gas	0.00%
Taxonomy-aligned: Nuclear	0.00%
Taxonomy-aligned (no gas and nuclear)	0.00%
Taxonomy-aligned	0.00%
Non Taxonomy-aligned	100.00%

This graph represents 100% of the total investments.

**For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures*

What was the share of investments made in transitional and enabling activities?

The sub-fund was not committed to a share of investments in transitional or enabling activities.

How did the percentage of investments that are aligned with the EU Taxonomy compare with previous reference periods?

The promoted proportion of environmentally sustainable investments in accordance with Regulation (EU) 2020/852 (Taxonomy Regulation) was 0% of the fund's assets in the current as well as previous reference periods. It may, however, have been the case that some sustainable investments were nevertheless aligned with an environmental objective of the Taxonomy Regulation.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the Regulation (EU) 2020/852.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The Sub-Fund did not commit to a minimum proportion of investments in transitional and enabling activities in this period or in previous periods.

In the 2022 reporting period, the Sub-Fund set a ratio for environmentally and socially sustainable investments. The share of sustainable investments not segregated according to ecological and social factors totalled 22.72% in 2022.

What was the share of socially sustainable investments?

The Sub-Fund did not commit to a minimum proportion of investments in transitional and enabling activities in this period or in previous periods.

In the 2022 reporting period, the Sub-Fund set a ratio for environmentally and socially sustainable investments. The share of sustainable investments not segregated according to ecological and social factors totalled 22.72% in 2022.

What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?

99.88% of this sub-fund´s net assets were aligned with the promoted environmental and social characteristics (#1 Aligned with E/S characteristics). 0.12% of the sub-fund's net assets were invested in assets which were either out-of-scope of the ESG assessment methodology or for which ESG data coverage was incomplete (#2 Other). Full ESG data coverage was required for the assessment of direct investments in companies in relation to good governance practices.

Assets under “#2 Other” could include all asset classes as foreseen in the specific investment policy, such as sight deposits with credit institutions and derivatives. These assets could include investments whose ESG assessment had deteriorated post-acquisition for a period of potentially up to three months.

These assets could be used by the portfolio management for performance, risk diversification, liquidity and hedging purposes.

Minimum environmental or social safeguards were not or only partially considered for the sub-fund´s investments falling within “#2 Other”.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

This sub-fund pursued a strategy based on equities as main investment strategy. The sub-fund's assets were predominantly in large cap developed market global equities that were considered undervalued and offered comparatively high and sustainable dividend yield according to the CROCI methodology and the CROCI Global Dividends investment strategy.
Further details regarding the main investment strategy are specified in the Special Section of the Sales Prospectus.

99.88% of the sub-fund's net assets were allocated to investments that met the promoted environmental and social characteristics as described in the following sections. The alignment of the portfolio with the binding elements of the investment strategy used to attain the promoted environmental and social characteristics was continuously controlled via the sub-fund's investment guidelines monitoring.

ESG assessment methodology

The sub-fund aimed to achieve the promoted environmental and social characteristics by assessing potential assets via an in-house ESG assessment methodology, regardless of their economic prospects for success, and by applying exclusion criteria based on this assessment.

The ESG assessment methodology was using a proprietary software tool which sourced data from one or several ESG data providers, public sources and/or internal assessments to derive overall assessments. The methodology applied to derive such overall assessments could be based on different methods, such as prioritizing one data vendor, worst-of or averaging approach. Internal assessments may have taken into account factors such as an issuer's future expected ESG developments, plausibility of data with regard to past or future events, the willingness to engage in dialogue on ESG matters and/or ESG-related decisions of a company. Further, internal ESG assessments for investee companies may considered the relevance of the exclusion criteria for the market sector of the investee company.

The proprietary software tool used, amongst others, the approaches described below to evaluate the adherence to the promoted ESG characteristics and whether investee companies followed good governance practices. The assessment approaches included, for example, exclusions related to revenues generated from controversial sectors or the exposure to such controversial sectors. In some of the assessment approaches, issuers received one of six possible assessments, with "A" representing the best and "F" the worst assessment. If an issuer was excluded based on one assessment approach, the sub-fund is prohibited from investing in that issuer.

Given the periodical reconstitution of the sub-fund's portfolio, the sub-fund may held an investment whose ESG assessment had deteriorated post its acquisition by the sub-fund management. While the sub-management ensured continued monitoring of the promoted environmental and social characteristics, the sub-fund's portfolio may contained such deteriorated asset for a period of potentially up to three months.

Depending on the investable universe, the portfolio allocation and the exposure to certain sectors, the assessment approaches described below may have been more or less relevant which was reflected in the number of issuers being actually excluded.

• Norm Controversy Assessment

The Norm Controversy Assessment evaluated the behaviour of companies in relation to generally accepted international standards and principles of responsible business conduct within, amongst others, the framework of the principles of the United Nations Global Compact, the United Nations Guiding Principles, the standards of the International Labour Organization and the OECD Guidelines for Multinational Enterprises. Examples of topics covered within these standards and principles included, but were not limited to , human rights violations, violations of workers' rights, child or forced labour, negative environmental impacts and business ethics. The Norm Controversy Assessment evaluates reported violations of the aforementioned international standards. Companies with the worst Norm Controversy Assessment of "F" were excluded as an investment.

• Freedom House Status

Freedom House is an international non-governmental organization that classifies countries by their degree of political and civil liberties. Based on the Freedom House Status, countries that were classified as “not free” were excluded as an investment.

• Exposure to controversial sectors

Companies that were involved in certain business areas and business activities in controversial areas ("controversial sectors") were excluded according to their share of total revenues generated in such controversial sectors as followed:

a. Manufacturing and/or distribution of civil handguns or ammunition: 5% or more
b. Manufacturing of tobacco products: 5% or more
c. Mining of oil sand: 5% or more
d. Companies that derived 25% or more from thermal coal mining and thermal coal-based power generation as well as companies with thermal coal expansion plans, such as additional expansion of coal mining, coal production or coal usage. Companies with thermal coal expansion plans were excluded based on an internal identification methodology. In the event of exceptional circumstances, such as measured imposed by a government to address challenges in the energy sector, the Management Company may decide to temporarily suspend the application of the coal-related exclusions to individual companies/geographical regions.

• Exposure to controversial weapons

Companies were excluded if they were identified as being involved in the manufacturing or selling of controversial weapons or key components of controversial weapons (anti-personnel mines, cluster munitions, and/or chemical and biological weapons). In addition, the shareholdings within a group structure might have been taken into consideration for the exclusions.

• Use-of-Proceeds Bond Assessment

This assessment was specific to the nature of this instrument and an investment in use-of-proceeds bonds was permitted only if the following criteria were met. Firstly, all use-of-proceeds bonds were checked for compliance with the Climate Bonds Standards, similar industry standards for green bonds, social bonds or sustainability bonds (such as ICMA Principles) or the EU Green Bond Standard or whether bonds have been subject to an independent review. Secondly, certain ESG criteria were applied in relation to the issuer of the bonds which could lead to the exclusion of issuers and their bonds as an investment.

• Target Fund Assessment

Target funds were evaluated in relation to the underlying companies and were eligible if these companies were aligned with the criteria of the Norm Controversy Assessment and the exposure to controversial weapons (anti-personnel mines, cluster munitions, and/or chemical weapons and biological weapons). Investment in companies with the worst Norm Controversy Assessment of "F" was permitted up to a determined threshold. Considering the tolerance threshold, diversity of data vendors and methodologies, the available data coverage as well as the target fund portfolio rebalancing, this sub-fund may have been indirectly exposed to certain assets that would be excluded if invested directly or for which data coverage was limited or not available.

The applied ESG investment strategy did not pursue a committed minimum reduction of the scope of the investments.

The assessment of the good governance practices of the investee companies (including assessments related to sound management structures, employee relations, remuneration of staff and tax compliance) was part of the Norm Controversy Assessment which evaluated a company's behavior within generally accepted international standards and principles of responsible business conduct. Companies with the worst Norm Controversy Assessment of "F" were excluded as an investment.

How did this financial product perform compared to the reference sustainable benchmark?

This sub-fund had not designated a reference benchmark to determine whether it was aligned with the environmental and social characteristics that it promoted.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Periodic disclosure for financial products referred to in Article 8, paragraph 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

Product name: DWS Invest CROCI Japan

Legal entity identifier: 549300ZET7UNS8RIVP43

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

Yes	No
☐ it made **sustainable investments with an environmental objective:** ___%	☒ It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of 30.16% of sustainable investments.
☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy	☐ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
	☒ with a social objective
☐ It made **sustainable investments with a social objective:** ___%	☐ It promoted E/S characteristics, but did **not make any sustainable investments**

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities.** That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

To what extent were the environmental and/or social characteristics promoted by this financial product met?

This sub-fund promoted environmental and social characteristics related to a general consideration of ESG criteria by excluding, for example, investments in companies with the worst norm-related issues towards international standards and/or investments in companies whose involvement in controversial sectors exceeded predefined revenue thresholds.

Further, this sub-fund promoted a proportion of sustainable investments in accordance with article 2(17) of the regulation on sustainability-related disclosures in the financial services sector (SFDR).

This sub-fund had not designated a reference benchmark for the purpose of attaining the environmental and social characteristics promoted.

No derivatives were used to attain the environmental or social characteristics promoted by the sub-fund.

How did the sustainability indicators perform?

The attainment of the promoted environmental and social characteristics as well as the sustainable investment was assessed via the application of an in-house ESG assessment methodology and ESG specific exclusion thresholds as further described in the section "What actions have been taken to meet the environmental and/or social characteristics during the reference period?". The methodology applied different assessment approaches that were used as sustainability indicators which were:

• **Norm Controversy Assessment** used as an indicator for a company's exposure to norm-related issues towards international standards.
Performance: No investments in suboptimal assets

• **Freedom House Status** used as an indicator for the political and civil liberties of a country.
Performance: No investments in suboptimal assets

• **Exposure to controversial sectors** used as an indicator for a company's involvement in controversial sectors.
Performance: 0%

• **Exposure to controversial weapons** used as an indicator for a company's involvement in controversial weapons.
Performance: 0%

• **Sustainability Investment Assessment** used as an indicator to measure the proportion of sustainable investments pursuant to article 2(17) SFDR.
Performance: 30.16%

Please see the section entitled “What actions have been taken to meet the environmental and/or social characteristics during the reference period?” for a description of the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted, including the exclusion criteria, and the assessment methodology for determining whether and to what extent assets met the defined environmental and/or social characteristics (including the turnover thresholds defined for the xclusions). This section contains further information on the sustainability indicators. The values from the DWS front office system are used to calculate the sustainability indicators. This means that there may be minor deviations from the other market values that appear in the annual report, which are derived from the fund accounting system.

…and compared to previous periods?

Attainment of the promoted environmental and social characteristics at portfolio level was measured in the previous years on the basis of the following sustainability indicators:

DWS Invest CROCI Japan

Indicators Performance	30/12/2024	29/12/2023	30/12/2022

The disclosure of the sustainability indicators has been revised compared with the prior-year report. The assessment methodology is unchanged. Additional information on the currently valid sustainability indicators is provided in the section entitled “What actions have been taken to meet the environmental and/or social characteristics during the reference period?”.
Information about taking into account the principal adverse impacts on sustainability factors is provided in the section entitled “How did this financial product consider principal adverse impacts on sustainability factors?”

DWS ESG-Assessment Scale

In the following assessment categories, the assets received one of six possible scores, with "A" being the best score and "F" being the worst score.

Criteria	Involvement in controversial sectors *(1)	Involvement in controversial weapons	Norm Assessment *(6)	ESG Quality Assessment	SDG- Assessment	Climat & Transition Risk Assessment
A	Non-involvement	Confirmed non-involvement	Confirmed no issues	True leader in ESG (>= 87.5 DWS ESG score)	True SDG contributor (>= 87.5 SDG score)	True climate leader (>= 87.5 score)
B	Remote involvement	Alleged	Violations of lesser degree	ESG leader (75-87.5 DWS ESG score)	SDG contributor (75-87.5 SDG score)	Climate solution provider(75-87.5 score)
C	0% - 5%	Dual-Purpose *(2)	Violations of lesser degree	ESG upper midfield (50-75 DWS ESG score)	SDG upper midfield (50-75 SDG score)	Low transition risk (50-75 score)
D	5% - 10% (coal: 5% - 10%)	Owning *(3)/ Owned *(4)	Violation of lesser degree	ESG lower midfield (25-50 DWS ESG score)	SDG lower midfield (25-50 SDG score)	Mod. transition risk (25-50 score)
E	10% - 25% (coal: 15% - 25%)	Component Producer *(5)	High severity or re-assessed highest violation *(7)	ESG laggard (12.5-25 DWS ESG score)	SDG obstructer (12.5-25 SDG score)	High transition risk (12.5-25 score)
F	>= 25%	Weapon producer	Highest severity / global compact violation *(8)	True laggard in ESG (0-12.5 DWS ESG score)	Significant SDG obstructer (0-12.5 SDG score)	Excessive transition risk (0-12.5 score)

*(1) Revenue share thresholds as per standard scheme. Sub-Granularity available. Thresholds can be individually set.

*(2) Encompasses e.g.. weapon-carrying systems such as combat aircraft that carry non-controversial weapons as well as controversial ones.

*(3) Owning more than 20% equity.

*(4) Being owned by more than 50% of company involved in grade E or F.

*(5) Single purpose key component.

*(6) Includes ILO controversies as well as corporate governance and product issues.

*(7) In its ongoing assessment, DWS takes into account the violation(s) of international standards – observed via data from ESG data vendors – such as the UN Global Compact, but also possible ESG data vendor errors identified, future expected developments of these violations as well as the willingness of the issuer to engage in dialogue regarding corporate decisions in this regard.

*(8) An F-grade can be considered a reconfirmed violation of the United Nations Global Compact rule framework for corporate behavior.

What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?

Sustainable investments contributed to at least one of the Sustainable Development Goals of the United Nations (UN SDGs) that relate to environmental and/or social objectives, such as good health and well-being or climate action and/or to at least one other environmental objective such as climate change adaption or climate change mitigation (as defined under the EU Taxonomy).

The extent of the contribution to individual sustainable investment objectives varied depending on the actual investments held in the portfolio.

DWS determined the contribution to a sustainable investment objective based on its Sustainability Investment Assessment which used data from one or several data providers, public sources and/or internal assessments. An investment's positive contribution to an environmental and/or social objective was assessed based on the revenues which a company generated from the actual economic activities making such contribution (activity-based approach). Where a positive contribution was determined, the investment was considered sustainable if the issuer passed the Do No significant Harm ("DNSH") assessment and the company followed good governance practices.

The share of sustainable investments in the portfolio as defined in article 2(17) SFDR was therefore calculated in proportion to the economic activities of the issuers that were considered as sustainable (activity-based approach). Notwithstanding the preceding, in the case of use-of-proceeds bonds that were considered as sustainable investment, the value of the entire bond was counted towards the portfolio's share of sustainable investments.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

The sustainable investments in which the sub-fund invested were assessed to ensure they did not cause significant harm to any environmental or social sustainable investment objective. This was achieved by taking into account the indicators for principal adverse impacts on sustainability factors (dependent on relevance) as described below. If a significant harm was identified, the investment could not have been considered sustainable.

How were the indicators for adverse impacts on sustainability factors taken into account?

The Sustainability Investment Assessment systematically integrated the mandatory principal adverse indicators on sustainability factors (dependent on relevance) from Table 1 and relevant indicators from Tables 2 and 3 of Annex I of the Commission Delegated Regulation (EU) 2022/1288 supplementing the SFDR. Taking into account these principal adverse impacts, DWS had established quantitative thresholds and/or qualitative values to assess a significant harm on any of the environmental or social sustainable investment objectives. These values were set based upon various external and internal factors, such as data availability or market developments and may have been adapted going forward.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The alignment of sustainable investments with, amongst others, the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights was evaluated through the Norm Controversy Assessment (as further described below). Companies with the worst Norm Controversy Assessment of “F” were excluded as an investment.

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union Criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU Criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU Criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

How did this financial product consider principal adverse impacts on sustainability factors?

The sub-fund considered the following principal adverse impacts on sustainability factors from Annex I of the Commission Delegated Regulation (EU) 2022/1288 supplementing the SFDR:

• Exposure to companies active in the fossil fuel sector (no. 4);

• Violations of the United Nations Global Compact principles and OECD Guidelines for Multinational Enterprises (no. 10); and

• Exposure to controversial weapons (no. 14).

DWS Invest CROCI Japan

Indicators	Description	Performance
Principal Adverse Impact		
PAII - 04. Exposure to companies active in the fossil fuel sector	Share of investments in companies active in the fossil fuel sector	10.09 % of assets
PAII - 10. Violations of UNGC principles and OECD Guidelines for Multinational Enterprises	Share of investments in investee companies that have been involved in violations of the UNGC principles or OECD Guidelines for Multinational Enterprises	0 % of assets
PAII - 14. Exposure to controversial weapons	Share of investments in investee companies involved in the manufacture or selling of controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)	0 % of assets

As of: December 30, 2025

The Principal Adverse Impact Indicators (PAIIs) are calculated on the basis of the data in the DWS back office and front office systems, which are primarily based on the data of external ESG data providers. If there is no data on individual PAIIs for individual securities or their issuers, either because no data is available or the PAII is not applicable to the particular issuer or security, these securities or issuers are not included in the calculation of the PAII. With target fund investments, a look-through of the target fund holdings is performed if appropriate data is available. The calculation method for the individual PAI indicators may change in subsequent reporting periods due to evolving market standards, a change in the treatment of securities of certain types of instruments (such as derivatives) or as a result of regulatory clarifications.
Moreover, improved data availability may have an effect on the reported PAIIs in subsequent reporting periods.
The values from the DWS front office system are used to calculate the PAIIs. This means that there may be minor deviations from the other market values that appear in the annual report, which are derived from the fund accounting system.

What were the top investments of this financial product?

DWS Invest CROCI Japan

Largest investments	Breakdown by sector according to NACE Codes	in % of average portfolio volume	Breakdown by country
Osaka Gas Co.	D - Electricity, gas, steam and air conditioning supply	3.4 %	Japan
Suzuki Motor Corp.	C - Manufacturing	3.4 %	Japan
Nitto Denko Corp.	C - Manufacturing	3.3 %	Japan
Shin-Etsu Chemical Co.	C - Manufacturing	3.3 %	Japan
Shionogi & Co.	C - Manufacturing	3.3 %	Japan
Sekisui House	F - Construction	3.3 %	Japan
Komatsu	C - Manufacturing	3.3 %	Japan
Takeda Pharmaceutical Co.	C - Manufacturing	3.3 %	Japan
Kansai Electric Power Co.	D - Electricity, gas, steam and air conditioning supply	3.3 %	Japan
Mitsui O.S.K. Lines	H - Transporting and storage	3.3 %	Japan

Secom Co.	N - Administrative and support service activities	3.2 %	Japan
Daikin Industries	C - Manufacturing	3.2 %	Japan

for the period from January 01, 2025, through December 30, 2025

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is:
for the period from January 01, 2025, through December 31, 2025

What was the proportion of sustainability-related investments?

The proportion of sustainability-related investments as of the reporting date was 99.88% of portfolio assets.
Proportion of sustainability-related investments for the previous years:
30/12/2024: 100.00 %
29/12/2023: 99.99 %
30/12/2022: 100.00 %

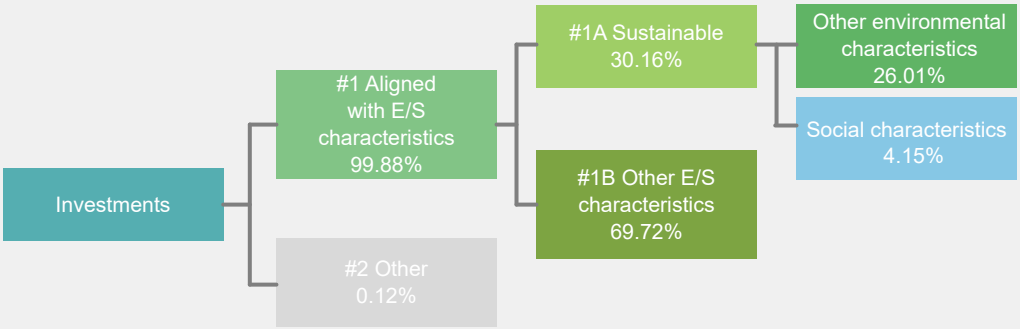
Asset allocation describes the share of investments in specific assets.

What was the asset allocation?

This sub-fund invested 99.88% of its net assets in investments that were aligned with the promoted environmental and social characteristics (#1 Aligned with E/S characteristics). Within this category, 30.16% of the sub-fund's net assets qualified as sustainable investments (#1A Sustainable). Thereof the share of sustainable investments with an environmental objective that was not compliant with the EU Taxonomy was 4.15% of the sub-fund's net assets and the share of socially sustainable investments was 26.01% of the sub-fund's net assets. The share of sustainable investments with an environmental objective that was not compliant with the EU Taxonomy and of socially sustainable investments depended on the market situation and the investable investment universe.

0.12% of the sub-fund's net assets have been invested in assets which were either out-of-scope of the ESG assessment methodology or for which ESG data coverage was incomplete (#2 Other) as further detailed in the section "What investments were included under "#2 Other", what was their purpose and were there any minimum environmental or social safeguards?".

A more detailed description of the specific asset allocation of this sub-fund can be found in the Special Section of the Sales Prospectus.



#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:
- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

In which economic sectors were the investments made?

DWS Invest CROCI Japan

NACE-Code	Breakdown by sector according to NACE Codes	in % of portfolio volume
C	Manufacturing	58.9 %
D	Electricity, gas, steam and air conditioning supply	6.6 %
F	Construction	3.3 %
H	Transporting and storage	10.0 %
K	Financial and insurance activities	13.3 %
M	Professional, scientific and technical activities	3.3 %
N	Administrative and support service activities	3.3 %
NA	Other	1.3 %
Exposure to companies active in the fossil fuel sector		10.1 %

As of: December 30, 2025

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The sub-fund did not commit to invest a proportion of sustainable investments with an environmental objective aligned with the EU Taxonomy. Therefore, the promoted minimum percentage of environmentally sustainable investments aligned with the EU Taxonomy was 0% of the sub-fund's net assets. However, certain investments' underlying economic activities may have been aligned with the EU Taxonomy.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are economic activities for yet low-carbon alternatives are not yet available and that have greenhouse gas emission levels corresponding to the best performance.

Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy[1]?

☐ Yes:

☐ In fossil gas ☐ In nuclear energy

☒ No

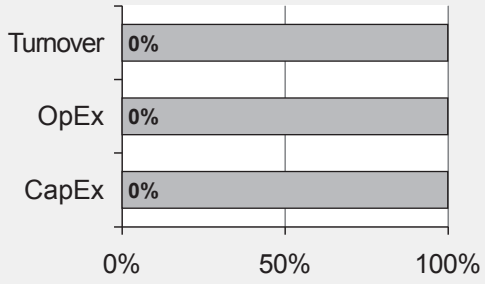
The sub-fund did not take into account the Taxonomy-alignment of companies active in the fossil gas and/or nuclear energy sectors.

[1] Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do no significant harm to any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Taxonomy-aligned activities are expressed as a share of:
- turnover reflecting the share of revenue from green activities of investee companies.
- capital expenditure (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- operational expenditure (OpEx) reflecting the green operational activities of investee companies.

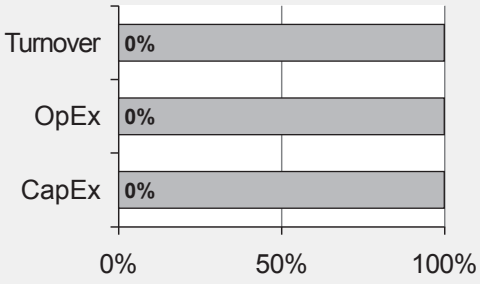
The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy-alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy-alignment only in relation to the investments of the financial product other than sovereign bonds.

1. Taxonomy-alignment of investments **including sovereign bonds***



Taxonomy-aligned: Fossil gas	0.00%
Taxonomy-aligned: Nuclear	0.00%
Taxonomy-aligned (no gas and nuclear)	0.00%
Taxonomy-aligned	0.00%
Non Taxonomy-aligned	100.00%

2. Taxonomy-alignment of investments **excluding sovereign bonds***



Taxonomy-aligned: Fossil gas	0.00%
Taxonomy-aligned: Nuclear	0.00%
Taxonomy-aligned (no gas and nuclear)	0.00%
Taxonomy-aligned	0.00%
Non Taxonomy-aligned	100.00%

This graph represents 100% of the total investments.

**For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures*

What was the share of investments made in transitional and enabling activities?

The sub-fund was not committed to a share of investments in transitional or enabling activities.

How did the percentage of investments that are aligned with the EU Taxonomy compare with previous reference periods?

The promoted proportion of environmentally sustainable investments in accordance with Regulation (EU) 2020/852 (Taxonomy Regulation) was 0% of the fund's assets in the current as well as previous reference periods. It may, however, have been the case that some sustainable investments were nevertheless aligned with an environmental objective of the Taxonomy Regulation.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the Regulation (EU) 2020/852.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The share of sustainable investments with an environmental objective that were not aligned with the EU Taxonomy was 4.15% of the sub-fund's net assets.

Shares of sustainable investments in previous reporting periods:

reporting period	sustainable investments (total)	with environmental objective	socially sustainable
30/12/2024	22.95%	4.70%	18.25%
29/12/2023	23.33%	4.33%	19.00%
30/12/2022	17.25%	--	--

What was the share of socially sustainable investments?

The share of socially sustainable investments was 26.01% of the sub-fund’s net assets.

Shares of sustainable investments in previous reporting periods:

reporting period	sustainable investments (total)	with environmental objective	socially sustainable
30/12/2024	22.95%	4.70%	18.25%
29/12/2023	23.33%	4.33%	19.00%
30/12/2022	17.25%	--	--

What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?

99.88% of this sub-fund´s net assets were aligned with the promoted environmental and social characteristics (#1 Aligned with E/S characteristics). 0.12% of the sub-fund's net assets were invested in assets which were either out-of-scope of the ESG assessment methodology or for which ESG data coverage was incomplete (#2 Other). Full ESG data coverage was required for the assessment of direct investments in companies in relation to good governance practices.

Assets under “#2 Other” could include all asset classes as foreseen in the specific investment policy, such as sight deposits with credit institutions and derivatives. These assets could include investments whose ESG assessment had deteriorated post-acquisition for a period of potentially up to three months.

These assets could be used by the portfolio management for performance, risk diversification, liquidity and hedging purposes.

Minimum environmental or social safeguards were not or only partially considered for the sub-fund´s investments falling within “#2 Other”.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

This sub-fund pursued a strategy based on equities as main investment strategy. The sub-fund's assets were invested predominantly in large cap Japanese equities that were considered undervalued according to the CROCI methodology and the CROCI Japan investment strategy.
Further details regarding the main investment strategy are specified in the Special Section of the Sales Prospectus.

99.88% of the sub-fund's net assets were allocated to investments that met the promoted environmental and social characteristics as described in the following sections. The alignment of the portfolio with the binding elements of the investment strategy used to attain the promoted environmental and social characteristics was continuously controlled via the sub-fund's investment guidelines monitoring.

ESG assessment methodology

The sub-fund aimed to achieve the promoted environmental and social characteristics by assessing potential assets via an in-house ESG assessment methodology, regardless of their economic prospects for success, and by applying exclusion criteria based on this assessment.

The ESG assessment methodology was using a proprietary software tool which sourced data from one or several ESG data providers, public sources and/or internal assessments to derive overall assessments. The methodology applied to derive such overall assessments could be based on different methods, such as prioritizing one data vendor, worst-of or averaging approach. Internal assessments may have taken into account factors such as an issuer's future expected ESG developments, plausibility of data with regard to past or future events, the willingness to engage in dialogue on ESG matters and/or ESG-related decisions of a company. Further, internal ESG assessments for investee companies may considered the relevance of the exclusion criteria for the market sector of the investee company.

The proprietary software tool used, amongst others, the approaches described below to evaluate the adherence to the promoted ESG characteristics and whether investee companies followed good governance practices. The assessment approaches included, for example, exclusions related to revenues generated from controversial sectors or the exposure to such controversial sectors. In some of the assessment approaches, issuers received one of six possible assessments, with "A" representing the best and "F" the worst assessment. If an issuer was excluded based on one assessment approach, the sub-fund is prohibited from investing in that issuer.

Given the periodical reconstitution of the sub-fund’s portfolio, the sub-fund may held an investment whose ESG assessment had deteriorated post its acquisition by the sub-fund management. While the sub-management ensured continued monitoring of the promoted environmental and social characteristics, the sub-fund’s portfolio may contained such deteriorated asset for a period of potentially up to three months.

Depending on the investable universe, the portfolio allocation and the exposure to certain sectors, the assessment approaches described below may have been more or less relevant which was reflected in the number of issuers being actually excluded.

• Norm Controversy Assessment

The Norm Controversy Assessment evaluated the behaviour of companies in relation to generally accepted international standards and principles of responsible business conduct within, amongst others, the framework of the principles of the United Nations Global Compact, the United Nations Guiding Principles, the standards of the International Labour Organization and the OECD Guidelines for Multinational Enterprises. Examples of topics covered within these standards and principles included, but were not limited to, human rights violations, violations of workers' rights, child or forced labour, negative environmental impacts and business ethics. The Norm Controversy Assessment evaluates reported violations of the aforementioned international standards. Companies with the worst Norm Controversy Assessment of "F" were excluded as an investment.

• Freedom House Status

Freedom House is an international non-governmental organization that classifies countries by their degree of political and civil liberties. Based on the Freedom House Status, countries that were classified as “not free” were excluded as an investment.

• **Exposure to controversial sectors**

Companies that were involved in certain business areas and business activities in controversial areas ("controversial sectors") were excluded according to their share of total revenues generated in such controversial sectors as followed:

a. Manufacturing and/or distribution of civil handguns or ammunition: 5% or more
b. Manufacturing of tobacco products: 5% or more
c. Mining of oil sand: 5% or more
d. Companies that derived 25% or more from thermal coal mining and thermal coal-based power generation as well as companies with thermal coal expansion plans, such as additional expansion of coal mining, coal production or coal usage. Companies with thermal coal expansion plans were excluded based on an internal identification methodology. In the event of exceptional circumstances, such as measured imposed by a government to address challenges in the energy sector, the Management Company may decide to temporarily suspend the application of the coal-related exclusions to individual companies/geographical regions.

• **Exposure to controversial weapons**

Companies were excluded if they were identified as being involved in the manufacturing or selling of controversial weapons or key components of controversial weapons (anti-personnel mines, cluster munitions, and/or chemical and biological weapons). In addition, the shareholdings within a group structure might have been taken into consideration for the exclusions.

• **Use-of-Proceeds Bond Assessment**

This assessment was specific to the nature of this instrument and an investment in use-of-proceeds bonds was permitted only if the following criteria were met. Firstly, all use-of-proceeds bonds were checked for compliance with the Climate Bonds Standards, similar industry standards for green bonds, social bonds or sustainability bonds (such as ICMA Principles) or the EU Green Bond Standard or whether bonds have been subject to an independent review. Secondly, certain ESG criteria were applied in relation to the issuer of the bonds which could lead to the exclusion of issuers and their bonds as an investment.

• **Target Fund Assessment**

Target funds were evaluated in relation to the underlying companies and were eligible if these companies were aligned with the criteria of the Norm Controversy Assessment and the exposure to controversial weapons (anti-personnel mines, cluster munitions, and/or chemical weapons and biological weapons). Investment in companies with the worst Norm Controversy Assessment of "F" was permitted up to a determined threshold. Considering the tolerance threshold, diversity of data vendors and methodologies, the available data coverage as well as the target fund portfolio rebalancing, this sub-fund may have been indirectly exposed to certain assets that would be excluded if invested directly or for which data coverage was limited or not available.

Sustainability Investment Assessment

Further, for the proportion of sustainable investments, DWS measured the contribution to one or several UN SDGs and/or to other environmental sustainable objectives via its Sustainability Investment Assessment which evaluated potential investments in relation to different criteria to conclude whether an investment could have been considered as sustainable as further detailed in the section "What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?".

The applied ESG investment strategy did not pursue a committed minimum reduction of the scope of the investments.

The assessment of the good governance practices of the investee companies (including assessments related to sound management structures, employee relations, remuneration of staff and tax compliance) was part of the Norm Controversy Assessment which evaluated a company's behavior within generally accepted international standards and principles of responsible business conduct. Companies with the worst Norm Controversy Assessment of "F" were excluded as an investment.

How did this financial product perform compared to the reference sustainable benchmark?

This sub-fund had not designated a reference benchmark to determine whether it was aligned with the environmental and social characteristics that it promoted.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Periodic disclosure for financial products referred to in Article 8, paragraph 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

Product name: DWS Invest CROCI Sectors Plus

Legal entity identifier: 22210022CF2RMX28PD07

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

Yes	No
☐ it made **sustainable investments with an environmental objective:** ___%	☐ It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of ___% of sustainable investments.
☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy	☐ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	☐ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
	☐ with a social objective
☐ It made **sustainable investments with a social objective:** ___%	☒ It promoted E/S characteristics, but did **not make any sustainable investments**

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities.** That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

To what extent were the environmental and/or social characteristics promoted by this financial product met?

This sub-fund promoted environmental and social characteristics related to a general consideration of ESG criteria by excluding, for example, investments in companies with the worst norm-related issues towards international standards and/or investments in companies whose involvement in controversial sectors exceeded predefined revenue thresholds.

This sub-fund had not designated a reference benchmark for the purpose of attaining the environmental and social characteristics promoted.

No derivatives were used to attain the environmental or social characteristics promoted by the sub-fund.

How did the sustainability indicators perform?

The attainment of the promoted environmental and social characteristics was assessed via the application of an in-house ESG assessment methodology and ESG specific exclusion thresholds as further described in the section "What actions have been taken to meet the environmental and/or social characteristics during the reference period?". The methodology applied different assessment approaches that were used as sustainability indicators which were:

• **Norm Controversy Assessment** used as an indicator for a company's exposure to norm-related issues towards international standards.
Performance: No investments in suboptimal assets

• **Freedom House Status** used as an indicator for the political and civil liberties of a country.
Performance: No investments in suboptimal assets

• **Exposure to controversial sectors** used as an indicator for a company's involvement in controversial sectors.
Performance: 0%

• **Exposure to controversial weapons** used as an indicator for a company's involvement in controversial weapons.
Performance: 0%

Please see the section entitled “What actions have been taken to meet the environmental and/or social characteristics during the reference period?” for a description of the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted, including the exclusion criteria, and the assessment methodology for determining whether and to what extent assets met the defined environmental and/or social characteristics (including the turnover thresholds defined for the xclusions). This section contains further information on the sustainability indicators. The values from the DWS front office system are used to calculate the sustainability indicators. This means that there may be minor deviations from the other market values that appear in the annual report, which are derived from the fund accounting system.

…and compared to previous periods?

Attainment of the promoted environmental and social characteristics at portfolio level was measured in the previous years on the basis of the following sustainability indicators:

DWS Invest CROCI Sectors Plus

Indicators Performance	30/12/2024	29/12/2023	30/12/2022

The disclosure of the sustainability indicators has been revised compared with the prior-year report. The assessment methodology is unchanged. Additional information on the currently valid sustainability indicators is provided in the section entitled “What actions have been taken to meet the environmental and/or social characteristics during the reference period?”.
Information about taking into account the principal adverse impacts on sustainability factors is provided in the section entitled “How did this financial product consider principal adverse impacts on sustainability factors?”

DWS ESG-Assessment Scale

In the following assessment categories, the assets received one of six possible scores, with "A" being the best score and "F" being the worst score.

Criteria	Involvement in controversial sectors *(1)	Involvement in controversial weapons	Norm Assessment *(6)	ESG Quality Assessment	SDG- Assessment	Climat & Transition Risk Assessment
A	Non-involvement	Confirmed non-involvement	Confirmed no issues	True leader in ESG (>= 87.5 DWS ESG score)	True SDG contributor (>= 87.5 SDG score)	True climate leader (>= 87.5 score)
B	Remote involvement	Alleged	Violations of lesser degree	ESG leader (75-87.5 DWS ESG score)	SDG contributor (75-87.5 SDG score)	Climate solution provider(75-87.5 score)
C	0% - 5%	Dual-Purpose *(2)	Violations of lesser degree	ESG upper midfield (50-75 DWS ESG score)	SDG upper midfield (50-75 SDG score)	Low transition risk (50-75 score)
D	5% - 10% (coal: 5% - 10%	Owning *(3)/ Owned *(4)	Violation of lesser degree	ESG lower midfield (25-50 DWS ESG score)	SDG lower midfield (25-50 SDG score)	Mod. transition risk (25-50 score)
E	10% - 25% (coal: 15% - 25%)	Component Producer *(5)	High severity or re-assessed highest violation *(7)	ESG laggard (12.5-25 DWS ESG score)	SDG obstructer (12.5-25 SDG score)	High transition risk (12.5-25 score)
F	>= 25%	Weapon producer	Highest severity / global compact violation *(8)	True laggard in ESG (0-12.5 DWS ESG score)	Significant SDG obstructer (0-12.5 SDG score)	Excessive transition risk (0-12.5 score)

*(1) Revenue share thresholds as per standard scheme. Sub-Granularity available. Thresholds can be individually set.

*(2) Encompasses e.g.. weapon-carrying systems such as combat aircraft that carry non-controversial weapons as well as controversial ones.

*(3) Owning more than 20% equity.

*(4) Being owned by more than 50% of company involved in grade E or F.

*(5) Single purpose key component.

*(6) Includes ILO controversies as well as corporate governance and product issues.

*(7) In its ongoing assessment, DWS takes into account the violation(s) of international standards – observed via data from ESG data vendors – such as the UN Global Compact, but also possible ESG data vendor errors identified, future expected developments of these violations as well as the willingness of the issuer to engage in dialogue regarding corporate decisions in this regard.

*(8) An F-grade can be considered a reconfirmed violation of the United Nations Global Compact rule framework for corporate behavior.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union Criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU Criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU Criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

How did this financial product consider principal adverse impacts on sustainability factors?

The sub-fund considered the following principal adverse impacts on sustainability factors from Annex I of the Commission Delegated Regulation (EU) 2022/1288 supplementing the SFDR:

• Exposure to companies active in the fossil fuel sector (no. 4);

• Violations of the United Nations Global Compact principles and OECD Guidelines for Multinational Enterprises (no. 10); and

• Exposure to controversial weapons (no. 14).

DWS Invest CROCI Sectors Plus

Indicators	Description	Performance
Principal Adverse Impact		
PAII - 04. Exposure to companies active in the fossil fuel sector	Share of investments in companies active in the fossil fuel sector	60.43 % of assets
PAII - 10. Violations of UNGC principles and OECD Guidelines for Multinational Enterprises	Share of investments in investee companies that have been involved in violations of the UNGC principles or OECD Guidelines for Multinational Enterprises	0 % of assets
PAII - 14. Exposure to controversial weapons	Share of investments in investee companies involved in the manufacture or selling of controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)	0 % of assets

As of: December 30, 2025

The Principal Adverse Impact Indicators (PAIIs) are calculated on the basis of the data in the DWS back office and front office systems, which are primarily based on the data of external ESG data providers. If there is no data on individual PAIIs for individual securities or their issuers, either because no data is available or the PAII is not applicable to the particular issuer or security, these securities or issuers are not included in the calculation of the PAII. With target fund investments, a look-through of the target fund holdings is performed if appropriate data is available. The calculation method for the individual PAI indicators may change in subsequent reporting periods due to evolving market standards, a change in the treatment of securities of certain types of instruments (such as derivatives) or as a result of regulatory clarifications.
Moreover, improved data availability may have an effect on the reported PAIIs in subsequent reporting periods.
The values from the DWS front office system are used to calculate the PAIIs. This means that there may be minor deviations from the other market values that appear in the annual report, which are derived from the fund accounting system.

What were the top investments of this financial product?

DWS Invest CROCI Sectors Plus

Largest investments	Breakdown by sector according to NACE Codes	in % of average portfolio volume	Breakdown by country
E.ON Reg.	M - Professional, scientific and technical activities	3.4 %	Germany
Engie	M - Professional, scientific and technical activities	3.4 %	France
SSE	D - Electricity, gas, steam and air conditioning supply	3.4 %	United Kingdom
J.M. Smucker Co.	C - Manufacturing	3.4 %	United States
Halliburton Co.	B - Mining and quarrying	3.4 %	United States
Shell	M - Professional, scientific and technical activities	3.3 %	United Kingdom
Oneok (new)	D - Electricity, gas, steam and air conditioning supply	3.3 %	United States
TotalEnergies	M - Professional, scientific and technical activities	3.3 %	France
The Kraft Heinz Co.	M - Professional, scientific and technical activities	3.3 %	United States
Coterra Energy	B - Mining and quarrying	3.3 %	United States
Devon Energy Corp.	B - Mining and quarrying	3.3 %	United States

Henkel Pref.	C - Manufacturing	3.3 %	Germany
Kansai Electric Power Co.	D - Electricity, gas, steam and air conditioning supply	3.3 %	Japan
ConAgra Brands	C - Manufacturing	3.3 %	United States

for the period from January 01, 2025, through December 30, 2025

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is:
for the period from January 01, 2025, through December 31, 2025

What was the proportion of sustainability-related investments?

The proportion of sustainability-related investments as of the reporting date was 100% of portfolio assets.
Proportion of sustainability-related investments for the previous years:
30/12/2024: 100.00 %
29/12/2023: 99.69 %
30/12/2022: 100.00 %

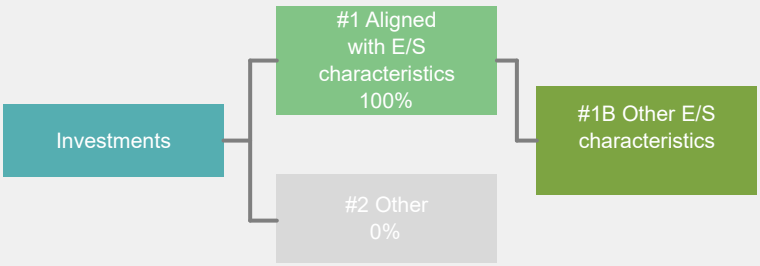
Asset allocation describes the share of investments in specific assets.

What was the asset allocation?

This sub-fund invested 100% of its net assets in investments that were aligned with the promoted environmental and social characteristics (#1 Aligned with E/S characteristics).

0% of the sub-fund's net assets have been invested in assets which were either out-of-scope of the ESG assessment methodology or for which ESG data coverage was incomplete (#2 Other) as further detailed in the section "What investments were included under "#2 Other", what was their purpose and were there any minimum environmental or social safeguards?".

A more detailed description of the specific asset allocation of this sub-fund can be found in the Special Section of the Sales Prospectus.



#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

In which economic sectors were the investments made?

DWS Invest CROCI Sectors Plus

NACE-Code	Breakdown by sector according to NACE Codes	in % of portfolio volume
B	Mining and quarrying	16.6 %
C	Manufacturing	22.7 %
D	Electricity, gas, steam and air conditioning supply	33.2 %
G	Wholesale and retail trade; repair of motor vehicles and motorcycles	3.3 %
M	Professional, scientific and technical activities	23.5 %
NA	Other	0.7 %
Exposure to companies active in the fossil fuel sector		60.4 %

As of: December 30, 2025

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The sub-fund did not commit to invest a proportion of sustainable investments with an environmental objective aligned with the EU Taxonomy. Therefore, the promoted minimum percentage of environmentally sustainable investments aligned with the EU Taxonomy was 0% of the sub-fund's net assets. However, certain investments' underlying economic activities may have been aligned with the EU Taxonomy.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are economic activities for yet low-carbon alternatives are not yet available and that have greenhouse gas emission levels corresponding to the best performance.

Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy[1]?

☐ Yes:

☐ In fossil gas ☐ In nuclear energy

☒ No

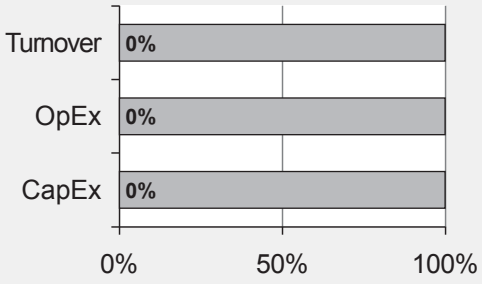
The sub-fund did not take into account the Taxonomy-alignment of companies active in the fossil gas and/or nuclear energy sectors.

[1] Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do no significant harm to any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Taxonomy-aligned activities are expressed as a share of:
- turnover reflecting the share of revenue from green activities of investee companies.
- capital expenditure (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- operational expenditure (OpEx) reflecting the green operational activities of investee companies.

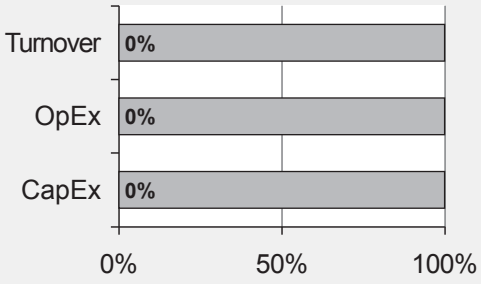
The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy-alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy-alignment only in relation to the investments of the financial product other than sovereign bonds.

1. Taxonomy-alignment of investments **including sovereign bonds***



Taxonomy-aligned: Fossil gas	0.00%
Taxonomy-aligned: Nuclear	0.00%
Taxonomy-aligned (no gas and nuclear)	0.00%
Taxonomy-aligned	0.00%
Non Taxonomy-aligned	100.00%

2. Taxonomy-alignment of investments **excluding sovereign bonds***



Taxonomy-aligned: Fossil gas	0.00%
Taxonomy-aligned: Nuclear	0.00%
Taxonomy-aligned (no gas and nuclear)	0.00%
Taxonomy-aligned	0.00%
Non Taxonomy-aligned	100.00%

This graph represents 100% of the total investments.

**For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures*

What was the share of investments made in transitional and enabling activities?

The sub-fund was not committed to a share of investments in transitional or enabling activities.

How did the percentage of investments that are aligned with the EU Taxonomy compare with previous reference periods?

The promoted proportion of environmentally sustainable investments in accordance with Regulation (EU) 2020/852 (Taxonomy Regulation) was 0% of the fund's assets in the current as well as previous reference periods. It may, however, have been the case that some sustainable investments were nevertheless aligned with an environmental objective of the Taxonomy Regulation.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the Regulation (EU) 2020/852.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

This year, as in previous periods, the fund did not advertise a share of sustainable investments with an environmental objective that was not in line with the EU taxonomy.

In the 2022 reporting period, the Sub-Fund set a ratio for environmentally and socially sustainable investments. The share of sustainable investments that is not segregated according to ecological and social factors totalled 5.26% in 2022.

What was the share of socially sustainable investments?

This year, as in previous periods, the fund did not advertise a share of sustainable investments with an environmental objective that was not in line with the EU taxonomy.

In the 2022 reporting period, the Sub-Fund set a ratio for environmentally and socially sustainable investments. The share of sustainable investments that is not segregated according to ecological and social factors totalled 5.26% in 2022.

What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?

100% of this sub-fund´s net assets were aligned with the promoted environmental and social characteristics (#1 Aligned with E/S characteristics). 0% of the sub-fund's net assets were invested in assets which were either out-of-scope of the ESG assessment methodology or for which ESG data coverage was incomplete (#2 Other). Full ESG data coverage was required for the assessment of direct investments in companies in relation to good governance practices.

Assets under “#2 Other” could include all asset classes as foreseen in the specific investment policy, such as sight deposits with credit institutions and derivatives. These assets could include investments whose ESG assessment had deteriorated post-acquisition for a period of potentially up to three months.

These assets could be used by the portfolio management for performance, risk diversification, liquidity and hedging purposes.

Minimum environmental or social safeguards were not or only partially considered for the sub-fund´s investments falling within “#2 Other”.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

This sub-fund pursued a strategy based on equities as main investment strategy. The sub-fund's assets were invested predominantly in large cap global equities which were considered undervalued according to the CROCI methodology and the CROCI Sectors Plus investment strategy.
Further details regarding the main investment strategy are specified in the Special Section of the Sales Prospectus.

100% of the sub-fund's net assets were allocated to investments that met the promoted environmental and social characteristics as described in the following sections. The alignment of the portfolio with the binding elements of the investment strategy used to attain the promoted environmental and social characteristics was continuously controlled via the sub-fund's investment guidelines monitoring.

ESG assessment methodology

The sub-fund aimed to achieve the promoted environmental and social characteristics by assessing potential assets via an in-house ESG assessment methodology, regardless of their economic prospects for success, and by applying exclusion criteria based on this assessment.

The ESG assessment methodology was using a proprietary software tool which sourced data from one or several ESG data providers, public sources and/or internal assessments to derive overall assessments. The methodology applied to derive such overall assessments could be based on different methods, such as prioritizing one data vendor, worst-of or averaging approach. Internal assessments may have taken into account factors such as an issuer's future expected ESG developments, plausibility of data with regard to past or future events, the willingness to engage in dialogue on ESG matters and/or ESG-related decisions of a company. Further, internal ESG assessments for investee companies may considered the relevance of the exclusion criteria for the market sector of the investee company.

The proprietary software tool used, amongst others, the approaches described below to evaluate the adherence to the promoted ESG characteristics and whether investee companies followed good governance practices. The assessment approaches included, for example, exclusions related to revenues generated from controversial sectors or the exposure to such controversial sectors. In some of the assessment approaches, issuers received one of six possible assessments, with "A" representing the best and "F" the worst assessment. If an issuer was excluded based on one assessment approach, the sub-fund is prohibited from investing in that issuer.

Given the periodical reconstitution of the sub-fund's portfolio, the sub-fund may held an investment whose ESG assessment had deteriorated post its acquisition by the sub-fund management. While the sub-management ensured continued monitoring of the promoted environmental and social characteristics, the sub-fund's portfolio may contained such deteriorated asset for a period of potentially up to three months.

Depending on the investable universe, the portfolio allocation and the exposure to certain sectors, the assessment approaches described below may have been more or less relevant which was reflected in the number of issuers being actually excluded.

• **Norm Controversy Assessment**

The Norm Controversy Assessment evaluated the behaviour of companies in relation to generally accepted international standards and principles of responsible business conduct within, amongst others, the framework of the principles of the United Nations Global Compact, the United Nations Guiding Principles, the standards of the International Labour Organization and the OECD Guidelines for Multinational Enterprises. Examples of topics covered within these standards and principles included, but were not limited to , human rights violations, violations of workers' rights, child or forced labour, negative environmental impacts and business ethics. The Norm Controversy Assessment evaluates reported violations of the aforementioned international standards. Companies with the worst Norm Controversy Assessment of "F" were excluded as an investment.

• **Freedom House Status**

Freedom House is an international non-governmental organization that classifies countries by their degree of political and civil liberties. Based on the Freedom House Status, countries that were classified as “not free” were excluded as an investment.

• **Exposure to controversial sectors**

Companies that were involved in certain business areas and business activities in controversial areas ("controversial sectors") were excluded according to their share of total revenues generated in such controversial sectors as followed:

a. Manufacturing and/or distribution of civil handguns or ammunition: 5% or more
b. Manufacturing of tobacco products: 5% or more
c. Mining of oil sand: 5% or more
d. Companies that derived 25% or more from thermal coal mining and thermal coal-based power generation as well as companies with thermal coal expansion plans, such as additional expansion of coal mining, coal production or coal usage. Companies with thermal coal expansion plans were excluded based on an internal identification methodology. In the event of exceptional circumstances, such as measured imposed by a government to address challenges in the energy sector, the Management Company may decide to temporarily suspend the application of the coal-related exclusions to individual companies/geographical regions.

• **Exposure to controversial weapons**

Companies were excluded if they were identified as being involved in the manufacturing or selling of controversial weapons or key components of controversial weapons (anti-personnel mines, cluster munitions, and/or chemical and biological weapons). In addition, the shareholdings within a group structure might have been taken into consideration for the exclusions.

• Use-of-Proceeds Bond Assessment

This assessment was specific to the nature of this instrument and an investment in use-of-proceeds bonds was permitted only if the following criteria were met. Firstly, all use-of-proceeds bonds were checked for compliance with the Climate Bonds Standards, similar industry standards for green bonds, social bonds or sustainability bonds (such as ICMA Principles) or the EU Green Bond Standard or whether bonds have been subject to an independent review. Secondly, certain ESG criteria were applied in relation to the issuer of the bonds which could lead to the exclusion of issuers and their bonds as an investment.

• Target Fund Assessment

Target funds were evaluated in relation to the underlying companies and were eligible if these companies were aligned with the criteria of the Norm Controversy Assessment and the exposure to controversial weapons (anti-personnel mines, cluster munitions, and/or chemical weapons and biological weapons). Investment in companies with the worst Norm Controversy Assessment of "F" was permitted up to a determined threshold. Considering the tolerance threshold, diversity of data vendors and methodologies, the available data coverage as well as the target fund portfolio rebalancing, this sub-fund may have been indirectly exposed to certain assets that would be excluded if invested directly or for which data coverage was limited or not available.

The applied ESG investment strategy did not pursue a committed minimum reduction of the scope of the investments.

The assessment of the good governance practices of the investee companies (including assessments related to sound management structures, employee relations, remuneration of staff and tax compliance) was part of the Norm Controversy Assessment which evaluated a company's behavior within generally accepted international standards and principles of responsible business conduct. Companies with the worst Norm Controversy Assessment of "F" were excluded as an investment.

How did this financial product perform compared to the reference sustainable benchmark?

This sub-fund had not designated a reference benchmark to determine whether it was aligned with the environmental and social characteristics that it promoted.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Periodic disclosure for financial products referred to in Article 8, paragraph 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

Product name: DWS Invest CROCI US

Legal entity identifier: 549300BSXEVPEQQ6V522

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

Yes	No
☐ it made **sustainable investments with an environmental objective:** ___%	☒ It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of 33.72% of sustainable investments.
☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy	☐ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
	☒ with a social objective
☐ It made **sustainable investments with a social objective:** ___%	☐ It promoted E/S characteristics, but did **not make any sustainable investments**

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities.** That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

To what extent were the environmental and/or social characteristics promoted by this financial product met?

This sub-fund promoted environmental and social characteristics related to a general consideration of ESG criteria by excluding, for example, investments in companies with the worst norm-related issues towards international standards and/or investments in companies whose involvement in controversial sectors exceeded predefined revenue thresholds.

Further, this sub-fund promoted a proportion of sustainable investments in accordance with article 2(17) of the regulation on sustainability-related disclosures in the financial services sector (SFDR).

This sub-fund had not designated a reference benchmark for the purpose of attaining the environmental and social characteristics promoted.

No derivatives were used to attain the environmental or social characteristics promoted by the sub-fund.

How did the sustainability indicators perform?

The attainment of the promoted environmental and social characteristics as well as the sustainable investment was assessed via the application of an in-house ESG assessment methodology and ESG specific exclusion thresholds as further described in the section "What actions have been taken to meet the environmental and/or social characteristics during the reference period?". The methodology applied different assessment approaches that were used as sustainability indicators which were:

• **Norm Controversy Assessment** used as an indicator for a company's exposure to norm-related issues towards international standards.
Performance: No investments in suboptimal assets

• **Freedom House Status** used as an indicator for the political and civil liberties of a country.
Performance: No investments in suboptimal assets

• **Exposure to controversial sectors** used as an indicator for a company's involvement in controversial sectors.
Performance: 0%

• **Exposure to controversial weapons** used as an indicator for a company's involvement in controversial weapons.
Performance: 0%

• **Sustainability Investment Assessment** used as an indicator to measure the proportion of sustainable investments pursuant to article 2(17) SFDR.
Performance: 33.72%

Please see the section entitled “What actions have been taken to meet the environmental and/or social characteristics during the reference period?” for a description of the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted, including the exclusion criteria, and the assessment methodology for determining whether and to what extent assets met the defined environmental and/or social characteristics (including the turnover thresholds defined for the xclusions). This section contains further information on the sustainability indicators. The values from the DWS front office system are used to calculate the sustainability indicators. This means that there may be minor deviations from the other market values that appear in the annual report, which are derived from the fund accounting system.

…and compared to previous periods?

Attainment of the promoted environmental and social characteristics at portfolio level was measured in the previous years on the basis of the following sustainability indicators:

DWS Invest CROCI US

The disclosure of the sustainability indicators has been revised compared with the prior-year report. The assessment methodology is unchanged. Additional information on the currently valid sustainability indicators is provided in the section entitled “What actions have been taken to meet the environmental and/or social characteristics during the reference period?”.
Information about taking into account the principal adverse impacts on sustainability factors is provided in the section entitled “How did this financial product consider principal adverse impacts on sustainability factors?”

DWS ESG-Assessment Scale

In the following assessment categories, the assets received one of six possible scores, with "A" being the best score and "F" being the worst score.

Criteria	Involvement in controversial sectors *(1)	Involvement in controversial weapons	Norm Assessment *(6)	ESG Quality Assessment	SDG- Assessment	Climat & Transition Risk Assessment
A	Non-involvement	Confirmed non-involvement	Confirmed no issues	True leader in ESG (>= 87.5 DWS ESG score)	True SDG contributor (>= 87.5 SDG score)	True climate leader (>= 87.5 score)
B	Remote involvement	Alleged	Violations of lesser degree	ESG leader (75-87.5 DWS ESG score)	SDG contributor (75-87.5 SDG score)	Climate solution provider(75-87.5 score)
C	0% - 5%	Dual-Purpose *(2)	Violations of lesser degree	ESG upper midfield (50-75 DWS ESG score)	SDG upper midfield (50-75 SDG score)	Low transition risk (50-75 score)
D	5% - 10% (coal: 5% - 10%)	Owning *(3)/ Owned *(4)	Violation of lesser degree	ESG lower midfield (25-50 DWS ESG score)	SDG lower midfield (25-50 SDG score)	Mod. transition risk (25-50 score)
E	10% - 25% (coal: 15% - 25%)	Component Producer *(5)	High severity or re-assessed highest violation *(7)	ESG laggard (12.5-25 DWS ESG score)	SDG obstructer (12.5-25 SDG score)	High transition risk (12.5-25 score)
F	>= 25%	Weapon producer	Highest severity / global compact violation *(8)	True laggard in ESG (0-12.5 DWS ESG score)	Significant SDG obstructer (0-12.5 SDG score)	Excessive transition risk (0-12.5 score)

*(1) Revenue share thresholds as per standard scheme. Sub-Granularity available. Thresholds can be individually set.

*(2) Encompasses e.g.. weapon-carrying systems such as combat aircraft that carry non-controversial weapons as well as controversial ones.

*(3) Owning more than 20% equity.

*(4) Being owned by more than 50% of company involved in grade E or F.

*(5) Single purpose key component.

*(6) Includes ILO controversies as well as corporate governance and product issues.

*(7) In its ongoing assessment, DWS takes into account the violation(s) of international standards – observed via data from ESG data vendors – such as the UN Global Compact, but also possible ESG data vendor errors identified, future expected developments of these violations as well as the willingness of the issuer to engage in dialogue regarding corporate decisions in this regard.

*(8) An F-grade can be considered a reconfirmed violation of the United Nations Global Compact rule framework for corporate behavior.

What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?

Sustainable investments contributed to at least one of the Sustainable Development Goals of the United Nations (UN SDGs) that relate to environmental and/or social objectives, such as good health and well-being or climate action and/or to at least one other environmental objective such as climate change adaption or climate change mitigation (as defined under the EU Taxonomy).

The extent of the contribution to individual sustainable investment objectives varied depending on the actual investments held in the portfolio.

DWS determined the contribution to a sustainable investment objective based on its Sustainability Investment Assessment which used data from one or several data providers, public sources and/or internal assessments. An investment's positive contribution to an environmental and/or social objective was assessed based on the revenues which a company generated from the actual economic activities making such contribution (activity-based approach). Where a positive contribution was determined, the investment was considered sustainable if the issuer passed the Do No significant Harm ("DNSH") assessment and the company followed good governance practices.

The share of sustainable investments in the portfolio as defined in article 2(17) SFDR was therefore calculated in proportion to the economic activities of the issuers that were considered as sustainable (activity-based approach). Notwithstanding the preceding, in the case of use-of-proceeds bonds that were considered as sustainable investment, the value of the entire bond was counted towards the portfolio's share of sustainable investments.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

The sustainable investments in which the sub-fund invested were assessed to ensure they did not cause significant harm to any environmental or social sustainable investment objective. This was achieved by taking into account the indicators for principal adverse impacts on sustainability factors (dependent on relevance) as described below. If a significant harm was identified, the investment could not have been considered sustainable.

How were the indicators for adverse impacts on sustainability factors taken into account?

The Sustainability Investment Assessment systematically integrated the mandatory principal adverse indicators on sustainability factors (dependent on relevance) from Table 1 and relevant indicators from Tables 2 and 3 of Annex I of the Commission Delegated Regulation (EU) 2022/1288 supplementing the SFDR. Taking into account these principal adverse impacts, DWS had established quantitative thresholds and/or qualitative values to assess a significant harm on any of the environmental or social sustainable investment objectives. These values were set based upon various external and internal factors, such as data availability or market developments and may have been adapted going forward.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The alignment of sustainable investments with, amongst others, the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights was evaluated through the Norm Controversy Assessment (as further described below). Companies with the worst Norm Controversy Assessment of “F” were excluded as an investment.

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union Criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU Criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU Criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

How did this financial product consider principal adverse impacts on sustainability factors?

The sub-fund considered the following principal adverse impacts on sustainability factors from Annex I of the Commission Delegated Regulation (EU) 2022/1288 supplementing the SFDR:

• Exposure to companies active in the fossil fuel sector (no. 4);

• Violations of the United Nations Global Compact principles and OECD Guidelines for Multinational Enterprises (no. 10); and

• Exposure to controversial weapons (no. 14).

DWS Invest CROCI US

Indicators	Description	Performance
Principal Adverse Impact		
PAII - 04. Exposure to companies active in the fossil fuel sector	Share of investments in companies active in the fossil fuel sector	7.91 % of assets
PAII - 10. Violations of UNGC principles and OECD Guidelines for Multinational Enterprises	Share of investments in investee companies that have been involved in violations of the UNGC principles or OECD Guidelines for Multinational Enterprises	0 % of assets
PAII - 14. Exposure to controversial weapons	Share of investments in investee companies involved in the manufacture or selling of controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)	0 % of assets

As of: December 30, 2025

The Principal Adverse Impact Indicators (PAIIs) are calculated on the basis of the data in the DWS back office and front office systems, which are primarily based on the data of external ESG data providers. If there is no data on individual PAIIs for individual securities or their issuers, either because no data is available or the PAII is not applicable to the particular issuer or security, these securities or issuers are not included in the calculation of the PAII. With target fund investments, a look-through of the target fund holdings is performed if appropriate data is available. The calculation method for the individual PAI indicators may change in subsequent reporting periods due to evolving market standards, a change in the treatment of securities of certain types of instruments (such as derivatives) or as a result of regulatory clarifications.
Moreover, improved data availability may have an effect on the reported PAIIs in subsequent reporting periods.
The values from the DWS front office system are used to calculate the PAIIs. This means that there may be minor deviations from the other market values that appear in the annual report, which are derived from the fund accounting system.

What were the top investments of this financial product?

DWS Invest CROCI US

Largest investments	Breakdown by sector according to NACE Codes	in % of average portfolio volume	Breakdown by country
WARNER BROS DISCOVERY	J - Information and communication	3.1 %	United States

for the period from January 01, 2025, through December 30, 2025

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is:
for the period from January 01, 2025, through December 31, 2025

What was the proportion of sustainability-related investments?

The proportion of sustainability-related investments as of the reporting date was 100% of portfolio assets.
Proportion of sustainability-related investments for the previous years:
30/12/2024: 100.00 %
29/12/2023: 100.00 %
30/12/2022: 100.00 %

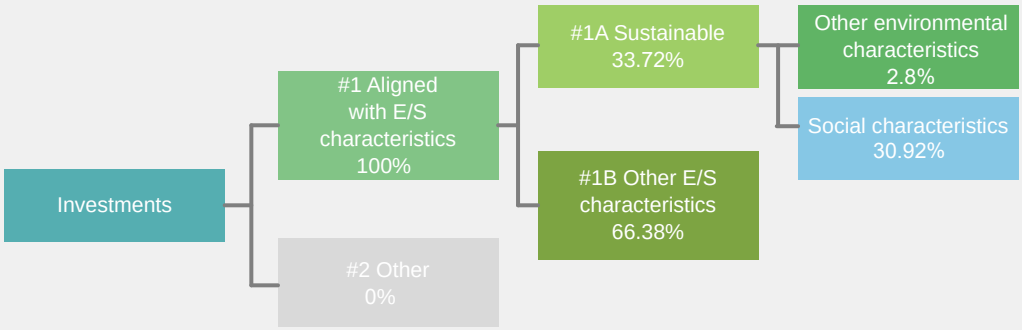
Asset allocation describes the share of investments in specific assets.

What was the asset allocation?

This sub-fund invested 100% of its net assets in investments that were aligned with the promoted environmental and social characteristics (#1 Aligned with E/S characteristics). Within this category, 33.72% of the sub-fund's net assets qualified as sustainable investments (#1A Sustainable). Thereof the share of sustainable investments with an environmental objective that was not compliant with the EU Taxonomy was 2.8% of the sub-fund's net assets and the share of socially sustainable investments was 30.92% of the sub-fund's net assets. The share of sustainable investments with an environmental objective that was not compliant with the EU Taxonomy and of socially sustainable investments depended on the market situation and the investable investment universe.

0% of the sub-fund's net assets have been invested in assets which were either out-of-scope of the ESG assessment methodology or for which ESG data coverage was incomplete (#2 Other) as further detailed in the section "What investments were included under "#2 Other", what was their purpose and were there any minimum environmental or social safeguards?".

A more detailed description of the specific asset allocation of this sub-fund can be found in the Special Section of the Sales Prospectus.



#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:
- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

In which economic sectors were the investments made?

DWS Invest CROCI US

NACE-Code	Breakdown by sector according to NACE Codes	in % of portfolio volume
B	Mining and quarrying	2.5 %
C	Manufacturing	49.0 %
D	Electricity, gas, steam and air conditioning supply	2.5 %
F	Construction	2.4 %
G	Wholesale and retail trade; repair of motor vehicles and motorcycles	2.5 %
H	Transporting and storage	2.8 %
J	Information and communication	15.5 %
K	Financial and insurance activities	15.0 %
M	Professional, scientific and technical activities	5.1 %
Q	Human health and social work activities	2.4 %
NA	Other	0.3 %
Exposure to companies active in the fossil fuel sector		7.9 %

As of: December 30, 2025

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The sub-fund did not commit to invest a proportion of sustainable investments with an environmental objective aligned with the EU Taxonomy. Therefore, the promoted minimum percentage of environmentally sustainable investments aligned with the EU Taxonomy was 0% of the sub-fund's net assets. However, certain investments' underlying economic activities may have been aligned with the EU Taxonomy.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are economic activities for yet low-carbon alternatives are not yet available and that have greenhouse gas emission levels corresponding to the best performance.

Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy[1]?

☐ Yes:

☐ In fossil gas ☐ In nuclear energy

☒ No

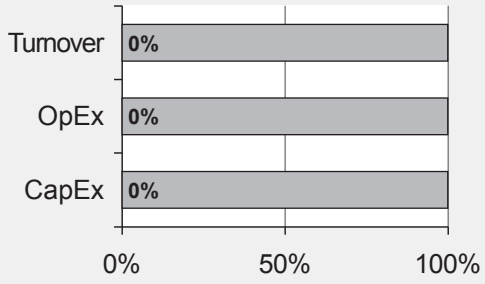
The sub-fund did not take into account the Taxonomy-alignment of companies active in the fossil gas and/or nuclear energy sectors.

[1] Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do no significant harm to any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Taxonomy-aligned activities are expressed as a share of:
- turnover reflecting the share of revenue from green activities of investee companies.
- capital expenditure (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- operational expenditure (OpEx) reflecting the green operational activities of investee companies.

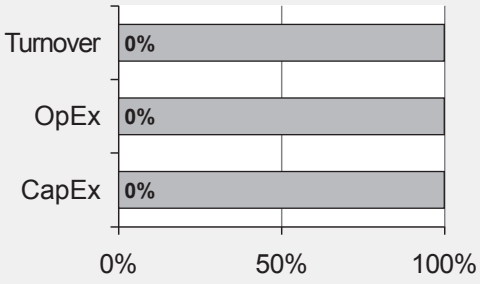
The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy-alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy-alignment only in relation to the investments of the financial product other than sovereign bonds.

1. Taxonomy-alignment of investments **including sovereign bonds***



Taxonomy-aligned: Fossil gas	0.00%
Taxonomy-aligned: Nuclear	0.00%
Taxonomy-aligned (no gas and nuclear)	0.00%
Taxonomy-aligned	0.00%
Non Taxonomy-aligned	100.00%

2. Taxonomy-alignment of investments **excluding sovereign bonds***



Taxonomy-aligned: Fossil gas	0.00%
Taxonomy-aligned: Nuclear	0.00%
Taxonomy-aligned (no gas and nuclear)	0.00%
Taxonomy-aligned	0.00%
Non Taxonomy-aligned	100.00%

This graph represents 100% of the total investments.

**For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures*

What was the share of investments made in transitional and enabling activities?

The sub-fund was not committed to a share of investments in transitional or enabling activities.

How did the percentage of investments that are aligned with the EU Taxonomy compare with previous reference periods?

The promoted proportion of environmentally sustainable investments in accordance with Regulation (EU) 2020/852 (Taxonomy Regulation) was 0% of the fund's assets in the current as well as previous reference periods. It may, however, have been the case that some sustainable investments were nevertheless aligned with an environmental objective of the Taxonomy Regulation.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the Regulation (EU) 2020/852.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The share of sustainable investments with an environmental objective that were not aligned with the EU Taxonomy was 2.8% of the sub-fund's net assets.

Shares of sustainable investments in previous reporting periods:

reporting period	sustainable investments (total)	with environmental objective	socially sustainable
30/12/2024	27.83%	2.03%	25.80%
29/12/2023	20.41%	3.43%	16.98%
30/12/2022	24.45%	--	--

What was the share of socially sustainable investments?

The share of socially sustainable investments was 30.92% of the sub-fund’s net

assets. Shares of sustainable investments in previous reporting periods:

reporting period	sustainable investments (total)	with environmental objective	socially sustainable
30/12/2024	27.83%	2.03%	25.80%
29/12/2023	20.41%	3.43%	16.98%
30/12/2022	24.45%	--	--

What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?

100% of this sub-fund´s net assets were aligned with the promoted environmental and social characteristics (#1 Aligned with E/S characteristics). 0% of the sub-fund's net assets were invested in assets which were either out-of-scope of the ESG assessment methodology or for which ESG data coverage was incomplete (#2 Other). Full ESG data coverage was required for the assessment of direct investments in companies in relation to good governance practices.

Assets under “#2 Other” could include all asset classes as foreseen in the specific investment policy, such as sight deposits with credit institutions and derivatives. These assets could include investments whose ESG assessment had deteriorated post-acquisition for a period of potentially up to three months.

These assets could be used by the portfolio management for performance, risk diversification, liquidity and hedging purposes.

Minimum environmental or social safeguards were not or only partially considered for the sub-fund´s investments falling within “#2 Other”.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

This sub-fund pursued a strategy based on equities as main investment strategy. The sub-fund's assets were invested predominantly in large cap US equities that were considered undervalued according to the CROCI methodology and the CROCI US investment strategy.
Further details regarding the main investment strategy are specified in the Special Section of the Sales Prospectus.

100% of the sub-fund's net assets were allocated to investments that met the promoted environmental and social characteristics as described in the following sections. The alignment of the portfolio with the binding elements of the investment strategy used to attain the promoted environmental and social characteristics was continuously controlled via the sub-fund's investment guidelines monitoring.

ESG assessment methodology

The sub-fund aimed to achieve the promoted environmental and social characteristics by assessing potential assets via an in-house ESG assessment methodology, regardless of their economic prospects for success, and by applying exclusion criteria based on this assessment.

The ESG assessment methodology was using a proprietary software tool which sourced data from one or several ESG data providers, public sources and/or internal assessments to derive overall assessments. The methodology applied to derive such overall assessments could be based on different methods, such as prioritizing one data vendor, worst-of or averaging approach. Internal assessments may have taken into account factors such as an issuer's future expected ESG developments, plausibility of data with regard to past or future events, the willingness to engage in dialogue on ESG matters and/or ESG-related decisions of a company. Further, internal ESG assessments for investee companies may considered the relevance of the exclusion criteria for the market sector of the investee company.

The proprietary software tool used, amongst others, the approaches described below to evaluate the adherence to the promoted ESG characteristics and whether investee companies followed good governance practices. The assessment approaches included, for example, exclusions related to revenues generated from controversial sectors or the exposure to such controversial sectors. In some of the assessment approaches, issuers received one of six possible assessments, with "A" representing the best and "F" the worst assessment. If an issuer was excluded based on one assessment approach, the sub-fund is prohibited from investing in that issuer.

Given the periodical reconstitution of the sub-fund’s portfolio, the sub-fund may held an investment whose ESG assessment had deteriorated post its acquisition by the sub-fund management. While the sub-management ensured continued monitoring of the promoted environmental and social characteristics, the sub-fund’s portfolio may contained such deteriorated asset for a period of potentially up to three months.

Depending on the investable universe, the portfolio allocation and the exposure to certain sectors, the assessment approaches described below may have been more or less relevant which was reflected in the number of issuers being actually excluded.

• Norm Controversy Assessment

The Norm Controversy Assessment evaluated the behaviour of companies in relation to generally accepted international standards and principles of responsible business conduct within, amongst others, the framework of the principles of the United Nations Global Compact, the United Nations Guiding Principles, the standards of the International Labour Organization and the OECD Guidelines for Multinational Enterprises. Examples of topics covered within these standards and principles included, but were not limited to, human rights violations, violations of workers' rights, child or forced labour, negative environmental impacts and business ethics. The Norm Controversy Assessment evaluates reported violations of the aforementioned international standards. Companies with the worst Norm Controversy Assessment of "F" were excluded as an investment.

• Freedom House Status

Freedom House is an international non-governmental organization that classifies countries by their degree of political and civil liberties. Based on the Freedom House Status, countries that were classified as “not free” were excluded as an investment.

• Exposure to controversial sectors

Companies that were involved in certain business areas and business activities in controversial areas ("controversial sectors") were excluded according to their share of total revenues generated in such controversial sectors as followed:

a. Manufacturing and/or distribution of civil handguns or ammunition: 5% or more
b. Manufacturing of tobacco products: 5% or more
c. Mining of oil sand: 5% or more
d. Companies that derived 25% or more from thermal coal mining and thermal coal-based power generation as well as companies with thermal coal expansion plans, such as additional expansion of coal mining, coal production or coal usage. Companies with thermal coal expansion plans were excluded based on an internal identification methodology. In the event of exceptional circumstances, such as measured imposed by a government to address challenges in the energy sector, the Management Company may decide to temporarily suspend the application of the coal-related exclusions to individual companies/geographical regions.

• Exposure to controversial weapons

Companies were excluded if they were identified as being involved in the manufacturing or selling of controversial weapons or key components of controversial weapons (anti-personnel mines, cluster munitions, and/or chemical and biological weapons). In addition, the shareholdings within a group structure might have been taken into consideration for the exclusions.

• Use-of-Proceeds Bond Assessment

This assessment was specific to the nature of this instrument and an investment in use-of-proceeds bonds was permitted only if the following criteria were met. Firstly, all use-of-proceeds bonds were checked for compliance with the Climate Bonds Standards, similar industry standards for green bonds, social bonds or sustainability bonds (such as ICMA Principles) or the EU Green Bond Standard or whether bonds have been subject to an independent review. Secondly, certain ESG criteria were applied in relation to the issuer of the bonds which could lead to the exclusion of issuers and their bonds as an investment.

• Target Fund Assessment

Target funds were evaluated in relation to the underlying companies and were eligible if these companies were aligned with the criteria of the Norm Controversy Assessment and the exposure to controversial weapons (anti-personnel mines, cluster munitions, and/or chemical weapons and biological weapons). Investment in companies with the worst Norm Controversy Assessment of "F" was permitted up to a determined threshold. Considering the tolerance threshold, diversity of data vendors and methodologies, the available data coverage as well as the target fund portfolio rebalancing, this sub-fund may have been indirectly exposed to certain assets that would be excluded if invested directly or for which data coverage was limited or not available.

Sustainability Investment Assessment

Further, for the proportion of sustainable investments, DWS measured the contribution to one or several UN SDGs and/or to other environmental sustainable objectives via its Sustainability Investment Assessment which evaluated potential investments in relation to different criteria to conclude whether an investment could have been considered as sustainable as further detailed in the section "What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?".

The applied ESG investment strategy did not pursue a committed minimum reduction of the scope of the investments.

The assessment of the good governance practices of the investee companies (including assessments related to sound management structures, employee relations, remuneration of staff and tax compliance) was part of the Norm Controversy Assessment which evaluated a company's behavior within generally accepted international standards and principles of responsible business conduct. Companies with the worst Norm Controversy Assessment of "F" were excluded as an investment.

How did this financial product perform compared to the reference sustainable benchmark?

This sub-fund had not designated a reference benchmark to determine whether it was aligned with the environmental and social characteristics that it promoted.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Periodic disclosure for financial products referred to in Article 8, paragraph 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

Product name: DWS Invest CROCI US Dividends

Legal entity identifier: 5493002IABFLPMN5KN63

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

Yes	No
☐ it made **sustainable investments with an environmental objective:** ___%	☐ It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of ___% of sustainable investments.
☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy	☐ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	☐ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
	☐ with a social objective
☐ It made **sustainable investments with a social objective:** ___%	☒ It promoted E/S characteristics, but did **not make any sustainable investments**

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities.** That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

To what extent were the environmental and/or social characteristics promoted by this financial product met?

This sub-fund promoted environmental and social characteristics related to a general consideration of ESG criteria by excluding, for example, investments in companies with the worst norm-related issues towards international standards and/or investments in companies whose involvement in controversial sectors exceeded predefined revenue thresholds.

This sub-fund had not designated a reference benchmark for the purpose of attaining the environmental and social characteristics promoted.

No derivatives were used to attain the environmental or social characteristics promoted by the sub-fund.

How did the sustainability indicators perform?

The attainment of the promoted environmental and social characteristics was assessed via the application of an in-house ESG assessment methodology and ESG specific exclusion thresholds as further described in the section "What actions have been taken to meet the environmental and/or social characteristics during the reference period?". The methodology applied different assessment approaches that were used as sustainability indicators which were:

• **Norm Controversy Assessment** used as an indicator for a company's exposure to norm-related issues towards international standards.
Performance: No investments in suboptimal assets

• **Freedom House Status** used as an indicator for the political and civil liberties of a country.
Performance: No investments in suboptimal assets

• **Exposure to controversial sectors** used as an indicator for a company's involvement in controversial sectors.
Performance: 0%

• **Exposure to controversial weapons** used as an indicator for a company's involvement in controversial weapons.
Performance: 0%

Please see the section entitled “What actions have been taken to meet the environmental and/or social characteristics during the reference period?” for a description of the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted, including the exclusion criteria, and the assessment methodology for determining whether and to what extent assets met the defined environmental and/or social characteristics (including the turnover thresholds defined for the xclusions). This section contains further information on the sustainability indicators. The values from the DWS front office system are used to calculate the sustainability indicators. This means that there may be minor deviations from the other market values that appear in the annual report, which are derived from the fund accounting system.

…and compared to previous periods?

Attainment of the promoted environmental and social characteristics at portfolio level was measured in the previous years on the basis of the following sustainability indicators:

DWS Invest CROCI US Dividends

Indicators Performance	30/12/2024	29/12/2023	30/12/2022

The disclosure of the sustainability indicators has been revised compared with the prior-year report. The assessment methodology is unchanged. Additional information on the currently valid sustainability indicators is provided in the section entitled “What actions have been taken to meet the environmental and/or social characteristics during the reference period?”.
Information about taking into account the principal adverse impacts on sustainability factors is provided in the section entitled “How did this financial product consider principal adverse impacts on sustainability factors?”

DWS ESG-Assessment Scale

In the following assessment categories, the assets received one of six possible scores, with "A" being the best score and "F" being the worst score.

Criteria	Involvement in controversial sectors *(1)	Involvement in controversial weapons	Norm Assessment *(6)	ESG Quality Assessment	SDG- Assessment	Climat & Transition Risk Assessment
A	Non-involvement	Confirmed non-involvement	Confirmed no issues	True leader in ESG (>= 87.5 DWS ESG score)	True SDG contributor (>= 87.5 SDG score)	True climate leader (>= 87.5 score)
B	Remote involvement	Alleged	Violations of lesser degree	ESG leader (75-87.5 DWS ESG score)	SDG contributor (75-87.5 SDG score)	Climate solution provider(75-87.5 score)
C	0% - 5%	Dual-Purpose *(2)	Violations of lesser degree	ESG upper midfield (50-75 DWS ESG score)	SDG upper midfield (50-75 SDG score)	Low transition risk (50-75 score)
D	5% - 10% (coal: 5% - 10%	Owning *(3)/ Owned *(4)	Violation of lesser degree	ESG lower midfield (25-50 DWS ESG score)	SDG lower midfield (25-50 SDG score)	Mod. transition risk (25-50 score)
E	10% - 25% (coal: 15% - 25%)	Component Producer *(5)	High severity or re-assessed highest violation *(7)	ESG laggard (12.5-25 DWS ESG score)	SDG obstructer (12.5-25 SDG score)	High transition risk (12.5-25 score)
F	>= 25%	Weapon producer	Highest severity / global compact violation *(8)	True laggard in ESG (0-12.5 DWS ESG score)	Significant SDG obstructer (0-12.5 SDG score)	Excessive transition risk (0-12.5 score)

*(1) Revenue share thresholds as per standard scheme. Sub-Granularity available. Thresholds can be individually set.

*(2) Encompasses e.g.. weapon-carrying systems such as combat aircraft that carry non-controversial weapons as well as controversial ones.

*(3) Owning more than 20% equity.

*(4) Being owned by more than 50% of company involved in grade E or F.

*(5) Single purpose key component.

*(6) Includes ILO controversies as well as corporate governance and product issues.

*(7) In its ongoing assessment, DWS takes into account the violation(s) of international standards – observed via data from ESG data vendors – such as the UN Global Compact, but also possible ESG data vendor errors identified, future expected developments of these violations as well as the willingness of the issuer to engage in dialogue regarding corporate decisions in this regard.

*(8) An F-grade can be considered a reconfirmed violation of the United Nations Global Compact rule framework for corporate behavior.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union Criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU Criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU Criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

How did this financial product consider principal adverse impacts on sustainability factors?

The sub-fund considered the following principal adverse impacts on sustainability factors from Annex I of the Commission Delegated Regulation (EU) 2022/1288 supplementing the SFDR:

• Exposure to companies active in the fossil fuel sector (no. 4);

• Violations of the United Nations Global Compact principles and OECD Guidelines for Multinational Enterprises (no. 10); and

• Exposure to controversial weapons (no. 14).

DWS Invest CROCI US Dividends

Indicators	Description	Performance
Principal Adverse Impact		
PAII - 04. Exposure to companies active in the fossil fuel sector	Share of investments in companies active in the fossil fuel sector	13.01 % of assets
PAII - 10. Violations of UNGC principles and OECD Guidelines for Multinational Enterprises	Share of investments in investee companies that have been involved in violations of the UNGC principles or OECD Guidelines for Multinational Enterprises	0 % of assets
PAII - 14. Exposure to controversial weapons	Share of investments in investee companies involved in the manufacture or selling of controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)	0 % of assets

As of: December 30, 2025

The Principal Adverse Impact Indicators (PAIIs) are calculated on the basis of the data in the DWS back office and front office systems, which are primarily based on the data of external ESG data providers. If there is no data on individual PAIIs for individual securities or their issuers, either because no data is available or the PAII is not applicable to the particular issuer or security, these securities or issuers are not included in the calculation of the PAII. With target fund investments, a look-through of the target fund holdings is performed if appropriate data is available. The calculation method for the individual PAI indicators may change in subsequent reporting periods due to evolving market standards, a change in the treatment of securities of certain types of instruments (such as derivatives) or as a result of regulatory clarifications.
Moreover, improved data availability may have an effect on the reported PAIIs in subsequent reporting periods.
The values from the DWS front office system are used to calculate the PAIIs. This means that there may be minor deviations from the other market values that appear in the annual report, which are derived from the fund accounting system.

What were the top investments of this financial product?

DWS Invest CROCI US Dividends

Largest investments	Breakdown by sector according to NACE Codes	in % of average portfolio volume	Breakdown by country
J.M. Smucker Co.	C - Manufacturing	2.5 %	United States
Gilead Sciences	C - Manufacturing	2.5 %	United States
Oneok (new)	D - Electricity, gas, steam and air conditioning supply	2.5 %	United States

for the period from January 01, 2025, through December 30, 2025

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is:
for the period from January 01, 2025, through December 31, 2025

What was the proportion of sustainability-related investments?

The proportion of sustainability-related investments as of the reporting date was 100% of portfolio assets.
Proportion of sustainability-related investments for the previous years:
30/12/2024: 99.95%
29/12/2023: 100.00%
30/12/2022: 99.91%

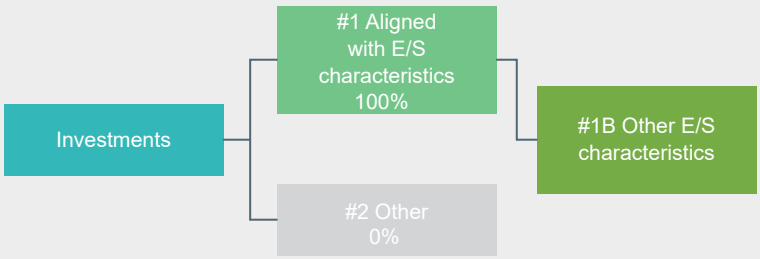
Asset allocation describes the share of investments in specific assets.

What was the asset allocation?

This sub-fund invested 100% of its net assets in investments that were aligned with the promoted environmental and social characteristics (#1 Aligned with E/S characteristics).

0% of the sub-fund's net assets have been invested in assets which were either out-of-scope of the ESG assessment methodology or for which ESG data coverage was incomplete (#2 Other) as further detailed in the section "What investments were included under "#2 Other", what was their purpose and were there any minimum environmental or social safeguards?".

A more detailed description of the specific asset allocation of this sub-fund can be found in the Special Section of the Sales Prospectus.



#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

In which economic sectors were the investments made?

DWS Invest CROCI US Dividends

NACE-Code	Breakdown by sector according to NACE Codes	in % of portfolio volume
B	Mining and quarrying	12.9 %
C	Manufacturing	61.9 %
D	Electricity, gas, steam and air conditioning supply	2.6 %
G	Wholesale and retail trade; repair of motor vehicles and motorcycles	7.2 %
J	Information and communication	2.6 %
K	Financial and insurance activities	0.0 %
M	Professional, scientific and technical activities	7.4 %
Q	Human health and social work activities	2.5 %
NA	Other	2.9 %
Exposure to companies active in the fossil fuel sector		13.0 %

As of: December 30, 2025

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The sub-fund did not commit to invest a proportion of sustainable investments with an environmental objective aligned with the EU Taxonomy. Therefore, the promoted minimum percentage of environmentally sustainable investments aligned with the EU Taxonomy was 0% of the sub-fund's net assets. However, certain investments' underlying economic activities may have been aligned with the EU Taxonomy.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are economic activities for yet low-carbon alternatives are not yet available and that have greenhouse gas emission levels corresponding to the best performance.

Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy[1]?

☐ Yes:

☐ In fossil gas ☐ In nuclear energy

☒ No

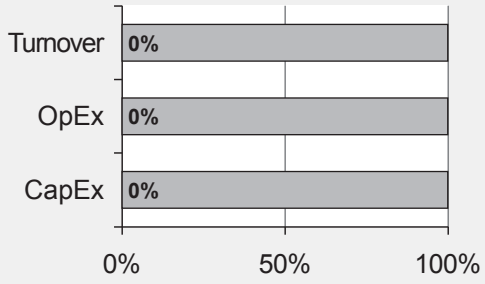
The sub-fund did not take into account the Taxonomy-alignment of companies active in the fossil gas and/or nuclear energy sectors.

[1] Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do no significant harm to any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Taxonomy-aligned activities are expressed as a share of:
- turnover reflecting the share of revenue from green activities of investee companies.
- capital expenditure (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- operational expenditure (OpEx) reflecting the green operational activities of investee companies.

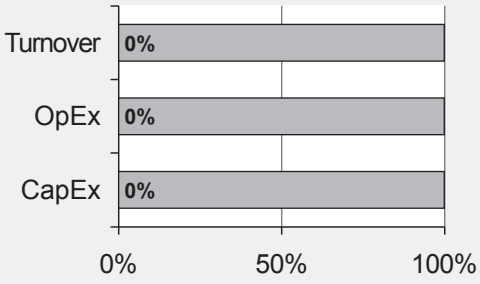
The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy-alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy-alignment only in relation to the investments of the financial product other than sovereign bonds.

1. Taxonomy-alignment of investments **including sovereign bonds***



Taxonomy-aligned: Fossil gas	0.00%
Taxonomy-aligned: Nuclear	0.00%
Taxonomy-aligned (no gas and nuclear)	0.00%
Taxonomy-aligned	0.00%
Non Taxonomy-aligned	100.00%

2. Taxonomy-alignment of investments **excluding sovereign bonds***



Taxonomy-aligned: Fossil gas	0.00%
Taxonomy-aligned: Nuclear	0.00%
Taxonomy-aligned (no gas and nuclear)	0.00%
Taxonomy-aligned	0.00%
Non Taxonomy-aligned	100.00%

This graph represents 100% of the total investments.

**For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures*

What was the share of investments made in transitional and enabling activities?

The sub-fund was not committed to a share of investments in transitional or enabling activities.

How did the percentage of investments that are aligned with the EU Taxonomy compare with previous reference periods?

The promoted proportion of environmentally sustainable investments in accordance with Regulation (EU) 2020/852 (Taxonomy Regulation) was 0% of the fund's assets in the current as well as previous reference periods. It may, however, have been the case that some sustainable investments were nevertheless aligned with an environmental objective of the Taxonomy Regulation.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the Regulation (EU) 2020/852.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

In this and previous periods, the fund did not advertise a share of sustainable investments with an environmental target that was not in line with the EU taxonomy.

In the 2022 reporting period, the Sub-Fund set a ratio for environmentally and socially sustainable investments. The share of sustainable investments not segregated according to ecological and social factors totalled 23.57% in 2022.

What was the share of socially sustainable investments?

In this and previous periods, the fund did not advertise a share of sustainable investments with an environmental target that was not in line with the EU taxonomy.

In the 2022 reporting period, the Sub-Fund set a ratio for environmentally and socially sustainable investments. The share of sustainable investments not segregated according to ecological and social factors totalled 23.57% in 2022.

What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?

100% of this sub-fund´s net assets were aligned with the promoted environmental and social characteristics (#1 Aligned with E/S characteristics). 0% of the sub-fund's net assets were invested in assets which were either out-of-scope of the ESG assessment methodology or for which ESG data coverage was incomplete (#2 Other). Full ESG data coverage was required for the assessment of direct investments in companies in relation to good governance practices.

Assets under “#2 Other” could include all asset classes as foreseen in the specific investment policy, such as sight deposits with credit institutions and derivatives. These assets could include investments whose ESG assessment had deteriorated post-acquisition for a period of potentially up to three months.

These assets could be used by the portfolio management for performance, risk diversification, liquidity and hedging purposes.

Minimum environmental or social safeguards were not or only partially considered for the sub-fund´s investments falling within “#2 Other”.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

This sub-fund pursued a strategy based on equities as main investment strategy. The sub-fund's assets were invested predominantly in large cap US equities that were considered undervalued and offered comparatively high and sustainable dividend yield according to the CROCI methodology and the CROCI US Dividends investment strategy.

Further details regarding the main investment strategy are specified in the Special Section of the Sales Prospectus.

At least 51% of the sub-fund's net assets were allocated to investments that met the promoted environmental and social characteristics as described in the following sections. The alignment of the portfolio with the binding elements of the investment strategy used to attain the promoted environmental and social characteristics was continuously controlled via the sub-fund's investment guidelines monitoring.

ESG assessment methodology

The sub-fund aimed to achieve the promoted environmental and social characteristics by assessing potential assets via an in-house ESG assessment methodology, regardless of their economic prospects for success, and by applying exclusion criteria based on this assessment.

The ESG assessment methodology was using a proprietary software tool which sourced data from one or several ESG data providers, public sources and/or internal assessments to derive overall assessments. The methodology applied to derive such overall assessments could be based on different methods, such as prioritizing one data vendor, worst-of or averaging approach. Internal assessments may have taken into account factors such as an issuer's future expected ESG developments, plausibility of data with regard to past or future events, the willingness to engage in dialogue on ESG matters and/or ESG-related decisions of a company. Further, internal ESG assessments for investee companies may considered the relevance of the exclusion criteria for the market sector of the investee company.

The proprietary software tool used, amongst others, the approaches described below to evaluate the adherence to the promoted ESG characteristics and whether investee companies followed good governance practices. The assessment approaches included, for example, exclusions related to revenues generated from controversial sectors or the exposure to such controversial sectors. In some of the assessment approaches, issuers received one of six possible assessments, with "A" representing the best and "F" the worst assessment. If an issuer was excluded based on one assessment approach, the sub-fund is prohibited from investing in that issuer.

Given the periodical reconstitution of the sub-fund's portfolio, the sub-fund may held an investment whose ESG assessment had deteriorated post its acquisition by the sub-fund management. While the sub-management ensured continued monitoring of the promoted environmental and social characteristics, the sub-fund's portfolio may contained such deteriorated asset for a period of potentially up to three months.

Depending on the investable universe, the portfolio allocation and the exposure to certain sectors, the assessment approaches described below may have been more or less relevant which was reflected in the number of issuers being actually excluded.

• **Norm Controversy Assessment**

The Norm Controversy Assessment evaluated the behaviour of companies in relation to generally accepted international standards and principles of responsible business conduct within, amongst others, the framework of the principles of the United Nations Global Compact, the United Nations Guiding Principles, the standards of the International Labour Organization and the OECD Guidelines for Multinational Enterprises. Examples of topics covered within these standards and principles included, but were not limited to, human rights violations, violations of workers' rights, child or forced labour, negative environmental impacts and business ethics. The Norm Controversy Assessment evaluates reported violations of the aforementioned international standards. Companies with the worst Norm Controversy Assessment of "F" were excluded as an investment.

• **Freedom House Status**

Freedom House is an international non-governmental organization that classifies countries by their degree of political and civil liberties. Based on the Freedom House Status, countries that were classified as “not free” were excluded as an investment.

• **Exposure to controversial sectors**

Companies that were involved in certain business areas and business activities in controversial areas ("controversial sectors") were excluded according to their share of total revenues generated in such controversial sectors as followed:

a. Manufacturing and/or distribution of civil handguns or ammunition: 5% or more
b. Manufacturing of tobacco products: 5% or more
c. Mining of oil sand: 5% or more
d. Companies that derived 25% or more from thermal coal mining and thermal coal-based power generation as well as companies with thermal coal expansion plans, such as additional expansion of coal mining, coal production or coal usage. Companies with thermal coal expansion plans were excluded based on an internal identification methodology. In the event of exceptional circumstances, such as measured imposed by a government to address challenges in the energy sector, the Management Company may decide to temporarily suspend the application of the coal-related exclusions to individual companies/geographical regions.

• **Exposure to controversial weapons**

Companies were excluded if they were identified as being involved in the manufacturing or selling of controversial weapons or key components of controversial weapons (anti-personnel mines, cluster munitions, and/or chemical and biological weapons). In addition, the shareholdings within a group structure might have been taken into consideration for the exclusions.

• Use-of-Proceeds Bond Assessment

This assessment was specific to the nature of this instrument and an investment in use-of-proceeds bonds was permitted only if the following criteria were met. Firstly, all use-of-proceeds bonds were checked for compliance with the Climate Bonds Standards, similar industry standards for green bonds, social bonds or sustainability bonds (such as ICMA Principles) or the EU Green Bond Standard or whether bonds have been subject to an independent review. Secondly, certain ESG criteria were applied in relation to the issuer of the bonds which could lead to the exclusion of issuers and their bonds as an investment.

• Target Fund Assessment

Target funds were evaluated in relation to the underlying companies and were eligible if these companies were aligned with the criteria of the Norm Controversy Assessment and the exposure to controversial weapons (anti-personnel mines, cluster munitions, and/or chemical weapons and biological weapons). Investment in companies with the worst Norm Controversy Assessment of "F" was permitted up to a determined threshold. Considering the tolerance threshold, diversity of data vendors and methodologies, the available data coverage as well as the target fund portfolio rebalancing, this sub-fund may have been indirectly exposed to certain assets that would be excluded if invested directly or for which data coverage was limited or not available.

The applied ESG investment strategy did not pursue a committed minimum reduction of the scope of the investments.

The assessment of the good governance practices of the investee companies (including assessments related to sound management structures, employee relations, remuneration of staff and tax compliance) was part of the Norm Controversy Assessment which evaluated a company's behavior within generally accepted international standards and principles of responsible business conduct. Companies with the worst Norm Controversy Assessment of "F" were excluded as an investment.

How did this financial product perform compared to the reference sustainable benchmark?

This sub-fund had not designated a reference benchmark to determine whether it was aligned with the environmental and social characteristics that it promoted.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Periodic disclosure for financial products referred to in Article 8, paragraph 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

Product name: DWS Invest CROCI World Value

Legal entity identifier: 549300EKCGWXZNQZVH81

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

Yes	No
☐ it made **sustainable investments with an environmental objective:** ___%	☐ It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of ___% of sustainable investments.
☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy	☐ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	☐ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
	☐ with a social objective
☐ It made **sustainable investments with a social objective:** ___%	X It promoted E/S characteristics, but did **not make any sustainable investments**

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities.** That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

To what extent were the environmental and/or social characteristics promoted by this financial product met?

This sub-fund promoted environmental and social characteristics related to a general consideration of ESG criteria by excluding, for example, investments in companies with the worst norm-related issues towards international standards and/or investments in companies whose involvement in controversial sectors exceeded predefined revenue thresholds.

This sub-fund had not designated a reference benchmark for the purpose of attaining the environmental and social characteristics promoted.

No derivatives were used to attain the environmental or social characteristics promoted by the sub-fund.

How did the sustainability indicators perform?

The attainment of the promoted environmental and social characteristics was assessed via the application of an in-house ESG assessment methodology and ESG specific exclusion thresholds as further described in the section "What actions have been taken to meet the environmental and/or social characteristics during the reference period?". The methodology applied different assessment approaches that were used as sustainability indicators which were:

• **Norm Controversy Assessment** used as an indicator for a company's exposure to norm-related issues towards international standards.
Performance: No investments in suboptimal assets

• **Freedom House Status** used as an indicator for the political and civil liberties of a country.
Performance: No investments in suboptimal assets

• **Exposure to controversial sectors** used as an indicator for a company's involvement in controversial sectors.
Performance: 0%

• **Exposure to controversial weapons** used as an indicator for a company's involvement in controversial weapons.
Performance: 0%

Please see the section entitled “What actions have been taken to meet the environmental and/or social characteristics during the reference period?” for a description of the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted, including the exclusion criteria, and the assessment methodology for determining whether and to what extent assets met the defined environmental and/or social characteristics (including the turnover thresholds defined for the xclusions). This section contains further information on the sustainability indicators. The values from the DWS front office system are used to calculate the sustainability indicators. This means that there may be minor deviations from the other market values that appear in the annual report, which are derived from the fund accounting system.

…and compared to previous periods?

Attainment of the promoted environmental and social characteristics at portfolio level was measured in the previous years on the basis of the following sustainability indicators:

DWS Invest CROCI World Value

The disclosure of the sustainability indicators has been revised compared with the prior-year report. The assessment methodology is unchanged. Additional information on the currently valid sustainability indicators is provided in the section entitled “What actions have been taken to meet the environmental and/or social characteristics during the reference period?”.
Information about taking into account the principal adverse impacts on sustainability factors is provided in the section entitled “How did this financial product consider principal adverse impacts on sustainability factors?”

DWS ESG-Assessment Scale

In the following assessment categories, the assets received one of six possible scores, with "A" being the best score and "F" being the worst score.

Criteria	Involvement in controversial sectors *(1)	Involvement in controversial weapons	Norm Assessment *(6)	ESG Quality Assessment	SDG- Assessment	Climat & Transition Risk Assessment
A	Non-involvement	Confirmed non-involvement	Confirmed no issues	True leader in ESG (>= 87.5 DWS ESG score)	True SDG contributor (>= 87.5 SDG score)	True climate leader (>= 87.5 score)
B	Remote involvement	Alleged	Violations of lesser degree	ESG leader (75-87.5 DWS ESG score)	SDG contributor (75-87.5 SDG score)	Climate solution provider(75-87.5 score)
C	0% - 5%	Dual-Purpose *(2)	Violations of lesser degree	ESG upper midfield (50-75 DWS ESG score)	SDG upper midfield (50-75 SDG score)	Low transition risk (50-75 score)
D	5% - 10% (coal: 5% - 10%	Owning *(3)/ Owned *(4)	Violation of lesser degree	ESG lower midfield (25-50 DWS ESG score)	SDG lower midfield (25-50 SDG score)	Mod. transition risk (25-50 score)
E	10% - 25% (coal: 15% - 25%)	Component Producer *(5)	High severity or re-assessed highest violation *(7)	ESG laggard (12.5-25 DWS ESG score)	SDG obstructer (12.5-25 SDG score)	High transition risk (12.5-25 score)
F	>= 25%	Weapon producer	Highest severity / global compact violation *(8)	True laggard in ESG (0-12.5 DWS ESG score)	Significant SDG obstructer (0-12.5 SDG score)	Excessive transition risk (0-12.5 score)

*(1) Revenue share thresholds as per standard scheme. Sub-Granularity available. Thresholds can be individually set.

*(2) Encompasses e.g.. weapon-carrying systems such as combat aircraft that carry non-controversial weapons as well as controversial ones.

*(3) Owning more than 20% equity.

*(4) Being owned by more than 50% of company involved in grade E or F.

*(5) Single purpose key component.

*(6) Includes ILO controversies as well as corporate governance and product issues.

*(7) In its ongoing assessment, DWS takes into account the violation(s) of international standards – observed via data from ESG data vendors – such as the UN Global Compact, but also possible ESG data vendor errors identified, future expected developments of these violations as well as the willingness of the issuer to engage in dialogue regarding corporate decisions in this regard.

*(8) An F-grade can be considered a reconfirmed violation of the United Nations Global Compact rule framework for corporate behavior.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union Criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU Criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU Criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

How did this financial product consider principal adverse impacts on sustainability factors?

The sub-fund considered the following principal adverse impacts on sustainability factors from Annex I of the Commission Delegated Regulation (EU) 2022/1288 supplementing the SFDR:

• Exposure to companies active in the fossil fuel sector (no. 4);

• Violations of the United Nations Global Compact principles and OECD Guidelines for Multinational Enterprises (no. 10); and

• Exposure to controversial weapons (no. 14).

DWS Invest CROCI World Value

Indicators	Description	Performance
Principal Adverse Impact		
PAII - 04. Exposure to companies active in the fossil fuel sector	Share of investments in companies active in the fossil fuel sector	9.1 % of assets
PAII - 10. Violations of UNGC principles and OECD Guidelines for Multinational Enterprises	Share of investments in investee companies that have been involved in violations of the UNGC principles or OECD Guidelines for Multinational Enterprises	0 % of assets
PAII - 14. Exposure to controversial weapons	Share of investments in investee companies involved in the manufacture or selling of controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)	0 % of assets

As of: December 30, 2025

The Principal Adverse Impact Indicators (PAIIs) are calculated on the basis of the data in the DWS back office and front office systems, which are primarily based on the data of external ESG data providers. If there is no data on individual PAIIs for individual securities or their issuers, either because no data is available or the PAII is not applicable to the particular issuer or security, these securities or issuers are not included in the calculation of the PAII. With target fund investments, a look-through of the target fund holdings is performed if appropriate data is available. The calculation method for the individual PAI indicators may change in subsequent reporting periods due to evolving market standards, a change in the treatment of securities of certain types of instruments (such as derivatives) or as a result of regulatory clarifications.
Moreover, improved data availability may have an effect on the reported PAIIs in subsequent reporting periods.
The values from the DWS front office system are used to calculate the PAIIs. This means that there may be minor deviations from the other market values that appear in the annual report, which are derived from the fund accounting system.

What were the top investments of this financial product?

DWS Invest CROCI World Value

Largest investments	Breakdown by sector according to NACE Codes	in % of average portfolio volume	Breakdown by country
Hewlett Packard Enterprise	C - Manufacturing	1.0 %	United States
Charter Communications Cl.A	J - Information and communication	1.0 %	United States
Eversource Energy	D - Electricity, gas, steam and air conditioning supply	1.0 %	United States

Aptiv	C - Manufacturing	1.0 %	Jersey
Devon Energy Corp.	B - Mining and quarrying	1.0 %	United States

for the period from January 01, 2025, through December 30, 2025

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is:
for the period from January 01, 2025, through December 31, 2025

What was the proportion of sustainability-related investments?

The proportion of sustainability-related investments as of the reporting date was 100% of portfolio assets.
Proportion of sustainability-related investments for the previous years:
30/12/2024: 99.85%
29/12/2023: 100.00%
30/12/2022: 100.00%

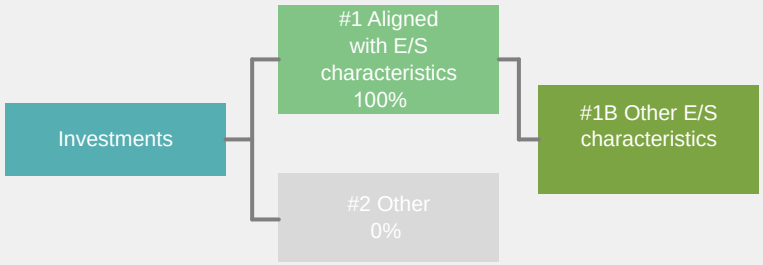
Asset allocation describes the share of investments in specific assets.

What was the asset allocation?

This sub-fund invested 100% of its net assets in investments that were aligned with the promoted environmental and social characteristics (#1 Aligned with E/S characteristics).

0% of the sub-fund's net assets have been invested in assets which were either out-of-scope of the ESG assessment methodology or for which ESG data coverage was incomplete (#2 Other) as further detailed in the section "What investments were included under "#2 Other", what was their purpose and were there any minimum environmental or social safeguards?".

A more detailed description of the specific asset allocation of this sub-fund can be found in the Special Section of the Sales Prospectus.



#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

In which economic sectors were the investments made?

DWS Invest CROCI World Value

NACE-Code	Breakdown by sector according to NACE Codes	in % of portfolio volume
B	Mining and quarrying	6.1 %
C	Manufacturing	39.6 %
D	Electricity, gas, steam and air conditioning supply	3.0 %
F	Construction	0.9 %
G	Wholesale and retail trade; repair of motor vehicles and motorcycles	2.8 %
H	Transporting and storage	5.9 %
I	Accommodation and food service activities	1.0 %
J	Information and communication	11.0 %
K	Financial and insurance activities	15.2 %
M	Professional, scientific and technical activities	8.9 %
Q	Human health and social work activities	1.0 %
R	Arts, entertainment and recreation	1.0 %
NA	Other	3.6 %
Exposure to companies active in the fossil fuel sector		9.1 %

As of: December 30, 2025

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The sub-fund did not commit to invest a proportion of sustainable investments with an environmental objective aligned with the EU Taxonomy. Therefore, the promoted minimum percentage of environmentally sustainable investments aligned with the EU Taxonomy was 0% of the sub-fund's net assets. However, certain investments' underlying economic activities may have been aligned with the EU Taxonomy.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are economic activities for yet low-carbon alternatives are not yet available and that have greenhouse gas emission levels corresponding to the best performance.

Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy[1]?

☐ Yes:

☐ In fossil gas ☐ In nuclear energy

☒ No

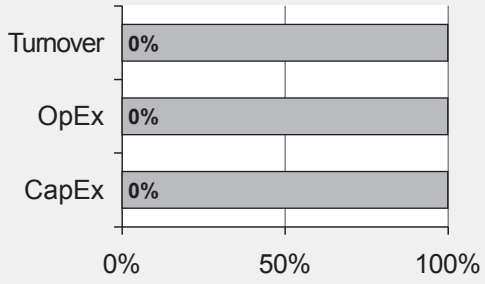
The sub-fund did not take into account the Taxonomy-alignment of companies active in the fossil gas and/or nuclear energy sectors.

[1] Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do no significant harm to any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Taxonomy-aligned activities are expressed as a share of:
- turnover reflecting the share of revenue from green activities of investee companies.
- capital expenditure (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- operational expenditure (OpEx) reflecting the green operational activities of investee companies.

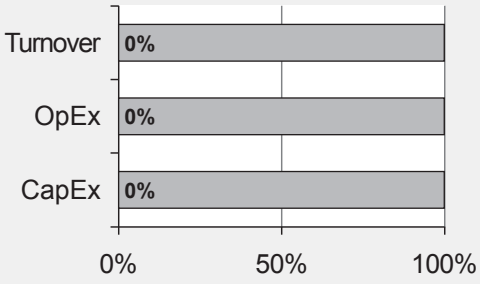
The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy-alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy-alignment only in relation to the investments of the financial product other than sovereign bonds.

1. Taxonomy-alignment of investments **including sovereign bonds***



Taxonomy-aligned: Fossil gas	0.00%
Taxonomy-aligned: Nuclear	0.00%
Taxonomy-aligned (no gas and nuclear)	0.00%
Taxonomy-aligned	0.00%
Non Taxonomy-aligned	100.00%

2. Taxonomy-alignment of investments **excluding sovereign bonds***



Taxonomy-aligned: Fossil gas	0.00%
Taxonomy-aligned: Nuclear	0.00%
Taxonomy-aligned (no gas and nuclear)	0.00%
Taxonomy-aligned	0.00%
Non Taxonomy-aligned	100.00%

This graph represents 100% of the total investments.

**For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures*

What was the share of investments made in transitional and enabling activities?

The sub-fund was not committed to a share of investments in transitional or enabling activities.

How did the percentage of investments that are aligned with the EU Taxonomy compare with previous reference periods?

The promoted proportion of environmentally sustainable investments in accordance with Regulation (EU) 2020/852 (Taxonomy Regulation) was 0% of the fund's assets in the current as well as previous reference periods. It may, however, have been the case that some sustainable investments were nevertheless aligned with an environmental objective of the Taxonomy Regulation.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the Regulation (EU) 2020/852.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

In this and previous periods, the fund did not advertise a share of sustainable investments with an environmental target that was not in line with the EU taxonomy.

In the 2022 reporting period, the Sub-Fund set a ratio for environmentally and socially sustainable investments. The share of sustainable investments not segregated according to ecological and social factors totalled 17.17% in 2022.

What was the share of socially sustainable investments?

In this and previous periods, the fund did not advertise a share of sustainable investments with an environmental target that was not in line with the EU taxonomy.

In the 2022 reporting period, the Sub-Fund set a ratio for environmentally and socially sustainable investments. The share of sustainable investments not segregated according to ecological and social factors totalled 17.17% in 2022.

What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?

100% of this sub-fund´s net assets were aligned with the promoted environmental and social characteristics (#1 Aligned with E/S characteristics). 0% of the sub-fund's net assets were invested in assets which were either out-of-scope of the ESG assessment methodology or for which ESG data coverage was incomplete (#2 Other). Full ESG data coverage was required for the assessment of direct investments in companies in relation to good governance practices.

Assets under “#2 Other” could include all asset classes as foreseen in the specific investment policy, such as sight deposits with credit institutions and derivatives. These assets could include investments whose ESG assessment had deteriorated post-acquisition for a period of potentially up to three months.

These assets could be used by the portfolio management for performance, risk diversification, liquidity and hedging purposes.

Minimum environmental or social safeguards were not or only partially considered for the sub-fund´s investments falling within “#2 Other”.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

This sub-fund pursued a strategy based on equities as main investment strategy. At least 60% of the sub-fund's assets were invested in large cap developed market global equities that were considered undervalued according to the CROCI methodology and the CROCI World Value investment strategy. Further details regarding the main investment strategy are specified in the Special Section of the Sales Prospectus.

100% of the sub-fund's net assets were allocated to investments that met the promoted environmental and social characteristics as described in the following sections. The alignment of the portfolio with the binding elements of the investment strategy used to attain the promoted environmental and social characteristics was continuously controlled via the sub-fund's investment guidelines monitoring.

ESG assessment methodology

The sub-fund aimed to achieve the promoted environmental and social characteristics by assessing potential assets via an in-house ESG assessment methodology, regardless of their economic prospects for success, and by applying exclusion criteria based on this assessment.

The ESG assessment methodology was using a proprietary software tool which sourced data from one or several ESG data providers, public sources and/or internal assessments to derive overall assessments. The methodology applied to derive such overall assessments could be based on different methods, such as prioritizing one data vendor, worst-of or averaging approach. Internal assessments may have taken into account factors such as an issuer's future expected ESG developments, plausibility of data with regard to past or future events, the willingness to engage in dialogue on ESG matters and/or ESG-related decisions of a company. Further, internal ESG assessments for investee companies may considered the relevance of the exclusion criteria for the market sector of the investee company.

The proprietary software tool used, amongst others, the approaches described below to evaluate the adherence to the promoted ESG characteristics and whether investee companies followed good governance practices. The assessment approaches included, for example, exclusions related to revenues generated from controversial sectors or the exposure to such controversial sectors. In some of the assessment approaches, issuers received one of six possible assessments, with "A" representing the best and "F" the worst assessment. If an issuer was excluded based on one assessment approach, the sub-fund is prohibited from investing in that issuer.

Given the periodical reconstitution of the sub-fund's portfolio, the sub-fund may held an investment whose ESG assessment had deteriorated post its acquisition by the sub-fund management. While the sub-management ensured continued monitoring of the promoted environmental and social characteristics, the sub-fund's portfolio may contained such deteriorated asset for a period of potentially up to three months.

Depending on the investable universe, the portfolio allocation and the exposure to certain sectors, the assessment approaches described below may have been more or less relevant which was reflected in the number of issuers being actually excluded.

• Norm Controversy Assessment

The Norm Controversy Assessment evaluated the behaviour of companies in relation to generally accepted international standards and principles of responsible business conduct within, amongst others, the framework of the principles of the United Nations Global Compact, the United Nations Guiding Principles, the standards of the International Labour Organization and the OECD Guidelines for Multinational Enterprises. Examples of topics covered within these standards and principles included, but were not limited to, human rights violations, violations of workers' rights, child or forced labour, negative environmental impacts and business ethics. The Norm Controversy Assessment evaluates reported violations of the aforementioned international standards. Companies with the worst Norm Controversy Assessment of "F" were excluded as an investment.

• Freedom House Status

Freedom House is an international non-governmental organization that classifies countries by their degree of political and civil liberties. Based on the Freedom House Status, countries that were classified as “not free” were excluded as an investment.

• Exposure to controversial sectors

Companies that were involved in certain business areas and business activities in controversial areas ("controversial sectors") were excluded according to their share of total revenues generated in such controversial sectors as followed:

a. Manufacturing and/or distribution of civil handguns or ammunition: 5% or more
b. Manufacturing of tobacco products: 5% or more
c. Mining of oil sand: 5% or more
d. Companies that derived 25% or more from thermal coal mining and thermal coal-based power generation as well as companies with thermal coal expansion plans, such as additional expansion of coal mining, coal production or coal usage. Companies with thermal coal expansion plans were excluded based on an internal identification methodology. In the event of exceptional circumstances, such as measured imposed by a government to address challenges in the energy sector, the Management Company may decide to temporarily suspend the application of the coal-related exclusions to individual companies/geographical regions.

• Exposure to controversial weapons

Companies were excluded if they were identified as being involved in the manufacturing or selling of controversial weapons or key components of controversial weapons (anti-personnel mines, cluster munitions, and/or chemical and biological weapons). In addition, the shareholdings within a group structure might have been taken into consideration for the exclusions.

• Use-of-Proceeds Bond Assessment

This assessment was specific to the nature of this instrument and an investment in use-of-proceeds bonds was permitted only if the following criteria were met. Firstly, all use-of-proceeds bonds were checked for compliance with the Climate Bonds Standards, similar industry standards for green bonds, social bonds or sustainability bonds (such as ICMA Principles) or the EU Green Bond Standard or whether bonds have been subject to an independent review. Secondly, certain ESG criteria were applied in relation to the issuer of the bonds which could lead to the exclusion of issuers and their bonds as an investment.

• Target Fund Assessment

Target funds were evaluated in relation to the underlying companies and were eligible if these companies were aligned with the criteria of the Norm Controversy Assessment and the exposure to controversial weapons (anti-personnel mines, cluster munitions, and/or chemical weapons and biological weapons). Investment in companies with the worst Norm Controversy Assessment of "F" was permitted up to a determined threshold. Considering the tolerance threshold, diversity of data vendors and methodologies, the available data coverage as well as the target fund portfolio rebalancing, this sub-fund may have been indirectly exposed to certain assets that would be excluded if invested directly or for which data coverage was limited or not available.

The applied ESG investment strategy did not pursue a committed minimum reduction of the scope of the investments.

The assessment of the good governance practices of the investee companies (including assessments related to sound management structures, employee relations, remuneration of staff and tax compliance) was part of the Norm Controversy Assessment which evaluated a company's behavior within generally accepted international standards and principles of responsible business conduct. Companies with the worst Norm Controversy Assessment of "F" were excluded as an investment.

How did this financial product perform compared to the reference sustainable benchmark?

This sub-fund had not designated a reference benchmark to determine whether it was aligned with the environmental and social characteristics that it promoted.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Periodic disclosure for financial products referred to in Article 8, paragraph 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

Product name: DWS Invest ESG Asian Bonds

Did this financial product have a sustainable investment objective?

Yes	No
☐ it made **sustainable investments with an environmental objective:** ___%	☒ It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of 24.00% of sustainable investments.
☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy	☐ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
	☒ with a social objective
☐ It made **sustainable investments with a social objective:** ___%	☐ It promoted E/S characteristics, but did **not make any sustainable investments**

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities.** That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

To what extent were the environmental and/or social characteristics promoted by this financial product met?

This sub-fund promoted environmental and social characteristics related to a general consideration of ESG criteria by excluding, for example, investments in companies with the worst norm-related issues towards international standards, issuers with the worst assessment in terms of environmental, social and governance aspects compared to their peer group and/or investments in companies whose involvement in controversial sectors exceeded predefined revenue thresholds.

Further, this sub-fund promoted a proportion of sustainable investments in accordance with article 2(17) of the regulation on sustainability-related disclosures in the financial services sector (SFDR).

This sub-fund had not designated a reference benchmark for the purpose of attaining the environmental and social characteristics promoted.

No derivatives were used to attain the environmental or social characteristics promoted by the sub-fund.

How did the sustainability indicators perform?

The attainment of the promoted environmental and social characteristics as well as the sustainable investment was assessed via the application of an in-house ESG assessment methodology and ESG specific exclusion thresholds as further described in the section “What actions have been taken to meet the environmental and/or social characteristics during the reference period?”. The methodology applied different assessment approaches that were used as sustainability indicators which were:

• **Norm Controversy Assessment** used as an indicator for a company’s exposure to norm-related issues towards international standards.
Performance: No investments in suboptimal assets

• **ESG Quality Assessment** used as an indicator for comparison of an issuer’s environmental, social and governance aspects in relation to its peer group.
Performance: No investments in suboptimal assets

• **Freedom House Status** used as an indicator for the political and civil liberties of a country.
Performance: No investments in suboptimal assets

• **Exposure to controversial sectors** used as an indicator for a company’s involvement in controversial sectors.
Performance: 0%

• **Exposure to companies subject to the EU Paris-aligned Benchmark exclusion criteria** as set forth in article 12(1) of Commission Delegated Regulation 2020/1818 (PAB-Exclusions).
Performance: No investments in suboptimal assets

• **Sustainability Investment Assessment** used as an indicator to measure the proportion of sustainable investments pursuant to article 2(17) SFDR.
Performance: 24.00%

Please see the section entitled “What actions have been taken to meet the environmental and/or social characteristics during the reference period?” for a description of the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted, including the exclusion criteria, and the assessment methodology for determining whether and to what extent assets met the defined environmental and/or social characteristics (including the turnover thresholds defined for the xclusions). This section contains further information on the sustainability indicators. The values from the DWS front office system are used to calculate the sustainability indicators. This means that there may be minor deviations from the other market values that appear in the annual report, which are derived from the fund accounting system.

…and compared to previous periods?

Attainment of the promoted environmental and social characteristics at portfolio level was measured in the previous years on the basis of the following sustainability indicators:

The disclosure of the sustainability indicators has been revised compared with the prior-year report. The assessment methodology is unchanged. Additional information on the currently valid sustainability indicators is provided in the section entitled “What actions have been taken to meet the environmental and/or social characteristics during the reference period?”.
Information about taking into account the principal adverse impacts on sustainability factors is provided in the section entitled “How did this financial product consider principal adverse impacts on sustainability factors?”

DWS ESG-Assessment Scale

In the following assessment categories, the assets received one of six possible scores, with "A" being the best score and "F" being the worst score.

Criteria	Involvement in controversial sectors *(1)	Involvement in controversial weapons	Norm Assessment *(6)	ESG Quality Assessment	SDG- Assessment	Climat & Transition Risk Assessment
A	Non-involvement	Confirmed non-involvement	Confirmed no issues	True leader in ESG (>= 87.5 DWS ESG score)	True SDG contributor (>= 87.5 SDG score)	True climate leader (>= 87.5 score)
B	Remote involvement	Alleged	Violations of lesser degree	ESG leader (75-87.5 DWS ESG score)	SDG contributor (75-87.5 SDG score)	Climate solution provider(75-87.5 score)
C	0% - 5%	Dual-Purpose *(2)	Violations of lesser degree	ESG upper midfield (50-75 DWS ESG score)	SDG upper midfield (50-75 SDG score)	Low transition risk (50-75 score)
D	5% - 10% (coal: 5% - 10%)	Owning *(3)/ Owned *(4)	Violation of lesser degree	ESG lower midfield (25-50 DWS ESG score)	SDG lower midfield (25-50 SDG score)	Mod. transition risk (25-50 score)
E	10% - 25% (coal: 15% - 25%)	Component Producer *(5)	High severity or re-assessed highest violation *(7)	ESG laggard (12.5-25 DWS ESG score)	SDG obstructer (12.5-25 SDG score)	High transition risk (12.5-25 score)
F	>= 25%	Weapon producer	Highest severity / global compact violation *(8)	True laggard in ESG (0-12.5 DWS ESG score)	Significant SDG obstructer (0-12.5 SDG score)	Excessive transition risk (0-12.5 score)

*(1) Revenue share thresholds as per standard scheme. Sub-Granularity available. Thresholds can be individually set.

*(2) Encompasses e.g.. weapon-carrying systems such as combat aircraft that carry non-controversial weapons as well as controversial ones.

*(3) Owning more than 20% equity.

*(4) Being owned by more than 50% of company involved in grade E or F.

*(5) Single purpose key component.

*(6) Includes ILO controversies as well as corporate governance and product issues.

*(7) In its ongoing assessment, DWS takes into account the violation(s) of international standards – observed via data from ESG data vendors – such as the UN Global Compact, but also possible ESG data vendor errors identified, future expected developments of these violations as well as the willingness of the issuer to engage in dialogue regarding corporate decisions in this regard.

*(8) An F-grade can be considered a reconfirmed violation of the United Nations Global Compact rule framework for corporate behavior.

What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?

Sustainable investments contributed to at least one of the Sustainable Development Goals of the United Nations (UN SDGs) that relate to environmental and/or social objectives, such as good health and well-being or climate action and/or to at least one other environmental objective such as climate change adaption or climate change mitigation (as defined under the EU Taxonomy).

The extent of the contribution to individual sustainable investment objectives varied depending on the actual investments held in the portfolio.

DWS determined the contribution to a sustainable investment objective based on its Sustainability Investment Assessment which used data from one or several data providers, public sources and/or internal assessments. An investment's positive contribution to an environmental and/or social objective was assessed based on the revenues which a company generated from the actual economic activities making such contribution (activity-based approach). Where a positive contribution was determined, the investment was considered sustainable if the issuer passed the Do No significant Harm ("DNSH") assessment and the company followed good governance practices.

The share of sustainable investments in the portfolio as defined in article 2(17) SFDR was therefore calculated in proportion to the economic activities of the issuers that were considered as sustainable (activity-based approach). Notwithstanding the preceding, in the case of use-of-proceeds bonds that were considered as sustainable investment, the value of the entire bond was counted towards the portfolio's share of sustainable investments.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

The sustainable investments in which the sub-fund invested were assessed to ensure they did not cause significant harm to any environmental or social sustainable investment objective. This was achieved by taking into account the indicators for principal adverse impacts on sustainability factors (dependent on relevance) as described below. If a significant harm was identified, the investment could not have been considered sustainable.

How were the indicators for adverse impacts on sustainability factors taken into account?

The Sustainability Investment Assessment systematically integrated the mandatory principal adverse indicators on sustainability factors (dependent on relevance) from Table 1 and relevant indicators from Tables 2 and 3 of Annex I of the Commission Delegated Regulation (EU) 2022/1288 supplementing the SFDR. Taking into account these principal adverse impacts, DWS had established quantitative thresholds and/or qualitative values to assess a significant harm on any of the environmental or social sustainable investment objectives. These values were set based upon various external and internal factors, such as data availability or market developments and may have been adapted going forward.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The alignment of sustainable investments with, amongst others, the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights was evaluated through the Norm Controversy Assessment (as further described below). Companies with the worst Norm Controversy Assessment of “F” were excluded as an investment.

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union Criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU Criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU Criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

How did this financial product consider principal adverse impacts on sustainability factors?

The sub-fund considered the following principal adverse impacts on sustainability factors from Annex I of the Commission Delegated Regulation (EU) 2022/1288 supplementing the SFDR:

• Greenhouse gas (GHG) emissions (no. 1);
• Carbon footprint (no. 2);
• GHG intensity of investee companies (no. 3);
• Exposure to companies active in the fossil fuel sector (no. 4);
• Violations of United Nations Global Compact principles and OECD Guidelines for Multinational Enterprises (no. 10); and
• Exposure to controversial weapons (no. 14).

DWS Invest ESG Asian Bonds

Indicators	Description	Performance
Principal Adverse Impact		
PAII - 01. GHG emissions	Sum of the current value of investments of company i, divided by the investee company's enterprise value and multiplied by company's cope 1+2+3 GHG emissions.	38638.45 tCO2e
PAII - 02. Carbon Footprint - EUR	The carbon footprint is expressed as tonnes of CO2 emissions per million EUR invested. The CO2 emissions of an issuer are normalised by its enterprise value including cash (EVIC)	174.77 tCO2e / million EUR
PAII - 03. Carbon Intensity	Weighted average carbon intensity scope 1+2+3	593.82 tCO2e / million EUR
PAII - 04. Exposure to companies active in the fossil fuel sector	Share of investments in companies active in the fossil fuel sector	2.7 % of assets
PAII - 10. Violations of UNGC principles and OECD Guidelines for Multinational Enterprises	Share of investments in investee companies that have been involved in violations of the UNGC principles or OECD Guidelines for Multinational Enterprises	0 % of assets
PAII - 14. Exposure to controversial weapons	Share of investments in investee companies involved in the manufacture or selling of controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)	0 % of assets

As of: December 30, 2025

The Principal Adverse Impact Indicators (PAIIs) are calculated on the basis of the data in the DWS back office and front office systems, which are primarily based on the data of external ESG data providers. If there is no data on individual PAIIs for individual securities or their issuers, either because no data is available or the PAII is not applicable to the particular issuer or security, these securities or issuers are not included in the calculation of the PAII. With target fund investments, a look-through of the target fund holdings is performed if appropriate data is available. The calculation method for the individual PAI indicators may change in subsequent reporting periods due to evolving market standards, a change in the treatment of securities of certain types of instruments (such as derivatives) or as a result of regulatory clarifications.
Moreover, improved data availability may have an effect on the reported PAIIs in subsequent reporting periods.
The values from the DWS front office system are used to calculate the PAIIs. This means that there may be minor deviations from the other market values that appear in the annual report, which are derived from the fund accounting system.

What were the top investments of this financial product?

DWS Invest ESG Asian Bonds

for the period from January 01, 2025, through December 30, 2025

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is:
for the period from January 01, 2025, through December 31, 2025

What was the proportion of sustainability-related investments?

The proportion of sustainability-related investments as of the reporting date was 95.33% of portfolio assets.
Proportion of sustainability-related investments for the previous years:

30/12/2024: 96.36%
29/12/2023: 92.59%
30/12/2022: 99.58%

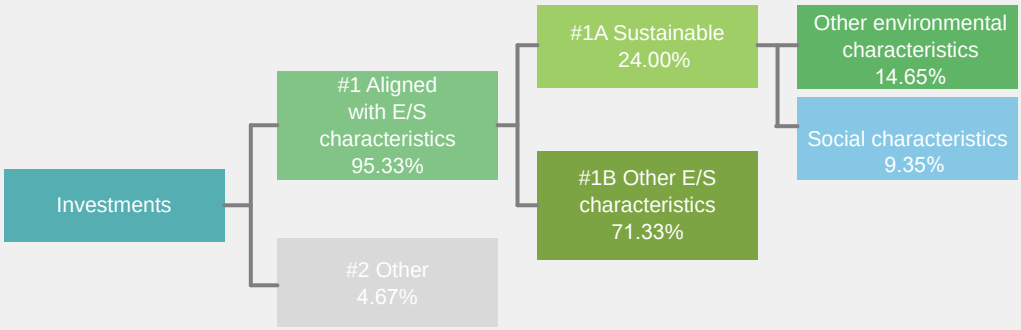
Asset allocation describes the share of investments in specific assets.

What was the asset allocation?

This sub-fund invested 95.33% of its net assets in investments that were aligned with the promoted environmental and social characteristics (#1 Aligned with E/S characteristics). Within this category, 24.00% of the sub-fund's net assets qualified as sustainable investments (#1A Sustainable). Thereof the share of sustainable investments with an environmental objective that was not compliant with the EU Taxonomy was 14.65% of the sub-fund's net assets and the share of socially sustainable investments was 9.35% of the sub-fund's net assets. The share of sustainable investments with an environmental objective that was not compliant with the EU Taxonomy and of socially sustainable investments depended on the market situation and the investable investment universe.

4.67% of the sub-fund's net assets have been invested in assets which were either out-of-scope of the ESG assessment methodology or for which ESG data coverage was incomplete (#2 Other) as further detailed in the section "What investments were included under "#2 Other", what was their purpose and were there any minimum environmental or social safeguards?".

A more detailed description of the specific asset allocation of this sub-fund can be found in the Special Section of the Sales Prospectus.



#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:
- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

In which economic sectors were the investments made?

DWS Invest ESG Asian Bonds

NACE-Code	Breakdown by sector according to NACE Codes	in % of portfolio volume
B	Mining and quarrying	1.8 %
C	Manufacturing	3.7 %
F	Construction	0.0 %
H	Transporting and storage	3.4 %
J	Information and communication	5.5 %
K	Financial and insurance activities	58.3 %
M	Professional, scientific and technical activities	2.6 %
O	Public administration and defence; compulsory social security	5.6 %
NA	Other	19.1 %
Exposure to companies active in the fossil fuel sector		2.7 %

As of: December 30, 2025

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The sub-fund did not commit to invest a proportion of sustainable investments with an environmental objective aligned with the EU Taxonomy. Therefore, the promoted minimum percentage of environmentally sustainable investments aligned with the EU Taxonomy was 0% of the sub-fund's net assets. However, certain investments' underlying economic activities may have been aligned with the EU Taxonomy.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are economic activities for yet low-carbon alternatives are not yet available and that have greenhouse gas emission levels corresponding to the best performance.

Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy[1]?

☐ Yes:

☐ In fossil gas ☐ In nuclear energy

☒ No

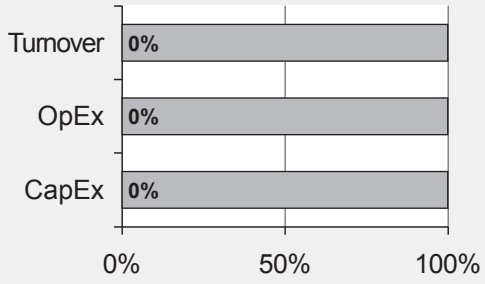
The sub-fund did not take into account the Taxonomy-alignment of companies active in the fossil gas and/or nuclear energy sectors.

[1] Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do no significant harm to any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Taxonomy-aligned activities are expressed as a share of:
- turnover reflecting the share of revenue from green activities of investee companies.
- capital expenditure (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- operational expenditure (OpEx) reflecting the green operational activities of investee companies.

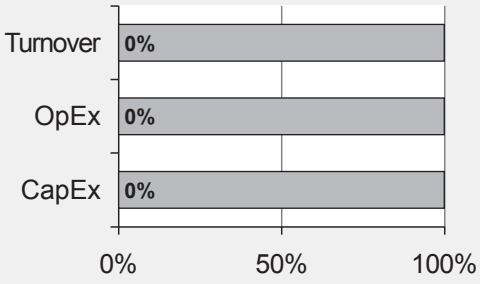
The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy-alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy-alignment only in relation to the investments of the financial product other than sovereign bonds.

1. Taxonomy-alignment of investments **including sovereign bonds***



Taxonomy-aligned: Fossil gas	0.00%
Taxonomy-aligned: Nuclear	0.00%
Taxonomy-aligned (no gas and nuclear)	0.00%
Taxonomy-aligned	0.00%
Non Taxonomy-aligned	100.00%

2. Taxonomy-alignment of investments **excluding sovereign bonds***



Taxonomy-aligned: Fossil gas	0.00%
Taxonomy-aligned: Nuclear	0.00%
Taxonomy-aligned (no gas and nuclear)	0.00%
Taxonomy-aligned	0.00%
Non Taxonomy-aligned	100.00%

This graph represents 100% of the total investments.

**For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures*

What was the share of investments made in transitional and enabling activities?

The sub-fund was not committed to a share of investments in transitional or enabling activities.

How did the percentage of investments that are aligned with the EU Taxonomy compare with previous reference periods?

The promoted proportion of environmentally sustainable investments in accordance with Regulation (EU) 2020/852 (Taxonomy Regulation) was 0% of the fund's assets in the current as well as previous reference periods. It may, however, have been the case that some sustainable investments were nevertheless aligned with an environmental objective of the Taxonomy Regulation.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the Regulation (EU) 2020/852.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The share of sustainable investments with an environmental objective that were not aligned with the EU Taxonomy was 14.65% of the sub-fund's net assets.

Shares of sustainable investments in previous reporting periods:

reporting period	sustainable investments (total)	with environmental objective	socially sustainable
30/12/2024	7.54%	3.62%	3.92%
29/12/2023	9.36%	4.30%	5.06%
30/12/2022	11.61%	--	--

What was the share of socially sustainable investments?

The share of socially sustainable investments was 9.35% of the sub-fund’s net

assets. Shares of sustainable investments in previous reporting periods:

reporting period	sustainable investments (total)	with environmental objective	socially sustainable
30/12/2024	7.54%	3.62%	3.92%
29/12/2023	9.36%	4.30%	5.06%
30/12/2022	11.61%	--	--

What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?

95.33% of the sub-fund’s net assets were aligned with the promoted environmental and social characteristics (#1 Aligned with E/S characteristics). 4.67% of the sub-fund’s net assets have been invested in assets which were either out-of-scope of the ESG assessment methodology or for which ESG data coverage was incomplete (#2 Other). Full ESG data coverage was required for the assessment of direct investments in companies in relation to good governance practices and the PAB-Exclusions.

Assets under “#2 Other” could include all asset classes as foreseen in the specific investment policy, such as sight deposits with credit institutions and derivatives. These assets could have been used by the portfolio management for performance, risk diversification, liquidity and hedging purposes.

Minimum environmental or social safeguards were not or only partially considered for the sub-fund’s investments falling within “#2 Other”.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

This sub-fund pursued a strategy based on bonds as main investment strategy. The sub-fund's assets were predominantly invested in interest-bearing debt securities denominated in USD that are issued by companies based in Asia or those that conduct their principal business activity in an Asian jurisdiction. U.S. dollar bonds refered to APAC government related bonds (Agency, Local Authority, Supranationals and Sovereign) and corporate bonds (for e.g., Industrial, Utility, Financial Institutions). The sub-fund's assets were predominately invested into interest-bearing debt securities that had an investment grade status at the time of the acquisition. A maximum of 49% of the sub-fund's assets may have been invested in interest-bearing securities that did not meet the above-mentioned criteria, cash and money market instruments. A maximum of 10% of the sub-fund's assets may have invested into interest-bearing debt securities with a non-investment grade status with a minimum credit rating of B3 (Moody's) or B- (S&P/Fitch) at time of acquisition. The sub-fund's investments in contingent convertibles should have been limited to 10% of the sub-fund's net asset value.

Further details regarding the main investment strategy are specified in the Special Section of the Sales Prospectus.

95.33% of the sub-fund's net assets were allocated to investments that met the promoted environmental and social characteristics as described in the following sections. The alignment of the portfolio with the binding elements of the investment strategy used to attain the promoted environmental and social characteristics as well as the PAB-Exclusions was continuously controlled via the sub-fund's investment guidelines monitoring.

ESG assessment methodology

The sub-fund aimed to achieve the promoted environmental and social characteristics by assessing potential assets via an in-house ESG assessment methodology, regardless of their economic prospects for success, and by applying exclusion criteria based on this assessment.

The ESG assessment methodology was using a proprietary software tool which sourced data from one or several ESG data providers, public sources and/or internal assessments to derive overall assessments. The methodology applied to derive such overall assessments could have been based on different methods, such as prioritizing one data vendor, worst-of or averaging approach. Internal assessments may take into account factors such as an issuer's future expected ESG developments, plausibility of data with regard to past or future events, the willingness to engage in dialogue on ESG matters and/or ESG-related decisions of a company. Further, internal ESG assessments for investee companies may have considered the relevance of the exclusion criteria for the market sector of the investee company.

The proprietary software tool used, amongst others, the approaches described below to evaluate the adherence to the promoted ESG characteristics and whether investee companies followed good governance practices. The assessment approaches included, for example, exclusions related to revenues generated from controversial sectors or the exposure to such controversial sectors. In some of the assessment approaches, issuers received one of six possible assessments, with "A" representing the best and "F" the worst assessment. If an issuer was excluded based on one assessment approach, the sub-fund was prohibited from investing in that issuer.

Depending on the investable universe, the portfolio allocation and the exposure to certain sectors, the assessment approaches described below have been more or less relevant which was reflected in the number of issuers being actually excluded.

• PAB-Exclusions

In accordance with the applicable regulations, the sub-fund applied the PAB-Exclusions and excluded all of the following companies:

a. companies involved in controversial weapons (manufacturing or selling of anti-personnel mines, cluster munitions, chemical weapons and biological weapons) assessed as part of the assessment of the "Exposure to controversial weapons" as described below;
b. companies involved in the cultivation and production of tobacco;
c. companies that were found in violation of the United Nations Global Compact principles or the OECD Guidelines for Multinational Enterprises (assessed as part of the "Norm Controversy Assessment" as described below);
d. companies that derived 1% or more of their revenues from exploration, mining, extraction, distribution or refining of hard coal and lignite;
e. companies that derived 10% or more of their revenues from the exploration, extraction, distribution or refining of oil fuels;

f. companies that derived 50% or more of their revenues from the exploration, extraction, manufacturing or distribution of gaseous fuels;
g. companies that derived 50% or more of their revenues from electricity generation with a GHG intensity of more than 100 g CO2 e/kWh.

The PAB-Exclusions were, in particular, not applied for sight deposits with credit institutions and certain derivative instruments. The extent of the application of the PAB-Exclusions in relation to use of proceeds bonds was described below under the section “Use of proceeds bond Assessment”.

• Norm Controversy Assessment

The Norm Controversy Assessment evaluated the behaviour of companies in relation to generally accepted international standards and principles of responsible business conduct within, amongst others, the framework of the principles of the United Nations Global Compact, the United Nations Guiding Principles, the standards of the International Labour Organization and the OECD Guidelines for Multinational Enterprises. Examples of topics covered within these standards and principles included, but were not limited to, human rights violations, violations of workers' rights, child or forced labour, negative environmental impacts and business ethics. The Norm Controversy Assessment evaluated reported violations of the aforementioned international standards. Companies with the worst Norm Controversy Assessment of “F” were excluded as an investment.

• ESG Quality Assessment

The ESG Quality Assessment distinguished between investments in companies and investments in sovereign issuers.

For companies, the ESG Quality Assessment allowed for a peer group comparison based on an overall ESG assessment, for example, concerning the handling of environmental changes, product safety, employee management or corporate ethics. The peer group for companies was made up from the same industry sector. Companies that scored higher in this comparison received a better assessment, while Companies that scored lower in the comparison received a worse assessment. Companies with the worst assessment of “F” were excluded as an investment.

For sovereign issuers, the ESG Quality Assessment assessed countries based on a peer group comparison considering environmental and social criteria as well as indicators for good governance, including, for example, the political system, the existence of institutions and the rule of law. Sovereign issuers with the worst assessment of “F” were excluded as an investment.

• Freedom House Status

Freedom House is an international non-governmental organization that classifies countries by their degree of political and civil liberties. Based on the Freedom House Status, countries that were classified as “not free” were excluded as an investment.

• Exposure to controversial sectors

Companies that were involved in certain business areas and business activities in controversial areas (“controversial sectors”) were excluded according to their share of total revenues generated in such controversial sectors as follows:

a. . Manufacturing of products and/or provision of services in the defence industry: 5% or more
b. . Manufacturing and/or distribution of civil handguns or ammunition: 5% or more
c. . Manufacturing of products in and/or provision of services for the gambling industry: 5% or more
d. . Manufacturing of adult entertainment: 5% or more
e. . Manufacturing of palm oil: 5% or more
f. . Nuclear power generation and/or uranium mining and/or uranium enrichment: 5% or more
g. . Unconventional extraction of crude oil and/or natural gas (including oil sand, oil shale/shale gas arctic drilling): more than 0%
h. . Companies that derived 25% or more from thermal coal mining and thermal coal-based power generation as well as companies with thermal coal expansion plans, such as additional expansion of coal mining, coal production or coal usage. Companies with thermal coal expansion plans were excluded based on an internal identification methodology.

Further, companies involved in the manufacturing or selling of nuclear weapons or key components of nuclear weapons were excluded and the shareholdings within a group structure may be taken into consideration.

• **Exposure to controversial weapons**

Companies were excluded if they are identified as being involved in the manufacturing or selling of controversial weapons or key components of controversial weapons or other related specific activities (anti-personnel mines, cluster munitions, chemical and biological weapons, blinding laser weapons, weapons with non-detectable fragments, depleted uranium weapons/munitions and/or incendiary weapons using white phosphorus). In addition, the shareholdings within a group structure may be taken into consideration for the exclusions.

• Use of Proceeds Bond Assessment

This assessment was specific to the nature of this instrument and an investment in use of proceeds bonds was permitted only if the following criteria were met. Firstly, all use of proceeds bonds were checked for compliance with the Climate Bonds Standards, similar industry standards for green bonds, social bonds or sustainability bonds (such as ICMA Principles) or the EU Green Bond Standard or whether bonds have been subject to an independent review.

Secondly, certain exclusion criteria were applied, where relevant and where sufficient data was available, at the level of the bond and/or in relation to the issuer of the bonds which could have led to the exclusion of the bond as an investment.

In particular, investments in use of proceeds bonds were prohibited based on the following issuer criteria:

a. Companies referred to under a) to c) of the PAB-Exclusions;
b. Companies with identified thermal coal expansion plans as referred to above;
c. Companies that derived more than 0% of their revenues from unconventional extraction of crude oil and/or natural gas (including oil sand, oil shale/shale gas, arctic drilling);
d. Companies that derived 5% or more of their revenues from nuclear power generation and/or uranium mining and/or uranium enrichment;
e. Sovereign issuers classified as “not free” by Freedom House.

Where no sufficient data was available for the evaluation of the PAB-Exclusions at use of proceeds bond level, the issuer in addition was evaluated based d) to g) of the above described PAB-Exclusions which may have led to the exclusion of the use of proceeds bond.

• Target Fund Assessment

Target funds were eligible if they were aligned with the PAB-Exclusions (starting from 21 May 2025) and, where applicable, the Freedom House Status. The target fund assessment relied on target fund related information acquired from external data sources or was evaluated in relation to the underlying assets of the portfolios of the target funds. Considering the diversity of data vendors and methodologies as well as the target fund portfolio rebalancing, this sub-fund have been indirectly exposed to certain assets that would have been excluded if invested directly.

Sustainability Investment Assessment

Further, for the proportion of sustainable investments, DWS measured the contribution to one or several UN SDGs and/or to other environmental sustainable objectives via its Sustainability Investment Assessment which evaluated potential investments in relation to different criteria to conclude whether an investment could have been considered as sustainable as further detailed in the section “What were the objectives of the sustainable investments that the financial product partially intends to make and how did the sustainable investment contributed to such objectives?”.

The applied ESG investment strategy did not pursue a committed minimum reduction of the scope of the investments.

The assessment of the good governance practices of the investee companies (including assessments related to sound management structures, employee relations, remuneration of staff and tax compliance) was part of the Norm Controversy Assessment which evaluated a company’s behavior within generally accepted international standards and principles of responsible business conduct. Companies with the worst Norm Controversy Assessment of “F” were excluded as an investment.

How did this financial product perform compared to the reference sustainable benchmark?

This sub-fund had not designated a reference benchmark to determine whether it was aligned with the environmental and social characteristics that it promoted.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Periodic disclosure for financial products referred to in Article 8, paragraph 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities.** That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name: DWS Invest ESG Climate Opportunities

Legal entity identifier: 549300E3NA7HC2KH3T16

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

Yes	No
[ ] it made **sustainable investments with an environmental objective:** ___%	[X] It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of 38.88% of sustainable investments.
[ ] in economic activities that qualify as environmentally sustainable under the EU Taxonomy	[ ] with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
[ ] in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	[X] with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
	[X] with a social objective
[ ] It made **sustainable investments with a social objective:** ___%	[ ] It promoted E/S characteristics, but did **not make any sustainable investments**

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

To what extent were the environmental and/or social characteristics promoted by this financial product met?

This sub-fund promoted environmental and social characteristics by investing worldwide in issuers that had at least part of their economic activities in areas that the sub-fund management considered relevant in the context of mitigating or adapting to climate change and its effects and that could benefit from those activities to mitigate or to adapt to climate change.

In addition, the sub-fund promoted environmental and social characteristics related to a general consideration of ESG criteria by excluding, for example, investments in companies with the worst norm-related issues towards international standards, issuers with the worst assessment in terms of environmental, social and governance aspects compared to their peer group and/or investments in companies whose involvement in controversial sectors exceeded predefined revenue thresholds.

Further, this sub-fund promoted a minimum proportion of sustainable investments in accordance with article 2(17) of the regulation on sustainability-related disclosures in the financial services sector (SFDR).

This sub-fund had not designated a reference benchmark for the purpose of attaining the environmental and social characteristics promoted.

No derivatives were used to attain the environmental or social characteristics promoted by the sub-fund.

How did the sustainability indicators perform?

The attainment of the promoted environmental and social characteristics as well as the sustainable investment was assessed via the application of an in-house ESG assessment methodology and ESG specific exclusion thresholds as further described in the section “What actions have been taken to meet the environmental and/or social characteristics during the reference period?”. The methodology applied different assessment approaches that were used as sustainability indicators which were:

• **Norm Controversy Assessment** used as an indicator for a company’s exposure to norm-related issues towards international standards.
Performance: No investments in suboptimal assets

• **ESG Quality Assessment** used as an indicator for comparison of an issuer’s environmental, social and governance aspects in relation to its peer group.
Performance: No investments in suboptimal assets

• **Freedom House Status** used as an indicator for the political- and civil liberties of a country.
Performance: No investments in suboptimal assets

• **Exposure to controversial sectors** used as an indicator for a company’s involvement in controversial sectors.
Performance: 0%

• **Exposure to solution providers and transition candidates in the blue economy sector.**
Performance: No investments in suboptimal asset

• **Exposure to companies subject to the EU Paris-aligned Benchmark exclusion criteria** as set forth in article 12(1) of Commission Delegated Regulation 2020/1818 (PAB-Exclusions).
Performance: No investments in suboptimal assets

• **Sustainability Investment Assessment** used as an indicator to measure the proportion of sustainable investments pursuant to article 2(17) SFDR.
Performance: 38.88%

Please see the section entitled “What actions have been taken to meet the environmental and/or social characteristics during the reference period?” for a description of the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted, including the exclusion criteria, and the assessment methodology for determining whether and to what extent assets met the defined environmental and/or social characteristics (including the turnover thresholds defined for the xclusions). This section contains further information on the sustainability indicators. The values from the DWS front office system are used to calculate the sustainability indicators. This means that there may be minor deviations from the other market values that appear in the annual report, which are derived from the fund accounting system.

…and compared to previous periods?

Attainment of the promoted environmental and social characteristics at portfolio level was measured in the previous years on the basis of the following sustainability indicators:

DWS Invest ESG Climate Opportunities

The disclosure of the sustainability indicators has been revised compared with the prior-year report. The assessment methodology is unchanged. Additional information on the currently valid sustainability indicators is provided in the section entitled “What actions have been taken to meet the environmental and/or social characteristics during the reference period?”.
Information about taking into account the principal adverse impacts on sustainability factors is provided in the section entitled “How did this financial product consider principal adverse impacts on sustainability factors?”

DWS ESG-Assessment Scale

In the following assessment categories, the assets received one of six possible scores, with "A" being the best score and "F" being the worst score.

Criteria	Involvement in controversial sectors *(1)	Involvement in controversial weapons	Norm Assessment *(6)	ESG Quality Assessment	SDG- Assessment	Climat & Transition Risk Assessment
A	Non-involvement	Confirmed non-involvement	Confirmed no issues	True leader in ESG (>= 87.5 DWS ESG score)	True SDG contributor (>= 87.5 SDG score)	True climate leader (>= 87.5 score)
B	Remote involvement	Alleged	Violations of lesser degree	ESG leader (75-87.5 DWS ESG score)	SDG contributor (75-87.5 SDG score)	Climate solution provider(75-87.5 score)
C	0% - 5%	Dual-Purpose *(2)	Violations of lesser degree	ESG upper midfield (50-75 DWS ESG score)	SDG upper midfield (50-75 SDG score)	Low transition risk (50-75 score)
D	5% - 10% (coal: 5% - 10%)	Owning *(3)/ Owned *(4)	Violation of lesser degree	ESG lower midfield (25-50 DWS ESG score)	SDG lower midfield (25-50 SDG score)	Mod. transition risk (25-50 score)
E	10% - 25% (coal: 15% - 25%)	Component Producer *(5)	High severity or re-assessed highest violation *(7)	ESG laggard (12.5-25 DWS ESG score)	SDG obstructer (12.5-25 SDG score)	High transition risk (12.5-25 score)
F	>= 25%	Weapon producer	Highest severity / global compact violation *(8)	True laggard in ESG (0-12.5 DWS ESG score)	Significant SDG obstructer (0-12.5 SDG score)	Excessive transition risk (0-12.5 score)

*(1) Revenue share thresholds as per standard scheme. Sub-Granularity available. Thresholds can be individually set.

*(2) Encompasses e.g.. weapon-carrying systems such as combat aircraft that carry non-controversial weapons as well as controversial ones.

*(3) Owning more than 20% equity.

*(4) Being owned by more than 50% of company involved in grade E or F.

*(5) Single purpose key component.

*(6) Includes ILO controversies as well as corporate governance and product issues.

*(7) In its ongoing assessment, DWS takes into account the violation(s) of international standards – observed via data from ESG data vendors – such as the UN Global Compact, but also possible ESG data vendor errors identified, future expected developments of these violations as well as the willingness of the issuer to engage in dialogue regarding corporate decisions in this regard.

*(8) An F-grade can be considered a reconfirmed violation of the United Nations Global Compact rule framework for corporate behavior.

What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?

Sustainable investments contributed (i) to at least one of the Sustainable Development Goals of the United Nations (UN SDGs) that relate to environmental and/or social objectives, such as no poverty, zero hunger, good health and well-being, quality education, gender equality, clean water and sanitation, affordable and clean energy, decent work and economic growth, reduced inequalities, sustainable cities and communities, responsible consumption and production, climate action, life below water and/or life on land and/or (ii) to at least one other environmental objective such as climate change adaption, climate change mitigation, sustainable use and protection of water and marine recources, transition to a circular economy, pollution prevention and control and/or protection and restoration of biodiversity and ecosystems (as defined under the EU Taxonomy).

The extent of the contribution to individual sustainable investment objectives varied depending on the actual investments held in the portfolio.

DWS determined the contribution to a sustainable investment objective based on its Sustainability Investment Assessment which used data from one or several data providers, public sources and/or internal assessments. An investment's positive contribution to an environmental and/or social objective was assessed based on the revenues which a company generated from the actual economic activities making such contribution (activity-based approach). Where a positive contribution was determined, the investment was considered sustainable if the issuer passed the Do No significant Harm ("DNSH") assessment and the company followed good governance practices.

The share of sustainable investments in the portfolio as defined in article 2(17) SFDR was therefore calculated in proportion to the economic activities of the issuers that were considered as sustainable (activity-based approach). Notwithstanding the preceding, in the case of use-of-proceeds bonds that were considered as sustainable investment, the value of the entire bond was counted towards the portfolio's share of sustainable investments.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

The sustainable investments in which the sub-fund invested were assessed to ensure they did not cause significant harm to any environmental or social sustainable investment objective. This was achieved by taking into account the indicators for principal adverse impacts on sustainability factors (dependent on relevance) as described below. If a significant harm was identified, the investment could not have been considered sustainable.

How were the indicators for adverse impacts on sustainability factors taken into account?

The Sustainability Investment Assessment systematically integrated the mandatory principal adverse indicators on sustainability factors (dependent on relevance) from Table 1 and relevant indicators from Tables 2 and 3 of Annex I of the Commission Delegated Regulation (EU) 2022/1288 supplementing the SFDR. Taking into account these principal adverse impacts, DWS had established quantitative thresholds and/or qualitative values to assess a significant harm on any of the environmental or social sustainable investment objectives. These values were set based upon various external and internal factors, such as data availability or market developments and may have been adapted going forward.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The alignment of sustainable investments with, amongst others, the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights was evaluated through the Norm Controversy Assessment (as further described below). Companies with the worst Norm Controversy Assessment of “F” were excluded as an investment.

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union Criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU Criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU Criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

How did this financial product consider principal adverse impacts on sustainability factors?

The sub-fund considered the following principal adverse impacts on sustainability factors from Annex I of the Commission Delegated Regulation (EU) 2022/1288 supplementing the SFDR:

• Greenhouse gas (GHG) emissions (no. 1);
• Carbon footprint (no. 2);
• GHG intensity of investee companies (no. 3);
• Exposure to companies active in the fossil fuel sector (no. 4);
• Violations of United Nations Global Compact principles and OECD Guidelines for Multinational Enterprises (no. 10); and
• Exposure to controversial weapons (no. 14).

DWS Invest ESG Climate Opportunities

Indicators	Description	Performance
Principal Adverse Impact		
PAII - 01. GHG emissions	Sum of the current value of investments of company i, divided by the investee company's enterprise value and multiplied by company's cope 1+2+3 GHG emissions.	356088.45 tCO2e
PAII - 02. Carbon Footprint - EUR	The carbon footprint is expressed as tonnes of CO2 emissions per million EUR invested. The CO2 emissions of an issuer are normalised by its enterprise value including cash (EVIC)	688.38 tCO2e / million EUR
PAII - 03. Carbon Intensity	Weighted average carbon intensity scope 1+2+3	1006.47 tCO2e / million EUR
PAII - 04. Exposure to companies active in the fossil fuel sector	Share of investments in companies active in the fossil fuel sector	4.94 % of assets
PAII - 10. Violations of UNGC principles and OECD Guidelines for Multinational Enterprises	Share of investments in investee companies that have been involved in violations of the UNGC principles or OECD Guidelines for Multinational Enterprises	0 % of assets
PAII - 14. Exposure to controversial weapons	Share of investments in investee companies involved in the manufacture or selling of controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)	0 % of assets

As of: December 30, 2025

The Principal Adverse Impact Indicators (PAIIs) are calculated on the basis of the data in the DWS back office and front office systems, which are primarily based on the data of external ESG data providers. If there is no data on individual PAIIs for individual securities or their issuers, either because no data is available or the PAII is not applicable to the particular issuer or security, these securities or issuers are not included in the calculation of the PAII. With target fund investments, a look-through of the target fund holdings is performed if appropriate data is available. The calculation method for the individual PAI indicators may change in subsequent reporting periods due to evolving market standards, a change in the treatment of securities of certain types of instruments (such as derivatives) or as a result of regulatory clarifications.
Moreover, improved data availability may have an effect on the reported PAIIs in subsequent reporting periods.
The values from the DWS front office system are used to calculate the PAIIs. This means that there may be minor deviations from the other market values that appear in the annual report, which are derived from the fund accounting system.

What were the top investments of this financial product?

DWS Invest ESG Climate Opportunities

Largest investments	Breakdown by sector according to NACE Codes	in % of average portfolio volume	Breakdown by country
Siemens Energy	D - Electricity, gas, steam and air conditioning supply	4.2 %	Germany
Microsoft Corp.	J - Information and communication	3.8 %	United States
First Solar	C - Manufacturing	2.5 %	United States
Prysmian	C - Manufacturing	2.5 %	Italy
Air Liquide	C - Manufacturing	2.3 %	France
Zoetis Cl. A	C - Manufacturing	2.3 %	United States
AXA	K - Financial and insurance activities	2.3 %	France

Vertiv Holdings Co. Cl A	C - Manufacturing	2.1 %	United States

for the period from January 01, 2025, through December 30, 2025

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is:
for the period from January 01, 2025, through December 31, 2025

What was the proportion of sustainability-related investments?

The proportion of sustainability-related investments as of the reporting date was 99.14% of portfolio assets.
Proportion of sustainability-related investments for the previous years:
30/12/2024: 97.06%
29/12/2023: 93.34%
30/12/2022: 97.18%

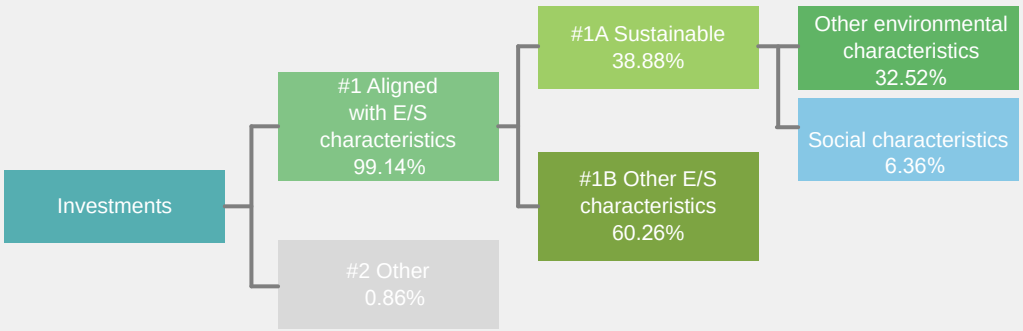
Asset allocation describes the share of investments in specific assets.

What was the asset allocation?

This sub-fund invested 99.14% of its net assets in investments that were aligned with the promoted environmental and social characteristics (#1 Aligned with E/S characteristics). Within this category, 38.88% of the sub-fund's net assets qualified as sustainable investments (#1A Sustainable). Thereof the share of sustainable investments with an environmental objective that was not compliant with the EU Taxonomy was 32.52% of the sub-fund's net assets and the share of socially sustainable investments was 6.36% of the sub-fund's net assets. The share of sustainable investments with an environmental objective that was not compliant with the EU Taxonomy and of socially sustainable investments depended on the market situation and the investable investment universe.

0.86% of the sub-fund's net assets have been invested in assets which were either out-of-scope of the ESG assessment methodology or for which ESG data coverage was incomplete (#2 Other) as further detailed in the section "What investments were included under "#2 Other", what was their purpose and were there any minimum environmental or social safeguards?".

A more detailed description of the specific asset allocation of this sub-fund can be found in the Special Section of the Sales Prospectus.



#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:
- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

In which economic sectors were the investments made?

DWS Invest ESG Climate Opportunities

NACE-Code	Breakdown by sector according to NACE Codes	in % of portfolio volume
A	Agriculture, forestry and fishing	3.1 %
B	Mining and quarrying	0.5 %
C	Manufacturing	44.2 %
D	Electricity, gas, steam and air conditioning supply	12.8 %
E	Water supply; sewerage; waste managment and remediation activities	3.3 %
F	Construction	6.5 %
G	Wholesale and retail trade; repair of motor vehicles and motorcycles	1.3 %
H	Transporting and storage	2.2 %
J	Information and communication	8.0 %
K	Financial and insurance activities	2.2 %
M	Professional, scientific and technical activities	10.7 %
N	Administrative and support service activities	1.7 %
NA	Other	3.5 %
Exposure to companies active in the fossil fuel sector		4.9 %

As of: December 30, 2025

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The sub-fund did not commit to invest a proportion of sustainable investments with an environmental objective aligned with the EU Taxonomy. Therefore, the promoted minimum percentage of environmentally sustainable investments aligned with the EU Taxonomy was 0% of the sub-fund's net assets. However, certain investments' underlying economic activities may have been aligned with the EU Taxonomy.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are economic activities for yet low-carbon alternatives are not yet available and that have greenhouse gas emission levels corresponding to the best performance.

Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy[1]?

☐ Yes:

☐ In fossil gas ☐ In nuclear energy

☒ No

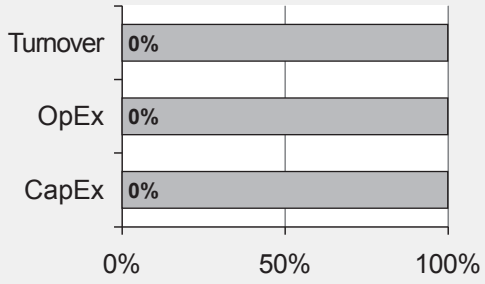
The sub-fund did not take into account the Taxonomy-alignment of companies active in the fossil gas and/or nuclear energy sectors.

[1] Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do no significant harm to any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Taxonomy-aligned activities are expressed as a share of:
- turnover reflecting the share of revenue from green activities of investee companies.
- capital expenditure (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- operational expenditure (OpEx) reflecting the green operational activities of investee companies.

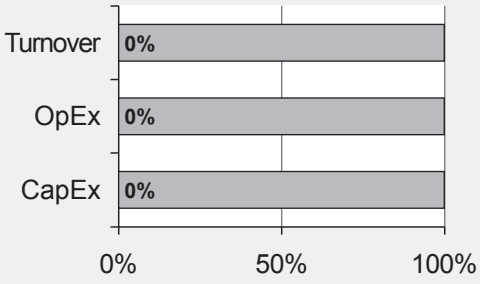
The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy-alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy-alignment only in relation to the investments of the financial product other than sovereign bonds.

1. Taxonomy-alignment of investments **including sovereign bonds***



Taxonomy-aligned: Fossil gas	0.00%
Taxonomy-aligned: Nuclear	0.00%
Taxonomy-aligned (no gas and nuclear)	0.00%
Taxonomy-aligned	0.00%
Non Taxonomy-aligned	100.00%

2. Taxonomy-alignment of investments **excluding sovereign bonds***



Taxonomy-aligned: Fossil gas	0.00%
Taxonomy-aligned: Nuclear	0.00%
Taxonomy-aligned (no gas and nuclear)	0.00%
Taxonomy-aligned	0.00%
Non Taxonomy-aligned	100.00%

This graph represents 100% of the total investments.

**For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures*

What was the share of investments made in transitional and enabling activities?

The sub-fund was not committed to a share of investments in transitional or enabling activities.

How did the percentage of investments that are aligned with the EU Taxonomy compare with previous reference periods?

The promoted proportion of environmentally sustainable investments in accordance with Regulation (EU) 2020/852 (Taxonomy Regulation) was 0% of the fund's assets in the current as well as previous reference periods. It may, however, have been the case that some sustainable investments were nevertheless aligned with an environmental objective of the Taxonomy Regulation.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the Regulation (EU) 2020/852.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The share of sustainable investments with an environmental objective that were not aligned with the EU Taxonomy was 32.52% of the sub-fund's net assets.

Shares of sustainable investments in previous reporting periods:

reporting period	sustainable investments (total)	with environmental objective	socially sustainable
30/12/2024	31.45%	27.26%	4.19%
29/12/2023	39.85%	30.66%	9.19%
30/12/2022	38.68%	--	--

What was the share of socially sustainable investments?

The share of socially sustainable investments was 6.36% of the sub-fund’s net

assets. Shares of sustainable investments in previous reporting periods:

reporting period	sustainable investments (total)	with environmental objective	socially sustainable
30/12/2024	31.45%	27.26%	4.19%
29/12/2023	39.85%	30.66%	9.19%
30/12/2022	38.68%	--	--

What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?

99.14% of the sub-fund’s net assets were aligned with the promoted environmental and social characteristics (#1 Aligned with E/S characteristics). 0.86% of the sub-fund’s net assets were invested in assets which were either target funds, out-of-scope of the ESG assessment methodology or for which ESG data coverage was incomplete (#2 Other). Full ESG data coverage was required for the assessment of direct investments in companies in relation to good governance practices and the PAB-Exclusions. Target funds were eligible if they were aligned with the PAB-Exclusions (starting from 21 May 2025) and the Freedom House Status, where applicable.

Assets under “#2 Other” could include all asset classes as foreseen in the specific investment policy, such as deposits with credit institutions and derivatives.

These assets could be used by the portfolio management for performance, risk diversification, liquidity and hedging purposes.

Minimum environmental or social safeguards were not or only partially considered for the sub-fund’s investments falling within “#2 Other”.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

The sub-fund pursued a strategy based on equities as main investment strategy. The sub-fund invested worldwide in issuers that had at least part of their economic activities in areas that the sub-fund management considered relevant in the context of mitigating or adapting to climate change and its effects and that could benefit from those activities to mitigate or to adapt to climate change.

Therefore at least 75% of the sub-fund's assets were invested in equities of all market capitalizations, stock certificates, participation and dividend right certificates, convertible bonds and equity warrants issued by foreign and domestic companies. Up to 25% of the sub-fund's assets were invested in short-term deposits, money market instruments and bank balances.

Further details regarding the main investment strategy are specified in the Special Section of the Sales Prospectus.

99.14% of the sub-fund’s net assets were allocated to investments that met the promoted environmental and social characteristics as described in the following sections. The alignment of the portfolio with the binding elements of the investment strategy used to attain the promoted environmental and social characteristics as well as the PAB-Exclusions was continuously controlled via the sub-fund’s investment guidelines monitoring.

ESG assessment methodology

The sub-fund aimed to achieve the promoted environmental and social characteristics by assessing potential assets via an in-house ESG assessment methodology, regardless of their economic prospects for success, and by applying exclusion criteria based on this assessment.

The ESG assessment methodology was using a proprietary software tool which sourced data from one or several ESG data providers, public sources and/or internal assessments to derive overall assessments. The methodology applied to derive such overall assessments could have been based on different methods, such as prioritizing one data vendor, worst-of or averaging approach. Internal assessments may take into account factors such as an issuer’s future expected ESG developments, plausibility of data with regard to past or future events, the willingness to engage in dialogue on ESG matters and/or ESG-related decisions of a company. Further, internal ESG assessments for investee companies may have considered the relevance of the exclusion criteria for the market sector of the investee company.

The proprietary software tool used, amongst others, the approaches described below to evaluate the adherence to the promoted ESG characteristics and whether investee companies followed good governance practices. The assessment approaches included, for example, exclusions related to revenues generated from controversial sectors or the exposure to such controversial sectors. In some of the assessment approaches, issuers received one of six possible assessments, with "A" representing the best and "F" the worst assessment. If an issuer was excluded based on one assessment approach, the sub-fund was prohibited from investing in that issuer.

Depending on the investable universe, the portfolio allocation and the exposure to certain sectors, the assessment approaches described below have been more or less relevant which was reflected in the number of issuers being actually excluded.

• PAB-Exclusions

In accordance with the applicable regulations, the sub-fund applied the PAB-Exclusions and excluded all of the following companies:

a. companies involved in controversial weapons (manufacturing or selling of anti-personnel mines, cluster munitions, chemical weapons and biological weapons) assessed as part of the assessment of the “Exposure to controversial weapons” as described below;
b. companies involved in the cultivation and production of tobacco;
c. companies that were found in violation of the United Nations Global Compact principles or the OECD Guidelines for Multinational Enterprises (assessed as part of the “Norm Controversy Assessment” as described below);
d. companies that derived 1% or more of their revenues from exploration, mining, extraction, distribution or refining of hard coal and lignite;
e. companies that derived 10% or more of their revenues from the exploration, extraction, distribution or refining of oil fuels;
f. companies that derived 50% or more of their revenues from the exploration, extraction, manufacturing or distribution of gaseous fuels;
g. companies that derived 50% or more of their revenues from electricity generation with a GHG intensity of more than 100 g CO2 e/kWh.

The PAB-Exclusions were, in particular, not applied for sight deposits with credit institutions and certain derivative instruments. The extent of the application of the PAB-Exclusions in relation to use of proceeds bonds was described below under the section “Use of proceeds bond Assessment”.

• Norm Controversy Assessment

The Norm Controversy Assessment evaluated the behaviour of companies in relation to generally accepted international standards and principles of responsible business conduct within, amongst others, the framework of the principles of the United Nations Global Compact, the United Nations Guiding Principles, the standards of the International Labour Organization and the OECD Guidelines for Multinational Enterprises. Examples of topics covered within these standards and principles included, but were not limited to, human rights violations, violations of workers' rights, child or forced labour, negative environmental impacts and business ethics. The Norm Controversy Assessment evaluated reported violations of the aforementioned international standards. Companies with the worst Norm Controversy Assessment of “F” were excluded as an investment.

• ESG Quality Assessment

The ESG Quality Assessment distinguished between investments in companies and investments in sovereign issuers.

For companies, the ESG Quality Assessment allowed for a peer group comparison based on an overall ESG assessment, for example, concerning the handling of environmental changes, product safety, employee management or corporate ethics. The peer group for companies was made up from the same industry sector. Companies that scored higher in this comparison received a better assessment, while Companies that scored lower in the comparison received a worse assessment. Companies with the worst assessment of “F” were excluded as an investment.

For sovereign issuers, the ESG Quality Assessment assessed countries based on a peer group comparison considering environmental and social criteria as well as indicators for good governance, including, for example, the political system, the existence of institutions and the rule of law. Sovereign issuers with the worst assessment of “F” were excluded as an investment.

• Freedom House Status

Freedom House is an international non-governmental organization that classifies countries by their degree of political and civil liberties. Based on the Freedom House Status, countries that were classified as “not free” were excluded as an investment.

• Exposure to controversial sectors

Companies that were involved in certain business areas and business activities in controversial areas (“controversial sectors”) were excluded according to their share of total revenues generated in such controversial sectors as follows:

a. . Manufacturing of products and/or provision of services in the defence industry: 5% or more
b. . Manufacturing and/or distribution of civil handguns or ammunition: 5% or more
c. . Manufacturing of products in and/or provision of services for the gambling industry: 5% or more
d. . Manufacturing of adult entertainment: 5% or more
e. . Manufacturing of palm oil: 5% or more
f. . Nuclear power generation and/or uranium mining and/or uranium enrichment: 5% or more
g. . Unconventional extraction of crude oil and/or natural gas (including oil sand, oil shale/shale gas arctic drilling): more than 0%
h. . Companies that derived 25% or more from thermal coal mining and thermal coal-based power generation as well as companies with thermal coal expansion plans, such as additional expansion of coal mining, coal production or coal usage. Companies with thermal coal expansion plans were excluded based on an internal identification methodology.

Further, companies involved in the manufacturing or selling of nuclear weapons or key components of nuclear weapons were excluded and the shareholdings within a group structure may be taken into consideration.

• **Exposure to controversial weapons**

Companies were excluded if they are identified as being involved in the manufacturing or selling of controversial weapons or key components of controversial weapons or other related specific activities (anti-personnel mines, cluster munitions, chemical and biological weapons, blinding laser weapons, weapons with non-detectable fragments, depleted uranium weapons/munitions and/or incendiary weapons using white phosphorus). In addition, the shareholdings within a group structure may be taken into consideration for the exclusions.

• Assessment on exposure to issuers with economic activities considered relevant in the context of mitigating or adapting to climate change and its effects

At least 80% of the sub-fund's net assets were invested worldwide in issuers that had at least part of their economic activities in areas that the sub-fund management considered relevant in the context of mitigating or adapting to climate change and its effects.

Issuers with activities related to mitigating climate change and its effects

The sub-fund management selected issuers that had at least part of their economic activities in areas that the sub-fund management considered relevant in the context of mitigating climate change and its effects. This included for example issuers offering products and/or services related to the generation of clean energy, the efficient transmission of energy or the increase of energy efficiency. The economic activities in the context of mitigating climate change should be understood in a broad sense and include, in particular, the entire value chain of solutions that helped to avoid, reduce, or capture carbon emissions such as circular technologies (e.g. recycling), sustainable fuels (e.g. biofuel), renewable energy (from equipment manufacturer to renewable energy producer), energy storage, energy efficiency, enhancing solutions, carbon removal technologies or clean transportation (from electric vehicle to rails).

To assess the relevance in the context of mitigating climate change and its effects, the sub-fund management was selecting issuers using a proprietary methodology based on the following principles:

• Each issuer must had a minimum portion of its revenues (> 0%) to relevant environmental objectives across the following UN SDGs:

- SDG 07: Affordable and Clean Energy

- SDG 11: Sustainable Cities and Communities

- SDG 12: Responsible Consumption and Production

- SDG 13: Climate Action

Further, the sub-fund management will ensure that these issuers must had, combined and on average, a minimum revenue share of at least 5% towards the relevant environmental SDG objectives.

The minimum UN SDG revenue share assessment described above is a metric used by the sub-fund management to determine part of the investment universe of the sub-fund. It was no claim for the sub-fund to create a positive real-world impact, nor was it sufficient as such to qualify an investment as sustainable investment under SFDR or taxonomy-aligned under the EU Taxonomy Regulation.

Issuers with activities related to adapting to climate change and its effects

Further, the sub-fund management selected issuers that had at least part of their economic activities in areas that the sub-fund management considered relevant in the context of adapting to climate change and its effects. This refered to an approach that attempted to deal with the climate related changes that had already occurred or were still expected, and in particular, to address the negative consequences or risks for the environment and/or society. To assess the relevance of the economic activity in the context of adapting to climate change and its effects, the sub-fund management performed a proprietary qualitative assessment of each issuer based on DWS internal research. This included issuers pursuing activities across different areas such as climate related risk insurance, diversified crop production and processing, probabilistic catastrophe modeling or development of drugs and anti-allergic treatments. No minimum revenue threshold was required at issuer level to consider such activities as relevant in relation to climate change adaptation.

Lastly, the sub-fund management excluded companies from the entire portfolio which showed a significant obstruction towards at least one of the following UN SDGs:

- SDG 02: Zero Hunger
- SDG 06: Clean Water and Sanitation
- SDG 07: Affordable and Clean Energy
- SDG 11: Sustainable Cities and Communities
- SDG 12: Responsible Consumption and Production
- SDG 13: Climate Action
- SDG 14: Life below Water
- SDG 15: Life on Land

Investors shall note that the above descriptions were used by the sub-fund management to determine the environmental and social characteristics promoted by the sub-fund and were not designed to assess the extent to which issuers were helping to reduce greenhouse gas emission or were helping, with their products or services, to mitigate or to adapt to climate change.

Sustainability Investment Assessment

Further, for the proportion of sustainable investments, DWS measured the contribution to one or several UN SDGs and/or to other environmental sustainable objectives via its Sustainability Investment Assessment which evaluated potential investments in relation to different criteria to conclude whether an investment could have been considered as sustainable as further detailed in the section “What were the objectives of the sustainable investments that the financial product partially intends to make and how did the sustainable investment contributed to such objectives?”.

The applied ESG investment strategy did not pursue a committed minimum reduction of the scope of the investments.

The assessment of the good governance practices of the investee companies (including assessments related to sound management structures, employee relations, remuneration of staff and tax compliance) was part of the Norm Controversy Assessment which evaluated a company’s behavior within generally accepted international standards and principles of responsible business conduct. Companies with the worst Norm Controversy Assessment of “F” were excluded as an investment.

How did this financial product perform compared to the reference sustainable benchmark?

This sub-fund had not designated a reference benchmark to determine whether it was aligned with the environmental and social characteristics that it promoted.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

How did this financial product perform compared to the reference sustainable benchmark?

This ATTENTION ERROR IN TAG!!! FundType had not designated a reference benchmark to determine whether it was aligned with the environmental and social characteristics that it promoted.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Periodic disclosure for financial products referred to in Article 8, paragraph 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

Product name: DWS Invest ESG CROCI Innovation Leaders

Legal entity identifier: 5493002T7XHBU985SZ06

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

Yes	No
☐ it made **sustainable investments with an environmental objective:** ___%	☒ It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of 29.41% of sustainable investments.
☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy	☐ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
	☒ with a social objective
☐ It made **sustainable investments with a social objective:** ___%	☐ It promoted E/S characteristics, but did **not make any sustainable investments**

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities.** That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

To what extent were the environmental and/or social characteristics promoted by this financial product met?

This sub-fund promoted environmental and social characteristics related to a general consideration of ESG criteria by excluding, for example, investments in companies with the worst norm-related issues towards international standards, issuers with the worst assessment in terms of environmental, social and governance aspects compared to their peer group and/or investments in companies whose involvement in controversial sectors exceeded predefined revenue thresholds.

Further, this sub-fund promoted a proportion of sustainable investments in accordance with article 2(17) of the regulation on sustainability-related disclosures in the financial services sector (SFDR).

This sub-fund had not designated a reference benchmark for the purpose of attaining the environmental and social characteristics promoted.

No derivatives were used to attain the environmental or social characteristics promoted by the sub-fund.

How did the sustainability indicators perform?

The attainment of the promoted environmental and social characteristics as well as the sustainable investment was assessed via the application of an in-house ESG assessment methodology and ESG specific exclusion thresholds as further described in the section “What actions have been taken to meet the environmental and/or social characteristics during the reference period?”. The methodology applied different assessment approaches that were used as sustainability indicators which were:

• **Norm Controversy Assessment** used as an indicator for a company’s exposure to norm-related issues towards international standards.
Performance: No investments in suboptimal assets

• **ESG Quality Assessment** used as an indicator for comparison of an issuer’s environmental, social and governance aspects in relation to its peer group.
Performance: No investments in suboptimal assets

• **Freedom House Status** used as an indicator for the political and civil liberties of a country.
Performance: No investments in suboptimal assets

• **Exposure to controversial sectors** used as an indicator for a company’s involvement in controversial sectors.
Performance: 0%

• **Exposure to companies subject to the EU Paris-aligned Benchmark exclusion criteria** as set forth in article 12(1) of Commission Delegated Regulation 2020/1818 (PAB-Exclusions).
Performance: No investments in suboptimal assets

• **Sustainability Investment Assessment** used as an indicator to measure the proportion of sustainable investments pursuant to article 2(17) SFDR.
Performance: 29.41%

Please see the section entitled “What actions have been taken to meet the environmental and/or social characteristics during the reference period?” for a description of the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted, including the exclusion criteria, and the assessment methodology for determining whether and to what extent assets met the defined environmental and/or social characteristics (including the turnover thresholds defined for the xclusions). This section contains further information on the sustainability indicators. The values from the DWS front office system are used to calculate the sustainability indicators. This means that there may be minor deviations from the other market values that appear in the annual report, which are derived from the fund accounting system.

…and compared to previous periods?

Attainment of the promoted environmental and social characteristics at portfolio level was measured in the previous years on the basis of the following sustainability indicators:

The disclosure of the sustainability indicators has been revised compared with the prior-year report. The assessment methodology is unchanged. Additional information on the currently valid sustainability indicators is provided in the section entitled “What actions have been taken to meet the environmental and/or social characteristics during the reference period?”.
Information about taking into account the principal adverse impacts on sustainability factors is provided in the section entitled “How did this financial product consider principal adverse impacts on sustainability factors?”

DWS ESG-Assessment Scale

In the following assessment categories, the assets received one of six possible scores, with "A" being the best score and "F" being the worst score.

Criteria	Involvement in controversial sectors *(1)	Involvement in controversial weapons	Norm Assessment *(6)	ESG Quality Assessment	SDG- Assessment	Climat & Transition Risk Assessment
A	Non-involvement	Confirmed non-involvement	Confirmed no issues	True leader in ESG (>= 87.5 DWS ESG score)	True SDG contributor (>= 87.5 SDG score)	True climate leader (>= 87.5 score)
B	Remote involvement	Alleged	Violations of lesser degree	ESG leader (75-87.5 DWS ESG score)	SDG contributor (75-87.5 SDG score)	Climate solution provider(75-87.5 score)
C	0% - 5%	Dual-Purpose *(2)	Violations of lesser degree	ESG upper midfield (50-75 DWS ESG score)	SDG upper midfield (50-75 SDG score)	Low transition risk (50-75 score)
D	5% - 10% (coal: 5% - 10%)	Owning *(3)/ Owned *(4)	Violation of lesser degree	ESG lower midfield (25-50 DWS ESG score)	SDG lower midfield (25-50 SDG score)	Mod. transition risk (25-50 score)
E	10% - 25% (coal: 15% - 25%)	Component Producer *(5)	High severity or re-assessed highest violation *(7)	ESG laggard (12.5-25 DWS ESG score)	SDG obstructer (12.5-25 SDG score)	High transition risk (12.5-25 score)
F	>= 25%	Weapon producer	Highest severity / global compact violation *(8)	True laggard in ESG (0-12.5 DWS ESG score)	Significant SDG obstructer (0-12.5 SDG score)	Excessive transition risk (0-12.5 score)

*(1) Revenue share thresholds as per standard scheme. Sub-Granularity available. Thresholds can be individually set.

*(2) Encompasses e.g.. weapon-carrying systems such as combat aircraft that carry non-controversial weapons as well as controversial ones.

*(3) Owning more than 20% equity.

*(4) Being owned by more than 50% of company involved in grade E or F.

*(5) Single purpose key component.

*(6) Includes ILO controversies as well as corporate governance and product issues.

*(7) In its ongoing assessment, DWS takes into account the violation(s) of international standards – observed via data from ESG data vendors – such as the UN Global Compact, but also possible ESG data vendor errors identified, future expected developments of these violations as well as the willingness of the issuer to engage in dialogue regarding corporate decisions in this regard.

*(8) An F-grade can be considered a reconfirmed violation of the United Nations Global Compact rule framework for corporate behavior.

What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?

Sustainable investments contributed to at least one of the Sustainable Development Goals of the United Nations (UN SDGs) that relate to environmental and/or social objectives, such as good health and well-being or climate action and/or to at least one other environmental objective such as climate change adaption or climate change mitigation (as defined under the EU Taxonomy).

The extent of the contribution to individual sustainable investment objectives varied depending on the actual investments held in the portfolio.

DWS determined the contribution to a sustainable investment objective based on its Sustainability Investment Assessment which used data from one or several data providers, public sources and/or internal assessments. An investment's positive contribution to an environmental and/or social objective was assessed based on the revenues which a company generated from the actual economic activities making such contribution (activity-based approach). Where a positive contribution was determined, the investment was considered sustainable if the issuer passed the Do No significant Harm ("DNSH") assessment and the company followed good governance practices.

The share of sustainable investments in the portfolio as defined in article 2(17) SFDR was therefore calculated in proportion to the economic activities of the issuers that were considered as sustainable (activity-based approach). Notwithstanding the preceding, in the case of use-of-proceeds bonds that were considered as sustainable investment, the value of the entire bond was counted towards the portfolio's share of sustainable investments.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

The sustainable investments in which the sub-fund invested were assessed to ensure they did not cause significant harm to any environmental or social sustainable investment objective. This was achieved by taking into account the indicators for principal adverse impacts on sustainability factors (dependent on relevance) as described below. If a significant harm was identified, the investment could not have been considered sustainable.

How were the indicators for adverse impacts on sustainability factors taken into account?

The Sustainability Investment Assessment systematically integrated the mandatory principal adverse indicators on sustainability factors (dependent on relevance) from Table 1 and relevant indicators from Tables 2 and 3 of Annex I of the Commission Delegated Regulation (EU) 2022/1288 supplementing the SFDR. Taking into account these principal adverse impacts, DWS had established quantitative thresholds and/or qualitative values to assess a significant harm on any of the environmental or social sustainable investment objectives. These values were set based upon various external and internal factors, such as data availability or market developments and may have been adapted going forward.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The alignment of sustainable investments with, amongst others, the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights was evaluated through the Norm Controversy Assessment (as further described below). Companies with the worst Norm Controversy Assessment of “F” were excluded as an investment.

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union Criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU Criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU Criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

How did this financial product consider principal adverse impacts on sustainability factors?

The sub-fund considered the following principal adverse impacts on sustainability factors from Annex I of the Commission Delegated Regulation (EU) 2022/1288 supplementing the SFDR:

• Greenhouse gas (GHG) emissions (no. 1);
• Carbon footprint (no. 2);
• GHG intensity of investee companies (no. 3);
• Exposure to companies active in the fossil fuel sector (no. 4);
• Violations of United Nations Global Compact principles and OECD Guidelines for Multinational Enterprises (no. 10); and
• Exposure to controversial weapons (no. 14).

DWS Invest ESG CROCI Innovation Leaders

Indicators	Description	Performance
Principal Adverse Impact		
PAII - 01. GHG emissions	Sum of the current value of investments of company i, divided by the investee company's enterprise value and multiplied by company's cope 1+2+3 GHG emissions.	2009.58 tCO2e
PAII - 02. Carbon Footprint - EUR	The carbon footprint is expressed as tonnes of CO2 emissions per million EUR invested. The CO2 emissions of an issuer are normalised by its enterprise value including cash (EVIC)	134.29 tCO2e / million EUR
PAII - 03. Carbon Intensity	Weighted average carbon intensity scope 1+2+3	464.22 tCO2e / million EUR
PAII - 04. Exposure to companies active in the fossil fuel sector	Share of investments in companies active in the fossil fuel sector	0 % of assets
PAII - 10. Violations of UNGC principles and OECD Guidelines for Multinational Enterprises	Share of investments in investee companies that have been involved in violations of the UNGC principles or OECD Guidelines for Multinational Enterprises	0 % of assets
PAII - 14. Exposure to controversial weapons	Share of investments in investee companies involved in the manufacture or selling of controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)	0 % of assets

As of: December 30, 2025

The Principal Adverse Impact Indicators (PAIIs) are calculated on the basis of the data in the DWS back office and front office systems, which are primarily based on the data of external ESG data providers. If there is no data on individual PAIIs for individual securities or their issuers, either because no data is available or the PAII is not applicable to the particular issuer or security, these securities or issuers are not included in the calculation of the PAII. With target fund investments, a look-through of the target fund holdings is performed if appropriate data is available. The calculation method for the individual PAI indicators may change in subsequent reporting periods due to evolving market standards, a change in the treatment of securities of certain types of instruments (such as derivatives) or as a result of regulatory clarifications.
Moreover, improved data availability may have an effect on the reported PAIIs in subsequent reporting periods.
The values from the DWS front office system are used to calculate the PAIIs. This means that there may be minor deviations from the other market values that appear in the annual report, which are derived from the fund accounting system.

What were the top investments of this financial product?

DWS Invest ESG CROCI Innovation Leaders

Largest investments	Breakdown by sector according to NACE Codes	in % of average portfolio volume	Breakdown by country
Alphabet Cl.A	J - Information and communication	6.1 %	United States
Meta Platforms	J - Information and communication	4.5 %	United States
Tencent Holdings	J - Information and communication	3.4 %	China
Microsoft Corp.	J - Information and communication	3.4 %	United States
NVIDIA Corp.	C - Manufacturing	3.2 %	United States
Apple	G - Wholesale and retail trade; repair of motor vehicles and motorcycles	3.1 %	United States
Taiwan Semiconductor Manufacturing Co.	C - Manufacturing	2.2 %	Taiwan

Cisco Systems	C - Manufacturing	1.1 %	United States

for the period from January 01, 2025, through December 30, 2025

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is:
for the period from January 01, 2025, through December 31, 2025

What was the proportion of sustainability-related investments?

The proportion of sustainability-related investments as of the reporting date was 100% of portfolio assets.
Proportion of sustainability-related investments for the previous years:
30/12/2024: 99.23%
29/12/2023: 91.55%
30/12/2022: 100.00%

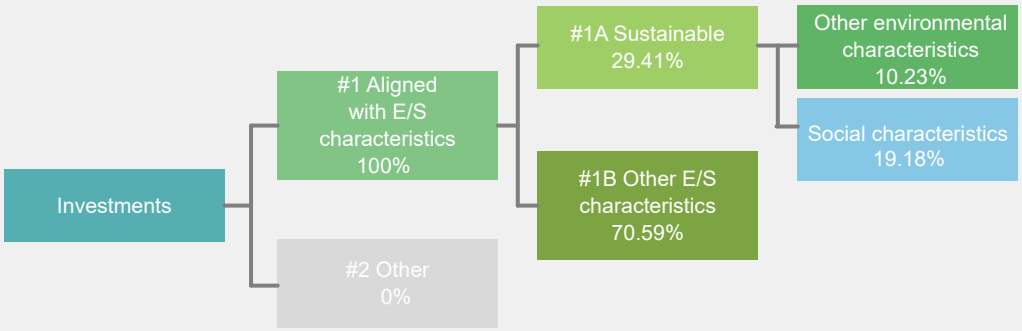
Asset allocation describes the share of investments in specific assets.

What was the asset allocation?

This sub-fund invested 100% of its net assets in investments that were aligned with the promoted environmental and social characteristics (#1 Aligned with E/S characteristics). Within this category, 29.41% of the sub-fund's net assets qualified as sustainable investments (#1A Sustainable). Thereof the share of sustainable investments with an environmental objective that was not compliant with the EU Taxonomy was 10.23% of the sub-fund's net assets and the share of socially sustainable investments was 19.18% of the sub-fund's net assets. The share of sustainable investments with an environmental objective that was not compliant with the EU Taxonomy and of socially sustainable investments depended on the market situation and the investable investment universe.

0% of the sub-fund's net assets have been invested in assets which were either out-of-scope of the ESG assessment methodology or for which ESG data coverage was incomplete (#2 Other) as further detailed in the section "What investments were included under "#2 Other", what was their purpose and were there any minimum environmental or social safeguards?".

A more detailed description of the specific asset allocation of this sub-fund can be found in the Special Section of the Sales Prospectus.



#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:
- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

In which economic sectors were the investments made?

DWS Invest ESG CROCI Innovation Leaders

NACE-Code	Breakdown by sector according to NACE Codes	in % of portfolio volume
C	Manufacturing	50.5 %
G	Wholesale and retail trade; repair of motor vehicles and motorcycles	3.7 %
J	Information and communication	28.3 %
K	Financial and insurance activities	4.4 %
M	Professional, scientific and technical activities	10.3 %
Q	Human health and social work activities	0.9 %
NA	Other	1.9 %
Exposure to companies active in the fossil fuel sector		0.0 %

As of: December 30, 2025

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The sub-fund did not commit to invest a proportion of sustainable investments with an environmental objective aligned with the EU Taxonomy. Therefore, the promoted minimum percentage of environmentally sustainable investments aligned with the EU Taxonomy was 0% of the sub-fund's net assets. However, certain investments' underlying economic activities may have been aligned with the EU Taxonomy.

Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy[1]?

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are economic activities for yet low-carbon alternatives are not yet available and that have greenhouse gas emission levels corresponding to the best performance.

☐ Yes:

☐ In fossil gas ☐ In nuclear energy

☒ No

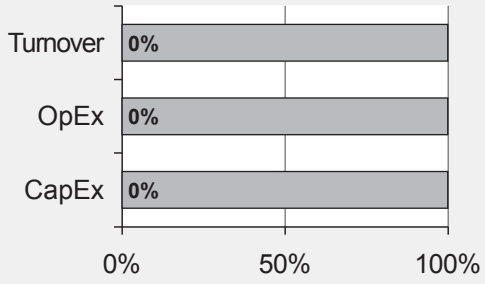
The sub-fund did not take into account the Taxonomy-alignment of companies active in the fossil gas and/or nuclear energy sectors.

[1] Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do no significant harm to any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Taxonomy-aligned activities are expressed as a share of:
- turnover reflecting the share of revenue from green activities of investee companies.
- capital expenditure (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- operational expenditure (OpEx) reflecting the green operational activities of investee companies.

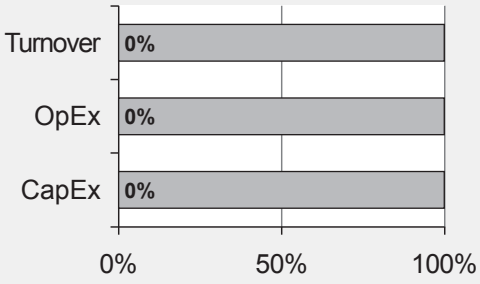
The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy-alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy-alignment only in relation to the investments of the financial product other than sovereign bonds.

1. Taxonomy-alignment of investments **including sovereign bonds***



Taxonomy-aligned: Fossil gas	0.00%
Taxonomy-aligned: Nuclear	0.00%
Taxonomy-aligned (no gas and nuclear)	0.00%
Taxonomy-aligned	0.00%
Non Taxonomy-aligned	100.00%

2. Taxonomy-alignment of investments **excluding sovereign bonds***



Taxonomy-aligned: Fossil gas	0.00%
Taxonomy-aligned: Nuclear	0.00%
Taxonomy-aligned (no gas and nuclear)	0.00%
Taxonomy-aligned	0.00%
Non Taxonomy-aligned	100.00%

This graph represents 100% of the total investments.

**For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures*

What was the share of investments made in transitional and enabling activities?

The sub-fund was not committed to a share of investments in transitional or enabling activities.

How did the percentage of investments that are aligned with the EU Taxonomy compare with previous reference periods?

The promoted proportion of environmentally sustainable investments in accordance with Regulation (EU) 2020/852 (Taxonomy Regulation) was 0% of the fund's assets in the current as well as previous reference periods. It may, however, have been the case that some sustainable investments were nevertheless aligned with an environmental objective of the Taxonomy Regulation.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the Regulation (EU) 2020/852.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The share of sustainable investments with an environmental objective that were not aligned with the EU Taxonomy was 10.23% of the sub-fund's net assets.

Shares of sustainable investments in previous reporting periods:

reporting period	sustainable investments (total)	with environmental objective	socially sustainable
30/12/2024	24.85%	7.18%	17.67%
29/12/2023	28.01%	4.96%	23.05%
30/12/2022	30.66%	--	--

What was the share of socially sustainable investments?

The share of socially sustainable investments was 19.18% of the sub-fund’s net assets. Shares of sustainable investments in previous reporting periods:

reporting period	sustainable investments (total)	with environmental objective	socially sustainable
30/12/2024	24.85%	7.18%	17.67%
29/12/2023	28.01%	4.96%	23.05%
30/12/2022	30.66%	--	--

What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?

100% of the sub-fund´s net assets were aligned with the promoted environmental and social characteristics (#1 Aligned with E/S characteristics). 0% of the sub-fund´s net assets were invested in assets which were either out-of-scope of the ESG assessment methodology or for which ESG data coverage was incomplete (#2 Other). Full ESG data coverage was required for the assessment of direct investments in companies in relation to good governance practices and the PAB-Exclusions.

Assets under “#2 Other” could include all asset classes as foreseen in the specific investment policy, such as sight deposits with credit institutions and derivatives.

These assets could be used by the portfolio management for performance, risk diversification, liquidity and hedging purposes. These assets could also include investments whose ESG assessment had deteriorated post-acquisition for a period of potentially up to three months.

Minimum environmental or social safeguards were not or only partially considered for the sub-fund´s investments falling within “#2 Other”.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

This sub-fund pursued a strategy based on equities as main investment strategy. The sub-fund's assets were invested predominately in large and mid-cap developed or emerging markets equities that had intellectual capital according to the CROCI Investment and Valuation Group and are considered undervalued according to the CROCI methodology and the CROCI Innovation Leaders investment strategy. The investment strategy generally selected approximately one hundred shares out of the CROCI company coverage universe.

Further details regarding the main investment strategy are specified in the Special Section of the Sales Prospectus.

At least 80% of the sub-fund's net assets were allocated to investments that met the promoted environmental and social characteristics as described in the following sections. The alignment of the portfolio with the binding elements of the investment strategy used to attain the promoted environmental and social characteristics as well as the PAB-Exclusions was continuously controlled via the sub-fund's investment guidelines monitoring.

ESG assessment methodology

The sub-fund aimed to achieve the promoted environmental and social characteristics by assessing potential assets via an in-house ESG assessment methodology, regardless of their economic prospects for success, and by applying exclusion criteria based on this assessment.

The ESG assessment methodology was using a proprietary software tool which sourced data from one or several ESG data providers, public sources and/or internal assessments to derive overall assessments. The methodology applied to derive such overall assessments could be based on different methods, such as prioritizing one data vendor, worst-of or averaging approach. Internal assessments may have taken into account factors such as an issuer's future expected ESG developments, plausibility of data with regard to past or future events, the willingness to engage in dialogue on ESG matters and/or ESG-related decisions of a company.

Further, internal ESG assessments for investee companies may considered the relevance of the exclusion criteria for the market sector of the investee company.

The proprietary software tool used, amongst others, the approaches described below to evaluated the adherence to the promoted ESG characteristics and whether investee companies followed good governance practices. The assessment approaches included, for example, exclusions related to revenues generated from controversial sectors or the exposure to such controversial sectors. In some of the assessment approaches, issuers received one of six possible assessments, with "A" representing the best and "F" the worst assessment. If an issuer was excluded based on one assessment approach, the sub-fund was prohibited from investing in that issuer.

Given the periodical reconstitution of the sub-fund’s portfolio, the sub-fund may held an investment whose ESG assessment had deteriorated post its acquisition by the sub-fund management. While the sub-management ensured continued monitoring of the promoted environmental and social characteristics as well as the PAB-Exclusions, the sub-fund’s portfolio may contained such deteriorated asset for a period of potentially up to three months.

Depending on the investable universe, the portfolio allocation and the exposure to certain sectors, the assessment approaches described below may have been more or less relevant which was reflected in the number of issuers being actually excluded.

• PAB-Exclusions

In accordance with the applicable regulations, the sub-fund applied the PAB-Exclusions and excluded all of the following companies:

a. companies involved in controversial weapons (manufacturing or selling of anti-personnel mines, cluster munitions, chemical weapons and biological weapons) assessed as part of the assessment of the “Exposure to controversial weapons” as described below;

b. companies involved in the cultivation and production of tobacco;

c. companies that were found in violation of the United Nations Global Compact principles or the OECD Guidelines for Multinational Enterprises (assessed as part of the “Norm Controversy Assessment” as described below);

d. companies that derived 1% or more of their revenues from exploration, mining, extraction, distribution or refining of hard coal and lignite;

e. companies that derived 10% or more of their revenues from the exploration, extraction, distribution or refining of oil fuels;

f. companies that derived 50% or more of their revenues from the exploration, extraction, manufacturing or distribution of gaseous fuels;

g. companies that derived 50% or more of their revenues from electricity generation with a GHG intensity of more than 100 g CO2 e/kWh.

The PAB-Exclusions were, in particular, not applied for sight deposits with credit institutions and certain derivative instruments. The extent of the application of the PAB-Exclusions in relation to use of proceeds bonds was described below under the section “Use of proceeds bond Assessment”.

• **Norm Controversy Assessment**

The Norm Controversy Assessment evaluated the behaviour of companies in relation to generally accepted international standards and principles of responsible business conduct within, amongst others, the framework of the principles of the United Nations Global Compact, the United Nations Guiding Principles, the standards of the International Labour Organization and the OECD Guidelines for Multinational Enterprises. Examples of topics covered within these standards and principles included, but were not limited to, human rights violations, violations of workers' rights, child or forced labour, negative environmental impacts and business ethics. The Norm Controversy Assessment evaluated reported violations of the aforementioned international standards. Companies with the worst Norm Controversy Assessment of "F" were excluded as an investment.

• **ESG Quality Assessment**

The ESG Quality Assessment distinguished between investments in companies and investments in sovereign issuers.

For companies, the ESG Quality Assessment allowed for a peer group comparison based on an overall ESG assessment, for example, concerning the handling of environmental changes, product safety, employee management or corporate ethics. The peer group for companies was made up from the same industry sector. Companies that scored higher in this comparison received a better assessment, while companies that scored lower in the comparison received a worse assessment. Companies with the worst assessment of "F" were excluded as an investment.

For sovereign issuers, the ESG Quality Assessment assessed countries based on a peer group comparison considering environmental and social criteria as well as indicators for good governance including, for example, the political system, the existence of institutions and the rule of law. Sovereign issuers with the worst assessment of "F" were excluded as an investment.

• **Freedom House Status**

Freedom House is an international non-governmental organization that classifies countries by their degree of political and civil liberties. Based on the Freedom House Status, countries that were classified as "not free" were excluded as an investment.

• **Exposure to controversial sectors**

Companies that were involved in certain business areas and business activities in controversial areas (“controversial sectors”) were excluded according to their share of total revenues generated in such controversial sectors as follows:

a. . Manufacturing of products and/or provision of services in the defence industry: 5% or more
b. . Manufacturing and/or distribution of civil handguns or ammunition: 5% or more
c. . Manufacturing of products in and/or provision of services for the gambling industry: 5% or more
d. . Manufacturing of adult entertainment: 5% or more
e. . Manufacturing of palm oil: 5% or more
f. . Nuclear power generation and/or uranium mining and/or uranium enrichment: 5% or more
g. . Unconventional extraction of crude oil and/or natural gas (including oil sand, oil shale/shale gas arctic drilling): more than 0%
h. . Companies that derived 25% or more from thermal coal mining and thermal coal-based power generation as well as companies with thermal coal expansion plans, such as additional expansion of coal mining, coal production or coal usage. Companies with thermal coal expansion plans were excluded based on an internal identification methodology.

Further, companies involved in the manufacturing or selling of nuclear weapons or key components of nuclear weapons were excluded and the shareholdings within a group structure may be taken into consideration.

• **Exposure to controversial weapons**

Companies were excluded if they are identified as being involved in the manufacturing or selling of controversial weapons or key components of controversial weapons or other related specific activities (anti-personnel mines, cluster munitions, chemical and biological weapons, blinding laser weapons, weapons with non-detectable fragments, depleted uranium weapons/munitions and/or incendiary weapons using white phosphorus). In addition, the shareholdings within a group structure may be taken into consideration for the exclusions.

• Use-of-Proceeds Bond Assessment

This assessment was specific to the nature of this instrument and an investment in use of proceeds bonds was permitted only if the following criteria were met. Firstly, all use of proceeds bonds were checked for compliance with the Climate Bonds Standards, similar industry standards for green bonds, social bonds or sustainability bonds (such as ICMA Principles) or the EU Green Bond Standard or whether bonds have been subject to an independent review.

Secondly, certain exclusion criteria (including the applicable PAB-Exclusions) were applied, where relevant and where sufficient data was available, at the level of the bond and/or in relation to the issuer of the bonds which could lead to the exclusion of the bond as an investment.

• Target Fund Assessment

Target funds were eligible if they are aligned with the PAB-Exclusions (starting from 21 May 2025) and, where applicable, the Freedom House Status. The target fund assessment relied on target fund related information acquired from external data sources or was evaluated in relation to the underlying assets of the portfolios of the target funds. Considering the diversity of data vendors and methodologies as well as the target fund portfolio rebalancing, this sub-fund may have been indirectly exposed to certain assets that would be excluded if invested directly.

Sustainability Investment Assessment

Further, for the proportion of sustainable investments, DWS measured the contribution to one or several UN SDGs and/or to other environmental sustainable objectives via its Sustainability Investment Assessment which evaluated potential investments in relation to different criteria to conclude whether an investment could have been considered as sustainable as further detailed in the section “What were the objectives of the sustainable investments that the financial product partially intends to make and how did the sustainable investment contributed to such objectives?”.

The applied ESG investment strategy did not pursue a committed minimum reduction of the scope of the investments.

The assessment of the good governance practices of the investee companies (including assessments related to sound management structures, employee relations, remuneration of staff and tax compliance) was part of the Norm Controversy Assessment which evaluated a company's behavior within generally accepted international standards and principles of responsible business conduct. Companies with the worst Norm Controversy Assessment of "F" were excluded as an investment.

How did this financial product perform compared to the reference sustainable benchmark?

This sub-fund had not designated a reference benchmark to determine whether it was aligned with the environmental and social characteristics that it promoted.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Periodic disclosure for financial products referred to in Article 8, paragraph 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities.** That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name: DWS Invest ESG Dynamic Opportunities

Legal entity identifier: 549300F0344VG88EO126

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

Yes	No
☐ it made **sustainable investments with an environmental objective:** ___%	☒ It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of 27.08% of sustainable investments.
☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy	☐ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
	☒ with a social objective
☐ It made **sustainable investments with a social objective:** ___%	☐ It promoted E/S characteristics, but did **not make any sustainable investments**

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

To what extent were the environmental and/or social characteristics promoted by this financial product met?

This sub-fund promoted environmental and social characteristics related to a general consideration of ESG criteria by excluding, for example, investments in companies with the worst norm-related issues towards international standards, issuers with the worst assessment in terms of environmental, social and governance aspects compared to their peer group and/or investments in companies whose involvement in controversial sectors exceeded predefined revenue thresholds.

Further, this sub-fund promoted a proportion of sustainable investments in accordance with article 2(17) of the regulation on sustainability-related disclosures in the financial services sector (SFDR).

This sub-fund had not designated a reference benchmark for the purpose of attaining the environmental and social characteristics promoted.

No derivatives were used to attain the environmental or social characteristics promoted by the sub-fund.

How did the sustainability indicators perform?

The attainment of the promoted environmental and social characteristics as well as the sustainable investment was assessed via the application of an in-house ESG assessment methodology and ESG specific exclusion thresholds as further described in the section “What actions have been taken to meet the environmental and/or social characteristics during the reference period?”. The methodology applied different assessment approaches that were used as sustainability indicators which were:

• **Norm Controversy Assessment** used as an indicator for a company’s exposure to norm-related issues towards international standards.
Performance: No investments in suboptimal assets

• **ESG Quality Assessment** used as an indicator for comparison of an issuer’s environmental, social and governance aspects in relation to its peer group.
Performance: No investments in suboptimal assets

• **Freedom House Status** used as an indicator for the political and civil liberties of a country.
Performance: No investments in suboptimal assets

• **Exposure to controversial sectors** used as an indicator for a company’s involvement in controversial sectors.
Performance: 0%

• **Exposure to companies subject to the EU Paris-aligned Benchmark exclusion criteria** as set forth in article 12(1) of Commission Delegated Regulation 2020/1818 (PAB-Exclusions).
Performance: No investments in suboptimal assets

• **Sustainability Investment Assessment** used as an indicator to measure the proportion of sustainable investments pursuant to article 2(17) SFDR.
Performance: 27.08%

Please see the section entitled “What actions have been taken to meet the environmental and/or social characteristics during the reference period?” for a description of the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted, including the exclusion criteria, and the assessment methodology for determining whether and to what extent assets met the defined environmental and/or social characteristics (including the turnover thresholds defined for the xclusions). This section contains further information on the sustainability indicators. The values from the DWS front office system are used to calculate the sustainability indicators. This means that there may be minor deviations from the other market values that appear in the annual report, which are derived from the fund accounting system.

…and compared to previous periods?

Attainment of the promoted environmental and social characteristics at portfolio level was measured in the previous years on the basis of the following sustainability indicators:

DWS Invest ESG Dynamic Opportunities

Indicators Performance	30/12/2024	29/12/2023	30/12/2022

The disclosure of the sustainability indicators has been revised compared with the prior-year report. The assessment methodology is unchanged. Additional information on the currently valid sustainability indicators is provided in the section entitled “What actions have been taken to meet the environmental and/or social characteristics during the reference period?”.
Information about taking into account the principal adverse impacts on sustainability factors is provided in the section entitled “How did this financial product consider principal adverse impacts on sustainability factors?”

DWS ESG-Assessment Scale

In the following assessment categories, the assets received one of six possible scores, with "A" being the best score and "F" being the worst score.

Criteria	Involvement in controversial sectors *(1)	Involvement in controversial weapons	Norm Assessment *(6)	ESG Quality Assessment	SDG- Assessment	Climat & Transition Risk Assessment
A	Non-involvement	Confirmed non-involvement	Confirmed no issues	True leader in ESG (>= 87.5 DWS ESG score)	True SDG contributor (>= 87.5 SDG score)	True climate leader (>= 87.5 score)
B	Remote involvement	Alleged	Violations of lesser degree	ESG leader (75-87.5 DWS ESG score)	SDG contributor (75-87.5 SDG score)	Climate solution provider(75-87.5 score)
C	0% - 5%	Dual-Purpose *(2)	Violations of lesser degree	ESG upper midfield (50-75 DWS ESG score)	SDG upper midfield (50-75 SDG score)	Low transition risk (50-75 score)
D	5% - 10% (coal: 5% - 10%)	Owning *(3)/ Owned *(4)	Violation of lesser degree	ESG lower midfield (25-50 DWS ESG score)	SDG lower midfield (25-50 SDG score)	Mod. transition risk (25-50 score)
E	10% - 25% (coal: 15% - 25%)	Component Producer *(5)	High severity or re-assessed highest violation *(7)	ESG laggard (12.5-25 DWS ESG score)	SDG obstructer (12.5-25 SDG score)	High transition risk (12.5-25 score)
F	>= 25%	Weapon producer	Highest severity / global compact violation *(8)	True laggard in ESG (0-12.5 DWS ESG score)	Significant SDG obstructer (0-12.5 SDG score)	Excessive transition risk (0-12.5 score)

*(1) Revenue share thresholds as per standard scheme. Sub-Granularity available. Thresholds can be individually set.

*(2) Encompasses e.g.. weapon-carrying systems such as combat aircraft that carry non-controversial weapons as well as controversial ones.

*(3) Owning more than 20% equity.

*(4) Being owned by more than 50% of company involved in grade E or F.

*(5) Single purpose key component.

*(6) Includes ILO controversies as well as corporate governance and product issues.

*(7) In its ongoing assessment, DWS takes into account the violation(s) of international standards – observed via data from ESG data vendors – such as the UN Global Compact, but also possible ESG data vendor errors identified, future expected developments of these violations as well as the willingness of the issuer to engage in dialogue regarding corporate decisions in this regard.

*(8) An F-grade can be considered a reconfirmed violation of the United Nations Global Compact rule framework for corporate behavior.

What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?

Sustainable investments contributed to at least one of the Sustainable Development Goals of the United Nations (UN SDGs) that relate to environmental and/or social objectives, such as good health and well-being or climate action and/or to at least one other environmental objective such as climate change adaption or climate change mitigation (as defined under the EU Taxonomy).

The extent of the contribution to individual sustainable investment objectives varied depending on the actual investments held in the portfolio.

DWS determined the contribution to a sustainable investment objective based on its Sustainability Investment Assessment which used data from one or several data providers, public sources and/or internal assessments. An investment's positive contribution to an environmental and/or social objective was assessed based on the revenues which a company generated from the actual economic activities making such contribution (activity-based approach). Where a positive contribution was determined, the investment was considered sustainable if the issuer passed the Do No significant Harm ("DNSH") assessment and the company followed good governance practices.

The share of sustainable investments in the portfolio as defined in article 2(17) SFDR was therefore calculated in proportion to the economic activities of the issuers that were considered as sustainable (activity-based approach). Notwithstanding the preceding, in the case of use-of-proceeds bonds that were considered as sustainable investment, the value of the entire bond was counted towards the portfolio's share of sustainable investments.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

The sustainable investments in which the sub-fund invested were assessed to ensure they did not cause significant harm to any environmental or social sustainable investment objective. This was achieved by taking into account the indicators for principal adverse impacts on sustainability factors (dependent on relevance) as described below. If a significant harm was identified, the investment could not have been considered sustainable.

How were the indicators for adverse impacts on sustainability factors taken into account?

The Sustainability Investment Assessment systematically integrated the mandatory principal adverse indicators on sustainability factors (dependent on relevance) from Table 1 and relevant indicators from Tables 2 and 3 of Annex I of the Commission Delegated Regulation (EU) 2022/1288 supplementing the SFDR. Taking into account these principal adverse impacts, DWS had established quantitative thresholds and/or qualitative values to assess a significant harm on any of the environmental or social sustainable investment objectives. These values were set based upon various external and internal factors, such as data availability or market developments and may have been adapted going forward.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The alignment of sustainable investments with, amongst others, the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights was evaluated through the Norm Controversy Assessment (as further described below). Companies with the worst Norm Controversy Assessment of “F” were excluded as an investment.

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union Criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU Criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU Criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

How did this financial product consider principal adverse impacts on sustainability factors?

The sub-fund considered the following principal adverse impacts on sustainability factors from Annex I of the Commission Delegated Regulation (EU) 2022/1288 supplementing the SFDR:

- Greenhouse gas (GHG) emissions (no. 1);
- Carbon footprint (no. 2);
- GHG intensity of investee companies (no. 3);
- Exposure to companies active in the fossil fuel sector (no. 4);
- Violations of United Nations Global Compact principles and OECD Guidelines for Multinational Enterprises (no. 10); and
- Exposure to controversial weapons (no. 14).

DWS Invest ESG Dynamic Opportunities

Indicators	Description	Performance
Principal Adverse Impact		
PAII - 01. GHG emissions	Sum of the current value of investments of company i, divided by the investee company's enterprise value and multiplied by company's cope 1+2+3 GHG emissions.	26444.27 tCO2e
PAII - 02. Carbon Footprint - EUR	The carbon footprint is expressed as tonnes of CO2 emissions per million EUR invested. The CO2 emissions of an issuer are normalised by its enterprise value including cash (EVIC)	189.32 tCO2e / million EUR
PAII - 03. Carbon Intensity	Weighted average carbon intensity scope 1+2+3	555.66 tCO2e / million EUR
PAII - 04. Exposure to companies active in the fossil fuel sector	Share of investments in companies active in the fossil fuel sector	6.24 % of assets
PAII - 10. Violations of UNGC principles and OECD Guidelines for Multinational Enterprises	Share of investments in investee companies that have been involved in violations of the UNGC principles or OECD Guidelines for Multinational Enterprises	0 % of assets
PAII - 14. Exposure to controversial weapons	Share of investments in investee companies involved in the manufacture or selling of controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)	0 % of assets

As of: December 30, 2025

The Principal Adverse Impact Indicators (PAIIs) are calculated on the basis of the data in the DWS back office and front office systems, which are primarily based on the data of external ESG data providers. If there is no data on individual PAIIs for individual securities or their issuers, either because no data is available or the PAII is not applicable to the particular issuer or security, these securities or issuers are not included in the calculation of the PAII. With target fund investments, a look-through of the target fund holdings is performed if appropriate data is available. The calculation method for the individual PAI indicators may change in subsequent reporting periods due to evolving market standards, a change in the treatment of securities of certain types of instruments (such as derivatives) or as a result of regulatory clarifications.
Moreover, improved data availability may have an effect on the reported PAIIs in subsequent reporting periods.
The values from the DWS front office system are used to calculate the PAIIs. This means that there may be minor deviations from the other market values that appear in the annual report, which are derived from the fund accounting system.

What were the top investments of this financial product?

DWS Invest ESG Dynamic Opportunities

Largest investments	Breakdown by sector according to NACE Codes	in % of average portfolio volume	Breakdown by country

for the period from January 01, 2025, through December 30, 2025

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is:
for the period from January 01, 2025, through December 31, 2025

What was the proportion of sustainability-related investments?

The proportion of sustainability-related investments as of the reporting date was 90.14% of portfolio assets.
Proportion of sustainability-related investments for the previous years:

30/12/2024: 89.46%
29/12/2023: 83.89%
30/12/2022: 99.70%

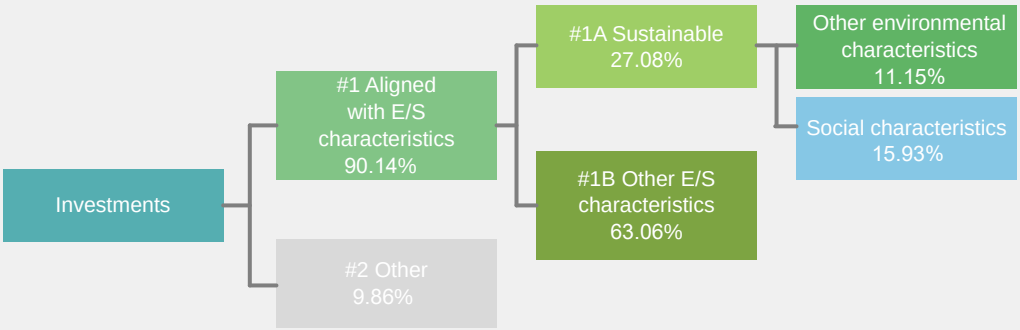
Asset allocation describes the share of investments in specific assets.

What was the asset allocation?

This sub-fund invested 90.14% of its net assets in investments that were aligned with the promoted environmental and social characteristics (#1 Aligned with E/S characteristics). Within this category, 27.08% of the sub-fund's net assets qualified as sustainable investments (#1A Sustainable). Thereof the share of sustainable investments with an environmental objective that was not compliant with the EU Taxonomy was 11.15% of the sub-fund's net assets and the share of socially sustainable investments was 15.93% of the sub-fund's net assets. The share of sustainable investments with an environmental objective that was not compliant with the EU Taxonomy and of socially sustainable investments depended on the market situation and the investable investment universe.

9.86% of the sub-fund's net assets have been invested in assets which were either out-of-scope of the ESG assessment methodology or for which ESG data coverage was incomplete (#2 Other) as further detailed in the section "What investments were included under "#2 Other", what was their purpose and were there any minimum environmental or social safeguards?".

A more detailed description of the specific asset allocation of this sub-fund can be found in the Special Section of the Sales Prospectus.



#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:
- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

In which economic sectors were the investments made?

DWS Invest ESG Dynamic Opportunities

NACE-Code	Breakdown by sector according to NACE Codes	in % of portfolio volume
B	Mining and quarrying	0.7 %
C	Manufacturing	26.1 %
D	Electricity, gas, steam and air conditioning supply	1.2 %
G	Wholesale and retail trade; repair of motor vehicles and motorcycles	2.7 %
H	Transporting and storage	1.3 %
I	Accommodation and food service activities	0.3 %
J	Information and communication	10.6 %
K	Financial and insurance activities	32.0 %
M	Professional, scientific and technical activities	11.4 %
N	Administrative and support service activities	1.7 %
Q	Human health and social work activities	1.3 %
R	Arts, entertainment and recreation	1.3 %
NA	Other	9.4 %
Exposure to companies active in the fossil fuel sector		6.2 %

As of: December 30, 2025

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The sub-fund did not commit to invest a proportion of sustainable investments with an environmental objective aligned with the EU Taxonomy. Therefore, the promoted minimum percentage of environmentally sustainable investments aligned with the EU Taxonomy was 0% of the sub-fund's net assets. However, certain investments' underlying economic activities may have been aligned with the EU Taxonomy.

Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy[1]?

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are economic activities for yet low-carbon alternatives are not yet available and that have greenhouse gas emission levels corresponding to the best performance.

☐ Yes:

☐ In fossil gas ☐ In nuclear energy

☒ No

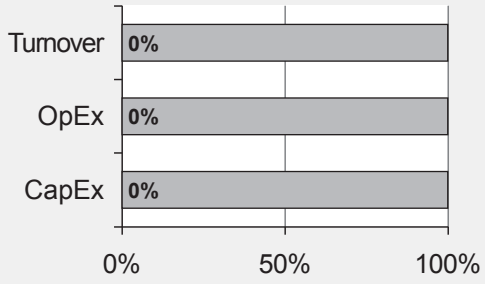
The sub-fund did not take into account the Taxonomy-alignment of companies active in the fossil gas and/or nuclear energy sectors.

[1] Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do no significant harm to any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Taxonomy-aligned activities are expressed as a share of:
- turnover reflecting the share of revenue from green activities of investee companies.
- capital expenditure (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- operational expenditure (OpEx) reflecting the green operational activities of investee companies.

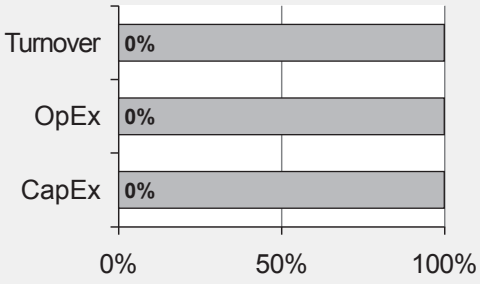
The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy-alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy-alignment only in relation to the investments of the financial product other than sovereign bonds.

1. Taxonomy-alignment of investments **including sovereign bonds***



Taxonomy-aligned: Fossil gas	0.00%
Taxonomy-aligned: Nuclear	0.00%
Taxonomy-aligned (no gas and nuclear)	0.00%
Taxonomy-aligned	0.00%
Non Taxonomy-aligned	100.00%

2. Taxonomy-alignment of investments **excluding sovereign bonds***



Taxonomy-aligned: Fossil gas	0.00%
Taxonomy-aligned: Nuclear	0.00%
Taxonomy-aligned (no gas and nuclear)	0.00%
Taxonomy-aligned	0.00%
Non Taxonomy-aligned	100.00%

This graph represents 100% of the total investments.

**For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures*

What was the share of investments made in transitional and enabling activities?

The sub-fund was not committed to a share of investments in transitional or enabling activities.

How did the percentage of investments that are aligned with the EU Taxonomy compare with previous reference periods?

The promoted proportion of environmentally sustainable investments in accordance with Regulation (EU) 2020/852 (Taxonomy Regulation) was 0% of the fund's assets in the current as well as previous reference periods. It may, however, have been the case that some sustainable investments were nevertheless aligned with an environmental objective of the Taxonomy Regulation.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the Regulation (EU) 2020/852.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The share of sustainable investments with an environmental objective that were not aligned with the EU Taxonomy was 11.15% of the sub-fund's net assets.

Shares of sustainable investments in previous reporting periods:

reporting period	sustainable investments (total)	with environmental objective	socially sustainable
30/12/2024	23.47%	7.78%	15.69%
29/12/2023	22.83%	7.84%	14.99%
30/12/2022	23.34%	--	--

What was the share of socially sustainable investments?

The share of socially sustainable investments was 15.93% of the sub-fund’s net assets. Shares of sustainable investments in previous reporting periods:

reporting period	sustainable investments (total)	with environmental objective	socially sustainable
30/12/2024	23.47%	7.78%	15.69%
29/12/2023	22.83%	7.84%	14.99%
30/12/2022	23.34%	--	--

What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?

90.14% of the sub-fund’s net assets were aligned with the promoted environmental and social characteristics (#1 Aligned with E/S characteristics). 9.86% of the sub-fund’s net assets have been invested in assets which were either out-of-scope of the ESG assessment methodology or for which ESG data coverage was incomplete (#2 Other). Full ESG data coverage was required for the assessment of direct investments in companies in relation to good governance practices and the PAB-Exclusions.

Assets under “#2 Other” could include all asset classes as foreseen in the specific investment policy, such as sight deposits with credit institutions and derivatives. These assets could have been used by the portfolio management for performance, risk diversification, liquidity and hedging purposes.

Minimum environmental or social safeguards were not or only partially considered for the sub-fund’s investments falling within “#2 Other”.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

This fund followed a multi-asset strategy as the principal investment strategy. At least 60% of the net assets were invested in equities. Up to 40% of the net assets was invested in interest-bearing securities; this did not include convertible debentures and warrant-linked bonds. Up to 40% of the fund's assets was invested in money market instruments. Up to 25% of the fund's assets was invested in bank balances.
Further details regarding the main investment strategy are specified in the Special Section of the Sales Prospectus.

90.14% of the sub-fund's net assets were allocated to investments that meet the promoted environmental and social characteristics as described in the following sections. The alignment of the portfolio with the binding elements of the investment strategy used to attain the promoted environmental and social characteristics as well as the PAB-Exclusions was continuously controlled via the sub-fund's investment guidelines monitoring.

ESG assessment methodology

The sub-fund aimed to achieve the promoted environmental and social characteristics by assessing potential assets via an in-house ESG assessment methodology, regardless of their economic prospects for success, and by applying exclusion criteria based on this assessment.

The ESG assessment methodology was using a proprietary software tool which sourced data from one or several ESG data providers, public sources and/or internal assessments to derive overall assessments. The methodology applied to derive such overall assessments could have been based on different methods, such as prioritizing one data vendor, worst-of or averaging approach. Internal assessments may take into account factors such as an issuer's future expected ESG developments, plausibility of data with regard to past or future events, the willingness to engage in dialogue on ESG matters and/or ESG-related decisions of a company. Further, internal ESG assessments for investee companies may have considered the relevance of the exclusion criteria for the market sector of the investee company.

The proprietary software tool used, amongst others, the approaches described below to evaluate the adherence to the promoted ESG characteristics and whether investee companies followed good governance practices. The assessment approaches included, for example, exclusions related to revenues generated from controversial sectors or the exposure to such controversial sectors. In some of the assessment approaches, issuers received one of six possible assessments, with "A" representing the best and "F" the worst assessment. If an issuer was excluded based on one assessment approach, the sub-fund was prohibited from investing in that issuer.

Depending on the investable universe, the portfolio allocation and the exposure to certain sectors, the assessment approaches described below have been more or less relevant which was reflected in the number of issuers being actually excluded.

• PAB-Exclusions

In accordance with the applicable regulations, the sub-fund applied the PAB-Exclusions and excluded all of the following companies:

a. companies involved in controversial weapons (manufacturing or selling of anti-personnel mines, cluster munitions, chemical weapons and biological weapons) assessed as part of the assessment of the "Exposure to controversial weapons" as described below;
b. companies involved in the cultivation and production of tobacco;
c. companies that were found in violation of the United Nations Global Compact principles or the OECD Guidelines for Multinational Enterprises (assessed as part of the "Norm Controversy Assessment" as described below);
d. companies that derived 1% or more of their revenues from exploration, mining, extraction, distribution or refining of hard coal and lignite;
e. companies that derived 10% or more of their revenues from the exploration, extraction, distribution or refining of oil fuels;
f. companies that derived 50% or more of their revenues from the exploration, extraction, manufacturing or distribution of gaseous fuels;
g. companies that derived 50% or more of their revenues from electricity generation with a GHG intensity of more than 100 g CO2 e/kWh.

The PAB-Exclusions were, in particular, not applied for sight deposits with credit institutions and certain derivative instruments. The extent of the application of the PAB-Exclusions in relation to use of proceeds bonds was described below under the section "Use of proceeds bond Assessment".

• Norm Controversy Assessment

The Norm Controversy Assessment evaluated the behaviour of companies in relation to generally accepted international standards and principles of responsible business conduct within, amongst others, the framework of the principles of the United Nations Global Compact, the United Nations Guiding Principles, the standards of the International Labour Organization and the OECD Guidelines for Multinational Enterprises. Examples of topics covered within these standards and principles included, but were not limited to, human rights violations, violations of workers' rights, child or forced labour, negative environmental impacts and business ethics. The Norm Controversy Assessment evaluated reported violations of the aforementioned international standards. Companies with the worst Norm Controversy Assessment of “F” were excluded as an investment.

• ESG Quality Assessment

The ESG Quality Assessment distinguished between investments in companies and investments in sovereign issuers.

For companies, the ESG Quality Assessment allowed for a peer group comparison based on an overall ESG assessment, for example, concerning the handling of environmental changes, product safety, employee management or corporate ethics. The peer group for companies was made up from the same industry sector. Companies that scored higher in this comparison received a better assessment, while Companies that scored lower in the comparison received a worse assessment. Companies with the worst assessment of “F” were excluded as an investment.

For sovereign issuers, the ESG Quality Assessment assessed countries based on a peer group comparison considering environmental and social criteria as well as indicators for good governance, including, for example, the political system, the existence of institutions and the rule of law. Sovereign issuers with the worst assessment of “F” were excluded as an investment.

• Freedom House Status

Freedom House is an international non-governmental organization that classifies countries by their degree of political and civil liberties. Based on the Freedom House Status, countries that were classified as “not free” were excluded as an investment.

• Exposure to controversial sectors

Companies that were involved in certain business areas and business activities in controversial areas (“controversial sectors”) were excluded according to their share of total revenues generated in such controversial sectors as follows:

a. Manufacturing of products and/or provision of services in the defence industry: 5% or more
b. Manufacturing and/or distribution of civil handguns or ammunition: 5% or more
c. Manufacturing of products in and/or provision of services for the gambling industry: 5% or more
d. Manufacturing of adult entertainment: 5% or more
e. Manufacturing of palm oil: 5% or more
f. Nuclear power generation and/or uranium mining and/or uranium enrichment: 5% or more
g. Unconventional extraction of crude oil and/or natural gas (including oil sand, oil shale/shale gas arctic drilling): more than 0%
h. Companies that derived 25% or more from thermal coal mining and thermal coal-based power generation as well as companies with thermal coal expansion plans, such as additional expansion of coal mining, coal production or coal usage. Companies with thermal coal expansion plans were excluded based on an internal identification methodology.

Further, companies involved in the manufacturing or selling of nuclear weapons or key components of nuclear weapons were excluded and the shareholdings within a group structure may be taken into consideration.

• Exposure to controversial weapons

Companies were excluded if they are identified as being involved in the manufacturing or selling of controversial weapons or key components of controversial weapons or other related specific activities (anti-personnel mines, cluster munitions, chemical and biological weapons, blinding laser weapons, weapons with non-detectable fragments, depleted uranium weapons/munitions and/or incendiary weapons using white phosphorus). In addition, the shareholdings within a group structure may be taken into consideration for the exclusions.

• Use of Proceeds Bond Assessment

This assessment was specific to the nature of this instrument and an investment in use of proceeds bonds was permitted only if the following criteria were met. Firstly, all use of proceeds bonds were checked for compliance with the Climate Bonds Standards, similar industry standards for green bonds, social bonds or sustainability bonds (such as ICMA Principles) or the EU Green Bond Standard or whether bonds have been subject to an independent review.

Secondly, certain exclusion criteria were applied, where relevant and where sufficient data was available, at the level of the bond and/or in relation to the issuer of the bonds which could have led to the exclusion of the bond as an investment.

In particular, investments in use of proceeds bonds were prohibited based on the following issuer criteria:

a. Companies referred to under a) to c) of the PAB-Exclusions;
b. Companies with identified thermal coal expansion plans as referred to above;
c. Companies that derived more than 0% of their revenues from unconventional extraction of crude oil and/or natural gas (including oil sand, oil shale/shale gas, arctic drilling);
d. Companies that derived 5% or more of their revenues from nuclear power generation and/or uranium mining and/or uranium enrichment;
e. Sovereign issuers classified as “not free” by Freedom House.

Where no sufficient data was available for the evaluation of the PAB-Exclusions at use of proceeds bond level, the issuer in addition was evaluated based d) to g) of the above described PAB-Exclusions which may have led to the exclusion of the use of proceeds bond.

• Target Fund Assessment

Target funds were eligible if they were aligned with the PAB-Exclusions (starting from 21 May 2025) and, where applicable, the Freedom House Status. The target fund assessment relied on target fund related information acquired from external data sources or was evaluated in relation to the underlying assets of the portfolios of the target funds. Considering the diversity of data vendors and methodologies as well as the target fund portfolio rebalancing, this sub-fund have been indirectly exposed to certain assets that would have been excluded if invested directly.

Sustainability Investment Assessment

Further, for the proportion of sustainable investments, DWS measured the contribution to one or several UN SDGs and/or to other environmental sustainable objectives via its Sustainability Investment Assessment which evaluated potential investments in relation to different criteria to conclude whether an investment could have been considered as sustainable as further detailed in the section “What were the objectives of the sustainable investments that the financial product partially intends to make and how did the sustainable investment contributed to such objectives?”.

The applied ESG investment strategy did not pursue a committed minimum reduction of the scope of the investments.

The assessment of the good governance practices of the investee companies (including assessments related to sound management structures, employee relations, remuneration of staff and tax compliance) was part of the Norm Controversy Assessment which evaluated a company’s behavior within generally accepted international standards and principles of responsible business conduct. Companies with the worst Norm Controversy Assessment of “F” were excluded as an investment.

How did this financial product perform compared to the reference sustainable benchmark?

This sub-fund had not designated a reference benchmark to determine whether it was aligned with the environmental and social characteristics that it promoted.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Periodic disclosure for financial products referred to in Article 8, paragraph 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

Product name: DWS Invest ESG Emerging Markets Top Dividend

Legal entity identifier: 5493004IT6HNQG6YQG05

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

Yes	No
☐ it made **sustainable investments with an environmental objective:** ___%	☒ It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of 16.73% of sustainable investments.
☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy	☐ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
	☒ with a social objective
☐ It made **sustainable investments with a social objective:** ___%	☐ It promoted E/S characteristics, but did **not make any sustainable investments**

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities.** That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

To what extent were the environmental and/or social characteristics promoted by this financial product met?

This sub-fund promoted environmental and social characteristics related to a general consideration of ESG criteria by excluding, for example, investments in companies with the worst norm-related issues towards international standards, issuers with the worst assessment in terms of environmental, social and governance aspects compared to their peer group and/or investments in companies whose involvement in controversial sectors exceeded predefined revenue thresholds.

Further, this sub-fund promoted a proportion of sustainable investments in accordance with article 2(17) of the regulation on sustainability-related disclosures in the financial services sector (SFDR).

This sub-fund had not designated a reference benchmark for the purpose of attaining the environmental and social characteristics promoted.

No derivatives were used to attain the environmental or social characteristics promoted by the sub-fund.

How did the sustainability indicators perform?

The attainment of the promoted environmental and social characteristics as well as the sustainable investment was assessed via the application of an in-house ESG assessment methodology and ESG specific exclusion thresholds as further described in the section “What actions have been taken to meet the environmental and/or social characteristics during the reference period?”. The methodology applied different assessment approaches that were used as sustainability indicators which were:

• **Norm Controversy Assessment** used as an indicator for a company’s exposure to norm-related issues towards international standards.
Performance: No investments in suboptimal assets

• **ESG Quality Assessment** used as an indicator for comparison of an issuer’s environmental, social and governance aspects in relation to its peer group.
Performance: No investments in suboptimal assets

• **Freedom House Status** used as an indicator for the political and civil liberties of a country.
Performance: No investments in suboptimal assets

• **Exposure to controversial sectors** used as an indicator for a company’s involvement in controversial sectors.
Performance: 0%

• **Exposure to companies subject to the EU Paris-aligned Benchmark exclusion criteria** as set forth in article 12(1) of Commission Delegated Regulation 2020/1818 (PAB-Exclusions).
Performance: No investments in suboptimal assets

• **Sustainability Investment Assessment** used as an indicator to measure the proportion of sustainable investments pursuant to article 2(17) SFDR.
Performance: 16.73%

Please see the section entitled “What actions have been taken to meet the environmental and/or social characteristics during the reference period?” for a description of the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted, including the exclusion criteria, and the assessment methodology for determining whether and to what extent assets met the defined environmental and/or social characteristics (including the turnover thresholds defined for the xclusions). This section contains further information on the sustainability indicators. The values from the DWS front office system are used to calculate the sustainability indicators. This means that there may be minor deviations from the other market values that appear in the annual report, which are derived from the fund accounting system.

…and compared to previous periods?

Attainment of the promoted environmental and social characteristics at portfolio level was measured in the previous years on the basis of the following sustainability indicators:

The disclosure of the sustainability indicators has been revised compared with the prior-year report. The assessment methodology is unchanged. Additional information on the currently valid sustainability indicators is provided in the section entitled “What actions have been taken to meet the environmental and/or social characteristics during the reference period?”.
Information about taking into account the principal adverse impacts on sustainability factors is provided in the section entitled “How did this financial product consider principal adverse impacts on sustainability factors?”

DWS ESG-Assessment Scale

In the following assessment categories, the assets received one of six possible scores, with "A" being the best score and "F" being the worst score.

Criteria	Involvement in controversial sectors *(1)	Involvement in controversial weapons	Norm Assessment *(6)	ESG Quality Assessment	SDG- Assessment	Climat & Transition Risk Assessment
A	Non-involvement	Confirmed non-involvement	Confirmed no issues	True leader in ESG (>= 87.5 DWS ESG score)	True SDG contributor (>= 87.5 SDG score)	True climate leader (>= 87.5 score)
B	Remote involvement	Alleged	Violations of lesser degree	ESG leader (75-87.5 DWS ESG score)	SDG contributor (75-87.5 SDG score)	Climate solution provider(75-87.5 score)
C	0% - 5%	Dual-Purpose *(2)	Violations of lesser degree	ESG upper midfield (50-75 DWS ESG score)	SDG upper midfield (50-75 SDG score)	Low transition risk (50-75 score)
D	5% - 10% (coal: 5% - 10%)	Owning *(3)/ Owned *(4)	Violation of lesser degree	ESG lower midfield (25-50 DWS ESG score)	SDG lower midfield (25-50 SDG score)	Mod. transition risk (25-50 score)
E	10% - 25% (coal: 15% - 25%)	Component Producer *(5)	High severity or re-assessed highest violation *(7)	ESG laggard (12.5-25 DWS ESG score)	SDG obstructer (12.5-25 SDG score)	High transition risk (12.5-25 score)
F	>= 25%	Weapon producer	Highest severity / global compact violation *(8)	True laggard in ESG (0-12.5 DWS ESG score)	Significant SDG obstructer (0-12.5 SDG score)	Excessive transition risk (0-12.5 score)

*(1) Revenue share thresholds as per standard scheme. Sub-Granularity available. Thresholds can be individually set.

*(2) Encompasses e.g.. weapon-carrying systems such as combat aircraft that carry non-controversial weapons as well as controversial ones.

*(3) Owning more than 20% equity.

*(4) Being owned by more than 50% of company involved in grade E or F.

*(5) Single purpose key component.

*(6) Includes ILO controversies as well as corporate governance and product issues.

*(7) In its ongoing assessment, DWS takes into account the violation(s) of international standards – observed via data from ESG data vendors – such as the UN Global Compact, but also possible ESG data vendor errors identified, future expected developments of these violations as well as the willingness of the issuer to engage in dialogue regarding corporate decisions in this regard.

*(8) An F-grade can be considered a reconfirmed violation of the United Nations Global Compact rule framework for corporate behavior.

What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?

Sustainable investments contributed to at least one of the Sustainable Development Goals of the United Nations (UN SDGs) that relate to environmental and/or social objectives, such as good health and well-being or climate action and/or to at least one other environmental objective such as climate change adaption or climate change mitigation (as defined under the EU Taxonomy).

The extent of the contribution to individual sustainable investment objectives varied depending on the actual investments held in the portfolio.

DWS determined the contribution to a sustainable investment objective based on its Sustainability Investment Assessment which used data from one or several data providers, public sources and/or internal assessments. An investment's positive contribution to an environmental and/or social objective was assessed based on the revenues which a company generated from the actual economic activities making such contribution (activity-based approach). Where a positive contribution was determined, the investment was considered sustainable if the issuer passed the Do No significant Harm ("DNSH") assessment and the company followed good governance practices.

The share of sustainable investments in the portfolio as defined in article 2(17) SFDR was therefore calculated in proportion to the economic activities of the issuers that were considered as sustainable (activity-based approach). Notwithstanding the preceding, in the case of use-of-proceeds bonds that were considered as sustainable investment, the value of the entire bond was counted towards the portfolio's share of sustainable investments.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

The sustainable investments in which the sub-fund invested were assessed to ensure they did not cause significant harm to any environmental or social sustainable investment objective. This was achieved by taking into account the indicators for principal adverse impacts on sustainability factors (dependent on relevance) as described below. If a significant harm was identified, the investment could not have been considered sustainable.

How were the indicators for adverse impacts on sustainability factors taken into account?

The Sustainability Investment Assessment systematically integrated the mandatory principal adverse indicators on sustainability factors (dependent on relevance) from Table 1 and relevant indicators from Tables 2 and 3 of Annex I of the Commission Delegated Regulation (EU) 2022/1288 supplementing the SFDR. Taking into account these principal adverse impacts, DWS had established quantitative thresholds and/or qualitative values to assess a significant harm on any of the environmental or social sustainable investment objectives. These values were set based upon various external and internal factors, such as data availability or market developments and may have been adapted going forward.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The alignment of sustainable investments with, amongst others, the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights was evaluated through the Norm Controversy Assessment (as further described below). Companies with the worst Norm Controversy Assessment of “F” were excluded as an investment.

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union Criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU Criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU Criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

How did this financial product consider principal adverse impacts on sustainability factors?

The sub-fund considered the following principal adverse impacts on sustainability factors from Annex I of the Commission Delegated Regulation (EU) 2022/1288 supplementing the SFDR:

• Greenhouse gas (GHG) emissions (no. 1);
• Carbon footprint (no. 2);
• GHG intensity of investee companies (no. 3);
• Exposure to companies active in the fossil fuel sector (no. 4);
• Violations of United Nations Global Compact principles and OECD Guidelines for Multinational Enterprises (no. 10); and
• Exposure to controversial weapons (no. 14).

DWS Invest ESG Emerging Markets Top Dividend

Indicators	Description	Performance
Principal Adverse Impact		
PAII - 01. GHG emissions	Sum of the current value of investments of company i, divided by the investee company's enterprise value and multiplied by company's cope 1+2+3 GHG emissions.	25793.66 tCO2e
PAII - 02. Carbon Footprint - EUR	The carbon footprint is expressed as tonnes of CO2 emissions per million EUR invested. The CO2 emissions of an issuer are normalised by its enterprise value including cash (EVIC)	193.36 tCO2e / million EUR
PAII - 03. Carbon Intensity	Weighted average carbon intensity scope 1+2+3	627.36 tCO2e / million EUR
PAII - 04. Exposure to companies active in the fossil fuel sector	Share of investments in companies active in the fossil fuel sector	1.64 % of assets
PAII - 10. Violations of UNGC principles and OECD Guidelines for Multinational Enterprises	Share of investments in investee companies that have been involved in violations of the UNGC principles or OECD Guidelines for Multinational Enterprises	0 % of assets
PAII - 14. Exposure to controversial weapons	Share of investments in investee companies involved in the manufacture or selling of controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)	0 % of assets

As of: December 30, 2025

The Principal Adverse Impact Indicators (PAIIs) are calculated on the basis of the data in the DWS back office and front office systems, which are primarily based on the data of external ESG data providers. If there is no data on individual PAIIs for individual securities or their issuers, either because no data is available or the PAII is not applicable to the particular issuer or security, these securities or issuers are not included in the calculation of the PAII. With target fund investments, a look-through of the target fund holdings is performed if appropriate data is available. The calculation method for the individual PAI indicators may change in subsequent reporting periods due to evolving market standards, a change in the treatment of securities of certain types of instruments (such as derivatives) or as a result of regulatory clarifications.
Moreover, improved data availability may have an effect on the reported PAIIs in subsequent reporting periods.
The values from the DWS front office system are used to calculate the PAIIs. This means that there may be minor deviations from the other market values that appear in the annual report, which are derived from the fund accounting system.

What were the top investments of this financial product?

DWS Invest ESG Emerging Markets Top Dividend

Largest investments	Breakdown by sector according to NACE Codes	in % of average portfolio volume	Breakdown by country
Taiwan Semiconductor Manufacturing Co.	C - Manufacturing	6.3 %	Taiwan

for the period from January 01, 2025, through December 30, 2025

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is:
for the period from January 01, 2025, through December 31, 2025

What was the proportion of sustainability-related investments?

The proportion of sustainability-related investments as of the reporting date was 99.68% of portfolio assets.
Proportion of sustainability-related investments for the previous years:
30/12/2024: 98.21%
29/12/2023: 97.65%
30/12/2022: 95.63%

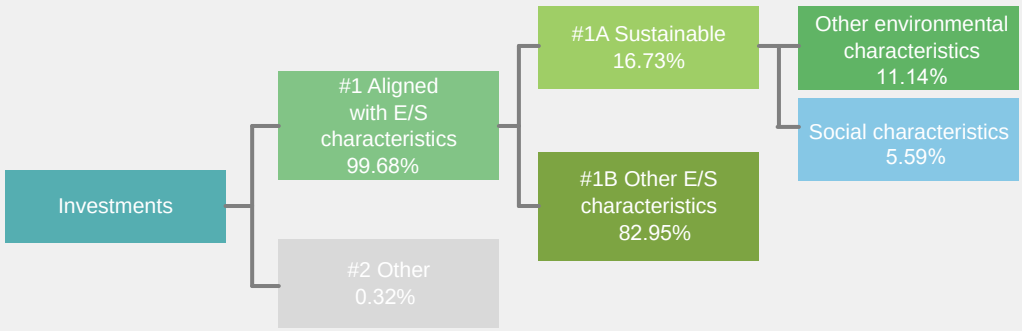
Asset allocation describes the share of investments in specific assets.

What was the asset allocation?

This sub-fund invested 99.68% of its net assets in investments that were aligned with the promoted environmental and social characteristics (#1 Aligned with E/S characteristics). Within this category, 16.73% of the sub-fund's net assets qualified as sustainable investments (#1A Sustainable). Thereof the share of sustainable investments with an environmental objective that was not compliant with the EU Taxonomy was 11.14% of the sub-fund's net assets and the share of socially sustainable investments was 5.59% of the sub-fund's net assets. The share of sustainable investments with an environmental objective that was not compliant with the EU Taxonomy and of socially sustainable investments depended on the market situation and the investable investment universe.

0.32% of the sub-fund's net assets have been invested in assets which were either out-of-scope of the ESG assessment methodology or for which ESG data coverage was incomplete (#2 Other) as further detailed in the section "What investments were included under "#2 Other", what was their purpose and were there any minimum environmental or social safeguards?".

A more detailed description of the specific asset allocation of this sub-fund can be found in the Special Section of the Sales Prospectus.



#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:
- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

In which economic sectors were the investments made?

DWS Invest ESG Emerging Markets Top Dividend

NACE-Code	Breakdown by sector according to NACE Codes	in % of portfolio volume
B	Mining and quarrying	0.0 %
C	Manufacturing	32.4 %

E	Water supply; sewerage; waste managment and remediation activities	0.5 %
G	Wholesale and retail trade; repair of motor vehicles and motorcycles	1.4 %
H	Transporting and storage	2.2 %
I	Accommodation and food service activities	0.7 %
J	Information and communication	15.3 %
K	Financial and insurance activities	31.2 %
M	Professional, scientific and technical activities	8.1 %
S	Other services activities	0.6 %
NA	Other	6.7 %
Exposure to companies active in the fossil fuel sector		1.6 %

As of: December 30, 2025

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The sub-fund did not commit to invest a proportion of sustainable investments with an environmental objective aligned with the EU Taxonomy. Therefore, the promoted minimum percentage of environmentally sustainable investments aligned with the EU Taxonomy was 0% of the sub-fund's net assets. However, certain investments' underlying economic activities may have been aligned with the EU Taxonomy.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are economic activities for yet low-carbon alternatives are not yet available and that have greenhouse gas emission levels corresponding to the best performance.

Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy[1]?

☐ Yes:

☐ In fossil gas ☐ In nuclear energy

☒ No

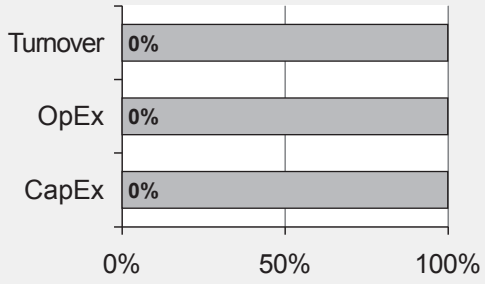
The sub-fund did not take into account the Taxonomy-alignment of companies active in the fossil gas and/or nuclear energy sectors.

[1] Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do no significant harm to any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Taxonomy-aligned activities are expressed as a share of:
- turnover reflecting the share of revenue from green activities of investee companies.
- capital expenditure (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- operational expenditure (OpEx) reflecting the green operational activities of investee companies.

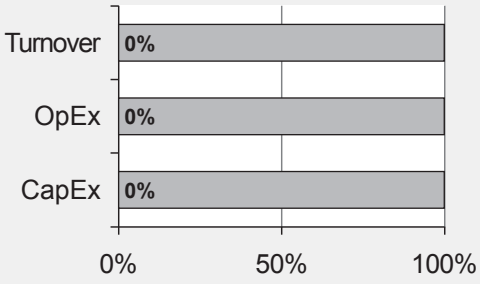
The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy-alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy-alignment only in relation to the investments of the financial product other than sovereign bonds.

1. Taxonomy-alignment of investments **including sovereign bonds***



Taxonomy-aligned: Fossil gas	0.00%
Taxonomy-aligned: Nuclear	0.00%
Taxonomy-aligned (no gas and nuclear)	0.00%
Taxonomy-aligned	0.00%
Non Taxonomy-aligned	100.00%

2. Taxonomy-alignment of investments **excluding sovereign bonds***



Taxonomy-aligned: Fossil gas	0.00%
Taxonomy-aligned: Nuclear	0.00%
Taxonomy-aligned (no gas and nuclear)	0.00%
Taxonomy-aligned	0.00%
Non Taxonomy-aligned	100.00%

This graph represents 100% of the total investments.

**For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures*

What was the share of investments made in transitional and enabling activities?

The sub-fund was not committed to a share of investments in transitional or enabling activities.

How did the percentage of investments that are aligned with the EU Taxonomy compare with previous reference periods?

The promoted proportion of environmentally sustainable investments in accordance with Regulation (EU) 2020/852 (Taxonomy Regulation) was 0% of the fund's assets in the current as well as previous reference periods. It may, however, have been the case that some sustainable investments were nevertheless aligned with an environmental objective of the Taxonomy Regulation.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the Regulation (EU) 2020/852.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The share of sustainable investments with an environmental objective that were not aligned with the EU Taxonomy was 11.14% of the sub-fund's net assets.

Shares of sustainable investments in previous reporting periods:

reporting period	sustainable investments (total)	with environmental objective	socially sustainable
30/12/2024	11.16%	6.63%	4.53%
29/12/2023	11.40%	6.83%	4.57%
30/12/2022	11.69%	--	--

What was the share of socially sustainable investments?

The share of socially sustainable investments was 5.59% of the sub-fund’s net

assets. Shares of sustainable investments in previous reporting periods:

reporting period	sustainable investments (total)	with environmental objective	socially sustainable
30/12/2024	11.16%	6.63%	4.53%
29/12/2023	11.40%	6.83%	4.57%
30/12/2022	11.69%	--	--

What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?

99.68% of the sub-fund’s net assets were aligned with the promoted environmental and social characteristics (#1 Aligned with E/S characteristics). 0.32% of the sub-fund’s net assets have been invested in assets which were either out-of-scope of the ESG assessment methodology or for which ESG data coverage was incomplete (#2 Other). Full ESG data coverage was required for the assessment of direct investments in companies in relation to good governance practices and the PAB-Exclusions.

Assets under “#2 Other” could include all asset classes as foreseen in the specific investment policy, such as sight deposits with credit institutions and derivatives. These assets could have been used by the portfolio management for performance, risk diversification, liquidity and hedging purposes.

Minimum environmental or social safeguards were not or only partially considered for the sub-fund’s investments falling within “#2 Other”.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

This sub-fund pursued a strategy based on equities as main investment strategy. The sub-fund may acquired equities, interest-bearing securities, convertible bonds, warrant-linked bonds, warrants, dividend-right certificates, index certificates and financial instruments certificated in securities of well-established issuers based in Emerging Markets. At least 70% (after deduction of liquid assets) of the sub-fund's asset must have been invested in equities of companies registered in Emerging Markets countries or in companies that conducted their principal business activity in Emerging Markets countries or which, as holding companies, hold primarily interest in companies registered in Emerging Markets countries, that could be expected to deliver an above-average dividend yield. Up to 20% of the sub-fund´s assets may have been invested in securities such as A-Shares, B-Shares, bonds and other securities listed and traded in Mainland China.

Further details regarding the main investment strategy are specified in the Special Section of the Sales Prospectus.

99.68% of the sub-fund's net assets were allocated to investments that met the promoted environmental and social characteristics as described in the following sections. The alignment of the portfolio with the binding elements of the investment strategy used to attain the promoted environmental and social characteristics as well as the PAB-Exclusions was continuously controlled via the sub-fund's investment guidelines monitoring.

ESG assessment methodology

The sub-fund aimed to achieve the promoted environmental and social characteristics by assessing potential assets via an in-house ESG assessment methodology, regardless of their economic prospects for success, and by applying exclusion criteria based on this assessment.

The ESG assessment methodology was using a proprietary software tool which sourced data from one or several ESG data providers, public sources and/or internal assessments to derive overall assessments. The methodology applied to derive such overall assessments could have been based on different methods, such as prioritizing one data vendor, worst-of or averaging approach. Internal assessments may take into account factors such as an issuer's future expected ESG developments, plausibility of data with regard to past or future events, the willingness to engage in dialogue on ESG matters and/or ESG-related decisions of a company. Further, internal ESG assessments for investee companies may have considered the relevance of the exclusion criteria for the market sector of the investee company.

The proprietary software tool used, amongst others, the approaches described below to evaluate the adherence to the promoted ESG characteristics and whether investee companies followed good governance practices. The assessment approaches included, for example, exclusions related to revenues generated from controversial sectors or the exposure to such controversial sectors. In some of the assessment approaches, issuers received one of six possible assessments, with "A" representing the best and "F" the worst assessment. If an issuer was excluded based on one assessment approach, the sub-fund was prohibited from investing in that issuer.

Depending on the investable universe, the portfolio allocation and the exposure to certain sectors, the assessment approaches described below have been more or less relevant which was reflected in the number of issuers being actually excluded.

• PAB-Exclusions

In accordance with the applicable regulations, the sub-fund applied the PAB-Exclusions and excluded all of the following companies:

a. companies involved in controversial weapons (manufacturing or selling of anti-personnel mines, cluster munitions, chemical weapons and biological weapons) assessed as part of the assessment of the "Exposure to controversial weapons" as described below;
b. companies involved in the cultivation and production of tobacco;
c. companies that were found in violation of the United Nations Global Compact principles or the OECD Guidelines for Multinational Enterprises (assessed as part of the "Norm Controversy Assessment" as described below);
d. companies that derived 1% or more of their revenues from exploration, mining, extraction, distribution or refining of hard coal and lignite;
e. companies that derived 10% or more of their revenues from the exploration, extraction, distribution or refining of oil fuels;
f. companies that derived 50% or more of their revenues from the exploration, extraction, manufacturing or distribution of gaseous fuels;

g. companies that derived 50% or more of their revenues from electricity generation with a GHG intensity of more than 100 g CO2 e/kWh.

The PAB-Exclusions were, in particular, not applied for sight deposits with credit institutions and certain derivative instruments. The extent of the application of the PAB-Exclusions in relation to use of proceeds bonds was described below under the section “Use of proceeds bond Assessment”.

• Norm Controversy Assessment

The Norm Controversy Assessment evaluated the behaviour of companies in relation to generally accepted international standards and principles of responsible business conduct within, amongst others, the framework of the principles of the United Nations Global Compact, the United Nations Guiding Principles, the standards of the International Labour Organization and the OECD Guidelines for Multinational Enterprises. Examples of topics covered within these standards and principles included, but were not limited to, human rights violations, violations of workers' rights, child or forced labour, negative environmental impacts and business ethics. The Norm Controversy Assessment evaluated reported violations of the aforementioned international standards. Companies with the worst Norm Controversy Assessment of “F” were excluded as an investment.

• ESG Quality Assessment

The ESG Quality Assessment distinguished between investments in companies and investments in sovereign issuers.

For companies, the ESG Quality Assessment allowed for a peer group comparison based on an overall ESG assessment, for example, concerning the handling of environmental changes, product safety, employee management or corporate ethics. The peer group for companies was made up from the same industry sector. Companies that scored higher in this comparison received a better assessment, while Companies that scored lower in the comparison received a worse assessment. Companies with the worst assessment of “F” were excluded as an investment.

For sovereign issuers, the ESG Quality Assessment assessed countries based on a peer group comparison considering environmental and social criteria as well as indicators for good governance, including, for example, the political system, the existence of institutions and the rule of law. Sovereign issuers with the worst assessment of “F” were excluded as an investment.

• Freedom House Status

Freedom House is an international non-governmental organization that classifies countries by their degree of political and civil liberties. Based on the Freedom House Status, countries that were classified as “not free” were excluded as an investment.

• Exposure to controversial sectors

Companies that were involved in certain business areas and business activities in controversial areas (“controversial sectors”) were excluded according to their share of total revenues generated in such controversial sectors as follows:

a. . Manufacturing of products and/or provision of services in the defence industry: 5% or more
b. . Manufacturing and/or distribution of civil handguns or ammunition: 5% or more
c. . Manufacturing of products in and/or provision of services for the gambling industry: 5% or more
d. . Manufacturing of adult entertainment: 5% or more
e. . Manufacturing of palm oil: 5% or more
f. . Nuclear power generation and/or uranium mining and/or uranium enrichment: 5% or more
g. . Unconventional extraction of crude oil and/or natural gas (including oil sand, oil shale/shale gas arctic drilling): more than 0%
h. . Companies that derived 25% or more from thermal coal mining and thermal coal-based pow generation as well as companies with thermal coal expansion plans, such as additional expansion of coal mining, coal production or coal usage. Companies with thermal coal expansion plans were excluded based on an internal identification methodology.

Further, companies involved in the manufacturing or selling of nuclear weapons or key components of nuclear weapons were excluded and the shareholdings within a group structure may be taken into consideration.

• **Exposure to controversial weapons**

Companies were excluded if they are identified as being involved in the manufacturing or selling of controversial weapons or key components of controversial weapons or other related specific activities (anti-personnel mines, cluster munitions, chemical and biological weapons, blinding laser weapons, weapons with non-detectable fragments, depleted uranium weapons/munitions and/or incendiary weapons using white phosphorus). In addition, the shareholdings within a group structure may be taken into consideration for the exclusions.

• Use-of-Proceeds Bond Assessment

This assessment was specific to the nature of this instrument and an investment in use of proceeds bonds was permitted only if the following criteria were met. Firstly, all use of proceeds bonds were checked for compliance with the Climate Bonds Standards, similar industry standards for green bonds, social bonds or sustainability bonds (such as ICMA Principles) or the EU Green Bond Standard or whether bonds have been subject to an independent review.

Secondly, certain exclusion criteria (including the applicable PAB-Exclusions) were applied, where relevant and where sufficient data was available, at the level of the bond and/or in relation to the issuer of the bonds which could lead to the exclusion of the bond as an investment.

• Target Fund Assessment

Target funds were eligible if they are aligned with the PAB-Exclusions (starting from 21 May 2025) and, where applicable, the Freedom House Status. The target fund assessment relied on target fund related information acquired from external data sources or was evaluated in relation to the underlying assets of the portfolios of the target funds. Considering the diversity of data vendors and methodologies as well as the target fund portfolio rebalancing, this sub-fund may have been indirectly exposed to certain assets that would be excluded if invested directly.

Sustainability Investment Assessment

Further, for the proportion of sustainable investments, DWS measured the contribution to one or several UN SDGs and/or to other environmental sustainable objectives via its Sustainability Investment Assessment which evaluated potential investments in relation to different criteria to conclude whether an investment could have been considered as sustainable as further detailed in the section “What were the objectives of the sustainable investments that the financial product partially intends to make and how did the sustainable investment contributed to such objectives?”.

The applied ESG investment strategy did not pursue a committed minimum reduction of the scope of the investments.

The assessment of the good governance practices of the investee companies (including assessments related to sound management structures, employee relations, remuneration of staff and tax compliance) was part of the Norm Controversy Assessment which evaluated a company’s behavior within generally accepted international standards and principles of responsible business conduct. Companies with the worst Norm Controversy Assessment of “F” were excluded as an investment.

How did this financial product perform compared to the reference sustainable benchmark?

This sub-fund had not designated a reference benchmark to determine whether it was aligned with the environmental and social characteristics that it promoted.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Periodic disclosure for financial products referred to in Article 8, paragraph 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

Product name: DWS Invest ESG Equity Income

Legal entity identifier: 222100L1LYCTTK0DG453

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

Yes	No
☐ it made **sustainable investments with an environmental objective:** ___%	☒ It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of 28.42% of sustainable investments.
☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy	☐ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
	☒ with a social objective
☐ It made **sustainable investments with a social objective:** ___%	☐ It promoted E/S characteristics, but did **not make any sustainable investments**

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities.** That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

To what extent were the environmental and/or social characteristics promoted by this financial product met?

This sub-fund promoted environmental and social characteristics related to a general consideration of ESG criteria by excluding, for example, investments in companies with the worst norm-related issues towards international standards, issuers with the worst assessment in terms of environmental, social and governance aspects compared to their peer group and/or investments in companies whose involvement in controversial sectors exceeded predefined revenue thresholds.

Further, this sub-fund promoted a proportion of sustainable investments in accordance with article 2(17) of the regulation on sustainability-related disclosures in the financial services sector (SFDR).

This sub-fund had not designated a reference benchmark for the purpose of attaining the environmental and social characteristics promoted.

No derivatives were used to attain the environmental or social characteristics promoted by the sub-fund.

How did the sustainability indicators perform?

The attainment of the promoted environmental and social characteristics as well as the sustainable investment was assessed via the application of an in-house ESG assessment methodology and ESG specific exclusion thresholds as further described in the section “What actions have been taken to meet the environmental and/or social characteristics during the reference period?”. The methodology applied different assessment approaches that were used as sustainability indicators which were:

• **Norm Controversy Assessment** used as an indicator for a company’s exposure to norm-related issues towards international standards.
Performance: No investments in suboptimal assets

• **ESG Quality Assessment** used as an indicator for comparison of an issuer’s environmental, social and governance aspects in relation to its peer group.
Performance: No investments in suboptimal assets

• **Freedom House Status** used as an indicator for the political and civil liberties of a country.
Performance: No investments in suboptimal assets

• **Exposure to controversial sectors** used as an indicator for a company’s involvement in controversial sectors.
Performance: 0%

• **Exposure to companies subject to the EU Paris-aligned Benchmark exclusion criteria** as set forth in article 12(1) of Commission Delegated Regulation 2020/1818 (PAB-Exclusions).
Performance: 0%

• **Sustainability Investment Assessment** used as an indicator to measure the proportion of sustainable investments pursuant to article 2(17) SFDR.
Performance: 28.42

Please see the section entitled “What actions have been taken to meet the environmental and/or social characteristics during the reference period?” for a description of the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted, including the exclusion criteria, and the assessment methodology for determining whether and to what extent assets met the defined environmental and/or social characteristics (including the turnover thresholds defined for the xclusions). This section contains further information on the sustainability indicators. The values from the DWS front office system are used to calculate the sustainability indicators. This means that there may be minor deviations from the other market values that appear in the annual report, which are derived from the fund accounting system.

…and compared to previous periods?

Attainment of the promoted environmental and social characteristics at portfolio level was measured in the previous years on the basis of the following sustainability indicators:

DWS Invest ESG Equity Income

The disclosure of the sustainability indicators has been revised compared with the prior-year report. The assessment methodology is unchanged. Additional information on the currently valid sustainability indicators is provided in the section entitled “What actions have been taken to meet the environmental and/or social characteristics during the reference period?”.
Information about taking into account the principal adverse impacts on sustainability factors is provided in the section entitled “How did this financial product consider principal adverse impacts on sustainability factors?”

DWS ESG-Assessment Scale

In the following assessment categories, the assets received one of six possible scores, with "A" being the best score and "F" being the worst score.

Criteria	Involvement in controversial sectors *(1)	Involvement in controversial weapons	Norm Assessment *(6)	ESG Quality Assessment	SDG- Assessment	Climat & Transition Risk Assessment
A	Non-involvement	Confirmed non-involvement	Confirmed no issues	True leader in ESG (>= 87.5 DWS ESG score)	True SDG contributor (>= 87.5 SDG score)	True climate leader (>= 87.5 score)
B	Remote involvement	Alleged	Violations of lesser degree	ESG leader (75-87.5 DWS ESG score)	SDG contributor (75-87.5 SDG score)	Climate solution provider(75-87.5 score)
C	0% - 5%	Dual-Purpose *(2)	Violations of lesser degree	ESG upper midfield (50-75 DWS ESG score)	SDG upper midfield (50-75 SDG score)	Low transition risk (50-75 score)
D	5% - 10% (coal: 5% - 10%)	Owning *(3)/ Owned *(4)	Violation of lesser degree	ESG lower midfield (25-50 DWS ESG score)	SDG lower midfield (25-50 SDG score)	Mod. transition risk (25-50 score)
E	10% - 25% (coal: 15% - 25%)	Component Producer *(5)	High severity or re-assessed highest violation *(7)	ESG laggard (12.5-25 DWS ESG score)	SDG obstructer (12.5-25 SDG score)	High transition risk (12.5-25 score)
F	>= 25%	Weapon producer	Highest severity / global compact violation *(8)	True laggard in ESG (0-12.5 DWS ESG score)	Significant SDG obstructer (0-12.5 SDG score)	Excessive transition risk (0-12.5 score)

*(1) Revenue share thresholds as per standard scheme. Sub-Granularity available. Thresholds can be individually set.

*(2) Encompasses e.g.. weapon-carrying systems such as combat aircraft that carry non-controversial weapons as well as controversial ones.

*(3) Owning more than 20% equity.

*(4) Being owned by more than 50% of company involved in grade E or F.

*(5) Single purpose key component.

*(6) Includes ILO controversies as well as corporate governance and product issues.

*(7) In its ongoing assessment, DWS takes into account the violation(s) of international standards – observed via data from ESG data vendors – such as the UN Global Compact, but also possible ESG data vendor errors identified, future expected developments of these violations as well as the willingness of the issuer to engage in dialogue regarding corporate decisions in this regard.

*(8) An F-grade can be considered a reconfirmed violation of the United Nations Global Compact rule framework for corporate behavior.

What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?

Sustainable investments contributed (i) to at least one of the Sustainable Development Goals of the United Nations (UN SDGs) that relate to environmental and/or social objectives, such as no poverty, zero hunger, good health and well-being, quality education, gender equality, clean water and sanitation, affordable and clean energy, decent work and economic growth, reduced inequalities, sustainable cities and communities, responsible consumption and production, climate action, life below water and/or life on land and/or (ii) to at least one other environmental objective such as climate change adaption, climate change mitigation, sustainable use and protection of water and marine recources, transition to a circular economy, pollution prevention and control and/or protection and restoration of biodiversity and ecosystems (as defined under the EU Taxonomy).

The extent of the contribution to individual sustainable investment objectives varied depending on the actual investments held in the portfolio.

DWS determined the contribution to a sustainable investment objective based on its Sustainability Investment Assessment which used data from one or several data providers, public sources and/or internal assessments. An investment's positive contribution to an environmental and/or social objective was assessed based on the revenues which a company generated from the actual economic activities making such contribution (activity-based approach). Where a positive contribution was determined, the investment was considered sustainable if the issuer passed the Do No significant Harm ("DNSH") assessment and the company followed good governance practices.

The share of sustainable investments in the portfolio as defined in article 2(17) SFDR was therefore calculated in proportion to the economic activities of the issuers that were considered as sustainable (activity-based approach). Notwithstanding the preceding, in the case of use-of-proceeds bonds that were considered as sustainable investment, the value of the entire bond was counted towards the portfolio's share of sustainable investments.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

The sustainable investments in which the sub-fund invested were assessed to ensure they did not cause significant harm to any environmental or social sustainable investment objective. This was achieved by taking into account the indicators for principal adverse impacts on sustainability factors (dependent on relevance) as described below. If a significant harm was identified, the investment could not have been considered sustainable.

How were the indicators for adverse impacts on sustainability factors taken into account?

The Sustainability Investment Assessment systematically integrated the mandatory principal adverse indicators on sustainability factors (dependent on relevance) from Table 1 and relevant indicators from Tables 2 and 3 of Annex I of the Commission Delegated Regulation (EU) 2022/1288 supplementing the SFDR. Taking into account these principal adverse impacts, DWS had established quantitative thresholds and/or qualitative values to assess a significant harm on any of the environmental or social sustainable investment objectives. These values were set based upon various external and internal factors, such as data availability or market developments and may have been adapted going forward.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The alignment of sustainable investments with, amongst others, the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights was evaluated through the Norm Controversy Assessment (as further described below). Companies with the worst Norm Controversy Assessment of “F” were excluded as an investment.

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union Criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU Criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU Criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

How did this financial product consider principal adverse impacts on sustainability factors?

The sub-fund considered the following principal adverse impacts on sustainability factors from Annex I of the Commission Delegated Regulation (EU) 2022/1288 supplementing the SFDR:

- Greenhouse gas (GHG) emissions (no. 1);
- Carbon footprint (no. 2);
- GHG intensity of investee companies (no. 3);
- Exposure to companies active in the fossil fuel sector (no. 4);
- Violations of United Nations Global Compact principles and OECD Guidelines for Multinational Enterprises (no. 10); and
- Exposure to controversial weapons (no. 14).

DWS Invest ESG Equity Income

Indicators	Description	Performance
Principal Adverse Impact		
PAII - 01. GHG emissions	Sum of the current value of investments of company i, divided by the investee company's enterprise value and multiplied by company's cope 1+2+3 GHG emissions.	577025.83 tCO2e
PAII - 02. Carbon Footprint - EUR	The carbon footprint is expressed as tonnes of CO2 emissions per million EUR invested. The CO2 emissions of an issuer are normalised by its enterprise value including cash (EVIC)	217.51 tCO2e / million EUR
PAII - 03. Carbon Intensity	Weighted average carbon intensity scope 1+2+3	589.53 tCO2e / million EUR
PAII - 04. Exposure to companies active in the fossil fuel sector	Share of investments in companies active in the fossil fuel sector	9.94 % of assets
PAII - 10. Violations of UNGC principles and OECD Guidelines for Multinational Enterprises	Share of investments in investee companies that have been involved in violations of the UNGC principles or OECD Guidelines for Multinational Enterprises	0 % of assets
PAII - 14. Exposure to controversial weapons	Share of investments in investee companies involved in the manufacture or selling of controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)	0 % of assets

As of: December 30, 2025

The Principal Adverse Impact Indicators (PAIIs) are calculated on the basis of the data in the DWS back office and front office systems, which are primarily based on the data of external ESG data providers. If there is no data on individual PAIIs for individual securities or their issuers, either because no data is available or the PAII is not applicable to the particular issuer or security, these securities or issuers are not included in the calculation of the PAII. With target fund investments, a look-through of the target fund holdings is performed if appropriate data is available. The calculation method for the individual PAI indicators may change in subsequent reporting periods due to evolving market standards, a change in the treatment of securities of certain types of instruments (such as derivatives) or as a result of regulatory clarifications.
Moreover, improved data availability may have an effect on the reported PAIIs in subsequent reporting periods.
The values from the DWS front office system are used to calculate the PAIIs. This means that there may be minor deviations from the other market values that appear in the annual report, which are derived from the fund accounting system.

What were the top investments of this financial product?

DWS Invest ESG Equity Income

Largest investments	Breakdown by sector according to NACE Codes	in % of average portfolio volume	Breakdown by country
Taiwan Semiconductor Manufacturing Co.	C - Manufacturing	3.8 %	Taiwan
AXA	K - Financial and insurance activities	2.8 %	France
Wheaton Precious Metals	B - Mining and quarrying	2.6 %	Canada

for the period from January 01, 2025, through December 30, 2025

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is:
for the period from January 01, 2025, through December 31, 2025

What was the proportion of sustainability-related investments?

The proportion of sustainability-related investments as of the reporting date was 99.98% of portfolio assets.
Proportion of sustainability-related investments for the previous years:

30/12/2024: 95.14 %
29/12/2023: 92.90 %
30/12/2022: 90.21 %

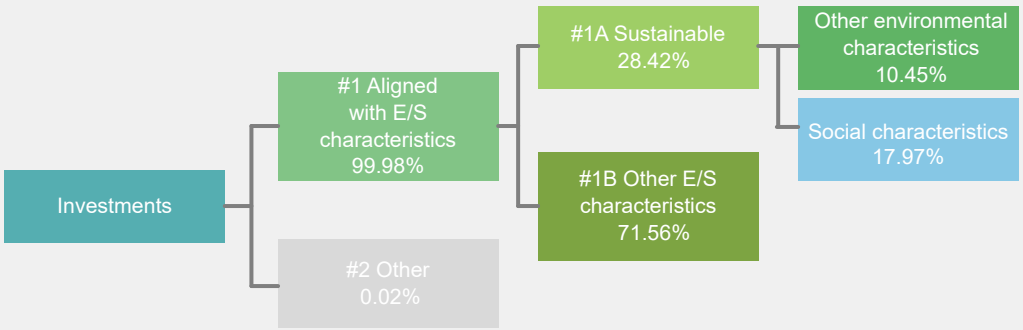
Asset allocation describes the share of investments in specific assets.

What was the asset allocation?

This sub-fund invested 99,98% of its net assets in investments that were aligned with the promoted environmental and social characteristics (#1 Aligned with E/S characteristics). Within this category, 28.42% of the sub-fund's net assets qualified as sustainable investments (#1A Sustainable). Thereof the share of sustainable investments with an environmental objective that was not compliant with the EU Taxonomy was 10.45% of the sub-fund's net assets and the share of socially sustainable investments was 17.97% of the sub-fund's net assets. The share of sustainable investments with an environmental objective that was not compliant with the EU Taxonomy and of socially sustainable investments depended on the market situation and the investable investment universe.

0.02% of the sub-fund's net assets have been invested in assets which were either out-of-scope of the ESG assessment methodology or for which ESG data coverage was incomplete (#2 Other) as further detailed in the section "What investments were included under "#2 Other", what was their purpose and were there any minimum environmental or social safeguards?".

A more detailed description of the specific asset allocation of this sub-fund can be found in the Special Section of the Sales Prospectus.



#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:
- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

In which economic sectors were the investments made?

DWS Invest ESG Equity Income

NACE-Code	Breakdown by sector according to NACE Codes	in % of portfolio volume
B	Mining and quarrying	3.3 %
C	Manufacturing	31.1 %
D	Electricity, gas, steam and air conditioning supply	5.2 %
G	Wholesale and retail trade; repair of motor vehicles and motorcycles	1.6 %
H	Transporting and storage	1.3 %
J	Information and communication	9.1 %
K	Financial and insurance activities	22.1 %
M	Professional, scientific and technical activities	13.8 %
Q	Human health and social work activities	2.0 %
NA	Other	10.5 %

NACE-Code	Breakdown by sector according to NACE Codes	in % of portfolio volume
Exposure to companies active in the fossil fuel sector		9.9 %

As of: December 30, 2025

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The sub-fund did not commit to invest a proportion of sustainable investments with an environmental objective aligned with the EU Taxonomy. Therefore, the promoted minimum percentage of environmentally sustainable investments aligned with the EU Taxonomy was 0% of the sub-fund's net assets. However, certain investments' underlying economic activities may have been aligned with the EU Taxonomy.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are economic activities for yet low-carbon alternatives are not yet available and that have greenhouse gas emission levels corresponding to the best performance.

Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy[1]?

☐ Yes:

☐ In fossil gas ☐ In nuclear energy

☒ No

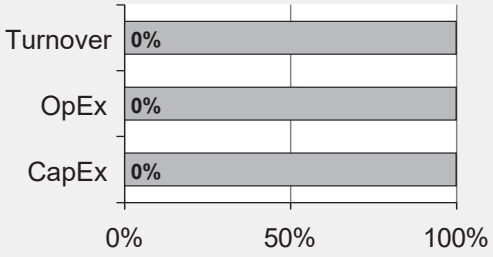
The sub-fund did not take into account the Taxonomy-alignment of companies active in the fossil gas and/or nuclear energy sectors.

[1] Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do no significant harm to any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Taxonomy-aligned activities are expressed as a share of:
- turnover reflecting the share of revenue from green activities of investee companies.
- capital expenditure (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- operational expenditure (OpEx) reflecting the green operational activities of investee companies.

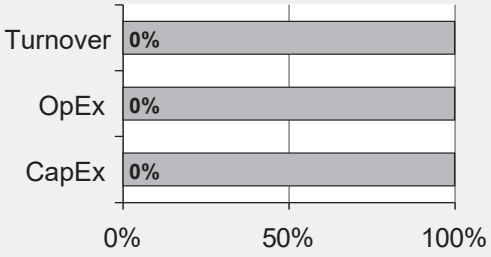
The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy-alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy-alignment only in relation to the investments of the financial product other than sovereign bonds.

1. Taxonomy-alignment of investments **including sovereign bonds***



Taxonomy-aligned: Fossil gas	0.00%
Taxonomy-aligned: Nuclear	0.00%
Taxonomy-aligned (no gas and nuclear)	0.00%
Taxonomy-aligned	0.00%
Non Taxonomy-aligned	100.00%

2. Taxonomy-alignment of investments **excluding sovereign bonds***



Taxonomy-aligned: Fossil gas	0.00%
Taxonomy-aligned: Nuclear	0.00%
Taxonomy-aligned (no gas and nuclear)	0.00%
Taxonomy-aligned	0.00%
Non Taxonomy-aligned	100.00%

This graph represents 100% of the total investments.

**For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures*

What was the share of investments made in transitional and enabling activities?

The sub-fund was not committed to a share of investments in transitional or enabling activities.

How did the percentage of investments that are aligned with the EU Taxonomy compare with previous reference periods?

The promoted proportion of environmentally sustainable investments in accordance with Regulation (EU) 2020/852 (Taxonomy Regulation) was 0% of the fund's assets in the current as well as previous reference periods. It may, however, have been the case that some sustainable investments were nevertheless aligned with an environmental objective of the Taxonomy Regulation.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the Regulation (EU) 2020/852.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The share of sustainable investments with an environmental objective that were not aligned with the EU Taxonomy was 10.45% of the sub-fund's net assets.

Shares of sustainable investments in previous reporting periods:

reporting period	sustainable investments (total)	with environmental objective	socially sustainable
30/12/2024	24.24%	7.40%	16.84%
29/12/2023	26.34%	6.98%	19.36%
30/12/2022	24.23%	--	--

What was the share of socially sustainable investments?

The share of socially sustainable investments was 17.97% of the sub-fund’s net assets. Shares of sustainable investments in previous reporting periods:

reporting period	sustainable investments (total)	with environmental objective	socially sustainable
30/12/2024	24.24%	7.40%	16.84%
29/12/2023	26.34%	6.98%	19.36%
30/12/2022	24.23%	--	--

What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?

99.98% of the sub-fund’s net assets were aligned with the promoted environmental and social characteristics (#1 Aligned with E/S characteristics). 0.02% of the sub-fund’s net assets have been invested in assets which were either out-of-scope of the ESG assessment methodology or for which ESG data coverage was incomplete (#2 Other). Full ESG data coverage was required for the assessment of direct investments in companies in relation to good governance practices and the PAB-Exclusions.

Assets under “#2 Other” could include all asset classes as foreseen in the specific investment policy, such as sight deposits with credit institutions and derivatives. These assets could have been used by the portfolio management for performance, risk diversification, liquidity and hedging purposes.

Minimum environmental or social safeguards were not or only partially considered for the sub-fund’s investments falling within “#2 Other”.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

This sub-fund pursued a strategy based on equities as main investment strategy. At least 70% of the sub-fund's assets were invested in equities from international issuers that were expected to deliver an above-average dividend yield. Up to 30% of the sub-fund's assets might have been invested in money market instruments and bank balances.

Further details regarding the main investment strategy were specified in the Special Section of the Sales Prospectus.

99.98% of the sub-fund's net assets were allocated to investments that met the promoted environmental and social characteristics as described in the following sections. The alignment of the portfolio with the binding elements of the investment strategy used to attain the promoted environmental and social characteristics as well as the PAB-Exclusions was continuously controlled via the sub-fund's investment guidelines monitoring.

ESG assessment methodology

The sub-fund aimed to achieve the promoted environmental and social characteristics by assessing potential assets via an in-house ESG assessment methodology, regardless of their economic prospects for success, and by applying exclusion criteria based on this assessment.

The ESG assessment methodology was using a proprietary software tool which sourced data from one or several ESG data providers, public sources and/or internal assessments to derive overall assessments. The methodology applied to derive such overall assessments could have been based on different methods, such as prioritizing one data vendor, worst-of or averaging approach. Internal assessments may take into account factors such as an issuer's future expected ESG developments, plausibility of data with regard to past or future events, the willingness to engage in dialogue on ESG matters and/or ESG-related decisions of a company. Further, internal ESG assessments for investee companies may have considered the relevance of the exclusion criteria for the market sector of the investee company.

The proprietary software tool used, amongst others, the approaches described below to evaluate the adherence to the promoted ESG characteristics and whether investee companies followed good governance practices. The assessment approaches included, for example, exclusions related to revenues generated from controversial sectors or the exposure to such controversial sectors. In some of the assessment approaches, issuers received one of six possible assessments, with "A" representing the best and "F" the worst assessment. If an issuer was excluded based on one assessment approach, the sub-fund was prohibited from investing in that issuer.

Depending on the investable universe, the portfolio allocation and the exposure to certain sectors, the assessment approaches described below have been more or less relevant which was reflected in the number of issuers being actually excluded.

• **PAB-Exclusions**

In accordance with the applicable regulations, the sub-fund applies the PAB-Exclusions and excluded all of the following companies:

a. companies involved in controversial weapons (manufacturing or selling of anti-personnel mines, cluster munitions, chemical weapons and biological weapons) assessed as part of the assessment of the "Exposure to controversial weapons" as described below;
b. companies involved in the cultivation and production of tobacco;
c. companies that were found in violation of the United Nations Global Compact principles or the OECD Guidelines for Multinational Enterprises (assessed as part of the "Norm Controversy Assessment" as described below);
d. companies that derived 1% or more of their revenues from exploration, mining, extraction, distribution or refining of hard coal and lignite;
e. companies that derived 10% or more of their revenues from the exploration, extraction, distribution or refining of oil fuels;
f. companies that derived 50% or more of their revenues from the exploration, extraction, manufacturing or distribution of gaseous fuels;
g. companies that derived 50% or more of their revenues from electricity generation with a GHG intensity of more than 100 g CO_2 e/kWh.

The PAB-Exclusions were, in particular, not applied for sight deposits with credit institutions and certain derivative instruments. The extent of the application of the PAB-Exclusions in relation to use of proceeds bonds was described below under the section "Use of proceeds bond Assessment".

• **Norm Controversy Assessment**

The Norm Controversy Assessment evaluated the behaviour of companies in relation to generally accepted international standards and principles of responsible business conduct within, amongst others, the framework of the principles of the United Nations Global Compact, the United Nations Guiding Principles, the standards of the International Labour Organization and the OECD Guidelines for Multinational Enterprises. Examples of topics covered within these standards and principles included, but were not limited to, human rights violations, violations of workers' rights, child or forced labour, negative environmental impacts and business ethics. The Norm Controversy Assessment evaluated reported violations of the aforementioned international standards. Companies with the worst Norm Controversy Assessment of “F” were excluded as an investment.

• **ESG Quality Assessment**

The ESG Quality Assessment distinguished between investments in companies and investments in sovereign issuers.

For companies, the ESG Quality Assessment allowed for a peer group comparison based on an overall ESG assessment, for example, concerning the handling of environmental changes, product safety, employee management or corporate ethics. The peer group for companies was made up from the same industry sector. Companies that scored higher in this comparison received a better assessment, while Companies that scored lower in the comparison received a worse assessment. Companies with the worst assessment of “F” were excluded as an investment.

For sovereign issuers, the ESG Quality Assessment assessed countries based on a peer group comparison considering environmental and social criteria as well as indicators for good governance, including, for example, the political system, the existence of institutions and the rule of law. Sovereign issuers with the worst assessment of “F” were excluded as an investment.

• **Freedom House Status**

Freedom House is an international non-governmental organization that classifies countries by their degree of political and civil liberties. Based on the Freedom House Status, countries that were classified as “not free” were excluded as an investment.

• **Exposure to controversial sectors**

Companies that were involved in certain business areas and business activities in controversial areas (“controversial sectors”) were excluded according to their share of total revenues generated in such controversial sectors as follows:

a. Manufacturing of products and/or provision of services in the defence industry: 5% or more
b. Manufacturing and/or distribution of civil handguns or ammunition: 5% or more
c. Manufacturing of products in and/or provision of services for the gambling industry: 5% or more
d. Manufacturing of adult entertainment: 5% or more
e. Manufacturing of palm oil: 5% or more
f. Nuclear power generation and/or uranium mining and/or uranium enrichment: 5% or more
g. Unconventional extraction of crude oil and/or natural gas (including oil sand, oil shale/shale gas, arctic drilling): more than 0%
h. Companies that derived 25% or more from thermal coal mining and thermal coal-based power generation as well as companies with thermal coal expansion plans, such as additional expansion of coal mining, coal production or coal usage. Companies with thermal coal expansion plans were excluded based on an internal identification methodology.

Further, companies involved in the manufacturing or selling of nuclear weapons or key components of nuclear weapons were excluded and the shareholdings within a group structure might have been taken into consideration.

• **Exposure to controversial weapons**

Companies were excluded if they were identified as being involved in the manufacturing or selling of controversial weapons or key components of controversial weapons or other related specific activities (anti-personnel mines, cluster munitions, chemical and biological weapons, blinding laser weapons, weapons with non-detectable fragments, depleted uranium weapons/munitions and/or incendiary weapons using white phosphorus). In addition, the shareholdings within a group structure might have been taken into consideration for the exclusions.

• Use-of-Proceeds Bond Assessment

This assessment was specific to the nature of this instrument and an investment in use of proceeds bonds was permitted only if the following criteria were met. Firstly, all use of proceeds bonds were checked for compliance with the Climate Bonds Standards, similar industry standards for green bonds, social bonds or sustainability bonds (such as ICMA Principles) or the EU Green Bond Standard or whether bonds have been subject to an independent review.

Secondly, certain exclusion criteria (including the applicable PAB-Exclusions) were applied, where relevant and where sufficient data was available, at the level of the bond and/or in relation to the issuer of the bonds which could lead to the exclusion of the bond as an investment.

• Target Fund Assessment

Target funds were eligible if they are aligned with the PAB-Exclusions (starting from 21 May 2025) and, where applicable, the Freedom House Status. The target fund assessment relied on target fund related information acquired from external data sources or was evaluated in relation to the underlying assets of the portfolios of the target funds. Considering the diversity of data vendors and methodologies as well as the target fund portfolio rebalancing, this sub-fund may have been indirectly exposed to certain assets that would be excluded if invested directly.

Sustainability Investment Assessment

Further, for the proportion of sustainable investments, DWS measured the contribution to one or several UN SDGs and/or to other environmental sustainable objectives via its Sustainability Investment Assessment which evaluated potential investments in relation to different criteria to conclude whether an investment could have been considered as sustainable as further detailed in the section “What were the objectives of the sustainable investments that the financial product partially intends to make and how did the sustainable investment contributed to such objectives?”.

The applied ESG investment strategy did not pursue a committed minimum reduction of the scope of the investments.

The assessment of the good governance practices of the investee companies (including assessments related to sound management structures, employee relations, remuneration of staff and tax compliance) was part of the Norm Controversy Assessment which evaluated a company’s behavior within generally accepted international standards and principles of responsible business conduct. Companies with the worst Norm Controversy Assessment of “F” were excluded as an investment.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

How did this financial product perform compared to the reference sustainable benchmark?

This sub-fund had not designated a reference benchmark to determine whether it was aligned with the environmental and social characteristics that it promoted.

Periodic disclosure for financial products referred to in Article 8, paragraph 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

Product name: DWS Invest ESG Euro Bonds (Short)

Legal entity identifier: 54930058ZGYNVVZRI740

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

Yes	No
☐ it made **sustainable investments with an environmental objective:** ___%	☒ It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of 22.89% of sustainable investments.
☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy	☐ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
	☒ with a social objective
☐ It made **sustainable investments with a social objective:** ___%	☐ It promoted E/S characteristics, but did **not make any sustainable investments**

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities.** That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

To what extent were the environmental and/or social characteristics promoted by this financial product met?

This sub-fund promoted environmental and social characteristics related to a general consideration of ESG criteria by excluding, for example, investments in companies with the worst norm-related issues towards international standards, issuers with the worst assessment in terms of environmental, social and governance aspects compared to their peer group and/or investments in companies whose involvement in controversial sectors exceeded predefined revenue thresholds.

Further, this sub-fund promoted a proportion of sustainable investments in accordance with article 2(17) of the regulation on sustainability-related disclosures in the financial services sector (SFDR).

This sub-fund had not designated a reference benchmark for the purpose of attaining the environmental and social characteristics promoted.

No derivatives were used to attain the environmental or social characteristics promoted by the sub-fund.

How did the sustainability indicators perform?

The attainment of the promoted environmental and social characteristics as well as the sustainable investment was assessed via the application of an in-house ESG assessment methodology and ESG specific exclusion thresholds as further described in the section “What actions have been taken to meet the environmental and/or social characteristics during the reference period?”. The methodology applied different assessment approaches that were used as sustainability indicators which were:

• **Norm Controversy Assessment** used as an indicator for a company’s exposure to norm-related issues towards international standards.
Performance: No investments in suboptimal assets

• **ESG Quality Assessment** used as an indicator for comparison of an issuer’s environmental, social and governance aspects in relation to its peer group.
Performance: No investments in suboptimal assets

• **Freedom House Status** used as an indicator for the political and civil liberties of a country.
Performance: No investments in suboptimal assets

• **Exposure to controversial sectors** used as an indicator for a company’s involvement in controversial sectors.
Performance: 0%

• **Exposure to companies subject to the EU Paris-aligned Benchmark exclusion criteria** as set forth in article 12(1) of Commission Delegated Regulation 2020/1818 (PAB-Exclusions).
Performance: No investments in suboptimal assets

• **Sustainability Investment Assessment** used as an indicator to measure the proportion of sustainable investments pursuant to article 2(17) SFDR.
Performance: 22.89%

Please see the section entitled “What actions have been taken to meet the environmental and/or social characteristics during the reference period?” for a description of the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted, including the exclusion criteria, and the assessment methodology for determining whether and to what extent assets met the defined environmental and/or social characteristics (including the turnover thresholds defined for the xclusions). This section contains further information on the sustainability indicators. The values from the DWS front office system are used to calculate the sustainability indicators. This means that there may be minor deviations from the other market values that appear in the annual report, which are derived from the fund accounting system.

…and compared to previous periods?

Attainment of the promoted environmental and social characteristics at portfolio level was measured in the previous years on the basis of the following sustainability indicators:

DWS Invest ESG Euro Bonds (Short)

The disclosure of the sustainability indicators has been revised compared with the prior-year report. The assessment methodology is unchanged. Additional information on the currently valid sustainability indicators is provided in the section entitled “What actions have been taken to meet the environmental and/or social characteristics during the reference period?”.
Information about taking into account the principal adverse impacts on sustainability factors is provided in the section entitled “How did this financial product consider principal adverse impacts on sustainability factors?”

DWS ESG-Assessment Scale

In the following assessment categories, the assets received one of six possible scores, with "A" being the best score and "F" being the worst score.

Criteria	Involvement in controversial sectors *(1)	Involvement in controversial weapons	Norm Assessment *(6)	ESG Quality Assessment	SDG- Assessment	Climat & Transition Risk Assessment
A	Non-involvement	Confirmed non-involvement	Confirmed no issues	True leader in ESG (>= 87.5 DWS ESG score)	True SDG contributor (>= 87.5 SDG score)	True climate leader (>= 87.5 score)
B	Remote involvement	Alleged	Violations of lesser degree	ESG leader (75-87.5 DWS ESG score)	SDG contributor (75-87.5 SDG score)	Climate solution provider(75-87.5 score)
C	0% - 5%	Dual-Purpose *(2)	Violations of lesser degree	ESG upper midfield (50-75 DWS ESG score)	SDG upper midfield (50-75 SDG score)	Low transition risk (50-75 score)
D	5% - 10% (coal: 5% - 10%)	Owning *(3)/ Owned *(4)	Violation of lesser degree	ESG lower midfield (25-50 DWS ESG score)	SDG lower midfield (25-50 SDG score)	Mod. transition risk (25-50 score)
E	10% - 25% (coal: 15% - 25%)	Component Producer *(5)	High severity or re-assessed highest violation *(7)	ESG laggard (12.5-25 DWS ESG score)	SDG obstructer (12.5-25 SDG score)	High transition risk (12.5-25 score)
F	>= 25%	Weapon producer	Highest severity / global compact violation *(8)	True laggard in ESG (0-12.5 DWS ESG score)	Significant SDG obstructer (0-12.5 SDG score)	Excessive transition risk (0-12.5 score)

*(1) Revenue share thresholds as per standard scheme. Sub-Granularity available. Thresholds can be individually set.

*(2) Encompasses e.g.. weapon-carrying systems such as combat aircraft that carry non-controversial weapons as well as controversial ones.

*(3) Owning more than 20% equity.

*(4) Being owned by more than 50% of company involved in grade E or F.

*(5) Single purpose key component.

*(6) Includes ILO controversies as well as corporate governance and product issues.

*(7) In its ongoing assessment, DWS takes into account the violation(s) of international standards – observed via data from ESG data vendors – such as the UN Global Compact, but also possible ESG data vendor errors identified, future expected developments of these violations as well as the willingness of the issuer to engage in dialogue regarding corporate decisions in this regard.

*(8) An F-grade can be considered a reconfirmed violation of the United Nations Global Compact rule framework for corporate behavior.

What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?

Sustainable investments contributed to at least one of the Sustainable Development Goals of the United Nations (UN SDGs) that relate to environmental and/or social objectives, such as good health and well-being or climate action and/or to at least one other environmental objective such as climate change adaption or climate change mitigation (as defined under the EU Taxonomy).

The extent of the contribution to individual sustainable investment objectives varied depending on the actual investments held in the portfolio.

DWS determined the contribution to a sustainable investment objective based on its Sustainability Investment Assessment which used data from one or several data providers, public sources and/or internal assessments. An investment's positive contribution to an environmental and/or social objective was assessed based on the revenues which a company generated from the actual economic activities making such contribution (activity-based approach). Where a positive contribution was determined, the investment was considered sustainable if the issuer passed the Do No significant Harm ("DNSH") assessment and the company followed good governance practices.

The share of sustainable investments in the portfolio as defined in article 2(17) SFDR was therefore calculated in proportion to the economic activities of the issuers that were considered as sustainable (activity-based approach). Notwithstanding the preceding, in the case of use-of-proceeds bonds that were considered as sustainable investment, the value of the entire bond was counted towards the portfolio's share of sustainable investments.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

The sustainable investments in which the sub-fund invested were assessed to ensure they did not cause significant harm to any environmental or social sustainable investment objective. This was achieved by taking into account the indicators for principal adverse impacts on sustainability factors (dependent on relevance) as described below. If a significant harm was identified, the investment could not have been considered sustainable.

How were the indicators for adverse impacts on sustainability factors taken into account?

The Sustainability Investment Assessment systematically integrated the mandatory principal adverse indicators on sustainability factors (dependent on relevance) from Table 1 and relevant indicators from Tables 2 and 3 of Annex I of the Commission Delegated Regulation (EU) 2022/1288 supplementing the SFDR. Taking into account these principal adverse impacts, DWS had established quantitative thresholds and/or qualitative values to assess a significant harm on any of the environmental or social sustainable investment objectives. These values were set based upon various external and internal factors, such as data availability or market developments and may have been adapted going forward.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The alignment of sustainable investments with, amongst others, the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights was evaluated through the Norm Controversy Assessment (as further described below). Companies with the worst Norm Controversy Assessment of “F” were excluded as an investment.

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union Criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU Criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU Criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

How did this financial product consider principal adverse impacts on sustainability factors?

The sub-fund considered the following principal adverse impacts on sustainability factors from Annex I of the Commission Delegated Regulation (EU) 2022/1288 supplementing the SFDR:

- Greenhouse gas (GHG) emissions (no. 1);
- Carbon footprint (no. 2);
- GHG intensity of investee companies (no. 3);
- Exposure to companies active in the fossil fuel sector (no. 4);
- Violations of United Nations Global Compact principles and OECD Guidelines for Multinational Enterprises (no. 10); and
- Exposure to controversial weapons (no. 14).

DWS Invest ESG Euro Bonds (Short)

Indicators	Description	Performance
Principal Adverse Impact		
PAII - 01. GHG emissions	Sum of the current value of investments of company i, divided by the investee company's enterprise value and multiplied by company's cope 1+2+3 GHG emissions.	175668.1 tCO2e
PAII - 02. Carbon Footprint - EUR	The carbon footprint is expressed as tonnes of CO2 emissions per million EUR invested. The CO2 emissions of an issuer are normalised by its enterprise value including cash (EVIC)	423.35 tCO2e / million EUR
PAII - 03. Carbon Intensity	Weighted average carbon intensity scope 1+2+3	692.09 tCO2e / million EUR
PAII - 04. Exposure to companies active in the fossil fuel sector	Share of investments in companies active in the fossil fuel sector	2.52 % of assets
PAII - 10. Violations of UNGC principles and OECD Guidelines for Multinational Enterprises	Share of investments in investee companies that have been involved in violations of the UNGC principles or OECD Guidelines for Multinational Enterprises	0 % of assets
PAII - 14. Exposure to controversial weapons	Share of investments in investee companies involved in the manufacture or selling of controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)	0 % of assets

As of: December 30, 2025

The Principal Adverse Impact Indicators (PAIIs) are calculated on the basis of the data in the DWS back office and front office systems, which are primarily based on the data of external ESG data providers. If there is no data on individual PAIIs for individual securities or their issuers, either because no data is available or the PAII is not applicable to the particular issuer or security, these securities or issuers are not included in the calculation of the PAII. With target fund investments, a look-through of the target fund holdings is performed if appropriate data is available. The calculation method for the individual PAI indicators may change in subsequent reporting periods due to evolving market standards, a change in the treatment of securities of certain types of instruments (such as derivatives) or as a result of regulatory clarifications.
Moreover, improved data availability may have an effect on the reported PAIIs in subsequent reporting periods.
The values from the DWS front office system are used to calculate the PAIIs. This means that there may be minor deviations from the other market values that appear in the annual report, which are derived from the fund accounting system.

What were the top investments of this financial product?

DWS Invest ESG Euro Bonds (Short)

Largest investments	Breakdown by sector according to NACE Codes	in % of average portfolio volume	Breakdown by country

for the period from January 01, 2025, through December 30, 2025

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is:
for the period from January 01, 2025, through December 31, 2025

What was the proportion of sustainability-related investments?

The proportion of sustainability-related investments as of the reporting date was 98.34% of portfolio assets.
Proportion of sustainability-related investments for the previous years:
30/12/2024: 97.37%
29/12/2023: 91.91%
30/12/2022: 99.50%

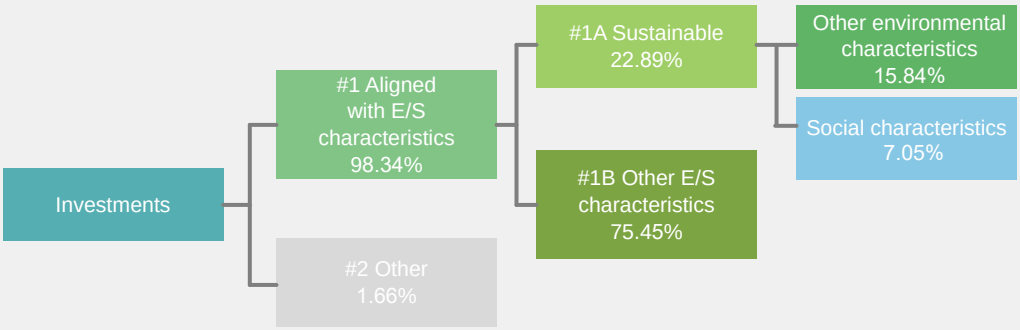
Asset allocation describes the share of investments in specific assets.

What was the asset allocation?

This sub-fund invested 98.34% of its net assets in investments that were aligned with the promoted environmental and social characteristics (#1 Aligned with E/S characteristics). Within this category, 22.89% of the sub-fund's net assets qualified as sustainable investments (#1A Sustainable). Thereof the share of sustainable investments with an environmental objective that was not compliant with the EU Taxonomy was 15.84% of the sub-fund's net assets and the share of socially sustainable investments was 7.05% of the sub-fund's net assets. The share of sustainable investments with an environmental objective that was not compliant with the EU Taxonomy and of socially sustainable investments depended on the market situation and the investable investment universe.

1.66% of the sub-fund's net assets have been invested in assets which were either out-of-scope of the ESG assessment methodology or for which ESG data coverage was incomplete (#2 Other) as further detailed in the section "What investments were included under "#2 Other", what was their purpose and were there any minimum environmental or social safeguards?".

A more detailed description of the specific asset allocation of this sub-fund can be found in the Special Section of the Sales Prospectus.



#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:
- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

In which economic sectors were the investments made?

DWS Invest ESG Euro Bonds (Short)

NACE-Code	Breakdown by sector according to NACE Codes	in % of portfolio volume
C	Manufacturing	2.1 %
D	Electricity, gas, steam and air conditioning supply	2.1 %
F	Construction	0.8 %
G	Wholesale and retail trade; repair of motor vehicles and motorcycles	0.7 %
H	Transporting and storage	0.4 %
J	Information and communication	0.8 %
K	Financial and insurance activities	39.1 %
M	Professional, scientific and technical activities	2.2 %
O	Public administration and defence; compulsory social security	39.6 %
NA	Other	12.2 %
Exposure to companies active in the fossil fuel sector		2.5 %

As of: December 30, 2025

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The sub-fund did not commit to invest a proportion of sustainable investments with an environmental objective aligned with the EU Taxonomy. Therefore, the promoted minimum percentage of environmentally sustainable investments aligned with the EU Taxonomy was 0% of the sub-fund's net assets. However, certain investments' underlying economic activities may have been aligned with the EU Taxonomy.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are economic activities for yet low-carbon alternatives are not yet available and that have greenhouse gas emission levels corresponding to the best performance.

Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy[1]?

☐ Yes:

☐ In fossil gas ☐ In nuclear energy

☒ No

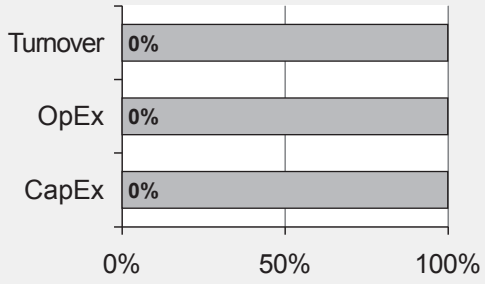
The sub-fund did not take into account the Taxonomy-alignment of companies active in the fossil gas and/or nuclear energy sectors.

[1] Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do no significant harm to any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Taxonomy-aligned activities are expressed as a share of:
- turnover reflecting the share of revenue from green activities of investee companies.
- capital expenditure (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- operational expenditure (OpEx) reflecting the green operational activities of investee companies.

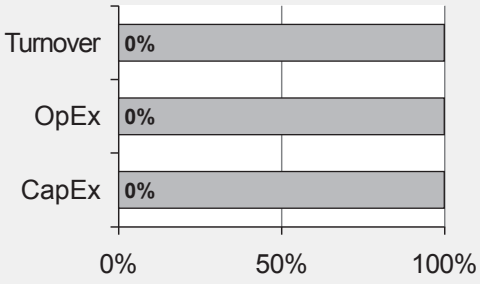
The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy-alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy-alignment only in relation to the investments of the financial product other than sovereign bonds.

1. Taxonomy-alignment of investments **including sovereign bonds***



Taxonomy-aligned: Fossil gas	0.00%
Taxonomy-aligned: Nuclear	0.00%
Taxonomy-aligned (no gas and nuclear)	0.00%
Taxonomy-aligned	0.00%
Non Taxonomy-aligned	100.00%

2. Taxonomy-alignment of investments **excluding sovereign bonds***



Taxonomy-aligned: Fossil gas	0.00%
Taxonomy-aligned: Nuclear	0.00%
Taxonomy-aligned (no gas and nuclear)	0.00%
Taxonomy-aligned	0.00%
Non Taxonomy-aligned	100.00%

This graph represents 100% of the total investments.

**For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures*

What was the share of investments made in transitional and enabling activities?

The sub-fund was not committed to a share of investments in transitional or enabling activities.

How did the percentage of investments that are aligned with the EU Taxonomy compare with previous reference periods?

The promoted proportion of environmentally sustainable investments in accordance with Regulation (EU) 2020/852 (Taxonomy Regulation) was 0% of the fund's assets in the current as well as previous reference periods. It may, however, have been the case that some sustainable investments were nevertheless aligned with an environmental objective of the Taxonomy Regulation.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the Regulation (EU) 2020/852.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The share of sustainable investments with an environmental objective that were not aligned with the EU Taxonomy was 15.84% of the sub-fund's net assets.

Shares of sustainable investments in previous reporting periods:

reporting period	sustainable investments (total)	with environmental objective	socially sustainable
30/12/2024	22.34%	16.55%	5.79%
29/12/2023	15.97%	12.59%	3.38%
30/12/2022	14.22%	--	--

What was the share of socially sustainable investments?

The share of socially sustainable investments was 7.05% of the sub-fund’s net

assets. Shares of sustainable investments in previous reporting periods:

reporting period	sustainable investments (total)	with environmental objective	socially sustainable
30/12/2024	22.34%	16.55%	5.79%
29/12/2023	15.97%	12.59%	3.38%
30/12/2022	14.22%	--	--

What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?

98.34% of the sub-fund’s net assets were aligned with the promoted environmental and social characteristics (#1 Aligned with E/S characteristics). 1.66% of the sub-fund’s net assets have been invested in assets which were either out-of-scope of the ESG assessment methodology or for which ESG data coverage was incomplete (#2 Other). Full ESG data coverage was required for the assessment of direct investments in companies in relation to good governance practices and the PAB-Exclusions.

Assets under “#2 Other” could include all asset classes as foreseen in the specific investment policy, such as sight deposits with credit institutions and derivatives. These assets could have been used by the portfolio management for performance, risk diversification, liquidity and hedging purposes.

Minimum environmental or social safeguards were not or only partially considered for the sub-fund’s investments falling within “#2 Other”.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

This sub-fund pursued a strategy based on bonds as main investment strategy. The sub-fund may acquired interest-bearing securities, convertible bonds and warrant-linked bonds, participation and dividend-right certificates, equities and equity warrants. At least 70% of the sub-fund's assets were invested in interest-bearing securities denominated in Euros. At least 70% of the sub-fund's assets were traded on exchanges or on other regulated markets in a member country of the Organisation for Economic Co-operation and Development (OECD) that operated regularly and was recognized and open to the public. Furthermore, at least 70% of the sub-fund's assets with the securities having maturities ranging between zero and three years. No more than 25% of the sub-fund's assets may have been invested in convertible bonds and warrant-linked bonds, no more than 10% may have been invested in participation and dividend-right certificates, equities and equity warrants.

Further details regarding the main investment strategy were specified in the Special Section of the Sales Prospectus.

98.34% of the sub-fund's net assets were allocated to investments that met the promoted environmental and social characteristics as described in the following sections. The alignment of the portfolio with the binding elements of the investment strategy used to attain the promoted environmental and social characteristics as well as the PAB-Exclusions was continuously controlled via the sub-fund's investment guidelines monitoring.

ESG assessment methodology

The sub-fund aimed to achieve the promoted environmental and social characteristics by assessing potential assets via an in-house ESG assessment methodology, regardless of their economic prospects for success, and by applying exclusion criteria based on this assessment.

The ESG assessment methodology was using a proprietary software tool which sourced data from one or several ESG data providers, public sources and/or internal assessments to derive overall assessments. The methodology applied to derive such overall assessments could have been based on different methods, such as prioritizing one data vendor, worst-of or averaging approach. Internal assessments may take into account factors such as an issuer's future expected ESG developments, plausibility of data with regard to past or future events, the willingness to engage in dialogue on ESG matters and/or ESG-related decisions of a company. Further, internal ESG assessments for investee companies may have considered the relevance of the exclusion criteria for the market sector of the investee company.

The proprietary software tool used, amongst others, the approaches described below to evaluate the adherence to the promoted ESG characteristics and whether investee companies followed good governance practices. The assessment approaches included, for example, exclusions related to revenues generated from controversial sectors or the exposure to such controversial sectors. In some of the assessment approaches, issuers received one of six possible assessments, with "A" representing the best and "F" the worst assessment. If an issuer was excluded based on one assessment approach, the sub-fund was prohibited from investing in that issuer.

Depending on the investable universe, the portfolio allocation and the exposure to certain sectors, the assessment approaches described below have been more or less relevant which was reflected in the number of issuers being actually excluded.

• PAB-Exclusions

In accordance with the applicable regulations, the sub-fund applied the PAB-Exclusions and excluded all of the following companies:

a. companies involved in controversial weapons (manufacturing or selling of anti-personnel mines, cluster munitions, chemical weapons and biological weapons) assessed as part of the assessment of the "Exposure to controversial weapons" as described below;
b. companies involved in the cultivation and production of tobacco;
c. companies that were found in violation of the United Nations Global Compact principles or the OECD Guidelines for Multinational Enterprises (assessed as part of the "Norm Controversy Assessment" as described below);
d. companies that derived 1% or more of their revenues from exploration, mining, extraction, distribution or refining of hard coal and lignite;
e. companies that derived 10% or more of their revenues from the exploration, extraction, distribution or refining of oil fuels;
f. companies that derived 50% or more of their revenues from the exploration, extraction, manufacturing or distribution of gaseous fuels;

g. companies that derived 50% or more of their revenues from electricity generation with a GHG intensity of more than 100 g CO2 e/kWh.

The PAB-Exclusions were, in particular, not applied for sight deposits with credit institutions and certain derivative instruments. The extent of the application of the PAB-Exclusions in relation to use of proceeds bonds was described below under the section “Use of proceeds bond Assessment”.

• Norm Controversy Assessment

The Norm Controversy Assessment evaluated the behaviour of companies in relation to generally accepted international standards and principles of responsible business conduct within, amongst others, the framework of the principles of the United Nations Global Compact, the United Nations Guiding Principles, the standards of the International Labour Organization and the OECD Guidelines for Multinational Enterprises. Examples of topics covered within these standards and principles included, but were not limited to, human rights violations, violations of workers' rights, child or forced labour, negative environmental impacts and business ethics. The Norm Controversy Assessment evaluated reported violations of the aforementioned international standards. Companies with the worst Norm Controversy Assessment of “F” were excluded as an investment.

• ESG Quality Assessment

The ESG Quality Assessment distinguished between investments in companies and investments in sovereign issuers.

For companies, the ESG Quality Assessment allowed for a peer group comparison based on an overall ESG assessment, for example, concerning the handling of environmental changes, product safety, employee management or corporate ethics. The peer group for companies was made up from the same industry sector. Companies that scored higher in this comparison received a better assessment, while Companies that scored lower in the comparison received a worse assessment. Companies with the worst assessment of “F” were excluded as an investment.

For sovereign issuers, the ESG Quality Assessment assessed countries based on a peer group comparison considering environmental and social criteria as well as indicators for good governance, including, for example, the political system, the existence of institutions and the rule of law. Sovereign issuers with the worst assessment of “F” were excluded as an investment.

• Freedom House Status

Freedom House is an international non-governmental organization that classifies countries by their degree of political and civil liberties. Based on the Freedom House Status, countries that were classified as “not free” were excluded as an investment.

• Exposure to controversial sectors

Companies that were involved in certain business areas and business activities in controversial areas (“controversial sectors”) were excluded according to their share of total revenues generated in such controversial sectors as follows:

a. . Manufacturing of products and/or provision of services in the defence industry: 5% or more
b. . Manufacturing and/or distribution of civil handguns or ammunition: 5% or more
c. . Manufacturing of products in and/or provision of services for the gambling industry: 5% or more
d. . Manufacturing of adult entertainment: 5% or more
e. . Manufacturing of palm oil: 5% or more
f. . Nuclear power generation and/or uranium mining and/or uranium enrichment: 5% or more
g. . Unconventional extraction of crude oil and/or natural gas (including oil sand, oil shale/shale gas arctic drilling): more than 0%
h. . Companies that derived 25% or more from thermal coal mining and thermal coal-based pow generation as well as companies with thermal coal expansion plans, such as additional expansion of coal mining, coal production or coal usage. Companies with thermal coal expansion plans were excluded based on an internal identification methodology.

Further, companies involved in the manufacturing or selling of nuclear weapons or key components of nuclear weapons were excluded and the shareholdings within a group structure may be taken into consideration.

• **Exposure to controversial weapons**

Companies were excluded if they are identified as being involved in the manufacturing or selling of controversial weapons or key components of controversial weapons or other related specific activities (anti-personnel mines, cluster munitions, chemical and biological weapons, blinding laser weapons, weapons with non-detectable fragments, depleted uranium weapons/munitions and/or incendiary weapons using white phosphorus). In addition, the shareholdings within a group structure may be taken into consideration for the exclusions.

• Use of Proceeds Bond Assessment

This assessment was specific to the nature of this instrument and an investment in use of proceeds bonds was permitted only if the following criteria were met. Firstly, all use of proceeds bonds were checked for compliance with the Climate Bonds Standards, similar industry standards for green bonds, social bonds or sustainability bonds (such as ICMA Principles) or the EU Green Bond Standard or whether bonds have been subject to an independent review.

Secondly, certain exclusion criteria were applied, where relevant and where sufficient data was available, at the level of the bond and/or in relation to the issuer of the bonds which could have led to the exclusion of the bond as an investment.

In particular, investments in use of proceeds bonds were prohibited based on the following issuer criteria:

a. Companies referred to under a) to c) of the PAB-Exclusions;
b. Companies with identified thermal coal expansion plans as referred to above;
c. Companies that derived more than 0% of their revenues from unconventional extraction of crude oil and/or natural gas (including oil sand, oil shale/shale gas, arctic drilling);
d. Companies that derived 5% or more of their revenues from nuclear power generation and/or uranium mining and/or uranium enrichment;
e. Sovereign issuers classified as “not free” by Freedom House.

Where no sufficient data was available for the evaluation of the PAB-Exclusions at use of proceeds bond level, the issuer in addition was evaluated based d) to g) of the above described PAB-Exclusions which may have led to the exclusion of the use of proceeds bond.

• Target Fund Assessment

Target funds were eligible if they were aligned with the PAB-Exclusions (starting from 21 May 2025) and, where applicable, the Freedom House Status. The target fund assessment relied on target fund related information acquired from external data sources or was evaluated in relation to the underlying assets of the portfolios of the target funds. Considering the diversity of data vendors and methodologies as well as the target fund portfolio rebalancing, this sub-fund have been indirectly exposed to certain assets that would have been excluded if invested directly.

Sustainability Investment Assessment

Further, for the proportion of sustainable investments, DWS measured the contribution to one or several UN SDGs and/or to other environmental sustainable objectives via its Sustainability Investment Assessment which evaluated potential investments in relation to different criteria to conclude whether an investment could have been considered as sustainable as further detailed in the section “What were the objectives of the sustainable investments that the financial product partially intends to make and how did the sustainable investment contributed to such objectives?”.

The applied ESG investment strategy did not pursue a committed minimum reduction of the scope of the investments.

The assessment of the good governance practices of the investee companies (including assessments related to sound management structures, employee relations, remuneration of staff and tax compliance) was part of the Norm Controversy Assessment which evaluated a company’s behavior within generally accepted international standards and principles of responsible business conduct. Companies with the worst Norm Controversy Assessment of “F” were excluded as an investment.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

How did this financial product perform compared to the reference sustainable benchmark?

This sub-fund had not designated a reference benchmark to determine whether it was aligned with the environmental and social characteristics that it promoted.

Periodic disclosure for financial products referred to in Article 8, paragraph 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

Product name: DWS Invest ESG Euro Corporate Bonds

Legal entity identifier: 549300N28JWBUL3R7I24

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

Yes	No
☐ it made **sustainable investments with an environmental objective:** ___%	☒ It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of 31.10% of sustainable investments.
☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy	☐ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
	☒ with a social objective
☐ It made **sustainable investments with a social objective:** ___%	☐ It promoted E/S characteristics, but did **not make any sustainable investments**

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities.** That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

To what extent were the environmental and/or social characteristics promoted by this financial product met?

This sub-fund promoted environmental and social characteristics related to a general consideration of ESG criteria by excluding, for example, investments in companies with the worst norm-related issues towards international standards, issuers with the worst assessment in terms of environmental, social and governance aspects compared to their peer group and/or investments in companies whose involvement in controversial sectors exceeded predefined revenue thresholds.

Further, this sub-fund promoted a proportion of sustainable investments in accordance with article 2(17) of the regulation on sustainability-related disclosures in the financial services sector (SFDR).

This sub-fund had not designated a reference benchmark for the purpose of attaining the environmental and social characteristics promoted.

No derivatives were used to attain the environmental or social characteristics promoted by the sub-fund.

How did the sustainability indicators perform?

The attainment of the promoted environmental and social characteristics as well as the sustainable investment was assessed via the application of an in-house ESG assessment methodology and ESG specific exclusion thresholds as further described in the section “What actions have been taken to meet the environmental and/or social characteristics during the reference period?”. The methodology applied different assessment approaches that were used as sustainability indicators which were:

• **Norm Controversy Assessment** used as an indicator for a company’s exposure to norm-related issues towards international standards.
Performance: No investments in suboptimal assets

• **ESG Quality Assessment** used as an indicator for comparison of an issuer’s environmental, social and governance aspects in relation to its peer group.
Performance: No investments in suboptimal assets

• **Freedom House Status** used as an indicator for the political and civil liberties of a country.
Performance: No investments in suboptimal assets

• **Exposure to controversial sectors** used as an indicator for a company’s involvement in controversial sectors.
Performance: 0%

• **Exposure to companies subject to the EU Paris-aligned Benchmark exclusion criteria** as set forth in article 12(1) of Commission Delegated Regulation 2020/1818 (PAB-Exclusions).
Performance: 0%

• **Sustainability Investment Assessment** used as an indicator to measure the proportion of sustainable investments pursuant to article 2(17) SFDR.
Performance: 31.10%

Note: The ESG-specific exclusion criteria were breached on April 25, 2025, due to investments in VATTENFALL AB RegS (XS2619829869), ELECTRICITE DE FRANCE SA (FR001400QR88), and ELECTRICITE DE FRANCE SA (FR001400SMT6) amounting to 0.9% of the sub-fund's net assets. This was due to a change in the investment guidelines. The breach of the investment limits was rectified by the sale of the securities on June 12, 2025.

Please see the section entitled “What actions have been taken to meet the environmental and/or social characteristics during the reference period?” for a description of the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted, including the exclusion criteria, and the assessment methodology for determining whether and to what extent assets met the defined environmental and/or social characteristics (including the turnover thresholds defined for the xclusions). This section contains further information on the sustainability indicators. The values from the DWS front office system are used to calculate the sustainability indicators. This means that there may be minor deviations from the other market values that appear in the annual report, which are derived from the fund accounting system.

…and compared to previous periods?

Attainment of the promoted environmental and social characteristics at portfolio level was measured in the previous years on the basis of the following sustainability indicators:

DWS Invest ESG Euro Corporate Bonds

Indicators Performance	30/12/2024	29/12/2023	30/12/2022

The disclosure of the sustainability indicators has been revised compared with the prior-year report. The assessment methodology is unchanged. Additional information on the currently valid sustainability indicators is provided in the section entitled “What actions have been taken to meet the environmental and/or social characteristics during the reference period?”.
Information about taking into account the principal adverse impacts on sustainability factors is provided in the section entitled “How did this financial product consider principal adverse impacts on sustainability factors?”

DWS ESG-Assessment Scale

In the following assessment categories, the assets received one of six possible scores, with "A" being the best score and "F" being the worst score.

Criteria	Involvement in controversial sectors *(1)	Involvement in controversial weapons	Norm Assessment *(6)	ESG Quality Assessment	SDG- Assessment	Climat & Transition Risk Assessment
A	Non-involvement	Confirmed non-involvement	Confirmed no issues	True leader in ESG (>= 87.5 DWS ESG score)	True SDG contributor (>= 87.5 SDG score)	True climate leader (>= 87.5 score)
B	Remote involvement	Alleged	Violations of lesser degree	ESG leader (75-87.5 DWS ESG score)	SDG contributor (75-87.5 SDG score)	Climate solution provider(75-87.5 score)
C	0% - 5%	Dual-Purpose *(2)	Violations of lesser degree	ESG upper midfield (50-75 DWS ESG score)	SDG upper midfield (50-75 SDG score)	Low transition risk (50-75 score)
D	5% - 10% (coal: 5% - 10%)	Owning *(3)/ Owned *(4)	Violation of lesser degree	ESG lower midfield (25-50 DWS ESG score)	SDG lower midfield (25-50 SDG score)	Mod. transition risk (25-50 score)
E	10% - 25% (coal: 15% - 25%)	Component Producer *(5)	High severity or re-assessed highest violation *(7)	ESG laggard (12.5-25 DWS ESG score)	SDG obstructer (12.5-25 SDG score)	High transition risk (12.5-25 score)
F	>= 25%	Weapon producer	Highest severity / global compact violation *(8)	True laggard in ESG (0-12.5 DWS ESG score)	Significant SDG obstructer (0-12.5 SDG score)	Excessive transition risk (0-12.5 score)

*(1) Revenue share thresholds as per standard scheme. Sub-Granularity available. Thresholds can be individually set.

*(2) Encompasses e.g.. weapon-carrying systems such as combat aircraft that carry non-controversial weapons as well as controversial ones.

*(3) Owning more than 20% equity.

*(4) Being owned by more than 50% of company involved in grade E or F.

*(5) Single purpose key component.

*(6) Includes ILO controversies as well as corporate governance and product issues.

*(7) In its ongoing assessment, DWS takes into account the violation(s) of international standards – observed via data from ESG data vendors – such as the UN Global Compact, but also possible ESG data vendor errors identified, future expected developments of these violations as well as the willingness of the issuer to engage in dialogue regarding corporate decisions in this regard.

*(8) An F-grade can be considered a reconfirmed violation of the United Nations Global Compact rule framework for corporate behavior.

What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?

Sustainable investments contributed (i) to at least one of the Sustainable Development Goals of the United Nations (UN SDGs) that relate to environmental and/or social objectives, such as no poverty, zero hunger, good health and well-being, quality education, gender equality, clean water and sanitation, affordable and clean energy, decent work and economic growth, reduced inequalities, sustainable cities and communities, responsible consumption and production, climate action, life below water and/or life on land and/or (ii) to at least one other environmental objective such as climate change adaption, climate change mitigation, sustainable use and protection of water and marine recources, transition to a circular economy, pollution prevention and control and/or protection and restoration of biodiversity and ecosystems (as defined under the EU Taxonomy).

The extent of the contribution to individual sustainable investment objectives varied depending on the actual investments held in the portfolio.

DWS determined the contribution to a sustainable investment objective based on its Sustainability Investment Assessment which used data from one or several data providers, public sources and/or internal assessments. An investment's positive contribution to an environmental and/or social objective was assessed based on the revenues which a company generated from the actual economic activities making such contribution (activity-based approach). Where a positive contribution was determined, the investment was considered sustainable if the issuer passed the Do No significant Harm ("DNSH") assessment and the company followed good governance practices.

The share of sustainable investments in the portfolio as defined in article 2(17) SFDR was therefore calculated in proportion to the economic activities of the issuers that were considered as sustainable (activity-based approach). Notwithstanding the preceding, in the case of use-of-proceeds bonds that were considered as sustainable investment, the value of the entire bond was counted towards the portfolio's share of sustainable investments.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

The sustainable investments in which the sub-fund invested were assessed to ensure they did not cause significant harm to any environmental or social sustainable investment objective. This was achieved by taking into account the indicators for principal adverse impacts on sustainability factors (dependent on relevance) as described below. If a significant harm was identified, the investment could not have been considered sustainable.

How were the indicators for adverse impacts on sustainability factors taken into account?

The Sustainability Investment Assessment systematically integrated the mandatory principal adverse indicators on sustainability factors (dependent on relevance) from Table 1 and relevant indicators from Tables 2 and 3 of Annex I of the Commission Delegated Regulation (EU) 2022/1288 supplementing the SFDR. Taking into account these principal adverse impacts, DWS had established quantitative thresholds and/or qualitative values to assess a significant harm on any of the environmental or social sustainable investment objectives. These values were set based upon various external and internal factors, such as data availability or market developments and may have been adapted going forward.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The alignment of sustainable investments with, amongst others, the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights was evaluated through the Norm Controversy Assessment (as further described below). Companies with the worst Norm Controversy Assessment of “F” were excluded as an investment.

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union Criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU Criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU Criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

How did this financial product consider principal adverse impacts on sustainability factors?

The sub-fund considered the following principal adverse impacts on sustainability factors from Annex I of the Commission Delegated Regulation (EU) 2022/1288 supplementing the SFDR:

• Greenhouse gas (GHG) emissions (no. 1);
• Carbon footprint (no. 2);
• GHG intensity of investee companies (no. 3);
• Exposure to companies active in the fossil fuel sector (no. 4);
• Violations of United Nations Global Compact principles and OECD Guidelines for Multinational Enterprises (no. 10); and
• Exposure to controversial weapons (no. 14).

DWS Invest ESG Euro Corporate Bonds

Indicators	Description	Performance
Principal Adverse Impact		
PAII - 01. GHG emissions	Sum of the current value of investments of company i, divided by the investee company's enterprise value and multiplied by company's cope 1+2+3 GHG emissions.	80582.3 tCO2e
PAII - 02. Carbon Footprint - EUR	The carbon footprint is expressed as tonnes of CO2 emissions per million EUR invested. The CO2 emissions of an issuer are normalised by its enterprise value including cash (EVIC)	327.49 tCO2e / million EUR
PAII - 03. Carbon Intensity	Weighted average carbon intensity scope 1+2+3 Share of investments in companies active in the fossil fuel sector	583.29 tCO2e / million EUR
PAII - 04. Exposure to companies active in the fossil fuel sector	Share of investments in investee companies that have been involved in violations of the UNGC principles or OECD Guidelines for Multinational Enterprises	6.32 % of assets
PAII - 10. Violations of UNGC principles and OECD Guidelines for Multinational Enterprises	Share of investments in investee companies involved in the manufacture or selling of controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)	0 % of assets
PAII - 14. Exposure to controversial weapons		0 % of assets

As of: December 30, 2025

The Principal Adverse Impact Indicators (PAIIs) are calculated on the basis of the data in the DWS back office and front office systems, which are primarily based on the data of external ESG data providers. If there is no data on individual PAIIs for individual securities or their issuers, either because no data is available or the PAII is not applicable to the particular issuer or security, these securities or issuers are not included in the calculation of the PAII. With target fund investments, a look-through of the target fund holdings is performed if appropriate data is available. The calculation method for the individual PAI indicators may change in subsequent reporting periods due to evolving market standards, a change in the treatment of securities of certain types of instruments (such as derivatives) or as a result of regulatory clarifications.
Moreover, improved data availability may have an effect on the reported PAIIs in subsequent reporting periods.
The values from the DWS front office system are used to calculate the PAIIs. This means that there may be minor deviations from the other market values that appear in the annual report, which are derived from the fund accounting system.

What were the top investments of this financial product?

for the period from January 01, 2025, through December 30, 2025

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is:
for the period from January 01, 2025, through December 31, 2025

What was the proportion of sustainability-related investments?

The proportion of sustainability-related investments as of the reporting date was 93.77% of portfolio assets.
Proportion of sustainability-related investments for the previous years:
30/12/2024: 89.23 %
29/12/2023: 90.21 %
30/12/2022: 99.35 %

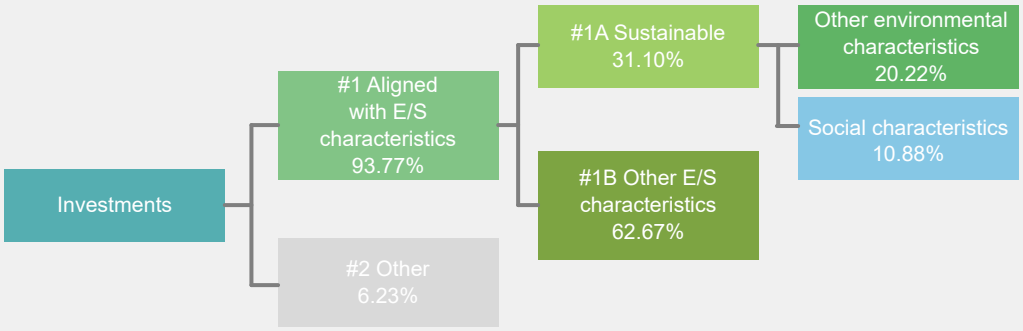
Asset allocation describes the share of investments in specific assets.

What was the asset allocation?

This sub-fund invested 93.77% of its net assets in investments that were aligned with the promoted environmental and social characteristics (#1 Aligned with E/S characteristics). Within this category, 31.10% of the sub-fund's net assets qualified as sustainable investments (#1A Sustainable). Thereof the share of sustainable investments with an environmental objective that was not compliant with the EU Taxonomy was 20.22% of the sub-fund's net assets and the share of socially sustainable investments was 10.88% of the sub-fund's net assets. The share of sustainable investments with an environmental objective that was not compliant with the EU Taxonomy and of socially sustainable investments depended on the market situation and the investable investment universe.

6.23% of the sub-fund's net assets have been invested in assets which were either out-of-scope of the ESG assessment methodology or for which ESG data coverage was incomplete (#2 Other) as further detailed in the section "What investments were included under "#2 Other", what was their purpose and were there any minimum environmental or social safeguards?".

A more detailed description of the specific asset allocation of this sub-fund can be found in the Special Section of the Sales Prospectus.



#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:
- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

In which economic sectors were the investments made?

DWS Invest ESG Euro Corporate Bonds

NACE-Code	Breakdown by sector according to NACE Codes	in % of portfolio volume
C	Manufacturing	5.3 %
D	Electricity, gas, steam and air conditioning supply	2.9 %
F	Construction	0.5 %
G	Wholesale and retail trade; repair of motor vehicles and motorcycles	0.4 %
H	Transporting and storage	3.8 %
J	Information and communication	8.3 %
K	Financial and insurance activities	53.9 %
L	Real estate activities	0.7 %
M	Professional, scientific and technical activities	11.4 %
N	Administrative and support service activities	0.6 %
NA	Other	12.2 %
Exposure to companies active in the fossil fuel sector		6.3 %

As of: December 30, 2025

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The sub-fund did not commit to invest a proportion of sustainable investments with an environmental objective aligned with the EU Taxonomy. Therefore, the promoted minimum percentage of environmentally sustainable investments aligned with the EU Taxonomy was 0% of the sub-fund's net assets. However, certain investments' underlying economic activities may have been aligned with the EU Taxonomy.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are economic activities for yet low-carbon alternatives are not yet available and that have greenhouse gas emission levels corresponding to the best performance.

Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy[1]?

☐ Yes:

☐ In fossil gas ☐ In nuclear energy

☒ No

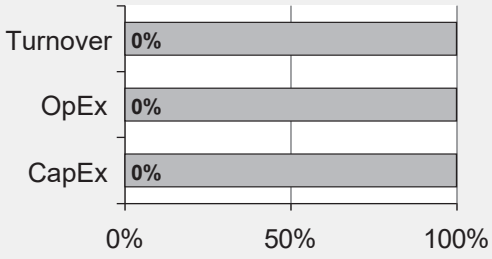
The sub-fund did not take into account the Taxonomy-alignment of companies active in the fossil gas and/or nuclear energy sectors.

[1] Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do no significant harm to any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Taxonomy-aligned activities are expressed as a share of:
- turnover reflecting the share of revenue from green activities of investee companies.
- capital expenditure (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- operational expenditure (OpEx) reflecting the green operational activities of investee companies.

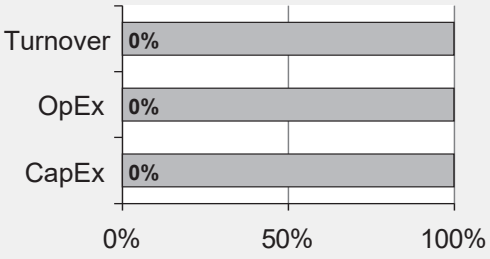
The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy-alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy-alignment only in relation to the investments of the financial product other than sovereign bonds.

1. Taxonomy-alignment of investments **including sovereign bonds***



Taxonomy-aligned: Fossil gas	0.00%
Taxonomy-aligned: Nuclear	0.00%
Taxonomy-aligned (no gas and nuclear)	0.00%
Taxonomy-aligned	0.00%
Non Taxonomy-aligned	100.00%

2. Taxonomy-alignment of investments **excluding sovereign bonds***



Taxonomy-aligned: Fossil gas	0.00%
Taxonomy-aligned: Nuclear	0.00%
Taxonomy-aligned (no gas and nuclear)	0.00%
Taxonomy-aligned	0.00%
Non Taxonomy-aligned	100.00%

This graph represents 100% of the total investments.

**For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures*

What was the share of investments made in transitional and enabling activities?

The sub-fund was not committed to a share of investments in transitional or enabling activities.

How did the percentage of investments that are aligned with the EU Taxonomy compare with previous reference periods?

The promoted proportion of environmentally sustainable investments in accordance with Regulation (EU) 2020/852 (Taxonomy Regulation) was 0% of the fund's assets in the current as well as previous reference periods. It may, however, have been the case that some sustainable investments were nevertheless aligned with an environmental objective of the Taxonomy Regulation.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the Regulation (EU) 2020/852.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The share of sustainable investments with an environmental objective that were not aligned with the EU Taxonomy was 20.22% of the sub-fund's net assets.

Shares of sustainable investments in previous reporting periods:

reporting period	sustainable investments (total)	with environmental objective	socially sustainable
30/12/2024	29.07%	19.66%	9.41%
29/12/2023	23.53%	16.48%	7.05%
30/12/2022	26.29%	--	--

What was the share of socially sustainable investments?

The share of socially sustainable investments was 10.88% of the sub-fund’s net assets. Shares of sustainable investments in previous reporting periods:

reporting period	sustainable investments (total)	with environmental objective	socially sustainable
30/12/2024	29.07%	19.66%	9.41%
29/12/2023	23.53%	16.48%	7.05%
30/12/2022	26.29%	--	--

What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?

93.77% of the sub-fund’s net assets were aligned with the promoted environmental and social characteristics (#1 Aligned with E/S characteristics). 6.23% of the sub-fund’s net assets have been invested in assets which were either out-of-scope of the ESG assessment methodology or for which ESG data coverage was incomplete (#2 Other). Full ESG data coverage was required for the assessment of direct investments in companies in relation to good governance practices and the PAB-Exclusions.

Assets under “#2 Other” could include all asset classes as foreseen in the specific investment policy, such as sight deposits with credit institutions and derivatives. These assets could have been used by the portfolio management for performance, risk diversification, liquidity and hedging purposes.

Minimum environmental or social safeguards were not or only partially considered for the sub-fund’s investments falling within “#2 Other”.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

This sub-fund pursued a strategy based on bonds as main investment strategy. The sub-fund may have acquired euro-denominated fixed and/or variable interest-bearing securities, convertible bonds and warrant-linked bonds, participation and dividend-right certificates, equities and equity warrants. At least 70% of the sub-fund's assets were invested in corporate bonds denominated in Euros that offered returns higher than those of comparable government bonds; investments are deliberately focused almost exclusively on issuers whose credit standing was considered by the market to be relatively good but not first-rate (investment-grade bonds). No more than 25% of the sub-fund's assets may have been invested in convertible bonds and warrant-linked bonds; no more than 10% may have been invested in participation and dividend-right certificates, equities and equity warrants. The sub-fund's investments in asset backed securities and mortgage backed securities hould have been limited to 20% of the sub-fund's net asset value.

Further details regarding the main investment strategy are specified in the Special Section of the Sales Prospectus.

93.77% of the sub-fund's net assets were allocated to investments that met the promoted environmental and social characteristics as described in the following sections. The alignment of the portfolio with the binding elements of the investment strategy used to attain the promoted environmental and social characteristics as well as the PAB-Exclusions was continuously controlled via the sub-fund's investment guidelines monitoring.

ESG assessment methodology

The sub-fund aimed to achieve the promoted environmental and social characteristics by assessing potential assets via an in-house ESG assessment methodology, regardless of their economic prospects for success, and by applying exclusion criteria based on this assessment.

The ESG assessment methodology was using a proprietary software tool which sourced data from one or several ESG data providers, public sources and/or internal assessments to derive overall assessments. The methodology applied to derive such overall assessments could have been based on different methods, such as prioritizing one data vendor, worst-of or averaging approach. Internal assessments may take into account factors such as an issuer's future expected ESG developments, plausibility of data with regard to past or future events, the willingness to engage in dialogue on ESG matters and/or ESG-related decisions of a company. Further, internal ESG assessments for investee companies may have considered the relevance of the exclusion criteria for the market sector of the investee company.

The proprietary software tool used, amongst others, the approaches described below to evaluate the adherence to the promoted ESG characteristics and whether investee companies followed good governance practices. The assessment approaches included, for example, exclusions related to revenues generated from controversial sectors or the exposure to such controversial sectors. In some of the assessment approaches, issuers received one of six possible assessments, with "A" representing the best and "F" the worst assessment. If an issuer was excluded based on one assessment approach, the sub-fund was prohibited from investing in that issuer.

Depending on the investable universe, the portfolio allocation and the exposure to certain sectors, the assessment approaches described below have been more or less relevant which was reflected in the number of issuers being actually excluded.

• **PAB-Exclusions**

In accordance with the applicable regulations, the sub-fund applied the PAB-Exclusions and excluded all of the following companies:

a. companies involved in controversial weapons (manufacturing or selling of anti-personnel mines, cluster munitions, chemical weapons and biological weapons) assessed as part of the assessment of the "Exposure to controversial weapons" as described below;
b. companies involved in the cultivation and production of tobacco;
c. companies that were found in violation of the United Nations Global Compact principles or the OECD Guidelines for Multinational Enterprises (assessed as part of the "Norm Controversy Assessment" as described below);
d. companies that derived 1% or more of their revenues from exploration, mining, extraction, distribution or refining of hard coal and lignite;
e. companies that derived 10% or more of their revenues from the exploration, extraction, distribution or refining of oil fuels;
f. companies that derived 50% or more of their revenues from the exploration, extraction,

manufacturing or distribution of gaseous fuels;
g. companies that derived 50% or more of their revenues from electricity generation with a GHG intensity of more than 100 g CO2 e/kWh.

The PAB-Exclusions were, in particular, not applied for sight deposits with credit institutions and certain derivative instruments. The extent of the application of the PAB-Exclusions in relation to use of proceeds bonds was described below under the section “Use of proceeds bond Assessment”.

• **Norm Controversy Assessment**

The Norm Controversy Assessment evaluated the behaviour of companies in relation to generally accepted international standards and principles of responsible business conduct within, amongst others, the framework of the principles of the United Nations Global Compact, the United Nations Guiding Principles, the standards of the International Labour Organization and the OECD Guidelines for Multinational Enterprises. Examples of topics covered within these standards and principles included, but were not limited to, human rights violations, violations of workers' rights, child or forced labour, negative environmental impacts and business ethics. The Norm Controversy Assessment evaluated reported violations of the aforementioned international standards. Companies with the worst Norm Controversy Assessment of “F” were excluded as an investment.

• **ESG Quality Assessment**

The ESG Quality Assessment distinguished between investments in companies and investments in sovereign issuers.

For companies, the ESG Quality Assessment allowed for a peer group comparison based on an overall ESG assessment, for example, concerning the handling of environmental changes, product safety, employee management or corporate ethics. The peer group for companies was made up from the same industry sector. Companies that scored higher in this comparison received a better assessment, while Companies that scored lower in the comparison received a worse assessment. Companies with the worst assessment of “F” were excluded as an investment.

For sovereign issuers, the ESG Quality Assessment assessed countries based on a peer group comparison considering environmental and social criteria as well as indicators for good governance, including, for example, the political system, the existence of institutions and the rule of law. Sovereign issuers with the worst assessment of “F” were excluded as an investment.

• **Freedom House Status**

Freedom House is an international non-governmental organization that classifies countries by their degree of political and civil liberties. Based on the Freedom House Status, countries that were classified as “not free” were excluded as an investment.

• **Exposure to controversial sectors**

Companies that were involved in certain business areas and business activities in controversial areas (“controversial sectors”) were excluded according to their share of total revenues generated in such controversial sectors as follows:

a. . Manufacturing of products and/or provision of services in the defence industry: 5% or more
b. . Manufacturing and/or distribution of civil handguns or ammunition: 5% or more
c. . Manufacturing of products in and/or provision of services for the gambling industry: 5% or more
d. . Manufacturing of adult entertainment: 5% or more
e. . Manufacturing of palm oil: 5% or more
f. . Nuclear power generation and/or uranium mining and/or uranium enrichment: 5% or more
g. . Unconventional extraction of crude oil and/or natural gas (including oil sand, oil shale/shale gas, arctic drilling): more than 0%
h. . Companies that derived 25% or more from thermal coal mining and thermal coal-based power generation as well as companies with thermal coal expansion plans, such as additional expansion of coal mining, coal production or coal usage. Companies with thermal coal expansion plans were excluded based on an internal identification methodology.

Further, companies involved in the manufacturing or selling of nuclear weapons or key components of nuclear weapons were excluded and the shareholdings within a group structure might have been taken into consideration.

• **Exposure to controversial weapons**

Companies are excluded if they are identified as being involved in the manufacturing or selling of controversial weapons or key components of controversial weapons or other related specific activities (anti-personnel mines, cluster munitions, chemical and biological weapons, blinding laser weapons, weapons with non-detectable fragments, depleted uranium weapons/munitions and/or incendiary weapons using white phosphorus). In addition, the shareholdings within a group structure may be taken into consideration for the exclusions.

• **Use of Proceeds Bond Assessment**

This assessment was specific to the nature of this instrument and an investment in use of proceeds bonds was permitted only if the following criteria were met. Firstly, all use of proceeds bonds were checked for compliance with the Climate Bonds Standards, similar industry standards for green bonds, social bonds or sustainability bonds (such as ICMA Principles) or the EU Green Bond Standard or whether bonds have been subject to an independent review.

Secondly, certain exclusion criteria were applied, where relevant and where sufficient data was available, at the level of the bond and/or in relation to the issuer of the bonds which could have led to the exclusion of the bond as an investment.

In particular, investments in use of proceeds bonds were prohibited based on the following issuer criteria:

a. Companies referred to under a) to c) of the PAB-Exclusions;
b. Companies with identified thermal coal expansion plans as referred to above;
c. Companies that derived more than 0% of their revenues from unconventional extraction of crude oil and/or natural gas (including oil sand, oil shale/shale gas, arctic drilling);
d. Companies that derived 5% or more of their revenues from nuclear power generation and/or uranium mining and/or uranium enrichment;
e. Sovereign issuers classified as “not free” by Freedom House.

Where no sufficient data was available for the evaluation of the PAB-Exclusions at use of proceeds bond level, the issuer in addition was evaluated based d) to g) of the above described PAB-Exclusions which may have led to the exclusion of the use of proceeds bond.

• **Target Fund Assessment**

Target funds were eligible if they were aligned with the PAB-Exclusions (starting from 21 May 2025) and, where applicable, the Freedom House Status. The target fund assessment relied on target fund related information acquired from external data sources or was evaluated in relation to the underlying assets of the portfolios of the target funds. Considering the diversity of data vendors and methodologies as well as the target fund portfolio rebalancing, this sub-fund have been indirectly exposed to certain assets that would have been excluded if invested directly.

Sustainability Investment Assessment

Further, for the proportion of sustainable investments, DWS measured the contribution to one or several UN SDGs and/or to other environmental sustainable objectives via its Sustainability Investment Assessment which evaluated potential investments in relation to different criteria to conclude whether an investment could have been considered as sustainable as further detailed in the section “What were the objectives of the sustainable investments that the financial product partially intends to make and how did the sustainable investment contributed to such objectives?”.

The applied ESG investment strategy did not pursue a committed minimum reduction of the scope of the investments.

The assessment of the good governance practices of the investee companies (including assessments related to sound management structures, employee relations, remuneration of staff and tax compliance) was part of the Norm Controversy Assessment which evaluated a company’s behavior within generally accepted international standards and principles of responsible business conduct. Companies with the worst Norm Controversy Assessment of “F” were excluded as an investment.

How did this financial product perform compared to the reference sustainable benchmark?

This sub-fund had not designated a reference benchmark to determine whether it was aligned with the environmental and social characteristics that it promoted.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Periodic disclosure for financial products referred to in Article 8, paragraph 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

Product name: DWS Invest ESG Euro Corporate Bonds Long

Legal entity identifier: 254900V3OKGYH585GX07

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

Yes	No
☐ it made **sustainable investments with an environmental objective:** ___%	☒ It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of 39.97 % of sustainable investments.
☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy	☐ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
	☒ with a social objective
☐ It made **sustainable investments with a social objective:** ___%	☐ It promoted E/S characteristics, but did **not make any sustainable investments**

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities.** That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

To what extent were the environmental and/or social characteristics promoted by this financial product met?

This sub-fund promoted environmental and social characteristics related to a general consideration of ESG criteria by excluding, for example, investments in companies with the worst norm-related issues towards international standards, issuers with the worst assessment in terms of environmental, social and governance aspects compared to their peer group and/or investments in companies whose involvement in controversial sectors exceeded predefined revenue thresholds.

Further, this sub-fund promoted a proportion of sustainable investments in accordance with article 2(17) of the regulation on sustainability-related disclosures in the financial services sector (SFDR).

This sub-fund had not designated a reference benchmark for the purpose of attaining the environmental and social characteristics promoted.

No derivatives were used to attain the environmental or social characteristics promoted by the sub-fund.

How did the sustainability indicators perform?

The attainment of the promoted environmental and social characteristics as well as the sustainable investment was assessed via the application of an in-house ESG assessment methodology and ESG specific exclusion thresholds as further described in the section “What actions have been taken to meet the environmental and/or social characteristics during the reference period?”. The methodology applied different assessment approaches that were used as sustainability indicators which were:

• **Norm Controversy Assessment** used as an indicator for a company’s exposure to norm-related issues towards international standards.
Performance: No investments in suboptimal assets

• **ESG Quality Assessment** used as an indicator for comparison of an issuer’s environmental, social and governance aspects in relation to its peer group.
Performance: No investments in suboptimal assets

• **Freedom House Status** used as an indicator for the political and civil liberties of a country.
Performance: No investments in suboptimal assets

• **Exposure to controversial sectors** used as an indicator for a company’s involvement in controversial sectors.
Performance: 0%

• **Exposure to companies subject to the EU Paris-aligned Benchmark exclusion criteria** as set forth in article 12(1) of Commission Delegated Regulation 2020/1818 (PAB-Exclusions).
Performance: 0%

• **Sustainability Investment Assessment** used as an indicator to measure the proportion of sustainable investments pursuant to article 2(17) SFDR.
Performance: 39.97%

Note: The ESG-specific exclusion criteria were not met on April 25, 2025, due to investments in ELECTRICITE DE FRANCE SA (FR001400QR88) and ELECTRICITE DE FRANCE SA (FR001400QR70) amounting to 1.86% of the sub-fund's net assets. This was due to a change in the investment guidelines. The investment limit violation was rectified by the sale of the securities on June 12, 2025.

Please see the section entitled “What actions have been taken to meet the environmental and/or social characteristics during the reference period?” for a description of the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted, including the exclusion criteria, and the assessment methodology for determining whether and to what extent assets met the defined environmental and/or social characteristics (including the turnover thresholds defined for the xclusions). This section contains further information on the sustainability indicators. The values from the DWS front office system are used to calculate the sustainability indicators. This means that there may be minor deviations from the other market values that appear in the annual report, which are derived from the fund accounting system.

…and compared to previous periods?

Attainment of the promoted environmental and social characteristics at portfolio level was measured in the previous year on the basis of the following sustainability indicators:

DWS Invest ESG Euro Corporate Bonds Long

Indicators Performance	30/12/2024	
Sustainability indicators		
Climate and Transition Risk Assessment	No investments in suboptimal assets	
ESG Quality Assessment	No investments in suboptimal assets	
Freedom House Status: Not Free	No investments in suboptimal assets	
Norm Assessment	No investments in suboptimal assets	
Sustainable investments	38.46	% of assets
UN Global Compact	No investments in suboptimal assets	
Involvement in controversial sectors		
Exposure to controversial sectors	0.00	% of assets
Involvement in controversial weapons		
Involvement in controversial weapons	0.00	% of assets

The disclosure of the sustainability indicators has been revised compared with the prior-year report. The assessment methodology is unchanged. Additional information on the currently valid sustainability indicators is provided in the section entitled “What actions have been taken to meet the environmental and/or social characteristics during the reference period?”.
Information about taking into account the principal adverse impacts on sustainability factors is provided in the section entitled “How did this financial product consider principal adverse impacts on sustainability factors?”

DWS ESG-Assessment Scale

In the following assessment categories, the assets received one of six possible scores, with "A" being the best score and "F" being the worst score.

Criteria	Involvement in controversial sectors *(1)	Involvement in controversial weapons	Norm Assessment *(6)	ESG Quality Assessment	SDG- Assessment	Climat & Transition Risk Assessment
A	Non-involvement	Confirmed non-involvement	Confirmed no issues	True leader in ESG (>= 87.5 DWS ESG score)	True SDG contributor (>= 87.5 SDG score)	True climate leader (>= 87.5 score)
B	Remote involvement	Alleged	Violations of lesser degree	ESG leader (75-87.5 DWS ESG score)	SDG contributor (75-87.5 SDG score)	Climate solution provider(75-87.5 score)
C	0% - 5%	Dual-Purpose *(2)	Violations of lesser degree	ESG upper midfield (50-75 DWS ESG score)	SDG upper midfield (50-75 SDG score)	Low transition risk (50-75 score)
D	5% - 10% (coal: 5% - 10%)	Owning *(3)/ Owned *(4)	Violation of lesser degree	ESG lower midfield (25-50 DWS ESG score)	SDG lower midfield (25-50 SDG score)	Mod. transition risk (25-50 score)
E	10% - 25% (coal: 15% - 25%)	Component Producer *(5)	High severity or re-assessed highest violation *(7)	ESG laggard (12.5-25 DWS ESG score)	SDG obstructer (12.5-25 SDG score)	High transition risk (12.5-25 score)
F	>= 25%	Weapon producer	Highest severity / global compact violation *(8)	True laggard in ESG (0-12.5 DWS ESG score)	Significant SDG obstructer (0-12.5 SDG score)	Excessive transition risk (0-12.5 score)

*(1) Revenue share thresholds as per standard scheme. Sub-Granularity available. Thresholds can be individually set.

*(2) Encompasses e.g.. weapon-carrying systems such as combat aircraft that carry non-controversial weapons as well as controversial ones.

*(3) Owning more than 20% equity.

*(4) Being owned by more than 50% of company involved in grade E or F.

*(5) Single purpose key component.

*(6) Includes ILO controversies as well as corporate governance and product issues.

*(7) In its ongoing assessment, DWS takes into account the violation(s) of international standards – observed via data from ESG data vendors – such as the UN Global Compact, but also possible ESG data vendor errors identified, future expected developments of these violations as well as the willingness of the issuer to engage in dialogue regarding corporate decisions in this regard.

*(8) An F-grade can be considered a reconfirmed violation of the United Nations Global Compact rule framework for corporate behavior.

What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?

Sustainable investments contributed (i) to at least one of the Sustainable Development Goals of the United Nations (UN SDGs) that relate to environmental and/or social objectives, such as no poverty, zero hunger, good health and well-being, quality education, gender equality, clean water and sanitation, affordable and clean energy, decent work and economic growth, reduced inequalities, sustainable cities and communities, responsible consumption and production, climate action, life below water and/or life on land and/or (ii) to at least one other environmental objective such as climate change adaption, climate change mitigation, sustainable use and protection of water and marine recources, transition to a circular economy, pollution prevention and control and/or protection and restoration of biodiversity and ecosystems (as defined under the EU Taxonomy).

The extent of the contribution to individual sustainable investment objectives varied depending on the actual investments held in the portfolio.

DWS determined the contribution to a sustainable investment objective based on its Sustainability Investment Assessment which used data from one or several data providers, public sources and/or internal assessments. An investment's positive contribution to an environmental and/or social objective was assessed based on the revenues which a company generated from the actual economic activities making such contribution (activity-based approach). Where a positive contribution was determined, the investment was considered sustainable if the issuer passed the Do No significant Harm ("DNSH") assessment and the company followed good governance practices.

The share of sustainable investments in the portfolio as defined in article 2(17) SFDR was therefore calculated in proportion to the economic activities of the issuers that were considered as sustainable (activity-based approach). Notwithstanding the preceding, in the case of use-of-proceeds bonds that were considered as sustainable investment, the value of the entire bond was counted towards the portfolio's share of sustainable investments.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

The sustainable investments in which the sub-fund invested were assessed to ensure they did not cause significant harm to any environmental or social sustainable investment objective. This was achieved by taking into account the indicators for principal adverse impacts on sustainability factors (dependent on relevance) as described below. If a significant harm was identified, the investment could not have been considered sustainable.

How were the indicators for adverse impacts on sustainability factors taken into account?

The Sustainability Investment Assessment systematically integrated the mandatory principal adverse indicators on sustainability factors (dependent on relevance) from Table 1 and relevant indicators from Tables 2 and 3 of Annex I of the Commission Delegated Regulation (EU) 2022/1288 supplementing the SFDR. Taking into account these principal adverse impacts, DWS had established quantitative thresholds and/or qualitative values to assess a significant harm on any of the environmental or social sustainable investment objectives. These values were set based upon various external and internal factors, such as data availability or market developments and may have been adapted going forward.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The alignment of sustainable investments with, amongst others, the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights was evaluated through the Norm Controversy Assessment (as further described below). Companies with the worst Norm Controversy Assessment of “F” were excluded as an investment.

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union Criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU Criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU Criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

How did this financial product consider principal adverse impacts on sustainability factors?

The sub-fund considered the following principal adverse impacts on sustainability factors from Annex I of the Commission Delegated Regulation (EU) 2022/1288 supplementing the SFDR:

• Greenhouse gas (GHG) emissions (no. 1);
• Carbon footprint (no. 2);
• GHG intensity of investee companies (no. 3);
• Exposure to companies active in the fossil fuel sector (no. 4);
• Violations of United Nations Global Compact principles and OECD Guidelines for Multinational Enterprises (no. 10); and
• Exposure to controversial weapons (no. 14).

DWS Invest ESG Euro Corporate Bonds Long

Indicators	Description	Performance
Principal Adverse Impact		
PAII - 01. GHG emissions	Sum of the current value of investments of company i, divided by the investee company's enterprise value and multiplied by company's cope 1+2+3 GHG emissions.	4814.56 tCO2e
PAII - 02. Carbon Footprint - EUR	The carbon footprint is expressed as tonnes of CO2 emissions per million EUR invested. The CO2 emissions of an issuer are normalised by its enterprise value including cash (EVIC)	269.9 tCO2e / million EUR
PAII - 03. Carbon Intensity	Weighted average carbon intensity scope 1+2+3 Share of investments in companies active in the fossil fuel sector	616.18 tCO2e / million EUR
PAII - 04. Exposure to companies active in the fossil fuel sector		8.3 % of assets
PAII - 10. Violations of UNGC principles and OECD Guidelines for Multinational Enterprises	Share of investments in investee companies that have been involved in violations of the UNGC principles or OECD Guidelines for Multinational Enterprises	0 % of assets
PAII - 14. Exposure to controversial weapons	Share of investments in investee companies involved in the manufacture or selling of controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)	0 % of assets

As of: December 30, 2025

The Principal Adverse Impact Indicators (PAIIs) are calculated on the basis of the data in the DWS back office and front office systems, which are primarily based on the data of external ESG data providers. If there is no data on individual PAIIs for individual securities or their issuers, either because no data is available or the PAII is not applicable to the particular issuer or security, these securities or issuers are not included in the calculation of the PAII. With target fund investments, a look-through of the target fund holdings is performed if appropriate data is available. The calculation method for the individual PAI indicators may change in subsequent reporting periods due to evolving market standards, a change in the treatment of securities of certain types of instruments (such as derivatives) or as a result of regulatory clarifications.
Moreover, improved data availability may have an effect on the reported PAIIs in subsequent reporting periods.
The values from the DWS front office system are used to calculate the PAIIs. This means that there may be minor deviations from the other market values that appear in the annual report, which are derived from the fund accounting system.

What were the top investments of this financial product?

DWS Invest ESG Euro Corporate Bonds Long

Largest investments	Breakdown by sector according to NACE Codes	in % of average portfolio volume	Breakdown by country
Bouyges 22/30.06.2042	M - Professional, scientific and technical activities	1.3 %	France
ENEL Finance International 23/20.02.2043 MTN	K - Financial and insurance activities	1.2 %	Italy
Anheuser-Busch InBev 24/22.03.2037 MTN	C - Manufacturing	1.2 %	Belgium
Anheuser-Busch InBev 24/22.03.2044 MTN	C - Manufacturing	1.1 %	Belgium
Booking Holdings 24/01.03.2044	J - Information and communication	1.1 %	United States

for the period from January 01, 2025, through December 30, 2025

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is:
for the period from January 01, 2025, through December 31, 2025

What was the proportion of sustainability-related investments?

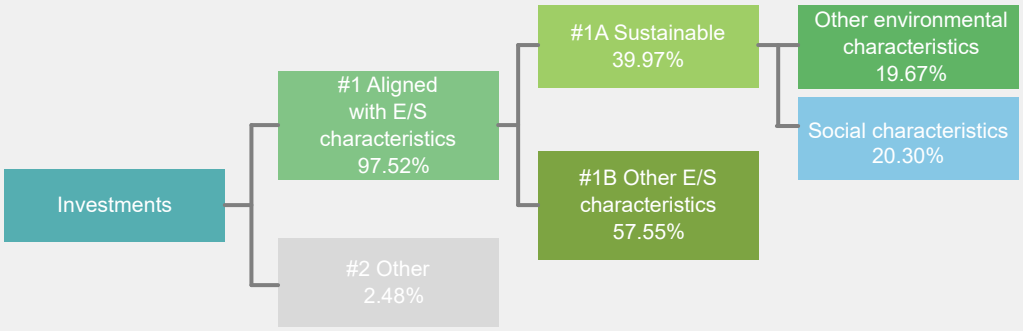
The proportion of sustainability-related investments as of the reporting date was 97.52% of portfolio assets.
Proportion of sustainability-related investments for the previous year:
30/12/2024: 91.06 %

Asset allocation describes the share of investments in specific assets.

What was the asset allocation?

This sub-fund invested 97.52% of its net assets in investments that were aligned with the promoted environmental and social characteristics (#1 Aligned with E/S characteristics). Within this category, 39.97% of the sub-fund's net assets qualified as sustainable investments (#1A Sustainable). Thereof the share of sustainable investments with an environmental objective that was not compliant with the EU Taxonomy was 19.67% of the sub-fund's net assets and the share of socially sustainable investments was 20.30% of the sub-fund's net assets. The share of sustainable investments with an environmental objective that was not compliant with the EU Taxonomy and of socially sustainable investments depended on the market situation and the investable investment universe.

2.48% of the sub-fund's net assets have been invested in assets which were either out-of-scope of the ESG assessment methodology or for which ESG data coverage was incomplete (#2 Other) as further detailed in the section "What investments were included under "#2 Other", what was their purpose and were there any minimum environmental or social safeguards?".
A more detailed description of the specific asset allocation of this sub-fund can be found in the Special Section of the Sales Prospectus.



#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:
- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

In which economic sectors were the investments made?

DWS Invest ESG Euro Corporate Bonds Long

NACE-Code	Breakdown by sector according to NACE Codes	in % of portfolio volume
C	Manufacturing	16.5 %
D	Electricity, gas, steam and air conditioning supply	2.3 %
F	Construction	0.6 %
H	Transporting and storage	3.1 %
J	Information and communication	16.3 %
K	Financial and insurance activities	29.4 %
M	Professional, scientific and technical activities	16.7 %
N	Administrative and support service activities	1.9 %
NA	Other	13.2 %
Exposure to companies active in the fossil fuel sector		8.3 %

As of: December 30, 2025

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The sub-fund did not commit to invest a proportion of sustainable investments with an environmental objective aligned with the EU Taxonomy. Therefore, the promoted minimum percentage of environmentally sustainable investments aligned with the EU Taxonomy was 0% of the sub-fund's net assets. However, certain investments' underlying economic activities may have been aligned with the EU Taxonomy.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are economic activities for yet low-carbon alternatives are not yet available and that have greenhouse gas emission levels corresponding to the best performance.

Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy[1]?

☐ Yes:

☐ In fossil gas ☐ In nuclear energy

☒ No

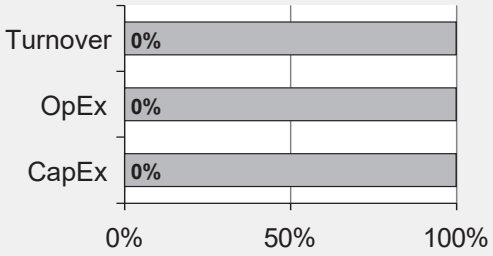
The sub-fund did not take into account the Taxonomy-alignment of companies active in the fossil gas and/or nuclear energy sectors.

[1] Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do no significant harm to any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Taxonomy-aligned activities are expressed as a share of:
- turnover reflecting the share of revenue from green activities of investee companies.
- capital expenditure (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- operational expenditure (OpEx) reflecting the green operational activities of investee companies.

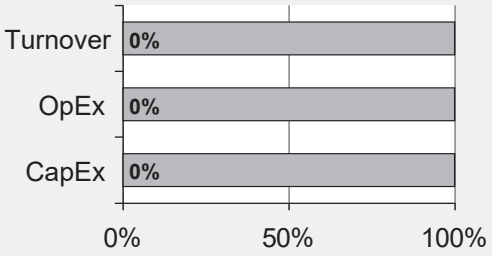
The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy-alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy-alignment only in relation to the investments of the financial product other than sovereign bonds.

1. Taxonomy-alignment of investments **including sovereign bonds***



Taxonomy-aligned: Fossil gas	0.00%
Taxonomy-aligned: Nuclear	0.00%
Taxonomy-aligned (no gas and nuclear)	0.00%
Taxonomy-aligned	0.00%
Non Taxonomy-aligned	100.00%

2. Taxonomy-alignment of investments **excluding sovereign bonds***



Taxonomy-aligned: Fossil gas	0.00%
Taxonomy-aligned: Nuclear	0.00%
Taxonomy-aligned (no gas and nuclear)	0.00%
Taxonomy-aligned	0.00%
Non Taxonomy-aligned	100.00%

This graph represents 100% of the total investments.

**For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures*

What was the share of investments made in transitional and enabling activities?

The sub-fund was not committed to a share of investments in transitional or enabling activities.

How did the percentage of investments that are aligned with the EU Taxonomy compare with previous reference periods?

The promoted proportion of environmentally sustainable investments in accordance with Regulation (EU) 2020/852 (Taxonomy Regulation) was 0% of the fund's assets in the current as well as previous reference periods. It may, however, have been the case that some sustainable investments were nevertheless aligned with an environmental objective of the Taxonomy Regulation.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the Regulation (EU) 2020/852.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The share of sustainable investments with an environmental objective that were not aligned with the EU Taxonomy was 19.67% of the sub-fund's net assets.

previous reporting period

reporting period	sustainable investments (total)	with environmental objective	socially sustainable
30/12/2024	38.46%	21.74%	16.72%

What was the share of socially sustainable investments?

The share of socially sustainable investments was 20.30% of the sub-fund’s net

assets. previous reporting period

reporting period	sustainable investments (total)	with environmental objective	socially sustainable
30/12/2024	38.46%	21.74%	16.72%

What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?

97.52% of the sub-fund’s net assets were aligned with the promoted environmental and social characteristics (#1 Aligned with E/S characteristics). 2.48% of the sub-fund’s net assets have been invested in assets which were either out-of-scope of the ESG assessment methodology or for which ESG data coverage was incomplete (#2 Other). Full ESG data coverage was required for the assessment of direct investments in companies in relation to good governance practices and the PAB-Exclusions.

Assets under “#2 Other” could include all asset classes as foreseen in the specific investment policy, such as sight deposits with credit institutions and derivatives. These assets could have been used by the portfolio management for performance, risk diversification, liquidity and hedging purposes.

Minimum environmental or social safeguards were not or only partially considered for the sub-fund’s investments falling within “#2 Other”.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

This sub-fund pursued a strategy based on bonds as main investment strategy. The sub-fund may have acquired euro-denominated fixed and/or variable interest-bearing securities, convertible bonds and warrant-linked bonds, participation and dividend-right certificates, equities and equity warrants. At least 80% of the sub-fund's assets were invested in corporate bonds denominated in Euros that offered returns higher than those of comparable government bonds; investments were deliberately focused almost exclusively on issuers whose credit standing was considered by the market to be relatively good but not first-rate (investment-grade bonds).No more than 10% of the sub-fund's assets may have been invested in high-yield bonds. Investments in contingent convertibles should have been limited to 10% of the sub-fund's net asset value. The sub-fund did not invest into asset backed securities and mortgage-backed securities.
Further details regarding the main investment strategy are specified in the Special Section of the Sales Prospectus.

97.52% of the sub-fund's net assets were allocated to investments that met the promoted environmental and social characteristics as described in the following sections. The alignment of the portfolio with the binding elements of the investment strategy used to attain the promoted environmental and social characteristics as well as the PAB-Exclusions was continuously controlled via the sub-fund's investment guidelines monitoring.

ESG assessment methodology

The sub-fund aimed to achieve the promoted environmental and social characteristics by assessing potential assets via an in-house ESG assessment methodology, regardless of their economic prospects for success, and by applying exclusion criteria based on this assessment.

The ESG assessment methodology was using a proprietary software tool which sourced data from one or several ESG data providers, public sources and/or internal assessments to derive overall assessments. The methodology applied to derive such overall assessments could have been based on different methods, such as prioritizing one data vendor, worst-of or averaging approach. Internal assessments may take into account factors such as an issuer's future expected ESG developments, plausibility of data with regard to past or future events, the willingness to engage in dialogue on ESG matters and/or ESG-related decisions of a company. Further, internal ESG assessments for investee companies may have considered the relevance of the exclusion criteria for the market sector of the investee company.

The proprietary software tool used, amongst others, the approaches described below to evaluate the adherence to the promoted ESG characteristics and whether investee companies followed good governance practices. The assessment approaches included, for example, exclusions related to revenues generated from controversial sectors or the exposure to such controversial sectors. In some of the assessment approaches, issuers received one of six possible assessments, with "A" representing the best and "F" the worst assessment. If an issuer was excluded based on one assessment approach, the sub-fund was prohibited from investing in that issuer.

Depending on the investable universe, the portfolio allocation and the exposure to certain sectors, the assessment approaches described below have been more or less relevant which was reflected in the number of issuers being actually excluded.

• **PAB-Exclusions**

In accordance with the applicable regulations, the sub-fund applied the PAB-Exclusions and excluded all of the following companies:

a. companies involved in controversial weapons (manufacturing or selling of anti-personnel mines, cluster munitions, chemical weapons and biological weapons) assessed as part of the assessment of the "Exposure to controversial weapons" as described below;
b. companies involved in the cultivation and production of tobacco;
c. companies that were found in violation of the United Nations Global Compact principles or the OECD Guidelines for Multinational Enterprises (assessed as part of the "Norm Controversy Assessment" as described below);
d. companies that derived 1% or more of their revenues from exploration, mining, extraction, distribution or refining of hard coal and lignite;
e. companies that derived 10% or more of their revenues from the exploration, extraction, distribution or refining of oil fuels;
f. companies that derived 50% or more of their revenues from the exploration, extraction, manufacturing or distribution of gaseous fuels;
g. companies that derived 50% or more of their revenues from electricity generation with a GHG

intensity of more than 100 g CO2 e/kWh.

The PAB-Exclusions were, in particular, not applied for sight deposits with credit institutions and certain derivative instruments. The extent of the application of the PAB-Exclusions in relation to use of proceeds bonds was described below under the section “Use of proceeds bond Assessment”.

• **Norm Controversy Assessment**

The Norm Controversy Assessment evaluated the behaviour of companies in relation to generally accepted international standards and principles of responsible business conduct within, amongst others, the framework of the principles of the United Nations Global Compact, the United Nations Guiding Principles, the standards of the International Labour Organization and the OECD Guidelines for Multinational Enterprises. Examples of topics covered within these standards and principles included, but were not limited to, human rights violations, violations of workers' rights, child or forced labour, negative environmental impacts and business ethics. The Norm Controversy Assessment evaluated reported violations of the aforementioned international standards. Companies with the worst Norm Controversy Assessment of “F” were excluded as an investment.

• **ESG Quality Assessment**

The ESG Quality Assessment distinguished between investments in companies and investments in sovereign issuers.

For companies, the ESG Quality Assessment allowed for a peer group comparison based on an overall ESG assessment, for example, concerning the handling of environmental changes, product safety, employee management or corporate ethics. The peer group for companies was made up from the same industry sector. Companies that scored higher in this comparison received a better assessment, while Companies that scored lower in the comparison received a worse assessment. Companies with the worst assessment of “F” were excluded as an investment.

For sovereign issuers, the ESG Quality Assessment assessed countries based on a peer group comparison considering environmental and social criteria as well as indicators for good governance, including, for example, the political system, the existence of institutions and the rule of law. Sovereign issuers with the worst assessment of “F” were excluded as an investment.

• **Freedom House Status**

Freedom House is an international non-governmental organization that classifies countries by their degree of political and civil liberties. Based on the Freedom House Status, countries that were classified as “not free” were excluded as an investment.

• **Exposure to controversial sectors**

Companies that were involved in certain business areas and business activities in controversial areas (“controversial sectors”) were excluded according to their share of total revenues generated in such controversial sectors as follows:

a. Manufacturing of products and/or provision of services in the defence industry: 5% or more
b. Manufacturing and/or distribution of civil handguns or ammunition: 5% or more
c. Manufacturing of products in and/or provision of services for the gambling industry: 5% or more
d. Manufacturing of adult entertainment: 5% or more
e. Manufacturing of palm oil: 5% or more
f. Nuclear power generation and/or uranium mining and/or uranium enrichment: 5% or more
g. Unconventional extraction of crude oil and/or natural gas (including oil sand, oil shale/shale gas, arctic drilling): more than 0%
h. Companies that derived 25% or more from thermal coal mining and thermal coal-based power generation as well as companies with thermal coal expansion plans, such as additional expansion of coal mining, coal production or coal usage. Companies with thermal coal expansion plans were excluded based on an internal identification methodology.

Further, companies involved in the manufacturing or selling of nuclear weapons or key components of nuclear weapons were excluded and the shareholdings within a group structure might have been taken into consideration.

• **Exposure to controversial weapons**

Companies were excluded if they were identified as being involved in the manufacturing or selling of

controversial weapons or key components of controversial weapons or other related specific activities (anti-personnel mines, cluster munitions, chemical and biological weapons, blinding laser weapons, weapons with non-detectable fragments, depleted uranium weapons/munitions and/or incendiary weapons using white phosphorus). In addition, the shareholdings within a group structure might have been taken into consideration for the exclusions.

• Use of Proceeds Bond Assessment

This assessment was specific to the nature of this instrument and an investment in use of proceeds bonds was permitted only if the following criteria were met. Firstly, all use of proceeds bonds were checked for compliance with the Climate Bonds Standards, similar industry standards for green bonds, social bonds or sustainability bonds (such as ICMA Principles) or the EU Green Bond Standard or whether bonds have been subject to an independent review.

Secondly, certain exclusion criteria were applied, where relevant and where sufficient data was available, at the level of the bond and/or in relation to the issuer of the bonds which could have led to the exclusion of the bond as an investment.

In particular, investments in use of proceeds bonds were prohibited based on the following issuer criteria:

a. Companies referred to under a) to c) of the PAB-Exclusions;
b. Companies with identified thermal coal expansion plans as referred to above;
c. Companies that derived more than 0% of their revenues from unconventional extraction of crude oil and/or natural gas (including oil sand, oil shale/shale gas, arctic drilling);
d. Companies that derived 5% or more of their revenues from nuclear power generation and/or uranium mining and/or uranium enrichment;
e. Sovereign issuers classified as “not free” by Freedom House.

Where no sufficient data was available for the evaluation of the PAB-Exclusions at use of proceeds bond level, the issuer in addition was evaluated based d) to g) of the above described PAB-Exclusions which may have led to the exclusion of the use of proceeds bond.

• Target Fund Assessment

Target funds were eligible if they were aligned with the PAB-Exclusions (starting from 21 May 2025) and, where applicable, the Freedom House Status. The target fund assessment relied on target fund related information acquired from external data sources or was evaluated in relation to the underlying assets of the portfolios of the target funds. Considering the diversity of data vendors and methodologies as well as the target fund portfolio rebalancing, this sub-fund have been indirectly exposed to certain assets that would have been excluded if invested directly.

Sustainability Investment Assessment

Further, for the proportion of sustainable investments, DWS measured the contribution to one or several UN SDGs and/or to other environmental sustainable objectives via its Sustainability Investment Assessment which evaluated potential investments in relation to different criteria to conclude whether an investment could have been considered as sustainable as further detailed in the section “What were the objectives of the sustainable investments that the financial product partially intends to make and how did the sustainable investment contributed to such objectives?”.

The applied ESG investment strategy did not pursue a committed minimum reduction of the scope of the investments.

The assessment of the good governance practices of the investee companies (including assessments related to sound management structures, employee relations, remuneration of staff and tax compliance) was part of the Norm Controversy Assessment which evaluated a company’s behavior within generally accepted international standards and principles of responsible business conduct. Companies with the worst Norm Controversy Assessment of “F” were excluded as an investment.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

How did this financial product perform compared to the reference sustainable benchmark?

This sub-fund had not designated a reference benchmark to determine whether it was aligned with the environmental and social characteristics that it promoted.

Periodic disclosure for financial products referred to in Article 8, paragraph 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

Product name: DWS Invest ESG Euro High Yield

Legal entity identifier: 2549003PZE015L3POO62

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

Yes	No
[ ] it made **sustainable investments with an environmental objective:** ___%	[X] It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of 27.96% of sustainable investments.
[ ] in economic activities that qualify as environmentally sustainable under the EU Taxonomy	[ ] with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
[ ] in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	[X] with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
	[X] with a social objective
[ ] It made **sustainable investments with a social objective:** ___%	[ ] It promoted E/S characteristics, but did **not make any sustainable investments**

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities.** That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

To what extent were the environmental and/or social characteristics promoted by this financial product met?

This sub-fund promoted environmental and social characteristics related to a general consideration of ESG criteria by excluding, for example, investments in companies with the worst norm-related issues towards international standards, issuers with the worst assessment in terms of environmental, social and governance aspects compared to their peer group and/or investments in companies whose involvement in controversial sectors exceeded predefined revenue thresholds.

Further, this sub-fund promoted a proportion of sustainable investments in accordance with article 2(17) of the regulation on sustainability-related disclosures in the financial services sector (SFDR).

This sub-fund had not designated a reference benchmark for the purpose of attaining the environmental and social characteristics promoted.

No derivatives were used to attain the environmental or social characteristics promoted by the sub-fund.

How did the sustainability indicators perform?

The attainment of the promoted environmental and social characteristics as well as the sustainable investment was assessed via the application of an in-house ESG assessment methodology and ESG specific exclusion thresholds as further described in the section “What actions have been taken to meet the environmental and/or social characteristics during the reference period?”. The methodology applied different assessment approaches that were used as sustainability indicators which were:

• **Norm Controversy Assessment** used as an indicator for a company’s exposure to norm-related issues towards international standards.
Performance: No investments in suboptimal assets except for the investment limit violations listed below

• **ESG Quality Assessment** used as an indicator for comparison of an issuer’s environmental, social and governance aspects in relation to its peer group.
Performance: No investments in suboptimal assets except for the investment limit violations listed below

• **Freedom House Status** used as an indicator for the political and civil liberties of a country.
Performance: No investments in suboptimal assets except for the investment limit violations listed below

• **Exposure to controversial sectors** used as an indicator for a company’s involvement in controversial sectors.
Performance: No investments in suboptimal assets except for the investment limit violations listed below

• **Exposure to companies subject to the EU Paris-aligned Benchmark exclusion criteria** as set forth in article 12(1) of Commission Delegated Regulation 2020/1818 (PAB-Exclusions).
Performance: No investments in suboptimal assets except for the investment limit violations listed below

• **Sustainability Investment Assessment** used as an indicator to measure the proportion of sustainable investments pursuant to article 2(17) SFDR.
Performance: 27.96%

A notice:
The ESG-specific exclusion criteria were not met on April 25, 2025 through investments in ELECTRICITE DE FRANCE SA (FR001400SMT6) amounting to 0.99% of the net sub-fund assets. The reason was the change in investment guidelines. The investment limit violation was remedied by selling the security on June 12th.

The ESG-specific exclusion criteria were not met on April 30, 2025 through investments in ELECTRICITE DE FRANCE SA (FR001400SMS8) amounting to 0.30% of the net sub-fund assets. The reason was the acquisition of the position. The investment limit violation was remedied by selling the security on June 12th.

Please see the section entitled “What actions have been taken to meet the environmental and/or social characteristics during the reference period?” for a description of the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted, including the exclusion criteria, and the assessment methodology for determining whether and to what extent assets met the defined environmental and/or social characteristics (including the turnover thresholds defined for the xclusions). This section contains further information on the sustainability indicators. The values from the DWS front office system are used to calculate the sustainability indicators. This means that there may be minor deviations from the other market values that appear in the annual report, which are derived from the fund accounting system.

…and compared to previous periods?

Attainment of the promoted environmental and social characteristics at portfolio level was measured in the previous years on the basis of the following sustainability indicators:

DWS Invest ESG Euro High Yield

The disclosure of the sustainability indicators has been revised compared with the prior-year report. The assessment methodology is unchanged. Additional information on the currently valid sustainability indicators is provided in the section entitled “What actions have been taken to meet the environmental and/or social characteristics during the reference period?”.
Information about taking into account the principal adverse impacts on sustainability factors is provided in the section entitled “How did this financial product consider principal adverse impacts on sustainability factors?”

DWS ESG-Assessment Scale

In the following assessment categories, the assets received one of six possible scores, with "A" being the best score and "F" being the worst score.

Criteria	Involvement in controversial sectors *(1)	Involvement in controversial weapons	Norm Assessment *(6)	ESG Quality Assessment	SDG- Assessment	Climat & Transition Risk Assessment
A	Non-involvement	Confirmed non-involvement	Confirmed no issues	True leader in ESG (>= 87.5 DWS ESG score)	True SDG contributor (>= 87.5 SDG score)	True climate leader (>= 87.5 score)
B	Remote involvement	Alleged	Violations of lesser degree	ESG leader (75-87.5 DWS ESG score)	SDG contributor (75-87.5 SDG score)	Climate solution provider(75-87.5 score)
C	0% - 5%	Dual-Purpose *(2)	Violations of lesser degree	ESG upper midfield (50-75 DWS ESG score)	SDG upper midfield (50-75 SDG score)	Low transition risk (50-75 score)
D	5% - 10% (coal: 5% - 10%)	Owning *(3)/ Owned *(4)	Violation of lesser degree	ESG lower midfield (25-50 DWS ESG score)	SDG lower midfield (25-50 SDG score)	Mod. transition risk (25-50 score)
E	10% - 25% (coal: 15% - 25%)	Component Producer *(5)	High severity or re-assessed highest violation *(7)	ESG laggard (12.5-25 DWS ESG score)	SDG obstructer (12.5-25 SDG score)	High transition risk (12.5-25 score)
F	>= 25%	Weapon producer	Highest severity / global compact violation *(8)	True laggard in ESG (0-12.5 DWS ESG score)	Significant SDG obstructer (0-12.5 SDG score)	Excessive transition risk (0-12.5 score)

*(1) Revenue share thresholds as per standard scheme. Sub-Granularity available. Thresholds can be individually set.

*(2) Encompasses e.g.. weapon-carrying systems such as combat aircraft that carry non-controversial weapons as well as controversial ones.

*(3) Owning more than 20% equity.

*(4) Being owned by more than 50% of company involved in grade E or F.

*(5) Single purpose key component.

*(6) Includes ILO controversies as well as corporate governance and product issues.

*(7) In its ongoing assessment, DWS takes into account the violation(s) of international standards – observed via data from ESG data vendors – such as the UN Global Compact, but also possible ESG data vendor errors identified, future expected developments of these violations as well as the willingness of the issuer to engage in dialogue regarding corporate decisions in this regard.

*(8) An F-grade can be considered a reconfirmed violation of the United Nations Global Compact rule framework for corporate behavior.

What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?

Sustainable investments contributed (i) to at least one of the Sustainable Development Goals of the United Nations (UN SDGs) that relate to environmental and/or social objectives, such as no poverty, zero hunger, good health and well-being, quality education, gender equality, clean water and sanitation, affordable and clean energy, decent work and economic growth, reduced inequalities, sustainable cities and communities, responsible consumption and production, climate action, life below water and/or life on land and/or (ii) to at least one other environmental objective such as climate change adaption, climate change mitigation, sustainable use and protection of water and marine recources, transition to a circular economy, pollution prevention and control and/or protection and restoration of biodiversity and ecosystems (as defined under the EU Taxonomy).

The extent of the contribution to individual sustainable investment objectives varied depending on the actual investments held in the portfolio.

DWS determined the contribution to a sustainable investment objective based on its Sustainability Investment Assessment which used data from one or several data providers, public sources and/or internal assessments. An investment's positive contribution to an environmental and/or social objective was assessed based on the revenues which a company generated from the actual economic activities making such contribution (activity-based approach). Where a positive contribution was determined, the investment was considered sustainable if the issuer passed the Do No significant Harm ("DNSH") assessment and the company followed good governance practices.

The share of sustainable investments in the portfolio as defined in article 2(17) SFDR was therefore calculated in proportion to the economic activities of the issuers that were considered as sustainable (activity-based approach). Notwithstanding the preceding, in the case of use-of-proceeds bonds that were considered as sustainable investment, the value of the entire bond was counted towards the portfolio's share of sustainable investments.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

The sustainable investments in which the sub-fund invested were assessed to ensure they did not cause significant harm to any environmental or social sustainable investment objective. This was achieved by taking into account the indicators for principal adverse impacts on sustainability factors (dependent on relevance) as described below. If a significant harm was identified, the investment could not have been considered sustainable.

How were the indicators for adverse impacts on sustainability factors taken into account?

The Sustainability Investment Assessment systematically integrated the mandatory principal adverse indicators on sustainability factors (dependent on relevance) from Table 1 and relevant indicators from Tables 2 and 3 of Annex I of the Commission Delegated Regulation (EU) 2022/1288 supplementing the SFDR. Taking into account these principal adverse impacts, DWS had established quantitative thresholds and/or qualitative values to assess a significant harm on any of the environmental or social sustainable investment objectives. These values were set based upon various external and internal factors, such as data availability or market developments and may have been adapted going forward.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The alignment of sustainable investments with, amongst others, the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights was evaluated through the Norm Controversy Assessment (as further described below). Companies with the worst Norm Controversy Assessment of “F” were excluded as an investment.

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union Criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU Criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU Criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

How did this financial product consider principal adverse impacts on sustainability factors?

The sub-fund considered the following principal adverse impacts on sustainability factors from Annex I of the Commission Delegated Regulation (EU) 2022/1288 supplementing the SFDR:

- Greenhouse gas (GHG) emissions (no. 1);
- Carbon footprint (no. 2);
- GHG intensity of investee companies (no. 3);
- Exposure to companies active in the fossil fuel sector (no. 4);
- Violations of United Nations Global Compact principles and OECD Guidelines for Multinational Enterprises (no. 10); and
- Exposure to controversial weapons (no. 14).

DWS Invest ESG Euro High Yield

Indicators	Description	Performance
Principal Adverse Impact		
PAII - 01. GHG emissions	Sum of the current value of investments of company i, divided by the investee company's enterprise value and multiplied by company's cope 1+2+3 GHG emissions.	230716.78 tCO2e
PAII - 02. Carbon Footprint - EUR	The carbon footprint is expressed as tonnes of CO2 emissions per million EUR invested. The CO2 emissions of an issuer are normalised by its enterprise value including cash (EVIC)	694.01 tCO2e / million EUR
PAII - 03. Carbon Intensity	Weighted average carbon intensity scope 1+2+3	657.04 tCO2e / million EUR
PAII - 04. Exposure to companies active in the fossil fuel sector	Share of investments in companies active in the fossil fuel sector	10.65 % of assets
PAII - 10. Violations of UNGC principles and OECD Guidelines for Multinational Enterprises	Share of investments in investee companies that have been involved in violations of the UNGC principles or OECD Guidelines for Multinational Enterprises	0 % of assets
PAII - 14. Exposure to controversial weapons	Share of investments in investee companies involved in the manufacture or selling of controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)	0 % of assets

As of: December 30, 2025

The Principal Adverse Impact Indicators (PAIIs) are calculated on the basis of the data in the DWS back office and front office systems, which are primarily based on the data of external ESG data providers. If there is no data on individual PAIIs for individual securities or their issuers, either because no data is available or the PAII is not applicable to the particular issuer or security, these securities or issuers are not included in the calculation of the PAII. With target fund investments, a look-through of the target fund holdings is performed if appropriate data is available. The calculation method for the individual PAI indicators may change in subsequent reporting periods due to evolving market standards, a change in the treatment of securities of certain types of instruments (such as derivatives) or as a result of regulatory clarifications.
Moreover, improved data availability may have an effect on the reported PAIIs in subsequent reporting periods.
The values from the DWS front office system are used to calculate the PAIIs. This means that there may be minor deviations from the other market values that appear in the annual report, which are derived from the fund accounting system.

for the period from January 01, 2025, through December 30, 2025

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is:
for the period from January 01, 2025, through December 31, 2025

What was the proportion of sustainability-related investments?

The proportion of sustainability-related investments as of the reporting date was 81.91% of portfolio assets.
Proportion of sustainability-related investments for the previous years:

30/12/2024: 80.00 %
29/12/2023: 82.17 %
30/12/2022: 98.23 %

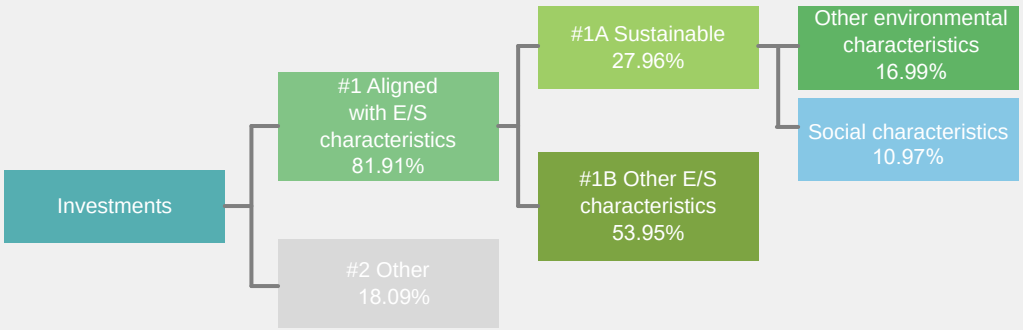
Asset allocation describes the share of investments in specific assets.

What was the asset allocation?

This sub-fund invested 81.91% of its net assets in investments that were aligned with the promoted environmental and social characteristics (#1 Aligned with E/S characteristics). Within this category, 27.96% of the sub-fund's net assets qualified as sustainable investments (#1A Sustainable). Thereof the share of sustainable investments with an environmental objective that was not compliant with the EU Taxonomy was 16.99% of the sub-fund's net assets and the share of socially sustainable investments was 10.97% of the sub-fund's net assets. The share of sustainable investments with an environmental objective that was not compliant with the EU Taxonomy and of socially sustainable investments depended on the market situation and the investable investment universe.

18.09% of the sub-fund's net assets have been invested in assets which were either out-of-scope of the ESG assessment methodology or for which ESG data coverage was incomplete (#2 Other) as further detailed in the section "What investments were included under "#2 Other", what was their purpose and were there any minimum environmental or social safeguards?".

A more detailed description of the specific asset allocation of this sub-fund can be found in the Special Section of the Sales Prospectus.



#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:
- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

In which economic sectors were the investments made?

DWS Invest ESG Euro High Yield

NACE-Code	Breakdown by sector according to NACE Codes	in % of portfolio volume
B	Mining and quarrying	0.1 %
C	Manufacturing	8.5 %
D	Electricity, gas, steam and air conditioning supply	3.3 %
E	Water supply; sewerage; waste managment and remediation activities	0.2 %
F	Construction	1.8 %
G	Wholesale and retail trade; repair of motor vehicles and motorcycles	1.9 %
H	Transporting and storage	1.6 %
J	Information and communication	8.0 %
K	Financial and insurance activities	27.1 %
M	Professional, scientific and technical activities	19.5 %
N	Administrative and support service activities	4.0 %

DWS Invest ESG Euro High Yield

NACE-Code	Breakdown by sector according to NACE Codes	in % of portfolio volume
Q	Human health and social work activities	1.2 %
NA	Other	22.6 %
Exposure to companies active in the fossil fuel sector		10.7 %

As of: December 30, 2025

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The sub-fund did not commit to invest a proportion of sustainable investments with an environmental objective aligned with the EU Taxonomy. Therefore, the promoted minimum percentage of environmentally sustainable investments aligned with the EU Taxonomy was 0% of the sub-fund's net assets. However, certain investments' underlying economic activities may have been aligned with the EU Taxonomy.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are economic activities for yet low-carbon alternatives are not yet available and that have greenhouse gas emission levels corresponding to the best performance.

Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy[1]?

☐ Yes:

☐ In fossil gas ☐ In nuclear energy

☒ No

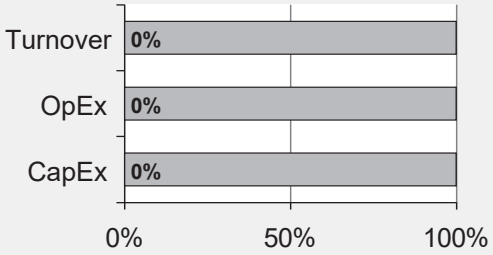
The sub-fund did not take into account the Taxonomy-alignment of companies active in the fossil gas and/or nuclear energy sectors.

[1] Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do no significant harm to any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Taxonomy-aligned activities are expressed as a share of:
- turnover reflecting the share of revenue from green activities of investee companies.
- capital expenditure (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- operational expenditure (OpEx) reflecting the green operational activities of investee companies.

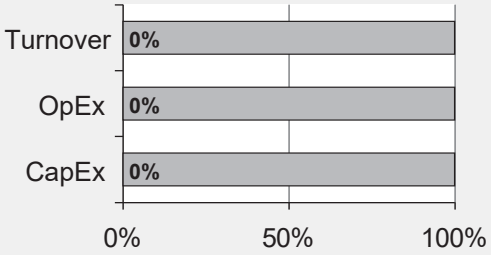
The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy-alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy-alignment only in relation to the investments of the financial product other than sovereign bonds.

1. Taxonomy-alignment of investments **including sovereign bonds***



Taxonomy-aligned: Fossil gas	0.00%
Taxonomy-aligned: Nuclear	0.00%
Taxonomy-aligned (no gas and nuclear)	0.00%
Taxonomy-aligned	0.00%
Non Taxonomy-aligned	100.00%

2. Taxonomy-alignment of investments **excluding sovereign bonds***



Taxonomy-aligned: Fossil gas	0.00%
Taxonomy-aligned: Nuclear	0.00%
Taxonomy-aligned (no gas and nuclear)	0.00%
Taxonomy-aligned	0.00%
Non Taxonomy-aligned	100.00%

This graph represents 100% of the total investments.

**For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures*

What was the share of investments made in transitional and enabling activities?

The sub-fund was not committed to a share of investments in transitional or enabling activities.

How did the percentage of investments that are aligned with the EU Taxonomy compare with previous reference periods?

The promoted proportion of environmentally sustainable investments in accordance with Regulation (EU) 2020/852 (Taxonomy Regulation) was 0% of the fund's assets in the current as well as previous reference periods. It may, however, have been the case that some sustainable investments were nevertheless aligned with an environmental objective of the Taxonomy Regulation.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the Regulation (EU) 2020/852.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The share of sustainable investments with an environmental objective that were not aligned with the EU Taxonomy was 16.99% of the sub-fund's net assets.

Shares of sustainable investments in previous reporting periods:

reporting period	sustainable investments (total)	with environmental objective	socially sustainable
30/12/2024	23.40%	15.65%	7.75%
29/12/2023	19.71%	13.41%	6.30%
30/12/2022	18.32%	--	--

What was the share of socially sustainable investments?

The share of socially sustainable investments was 10.97% of the sub-fund’s net assets. Shares of sustainable investments in previous reporting periods:

reporting period	sustainable investments (total)	with environmental objective	socially sustainable
30/12/2024	23.40%	15.65%	7.75%
29/12/2023	19.71%	13.41%	6.30%
30/12/2022	18.32%	--	--

What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?

81.91% of the sub-fund’s net assets were aligned with the promoted environmental and social characteristics (#1 Aligned with E/S characteristics). 18.09% of the sub-fund’s net assets have been invested in assets which were either out-of-scope of the ESG assessment methodology or for which ESG data coverage was incomplete (#2 Other). Full ESG data coverage was required for the assessment of direct investments in companies in relation to good governance practices and the PAB-Exclusions.

Assets under “#2 Other” could include all asset classes as foreseen in the specific investment policy, such as sight deposits with credit institutions and derivatives. These assets could have been used by the portfolio management for performance, risk diversification, liquidity and hedging purposes.

Minimum environmental or social safeguards were not or only partially considered for the sub-fund’s investments falling within “#2 Other”.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

This sub-fund pursued a strategy based on bonds as main investment strategy. At least 70% of the sub-fund's assets were invested globally in corporate bonds (including Financials) that offered a non-investment grade status at the time of acquisition. In the due course of a re-structuring of fixed income instruments held by the sub-fund, the sub-fund manager may also have invested up to a maximum of 10% of the sub-fund's assets into listed or non-listed equities. Furthermore, the sub-fund manager may also have participate in capital increases or other corporate actions (e.g. for convertible bonds or warrant linked bonds) that were part of a re-structuring or take place after a re-structuring.

Further details regarding the main investment strategy are specified in the Special Section of the Sales Prospectus.

At least 80% of the sub-fund's net assets were allocated to investments that met the promoted environmental and social characteristics as described in the following sections. The alignment of the portfolio with the binding elements of the investment strategy used to attain the promoted environmental and social characteristics as well as the PAB-Exclusions was continuously controlled via the sub-fund's investment guidelines monitoring.

ESG assessment methodology

The sub-fund aimed to achieve the promoted environmental and social characteristics by assessing potential assets via an in-house ESG assessment methodology, regardless of their economic prospects for success, and by applying exclusion criteria based on this assessment.

The ESG assessment methodology was using a proprietary software tool which sourced data from one or several ESG data providers, public sources and/or internal assessments to derive overall assessments. The methodology applied to derive such overall assessments could have been based on different methods, such as prioritizing one data vendor, worst-of or averaging approach. Internal assessments may take into account factors such as an issuer's future expected ESG developments, plausibility of data with regard to past or future events, the willingness to engage in dialogue on ESG matters and/or ESG-related decisions of a company. Further, internal ESG assessments for investee companies may have considered the relevance of the exclusion criteria for the market sector of the investee company.

The proprietary software tool used, amongst others, the approaches described below to evaluate the adherence to the promoted ESG characteristics and whether investee companies followed good governance practices. The assessment approaches included, for example, exclusions related to revenues generated from controversial sectors or the exposure to such controversial sectors. In some of the assessment approaches, issuers received one of six possible assessments, with "A" representing the best and "F" the worst assessment. If an issuer was excluded based on one assessment approach, the sub-fund was prohibited from investing in that issuer.

Depending on the investable universe, the portfolio allocation and the exposure to certain sectors, the assessment approaches described below have been more or less relevant which was reflected in the number of issuers being actually excluded.

• PAB-Exclusions

In accordance with the applicable regulations, the sub-fund applied the PAB-Exclusions and excluded all of the following companies:

a. companies involved in controversial weapons (manufacturing or selling of anti-personnel mines, cluster munitions, chemical weapons and biological weapons) assessed as part of the assessment of the "Exposure to controversial weapons" as described below;
b. companies involved in the cultivation and production of tobacco;
c. companies that were found in violation of the United Nations Global Compact principles or the OECD Guidelines for Multinational Enterprises (assessed as part of the "Norm Controversy Assessment" as described below);
d. companies that derived 1% or more of their revenues from exploration, mining, extraction, distribution or refining of hard coal and lignite;
e. companies that derived 10% or more of their revenues from the exploration, extraction, distribution or refining of oil fuels;
f. companies that derived 50% or more of their revenues from the exploration, extraction, manufacturing or distribution of gaseous fuels;
g. companies that derived 50% or more of their revenues from electricity generation with a GHG intensity of more than 100 g CO2 e/kWh.

The PAB-Exclusions were, in particular, not applied for sight deposits with credit institutions and certain derivative instruments. The extent of the application of the PAB-Exclusions in relation to use of proceeds bonds was described below under the section “Use of proceeds bond Assessment”.

• Norm Controversy Assessment

The Norm Controversy Assessment evaluated the behaviour of companies in relation to generally accepted international standards and principles of responsible business conduct within, amongst others, the framework of the principles of the United Nations Global Compact, the United Nations Guiding Principles, the standards of the International Labour Organization and the OECD Guidelines for Multinational Enterprises. Examples of topics covered within these standards and principles included, but were not limited to, human rights violations, violations of workers' rights, child or forced labour, negative environmental impacts and business ethics. The Norm Controversy Assessment evaluated reported violations of the aforementioned international standards. Companies with the worst Norm Controversy Assessment of “F” were excluded as an investment.

• ESG Quality Assessment

The ESG Quality Assessment distinguished between investments in companies and investments in sovereign issuers.

For companies, the ESG Quality Assessment allowed for a peer group comparison based on an overall ESG assessment, for example, concerning the handling of environmental changes, product safety, employee management or corporate ethics. The peer group for companies was made up from the same industry sector. Companies that scored higher in this comparison received a better assessment, while Companies that scored lower in the comparison received a worse assessment. Companies with the worst assessment of “F” were excluded as an investment.

For sovereign issuers, the ESG Quality Assessment assessed countries based on a peer group comparison considering environmental and social criteria as well as indicators for good governance, including, for example, the political system, the existence of institutions and the rule of law. Sovereign issuers with the worst assessment of “F” were excluded as an investment.

• Freedom House Status

Freedom House is an international non-governmental organization that classifies countries by their degree of political and civil liberties. Based on the Freedom House Status, countries that were classified as “not free” were excluded as an investment.

• Exposure to controversial sectors

Companies that were involved in certain business areas and business activities in controversial areas (“controversial sectors”) were excluded according to their share of total revenues generated in such controversial sectors as follows:

a. Manufacturing of products and/or provision of services in the defence industry: 5% or more
b. Manufacturing and/or distribution of civil handguns or ammunition: 5% or more
c. Manufacturing of products in and/or provision of services for the gambling industry: 5% or more
d. Manufacturing of adult entertainment: 5% or more
e. Manufacturing of palm oil: 5% or more
f. Nuclear power generation and/or uranium mining and/or uranium enrichment: 5% or more
g. Unconventional extraction of crude oil and/or natural gas (including oil sand, oil shale/shale gas, arctic drilling): more than 0%
h. Companies that derived 25% or more from thermal coal mining and thermal coal-based power generation as well as companies with thermal coal expansion plans, such as additional expansion of coal mining, coal production or coal usage. Companies with thermal coal expansion plans were excluded based on an internal identification methodology.

Further, companies involved in the manufacturing or selling of nuclear weapons or key components of nuclear weapons were excluded and the shareholdings within a group structure might have been taken into consideration.

• Exposure to controversial weapons

Companies were excluded if they were identified as being involved in the manufacturing or selling of controversial weapons or key components of controversial weapons or other related specific activities

(anti-personnel mines, cluster munitions, chemical and biological weapons, blinding laser weapons, weapons with non-detectable fragments, depleted uranium weapons/munitions and/or incendiary weapons using white phosphorus). In addition, the shareholdings within a group structure might have been taken into consideration for the exclusions.

• Use of Proceeds Bond Assessment

This assessment was specific to the nature of this instrument and an investment in use of proceeds bonds was permitted only if the following criteria were met. Firstly, all use of proceeds bonds were checked for compliance with the Climate Bonds Standards, similar industry standards for green bonds, social bonds or sustainability bonds (such as ICMA Principles) or the EU Green Bond Standard or whether bonds have been subject to an independent review.

Secondly, certain exclusion criteria were applied, where relevant and where sufficient data was available, at the level of the bond and/or in relation to the issuer of the bonds which could have led to the exclusion of the bond as an investment.

In particular, investments in use of proceeds bonds were prohibited based on the following issuer criteria:

a. Companies referred to under a) to c) of the PAB-Exclusions;
b. Companies with identified thermal coal expansion plans as referred to above;
c. Companies that derived more than 0% of their revenues from unconventional extraction of crude oil and/or natural gas (including oil sand, oil shale/shale gas, arctic drilling);
d. Companies that derived 5% or more of their revenues from nuclear power generation and/or uranium mining and/or uranium enrichment;
e. Sovereign issuers classified as “not free” by Freedom House.

Where no sufficient data was available for the evaluation of the PAB-Exclusions at use of proceeds bond level, the issuer in addition was evaluated based d) to g) of the above described PAB-Exclusions which may have led to the exclusion of the use of proceeds bond.

• Target Fund Assessment

Target funds were eligible if they were aligned with the PAB-Exclusions (starting from 21 May 2025) and, where applicable, the Freedom House Status. The target fund assessment relied on target fund related information acquired from external data sources or was evaluated in relation to the underlying assets of the portfolios of the target funds. Considering the diversity of data vendors and methodologies as well as the target fund portfolio rebalancing, this sub-fund have been indirectly exposed to certain assets that would have been excluded if invested directly.

Sustainability Investment Assessment

Further, for the proportion of sustainable investments, DWS measured the contribution to one or several UN SDGs and/or to other environmental sustainable objectives via its Sustainability Investment Assessment which evaluated potential investments in relation to different criteria to conclude whether an investment could have been considered as sustainable as further detailed in the section “What were the objectives of the sustainable investments that the financial product partially intends to make and how did the sustainable investment contributed to such objectives?”.

The applied ESG investment strategy did not pursue a committed minimum reduction of the scope of the investments.

The assessment of the good governance practices of the investee companies (including assessments related to sound management structures, employee relations, remuneration of staff and tax compliance) was part of the Norm Controversy Assessment which evaluated a company’s behavior within generally accepted international standards and principles of responsible business conduct. Companies with the worst Norm Controversy Assessment of “F” were excluded as an investment.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

How did this financial product perform compared to the reference sustainable benchmark?

This sub-fund had not designated a reference benchmark to determine whether it was aligned with the environmental and social characteristics that it promoted.

Periodic disclosure for financial products referred to in Article 8, paragraph 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

Product name: DWS Invest ESG European Small/Mid Cap

Legal entity identifier: 549300I4MADW6ZHX8U51

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

Yes	No
[ ] it made **sustainable investments with an environmental objective:** ___%	[X] It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of 30.76% of sustainable investments.
[ ] in economic activities that qualify as environmentally sustainable under the EU Taxonomy	[ ] with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
[ ] in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	[X] with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
	[X] with a social objective
[ ] It made **sustainable investments with a social objective:** ___%	[ ] It promoted E/S characteristics, but did **not make any sustainable investments**

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities.** That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

To what extent were the environmental and/or social characteristics promoted by this financial product met?

This sub-fund promoted environmental and social characteristics related to a general consideration of ESG criteria by excluding, for example, investments in companies with the worst norm-related issues towards international standards, issuers with the worst assessment in terms of environmental, social and governance aspects compared to their peer group and/or investments in companies whose involvement in controversial sectors exceeded predefined revenue thresholds.

Further, this sub-fund promoted a proportion of sustainable investments in accordance with article 2(17) of the regulation on sustainability-related disclosures in the financial services sector (SFDR).

This sub-fund had not designated a reference benchmark for the purpose of attaining the environmental and social characteristics promoted.

No derivatives were used to attain the environmental or social characteristics promoted by the sub-fund.

How did the sustainability indicators perform?

The attainment of the promoted environmental and social characteristics as well as the sustainable investment was assessed via the application of an in-house ESG assessment methodology and ESG specific exclusion thresholds as further described in the section “What actions have been taken to meet the environmental and/or social characteristics during the reference period?”. The methodology applied different assessment approaches that were used as sustainability indicators which were:

• **Norm Controversy Assessment** used as an indicator for a company’s exposure to norm-related issues towards international standards.
Performance: No investments in suboptimal assets

• **ESG Quality Assessment** used as an indicator for comparison of an issuer’s environmental, social and governance aspects in relation to its peer group.
Performance: No investments in suboptimal assets

• **Freedom House Status** used as an indicator for the political and civil liberties of a country.
Performance: No investments in suboptimal assets

• **Exposure to controversial sectors** used as an indicator for a company’s involvement in controversial sectors.
Performance: 0%

• **Exposure to companies subject to the EU Paris-aligned Benchmark exclusion criteria** as set forth in article 12(1) of Commission Delegated Regulation 2020/1818 (PAB-Exclusions).
Performance: 0%

• **Sustainability Investment Assessment** used as an indicator to measure the proportion of sustainable investments pursuant to article 2(17) SFDR.
Performance: 30.76%

Please see the section entitled “What actions have been taken to meet the environmental and/or social characteristics during the reference period?” for a description of the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted, including the exclusion criteria, and the assessment methodology for determining whether and to what extent assets met the defined environmental and/or social characteristics (including the turnover thresholds defined for the xclusions). This section contains further information on the sustainability indicators. The values from the DWS front office system are used to calculate the sustainability indicators. This means that there may be minor deviations from the other market values that appear in the annual report, which are derived from the fund accounting system.

…and compared to previous periods?

Attainment of the promoted environmental and social characteristics at portfolio level was measured in the previous years on the basis of the following sustainability indicators:

Nuclear weapons F	-	-	0.00	% of assets

The disclosure of the sustainability indicators has been revised compared with the prior-year report. The assessment methodology is unchanged. Additional information on the currently valid sustainability indicators is provided in the section entitled “What actions have been taken to meet the environmental and/or social characteristics during the reference period?”.
Information about taking into account the principal adverse impacts on sustainability factors is provided in the section entitled “How did this financial product consider principal adverse impacts on sustainability factors?”

DWS ESG-Assessment Scale

In the following assessment categories, the assets received one of six possible scores, with "A" being the best score and "F" being the worst score.

Criteria	Involvement in controversial sectors *(1)	Involvement in controversial weapons	Norm Assessment *(6)	ESG Quality Assessment	SDG- Assessment	Climat & Transition Risk Assessment
A	Non-involvement	Confirmed non-involvement	Confirmed no issues	True leader in ESG (>= 87.5 DWS ESG score)	True SDG contributor (>= 87.5 SDG score)	True climate leader (>= 87.5 score)
B	Remote involvement	Alleged	Violations of lesser degree	ESG leader (75-87.5 DWS ESG score)	SDG contributor (75-87.5 SDG score)	Climate solution provider(75-87.5 score)
C	0% - 5%	Dual-Purpose *(2)	Violations of lesser degree	ESG upper midfield (50-75 DWS ESG score)	SDG upper midfield (50-75 SDG score)	Low transition risk (50-75 score)
D	5% - 10% (coal: 5% - 10%)	Owning *(3)/ Owned *(4)	Violation of lesser degree	ESG lower midfield (25-50 DWS ESG score)	SDG lower midfield (25-50 SDG score)	Mod. transition risk (25-50 score)
E	10% - 25% (coal: 15% - 25%)	Component Producer *(5)	High severity or re-assessed highest violation *(7)	ESG laggard (12.5-25 DWS ESG score)	SDG obstructer (12.5-25 SDG score)	High transition risk (12.5-25 score)
F	>= 25%	Weapon producer	Highest severity / global compact violation *(8)	True laggard in ESG (0-12.5 DWS ESG score)	Significant SDG obstructer (0-12.5 SDG score)	Excessive transition risk (0-12.5 score)

*(1) Revenue share thresholds as per standard scheme. Sub-Granularity available. Thresholds can be individually set.

*(2) Encompasses e.g.. weapon-carrying systems such as combat aircraft that carry non-controversial weapons as well as controversial ones.

*(3) Owning more than 20% equity.

*(4) Being owned by more than 50% of company involved in grade E or F.

*(5) Single purpose key component.

*(6) Includes ILO controversies as well as corporate governance and product issues.

*(7) In its ongoing assessment, DWS takes into account the violation(s) of international standards – observed via data from ESG data vendors – such as the UN Global Compact, but also possible ESG data vendor errors identified, future expected developments of these violations as well as the willingness of the issuer to engage in dialogue regarding corporate decisions in this regard.

*(8) An F-grade can be considered a reconfirmed violation of the United Nations Global Compact rule framework for corporate behavior.

What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?

Sustainable investments contributed (i) to at least one of the Sustainable Development Goals of the United Nations (UN SDGs) that relate to environmental and/or social objectives, such as no poverty, zero hunger, good health and well-being, quality education, gender equality, clean water and sanitation, affordable and clean energy, decent work and economic growth, reduced inequalities, sustainable cities and communities, responsible consumption and production, climate action, life below water and/or life on land and/or (ii) to at least one other environmental objective such as climate change adaption, climate change mitigation, sustainable use and protection of water and marine recources, transition to a circular economy, pollution prevention and control and/or protection and restoration of biodiversity and ecosystems (as defined under the EU Taxonomy).

The extent of the contribution to individual sustainable investment objectives varied depending on the actual investments held in the portfolio.

DWS determined the contribution to a sustainable investment objective based on its Sustainability Investment Assessment which used data from one or several data providers, public sources and/or internal assessments. An investment's positive contribution to an environmental and/or social objective was assessed based on the revenues which a company generated from the actual economic activities making such contribution (activity-based approach). Where a positive contribution was determined, the investment was considered sustainable if the issuer passed the Do No significant Harm ("DNSH") assessment and the company followed good governance practices.

The share of sustainable investments in the portfolio as defined in article 2(17) SFDR was therefore calculated in proportion to the economic activities of the issuers that were considered as sustainable (activity-based approach). Notwithstanding the preceding, in the case of use-of-proceeds bonds that were considered as sustainable investment, the value of the entire bond was counted towards the portfolio's share of sustainable investments.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

The sustainable investments in which the sub-fund invested were assessed to ensure they did not cause significant harm to any environmental or social sustainable investment objective. This was achieved by taking into account the indicators for principal adverse impacts on sustainability factors (dependent on relevance) as described below. If a significant harm was identified, the investment could not have been considered sustainable.

How were the indicators for adverse impacts on sustainability factors taken into account?

The Sustainability Investment Assessment systematically integrated the mandatory principal adverse indicators on sustainability factors (dependent on relevance) from Table 1 and relevant indicators from Tables 2 and 3 of Annex I of the Commission Delegated Regulation (EU) 2022/1288 supplementing the SFDR. Taking into account these principal adverse impacts, DWS had established quantitative thresholds and/or qualitative values to assess a significant harm on any of the environmental or social sustainable investment objectives. These values were set based upon various external and internal factors, such as data availability or market developments and may have been adapted going forward.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The alignment of sustainable investments with, amongst others, the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights was evaluated through the Norm Controversy Assessment (as further described below). Companies with the worst Norm Controversy Assessment of “F” were excluded as an investment.

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union Criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU Criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU Criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

How did this financial product consider principal adverse impacts on sustainability factors?

The sub-fund considered the following principal adverse impacts on sustainability factors from Annex I of the Commission Delegated Regulation (EU) 2022/1288 supplementing the SFDR:

- Greenhouse gas (GHG) emissions (no. 1);
- Carbon footprint (no. 2);
- GHG intensity of investee companies (no. 3);
- Exposure to companies active in the fossil fuel sector (no. 4);
- Violations of United Nations Global Compact principles and OECD Guidelines for Multinational Enterprises (no. 10); and
- Exposure to controversial weapons (no. 14).

DWS Invest ESG European Small/Mid Cap

Indicators	Description	Performance
Principal Adverse Impact		
PAII - 01. GHG emissions	Sum of the current value of investments of company i, divided by the investee company's enterprise value and multiplied by company's cope 1+2+3 GHG emissions.	118467.7 tCO2e
PAII - 02. Carbon Footprint - EUR	The carbon footprint is expressed as tonnes of CO2 emissions per million EUR invested. The CO2 emissions of an issuer are normalised by its enterprise value including cash (EVIC)	469.29 tCO2e / million EUR
PAII - 03. Carbon Intensity	Weighted average carbon intensity scope 1+2+3	534.14 tCO2e / million EUR
PAII - 04. Exposure to companies active in the fossil fuel sector	Share of investments in companies active in the fossil fuel sector	1.49 % of assets
PAII - 10. Violations of UNGC principles and OECD Guidelines for Multinational Enterprises	Share of investments in investee companies that have been involved in violations of the UNGC principles or OECD Guidelines for Multinational Enterprises	0 % of assets
PAII - 14. Exposure to controversial weapons	Share of investments in investee companies involved in the manufacture or selling of controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)	0 % of assets

As of: December 30, 2025

The Principal Adverse Impact Indicators (PAIIs) are calculated on the basis of the data in the DWS back office and front office systems, which are primarily based on the data of external ESG data providers. If there is no data on individual PAIIs for individual securities or their issuers, either because no data is available or the PAII is not applicable to the particular issuer or security, these securities or issuers are not included in the calculation of the PAII. With target fund investments, a look-through of the target fund holdings is performed if appropriate data is available. The calculation method for the individual PAI indicators may change in subsequent reporting periods due to evolving market standards, a change in the treatment of securities of certain types of instruments (such as derivatives) or as a result of regulatory clarifications.
Moreover, improved data availability may have an effect on the reported PAIIs in subsequent reporting periods.
The values from the DWS front office system are used to calculate the PAIIs. This means that there may be minor deviations from the other market values that appear in the annual report, which are derived from the fund accounting system.

What were the top investments of this financial product?

DWS Invest ESG European Small/Mid Cap

Largest investments	Breakdown by sector according to NACE Codes	in % of average portfolio volume	Breakdown by country
BAWAG Group	K - Financial and insurance activities	3.0 %	Austria
Zalando	G - Wholesale and retail trade; repair of motor vehicles and motorcycles	2.7 %	Germany
Banca Mediolanum	K - Financial and insurance activities	2.6 %	Italy
Nexans	C - Manufacturing	2.5 %	France
BPER Banca	K - Financial and insurance activities	2.4 %	Italy
Aperam	C - Manufacturing	2.3 %	Luxembourg
Persimmon	F - Construction	2.2 %	United Kingdom
CTP	NA - Other	2.2 %	Netherlands
Hellenic Telecommunications Organization	J - Information and communication	2.1 %	Greece
Elis	N - Administrative and support service activities	2.1 %	France

Storebrand	K - Financial and insurance activities	2.1 %	Norway
Admiral Group	K - Financial and insurance activities	2.0 %	United Kingdom
Marks & Spencer Group	G - Wholesale and retail trade; repair of motor vehicles and motorcycles	1.9 %	United Kingdom

for the period from January 01, 2025, through December 30, 2025

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is:
for the period from January 01, 2025, through December 31, 2025

What was the proportion of sustainability-related investments?

The proportion of sustainability-related investments as of the reporting date was 98.31% of portfolio assets.
Proportion of sustainability-related investments for the previous years:

30/12/2024: 97.51 %
29/12/2023: 94.03 %
30/12/2022: 98.14 %

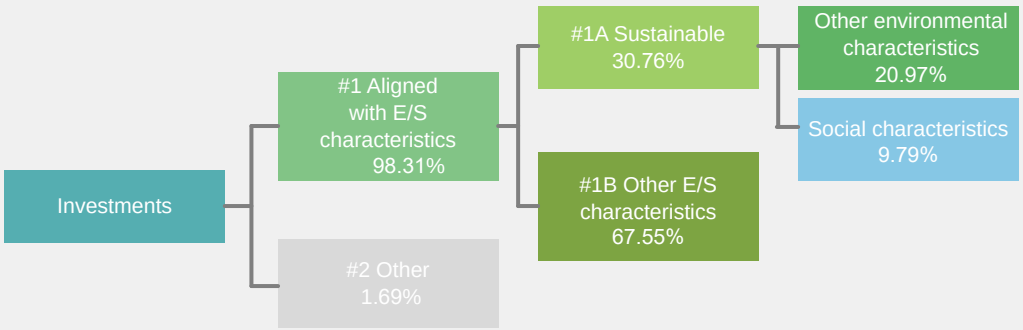
Asset allocation describes the share of investments in specific assets.

What was the asset allocation?

This sub-fund invested 98.31% of its net assets in investments that were aligned with the promoted environmental and social characteristics (#1 Aligned with E/S characteristics). Within this category, 30.76% of the sub-fund's net assets qualified as sustainable investments (#1A Sustainable). Thereof the share of sustainable investments with an environmental objective that was not compliant with the EU Taxonomy was 20.97% of the sub-fund's net assets and the share of socially sustainable investments was 9.79% of the sub-fund's net assets. The share of sustainable investments with an environmental objective that was not compliant with the EU Taxonomy and of socially sustainable investments depended on the market situation and the investable investment universe.

1.69% of the sub-fund's net assets have been invested in assets which were either out-of-scope of the ESG assessment methodology or for which ESG data coverage was incomplete (#2 Other) as further detailed in the section "What investments were included under "#2 Other", what was their purpose and were there any minimum environmental or social safeguards?".

A more detailed description of the specific asset allocation of this sub-fund can be found in the Special Section of the Sales Prospectus.



#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:
- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

In which economic sectors were the investments made?

DWS Invest ESG European Small/Mid Cap

G	Wholesale and retail trade; repair of motor vehicles and motorcycles	5.6 %
J	Information and communication	6.7 %
K	Financial and insurance activities	26.4 %
L	Real estate activities	3.3 %
M	Professional, scientific and technical activities	19.1 %
N	Administrative and support service activities	3.6 %
P	Education	0.5 %

DWS Invest ESG European Small/Mid Cap

NACE-Code	Breakdown by sector according to NACE Codes	in % of portfolio volume
NA	Other	8.8 %
Exposure to companies active in the fossil fuel sector		1.5 %

As of: December 30, 2025

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The sub-fund did not commit to invest a proportion of sustainable investments with an environmental objective aligned with the EU Taxonomy. Therefore, the promoted minimum percentage of environmentally sustainable investments aligned with the EU Taxonomy was 0% of the sub-fund's net assets. However, certain investments' underlying economic activities may have been aligned with the EU Taxonomy.

Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy[1]?

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are economic activities for yet low-carbon alternatives are not yet available and that have greenhouse gas emission levels corresponding to the best performance.

☐ Yes:

☐ In fossil gas ☐ In nuclear energy

☒ No

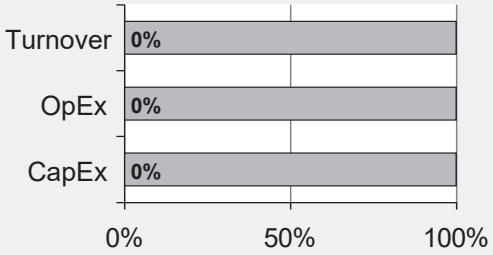
The sub-fund did not take into account the Taxonomy-alignment of companies active in the fossil gas and/or nuclear energy sectors.

[1] Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do no significant harm to any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Taxonomy-aligned activities are expressed as a share of:
- turnover reflecting the share of revenue from green activities of investee companies.
- capital expenditure (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- operational expenditure (OpEx) reflecting the green operational activities of investee companies.

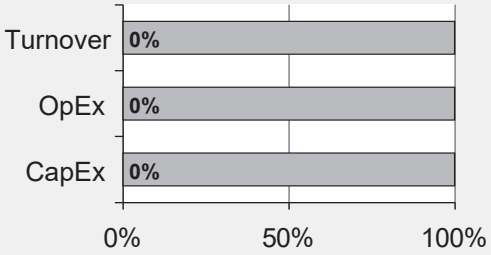
The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy-alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy-alignment only in relation to the investments of the financial product other than sovereign bonds.

1. Taxonomy-alignment of investments **including sovereign bonds***



Taxonomy-aligned: Fossil gas	0.00%
Taxonomy-aligned: Nuclear	0.00%
Taxonomy-aligned (no gas and nuclear)	0.00%
Taxonomy-aligned	0.00%
Non Taxonomy-aligned	100.00%

2. Taxonomy-alignment of investments **excluding sovereign bonds***



Taxonomy-aligned: Fossil gas	0.00%
Taxonomy-aligned: Nuclear	0.00%
Taxonomy-aligned (no gas and nuclear)	0.00%
Taxonomy-aligned	0.00%
Non Taxonomy-aligned	100.00%

This graph represents 100% of the total investments.

**For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures*

What was the share of investments made in transitional and enabling activities?

The sub-fund was not committed to a share of investments in transitional or enabling activities.

How did the percentage of investments that are aligned with the EU Taxonomy compare with previous reference periods?

The promoted proportion of environmentally sustainable investments in accordance with Regulation (EU) 2020/852 (Taxonomy Regulation) was 0% of the fund's assets in the current as well as previous reference periods. It may, however, have been the case that some sustainable investments were nevertheless aligned with an environmental objective of the Taxonomy Regulation.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the Regulation (EU) 2020/852.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The share of sustainable investments with an environmental objective that were not aligned with the EU Taxonomy was 20.97% of the sub-fund's net assets.

Shares of sustainable investments in previous reporting periods:

reporting period	sustainable investments (total)	with environmental objective	socially sustainable
30/12/2024	18.92%	10.02%	8.90%
29/12/2023	22.13%	13.19%	8.94%
30/12/2022	19.55%	--	--

What was the share of socially sustainable investments?

The share of socially sustainable investments was 9.79% of the sub-fund’s net

assets. Shares of sustainable investments in previous reporting periods:

reporting period	sustainable investments (total)	with environmental objective	socially sustainable
30/12/2024	18.92%	10.02%	8.90%
29/12/2023	22.13%	13.19%	8.94%
30/12/2022	19.55%	--	--

What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?

98.31% of the sub-fund’s net assets were aligned with the promoted environmental and social characteristics (#1 Aligned with E/S characteristics). 1.69% of the sub-fund’s net assets have been invested in assets which were either out-of-scope of the ESG assessment methodology or for which ESG data coverage was incomplete (#2 Other). Full ESG data coverage was required for the assessment of direct investments in companies in relation to good governance practices and the PAB-Exclusions.

Assets under “#2 Other” could include all asset classes as foreseen in the specific investment policy, such as sight deposits with credit institutions and derivatives. These assets could have been used by the portfolio management for performance, risk diversification, liquidity and hedging purposes.

Minimum environmental or social safeguards were not or only partially considered for the sub-fund’s investments falling within “#2 Other”.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

This sub-fund pursued a strategy based on equities as main investment strategy. At least 80% of the sub-fund`s assets were invested in equities. At least 51% of the sub-fund's assets was invested in equities of medium and small European issuers (mid caps and small caps).

Further details regarding the main investment strategy are specified in the Special Section of the Sales Prospectus.

98.31% of the sub-fund's net assets were allocated to investments that met the promoted environmental and social characteristics as described in the following sections. The alignment of the portfolio with the binding elements of the investment strategy used to attain the promoted environmental and social characteristics as well as the PAB-Exclusions was continuously controlled via the sub-fund's investment guidelines monitoring.

ESG assessment methodology

The sub-fund aimed to achieve the promoted environmental and social characteristics by assessing potential assets via an in-house ESG assessment methodology, regardless of their economic prospects for success, and by applying exclusion criteria based on this assessment.

The ESG assessment methodology was using a proprietary software tool which sourced data from one or several ESG data providers, public sources and/or internal assessments to derive overall assessments. The methodology applied to derive such overall assessments could have been based on different methods, such as prioritizing one data vendor, worst-of or averaging approach. Internal assessments may take into account factors such as an issuer's future expected ESG developments, plausibility of data with regard to past or future events, the willingness to engage in dialogue on ESG matters and/or ESG-related decisions of a company. Further, internal ESG assessments for investee companies may have considered the relevance of the exclusion criteria for the market sector of the investee company.

The proprietary software tool used, amongst others, the approaches described below to evaluate the adherence to the promoted ESG characteristics and whether investee companies followed good governance practices. The assessment approaches included, for example, exclusions related to revenues generated from controversial sectors or the exposure to such controversial sectors. In some of the assessment approaches, issuers received one of six possible assessments, with "A" representing the best and "F" the worst assessment. If an issuer was excluded based on one assessment approach, the sub-fund was prohibited from investing in that issuer.

Depending on the investable universe, the portfolio allocation and the exposure to certain sectors, the assessment approaches described below have been more or less relevant which was reflected in the number of issuers being actually excluded.

• PAB-Exclusions

In accordance with the applicable regulations, the sub-fund applied the PAB-Exclusions and excluded all of the following companies:

a. companies involved in controversial weapons (manufacturing or selling of anti-personnel mines, cluster munitions, chemical weapons and biological weapons) assessed as part of the assessment of the "Exposure to controversial weapons" as described below;
b. companies involved in the cultivation and production of tobacco;
c. companies that were found in violation of the United Nations Global Compact principles or the OECD Guidelines for Multinational Enterprises (assessed as part of the "Norm Controversy Assessment" as described below);
d. companies that derived 1% or more of their revenues from exploration, mining, extraction, distribution or refining of hard coal and lignite;
e. companies that derived 10% or more of their revenues from the exploration, extraction, distribution or refining of oil fuels;
f. companies that derived 50% or more of their revenues from the exploration, extraction, manufacturing or distribution of gaseous fuels;
g. companies that derived 50% or more of their revenues from electricity generation with a GHG intensity of more than 100 g CO2 e/kWh.

The PAB-Exclusions were, in particular, not applied for sight deposits with credit institutions and certain derivative instruments. The extent of the application of the PAB-Exclusions in relation to use of proceeds bonds was described below under the section "Use of proceeds bond Assessment".

• Norm Controversy Assessment

The Norm Controversy Assessment evaluated the behaviour of companies in relation to generally accepted international standards and principles of responsible business conduct within, amongst others, the framework of the principles of the United Nations Global Compact, the United Nations Guiding Principles, the standards of the International Labour Organization and the OECD Guidelines for Multinational Enterprises. Examples of topics covered within these standards and principles included, but were not limited to, human rights violations, violations of workers' rights, child or forced labour, negative environmental impacts and business ethics. The Norm Controversy Assessment evaluated reported violations of the aforementioned international standards. Companies with the worst Norm Controversy Assessment of “F” were excluded as an investment.

• ESG Quality Assessment

The ESG Quality Assessment distinguished between investments in companies and investments in sovereign issuers.

For companies, the ESG Quality Assessment allowed for a peer group comparison based on an overall ESG assessment, for example, concerning the handling of environmental changes, product safety, employee management or corporate ethics. The peer group for companies was made up from the same industry sector. Companies that scored higher in this comparison received a better assessment, while Companies that scored lower in the comparison received a worse assessment. Companies with the worst assessment of “F” were excluded as an investment.

For sovereign issuers, the ESG Quality Assessment assessed countries based on a peer group comparison considering environmental and social criteria as well as indicators for good governance, including, for example, the political system, the existence of institutions and the rule of law. Sovereign issuers with the worst assessment of “F” were excluded as an investment.

• Freedom House Status

Freedom House is an international non-governmental organization that classifies countries by their degree of political and civil liberties. Based on the Freedom House Status, countries that were classified as “not free” were excluded as an investment.

• Exposure to controversial sectors

Companies that were involved in certain business areas and business activities in controversial areas (“controversial sectors”) were excluded according to their share of total revenues generated in such controversial sectors as follows:

a. Manufacturing of products and/or provision of services in the defence industry: 5% or more
b. Manufacturing and/or distribution of civil handguns or ammunition: 5% or more
c. Manufacturing of products in and/or provision of services for the gambling industry: 5% or more
d. Manufacturing of adult entertainment: 5% or more
e. Manufacturing of palm oil: 5% or more
f. Nuclear power generation and/or uranium mining and/or uranium enrichment: 5% or more
g. Unconventional extraction of crude oil and/or natural gas (including oil sand, oil shale/shale gas, arctic drilling): more than 0%
h. Companies that derived 25% or more from thermal coal mining and thermal coal-based power generation as well as companies with thermal coal expansion plans, such as additional expansion of coal mining, coal production or coal usage. Companies with thermal coal expansion plans were excluded based on an internal identification methodology.

Further, companies involved in the manufacturing or selling of nuclear weapons or key components of nuclear weapons were excluded and the shareholdings within a group structure might have been taken into consideration.

• Exposure to controversial weapons

Companies were excluded if they were identified as being involved in the manufacturing or selling of controversial weapons or key components of controversial weapons or other related specific activities (anti-personnel mines, cluster munitions, chemical and biological weapons, blinding laser weapons, weapons with non-detectable fragments, depleted uranium weapons/munitions and/or incendiary weapons using white phosphorus). In addition, the shareholdings within a group structure might have been taken into consideration for the exclusions.

• Use-of-Proceeds Bond Assessment

This assessment was specific to the nature of this instrument and an investment in use of proceeds bonds was permitted only if the following criteria were met. Firstly, all use of proceeds bonds were checked for compliance with the Climate Bonds Standards, similar industry standards for green bonds, social bonds or sustainability bonds (such as ICMA Principles) or the EU Green Bond Standard or whether bonds have been subject to an independent review.

Secondly, certain exclusion criteria (including the applicable PAB-Exclusions) were applied, where relevant and where sufficient data was available, at the level of the bond and/or in relation to the issuer of the bonds which could lead to the exclusion of the bond as an investment.

• Target Fund Assessment

Target funds were eligible if they are aligned with the PAB-Exclusions (starting from 21 May 2025) and, where applicable, the Freedom House Status. The target fund assessment relied on target fund related information acquired from external data sources or was evaluated in relation to the underlying assets of the portfolios of the target funds. Considering the diversity of data vendors and methodologies as well as the target fund portfolio rebalancing, this sub-fund may have been indirectly exposed to certain assets that would be excluded if invested directly.

Sustainability Investment Assessment

Further, for the proportion of sustainable investments, DWS measured the contribution to one or several UN SDGs and/or to other environmental sustainable objectives via its Sustainability Investment Assessment which evaluated potential investments in relation to different criteria to conclude whether an investment could have been considered as sustainable as further detailed in the section “What were the objectives of the sustainable investments that the financial product partially intends to make and how did the sustainable investment contributed to such objectives?”.

The applied ESG investment strategy did not pursue a committed minimum reduction of the scope of the investments.

The assessment of the good governance practices of the investee companies (including assessments related to sound management structures, employee relations, remuneration of staff and tax compliance) was part of the Norm Controversy Assessment which evaluated a company’s behavior within generally accepted international standards and principles of responsible business conduct. Companies with the worst Norm Controversy Assessment of “F” were excluded as an investment.

How did this financial product perform compared to the reference sustainable benchmark?

This sub-fund had not designated a reference benchmark to determine whether it was aligned with the environmental and social characteristics that it promoted.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Periodic disclosure for financial products referred to in Article 8, paragraph 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

Product name: DWS Invest ESG Floating Rate Notes

Legal entity identifier: 54930035UIUSLZ2H7R96

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

Yes	No
[ ] it made **sustainable investments with an environmental objective:** ___%	[X] It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of 12.50% of sustainable investments.
[ ] in economic activities that qualify as environmentally sustainable under the EU Taxonomy	[ ] with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
[ ] in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	[X] with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
	[X] with a social objective
[ ] It made **sustainable investments with a social objective:** ___%	[ ] It promoted E/S characteristics, but did **not make any sustainable investments**

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities.** That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

To what extent were the environmental and/or social characteristics promoted by this financial product met?

This sub-fund promoted environmental and social characteristics related to a general consideration of ESG criteria by excluding, for example, investments in companies with the worst norm-related issues towards international standards, issuers with the worst assessment in terms of environmental, social and governance aspects compared to their peer group and/or investments in companies whose involvement in controversial sectors exceeded predefined revenue thresholds.

Further, this sub-fund promoted a proportion of sustainable investments in accordance with article 2(17) of the regulation on sustainability-related disclosures in the financial services sector (SFDR).

This sub-fund had not designated a reference benchmark for the purpose of attaining the environmental and social characteristics promoted.

No derivatives were used to attain the environmental or social characteristics promoted by the sub-fund.

How did the sustainability indicators perform?

The attainment of the promoted environmental and social characteristics as well as the sustainable investment was assessed via the application of an in-house ESG assessment methodology and ESG specific exclusion thresholds as further described in the section “What actions have been taken to meet the environmental and/or social characteristics during the reference period?”. The methodology applied different assessment approaches that were used as sustainability indicators which were:

• **Norm Controversy Assessment** used as an indicator for a company’s exposure to norm-related issues towards international standards.
Performance: No investments in suboptimal assets

• **ESG Quality Assessment** used as an indicator for comparison of an issuer’s environmental, social and governance aspects in relation to its peer group.
Performance: No investments in suboptimal assets

• **Freedom House Status** used as an indicator for the political and civil liberties of a country.
Performance: No investments in suboptimal assets

• **Exposure to controversial sectors** used as an indicator for a company’s involvement in controversial sectors.
Performance: 0%

• **Exposure to companies subject to the EU Paris-aligned Benchmark exclusion criteria** as set forth in article 12(1) of Commission Delegated Regulation 2020/1818 (PAB-Exclusions).
Performance: 0%

• **Sustainability Investment Assessment** used as an indicator to measure the proportion of sustainable investments pursuant to article 2(17) SFDR.
Performance: 12.50%

Please see the section entitled “What actions have been taken to meet the environmental and/or social characteristics during the reference period?” for a description of the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted, including the exclusion criteria, and the assessment methodology for determining whether and to what extent assets met the defined environmental and/or social characteristics (including the turnover thresholds defined for the xclusions). This section contains further information on the sustainability indicators. The values from the DWS front office system are used to calculate the sustainability indicators. This means that there may be minor deviations from the other market values that appear in the annual report, which are derived from the fund accounting system.

…and compared to previous periods?

Attainment of the promoted environmental and social characteristics at portfolio level was measured in the previous years on the basis of the following sustainability indicators:

The disclosure of the sustainability indicators has been revised compared with the prior-year report. The assessment methodology is unchanged. Additional information on the currently valid sustainability indicators is provided in the section entitled “What actions have been taken to meet the environmental and/or social characteristics during the reference period?”.
Information about taking into account the principal adverse impacts on sustainability factors is provided in the section entitled “How did this financial product consider principal adverse impacts on sustainability factors?”

DWS ESG-Assessment Scale

In the following assessment categories, the assets received one of six possible scores, with "A" being the best score and "F" being the worst score.

Criteria	Involvement in controversial sectors *(1)	Involvement in controversial weapons	Norm Assessment *(6)	ESG Quality Assessment	SDG- Assessment	Climat & Transition Risk Assessment
A	Non-involvement	Confirmed non-involvement	Confirmed no issues	True leader in ESG (>= 87.5 DWS ESG score)	True SDG contributor (>= 87.5 SDG score)	True climate leader (>= 87.5 score)
B	Remote involvement	Alleged	Violations of lesser degree	ESG leader (75-87.5 DWS ESG score)	SDG contributor (75-87.5 SDG score)	Climate solution provider(75-87.5 score)
C	0% - 5%	Dual-Purpose *(2)	Violations of lesser degree	ESG upper midfield (50-75 DWS ESG score)	SDG upper midfield (50-75 SDG score)	Low transition risk (50-75 score)
D	5% - 10% (coal: 5% - 10%)	Owning *(3)/ Owned *(4)	Violation of lesser degree	ESG lower midfield (25-50 DWS ESG score)	SDG lower midfield (25-50 SDG score)	Mod. transition risk (25-50 score)
E	10% - 25% (coal: 15% - 25%)	Component Producer *(5)	High severity or re-assessed highest violation *(7)	ESG laggard (12.5-25 DWS ESG score)	SDG obstructer (12.5-25 SDG score)	High transition risk (12.5-25 score)
F	>= 25%	Weapon producer	Highest severity / global compact violation *(8)	True laggard in ESG (0-12.5 DWS ESG score)	Significant SDG obstructer (0-12.5 SDG score)	Excessive transition risk (0-12.5 score)

*(1) Revenue share thresholds as per standard scheme. Sub-Granularity available. Thresholds can be individually set.

*(2) Encompasses e.g.. weapon-carrying systems such as combat aircraft that carry non-controversial weapons as well as controversial ones.

*(3) Owning more than 20% equity.

*(4) Being owned by more than 50% of company involved in grade E or F.

*(5) Single purpose key component.

*(6) Includes ILO controversies as well as corporate governance and product issues.

*(7) In its ongoing assessment, DWS takes into account the violation(s) of international standards – observed via data from ESG data vendors – such as the UN Global Compact, but also possible ESG data vendor errors identified, future expected developments of these violations as well as the willingness of the issuer to engage in dialogue regarding corporate decisions in this regard.

*(8) An F-grade can be considered a reconfirmed violation of the United Nations Global Compact rule framework for corporate behavior.

What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?

Sustainable investments contributed to at least one of the Sustainable Development Goals of the United Nations (UN SDGs) that relate to environmental and/or social objectives, such as good health and well-being or climate action and/or to at least one other environmental objective such as climate change adaption or climate change mitigation (as defined under the EU Taxonomy).

The extent of the contribution to individual sustainable investment objectives varied depending on the actual investments held in the portfolio.

DWS determined the contribution to a sustainable investment objective based on its Sustainability Investment Assessment which used data from one or several data providers, public sources and/or internal assessments. An investment's positive contribution to an environmental and/or social objective was assessed based on the revenues which a company generated from the actual economic activities making such contribution (activity-based approach). Where a positive contribution was determined, the investment was considered sustainable if the issuer passed the Do No significant Harm ("DNSH") assessment and the company followed good governance practices.

The share of sustainable investments in the portfolio as defined in article 2(17) SFDR was therefore calculated in proportion to the economic activities of the issuers that were considered as sustainable (activity-based approach). Notwithstanding the preceding, in the case of use-of-proceeds bonds that were considered as sustainable investment, the value of the entire bond was counted towards the portfolio's share of sustainable investments.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

The sustainable investments in which the sub-fund invested were assessed to ensure they did not cause significant harm to any environmental or social sustainable investment objective. This was achieved by taking into account the indicators for principal adverse impacts on sustainability factors (dependent on relevance) as described below. If a significant harm was identified, the investment could not have been considered sustainable.

How were the indicators for adverse impacts on sustainability factors taken into account?

The Sustainability Investment Assessment systematically integrated the mandatory principal adverse indicators on sustainability factors (dependent on relevance) from Table 1 and relevant indicators from Tables 2 and 3 of Annex I of the Commission Delegated Regulation (EU) 2022/1288 supplementing the SFDR. Taking into account these principal adverse impacts, DWS had established quantitative thresholds and/or qualitative values to assess a significant harm on any of the environmental or social sustainable investment objectives. These values were set based upon various external and internal factors, such as data availability or market developments and may have been adapted going forward.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The alignment of sustainable investments with, amongst others, the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights was evaluated through the Norm Controversy Assessment (as further described below). Companies with the worst Norm Controversy Assessment of “F” were excluded as an investment.

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union Criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU Criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU Criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

How did this financial product consider principal adverse impacts on sustainability factors?

The sub-fund considered the following principal adverse impacts on sustainability factors from Annex I of the Commission Delegated Regulation (EU) 2022/1288 supplementing the SFDR:

- Greenhouse gas (GHG) emissions (no. 1);
- Carbon footprint (no. 2);
- GHG intensity of investee companies (no. 3);
- Exposure to companies active in the fossil fuel sector (no. 4);
- Violations of United Nations Global Compact principles and OECD Guidelines for Multinational Enterprises (no. 10); and
- Exposure to controversial weapons (no. 14).

DWS Invest ESG Floating Rate Notes

Indicators	Description	Performance	
Principal Adverse Impact			
PAII - 01. GHG emissions	Sum of the current value of investments of company i, divided by the investee company's enterprise value and multiplied by company's cope 1+2+3 GHG emissions.	225329.12	tCO2e
PAII - 02. Carbon Footprint - EUR	The carbon footprint is expressed as tonnes of CO2 emissions per million EUR invested. The CO2 emissions of an issuer are normalised by its enterprise value including cash (EVIC)	226.97	tCO2e / million EUR
PAII - 03. Carbon Intensity	Weighted average carbon intensity scope 1+2+3	568.36	tCO2e / million EUR
PAII - 04. Exposure to companies active in the fossil fuel sector	Share of investments in companies active in the fossil fuel sector	0.61	% of assets
PAII - 10. Violations of UNGC principles and OECD Guidelines for Multinational Enterprises	Share of investments in investee companies that have been involved in violations of the UNGC principles or OECD Guidelines for Multinational Enterprises	0	% of assets
PAII - 14. Exposure to controversial weapons	Share of investments in investee companies involved in the manufacture or selling of controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)	0	% of assets

As of: December 30, 2025

The Principal Adverse Impact Indicators (PAIIs) are calculated on the basis of the data in the DWS back office and front office systems, which are primarily based on the data of external ESG data providers. If there is no data on individual PAIIs for individual securities or their issuers, either because no data is available or the PAII is not applicable to the particular issuer or security, these securities or issuers are not included in the calculation of the PAII. With target fund investments, a look-through of the target fund holdings is performed if appropriate data is available. The calculation method for the individual PAI indicators may change in subsequent reporting periods due to evolving market standards, a change in the treatment of securities of certain types of instruments (such as derivatives) or as a result of regulatory clarifications.
Moreover, improved data availability may have an effect on the reported PAIIs in subsequent reporting periods.
The values from the DWS front office system are used to calculate the PAIIs. This means that there may be minor deviations from the other market values that appear in the annual report, which are derived from the fund accounting system.

What were the top investments of this financial product?

for the period from January 01, 2025, through December 30, 2025

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is:
for the period from January 01, 2025, through December 31, 2025

What was the proportion of sustainability-related investments?

The proportion of sustainability-related investments as of the reporting date was 99.36% of portfolio assets.
Proportion of sustainability-related investments for the previous years:

30/12/2024: 88.33 %
29/12/2023: 90.10 %
30/12/2022: 97.42 %

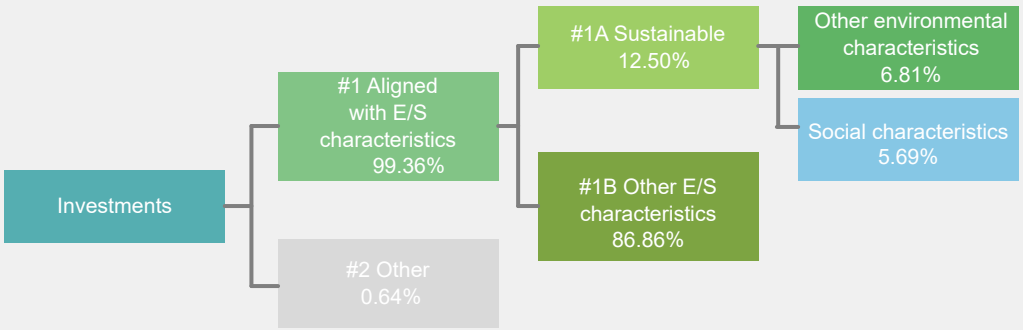
Asset allocation describes the share of investments in specific assets.

What was the asset allocation?

This sub-fund invested 99.36% of its net assets in investments that were aligned with the promoted environmental and social characteristics (#1 Aligned with E/S characteristics). Within this category, 12.50% of the sub-fund's net assets qualified as sustainable investments (#1A Sustainable). Thereof the share of sustainable investments with an environmental objective that was not compliant with the EU Taxonomy was 6.81% of the sub-fund's net assets and the share of socially sustainable investments was 5.69% of the sub-fund's net assets. The share of sustainable investments with an environmental objective that was not compliant with the EU Taxonomy and of socially sustainable investments depended on the market situation and the investable investment universe.

0.64% of the sub-fund's net assets have been invested in assets which were either out-of-scope of the ESG assessment methodology or for which ESG data coverage was incomplete (#2 Other) as further detailed in the section "What investments were included under "#2 Other", what was their purpose and were there any minimum environmental or social safeguards?".

A more detailed description of the specific asset allocation of this sub-fund can be found in the Special Section of the Sales Prospectus.



#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:
- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

In which economic sectors were the investments made?

M	Professional, scientific and technical activities	2.6 %
N	Administrative and support service activities	0.6 %
O	Public administration and defence; compulsory social security	7.4 %
NA	Other	12.1 %

NACE-Code	Breakdown by sector according to NACE Codes	in % of portfolio volume
Exposure to companies active in the fossil fuel sector		0.6 %

As of: December 30, 2025

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The sub-fund did not commit to invest a proportion of sustainable investments with an environmental objective aligned with the EU Taxonomy. Therefore, the promoted minimum percentage of environmentally sustainable investments aligned with the EU Taxonomy was 0% of the sub-fund's net assets. However, certain investments' underlying economic activities may have been aligned with the EU Taxonomy.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are economic activities for yet low-carbon alternatives are not yet available and that have greenhouse gas emission levels corresponding to the best performance.

Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy[1]?

☐ Yes:

☐ In fossil gas ☐ In nuclear energy

☒ No

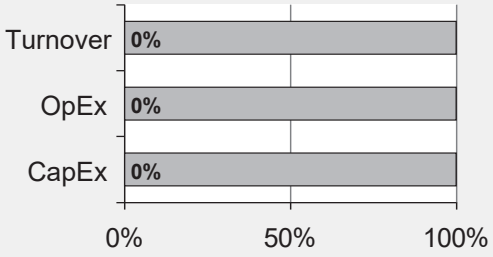
The sub-fund did not take into account the Taxonomy-alignment of companies active in the fossil gas and/or nuclear energy sectors.

[1] Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do no significant harm to any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Taxonomy-aligned activities are expressed as a share of:
- turnover reflecting the share of revenue from green activities of investee companies.
- capital expenditure (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- operational expenditure (OpEx) reflecting the green operational activities of investee companies.

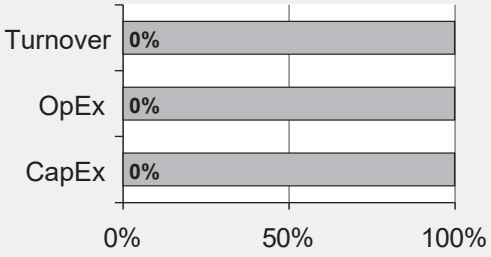
The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy-alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy-alignment only in relation to the investments of the financial product other than sovereign bonds.

1. Taxonomy-alignment of investments **including sovereign bonds***



Taxonomy-aligned: Fossil gas	0.00%
Taxonomy-aligned: Nuclear	0.00%
Taxonomy-aligned (no gas and nuclear)	0.00%
Taxonomy-aligned	0.00%
Non Taxonomy-aligned	100.00%

2. Taxonomy-alignment of investments **excluding sovereign bonds***



Taxonomy-aligned: Fossil gas	0.00%
Taxonomy-aligned: Nuclear	0.00%
Taxonomy-aligned (no gas and nuclear)	0.00%
Taxonomy-aligned	0.00%
Non Taxonomy-aligned	100.00%

This graph represents 100% of the total investments.

**For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures*

What was the share of investments made in transitional and enabling activities?

The sub-fund was not committed to a share of investments in transitional or enabling activities.

How did the percentage of investments that are aligned with the EU Taxonomy compare with previous reference periods?

The promoted proportion of environmentally sustainable investments in accordance with Regulation (EU) 2020/852 (Taxonomy Regulation) was 0% of the fund's assets in the current as well as previous reference periods. It may, however, have been the case that some sustainable investments were nevertheless aligned with an environmental objective of the Taxonomy Regulation.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the Regulation (EU) 2020/852.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The share of sustainable investments with an environmental objective that were not aligned with the EU Taxonomy was 6.81% of the sub-fund's net assets.

Shares of sustainable investments in previous reporting periods:

reporting period	sustainable investments (total)	with environmental objective	socially sustainable
30/12/2024	5.77%	3.56%	2.21%
29/12/2023	7.34%	2.86%	4.48%
30/12/2022	6.66%	--	--

What was the share of socially sustainable investments?

The share of socially sustainable investments was 5.69% of the sub-fund’s net assets.

Shares of sustainable investments in previous reporting periods:

reporting period	sustainable investments (total)	with environmental objective	socially sustainable
30/12/2024	5.77%	3.56%	2.21%
29/12/2023	7.34%	2.86%	4.48%
30/12/2022	6.66%	--	--

What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?

99.36% of the sub-fund’s net assets were aligned with the promoted environmental and social characteristics (#1 Aligned with E/S characteristics). 0,64% of the sub-fund’s net assets have been invested in assets which were either out-of-scope of the ESG assessment methodology or for which ESG data coverage was incomplete (#2 Other). Full ESG data coverage was required for the assessment of direct investments in companies in relation to good governance practices and the PAB-Exclusions.

Assets under “#2 Other” could include all asset classes as foreseen in the specific investment policy, such as sight deposits with credit institutions and derivatives. These assets could have been used by the portfolio management for performance, risk diversification, liquidity and hedging purposes.

Minimum environmental or social safeguards were not or only partially considered for the sub-fund’s investments falling within “#2 Other”.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

This sub-fund pursued a strategy based on bonds as main investment strategy. At least 70% of the sub-fund's assets should have been invested in floating rate bonds. Furthermore, the sub-fund's assets may have been invested in convertible bonds or fixed rate bonds that were traded on exchanges or on another regulated market that was recognized, open to the public and operates regularly and that was located in a member country of the Organisation for Economic Co-operation and Development (OECD), in the G20, the EU, Singapore, as well as in investment funds (incl. money market funds), deposits with credit and money market instruments.

Further details regarding the main investment strategy are specified in the Special Section of the Sales Prospectus.

99.36% of the sub-fund's net assets were allocated to investments that met the promoted environmental and social characteristics as described in the following sections. The alignment of the portfolio with the binding elements of the investment strategy used to attain the promoted environmental and social characteristics as well as the PAB-Exclusions was continuously controlled via the sub-fund's investment guidelines monitoring.

ESG assessment methodology

The sub-fund aimed to achieve the promoted environmental and social characteristics by assessing potential assets via an in-house ESG assessment methodology, regardless of their economic prospects for success, and by applying exclusion criteria based on this assessment.

The ESG assessment methodology was using a proprietary software tool which sourced data from one or several ESG data providers, public sources and/or internal assessments to derive overall assessments. The methodology applied to derive such overall assessments could have been based on different methods, such as prioritizing one data vendor, worst-of or averaging approach. Internal assessments may take into account factors such as an issuer's future expected ESG developments, plausibility of data with regard to past or future events, the willingness to engage in dialogue on ESG matters and/or ESG-related decisions of a company. Further, internal ESG assessments for investee companies may have considered the relevance of the exclusion criteria for the market sector of the investee company.

The proprietary software tool used, amongst others, the approaches described below to evaluate the adherence to the promoted ESG characteristics and whether investee companies followed good governance practices. The assessment approaches included, for example, exclusions related to revenues generated from controversial sectors or the exposure to such controversial sectors. In some of the assessment approaches, issuers received one of six possible assessments, with "A" representing the best and "F" the worst assessment. If an issuer was excluded based on one assessment approach, the sub-fund was prohibited from investing in that issuer.

Depending on the investable universe, the portfolio allocation and the exposure to certain sectors, the assessment approaches described below have been more or less relevant which was reflected in the number of issuers being actually excluded.

• PAB-Exclusions

In accordance with the applicable regulations, the sub-fund applied the PAB-Exclusions and excluded all of the following companies:

a. companies involved in controversial weapons (manufacturing or selling of anti-personnel mines, cluster munitions, chemical weapons and biological weapons) assessed as part of the assessment of the "Exposure to controversial weapons" as described below;
b. companies involved in the cultivation and production of tobacco;
c. companies that were found in violation of the United Nations Global Compact principles or the OECD Guidelines for Multinational Enterprises (assessed as part of the "Norm Controversy Assessment" as described below);
d. companies that derived 1% or more of their revenues from exploration, mining, extraction, distribution or refining of hard coal and lignite;
e. companies that derived 10% or more of their revenues from the exploration, extraction, distribution or refining of oil fuels;
f. companies that derived 50% or more of their revenues from the exploration, extraction, manufacturing or distribution of gaseous fuels;
g. companies that derived 50% or more of their revenues from electricity generation with a GHG intensity of more than 100 g CO2 e/kWh.

The PAB-Exclusions were, in particular, not applied for sight deposits with credit institutions and certain derivative instruments. The extent of the application of the PAB-Exclusions in relation to use of proceeds bonds was described below under the section “Use of proceeds bond Assessment”.

• **Norm Controversy Assessment**

The Norm Controversy Assessment evaluated the behaviour of companies in relation to generally accepted international standards and principles of responsible business conduct within, amongst others, the framework of the principles of the United Nations Global Compact, the United Nations Guiding Principles, the standards of the International Labour Organization and the OECD Guidelines for Multinational Enterprises. Examples of topics covered within these standards and principles included, but were not limited to, human rights violations, violations of workers' rights, child or forced labour, negative environmental impacts and business ethics. The Norm Controversy Assessment evaluated reported violations of the aforementioned international standards. Companies with the worst Norm Controversy Assessment of “F” were excluded as an investment.

• **ESG Quality Assessment**

The ESG Quality Assessment distinguished between investments in companies and investments in sovereign issuers.

For companies, the ESG Quality Assessment allowed for a peer group comparison based on an overall ESG assessment, for example, concerning the handling of environmental changes, product safety, employee management or corporate ethics. The peer group for companies was made up from the same industry sector. Companies that scored higher in this comparison received a better assessment, while Companies that scored lower in the comparison received a worse assessment. Companies with the worst assessment of “F” were excluded as an investment.

For sovereign issuers, the ESG Quality Assessment assessed countries based on a peer group comparison considering environmental and social criteria as well as indicators for good governance, including, for example, the political system, the existence of institutions and the rule of law. Sovereign issuers with the worst assessment of “F” were excluded as an investment.

• **Freedom House Status**

Freedom House is an international non-governmental organization that classifies countries by their degree of political and civil liberties. Based on the Freedom House Status, countries that were classified as “not free” were excluded as an investment.

• **Exposure to controversial sectors**

Companies that were involved in certain business areas and business activities in controversial areas (“controversial sectors”) were excluded according to their share of total revenues generated in such controversial sectors as follows:

a. Manufacturing of products and/or provision of services in the defence industry: 5% or more
b. Manufacturing and/or distribution of civil handguns or ammunition: 5% or more
c. Manufacturing of products in and/or provision of services for the gambling industry: 5% or more
d. Manufacturing of adult entertainment: 5% or more
e. Manufacturing of palm oil: 5% or more
f. Nuclear power generation and/or uranium mining and/or uranium enrichment: 5% or more
g. Unconventional extraction of crude oil and/or natural gas (including oil sand, oil shale/shale gas, arctic drilling): more than 0%
h. Companies that derived 25% or more from thermal coal mining and thermal coal-based power generation as well as companies with thermal coal expansion plans, such as additional expansion of coal mining, coal production or coal usage. Companies with thermal coal expansion plans were excluded based on an internal identification methodology.

Further, companies involved in the manufacturing or selling of nuclear weapons or key components of nuclear weapons were excluded and the shareholdings within a group structure might have been taken into consideration.

• **Exposure to controversial weapons**

Companies were excluded if they were identified as being involved in the manufacturing or selling of controversial weapons or key components of controversial weapons or other related specific activities

(anti-personnel mines, cluster munitions, chemical and biological weapons, blinding laser weapons, weapons with non-detectable fragments, depleted uranium weapons/munitions and/or incendiary weapons using white phosphorus). In addition, the shareholdings within a group structure might have been taken into consideration for the exclusions.

• Use of Proceeds Bond Assessment

This assessment was specific to the nature of this instrument and an investment in use of proceeds bonds was permitted only if the following criteria were met. Firstly, all use of proceeds bonds were checked for compliance with the Climate Bonds Standards, similar industry standards for green bonds, social bonds or sustainability bonds (such as ICMA Principles) or the EU Green Bond Standard or whether bonds have been subject to an independent review.

Secondly, certain exclusion criteria were applied, where relevant and where sufficient data was available, at the level of the bond and/or in relation to the issuer of the bonds which could have led to the exclusion of the bond as an investment.

In particular, investments in use of proceeds bonds were prohibited based on the following issuer criteria:

a. Companies referred to under a) to c) of the PAB-Exclusions;
b. Companies with identified thermal coal expansion plans as referred to above;
c. Companies that derived more than 0% of their revenues from unconventional extraction of crude oil and/or natural gas (including oil sand, oil shale/shale gas, arctic drilling);
d. Companies that derived 5% or more of their revenues from nuclear power generation and/or uranium mining and/or uranium enrichment;
e. Sovereign issuers classified as “not free” by Freedom House.

Where no sufficient data was available for the evaluation of the PAB-Exclusions at use of proceeds bond level, the issuer in addition was evaluated based d) to g) of the above described PAB-Exclusions which may have led to the exclusion of the use of proceeds bond.

• Target Fund Assessment

Target funds were eligible if they were aligned with the PAB-Exclusions (starting from 21 May 2025) and, where applicable, the Freedom House Status. The target fund assessment relied on target fund related information acquired from external data sources or was evaluated in relation to the underlying assets of the portfolios of the target funds. Considering the diversity of data vendors and methodologies as well as the target fund portfolio rebalancing, this sub-fund have been indirectly exposed to certain assets that would have been excluded if invested directly.

Sustainability Investment Assessment

Further, for the proportion of sustainable investments, DWS measured the contribution to one or several UN SDGs and/or to other environmental sustainable objectives via its Sustainability Investment Assessment which evaluated potential investments in relation to different criteria to conclude whether an investment could have been considered as sustainable as further detailed in the section “What were the objectives of the sustainable investments that the financial product partially intends to make and how did the sustainable investment contributed to such objectives?”.

The applied ESG investment strategy did not pursue a committed minimum reduction of the scope of the investments.

The assessment of the good governance practices of the investee companies (including assessments related to sound management structures, employee relations, remuneration of staff and tax compliance) was part of the Norm Controversy Assessment which evaluated a company’s behavior within generally accepted international standards and principles of responsible business conduct. Companies with the worst Norm Controversy Assessment of “F” were excluded as an investment.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

How did this financial product perform compared to the reference sustainable benchmark?

This sub-fund had not designated a reference benchmark to determine whether it was aligned with the environmental and social characteristics that it promoted.

Periodic disclosure for financial products referred to in Article 8, paragraph 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

Product name: DWS Invest ESG Global Corporate Bonds

Legal entity identifier: 549300R7HHCUF1UTLL03

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

Yes	No
☐ it made **sustainable investments with an environmental objective:** ___%	☒ It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of 26.30% of sustainable investments.
☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy	☐ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
	☒ with a social objective
☐ It made **sustainable investments with a social objective:** ___%	☐ It promoted E/S characteristics, but did **not make any sustainable investments**

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities.** That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

To what extent were the environmental and/or social characteristics promoted by this financial product met?

This sub-fund promoted environmental and social characteristics related to a general consideration of ESG criteria by excluding, for example, investments in companies with the worst norm-related issues towards international standards, issuers with the worst assessment in terms of environmental, social and governance aspects compared to their peer group and/or investments in companies whose involvement in controversial sectors exceeded predefined revenue thresholds.

Further, this sub-fund promoted a proportion of sustainable investments in accordance with article 2(17) of the regulation on sustainability-related disclosures in the financial services sector (SFDR).

This sub-fund had not designated a reference benchmark for the purpose of attaining the environmental and social characteristics promoted.

No derivatives were used to attain the environmental or social characteristics promoted by the sub-fund.

How did the sustainability indicators perform?

The attainment of the promoted environmental and social characteristics as well as the sustainable investment was assessed via the application of an in-house ESG assessment methodology and ESG specific exclusion thresholds as further described in the section “What actions have been taken to meet the environmental and/or social characteristics during the reference period?”. The methodology applied different assessment approaches that were used as sustainability indicators which were:

• **Norm Controversy Assessment** used as an indicator for a company’s exposure to norm-related issues towards international standards.
Performance: No investments in suboptimal assets

• **ESG Quality Assessment** used as an indicator for comparison of an issuer’s environmental, social and governance aspects in relation to its peer group.
Performance: No investments in suboptimal assets

• **Freedom House Status** used as an indicator for the political and civil liberties of a country.
Performance: No investments in suboptimal assets

• **Exposure to controversial sectors** used as an indicator for a company’s involvement in controversial sectors.
Performance: 0%

• **Exposure to companies subject to the EU Paris-aligned Benchmark exclusion criteria** as set forth in article 12(1) of Commission Delegated Regulation 2020/1818 (PAB-Exclusions).
Performance: 0%

• **Sustainability Investment Assessment** used as an indicator to measure the proportion of sustainable investments pursuant to article 2(17) SFDR.
Performance: 26.30%

Please see the section entitled “What actions have been taken to meet the environmental and/or social characteristics during the reference period?” for a description of the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted, including the exclusion criteria, and the assessment methodology for determining whether and to what extent assets met the defined environmental and/or social characteristics (including the turnover thresholds defined for the xclusions). This section contains further information on the sustainability indicators. The values from the DWS front office system are used to calculate the sustainability indicators. This means that there may be minor deviations from the other market values that appear in the annual report, which are derived from the fund accounting system.

…and compared to previous periods?

Attainment of the promoted environmental and social characteristics at portfolio level was measured in the previous years on the basis of the following sustainability indicators:

DWS Invest ESG Global Corporate Bonds

The disclosure of the sustainability indicators has been revised compared with the prior-year report. The assessment methodology is unchanged. Additional information on the currently valid sustainability indicators is provided in the section entitled “What actions have been taken to meet the environmental and/or social characteristics during the reference period?”.
Information about taking into account the principal adverse impacts on sustainability factors is provided in the section entitled “How did this financial product consider principal adverse impacts on sustainability factors?”

DWS ESG-Assessment Scale

In the following assessment categories, the assets received one of six possible scores, with "A" being the best score and "F" being the worst score.

Criteria	Involvement in controversial sectors *(1)	Involvement in controversial weapons	Norm Assessment *(6)	ESG Quality Assessment	SDG- Assessment	Climat & Transition Risk Assessment
A	Non-involvement	Confirmed non-involvement	Confirmed no issues	True leader in ESG (>= 87.5 DWS ESG score)	True SDG contributor (>= 87.5 SDG score)	True climate leader (>= 87.5 score)
B	Remote involvement	Alleged	Violations of lesser degree	ESG leader (75-87.5 DWS ESG score)	SDG contributor (75-87.5 SDG score)	Climate solution provider(75-87.5 score)
C	0% - 5%	Dual-Purpose *(2)	Violations of lesser degree	ESG upper midfield (50-75 DWS ESG score)	SDG upper midfield (50-75 SDG score)	Low transition risk (50-75 score)
D	5% - 10% (coal: 5% - 10%)	Owning *(3)/ Owned *(4)	Violation of lesser degree	ESG lower midfield (25-50 DWS ESG score)	SDG lower midfield (25-50 SDG score)	Mod. transition risk (25-50 score)
E	10% - 25% (coal: 15% - 25%)	Component Producer *(5)	High severity or re-assessed highest violation *(7)	ESG laggard (12.5-25 DWS ESG score)	SDG obstructer (12.5-25 SDG score)	High transition risk (12.5-25 score)
F	>= 25%	Weapon producer	Highest severity / global compact violation *(8)	True laggard in ESG (0-12.5 DWS ESG score)	Significant SDG obstructer (0-12.5 SDG score)	Excessive transition risk (0-12.5 score)

*(1) Revenue share thresholds as per standard scheme. Sub-Granularity available. Thresholds can be individually set.

*(2) Encompasses e.g.. weapon-carrying systems such as combat aircraft that carry non-controversial weapons as well as controversial ones.

*(3) Owning more than 20% equity.

*(4) Being owned by more than 50% of company involved in grade E or F.

*(5) Single purpose key component.

*(6) Includes ILO controversies as well as corporate governance and product issues.

*(7) In its ongoing assessment, DWS takes into account the violation(s) of international standards – observed via data from ESG data vendors – such as the UN Global Compact, but also possible ESG data vendor errors identified, future expected developments of these violations as well as the willingness of the issuer to engage in dialogue regarding corporate decisions in this regard.

*(8) An F-grade can be considered a reconfirmed violation of the United Nations Global Compact rule framework for corporate behavior.

What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?

Sustainable investments contributed (i) to at least one of the Sustainable Development Goals of the United Nations (UN SDGs) that relate to environmental and/or social objectives, such as no poverty, zero hunger, good health and well-being, quality education, gender equality, clean water and sanitation, affordable and clean energy, decent work and economic growth, reduced inequalities, sustainable cities and communities, responsible consumption and production, climate action, life below water and/or life on land and/or (ii) to at least one other environmental objective such as climate change adaption, climate change mitigation, sustainable use and protection of water and marine recources, transition to a circular economy, pollution prevention and control and/or protection and restoration of biodiversity and ecosystems (as defined under the EU Taxonomy).

The extent of the contribution to individual sustainable investment objectives varied depending on the actual investments held in the portfolio.

DWS determined the contribution to a sustainable investment objective based on its Sustainability Investment Assessment which used data from one or several data providers, public sources and/or internal assessments. An investment's positive contribution to an environmental and/or social objective was assessed based on the revenues which a company generated from the actual economic activities making such contribution (activity-based approach). Where a positive contribution was determined, the investment was considered sustainable if the issuer passed the Do No significant Harm ("DNSH") assessment and the company followed good governance practices.

The share of sustainable investments in the portfolio as defined in article 2(17) SFDR was therefore calculated in proportion to the economic activities of the issuers that were considered as sustainable (activity-based approach). Notwithstanding the preceding, in the case of use-of-proceeds bonds that were considered as sustainable investment, the value of the entire bond was counted towards the portfolio's share of sustainable investments.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

The sustainable investments in which the sub-fund invested were assessed to ensure they did not cause significant harm to any environmental or social sustainable investment objective. This was achieved by taking into account the indicators for principal adverse impacts on sustainability factors (dependent on relevance) as described below. If a significant harm was identified, the investment could not have been considered sustainable.

How were the indicators for adverse impacts on sustainability factors taken into account?

The Sustainability Investment Assessment systematically integrated the mandatory principal adverse indicators on sustainability factors (dependent on relevance) from Table 1 and relevant indicators from Tables 2 and 3 of Annex I of the Commission Delegated Regulation (EU) 2022/1288 supplementing the SFDR. Taking into account these principal adverse impacts, DWS had established quantitative thresholds and/or qualitative values to assess a significant harm on any of the environmental or social sustainable investment objectives. These values were set based upon various external and internal factors, such as data availability or market developments and may have been adapted going forward.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The alignment of sustainable investments with, amongst others, the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights was evaluated through the Norm Controversy Assessment (as further described below). Companies with the worst Norm Controversy Assessment of “F” were excluded as an investment.

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union Criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU Criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU Criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

How did this financial product consider principal adverse impacts on sustainability factors?

The sub-fund considered the following principal adverse impacts on sustainability factors from Annex I of the Commission Delegated Regulation (EU) 2022/1288 supplementing the SFDR:

- Greenhouse gas (GHG) emissions (no. 1);
- Carbon footprint (no. 2);
- GHG intensity of investee companies (no. 3);
- Exposure to companies active in the fossil fuel sector (no. 4);
- Violations of United Nations Global Compact principles and OECD Guidelines for Multinational Enterprises (no. 10); and
- Exposure to controversial weapons (no. 14).

DWS Invest ESG Global Corporate Bonds

Indicators	Description	Performance	
Principal Adverse Impact			
PAII - 01. GHG emissions	Sum of the current value of investments of company i, divided by the investee company's enterprise value and multiplied by company's cope 1+2+3 GHG emissions.	66237.25	tCO2e
PAII - 02. Carbon Footprint - EUR	The carbon footprint is expressed as tonnes of CO2 emissions per million EUR invested. The CO2 emissions of an issuer are normalised by its enterprise value including cash (EVIC)	199.65	tCO2e / million EUR
PAII - 03. Carbon Intensity	Weighted average carbon intensity scope 1+2+3	503.39	tCO2e / million EUR
PAII - 04. Exposure to companies active in the fossil fuel sector	Share of investments in companies active in the fossil fuel sector	5.36	% of assets
PAII - 10. Violations of UNGC principles and OECD Guidelines for Multinational Enterprises	Share of investments in investee companies that have been involved in violations of the UNGC principles or OECD Guidelines for Multinational Enterprises	0	% of assets
PAII - 14. Exposure to controversial weapons	Share of investments in investee companies involved in the manufacture or selling of controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)	0	% of assets

As of: December 30, 2025

The Principal Adverse Impact Indicators (PAIIs) are calculated on the basis of the data in the DWS back office and front office systems, which are primarily based on the data of external ESG data providers. If there is no data on individual PAIIs for individual securities or their issuers, either because no data is available or the PAII is not applicable to the particular issuer or security, these securities or issuers are not included in the calculation of the PAII. With target fund investments, a look-through of the target fund holdings is performed if appropriate data is available. The calculation method for the individual PAI indicators may change in subsequent reporting periods due to evolving market standards, a change in the treatment of securities of certain types of instruments (such as derivatives) or as a result of regulatory clarifications.
Moreover, improved data availability may have an effect on the reported PAIIs in subsequent reporting periods.
The values from the DWS front office system are used to calculate the PAIIs. This means that there may be minor deviations from the other market values that appear in the annual report, which are derived from the fund accounting system.

What were the top investments of this financial product?

DWS Invest ESG Global Corporate Bonds

Largest investments	Breakdown by sector according to NACE Codes	in % of average portfolio volume	Breakdown by country
Standard Chartered 21/14.01.27 MTN Reg S	K - Financial and insurance activities	0.7 %	United Kingdom

Synchrony Financial 24/02.08.2030	K - Financial and insurance activities	0.5 %	United States

for the period from January 01, 2025, through December 30, 2025

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is:
for the period from January 01, 2025, through December 31, 2025

What was the proportion of sustainability-related investments?

The proportion of sustainability-related investments as of the reporting date was 94.43% of portfolio assets.
Proportion of sustainability-related investments for the previous years:

30/12/2024: 97.27 %
29/12/2023: 95.08 %
30/12/2022: 99.02 %

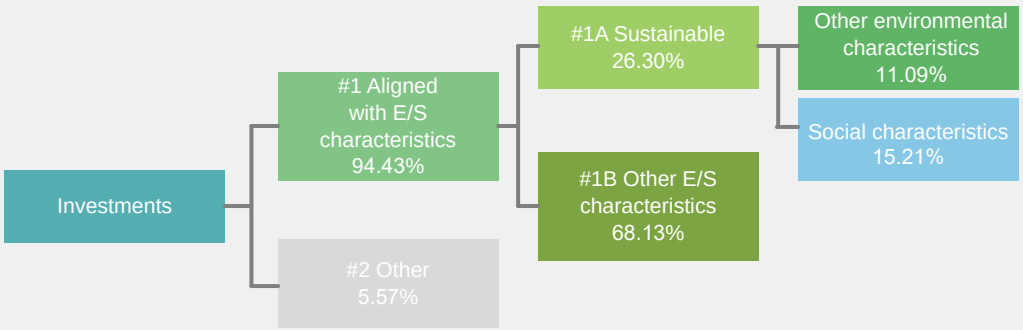
Asset allocation describes the share of investments in specific assets.

What was the asset allocation?

This sub-fund invested 94.43% of its net assets in investments that were aligned with the promoted environmental and social characteristics (#1 Aligned with E/S characteristics). Within this category, 26.30% of the sub-fund's net assets qualified as sustainable investments (#1A Sustainable). Thereof the share of sustainable investments with an environmental objective that was not compliant with the EU Taxonomy was 11.09% of the sub-fund's net assets and the share of socially sustainable investments was 15.21% of the sub-fund's net assets. The share of sustainable investments with an environmental objective that was not compliant with the EU Taxonomy and of socially sustainable investments depended on the market situation and the investable investment universe.

5.57% of the sub-fund's net assets have been invested in assets which were either out-of-scope of the ESG assessment methodology or for which ESG data coverage was incomplete (#2 Other) as further detailed in the section "What investments were included under "#2 Other", what was their purpose and were there any minimum environmental or social safeguards?".

A more detailed description of the specific asset allocation of this sub-fund can be found in the Special Section of the Sales Prospectus.



#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:
- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

In which economic sectors were the investments made?

DWS Invest ESG Global Corporate Bonds

NA	Other	7.8 %
Exposure to companies active in the fossil fuel sector		5.4 %

As of: December 30, 2025

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The sub-fund did not commit to invest a proportion of sustainable investments with an environmental objective aligned with the EU Taxonomy. Therefore, the promoted minimum percentage of environmentally sustainable investments aligned with the EU Taxonomy was 0% of the sub-fund's net assets. However, certain investments' underlying economic activities may have been aligned with the EU Taxonomy.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are economic activities for yet low-carbon alternatives are not yet available and that have greenhouse gas emission levels corresponding to the best performance.

Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy[1]?

☐ Yes:

☐ In fossil gas ☐ In nuclear energy

☒ No

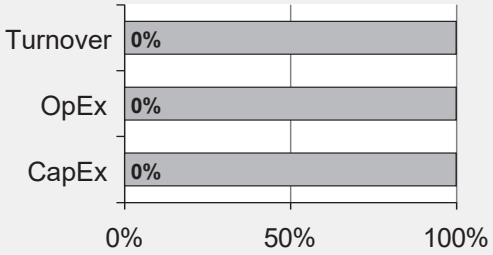
The sub-fund did not take into account the Taxonomy-alignment of companies active in the fossil gas and/or nuclear energy sectors.

[1] Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do no significant harm to any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Taxonomy-aligned activities are expressed as a share of:
- turnover reflecting the share of revenue from green activities of investee companies.
- capital expenditure (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- operational expenditure (OpEx) reflecting the green operational activities of investee companies.

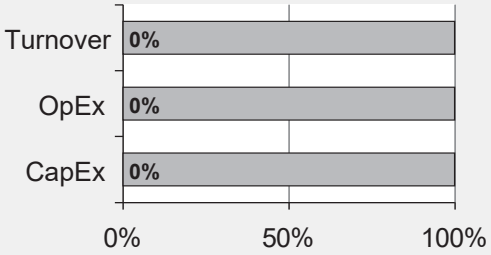
The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy-alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy-alignment only in relation to the investments of the financial product other than sovereign bonds.

1. Taxonomy-alignment of investments **including sovereign bonds***



Taxonomy-aligned: Fossil gas	0.00%
Taxonomy-aligned: Nuclear	0.00%
Taxonomy-aligned (no gas and nuclear)	0.00%
Taxonomy-aligned	0.00%
Non Taxonomy-aligned	100.00%

2. Taxonomy-alignment of investments **excluding sovereign bonds***



Taxonomy-aligned: Fossil gas	0.00%
Taxonomy-aligned: Nuclear	0.00%
Taxonomy-aligned (no gas and nuclear)	0.00%
Taxonomy-aligned	0.00%
Non Taxonomy-aligned	100.00%

This graph represents 100% of the total investments.

**For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures*

What was the share of investments made in transitional and enabling activities?

The sub-fund was not committed to a share of investments in transitional or enabling activities.

How did the percentage of investments that are aligned with the EU Taxonomy compare with previous reference periods?

The promoted proportion of environmentally sustainable investments in accordance with Regulation (EU) 2020/852 (Taxonomy Regulation) was 0% of the fund's assets in the current as well as previous reference periods. It may, however, have been the case that some sustainable investments were nevertheless aligned with an environmental objective of the Taxonomy Regulation.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the Regulation (EU) 2020/852.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The share of sustainable investments with an environmental objective that were not aligned with the EU Taxonomy was 11.09% of the sub-fund's net assets.

Shares of sustainable investments in previous reporting periods:

reporting period	sustainable investments (total)	with environmental objective	socially sustainable
30/12/2024	22,78% [1]%	12.38%	10.40%
29/12/2023	21.57%	11.78%	9.79%
30/12/2022	21.12%	--	--

What was the share of socially sustainable investments?

The share of socially sustainable investments was 15.21% of the sub-fund’s net

assets. Shares of sustainable investments in previous reporting periods:

reporting period	sustainable investments (total)	with environmental objective	socially sustainable
30/12/2024	22,78% [1]%	12.38%	10.40%
29/12/2023	21.57%	11.78%	9.79%
30/12/2022	21.12%	--	--

What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?

94.43% of the sub-fund’s net assets were aligned with the promoted environmental and social characteristics (#1 Aligned with E/S characteristics). 5.57% of the sub-fund’s net assets have been invested in assets which were either out-of-scope of the ESG assessment methodology or for which ESG data coverage was incomplete (#2 Other). Full ESG data coverage was required for the assessment of direct investments in companies in relation to good governance practices and the PAB-Exclusions.

Assets under “#2 Other” could include all asset classes as foreseen in the specific investment policy, such as sight deposits with credit institutions and derivatives. These assets could have been used by the portfolio management for performance, risk diversification, liquidity and hedging purposes.

Minimum environmental or social safeguards were not or only partially considered for the sub-fund’s investments falling within “#2 Other”.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

This sub-fund pursued a strategy based on bonds as main investment strategy. At least 80% of the sub-fund's assets should have been invested globally in interest-bearing debt securities denominated in euro or hedged against the euro that had an investment grade status at the time of the acquisition. Up to 20% of the sub-fund's assets may have been invested in interest-bearing debt securities denominated in euro or hedged against the euro that did not meet the above-mentioned criteria as well as money market instruments and cash. The sub-fund's investments in covered bonds should have been limited to 40% of the sub-fund's net asset value, asset-backed securities should have been limited to 20% of the sub-fund's net asset value. At least 50% of the sub-fund's assets should have been invested globally in corporate bonds. The sub-fund's investments in contingent convertibles should have been limited to 10% of the sub-fund's net asset value.

Further details regarding the main investment strategy are specified in the Special Section of the Sales Prospectus.

94.43% of the sub-fund's net assets were allocated to investments that met the promoted environmental and social characteristics as described in the following sections. The alignment of the portfolio with the binding elements of the investment strategy used to attain the promoted environmental and social characteristics as well as the PAB-Exclusions was continuously controlled via the sub-fund's investment guidelines monitoring.

ESG assessment methodology

The sub-fund aimed to achieve the promoted environmental and social characteristics by assessing potential assets via an in-house ESG assessment methodology, regardless of their economic prospects for success, and by applying exclusion criteria based on this assessment.

The ESG assessment methodology was using a proprietary software tool which sourced data from one or several ESG data providers, public sources and/or internal assessments to derive overall assessments. The methodology applied to derive such overall assessments could have been based on different methods, such as prioritizing one data vendor, worst-of or averaging approach. Internal assessments may take into account factors such as an issuer's future expected ESG developments, plausibility of data with regard to past or future events, the willingness to engage in dialogue on ESG matters and/or ESG-related decisions of a company. Further, internal ESG assessments for investee companies may have considered the relevance of the exclusion criteria for the market sector of the investee company.

The proprietary software tool used, amongst others, the approaches described below to evaluate the adherence to the promoted ESG characteristics and whether investee companies followed good governance practices. The assessment approaches included, for example, exclusions related to revenues generated from controversial sectors or the exposure to such controversial sectors. In some of the assessment approaches, issuers received one of six possible assessments, with "A" representing the best and "F" the worst assessment. If an issuer was excluded based on one assessment approach, the sub-fund was prohibited from investing in that issuer.

Depending on the investable universe, the portfolio allocation and the exposure to certain sectors, the assessment approaches described below have been more or less relevant which was reflected in the number of issuers being actually excluded.

• PAB-Exclusions

In accordance with the applicable regulations, the sub-fund applied the PAB-Exclusions and excluded all of the following companies:

a. companies involved in controversial weapons (manufacturing or selling of anti-personnel mines, cluster munitions, chemical weapons and biological weapons) assessed as part of the assessment of the "Exposure to controversial weapons" as described below;
b. companies involved in the cultivation and production of tobacco;
c. companies that were found in violation of the United Nations Global Compact principles or the OECD Guidelines for Multinational Enterprises (assessed as part of the "Norm Controversy Assessment" as described below);
d. companies that derived 1% or more of their revenues from exploration, mining, extraction, distribution or refining of hard coal and lignite;
e. companies that derived 10% or more of their revenues from the exploration, extraction, distribution or refining of oil fuels;
f. companies that derived 50% or more of their revenues from the exploration, extraction, manufacturing or distribution of gaseous fuels;

g. companies that derived 50% or more of their revenues from electricity generation with a GHG intensity of more than 100 g CO2 e/kWh.

The PAB-Exclusions were, in particular, not applied for sight deposits with credit institutions and certain derivative instruments. The extent of the application of the PAB-Exclusions in relation to use of proceeds bonds was described below under the section “Use of proceeds bond Assessment”.

• Norm Controversy Assessment

The Norm Controversy Assessment evaluated the behaviour of companies in relation to generally accepted international standards and principles of responsible business conduct within, amongst others, the framework of the principles of the United Nations Global Compact, the United Nations Guiding Principles, the standards of the International Labour Organization and the OECD Guidelines for Multinational Enterprises. Examples of topics covered within these standards and principles included, but were not limited to, human rights violations, violations of workers' rights, child or forced labour, negative environmental impacts and business ethics. The Norm Controversy Assessment evaluated reported violations of the aforementioned international standards. Companies with the worst Norm Controversy Assessment of “F” were excluded as an investment.

• ESG Quality Assessment

The ESG Quality Assessment distinguished between investments in companies and investments in sovereign issuers.

For companies, the ESG Quality Assessment allowed for a peer group comparison based on an overall ESG assessment, for example, concerning the handling of environmental changes, product safety, employee management or corporate ethics. The peer group for companies was made up from the same industry sector. Companies that scored higher in this comparison received a better assessment, while Companies that scored lower in the comparison received a worse assessment. Companies with the worst assessment of “F” were excluded as an investment.

For sovereign issuers, the ESG Quality Assessment assessed countries based on a peer group comparison considering environmental and social criteria as well as indicators for good governance, including, for example, the political system, the existence of institutions and the rule of law. Sovereign issuers with the worst assessment of “F” were excluded as an investment.

• Freedom House Status

Freedom House is an international non-governmental organization that classifies countries by their degree of political and civil liberties. Based on the Freedom House Status, countries that were classified as “not free” were excluded as an investment.

• Exposure to controversial sectors

Companies that were involved in certain business areas and business activities in controversial areas (“controversial sectors”) were excluded according to their share of total revenues generated in such controversial sectors as follows:

a. Manufacturing of products and/or provision of services in the defence industry: 5% or more
b. Manufacturing and/or distribution of civil handguns or ammunition: 5% or more
c. Manufacturing of products in and/or provision of services for the gambling industry: 5% or more
d. Manufacturing of adult entertainment: 5% or more
e. Manufacturing of palm oil: 5% or more
f. Nuclear power generation and/or uranium mining and/or uranium enrichment: 5% or more
g. Unconventional extraction of crude oil and/or natural gas (including oil sand, oil shale/shale gas, arctic drilling): more than 0%
h. Companies that derived 25% or more from thermal coal mining and thermal coal-based power generation as well as companies with thermal coal expansion plans, such as additional expansion of coal mining, coal production or coal usage. Companies with thermal coal expansion plans were excluded based on an internal identification methodology.

Further, companies involved in the manufacturing or selling of nuclear weapons or key components of nuclear weapons were excluded and the shareholdings within a group structure might have been taken into consideration.

• Exposure to controversial weapons

Companies were excluded if they were identified as being involved in the manufacturing or selling of

controversial weapons or key components of controversial weapons or other related specific activities (anti-personnel mines, cluster munitions, chemical and biological weapons, blinding laser weapons, weapons with non-detectable fragments, depleted uranium weapons/munitions and/or incendiary weapons using white phosphorus). In addition, the shareholdings within a group structure might have been taken into consideration for the exclusions.

• Use of Proceeds Bond Assessment

This assessment was specific to the nature of this instrument and an investment in use of proceeds bonds was permitted only if the following criteria were met. Firstly, all use of proceeds bonds were checked for compliance with the Climate Bonds Standards, similar industry standards for green bonds, social bonds or sustainability bonds (such as ICMA Principles) or the EU Green Bond Standard or whether bonds have been subject to an independent review.

Secondly, certain exclusion criteria were applied, where relevant and where sufficient data was available, at the level of the bond and/or in relation to the issuer of the bonds which could have led to the exclusion of the bond as an investment.

In particular, investments in use of proceeds bonds were prohibited based on the following issuer criteria:

a. Companies referred to under a) to c) of the PAB-Exclusions;
b. Companies with identified thermal coal expansion plans as referred to above;
c. Companies that derive more than 0% of their revenues from unconventional extraction of crude oil and/or natural gas (including oil sand, oil shale/shale gas, arctic drilling);
d. Companies that derived 5% or more of their revenues from nuclear power generation and/or uranium mining and/or uranium enrichment;
e. Sovereign issuers classified as “not free” by Freedom House.

Where no sufficient data was available for the evaluation of the PAB-Exclusions at use of proceeds bond level, the issuer in addition was evaluated based d) to g) of the above described PAB-Exclusions which may have led to the exclusion of the use of proceeds bond.

• Target Fund Assessment

Target funds were eligible if they were aligned with the PAB-Exclusions (starting from 21 May 2025) and, where applicable, the Freedom House Status. The target fund assessment relied on target fund related information acquired from external data sources or was evaluated in relation to the underlying assets of the portfolios of the target funds. Considering the diversity of data vendors and methodologies as well as the target fund portfolio rebalancing, this sub-fund have been indirectly exposed to certain assets that would have been excluded if invested directly.

Sustainability Investment Assessment

Further, for the proportion of sustainable investments, DWS measured the contribution to one or several UN SDGs and/or to other environmental sustainable objectives via its Sustainability Investment Assessment which evaluated potential investments in relation to different criteria to conclude whether an investment could have been considered as sustainable as further detailed in the section “What were the objectives of the sustainable investments that the financial product partially intends to make and how did the sustainable investment contributed to such objectives?”.

The applied ESG investment strategy did not pursue a committed minimum reduction of the scope of the investments.

The assessment of the good governance practices of the investee companies (including assessments related to sound management structures, employee relations, remuneration of staff and tax compliance) was part of the Norm Controversy Assessment which evaluated a company’s behavior within generally accepted international standards and principles of responsible business conduct. Companies with the worst Norm Controversy Assessment of “F” were excluded as an investment.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

How did this financial product perform compared to the reference sustainable benchmark?

This sub-fund had not designated a reference benchmark to determine whether it was aligned with the environmental and social characteristics that it promoted.

Periodic disclosure for financial products referred to in Article 8, paragraph 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

Product name: DWS Invest ESG Global Emerging Markets Equities

Legal entity identifier: 549300OD0ROCLWJDQR95

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

Yes	No
☐ it made **sustainable investments with an environmental objective:** ___%	☒ It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of 18.59% of sustainable investments.
☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy	☐ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
	☒ with a social objective
☐ It made **sustainable investments with a social objective:** ___%	☐ It promoted E/S characteristics, but did **not make any sustainable investments**

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities.** That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

To what extent were the environmental and/or social characteristics promoted by this financial product met?

This sub-fund promoted environmental and social characteristics related to a general consideration of ESG criteria by excluding, for example, investments in companies with the worst norm-related issues towards international standards, issuers with the worst assessment in terms of environmental, social and governance aspects compared to their peer group and/or investments in companies whose involvement in controversial sectors exceeded predefined revenue thresholds.

Further, this sub-fund promoted a proportion of sustainable investments in accordance with article 2(17) of the regulation on sustainability-related disclosures in the financial services sector (SFDR).

This sub-fund had not designated a reference benchmark for the purpose of attaining the environmental and social characteristics promoted.

No derivatives were used to attain the environmental or social characteristics promoted by the sub-fund.

How did the sustainability indicators perform?

The attainment of the promoted environmental and social characteristics as well as the sustainable investment was assessed via the application of an in-house ESG assessment methodology and ESG specific exclusion thresholds as further described in the section “What actions have been taken to meet the environmental and/or social characteristics during the reference period?”. The methodology applied different assessment approaches that were used as sustainability indicators which were:

• **Norm Controversy Assessment** used as an indicator for a company’s exposure to norm-related issues towards international standards.
Performance: No investments in suboptimal assets

• **ESG Quality Assessment** used as an indicator for comparison of an issuer’s environmental, social and governance aspects in relation to its peer group.
Performance: No investments in suboptimal assets

• **Freedom House Status** used as an indicator for the political and civil liberties of a country.
Performance: No investments in suboptimal assets

• **Exposure to controversial sectors** used as an indicator for a company’s involvement in controversial sectors.
Performance: 0%

• **Exposure to companies subject to the EU Paris-aligned Benchmark exclusion criteria** as set forth in article 12(1) of Commission Delegated Regulation 2020/1818 (PAB-Exclusions).
Performance: 0%

• **Sustainability Investment Assessment** used as an indicator to measure the proportion of sustainable investments pursuant to article 2(17) SFDR.
Performance: 18.59%

Please see the section entitled “What actions have been taken to meet the environmental and/or social characteristics during the reference period?” for a description of the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted, including the exclusion criteria, and the assessment methodology for determining whether and to what extent assets met the defined environmental and/or social characteristics (including the turnover thresholds defined for the xclusions). This section contains further information on the sustainability indicators. The values from the DWS front office system are used to calculate the sustainability indicators. This means that there may be minor deviations from the other market values that appear in the annual report, which are derived from the fund accounting system.

…and compared to previous periods?

Attainment of the promoted environmental and social characteristics at portfolio level was measured in the previous years on the basis of the following sustainability indicators:

DWS Invest ESG Global Emerging Markets Equities

The disclosure of the sustainability indicators has been revised compared with the prior-year report. The assessment methodology is unchanged. Additional information on the currently valid sustainability indicators is provided in the section entitled “What actions have been taken to meet the environmental and/or social characteristics during the reference period?”.
Information about taking into account the principal adverse impacts on sustainability factors is provided in the section entitled “How did this financial product consider principal adverse impacts on sustainability factors?”

DWS ESG-Assessment Scale

In the following assessment categories, the assets received one of six possible scores, with "A" being the best score and "F" being the worst score.

Criteria	Involvement in controversial sectors *(1)	Involvement in controversial weapons	Norm Assessment *(6)	ESG Quality Assessment	SDG- Assessment	Climat & Transition Risk Assessment
A	Non-involvement	Confirmed non-involvement	Confirmed no issues	True leader in ESG (>= 87.5 DWS ESG score)	True SDG contributor (>= 87.5 SDG score)	True climate leader (>= 87.5 score)
B	Remote involvement	Alleged	Violations of lesser degree	ESG leader (75-87.5 DWS ESG score)	SDG contributor (75-87.5 SDG score)	Climate solution provider(75-87.5 score)
C	0% - 5%	Dual-Purpose *(2)	Violations of lesser degree	ESG upper midfield (50-75 DWS ESG score)	SDG upper midfield (50-75 SDG score)	Low transition risk (50-75 score)
D	5% - 10% (coal: 5% - 10%)	Owning *(3)/ Owned *(4)	Violation of lesser degree	ESG lower midfield (25-50 DWS ESG score)	SDG lower midfield (25-50 SDG score)	Mod. transition risk (25-50 score)
E	10% - 25% (coal: 15% - 25%)	Component Producer *(5)	High severity or re-assessed highest violation *(7)	ESG laggard (12.5-25 DWS ESG score)	SDG obstructer (12.5-25 SDG score)	High transition risk (12.5-25 score)
F	>= 25%	Weapon producer	Highest severity / global compact violation *(8)	True laggard in ESG (0-12.5 DWS ESG score)	Significant SDG obstructer (0-12.5 SDG score)	Excessive transition risk (0-12.5 score)

*(1) Revenue share thresholds as per standard scheme. Sub-Granularity available. Thresholds can be individually set.

*(2) Encompasses e.g.. weapon-carrying systems such as combat aircraft that carry non-controversial weapons as well as controversial ones.

*(3) Owning more than 20% equity.

*(4) Being owned by more than 50% of company involved in grade E or F.

*(5) Single purpose key component.

*(6) Includes ILO controversies as well as corporate governance and product issues.

*(7) In its ongoing assessment, DWS takes into account the violation(s) of international standards – observed via data from ESG data vendors – such as the UN Global Compact, but also possible ESG data vendor errors identified, future expected developments of these violations as well as the willingness of the issuer to engage in dialogue regarding corporate decisions in this regard.

*(8) An F-grade can be considered a reconfirmed violation of the United Nations Global Compact rule framework for corporate behavior.

What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?

Sustainable investments contributed to at least one of the Sustainable Development Goals of the United Nations (UN SDGs) that relate to environmental and/or social objectives, such as good health and well-being or climate action and/or to at least one other environmental objective such as climate change adaption or climate change mitigation (as defined under the EU Taxonomy).

The extent of the contribution to individual sustainable investment objectives varied depending on the actual investments held in the portfolio.

DWS determined the contribution to a sustainable investment objective based on its Sustainability Investment Assessment which used data from one or several data providers, public sources and/or internal assessments. An investment's positive contribution to an environmental and/or social objective was assessed based on the revenues which a company generated from the actual economic activities making such contribution (activity-based approach). Where a positive contribution was determined, the investment was considered sustainable if the issuer passed the Do No significant Harm ("DNSH") assessment and the company followed good governance practices.

The share of sustainable investments in the portfolio as defined in article 2(17) SFDR was therefore calculated in proportion to the economic activities of the issuers that were considered as sustainable (activity-based approach). Notwithstanding the preceding, in the case of use-of-proceeds bonds that were considered as sustainable investment, the value of the entire bond was counted towards the portfolio's share of sustainable investments.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

The sustainable investments in which the sub-fund invested were assessed to ensure they did not cause significant harm to any environmental or social sustainable investment objective. This was achieved by taking into account the indicators for principal adverse impacts on sustainability factors (dependent on relevance) as described below. If a significant harm was identified, the investment could not have been considered sustainable.

How were the indicators for adverse impacts on sustainability factors taken into account?

The Sustainability Investment Assessment systematically integrated the mandatory principal adverse indicators on sustainability factors (dependent on relevance) from Table 1 and relevant indicators from Tables 2 and 3 of Annex I of the Commission Delegated Regulation (EU) 2022/1288 supplementing the SFDR. Taking into account these principal adverse impacts, DWS had established quantitative thresholds and/or qualitative values to assess a significant harm on any of the environmental or social sustainable investment objectives. These values were set based upon various external and internal factors, such as data availability or market developments and may have been adapted going forward.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The alignment of sustainable investments with, amongst others, the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights was evaluated through the Norm Controversy Assessment (as further described below). Companies with the worst Norm Controversy Assessment of “F” were excluded as an investment.

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union Criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU Criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU Criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

How did this financial product consider principal adverse impacts on sustainability factors?

The sub-fund considered the following principal adverse impacts on sustainability factors from Annex I of the Commission Delegated Regulation (EU) 2022/1288 supplementing the SFDR:

- Greenhouse gas (GHG) emissions (no. 1);
- Carbon footprint (no. 2);
- GHG intensity of investee companies (no. 3);
- Exposure to companies active in the fossil fuel sector (no. 4);
- Violations of United Nations Global Compact principles and OECD Guidelines for Multinational Enterprises (no. 10); and
- Exposure to controversial weapons (no. 14).

DWS Invest ESG Global Emerging Markets Equities

Indicators	Description	Performance

Principal Adverse Impact

PAII - 01. GHG emissions	Sum of the current value of investments of company i, divided by the investee company's enterprise value and multiplied by company's cope 1+2+3 GHG emissions.	124940.78	tCO2e
PAII - 02. Carbon Footprint - EUR	The carbon footprint is expressed as tonnes of CO2 emissions per million EUR invested. The CO2 emissions of an issuer are normalised by its enterprise value including cash (EVIC)	207.97	tCO2e / million EUR
PAII - 03. Carbon Intensity	Weighted average carbon intensity scope 1+2+3	586.77	tCO2e / million EUR
PAII - 04. Exposure to companies active in the fossil fuel sector	Share of investments in companies active in the fossil fuel sector	0.98	% of assets
PAII - 10. Violations of UNGC principles and OECD Guidelines for Multinational Enterprises	Share of investments in investee companies that have been involved in violations of the UNGC principles or OECD Guidelines for Multinational Enterprises	0	% of assets
PAII - 14. Exposure to controversial weapons	Share of investments in investee companies involved in the manufacture or selling of controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)	0	% of assets

As of: December 30, 2025

The Principal Adverse Impact Indicators (PAIIs) are calculated on the basis of the data in the DWS back office and front office systems, which are primarily based on the data of external ESG data providers. If there is no data on individual PAIIs for individual securities or their issuers, either because no data is available or the PAII is not applicable to the particular issuer or security, these securities or issuers are not included in the calculation of the PAII. With target fund investments, a look-through of the target fund holdings is performed if appropriate data is available. The calculation method for the individual PAI indicators may change in subsequent reporting periods due to evolving market standards, a change in the treatment of securities of certain types of instruments (such as derivatives) or as a result of regulatory clarifications.
Moreover, improved data availability may have an effect on the reported PAIIs in subsequent reporting periods.
The values from the DWS front office system are used to calculate the PAIIs. This means that there may be minor deviations from the other market values that appear in the annual report, which are derived from the fund accounting system.

What were the top investments of this financial product?

DWS Invest ESG Global Emerging Markets Equities

Largest investments	Breakdown by sector according to NACE Codes	in % of average portfolio volume	Breakdown by country
Tencent Holdings	J - Information and communication	8.6 %	China
Taiwan Semiconductor ADR	C - Manufacturing	7.7 %	Taiwan
Alibaba Group Holding	M - Professional, scientific and technical activities	4.3 %	China

for the period from January 01, 2025, through December 30, 2025

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is:
for the period from January 01, 2025, through December 31, 2025

What was the proportion of sustainability-related investments?

The proportion of sustainability-related investments as of the reporting date was 99.00% of portfolio assets.
Proportion of sustainability-related investments for the previous years:

30/12/2024: 98.17 %
29/12/2023: 96.52 %
30/12/2022: 96.21 %

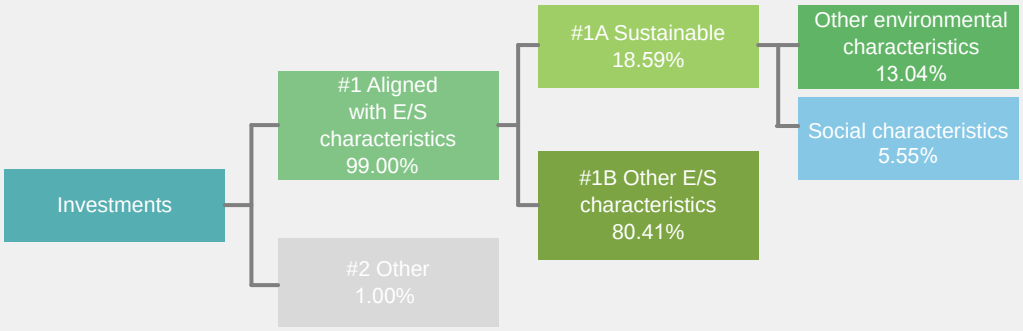
Asset allocation describes the share of investments in specific assets.

What was the asset allocation?

This sub-fund invested 99.00% of its net assets in investments that were aligned with the promoted environmental and social characteristics (#1 Aligned with E/S characteristics). Within this category, 18.59% of the sub-fund's net assets qualified as sustainable investments (#1A Sustainable). Thereof the share of sustainable investments with an environmental objective that was not compliant with the EU Taxonomy was 13.04% of the sub-fund's net assets and the share of socially sustainable investments was 5.55% of the sub-fund's net assets. The share of sustainable investments with an environmental objective that was not compliant with the EU Taxonomy and of socially sustainable investments depended on the market situation and the investable investment universe.

1.00% of the sub-fund's net assets have been invested in assets which were either out-of-scope of the ESG assessment methodology or for which ESG data coverage was incomplete (#2 Other) as further detailed in the section "What investments were included under "#2 Other", what was their purpose and were there any minimum environmental or social safeguards?".

A more detailed description of the specific asset allocation of this sub-fund can be found in the Special Section of the Sales Prospectus.



#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:
- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

In which economic sectors were the investments made?

DWS Invest ESG Global Emerging Markets Equities

NACE-Code	Breakdown by sector according to NACE Codes	in % of portfolio volume
C	Manufacturing	43.9 %
D	Electricity, gas, steam and air conditioning supply	1.2 %
E	Water supply; sewerage; waste managment and remediation activities	1.7 %
G	Wholesale and retail trade; repair of motor vehicles and motorcycles	5.5 %
I	Accommodation and food service activities	0.7 %
J	Information and communication	14.2 %
K	Financial and insurance activities	16.4 %
M	Professional, scientific and technical activities	7.3 %
S	Other services activities	2.0 %
NA	Other	7.1 %
Exposure to companies active in the fossil fuel sector		1.0 %

As of: December 30, 2025

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The sub-fund did not commit to invest a proportion of sustainable investments with an environmental objective aligned with the EU Taxonomy. Therefore, the promoted minimum percentage of environmentally sustainable investments aligned with the EU Taxonomy was 0% of the sub-fund's net assets. However, certain investments' underlying economic activities may have been aligned with the EU Taxonomy.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are economic activities for yet low-carbon alternatives are not yet available and that have greenhouse gas emission levels corresponding to the best performance.

Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy[1]?

☐ Yes:

☐ In fossil gas ☐ In nuclear energy

☒ No

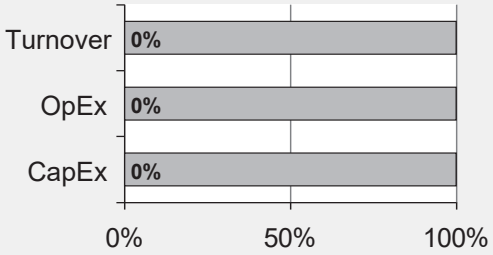
The sub-fund did not take into account the Taxonomy-alignment of companies active in the fossil gas and/or nuclear energy sectors.

[1] Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do no significant harm to any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Taxonomy-aligned activities are expressed as a share of:
- turnover reflecting the share of revenue from green activities of investee companies.
- capital expenditure (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- operational expenditure (OpEx) reflecting the green operational activities of investee companies.

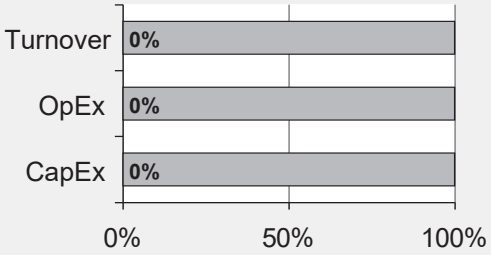
The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy-alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy-alignment only in relation to the investments of the financial product other than sovereign bonds.

1. Taxonomy-alignment of investments **including sovereign bonds***



Taxonomy-aligned: Fossil gas	0.00%
Taxonomy-aligned: Nuclear	0.00%
Taxonomy-aligned (no gas and nuclear)	0.00%
Taxonomy-aligned	0.00%
Non Taxonomy-aligned	100.00%

2. Taxonomy-alignment of investments **excluding sovereign bonds***



Taxonomy-aligned: Fossil gas	0.00%
Taxonomy-aligned: Nuclear	0.00%
Taxonomy-aligned (no gas and nuclear)	0.00%
Taxonomy-aligned	0.00%
Non Taxonomy-aligned	100.00%

This graph represents 100% of the total investments.

**For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures*

What was the share of investments made in transitional and enabling activities?

The sub-fund was not committed to a share of investments in transitional or enabling activities.

How did the percentage of investments that are aligned with the EU Taxonomy compare with previous reference periods?

The promoted proportion of environmentally sustainable investments in accordance with Regulation (EU) 2020/852 (Taxonomy Regulation) was 0% of the fund's assets in the current as well as previous reference periods. It may, however, have been the case that some sustainable investments were nevertheless aligned with an environmental objective of the Taxonomy Regulation.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the Regulation (EU) 2020/852.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The share of sustainable investments with an environmental objective that were not aligned with the EU Taxonomy was 13.04% of the sub-fund's net assets.

Shares of sustainable investments in previous reporting periods:

reporting period	sustainable investments (total)	with environmental objective	socially sustainable
30/12/2024	13.32%	8.41%	4.91%
29/12/2023	11.75%	8.28%	3.47%
30/12/2022	6.33%	--	--

What was the share of socially sustainable investments?

The share of socially sustainable investments was 5.55% of the sub-fund’s net

assets. Shares of sustainable investments in previous reporting periods:

reporting period	sustainable investments (total)	with environmental objective	socially sustainable
30/12/2024	13.32%	8.41%	4.91%
29/12/2023	11.75%	8.28%	3.47%
30/12/2022	6.33%	--	--

What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?

99.00% of the sub-fund’s net assets were aligned with the promoted environmental and social characteristics (#1 Aligned with E/S characteristics). 1.00% of the sub-fund’s net assets have been invested in assets which were either out-of-scope of the ESG assessment methodology or for which ESG data coverage was incomplete (#2 Other). Full ESG data coverage was required for the assessment of direct investments in companies in relation to good governance practices and the PAB-Exclusions.

Assets under “#2 Other” could include all asset classes as foreseen in the specific investment policy, such as sight deposits with credit institutions and derivatives. These assets could have been used by the portfolio management for performance, risk diversification, liquidity and hedging purposes.

Minimum environmental or social safeguards were not or only partially considered for the sub-fund’s investments falling within “#2 Other”.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

This sub-fund pursued a strategy based on equities as main investment strategy. At least 70% of the sub-fund's assets were invested in equities of companies registered in Emerging Markets countries or companies that conducted their principal business activity in Emerging Markets countries or which, as holding companies, hold primarily interest in companies registered in Emerging Markets countries. The securities issued by these companies may have been listed on Chinese (including the Shenzhen-Hong Kong and Shanghai-Hong Kong Stock Connect) or other foreign securities exchanges or traded on other regulated markets in a member country of the Organisation for Economic Co-operation and Development (OECD) that operated regularly and were recognized and open to the public.

Further details regarding the main investment strategy are specified in the Special Section of the Sales Prospectus.

99.00% of the sub-fund's net assets were allocated to investments that met the promoted environmental and social characteristics as described in the following sections. The alignment of the portfolio with the binding elements of the investment strategy used to attain the promoted environmental and social characteristics as well as the PAB-Exclusions was continuously controlled via the sub-fund's investment guidelines monitoring.

ESG assessment methodology

The sub-fund aimed to achieve the promoted environmental and social characteristics by assessing potential assets via an in-house ESG assessment methodology, regardless of their economic prospects for success, and by applying exclusion criteria based on this assessment.

The ESG assessment methodology was using a proprietary software tool which sourced data from one or several ESG data providers, public sources and/or internal assessments to derive overall assessments. The methodology applied to derive such overall assessments could have been based on different methods, such as prioritizing one data vendor, worst-of or averaging approach. Internal assessments may take into account factors such as an issuer's future expected ESG developments, plausibility of data with regard to past or future events, the willingness to engage in dialogue on ESG matters and/or ESG-related decisions of a company. Further, internal ESG assessments for investee companies may have considered the relevance of the exclusion criteria for the market sector of the investee company.

The proprietary software tool used, amongst others, the approaches described below to evaluate the adherence to the promoted ESG characteristics and whether investee companies followed good governance practices. The assessment approaches included, for example, exclusions related to revenues generated from controversial sectors or the exposure to such controversial sectors. In some of the assessment approaches, issuers received one of six possible assessments, with "A" representing the best and "F" the worst assessment. If an issuer was excluded based on one assessment approach, the sub-fund was prohibited from investing in that issuer.

Depending on the investable universe, the portfolio allocation and the exposure to certain sectors, the assessment approaches described below have been more or less relevant which was reflected in the number of issuers being actually excluded.

• PAB-Exclusions

In accordance with the applicable regulations, the sub-fund applied the PAB-Exclusions and excluded all of the following companies:

a. companies involved in controversial weapons (manufacturing or selling of anti-personnel mines, cluster munitions, chemical weapons and biological weapons) assessed as part of the assessment of the "Exposure to controversial weapons" as described below;
b. companies involved in the cultivation and production of tobacco;
c. companies that were found in violation of the United Nations Global Compact principles or the OECD Guidelines for Multinational Enterprises (assessed as part of the "Norm Controversy Assessment" as described below);
d. companies that derived 1% or more of their revenues from exploration, mining, extraction, distribution or refining of hard coal and lignite;
e. companies that derived 10% or more of their revenues from the exploration, extraction, distribution or refining of oil fuels;
f. companies that derived 50% or more of their revenues from the exploration, extraction, manufacturing or distribution of gaseous fuels;
g. companies that derived 50% or more of their revenues from electricity generation with a GHG

intensity of more than 100 g CO2 e/kWh.

The PAB-Exclusions were, in particular, not applied for sight deposits with credit institutions and certain derivative instruments. The extent of the application of the PAB-Exclusions in relation to use of proceeds bonds was described below under the section “Use of proceeds bond Assessment”.

• Norm Controversy Assessment

The Norm Controversy Assessment evaluated the behaviour of companies in relation to generally accepted international standards and principles of responsible business conduct within, amongst others, the framework of the principles of the United Nations Global Compact, the United Nations Guiding Principles, the standards of the International Labour Organization and the OECD Guidelines for Multinational Enterprises. Examples of topics covered within these standards and principles included, but were not limited to, human rights violations, violations of workers' rights, child or forced labour, negative environmental impacts and business ethics. The Norm Controversy Assessment evaluated reported violations of the aforementioned international standards. Companies with the worst Norm Controversy Assessment of “F” were excluded as an investment.

• ESG Quality Assessment

The ESG Quality Assessment distinguished between investments in companies and investments in sovereign issuers.

For companies, the ESG Quality Assessment allowed for a peer group comparison based on an overall ESG assessment, for example, concerning the handling of environmental changes, product safety, employee management or corporate ethics. The peer group for companies was made up from the same industry sector. Companies that scored higher in this comparison received a better assessment, while Companies that scored lower in the comparison received a worse assessment. Companies with the worst assessment of “F” were excluded as an investment.

For sovereign issuers, the ESG Quality Assessment assessed countries based on a peer group comparison considering environmental and social criteria as well as indicators for good governance, including, for example, the political system, the existence of institutions and the rule of law. Sovereign issuers with the worst assessment of “F” were excluded as an investment.

• Freedom House Status

Freedom House is an international non-governmental organization that classifies countries by their degree of political and civil liberties. Based on the Freedom House Status, countries that were classified as “not free” were excluded as an investment.

• Exposure to controversial sectors

Companies that were involved in certain business areas and business activities in controversial areas (“controversial sectors”) were excluded according to their share of total revenues generated in such controversial sectors as follows:

a. Manufacturing of products and/or provision of services in the defence industry: 5% or more
b. Manufacturing and/or distribution of civil handguns or ammunition: 5% or more
c. Manufacturing of products in and/or provision of services for the gambling industry: 5% or more
d. Manufacturing of adult entertainment: 5% or more
e. Manufacturing of palm oil: 5% or more
f. Nuclear power generation and/or uranium mining and/or uranium enrichment: 5% or more
g. Unconventional extraction of crude oil and/or natural gas (including oil sand, oil shale/shale gas, arctic drilling): more than 0%
h. Companies that derived 25% or more from thermal coal mining and thermal coal-based power generation as well as companies with thermal coal expansion plans, such as additional expansion of coal mining, coal production or coal usage. Companies with thermal coal expansion plans were excluded based on an internal identification methodology.

Further, companies involved in the manufacturing or selling of nuclear weapons or key components of nuclear weapons were excluded and the shareholdings within a group structure might have been taken into consideration.

• Exposure to controversial weapons

Companies were excluded if they are identified as being involved in the manufacturing or selling of controversial weapons or key components of controversial weapons or other related specific activities

(anti-personnel mines, cluster munitions, chemical and biological weapons, blinding laser weapons, weapons with non-detectable fragments, depleted uranium weapons/munitions and/or incendiary weapons using white phosphorus). In addition, the shareholdings within a group structure might have been taken into consideration for the exclusions.

• Use-of-Proceeds Bond Assessment

This assessment was specific to the nature of this instrument and an investment in use of proceeds bonds was permitted only if the following criteria were met. Firstly, all use of proceeds bonds were checked for compliance with the Climate Bonds Standards, similar industry standards for green bonds, social bonds or sustainability bonds (such as ICMA Principles) or the EU Green Bond Standard or whether bonds have been subject to an independent review.

Secondly, certain exclusion criteria (including the applicable PAB-Exclusions) were applied, where relevant and where sufficient data was available, at the level of the bond and/or in relation to the issuer of the bonds which could lead to the exclusion of the bond as an investment.

• Target Fund Assessment

Target funds were eligible if they are aligned with the PAB-Exclusions (starting from 21 May 2025) and, where applicable, the Freedom House Status. The target fund assessment relied on target fund related information acquired from external data sources or was evaluated in relation to the underlying assets of the portfolios of the target funds. Considering the diversity of data vendors and methodologies as well as the target fund portfolio rebalancing, this sub-fund may have been indirectly exposed to certain assets that would be excluded if invested directly.

Sustainability Investment Assessment

Further, for the proportion of sustainable investments, DWS measured the contribution to one or several UN SDGs and/or to other environmental sustainable objectives via its Sustainability Investment Assessment which evaluated potential investments in relation to different criteria to conclude whether an investment could have been considered as sustainable as further detailed in the section “What were the objectives of the sustainable investments that the financial product partially intends to make and how did the sustainable investment contributed to such objectives?”.

The applied ESG investment strategy did not pursue a committed minimum reduction of the scope of the investments.

The assessment of the good governance practices of the investee companies (including assessments related to sound management structures, employee relations, remuneration of staff and tax compliance) was part of the Norm Controversy Assessment which evaluated a company’s behavior within generally accepted international standards and principles of responsible business conduct. Companies with the worst Norm Controversy Assessment of “F” were excluded as an investment.

How did this financial product perform compared to the reference sustainable benchmark?

This sub-fund had not designated a reference benchmark to determine whether it was aligned with the environmental and social characteristics that it promoted.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Regelmäßige Informationen zu den in Artikel 8 Absätze 1, 2 und 2a der Verordnung (EU) 2019/2088 und Artikel 6 Absatz 1 der Verordnung (EU) 2020/852 genannten Finanzprodukten

Eine **nachhaltige Investition** ist eine Investition in eine Wirtschaftstätigkeit, die zur Erreichung eines Umweltziels oder sozialen Ziels beiträgt, vorausgesetzt, dass diese Investition keine Umweltziele oder sozialen Ziele erheblich beeinträchtigt und die Unternehmen, in die investiert wird, Verfahrensweisen einer guten Unternehmensführung anwenden.

Die **EU-Taxonomie** ist ein Klassifikationssystem, das in der Verordnung (EU) 2020/852 festgelegt ist und ein Verzeichnis von **ökologisch nachhaltigen Wirtschaftstätigkeiten** enthält. In dieser Verordnung ist kein Verzeichnis der sozial nachhaltigen Wirtschaftstätigkeiten festgelegt. Nachhaltige Investitionen mit einem Umweltziel könnten taxonomie-konform sein oder nicht.

Name des Produkts: DWS Invest ESG Mobility

Unternehmenskennung (LEI-Code): 254900YCVDPCKP4IYF04

Ökologische und/oder soziale Merkmale

Wurden mit diesem Finanzprodukt nachhaltige Investitionen angestrebt?

● ● ☐ **Ja**	● ○ **X Nein**
☐ Es wurden damit **nachhaltige Investitionen mit einem Umweltziel getätigt:** ___%	**X** Es wurden damit **ökologische/soziale Merkmale beworben** und obwohl keine nachhaltigen Investitionen angestrebt wurden, enthielt es 0% an nachhaltigen Investitionen
☐ in Wirtschaftstätigkeiten, die nach der EU-Taxonomie als ökologisch nachhaltig einzustufen sind	☐ mit einem Umweltziel in Wirtschaftstätigkeiten, die nach der EU-Taxonomie als ökologisch nachhaltig einzustufen sind
☐ in Wirtschaftstätigkeiten, die nach der EU-Taxonomie nicht als ökologisch nachhaltig einzustufen sind	**X** mit einem Umweltziel in Wirtschaftstätigkeiten, die nach der EU-Taxonomie nicht als ökologisch nachhaltig einzustufen sind
	☐ mit einem sozialen Ziel
☐ Es wurden damit **nachhaltige Investitionen mit einem sozialen Ziel** getätigt: ___%	☐ Es wurden damit ökologische/soziale Merkmale beworben, aber **keine nachhaltigen Investitionen getätigt.**

Mit **Nachhaltigkeits-indikatoren** wird gemessen, inwieweit die mit dem Finanzprodukt beworbenen ökologischen oder sozialen Merkmale erreicht werden.

Inwieweit wurden die mit dem Finanzprodukt beworbenen ökologischen und/oder sozialen Merkmale erfüllt?

Dieser Teilfonds bewarb ökologische und soziale Merkmale in den Bereichen Klimaschutz, Unternehmensführung (Governance) und soziale Normen sowie der allgemeinen ESG-Qualität, indem folgende Emittenten gemieden wurden:

(1) Emittenten mit exzessiven Klima- und Transitionsrisiken,
(2) Unternehmen mit der schlechtesten DWS Norm-Bewertung (d.h. im Hinblick auf die Einhaltung internationaler Normen für Unternehmensführung, Menschen- und Arbeitnehmerrechte, Kunden- und Umweltsicherheit und Geschäftsethik),
(3) Unternehmen mit sehr schwerwiegenden, ungelösten Kontroversen in Bezug auf die Prinzipien des United Nations Global Compact (UN Global Compact),
(4) Emittenten, die im Verhältnis zu ihrer Vergleichsgruppe am schlechtesten hinsichtlich Umwelt-, Sozial- und Governance-Risiken bewertet wurden,
(5) Staaten, die vom Freedom House als „nicht frei“ gekennzeichnet wurden,
(6) Unternehmen, deren Beteiligung an kontroversen Sektoren eine vordefinierte Umsatzgrenze überstiegen und/oder
(7) Unternehmen mit Involvierung in kontroversen Waffen.

Dieser Teilfonds bewarb zudem einen Mindestanteil an ökologisch nachhaltigen Anlagen, die einen positiven Beitrag zu einem oder mehreren Zielen der Vereinten Nationen für eine nachhaltige Entwicklung (UN SDGs) leisteten.
Dieser Teilfonds hatte keinen Referenzwert für die Erreichung der beworbenen ökologischen und/oder sozialen Merkmale bestimmt.

Es wurden keine Derivate verwendet, um die von dem Teilfonds beworbenen ökologischen oder sozialen Merkmale zu erreichen.

Wie haben die Nachhaltigkeitsindikatoren abgeschnitten?

Die Erreichung der beworbenen ökologischen und sozialen Merkmale sowie die Nachhaltigkeit der Anlagen wurde mittels einer hauseigenen DWS ESG-Bewertungsmethodik bewertet, die im Abschnitt „Welche Maßnahmen wurden während des Bezugszeitraums zur Erfüllung der ökologischen und/oder sozialen Merkmale ergriffen?“ näher beschrieben wurde. Die Methode umfasste verschiedene Bewertungsansätze, die als Nachhaltigkeitsindikatoren zur Bewertung der Erreichung der beworbenen ökologischen und sozialen Merkmale herangezogen wurden. Hierzu gehörten:

• **DWS Klima- und Transitionsrisiko-Bewertung** diente als Indikator dafür, in welchem Maße ein Emittent Klima- und Transitionsrisiken ausgesetzt war.
Performanz: Keine Investitionen in unzulängliche Vermögenswerte

• **DWS Norm-Bewertung** diente als Indikator dafür, in welchem Maße bei einem Unternehmen Norm-Verstöße gegen internationale Standards auftraten.
Performanz: Keine Investitionen in unzulängliche Vermögenswerte

• **UN Global Compact- Bewertung** diente als Indikator dafür, ob ein Unternehmen direkt in eine oder mehrere sehr schwerwiegende, ungelöste Kontroversen in Bezug auf den UN Global Compact verwickelt war.
Performanz: Keine Investitionen in unzulängliche Vermögenswerte

• **DWS ESG-Qualitätsbewertung** diente als Indikator für den Vergleich der Umwelt-, Sozial- und Governance-Risiken eines Emittenten im Verhältnis zu seiner Vergleichsgruppe.
Performanz: Keine Investitionen in unzulängliche Vermögenswerte

• **Freedom House Status** diente als Indikator für die politisch-zivile Freiheit eines Staates.
Performanz: Keine Investitionen in unzulängliche Vermögenswerte

• **Beteiligung an kontroversen Sektoren** diente als Indikator dafür, inwieweit ein Unternehmen an kontroversen Sektoren beteiligt war.
Performanz: 0%

• **DWS Ausschlüsse für kontroverse Waffen** diente als Indikator dafür, inwieweit ein Unternehmen an kontroversen Waffen beteiligt war.
Performanz: 0%

• **DWS-Methodik zur Bestimmung von nachhaltigen Anlagen gemäß Artikel 2 Absatz 17 SFDR (DWS-Nachhaltigkeitsbewertung)** wurde als Indikator zur Messung des Anteils nachhaltiger Anlagen herangezogen.
Performanz: 0% zum Liquidationsstichtag

Eine Beschreibung der verbindlichen Elemente der Anlagestrategie, die für die Auswahl der Investitionen zur Erfüllung der beworbenen ökologischen oder sozialen Ziele verwendet wurden, einschließlich der Ausschlusskriterien, sowie der Bewertungsmethodik, ob und in welchem Maße Vermögensgegenstände die definierten ökologischen und/oder sozialen Merkmale erfüllten (einschließlich der für die Ausschlüsse definierten Umsatzschwellen), können dem Kapitel „Welche Maßnahmen wurden während des Bezugszeitraums zur Erfüllung der ökologischen und/oder sozialen Merkmale ergriffen?" entnommen werden. Dieser Abschnitt enthält weitergehende Informationen zu den Nachhaltigkeitsindikatoren.
Zur Berechnung der Nachhaltigkeitsindikatoren werden die Werte aus dem Front-Office-System der DWS genutzt. Dies bedeutet, dass es zu geringfügigen Abweichungen zu den übrigen im Jahresbericht dargestellten Kurswerten, die aus dem Fondsbuchhaltungssystem abgeleitet werden, kommen kann.

...und im Vergleich zu früheren Perioden?

Die Erreichung der beworbenen ökologischen und sozialen Merkmale auf Portfolioebene wurde im Vorjahr anhand der folgenden Nachhaltigkeitsindikatoren gemessen:

DWS Invest ESG Mobility

Indikatoren Performanz	30.12.2024	29.12.2023	30.12.2022

Der Ausweis der Nachhaltigkeitsindikatoren wurde im Vergleich zum Vorjahresbericht überarbeitet. Die Bewertungsmethodik ist unverändert. Weiterführende Hinweise in Bezug auf die aktuell geltenden Nachhaltigkeitsindikatoren sind dem Abschnitt "Welche Maßnahmen wurden während des Bezugszeitraums zur Erfüllung der ökologischen und/oder sozialen Merkmale ergriffen?" zu entnehmen.
Angaben zur Berücksichtigung der wichtigsten nachteiligen Auswirkungen auf Nachhaltigkeitsfaktoren (Principal Adverse Impacts) finden Sie in dem Abschnitt "Wie wurden bei diesem Finanzprodukt die wichtigsten nachteiligen Auswirkungen auf Nachhaltigkeitsfaktoren berücksichtigt?".

DWS ESG-Bewertungsskala

In den folgenden Bewertungssätzen erhielten die Vermögensgegenstände jeweils eine von sechs möglichen Bewertungen, wobei A die beste Bewertung war und F die schlechteste Bewertung war.

Kriterium	Umstrittene Sektoren *(1)	Kontroverse Waffen	Norm- Bewertung *(6)	ESG-Qualitäts-Bewertung	SDG- Bewertung	Klima- & Transitionsrisiko-Bewertung
A	Kein Bezug zu "kontroversen" Sektoren	Kein Bezug zu kontroversen Waffen	Keine Probleme	Wahrer ESG Vorreiter (>= 87.5 ESG Punkte)	Wahrer SDG Beiträger (>=87.5 SDG Punkte)	Wahrer Vorreiter (>= 87.5 Punkte)
B	Entfernter Bezug	Entfernter / Nur vermuteter Bezug	Minimale Probleme	ESG Vorreiter (75-87.5 ESG Punkte)	SDG Beiträger (75-87.5 SDG Punkte)	Klimalösungen (75-87.5 Punkte)
C	0% - 5%	Dual-Purpose *(2)	Probleme	ESG oberes Mittelfeld (50-75 ESG Punkte)	SDG oberes Mittelfeld (50-75 SDG Punkte)	Kontrolliertes Risiko (50-75 Punkte)
D	5% - 10% (Kohle: 5% - 10%)	Besitz *(3)/ Mutter *(4)	Schwerere Probleme	ESG unteres Mittelfeld (25-50 ESG Punkte)	SDG unteres Mittelfeld (25-50 SDG Punkte)	Moderates Risiko (25-50 Punkte)
E	10% - 25% (Kohle: 15% - 25%)	Hersteller einer Komponente *(5)	Ernste Probleme oder höchste Stufe mit Neubewertung *(7)	ESG Nachzügler (12.5-25 ESG Punkte)	SDG Verhinderer (12.5-25 SDG Punkte)	Hohes Risiko (12.5-25 Punkte)
F	>= 25%	Hersteller Waffen	Höchste Stufe / UNGC Verletzung *(8)	Wahrer ESG Nachzügler (0-12.5 ESG Punkte)	Signifikante SDG Verhinderer (0-12.5 SDG Punkte)	Extremes Risiko (0-12.5 Punkte)

*(1) Umsatz-/Erlöseschwellen nach Standardschema (höhere Granularität verfügbar / Schwellen können individuell gesetzt werden).

*(2) Hierein fallen z.B. Waffenträgersysteme wie Kampfflugzeuge, die neben der kontroversen auch nicht-kontroverse Waffen tragen.

*(3) Mehr als 20% Eigenkapital.

*(4) Mutterfirma, die in Waffen auf der Stufe E/F involviert ist, hält mehr als 50% Eigenkapital.

*(5) Einzweck-Komponenten.

*(6) Einschließlich ILO-Kontroversen sowie Unternehmensführung und Produktprobleme.

*(7) Bei der laufenden Bewertung berücksichtigt die DWS den Verstoß/ die Verstöße gegen internationale Standards - beobachtet anhand von Daten von ESG-Datenanbietern - aber auch mögliche Fehler von ESG-Datenanbietern, die erwarteten zukünftigen Entwicklungen dieser Verstöße sowie die Bereitschaft die Emittenten einen Dialog über diesbezügliche Unternehmensentscheidungen aufzunehmen.

*(8) Eine Bewertung der Stufe F kann als eine rückbestätigte Verletzung des UNGC angesehen werden, insb. Vorsätzliche / strukturell bedingte Verletzung in eigenen Unternehmen.

Welche Ziele verfolgten die nachhaltigen Investitionen, die mit dem Finanzprodukt teilweise getätigt wurden, und wie trägt die nachhaltige Investition zu diesen Zielen bei?

Der Teilfonds investierte teilweise in nachhaltige Anlagen gemäß Artikel 2 Absatz 17 der EU-Verordnung 2019/2088 über nachhaltigkeitsbezogene Offenlegungspflichten im Finanzdienstleistungssektor (SFDR). Diese nachhaltigen Anlagen trugen mindestens zu einem der UN SDGs bei, die ökologische Zielsetzungen hatten, wie beispielsweise folgende (nicht abschließende Liste):

• Ziel 12: Nachhaltige/r Konsum und Produktion
• Ziel 13: Maßnahmen zum Klimaschutz
• Ziel 14: Leben unter Wasser
• Ziel 15: Leben an Land

Der Umfang des Beitrags zu den einzelnen UN SDGs variierte in Abhängigkeit von den tatsächlichen Anlagen im Portfolio.

Die DWS ermittelte den Beitrag zu den UN SDGs mittels ihrer DWS-Nachhaltigkeitsbewertung von Anlagen, bei der potenzielle Anlagen anhand verschiedener Kriterien dahingehend beurteilt wurden, ob eine Anlage als nachhaltig eingestuft werden konnte. Im Rahmen dieser Bewertungsmethodik wurde beurteilt, ob (1) eine Anlage einen positiven Beitrag zu einem oder mehreren UN SDGs leistete, (2) der Emittent diese Ziele erheblich beeinträchtigte (Do Not Significantly Harm – „DNSH“ Bewertung), und (3) das Unternehmen Verfahrensweisen einer guten Unternehmensführung anwandte.

In die DWS-Nachhaltigkeitsbewertung von Anlagen flossen Daten von mehreren Datenanbietern, aus öffentlichen Quellen und/oder internen Bewertungen auf Grundlage einer festgelegten Bewertungs- und Klassifizierungsmethodik ein, um festzustellen, ob eine Anlage nachhaltig war. Tätigkeiten, die einen positiven Beitrag zu den UN SDGs leisteten, wurden in Abhängigkeit von der Anlage nach Umsatz, Investitionsaufwendungen (CapEx) und/oder betrieblichen Aufwendungen (OpEx) bewertet. Wurde ein positiver Beitrag festgestellt, galt die Anlage als nachhaltig, sofern der Emittent die DNSH-Bewertung bestand und das Unternehmen Verfahrensweisen einer guten Unternehmensführung anwendete.

Der Anteil an nachhaltigen Anlagen gemäß Artikel 2 Absatz 17 SFDR im Portfolio wurde proportional zu den wirtschaftlichen Aktivitäten der Emittenten berechnet, die als nachhaltig qualifizierten. Abweichend hiervon erfolgte im Falle von Use of Proceed Bonds, die als nachhaltige Anlage qualifizierten, eine Anrechnung des Wertes der gesamten Anleihe auf den Anteil an nachhaltigen Anlagen.

Der Teilfonds strebte keinen Mindestanteil an nachhaltigen Anlagen an, die mit einem ökologischen Ziel gemäß der EU-Taxonomie im Einklang standen.

Inwiefern haben die nachhaltigen Investitionen, die mit dem Finanzprodukt teilweise getätigt wurden, ökologisch oder sozial nachhaltigen Anlagezielen nicht erheblich geschadet?

Die DNSH-Bewertung war ein integraler Bestandteil der DWS-Nachhaltigkeitsbewertung von Anlagen und beurteilte, ob durch einen Emittenten, der zu einem UN SDG beitrug, eines oder mehrere dieser Ziele erheblich beeinträchtigt wurden. Wurde eine erhebliche Beeinträchtigung festgestellt, bestand der Emittent die DNSH-Bewertung nicht und konnte nicht als nachhaltige Anlage angesehen werden.

Wie wurden die Indikatoren für nachteilige Auswirkungen auf Nachhaltigkeitsfaktoren berücksichtigt?

Im Rahmen der DNSH-Bewertung gemäß Artikel 2 Absatz 17 SFDR wurden in der DWS-Nachhaltigkeitsbewertung einer Anlage systematisch die verpflichtenden Indikatoren für die wichtigsten nachteiligen Auswirkungen auf Nachhaltigkeitsfaktoren aus Tabelle 1 (nach Relevanz) sowie relevante Indikatoren aus Tabelle 2 und 3 in Anhang I der Delegierten Verordnung (EU) 2022/1288 der Kommission zur Ergänzung der SFDR integriert. Unter Berücksichtigung dieser nachteiligen Auswirkungen hatte die DWS quantitative Schwellenwerte und/oder qualitative Werte festgelegt, anhand derer bestimmt wurde, ob ein Emittent die ökologischen oder sozialen Ziele erheblich beeinträchtigte. Diese Werte wurden auf der Grundlage verschiedener externer und interner Faktoren, wie Datenverfügbarkeit oder Marktentwicklungen, festgelegt und können künftig angepasst werden.

Stehen die nachhaltigen Investitionen mit den OECD-Leitsätzen für multinationale Unternehmen und den Leitprinzipien der Vereinten Nationen für Wirtschaft und Menschenrechte in Einklang? Nähere Angaben:

Im Rahmen der DWS-Nachhaltigkeitsbewertung von Anlagen beurteilte die DWS darüber hinaus auf Basis der DWS Norm-Bewertung, inwieweit ein Unternehmen mit internationalen Normen im Einklang stand. Dies umfasste Prüfungen hinsichtlich der Einhaltung internationaler Normen, wie beispielsweise der OECD-Leitsätze für multinationale Unternehmen, der Leitprinzipien der Vereinten Nationen für Wirtschaft und Menschenrechte, der Prinzipien des UN Global Compact und der Standards der International Labour Organisation. Unternehmen mit der schlechtesten DWS Norm-Bewertung (d.h. einer „F“-Bewertung) konnten nicht als nachhaltig eingestuft werden und wurden als Anlage ausgeschlossen.

In der EU-Taxonomie ist der Grundsatz „Vermeidung erheblicher Beeinträchtigungen“ festgelegt, nach dem taxonomiekonforme Investitionen die Ziele der EU-Taxonomie nicht erheblich beeinträchtigen dürfen, und es sind spezifische EU-Kriterien beigefügt.

Der Grundsatz „Vermeidung erheblicher Beeinträchtigungen“ findet nur bei denjenigen dem Finanzprodukt zugrunde liegenden Investitionen Anwendung, die die EU-Kriterien für ökologisch nachhaltige Wirtschaftsaktivitäten berücksichtigen. Die dem verbleibenden Teil dieses Finanzprodukts zugrunde liegenden Investitionen berücksichtigen nicht die EU-Kriterien für ökologisch nachhaltige Wirtschaftsaktivitäten.

Alle anderen nachhaltigen Investitionen dürfen ökologische oder soziale Ziele ebenfalls nicht erheblich beeinträchtigen.

Bei den **wichtigsten nachteiligen Auswirkungen** handelt es sich um die bedeutendsten nachteiligen Auswirkungen von Investitionsentscheidungen auf Nachhaltigkeitsfaktoren in den Bereichen Umwelt, Soziales und Beschäftigung, Achtung der Menschenrechte und Bekämpfung von Korruption und Bestechung.

Wie wurden bei diesem Finanzprodukt die wichtigsten nachteiligen Auswirkungen auf Nachhaltigkeitsfaktoren berücksichtigt?

Ja, der Teilfonds berücksichtigte die folgenden wichtigsten nachteiligen Auswirkungen auf Nachhaltigkeitsfaktoren aus Anhang I der Delegierten Verordnung (EU) 2022/1288 der Kommission zur Ergänzung der SFDR:

• Treibhausgasemissionen (THG-Emissionen) (Nr. 1);
• CO2-Fußabdruck (Nr. 2);
• THG-Emissionsintensität der Unternehmen, in die investiert wird (Nr. 3);
• Engagement in Unternehmen, die im Bereich der fossilen Brennstoffe tätig sind (Nr. 4);
• Verstöße gegen die UNGC-Grundsätze und gegen die Leitsätze der Organisation für wirtschaftliche Zusammenarbeit und Entwicklung (OECD) für multinationale Unternehmen (Nr. 10); und
• Engagement in umstrittenen Waffen (Antipersonenminen, Streumunition, chemische und biologische Waffen) (Nr. 14).

Für nachhaltige Anlagen werden die wichtigsten nachteiligen Auswirkungen darüber hinaus auch in der DNSH-Bewertung berücksichtigt, wie im vorstehenden Abschnitt „Wie wurden die Indikatoren für nachteilige Auswirkungen auf die Nachhaltigkeitsfaktoren berücksichtigt?“ dargelegt.

DWS Invest ESG Mobility (in Liquidation)

Indikatoren	Beschreibung	Performanz
Die wichtigsten nachteiligen Auswirkungen (PAI)		
PAII - 01. THG-Emissionen	Summe des aktuellen Werts der Investitionen von Unternehmen i, geteilt durch den Unternehmenswert des investierten Unternehmens und multipliziert mit den Scope 1+2+3-THG-Emissionen des Unternehmens.	0 tCO2e
PAII - 02. CO2-Fußabdruck - EUR	Der CO2-Fußabdruck wird in Tonnen CO2-Emissionen pro Million investierter EUR ausgedrückt. Die CO2-Emissionen eines Emittenten werden durch seinen Unternehmenswert einschließlich liquider Mittel (EVIC) normalisiert.	0 tCO2e / Million EUR
PAII - 03. Kohlenstoffintensität	Gewichtete durchschnittliche Kohlenstoffintensität Scope 1+2+3	0 tCO2e / Million EUR
PAII - 04. Beteiligung an Unternehmen, die im Bereich der fossilen Brennstoffe tätig sind	Anteil der Investitionen in Unternehmen, die im Bereich der fossilen Brennstoffe tätig sind	0 % des Portfoliovermögens
PAII - 10. Verstöße gegen die UNGC-Grundsätze und die OECD-Leitsätze für multinationale Unternehmen	Anteil der Investitionen in Unternehmen, die in Verstöße gegen die UNGC-Grundsätze oder die OECD-Leitsätze für multinationale Unternehmen verwickelt waren	0 % des Portfoliovermögens
PAII - 14. Beteiligung an umstrittenen Waffen	Anteil der Investitionen in Unternehmen, die an der Herstellung oder dem Verkauf von umstrittenen Waffen beteiligt sind (Antipersonenminen, Streumunition, chemische und biologische Waffen)	0 % des Portfoliovermögens

Stand: 06. März 2025

Die Indikatoren für die wichtigsten nachteiligen Auswirkungen auf Nachhaltigkeitsfaktoren (Principal Adverse Impact Indicators –PAII) werden anhand der Daten in den DWS Backoffice- und Frontoffice-Systemen berechnet, die überwiegend auf den Daten externer ESG-Datenanbieter basieren. Wenn es zu einzelnen Wertpapieren oder deren Emittenten keine Daten zu einzelnen PAII gibt, entweder weil keine Daten verfügbar sind oder der PAII auf den jeweiligen Emittenten oder das Wertpapier nicht anwendbar ist, werden diese Wertpapiere oder Emittenten nicht in der Berechnung des PAII einbezogen. Bei Zielfondsinvestitionen erfolgt eine Durchsicht ("Look-through") in die Zielfondsbestände, sofern entsprechende Daten verfügbar sind. Die Berechnungsmethode für die einzelnen PAI-Indikatoren kann sich in nachfolgenden Berichtszeiträumen infolge sich entwickelnder Marktstandards, einer veränderten Behandlung von Wertpapieren bestimmter Instrumententypen (wie Derivate) oder durch aufsichtsrechtliche Klarstellungen ändern.
Eine Verbesserung der Datenverfügbarkeit kann sich zudem in nachfolgenden Berichtszeiträumen auf die ausgewiesenen PAIIs auswirken.
Zur Berechnung der PAIIs werden die Werte aus dem Front-Office-System der DWS genutzt. Dies bedeutet, dass es zu geringfügigen Abweichungen zu den übrigen im Jahresbericht dargestellten Kurswerten, die aus dem Fondsbuchhaltungssystem abgeleitet werden, kommen kann.

Welche sind die Hauptinvestitionen dieses Finanzprodukts?

DWS Invest ESG Mobility

Größte Investitionen	Aufschlüsselung der Branchenstruktur gemäß NACE-Systematik	In % des durchschnittlichen Portfoliovermögens	Aufschlüsselung der Länder

für den Zeitraum vom 01. Januar 2025 bis zum 06. März 2025

Die Liste umfasst die folgenden Investitionen, auf die **der größte Anteil der** im Bezugszeitraum getätigten **Investitionen** des Finanzprodukts entfiel: für den Zeitraum vom 01. Januar 2025 bis zum 06. März 2025

Wie hoch war der Anteil der nachhaltigkeitsbezogenen Investitionen?

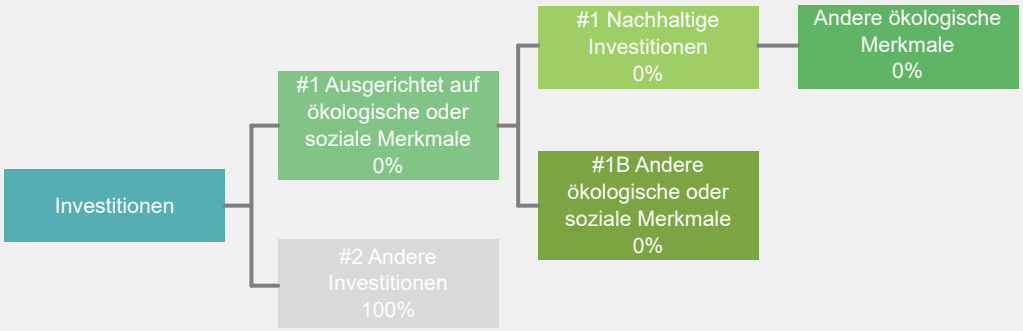
Der Anteil der nachhaltigkeitsbezogenen Investitionen betrug zum Liquidationsstichtag 0% des Portfoliovermögens.
Anteil der nachhaltigkeitsbezogenen Investitionen in den Vorjahren:
30.12.2024: 95,64 %
29.12.2023: 96,19 %
30.12.2022: 99,86 %

Die **Vermögensallokation** gibt den jeweiligen Anteil der Investitionen in bestimmte Vermögenswerte an.

Wie sah die Vermögensallokation aus?

Dieser Fonds wurde zum 6. März 2025 liquidiert. Zum Liquidationsstichtag legte der Fonds 0% seines Nettovermögens in Anlagen, die mit den beworbenen ökologischen und sozialen Merkmalen im Einklang standen (#1 Ausgerichtet auf ökologische oder soziale Merkmale). Innerhalb dieser Kategorie erfüllten 0% des Teilfondsvermögens die Kriterien für eine Einstufung als nachhaltige Investitionen (#1A Nachhaltige Investitionen). Davon betrug der Anteil nachhaltiger Investitionen mit einem Umweltziel, das nicht mit der EU-Taxonomie konform war, 0%des Netto-Teilfondsvermögens. Der Anteil nachhaltiger Investitionen mit einem Umweltziel, das nicht mit der EU-Taxonomie konform war, hing von der Marktsituation und dem investierbaren Anlageuniversum ab.

100% des Netto-Teilfondsvermögens wurden in alle zulässigen Anlagen investiert, für die entweder die DWS ESG-Bewertungsmethodik nicht angewendet wurde oder für die keine vollständige ESG-Datenabdeckung vorlag (#2 Andere). Innerhalb dieser Quote wurden bis zu 20% des Netto-Teilfondsvermögens in Anlagen toleriert, für die keine vollständige Datenabdeckung in Bezug auf die vorab genannten DWS ESG-Bewertungsansätze und Ausschlüsse vorlag. Diese Toleranz galt nicht für die Bemessung der Verfahrensweisen einer guten Unternehmensführung (mittels der DWS Norm-Bewertung).
Eine ausführlichere Darstellung der genauen Aufteilung des Portfolios dieses Teilfonds war dem Besonderen Teil des Verkaufsprospekts zu entnehmen.



#1 Ausgerichtet auf ökologische oder soziale Merkmale umfasst Investitionen des Finanzprodukts, die zur Erreichung der beworbenen ökologischen oder sozialen Merkmale getätigt wurden.

#2 Andere Investitionen umfasst die übrigen Investitionen des Finanzprodukts, die weder auf ökologische oder soziale Merkmale ausgerichtet sind noch als nachhaltige Investitionen eingestuft werden.

Die Kategorie **#1 Ausgerichtet auf ökologische oder soziale Merkmale** umfasst folgende Unterkategorien:
- Die Unterkategorie **#1A Nachhaltige Investitionen** umfasst ökologisch und sozial nachhaltige Investitionen.
- Die Unterkategorie **#1B Andere ökologische oder soziale Merkmale** umfasst Investitionen, die auf ökologische oder soziale Merkmale ausgerichtet sind, aber nicht als nachhaltige Investitionen eingestuft werden.

In welchen Wirtschaftssektoren wurden die Investitionen getätigt?

DWS Concept ESG Mobility

NACE-Code	Aufschlüsselung der Branchenstruktur gemäß NACE-Systematik	In % des Portfoliovermögens
NA	Bankguthaben und Sonstige	100%
Beteiligung an Unternehmen, die im Bereich der fossilen Brennstoffe tätig sind		0,0 %

Stand: 06. März 2025

Dieser Fonds wurde zum 06. März 2025 liquidiert. Weitere Informationen sind der Vermögensübersicht im Auflösungsbericht zu entnehmen.

Inwiefern waren die nachhaltigen Investitionen mit einem Umweltziel mit der EU-Taxonomie konform?

Aufgrund des Mangels an verlässlichen Daten verpflichtete sich der Teilfonds nicht dazu, einen Anteil an nachhaltigen Anlagen anzustreben, die mit einem Umweltziel gemäß der EU-Taxonomie im Einklang stehen. Daher betrug der beworbene Anteil ökologisch nachhaltiger Anlagen, die mit der EU-Taxonomie konform sind, 0% des NettoTeilfondsvermögens. Es konnte jedoch vorkommen, dass ein Teil der den Anlagen zugrunde liegenden wirtschaftlichen Tätigkeiten mit der EU-Taxonomie im Einklang stand.

Mit Blick auf die EU-Taxonomiekonformität umfassen die Kriterien für **fossiles Gas** die Begrenzung der Emissionen und die Umstellung auf voll erneuerbare Energie oder CO2-arme Kraftstoffe bis Ende 2035. Die Kriterien für **Kernenergie** beinhalten umfassende Sicherheits- und Abfallentsorgungsvorschriften.

Ermöglichende Tätigkeiten wirken unmittelbar ermöglichend darauf hin, dass andere Tätigkeiten einen wesentlichen Beitrag zu den Umweltzielen leisten.

Übergangstätigkeiten sind Tätigkeiten, für die es noch keine CO2-armen Alternativen gibt und die unter anderem Treibhausgasemissionswerte aufweisen, die den besten Leistungen entsprechen.

Wurde mit dem Finanzprodukt in EU-taxonomiekonforme Tätigkeiten im Bereich fossiles Gas und/oder Kernenergie investiert[1]?

☐ Ja:

☐ In fossiles Gas ☐ In Kernenergie

☒ Nein

Der Teilfonds strebte keine taxonomiekonformen Investitionen im Bereich fossiles Gas und/oder Kernenergie an. Dennoch konnt es vorkommen, dass er im Rahmen der Anlagestrategie auch in Unternehmen investierte, die jedenfalls auch in diesen Bereichen tätig waren.

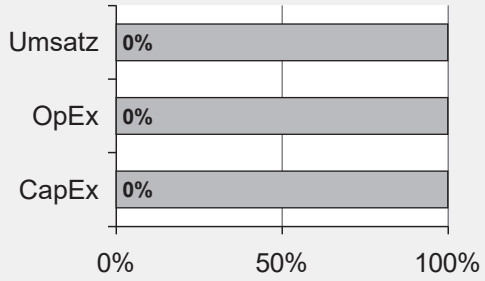
---

[1] Tätigkeiten im Bereich fossiles Gas und/oder Kernenergie sind nur dann EU-taxonomiekonform, wenn sie zur Eindämmung des Klimawandels („Klimaschutz") beitragen und kein Ziel der EU-Taxonomie erheblich beeinträchtigen – siehe Erläuterung am linken Rand. Die vollständigen Kriterien für EU-taxonomiekonforme Wirtschaftstätigkeiten im Bereich fossiles Gas und Kernenergie sind in der Delegierten Verordnung (EU) 2022/1214 der Kommission festgelegt.

Taxonomiekonforme Tätigkeiten, ausgedrückt durch den Anteil der:
- Umsatzerlöse, die die gegenwärtige „Umweltfreundlichkeit“ der Unternehmen, in die investiert wird, widerspiegeln.
- Investitionsausgaben (CapEx), die die umweltfreundlichen, für den Übergang zu einer grünen Wirtschaft relevanten Investitionen der Unternehmen, in die investiert wird, aufzeigen.
- Betriebsausgaben (OpEx), die die umweltfreundlichen betrieblichen Aktivitäten der Unternehmen, in die investiert wird, widerspiegeln.

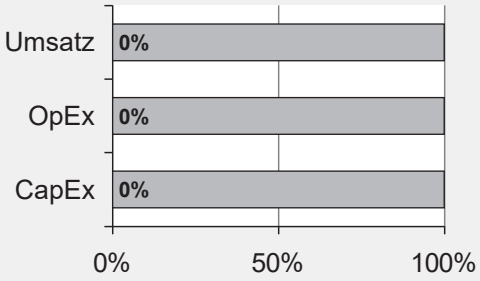
Die nachstehenden Grafiken zeigen den Mindestprozentsatz der EU-taxonomiekonformen Investitionen in Grün. Da es keine geeignete Methode zur Bestimmung der Taxonomiekonformität von Staatsanleihen* gibt, zeigt die erste Grafik die Taxonomiekonformität in Bezug auf alle Investitionen des Finanzprodukts einschließlich der Staatsanleihen, während die zweite Grafik die Taxonomiekonformität nur in Bezug auf die Investitionen des Finanzprodukts zeigt, die keine Staatsanleihen umfassen.

1. Taxonomiekonformität der Investitionen **einschließlich Staatsanleihen***



Taxonomiekonform: Fossiles Gas	0.00%
Taxonomiekonform: Kernenergie	0.00%
Taxonomiekonform (ohne fossiles Gas und Kernenergie)	0.00%
Taxonomiekonform	0,00%
Nicht taxonomiekonform	100,00%

2. Taxonomiekonformität der Investitionen **ohne Staatsanleihen***



Taxonomiekonform: Fossiles Gas	0.00%
Taxonomiekonform: Kernenergie	0.00%
Taxonomiekonform (ohne fossiles Gas und Kernenergie)	0.00%
Taxonomiekonform	0,00%
Nicht taxonomiekonform	100,00%

Diese Grafik gibt 100% der Gesamtinvestitionen wieder.

** Für die Zwecke dieser Diagramme umfasst der Begriff „Staatsanleihen“ alle Risikopositionen gegenüber Staaten.*

Wie hoch ist der Anteil der Investitionen, die in Übergangstätigkeiten und ermöglichende Tätigkeiten geflossen sind?

Der Teilfonds sah keinen Anteil an Anlagen in Übergangswirtschaftstätigkeiten oder ermöglichende Tätigkeiten vor, da er sich nicht zu einem Anteil an ökologisch nachhaltigen Anlagen im Einklang mit der EU-Taxonomie verpflichtet hatte.

Wie hat sich der Anteil der Investitionen, die mit der EU-Taxonomie in Einklang gebracht werden, im Vergleich zu früheren Bezugszeiträumen entwickelt?

Der beworbene Anteil ökologisch nachhaltiger Investitionen, gemäß der Verordnung (EU) 2020/852 (sogenannte Taxonomie-Verordnung) betrug im aktuellen sowie vorherigen Bezugsraum 0% des Wertes des Fonds. Es konnte jedoch sein, dass einige nachhaltige Investitionen dennoch mit einem Umweltziel der Taxonomie-Verordnung konform waren.

sind nachhaltige Investitionen mit einem Umweltziel, die **die Kriterien** für ökologisch nachhaltige Wirtschaftstätigkeiten gemäß der Verordnung (EU) 2020/852 **nicht berücksichtigen.**

Wie hoch war der Anteil der nicht mit der EU-Taxonomie konformen nachhaltigen Investitionen mit einem Umweltziel?

Der nachhaltiger Investitionen mit einem Umweltziel, die nicht mit der EU-Taxonomie konform waren, betrug zum Liquidationsstichtag 0%.

In den Vorjahren betrug der Anteil:

Berichtsperiode	Nachhaltige Investitionen (gesamt)	mit Umweltziel	sozial nachhaltig
30.12.2024	18,73%	18,24%	--
29.12.2023	17,02%	17,02%	--
30.12.2022	15,82%	--	--

Wie hoch war der Anteil der sozial nachhaltigen Investitionen?

Der Teilfonds sah keine Mindestquote für sozial nachhaltige Investitionen gemäß Artikel 2 Absatz 17 SFDR vor.

In den Vorjahren betrug der Anteil:

Berichtsperiode	Nachhaltige Investitionen (gesamt)	mit Umweltziel	sozial nachhaltig
30.12.2024	18,73%	18,24%	--
29.12.2023	17,02%	17,02%	--
30.12.2022	15,82%	--	--

Welche Investitionen fielen unter „Andere Investitionen“, welcher Anlagezweck wurde mit ihnen verfolgt und gab es einen ökologischen oder sozialen Mindestschutz?

Dieser Teilfonds bewarb eine vorwiegende Vermögensallokation in Anlagen, die mit ökologischen und sozialen Merkmalen im Einklang standen (#1 Ausgerichtet auf ökologische oder soziale Merkmale). Zum Liquidationsstichtag wurden jedoch 100% seines Netto-Teilfondsvermögens in Anlagen investiert, für die entweder die DWS ESG-Bewertungsmethodik nicht angewandt wurde oder für die keine vollständige ESG-Datenabdeckung vorlag (#2 Andere). Innerhalb dieser Quote wurden bis zu 20% des Netto-Teilfondsvermögens in Anlagen toleriert, für die keine vollständige Datenabdeckung in Bezug auf die vorab genannten DWS ESG-Bewertungsansätze und Ausschlüsse vorlag. Diese Toleranz galt nicht für die Bemessung der Verfahrensweisen einer guten Unternehmensführung (mittels der DWS Norm-Bewertung).

Diese anderen Anlagen konnten sämtliche Anlageklassen umfassen, die gemäß der jeweiligen Anlagepolitik zulässig waren, einschließlich Einlagen bei Kreditinstituten und Derivate.

Das Portfoliomanagement konnte diese "Anderen Anlagen" zur Optimierung des Anlageergebnisses nutzen sowie für Diversifizierungs-, Liquiditäts- und Absicherungszwecke.

Ökologischer oder sozialer Mindestschutz wurde bei diesen anderen Anlagen bei diesem Teilfonds entweder nicht berücksichtigt oder nur teilweise.

Welche Maßnahmen wurden während des Bezugszeitraums zur Erfüllung der ökologischen und/oder sozialen Merkmale ergriffen?

Dieser Teilfonds verfolgte eine Aktienstrategie als Hauptanlagestrategie. Mindestens 70% des Teilfondsvermögens wurden in Aktien, Aktienzertifikaten, Optionsanleihen, deren Optionsscheine auf Wertpapiere lauteten, Partizipations- und Genussscheinen sowie in Optionsscheinen auf Aktien in- und ausländischer Emittenten angelegt, deren Hauptgeschäftsfeld im Bereich „Mobility“ lag oder davon profitierte.
Weitere Angaben zur Hauptanlagestrategie sind dem Besonderen Teil des Verkaufsprospekts zu entnehmen.
Das Teilfondsvermögen wurde im Berichtzeitraum vorwiegend in Anlagen investiert, die die definierten Standards für die beworbenen ökologischen oder sozialen Merkmale erfüllten, wie in den folgenden Abschnitten dargelegt (zum Liquidationsstichtag betrug dieser Anteil 0% des Teilfondsvermögens).
Die Strategie des Teilfonds im Hinblick auf die beworbenen ökologischen oder sozialen Merkmale war ein wesentlicher Bestandteil der ESG-Bewertungsmethodik und wurde über die Anlagerichtlinien des Teilfonds fortlaufend überwacht.

DWS ESG-Bewertungsmethodik
Der Teilfonds strebte an, die beworbenen ökologischen und sozialen Merkmale zu erreichen, indem potenzielle Anlagen unabhängig von deren wirtschaftlichen Erfolgsaussichten anhand einer hauseigenen DWS ESG-Bewertungsmethodik bewertet und darauf basierend Ausschlusskriterien angewendet wurden. Die DWS ESG-Bewertungsmethodik basierte auf der DWS ESG-Datenbank, die Daten mehrerer ESG-Datenanbieter, öffentliche Quellen und/oder interne Bewertungen nutzte, um abgeleitete Gesamtbewertungen zu erzielen. Interne Bewertungen berücksichtigten unter anderem die zukünftig erwarteten ESG-Entwicklungen eines Emittenten, Plausibilität der Daten im Hinblick auf vergangene oder zukünftige Ereignisse, Dialogbereitschaft zu ESG-Themen und ESG-spezifische Entscheidungen eines Unternehmens.

Die DWS ESG-Datenbank leitete, wie nachfolgend näher beschrieben, innerhalb verschiedener Bewertungsansätze kodierte Bewertungen ab. Einzelne Bewertungsansätze basierten dabei auf einer Buchstabenskala von „A“ bis „F“. Hierbei erhielten Emittenten jeweils eine von sechs möglichen Bewertungen, wobei „A“ die höchste Bewertung und „F“ die niedrigste Bewertung auf der Skala darstellte. Innerhalb anderer Bewertungsansätze stellte die DWS ESG-Datenbank gesonderte Bewertungen bereit, darunter zum Beispiel in Bezug auf Umsätze aus kontroversen Sektoren oder den Grad der Involvierung in kontroverse Waffen. Wurde die Bewertung eines Emittenten entsprechend einem Bewertungsansatz als nicht ausreichend erachtet, war es dem Teilfonds untersagt, in diesen Emittenten beziehungsweise diese Anlage zu investieren, auch wenn dieser oder diese entsprechend den anderen Bewertungsansätzen grundsätzlich investierbar war.

Die DWS ESG-Datenbank nutzte unter anderem folgende Bewertungsansätze zur Beurteilung, ob die beworbenen ökologischen und sozialen Merkmale bei Emittenten beziehungsweise Anlagen vorlagen und Unternehmen, in die investiert wurde, Verfahrensweisen einer guten Unternehmensführung anwendeten:

DWS Klima- und Transitionsrisiko-Bewertung:
Diese Bewertung beurteilte Emittenten hinsichtlich ihres Beitrags zum Klimawandel und zu Umweltveränderungen, beispielsweise in Bezug auf die Reduzierung von Treibhausgasen und den Schutz von Wasserressourcen. Emittenten, die weniger zum Klimawandel und anderen negativen Umweltveränderungen beitrugen oder weniger von diesen Risiken betroffen waren, erhielten bessere Bewertungen. Unternehmen mit einem exzessiven Klima-und Transitionsrisikoprofil (d.h. einer "F"-Bewertung) wurden ausgeschlossen.

DWS Norm-Bewertung:
Die DWS Norm-Bewertung beurteilte das Verhalten von Unternehmen zum Beispiel im Rahmen der Prinzipien des UN Global Compact, der Standards der International Labour Organisation sowie allgemein anerkannter internationaler Normen und Grundsätze. Die DWS Norm-Bewertung prüfte zum Beispiel Menschenrechtsverletzungen, Verletzungen von Arbeitnehmerrechten, Kinder- oder Zwangsarbeit, nachteilige Umweltauswirkungen und Geschäftsethik. Bei der Bewertung wurden Verstöße gegen die zuvor genannten internationalen Standards berücksichtigt. Diese wurden anhand von Daten von ESG-Datenanbietern und/oder anderer vorliegender Informationen, wie zum Beispiel die erwarteten zukünftigen Entwicklungen dieser Verstöße sowie die Bereitschaft des Unternehmens, einen Dialog über diesbezügliche Unternehmensentscheidungen aufzunehmen, bewertet.
Unternehmen mit der schlechtesten DWS Norm-Bewertung (d.h. einer „F“-Bewertung) waren als Anlage ausgeschlossen.

UN Global Compact-Bewertung:
Zusätzlich zur DWS Norm-Bewertung wurden Unternehmen ausgeschlossen, die direkt in eine oder mehrere schwerwiegende, ungelöste Kontroversen in Bezug auf die Prinzipien des UN Global Compact verwickelt waren.

DWS ESG-Qualitätsbewertung:
Die DWS ESG-Qualitätsbewertung unterschiedet zwischen Unternehmen und staatlichen Emittenten. Für Unternehmen ermöglichte die DWS ESG-Qualitätsbewertung einen Peer-Group-Vergleich basierend auf einem anbieterübergreifenden Konsens über die ESG-Gesamtbewertung (Best-in-Class Ansatz), zum Beispiel in Bezug auf den Umgang mit Umweltveränderungen, Produktsicherheit, Mitarbeiterführung oder Unternehmensethik. Die Vergleichsgruppe für Unternehmen setzte sich aus Unternehmen aus dem gleichen Industriesektor zusammen. Die in diesem Vergleich besser bewerteten Unternehmen erhielten eine bessere Bewertung, während die im Vergleich schlechter bewerteten Unternehmen eine schlechtere Bewertung erhielten. Unternehmen, die im Vergleich zu ihrer Vergleichsgruppe am schlechtesten bewertet wurden (d.h. eine „F“-Bewertung), waren als Anlage ausgeschlossen.
Für staatliche Emittenten beurteilte die DWS ESG-Qualitätsbewertung einen Staat über eine Vielzahl an ESG-Kriterien. Indikatoren für Umweltaspekte waren zum Beispiel der Umgang mit dem Klimawandel, natürliche Ressourcen und Katastrophenanfälligkeit, Indikatoren für Soziales waren unter anderem das Verhältnis zu Kinderarbeit, Gleichberechtigung und die herrschenden sozialen Bedingungen, und Indikatoren für eine gute Regierungsführung waren zum Beispiel das politische System, das Vorhandensein von Institutionen sowie die Rechtsstaatlichkeit. Darüber hinaus berücksichtigte die DWS ESG-Qualitätsbewertung explizit die zivilen und demokratischen Freiheiten eines Landes. Staaten, die im Vergleich zu ihrer Vergleichsgruppe (jeweils getrennt für entwickelte Länder und Schwellenländer) am schlechtesten bewertet wurden (d.h. eine „F“-Bewertung), wurden als Anlage ausgeschlossen.

• **Freedom House Status**
Freedom House ist eine internationale Nichtregierungsorganisation, welche Länder nach dem Grad ihrer politisch-zivilen Freiheit klassifiziert. Auf Basis des Freedom House Status wurden Staaten ausgeschlossen, die von Freedom House als “nicht frei” gekennzeichnet wurden.

• **Beteiligung an kontroversen Sektoren**
Es wurden Anlagen in Unternehmen ausgeschlossen, die bestimmte Geschäftsbereiche und Geschäftstätigkeiten in umstrittenen Bereichen ("kontroversen Sektoren") hatten. Unternehmen wurden nach ihrem Anteil am Gesamtumsatz, den sie in kontroversen Sektoren erzielten, wie folgt aus dem Portfolio ausgeschlossen.

Umsatzschwellen für den Ausschluss von kontroversen Sektoren:

• Herstellung von Produkten und/oder Erbringung von Dienstleistungen in der Rüstungsindustrie mindestens 5%
• Herstellung und/oder Vertrieb ziviler Handfeuerwaffen oder Munition: mindestens 5%
• Herstellung von Tabakwaren: mindestens 5%
• Herstellung von Produkten und/oder Erbringung von Dienstleistungen für die Glücksspielindustrie mindestens 5%
• Herstellung von Erwachsenenunterhaltung: mindestens 5%
• Herstellung von Palmöl: mindestens 5%
• Energiegewinnung aus Kernenergie und/oder Abbau von Uran und/oder Anreicherung von Uran mindestens 5%
• Förderung von Erdöl: mindestens 10%
• Unkonventionelle Förderung von Erdöl und/oder Erdgas (inklusive Ölsand, Ölschiefer/Schiefergas arktische Bohrungen): mehr als 0%
• Abbau von Kohle: mindestens 1%
• Energiegewinnung aus Kohle: mindestens 10%
• Förderung von Kohle und Erdöl: mindestens 10%
• Energiegewinnung aus und sonstiger Einsatz von fossilen Brennstoffen (exklusive Erdgas) mindestens 10%
• Abbau und Exploration von und Dienstleistungen im Zusammenhang mit Ölsand und Ölschiefer mindestens 10%

Der Teilfonds schloss Unternehmen mit Kohleexpansionsplänen, wie zum Beispiel zusätzliche Kohleförderung, -produktion oder -nutzung, basierend auf einer internen Identifizierungsmethodik aus.

Die zuvor genannten kohlebezogenen Ausschlüsse bezogen sich ausschließlich auf sogenannte Kraftwerkskohle, d.h. Kohle, die in Kraftwerken zur Energiegewinnung eingesetzt wurde.

DWS Ausschlüsse für kontroverse Waffen
Unternehmen wurden ausgeschlossen, wenn sie als Hersteller von Antipersonenminen, Streumunition, chemischen und biologischen Waffen, Nuklearwaffen, Waffen aus abgereichertem Uran oder Uranmunition oder von Schlüsselkomponenten des Vorgenannten identifiziert wurden. Für die Ausschlüsse wurden zudem die Beteiligungen innerhalb einer Konzernstruktur berücksichtigt. Ebenfalls ausgeschlossen waren Unternehmen, die als Hersteller von Brandbomben mit weißem Phosphor oder deren Schlüsselkomponenten identifiziert wurden.

DWS Bewertung der Erlösverwendung (Use-of-proceeds)
Abweichend von den oben dargelegten Bewertungsansätzen war eine Anlage in Anleihen ausgeschlossener Emittenten zulässig, wenn die besonderen Anforderungen für zweckgebundene Anleihen erfüllt waren. In diesem Fall wurde die Anleihe zunächst auf ihre Konformität mit den von der International Capital Market Association (ICMA) herausgegebenen Green Bond Principles, Social Bond Principles bzw. Sustainability Bond Principles geprüft. Außerdem wurde geprüft, ob der Emittent der Anleihe einen festgelegten Mindestumfang an ESG-Kriterien einhielt. Emittenten und deren Anleihen, die diese Kriterien nicht erfüllten, wurden ausgeschlossen.

DWS Zielfonds-Bewertung
Die DWS ESG-Datenbank bewertete Zielfonds anhand der DWS Klima- und Transitionsrisiko-Bewertung, der DWS Norm-Bewertung, der UN Global Compact-Bewertung, der DWS ESG-Qualitätsbewertung, der Einstufung durch Freedom House sowie im Hinblick auf Investitionen in Unternehmen, die als Hersteller von Antipersonenminen, Streumunition, chemischen und biologischen Waffen oder deren Schlüsselkomponenten galten (die Beteiligungen innerhalb einer Konzernstruktur wurden entsprechend berücksichtigt). Bei den Bewertungsmethoden für Zielfonds wurde das gesamte Zielfondsportfolio mit den darin enthaltenen Anlagen untersucht. Je nach Bewertungsansatz wurden Ausschlusskriterien (zum Beispiel Toleranzschwellen) definiert, die zum Ausschluss des Zielfonds führten. Dementsprechend enthielten die Portfolios der Zielfonds Anlagen, die nicht den DWS-Standards für Emittenten entsprachen.

Nicht ESG-bewertete Anlageklassen
Nicht jeder Vermögenswert des Teilfonds wurde mit der DWS ESG-Bewertungsmethodik bewertet. Dies galt insbesondere für die folgenden Assetklassen:

Derzeit wurden die mit dem Teilfonds beworbenen ökologischen und sozialen Merkmale nicht durch den Einsatz von Derivaten erreicht. Derivate wurden daher bei der Berechnung des Mindestanteils der Vermögenswerte, die diesen Merkmalen entsprachen, nicht berücksichtigt. Derivate auf einzelne Emittenten wurden für den Teilfonds jedoch nur dann erworben, wenn die Emittenten des Basiswerts die Kriterien der DWS ESG-Bewertungsmethodik erfüllten.

Einlagen bei Kreditinstituten wurden nicht mit der DWS ESG-Bewertungsmethodik bewertet.

Die angewandte ESG-Anlagestrategie sah keine verbindliche Mindestreduzierung des Umfangs der Anlagen vor.

Die Bewertung der Verfahrensweisen einer guten Unternehmensführung der Unternehmen, in die investiert wurde, basierte auf der DWS Norm-Bewertung. Dementsprechend befolgten die bewerteten Unternehmen, in die investiert wurde, Verfahrensweisen einer guten Unternehmensführung.

DWS-Methodik zur Bestimmung von nachhaltigen Anlagen gemäß Artikel 2 Absatz 17 SFDR (DWS-Nachhaltigkeitsbewertung)
Darüber hinaus maß die DWS zur Ermittlung des Anteils nachhaltiger Anlagen den Beitrag zu einem oder mehreren UN SDGs. Dies erfolgte mit ihrer DWS-Nachhaltigkeitsbewertung von Anlagen, bei der potenzielle Anlagen anhand verschiedener Kriterien dahingehend beurteilt wurden, ob eine Anlage als nachhaltig eingestuft werden konnte., wie im Abschnitt „Welche Ziele verfolgten die nachhaltigen Investitionen, die mit dem Finanzprodukt teilweise getätigt wurden, und wie trägt die nachhaltige Investition zu diesen Zielen bei?“ näher ausgeführt.

Wie hat dieses Finanzprodukt im Vergleich zum bestimmten Referenzwert abgeschnitten?

Dieser Teilfonds hatte keinen Referenzwert festgelegt, um festzustellen, ob er mit den von ihm beworbenen ökologischen und/oder sozialen Merkmalen im Einklang stand.

Bei den **Referenzwerten** handelt es sich um Indizes, mit denen gemessen wird, ob das Finanzprodukt die beworbenen ökologischen oder sozialen Merkmale erreicht.

Periodic disclosure for financial products referred to in Article 8, paragraph 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

Product name: DWS Invest ESG Multi Asset Income

Legal entity identifier: 549300O5WKUNONTPTH35

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

Yes	No
☐ it made **sustainable investments with an environmental objective:** ___%	☒ It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of 37.48% of sustainable investments.
☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy	☐ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
	☒ with a social objective
☐ It made **sustainable investments with a social objective:** ___%	☐ It promoted E/S characteristics, but did **not make any sustainable investments**

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities.** That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

To what extent were the environmental and/or social characteristics promoted by this financial product met?

This sub-fund promoted environmental and social characteristics related to a general consideration of ESG criteria by excluding, for example, investments in companies with the worst norm-related issues towards international standards, issuers with the worst assessment in terms of environmental, social and governance aspects compared to their peer group and/or investments in companies whose involvement in controversial sectors exceeded predefined revenue thresholds.

Further, this sub-fund promoted a proportion of sustainable investments in accordance with article 2(17) of the regulation on sustainability-related disclosures in the financial services sector (SFDR).

This sub-fund had not designated a reference benchmark for the purpose of attaining the environmental and social characteristics promoted.

No derivatives were used to attain the environmental or social characteristics promoted by the sub-fund.

How did the sustainability indicators perform?

The attainment of the promoted environmental and social characteristics as well as the sustainable investment was assessed via the application of an in-house ESG assessment methodology and ESG specific exclusion thresholds as further described in the section “What actions have been taken to meet the environmental and/or social characteristics during the reference period?”. The methodology applied different assessment approaches that were used as sustainability indicators which were:

• **Norm Controversy Assessment** used as an indicator for a company’s exposure to norm-related issues towards international standards.
Performance: No investments in suboptimal assets

• **ESG Quality Assessment** used as an indicator for comparison of an issuer’s environmental, social and governance aspects in relation to its peer group.
Performance: No investments in suboptimal assets

• **Freedom House Status** used as an indicator for the political and civil liberties of a country.
Performance: No investments in suboptimal assets

• **Exposure to controversial sectors** used as an indicator for a company’s involvement in controversial sectors.
Performance: 0%

• **Exposure to companies subject to the EU Paris-aligned Benchmark exclusion criteria** as set forth in article 12(1) of Commission Delegated Regulation 2020/1818 (PAB-Exclusions).
Performance: 0%

• **Sustainability Investment Assessment** used as an indicator to measure the proportion of sustainable investments pursuant to article 2(17) SFDR.
Performance: 37.48%

Please see the section entitled “What actions have been taken to meet the environmental and/or social characteristics during the reference period?” for a description of the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted, including the exclusion criteria, and the assessment methodology for determining whether and to what extent assets met the defined environmental and/or social characteristics (including the turnover thresholds defined for the xclusions). This section contains further information on the sustainability indicators. The values from the DWS front office system are used to calculate the sustainability indicators. This means that there may be minor deviations from the other market values that appear in the annual report, which are derived from the fund accounting system.

…and compared to previous periods?

Attainment of the promoted environmental and social characteristics at portfolio level was measured in the previous years on the basis of the following sustainability indicators:

DWS Invest ESG Multi Asset Income

The disclosure of the sustainability indicators has been revised compared with the prior-year report. The assessment methodology is unchanged. Additional information on the currently valid sustainability indicators is provided in the section entitled “What actions have been taken to meet the environmental and/or social characteristics during the reference period?”.
Information about taking into account the principal adverse impacts on sustainability factors is provided in the section entitled “How did this financial product consider principal adverse impacts on sustainability factors?”

DWS ESG-Assessment Scale

In the following assessment categories, the assets received one of six possible scores, with "A" being the best score and "F" being the worst score.

Criteria	Involvement in controversial sectors *(1)	Involvement in controversial weapons	Norm Assessment *(6)	ESG Quality Assessment	SDG- Assessment	Climat & Transition Risk Assessment
A	Non-involvement	Confirmed non-involvement	Confirmed no issues	True leader in ESG (>= 87.5 DWS ESG score)	True SDG contributor (>= 87.5 SDG score)	True climate leader (>= 87.5 score)
B	Remote involvement	Alleged	Violations of lesser degree	ESG leader (75-87.5 DWS ESG score)	SDG contributor (75-87.5 SDG score)	Climate solution provider(75-87.5 score)
C	0% - 5%	Dual-Purpose *(2)	Violations of lesser degree	ESG upper midfield (50-75 DWS ESG score)	SDG upper midfield (50-75 SDG score)	Low transition risk (50-75 score)
D	5% - 10% (coal: 5% - 10%)	Owning *(3)/ Owned *(4)	Violation of lesser degree	ESG lower midfield (25-50 DWS ESG score)	SDG lower midfield (25-50 SDG score)	Mod. transition risk (25-50 score)
E	10% - 25% (coal: 15% - 25%)	Component Producer *(5)	High severity or re-assessed highest violation *(7)	ESG laggard (12.5-25 DWS ESG score)	SDG obstructer (12.5-25 SDG score)	High transition risk (12.5-25 score)
F	>= 25%	Weapon producer	Highest severity / global compact violation *(8)	True laggard in ESG (0-12.5 DWS ESG score)	Significant SDG obstructer (0-12.5 SDG score)	Excessive transition risk (0-12.5 score)

*(1) Revenue share thresholds as per standard scheme. Sub-Granularity available. Thresholds can be individually set.

*(2) Encompasses e.g.. weapon-carrying systems such as combat aircraft that carry non-controversial weapons as well as controversial ones.

*(3) Owning more than 20% equity.

*(4) Being owned by more than 50% of company involved in grade E or F.

*(5) Single purpose key component.

*(6) Includes ILO controversies as well as corporate governance and product issues.

*(7) In its ongoing assessment, DWS takes into account the violation(s) of international standards – observed via data from ESG data vendors – such as the UN Global Compact, but also possible ESG data vendor errors identified, future expected developments of these violations as well as the willingness of the issuer to engage in dialogue regarding corporate decisions in this regard.

*(8) An F-grade can be considered a reconfirmed violation of the United Nations Global Compact rule framework for corporate behavior.

What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?

Sustainable investments contributed (i) to at least one of the Sustainable Development Goals of the United Nations (UN SDGs) that relate to environmental and/or social objectives, such as no poverty, zero hunger, good health and well-being, quality education, gender equality, clean water and sanitation, affordable and clean energy, decent work and economic growth, reduced inequalities, sustainable cities and communities, responsible consumption and production, climate action, life below water and/or life on land and/or (ii) to at least one other environmental objective such as climate change adaption, climate change mitigation, sustainable use and protection of water and marine recources, transition to a circular economy, pollution prevention and control and/or protection and restoration of biodiversity and ecosystems (as defined under the EU Taxonomy).

The extent of the contribution to individual sustainable investment objectives varied depending on the actual investments held in the portfolio.

DWS determined the contribution to a sustainable investment objective based on its Sustainability Investment Assessment which used data from one or several data providers, public sources and/or internal assessments. An investment's positive contribution to an environmental and/or social objective was assessed based on the revenues which a company generated from the actual economic activities making such contribution (activity-based approach). Where a positive contribution was determined, the investment was considered sustainable if the issuer passed the Do No significant Harm ("DNSH") assessment and the company followed good governance practices.

The share of sustainable investments in the portfolio as defined in article 2(17) SFDR was therefore calculated in proportion to the economic activities of the issuers that were considered as sustainable (activity-based approach). Notwithstanding the preceding, in the case of use-of-proceeds bonds that were considered as sustainable investment, the value of the entire bond was counted towards the portfolio's share of sustainable investments.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

The sustainable investments in which the sub-fund invested were assessed to ensure they did not cause significant harm to any environmental or social sustainable investment objective. This was achieved by taking into account the indicators for principal adverse impacts on sustainability factors (dependent on relevance) as described below. If a significant harm was identified, the investment could not have been considered sustainable.

How were the indicators for adverse impacts on sustainability factors taken into account?

The Sustainability Investment Assessment systematically integrated the mandatory principal adverse indicators on sustainability factors (dependent on relevance) from Table 1 and relevant indicators from Tables 2 and 3 of Annex I of the Commission Delegated Regulation (EU) 2022/1288 supplementing the SFDR. Taking into account these principal adverse impacts, DWS had established quantitative thresholds and/or qualitative values to assess a significant harm on any of the environmental or social sustainable investment objectives. These values were set based upon various external and internal factors, such as data availability or market developments and may have been adapted going forward.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The alignment of sustainable investments with, amongst others, the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights was evaluated through the Norm Controversy Assessment (as further described below). Companies with the worst Norm Controversy Assessment of “F” were excluded as an investment.

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union Criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU Criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU Criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

How did this financial product consider principal adverse impacts on sustainability factors?

The sub-fund considered the following principal adverse impacts on sustainability factors from Annex I of the Commission Delegated Regulation (EU) 2022/1288 supplementing the SFDR:

- Greenhouse gas (GHG) emissions (no. 1);
- Carbon footprint (no. 2);
- GHG intensity of investee companies (no. 3);
- Exposure to companies active in the fossil fuel sector (no. 4);
- Violations of United Nations Global Compact principles and OECD Guidelines for Multinational Enterprises (no. 10); and
- Exposure to controversial weapons (no. 14).

DWS Invest ESG Multi Asset Income

Indicators	Description	Performance	
Principal Adverse Impact			
PAII - 01. GHG emissions	Sum of the current value of investments of company i, divided by the investee company's enterprise value and multiplied by company's cope 1+2+3 GHG emissions.	14808.6	tCO2e
PAII - 02. Carbon Footprint - EUR	The carbon footprint is expressed as tonnes of CO2 emissions per million EUR invested. The CO2 emissions of an issuer are normalised by its enterprise value including cash (EVIC)	211.59	tCO2e / million EUR
PAII - 03. Carbon Intensity	Weighted average carbon intensity scope 1+2+3	547.75	tCO2e / million EUR
PAII - 04. Exposure to companies active in the fossil fuel sector	Share of investments in companies active in the fossil fuel sector	15.22	% of assets
PAII - 10. Violations of UNGC principles and OECD Guidelines for Multinational Enterprises	Share of investments in investee companies that have been involved in violations of the UNGC principles or OECD Guidelines for Multinational Enterprises	0	% of assets
PAII - 14. Exposure to controversial weapons	Share of investments in investee companies involved in the manufacture or selling of controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)	0	% of assets

As of: December 30, 2025

The Principal Adverse Impact Indicators (PAIIs) are calculated on the basis of the data in the DWS back office and front office systems, which are primarily based on the data of external ESG data providers. If there is no data on individual PAIIs for individual securities or their issuers, either because no data is available or the PAII is not applicable to the particular issuer or security, these securities or issuers are not included in the calculation of the PAII. With target fund investments, a look-through of the target fund holdings is performed if appropriate data is available. The calculation method for the individual PAI indicators may change in subsequent reporting periods due to evolving market standards, a change in the treatment of securities of certain types of instruments (such as derivatives) or as a result of regulatory clarifications.
Moreover, improved data availability may have an effect on the reported PAIIs in subsequent reporting periods.
The values from the DWS front office system are used to calculate the PAIIs. This means that there may be minor deviations from the other market values that appear in the annual report, which are derived from the fund accounting system.

What were the top investments of this financial product?

DWS Invest ESG Multi Asset Income

Largest investments	Breakdown by sector according to NACE Codes	in % of average portfolio volume	Breakdown by country

for the period from January 01, 2025, through December 30, 2025

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is:
for the period from January 01, 2025, through December 31, 2025

What was the proportion of sustainability-related investments?

The proportion of sustainability-related investments as of the reporting date was 99.54% of portfolio assets.
Proportion of sustainability-related investments for the previous years:

30/12/2024: 92.00 %
29/12/2023: 94.24 %
30/12/2022: 95.92 %

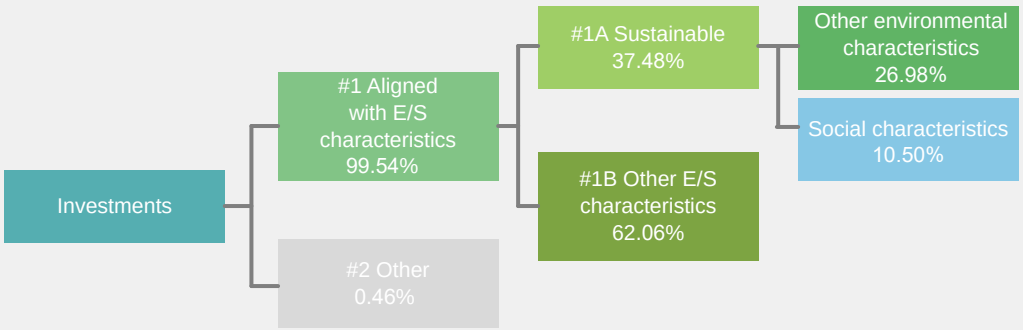
Asset allocation describes the share of investments in specific assets.

What was the asset allocation?

This sub-fund invested 99.54% of its net assets in investments that were aligned with the promoted environmental and social characteristics (#1 Aligned with E/S characteristics). Within this category, 37.48% of the sub-fund's net assets qualified as sustainable investments (#1A Sustainable). Thereof the share of sustainable investments with an environmental objective that was not compliant with the EU Taxonomy was 26.98% of the sub-fund's net assets and the share of socially sustainable investments was 10.50% of the sub-fund's net assets. The share of sustainable investments with an environmental objective that was not compliant with the EU Taxonomy and of socially sustainable investments depended on the market situation and the investable investment universe.

0.46% of the sub-fund's net assets have been invested in assets which were either out-of-scope of the ESG assessment methodology or for which ESG data coverage was incomplete (#2 Other) as further detailed in the section "What investments were included under "#2 Other", what was their purpose and were there any minimum environmental or social safeguards?".

A more detailed description of the specific asset allocation of this sub-fund can be found in the Special Section of the Sales Prospectus.



#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:
- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

In which economic sectors were the investments made?

DWS Invest ESG Multi Asset Income

NACE-Code	Breakdown by sector according to NACE Codes	in % of portfolio volume
B	Mining and quarrying	5.7 %
C	Manufacturing	14.1 %

O	Public administration and defence; compulsory social security	20.3 %

DWS Invest ESG Multi Asset Income

NACE-Code	Breakdown by sector according to NACE Codes	in % of portfolio volume
Q	Human health and social work activities	0.9 %
NA	Other	6.9 %
Exposure to companies active in the fossil fuel sector		15.2 %

As of: December 30, 2025

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The sub-fund did not commit to invest a proportion of sustainable investments with an environmental objective aligned with the EU Taxonomy. Therefore, the promoted minimum percentage of environmentally sustainable investments aligned with the EU Taxonomy was 0% of the sub-fund's net assets. However, certain investments' underlying economic activities may have been aligned with the EU Taxonomy.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are economic activities for yet low-carbon alternatives are not yet available and that have greenhouse gas emission levels corresponding to the best performance.

Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy[1]?

☐ Yes:

☐ In fossil gas ☐ In nuclear energy

☒ No

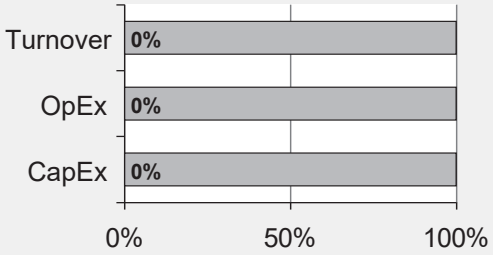
The sub-fund did not take into account the Taxonomy-alignment of companies active in the fossil gas and/or nuclear energy sectors.

[1] Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do no significant harm to any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Taxonomy-aligned activities are expressed as a share of:
- turnover reflecting the share of revenue from green activities of investee companies.
- capital expenditure (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- operational expenditure (OpEx) reflecting the green operational activities of investee companies.

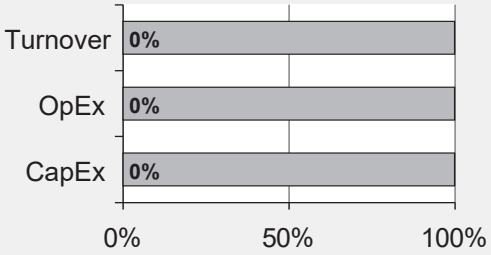
The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy-alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy-alignment only in relation to the investments of the financial product other than sovereign bonds.

1. Taxonomy-alignment of investments **including sovereign bonds***



Taxonomy-aligned: Fossil gas	0.00%
Taxonomy-aligned: Nuclear	0.00%
Taxonomy-aligned (no gas and nuclear)	0.00%
Taxonomy-aligned	0.00%
Non Taxonomy-aligned	100.00%

2. Taxonomy-alignment of investments **excluding sovereign bonds***



Taxonomy-aligned: Fossil gas	0.00%
Taxonomy-aligned: Nuclear	0.00%
Taxonomy-aligned (no gas and nuclear)	0.00%
Taxonomy-aligned	0.00%
Non Taxonomy-aligned	100.00%

This graph represents 100% of the total investments.

**For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures*

What was the share of investments made in transitional and enabling activities?

The sub-fund was not committed to a share of investments in transitional or enabling activities.

How did the percentage of investments that are aligned with the EU Taxonomy compare with previous reference periods?

The promoted proportion of environmentally sustainable investments in accordance with Regulation (EU) 2020/852 (Taxonomy Regulation) was 0% of the fund's assets in the current as well as previous reference periods. It may, however, have been the case that some sustainable investments were nevertheless aligned with an environmental objective of the Taxonomy Regulation.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the Regulation (EU) 2020/852.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The share of sustainable investments with an environmental objective that were not aligned with the EU Taxonomy was 26.98% of the sub-fund's net assets.

Shares of sustainable investments in previous reporting periods:

reporting period	sustainable investments (total)	with environmental objective	socially sustainable
30/12/2024	35.11%	26.78%	8.33%
29/12/2023	35.67%	26.16%	9.51%
30/12/2022	38.96%	--	--

What was the share of socially sustainable investments?

The share of socially sustainable investments was 10.50% of the sub-fund’s net assets. Shares of sustainable investments in previous reporting periods:

reporting period	sustainable investments (total)	with environmental objective	socially sustainable
30/12/2024	35.11%	26.78%	8.33%
29/12/2023	35.67%	26.16%	9.51%
30/12/2022	38.96%	--	--

What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?

99.54% of the sub-fund’s net assets were aligned with the promoted environmental and social characteristics (#1 Aligned with E/S characteristics). 0.46% of the sub-fund’s net assets have been invested in assets which were either out-of-scope of the ESG assessment methodology or for which ESG data coverage was incomplete (#2 Other). Full ESG data coverage was required for the assessment of direct investments in companies in relation to good governance practices and the PAB-Exclusions.

Assets under “#2 Other” could include all asset classes as foreseen in the specific investment policy, such as sight deposits with credit institutions and derivatives. These assets could have been used by the portfolio management for performance, risk diversification, liquidity and hedging purposes.

Minimum environmental or social safeguards were not or only partially considered for the sub-fund’s investments falling within “#2 Other”.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

This sub-fund pursued a strategy based on multiple asset classes as main investment strategy. The sub-fund invested up to 75% of the sub-fund's assets in interest-bearing securities, convertible bonds, bond funds, certificates on bonds or bond indices and warrant-linked bonds. Up to 65% of the sub-fund's assets were invested in equities, equity funds, certificates on equities or equity indices and equity warrants. The sub-fund's investments in asset-backed securities and mortgage backed securities shall be limited to 20% of the sub-fund's net asset value.

Further details regarding the main investment strategy are specified in the Special Section of the Sales Prospectus.

99.54% of the sub-fund's net assets were allocated to investments that met the promoted environmental and social characteristics as described in the following sections. The alignment of the portfolio with the binding elements of the investment strategy used to attain the promoted environmental and social characteristics as well as the PAB-Exclusions was continuously controlled via the sub-fund's investment guidelines monitoring.

ESG assessment methodology

The sub-fund aimed to achieve the promoted environmental and social characteristics by assessing potential assets via an in-house ESG assessment methodology, regardless of their economic prospects for success, and by applying exclusion criteria based on this assessment.

The ESG assessment methodology was using a proprietary software tool which sourced data from one or several ESG data providers, public sources and/or internal assessments to derive overall assessments. The methodology applied to derive such overall assessments could have been based on different methods, such as prioritizing one data vendor, worst-of or averaging approach. Internal assessments may take into account factors such as an issuer's future expected ESG developments, plausibility of data with regard to past or future events, the willingness to engage in dialogue on ESG matters and/or ESG-related decisions of a company. Further, internal ESG assessments for investee companies may have considered the relevance of the exclusion criteria for the market sector of the investee company.

The proprietary software tool used, amongst others, the approaches described below to evaluate the adherence to the promoted ESG characteristics and whether investee companies followed good governance practices. The assessment approaches included, for example, exclusions related to revenues generated from controversial sectors or the exposure to such controversial sectors. In some of the assessment approaches, issuers received one of six possible assessments, with "A" representing the best and "F" the worst assessment. If an issuer was excluded based on one assessment approach, the sub-fund was prohibited from investing in that issuer.

Depending on the investable universe, the portfolio allocation and the exposure to certain sectors, the assessment approaches described below have been more or less relevant which was reflected in the number of issuers being actually excluded.

• PAB-Exclusions

In accordance with the applicable regulations, the sub-fund applied the PAB-Exclusions and excluded all of the following companies:

a. companies involved in controversial weapons (manufacturing or selling of anti-personnel mines, cluster munitions, chemical weapons and biological weapons) assessed as part of the assessment of the "Exposure to controversial weapons" as described below;
b. companies involved in the cultivation and production of tobacco;
c. companies that were found in violation of the United Nations Global Compact principles or the OECD Guidelines for Multinational Enterprises (assessed as part of the "Norm Controversy Assessment" as described below);
d. companies that derived 1% or more of their revenues from exploration, mining, extraction, distribution or refining of hard coal and lignite;
e. companies that derived 10% or more of their revenues from the exploration, extraction, distribution or refining of oil fuels;
f. companies that derived 50% or more of their revenues from the exploration, extraction, manufacturing or distribution of gaseous fuels;
g. companies that derived 50% or more of their revenues from electricity generation with a GHG intensity of more than 100 g CO_2 e/kWh.

The PAB-Exclusions were, in particular, not applied for sight deposits with credit institutions and certain derivative instruments. The extent of the application of the PAB-Exclusions in relation to use of proceeds bonds was described below under the section “Use of proceeds bond Assessment”.

• Norm Controversy Assessment

The Norm Controversy Assessment evaluated the behaviour of companies in relation to generally accepted international standards and principles of responsible business conduct within, amongst others, the framework of the principles of the United Nations Global Compact, the United Nations Guiding Principles, the standards of the International Labour Organization and the OECD Guidelines for Multinational Enterprises. Examples of topics covered within these standards and principles included, but were not limited to, human rights violations, violations of workers' rights, child or forced labour, negative environmental impacts and business ethics. The Norm Controversy Assessment evaluated reported violations of the aforementioned international standards. Companies with the worst Norm Controversy Assessment of “F” were excluded as an investment.

• ESG Quality Assessment

The ESG Quality Assessment distinguished between investments in companies and investments in sovereign issuers.

For companies, the ESG Quality Assessment allowed for a peer group comparison based on an overall ESG assessment, for example, concerning the handling of environmental changes, product safety, employee management or corporate ethics. The peer group for companies was made up from the same industry sector. Companies that scored higher in this comparison received a better assessment, while Companies that scored lower in the comparison received a worse assessment. Companies with the worst assessment of “F” were excluded as an investment.

For sovereign issuers, the ESG Quality Assessment assessed countries based on a peer group comparison considering environmental and social criteria as well as indicators for good governance, including, for example, the political system, the existence of institutions and the rule of law. Sovereign issuers with the worst assessment of “F” were excluded as an investment.

• Freedom House Status

Freedom House is an international non-governmental organization that classifies countries by their degree of political and civil liberties. Based on the Freedom House Status, countries that were classified as “not free” were excluded as an investment.

• Exposure to controversial sectors

Companies that were involved in certain business areas and business activities in controversial areas (“controversial sectors”) were excluded according to their share of total revenues generated in such controversial sectors as follows:

a. Manufacturing of products and/or provision of services in the defence industry: 5% or more
b. Manufacturing and/or distribution of civil handguns or ammunition: 5% or more
c. Manufacturing of products in and/or provision of services for the gambling industry: 5% or more
d. Manufacturing of adult entertainment: 5% or more
e. Manufacturing of palm oil: 5% or more
f. Nuclear power generation and/or uranium mining and/or uranium enrichment: 5% or more
g. Unconventional extraction of crude oil and/or natural gas (including oil sand, oil shale/shale gas, arctic drilling): more than 0%
h. Companies that derived 25% or more from thermal coal mining and thermal coal-based power generation as well as companies with thermal coal expansion plans, such as additional expansion of coal mining, coal production or coal usage. Companies with thermal coal expansion plans were excluded based on an internal identification methodology.

Further, companies involved in the manufacturing or selling of nuclear weapons or key components of nuclear weapons were excluded and the shareholdings within a group structure might have been taken into consideration.

• Exposure to controversial weapons

Companies were excluded if they were identified as being involved in the manufacturing or selling of controversial weapons or key components of controversial weapons or other related specific activities

(anti-personnel mines, cluster munitions, chemical and biological weapons, blinding laser weapons, weapons with non-detectable fragments, depleted uranium weapons/munitions and/or incendiary weapons using white phosphorus). In addition, the shareholdings within a group structure might have been taken into consideration for the exclusions.

• Use of Proceeds Bond Assessment

This assessment was specific to the nature of this instrument and an investment in use of proceeds bonds was permitted only if the following criteria were met. Firstly, all use of proceeds bonds were checked for compliance with the Climate Bonds Standards, similar industry standards for green bonds, social bonds or sustainability bonds (such as ICMA Principles) or the EU Green Bond Standard or whether bonds have been subject to an independent review.

Secondly, certain exclusion criteria were applied, where relevant and where sufficient data was available, at the level of the bond and/or in relation to the issuer of the bonds which could have led to the exclusion of the bond as an investment.

In particular, investments in use of proceeds bonds were prohibited based on the following issuer criteria:

a. Companies referred to under a) to c) of the PAB-Exclusions;
b. Companies with identified thermal coal expansion plans as referred to above;
c. Companies that derived more than 0% of their revenues from unconventional extraction of crude oil and/or natural gas (including oil sand, oil shale/shale gas, arctic drilling);
d. Companies that derived 5% or more of their revenues from nuclear power generation and/or uranium mining and/or uranium enrichment;
e. Sovereign issuers classified as “not free” by Freedom House.

Where no sufficient data was available for the evaluation of the PAB-Exclusions at use of proceeds bond level, the issuer in addition was evaluated based d) to g) of the above described PAB-Exclusions which may have led to the exclusion of the use of proceeds bond.

• Target Fund Assessment

Target funds were eligible if they were aligned with the PAB-Exclusions (starting from 21 May 2025) and, where applicable, the Freedom House Status. The target fund assessment relied on target fund related information acquired from external data sources or was evaluated in relation to the underlying assets of the portfolios of the target funds. Considering the diversity of data vendors and methodologies as well as the target fund portfolio rebalancing, this sub-fund have been indirectly exposed to certain assets that would have been excluded if invested directly.

Sustainability Investment Assessment

Further, for the proportion of sustainable investments, DWS measured the contribution to one or several UN SDGs and/or to other environmental sustainable objectives via its Sustainability Investment Assessment which evaluated potential investments in relation to different criteria to conclude whether an investment could have been considered as sustainable as further detailed in the section “What were the objectives of the sustainable investments that the financial product partially intends to make and how did the sustainable investment contributed to such objectives?”.

The applied ESG investment strategy did not pursue a committed minimum reduction of the scope of the investments.

The assessment of the good governance practices of the investee companies (including assessments related to sound management structures, employee relations, remuneration of staff and tax compliance) was part of the Norm Controversy Assessment which evaluated a company’s behavior within generally accepted international standards and principles of responsible business conduct. Companies with the worst Norm Controversy Assessment of “F” were excluded as an investment.

How did this financial product perform compared to the reference sustainable benchmark?

This sub-fund had not designated a reference benchmark to determine whether it was aligned with the environmental and social characteristics that it promoted.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Periodic disclosure for financial products referred to in Article 8, paragraph 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

Product name: DWS Invest ESG Next Generation Infrastructure

Legal entity identifier: 254900DJJZ72SAHA1E19

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

Yes	No
[ ] it made **sustainable investments with an environmental objective:** ___%	[X] It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of 48.62 % of sustainable investments.
[ ] in economic activities that qualify as environmentally sustainable under the EU Taxonomy	[ ] with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
[ ] in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	[X] with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
	[X] with a social objective
[ ] It made **sustainable investments with a social objective:** ___%	[ ] It promoted E/S characteristics, but did **not make any sustainable investments**

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities.** That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

To what extent were the environmental and/or social characteristics promoted by this financial product met?

This sub-fund promoted environmental and social characteristics related to a general consideration of ESG criteria by excluding, for example, investments in companies with the worst norm-related issues towards international standards, issuers with the worst assessment in terms of environmental, social and governance aspects compared to their peer group and/or investments in companies whose involvement in controversial sectors exceeded predefined revenue thresholds.

Further, this sub-fund promoted a proportion of sustainable investments in accordance with article 2(17) of the regulation on sustainability-related disclosures in the financial services sector (SFDR).

This sub-fund had not designated a reference benchmark for the purpose of attaining the environmental and social characteristics promoted.

No derivatives were used to attain the environmental or social characteristics promoted by the sub-fund.

How did the sustainability indicators perform?

The attainment of the promoted environmental and social characteristics as well as the sustainable investment was assessed via the application of an in-house ESG assessment methodology and ESG specific exclusion thresholds as further described in the section “What actions have been taken to meet the environmental and/or social characteristics during the reference period?”. The methodology applied different assessment approaches that were used as sustainability indicators which were:

• **Norm Controversy Assessment** used as an indicator for a company’s exposure to norm-related issues towards international standards.
Performance: No investments in suboptimal assets

• **ESG Quality Assessment** used as an indicator for comparison of an issuer’s environmental, social and governance aspects in relation to its peer group.
Performance: No investments in suboptimal assets

• **Freedom House Status** used as an indicator for the political and civil liberties of a country.
Performance: No investments in suboptimal assets

• **Exposure to controversial sectors** used as an indicator for a company’s involvement in controversial sectors.
Performance: 0%

• **Exposure to companies subject to the EU Paris-aligned Benchmark exclusion criteria** as set forth in article 12(1) of Commission Delegated Regulation 2020/1818 (PAB-Exclusions).
Performance: 0%

• **Sustainability Investment Assessment** used as an indicator to measure the proportion of sustainable investments pursuant to article 2(17) SFDR.
Performance: 48.62%

Please see the section entitled “What actions have been taken to meet the environmental and/or social characteristics during the reference period?” for a description of the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted, including the exclusion criteria, and the assessment methodology for determining whether and to what extent assets met the defined environmental and/or social characteristics (including the turnover thresholds defined for the xclusions). This section contains further information on the sustainability indicators. The values from the DWS front office system are used to calculate the sustainability indicators. This means that there may be minor deviations from the other market values that appear in the annual report, which are derived from the fund accounting system.

…and compared to previous periods?

Attainment of the promoted environmental and social characteristics at portfolio level was measured in the previous years on the basis of the following sustainability indicators:

DWS Invest ESG Next Generation Infrastructure
