

23 March 2026

Publication pursuant to SFDR - Details

DWS Institutional ESG Euro Money Market Fund

This financial product promotes environmental and social characteristics and qualifies as product in accordance with Article 8(1) of Regulation (EU) 2019/2088.

No sustainable investment objective

This financial product promotes environmental or social characteristics, but does not have as its objective sustainable investment.

The sub-fund commits to partially invest in sustainable investments. To ensure those sustainable investments do not cause significant harm to any environmental or social sustainable investment objective following processes are implemented:

DNSH Assessment

The sustainable investments in which the sub-fund invests are assessed to ensure they do not cause significant harm to any social sustainable investment objective. This is achieved by taking into account the indicators for principal adverse impacts on sustainability factors (dependent on relevance) as described below. If a significant harm is identified, the investment cannot be considered sustainable.

Integration of adverse impacts on sustainability factors

The Sustainability Investment Assessment systematically integrates the mandatory principal adverse indicators on sustainability factors (dependent on relevance) from Table 1 and relevant indicators from Tables 2 and 3 of Annex I of the Commission Delegated Regulation (EU) 2022/1288 supplementing the SFDR. Taking into account these principal adverse impacts, DWS has established quantitative thresholds and/or qualitative values to assess a significant harm on any of the social sustainable investment objectives. These values are set based upon various external and internal factors, such as data availability or market developments and may be adapted going forward.

Alignment with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights

The alignment of sustainable investments with, amongst others, the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights is evaluated through the Norm Controversy Assessment (as further described below). Companies with the worst Norm Controversy Assessment of "F" are excluded as an investment.

Environmental or social characteristics of the financial product

This sub-fund promotes environmental and social characteristics in that it generally considers ESG criteria when selecting investments, including deposits with credit institutions, by excluding, for example, companies with the lowest score with respect to norm-related controversies with regard to international standards, issuers with the lowest score for ESG aspects in comparison with their peer group and/or companies whose activities in controversial sectors generate more than a specific revenue threshold.

In addition, this sub-fund promotes a minimum proportion of socially sustainable investments as defined in article 2(17) of the Regulation (EU) on sustainability-related disclosures in the financial services sector (SFDR).

This sub-fund has not designated a reference benchmark for the attainment of the promoted environmental and social characteristics.

Investment strategy

This sub-fund follows a money market strategy as the principal investment strategy. Here, the sub-fund's assets are invested mainly in money market instruments and deposits with credit institutions that are denominated in euro or hedged against the euro. In addition, the sub-fund may invest in shares of other short-term MMFs or other standard MMFs, repurchase agreement transactions and reverse repurchase agreement transactions according to the conditions and in the amount outlined in greater detail in the general section of the Sales Prospectus, as well as in liquid assets. The instruments are traded on stock exchanges, or in another regulated market that is recognized, open to the public and operates regularly, in a member country of the Organisation for Economic Co-operation and Development (OECD), the G20, the EU or Singapore. Money market instruments (e.g., commercial paper, certificates of deposit and time deposits) do not, however, have to be admitted for trading on a stock exchange or included in a regulated market. The assets acquired for the fund may have a residual term to maturity of no more than two years and an interest rate adjustment within 397 days. The weighted average term to maturity of the fund's assets may at no time be more than twelve months. Article 25 (1), sub-paragraphs 2 and 3, of the Money Market Funds Regulation apply for the calculation of the weighted average term to maturity. The weighted duration may at no time be more than six months.

Please refer to the special section of the sales prospectus for more information on the main investment strategy.

At least 80% of the sub-fund's net assets are invested in assets that fulfill the promoted environmental and social characteristics set out in the following sections. The portfolio's compliance with the binding elements of the investment strategy for achieving the promoted environmental and social characteristics and adherence to the PAB exclusions is continuously checked as part of the monitoring of the sub-fund's investment guidelines.

ESG assessment methodology

The sub-fund aims to achieve the promoted environmental and social characteristics by assessing potential assets via an in-house ESG assessment methodology, regardless of their economic prospects for success, and by applying exclusion criteria based on this assessment.

The ESG assessment methodology is using a proprietary software tool which sources data from one or several ESG data providers, public sources and/or internal assessments to derive overall assessments. The methodology applied to derive such overall assessments can be based on different methods, such as prioritizing one data vendor, worst-of or averaging approach. Internal assessments may take into account factors such as an issuer's future expected ESG developments, plausibility of data with regard to past or future events, the willingness to engage in dialogue on ESG matters and/or ESG-related decisions of a company. Further, internal ESG assessments for investee companies may consider the relevance of the exclusion criteria for the market sector of the investee company.

The proprietary software tool uses, amongst others, the approaches described below to evaluate the adherence to the promoted ESG characteristics and whether investee companies follow good governance practices. The assessment approaches include, for example, exclusions related to revenues generated from controversial sectors or the exposure to such controversial sectors. In some of the assessment approaches, issuers receive one of six possible assessments, with "A" representing the best and "F" the worst assessment. If an issuer is excluded based on one assessment approach, the sub-fund is prohibited from investing in that issuer.

Depending on the investable universe, the portfolio allocation and the exposure to certain sectors, the assessment approaches described below may be more or less relevant which is reflected in the number of issuers being actually excluded.

PAB-Exclusions

In accordance with the applicable regulations, the sub-fund applies the PAB-Exclusions and excludes all of the following companies:

- a. companies involved in controversial weapons (manufacturing or selling of anti-personnel mines, cluster munitions, chemical weapons and biological weapons) assessed as part of the assessment of the "Exposure to controversial weapons" as described below;
- b. companies involved in the cultivation and production of tobacco;
- c. companies that are found in violation of the United Nations Global Compact principles or the OECD Guidelines for Multinational Enterprises (assessed as part of the "Norm Controversy Assessment" as described below);
- d. companies that derive 1% or more of their revenues from exploration, mining, extraction, distribution or refining of hard coal and lignite;
- e. companies that derive 10% or more of their revenues from the exploration, extraction, distribution or refining of oil fuels;
- f. companies that derive 50% or more of their revenues from the exploration, extraction, manufacturing or distribution of gaseous fuels;
- g. companies that derive 50% or more of their revenues from electricity generation with a GHG intensity of more than 100 g CO₂ e/kWh.

The PAB-Exclusions are, in particular, not applied for sight deposits with credit institutions and certain derivative instruments. The extent of the application of the PAB-Exclusions in relation to use of proceeds bonds is described below under the section "Use of proceeds bond Assessment".

Norm Controversy Assessment

The Norm Controversy Assessment evaluates the behaviour of companies in relation to generally accepted international standards and principles of responsible business conduct within, amongst others, the framework of the principles of the United Nations Global Compact, the United Nations Guiding Principles, the standards of the International Labour Organization and the OECD Guidelines for Multinational Enterprises. Examples of topics covered within these standards and principles include, but are not limited to, human rights violations, violations of workers' rights, child or forced labour, negative environmental impacts and business ethics. The Norm Controversy Assessment evaluates reported violations of the aforementioned international standards. Companies with the worst Norm Controversy Assessment of "F" are excluded as an investment.

ESG Quality Assessment

The ESG Quality Assessment distinguishes between investments in companies and investments in sovereign issuers.

For companies, the ESG Quality Assessment allows for a peer group comparison based on an overall ESG assessment, for example, concerning the handling of environmental changes, product safety, employee management or corporate ethics. The peer group for companies is made up from the same industry sector. Companies that score higher in this comparison receive a better assessment, while companies that score lower in the comparison receive a worse assessment. Companies with the worst assessment of "F" are excluded as an investment.

For sovereign issuers, the ESG Quality Assessment assesses countries based on a peer group comparison considering environmental and social criteria as well as indicators for good governance, including, for example, the political system, the existence of institutions and the rule of law. Sovereign issuers with the worst assessment of "F" are excluded as an investment.

Freedom House Status

Freedom House is an international non-governmental organization that classifies countries by their degree of political and civil liberties. Based on the Freedom House Status, countries that are classified as "not free" are excluded as an investment.

Exposure to controversial sectors

Companies that are involved in certain business areas and business activities in controversial areas ("controversial sectors") are excluded according to their share of total revenues generated in such controversial sectors as follows:

- a. Manufacturing of products and/or provision of services in the defence industry: 5% or more
- b. Manufacturing and/or distribution of civil handguns or ammunition: 5% or more
- c. Manufacturing of products in and/or provision of services for the gambling industry: 5% or more
- d. Manufacturing of adult entertainment: 5% or more
- e. Manufacturing of palm oil: 5% or more
- f. Nuclear power generation and/or uranium mining and/or uranium enrichment: 5% or more
- g. Unconventional extraction of crude oil and/or natural gas (including oil sand, oil shale/shale gas, arctic drilling): more than 0%
- h. Companies that derive 25% or more from thermal coal mining and thermal coal-based power generation as well as companies with thermal coal expansion plans, such as additional expansion of coal mining, coal production or coal usage. Companies with thermal coal expansion plans are excluded based on an internal identification methodology.

Further, companies involved in the manufacturing or selling of nuclear weapons or key components of nuclear weapons are excluded and the shareholdings within a group structure may be taken into consideration.

Exposure to controversial weapons

Companies are excluded if they are identified as being involved in the manufacturing or selling of controversial weapons or key components of controversial weapons or other related specific activities (anti-personnel mines, cluster munitions, chemical and biological weapons, blinding laser weapons, weapons with non-detectable fragments, depleted uranium weapons/munitions and/or incendiary weapons using white phosphorus). In addition, the shareholdings within a group structure may be taken into consideration for the exclusions.

- Assessment of deposits with credit institutions**
 Deposits with credit institutions are assessed based on the categories described above, which are applied to companies. Demand deposits are not included in this assessment.
- Assessment of use-of-proceeds bonds**
 This assessment is specially designed for this type of financial instrument and an investment in use-of-proceeds bonds is only permitted if the following criteria are complied with. Firstly, all use-of-proceeds bonds are checked for compliance with the Climate Bonds Standards, similar industry standards for green bonds, social bonds or sustainability bonds (such as the ICMA Principles) or the EU standard for green bonds, or for whether the bonds have undergone an independent audit.
 Secondly, provided that this is relevant and enough data is available, certain exclusion criteria (including the applicable PAB exclusions) are applied at bond level and/or in relation to the issuer of the bonds, which may result in the bond being excluded as an investment. In particular, investments in use-of-proceeds bonds are prohibited based on the following issuer criteria:
 - Companies that are referred to under a) to c) of the PAB exclusions;
 - Companies with identified thermal coal expansion plans, as explained above;
 - Companies that derive more than 0% of their revenues from the unconventional extraction of crude oil and/or natural gas (including oil sand, oil shale/shale gas, Arctic drilling);
 - Companies that derive 5% or more of their revenues from nuclear power generation and/or uranium mining and/or uranium enrichment;
 - Sovereign issuers classed as “not free” by Freedom House.
 If not enough data is available for the assessment of the PAB exclusions at the level of the use-of-proceeds bonds, the issuer is also assessed on the basis of d) to g) of the PAB exclusions described above, which may result in the exclusion of the use-of-proceeds bonds.
- Target Fund Assessment**
 Investment in target funds is permitted if they are aligned with the PAB exclusions (starting on May 21, 2025) and, if applicable, with the Freedom House rating. The Target Fund Assessment is based on information about the target funds that is obtained from external data sources, or it is carried out under consideration of the investments in the target fund portfolio. In view of the variety of data providers and methods and the regular rebalancing of the target fund portfolio, this sub-fund may have an indirect position in certain assets that would be excluded from direct investment.

Sustainability Investment Assessment

Further, for the proportion of sustainable investments, DWS measures the contribution to one or several UN SDGs via its Sustainability Investment Assessment which evaluates potential investments in relation to different criteria to conclude whether an investment can be considered as sustainable as further detailed in the section “What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?”.

(Pre-contractual disclosure according to Annex II of the Commission Delegated Regulation (EU)2022/1288 supplementing the Sustainable Finance Disclosure Regulation.)

Policy to assess Good Governance

The assessment of the good governance practices of the investee companies (including assessments related to sound management structures, employee relations, remuneration of staff and tax compliance) is part of the Norm Controversy Assessment which evaluates a company’s behavior within generally accepted international standards and principles of responsible business conduct. Further information can be found in the section “What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?”. Companies with the worst Norm Controversy Assessment of “F” are excluded as an investment.

(Pre-contractual disclosure according to Annex II of the Commission Delegated Regulation (EU)2022/1288 supplementing the Sustainable Finance Disclosure Regulation.)

Proportion of investments

This sub-fund invests at least 80% of its net assets in investments that are aligned with the promoted environmental and social characteristics. Within this category, at least 1% of the sub-fund’s assets qualify as sustainable investments in the sense of article 2(17) SFDR. Up to 20% of the sub-fund’s net assets may be invested in all permissible assets for which either the DWS ESG assessment methodology is not applied or for which ESG data coverage is incomplete. A more detailed description of the specific asset allocation of this sub-fund can be found in the Special Section of the Sales Prospectus.

Derivatives are currently not used to attain the environmental and social characteristics promoted by the sub-fund.

Monitoring of environmental or social characteristics

For the purpose of the investment guideline monitoring, a coding process is established in which the investment policy as described in the prospectus and the investment limits contained therein are coded in accordance into the investment management system. This applies in particular to the respective ESG investment limits. The investment limits are monitored daily pre- and post-trade in the investment management system to ensure compliance with the investment guidelines. In pre-trade monitoring, it is ensured that the investment limits are complied with before trading. However, if a breach has been detected, the breach will be investigated for its cause and scope, addressed and corrected in accordance with legal/regulatory requirements and guidelines.

Methodologies

Attainment of the promoted environmental and social characteristics as well as the sustainability of the investments is assessed by applying an internal ESG assessment methodology and ESG-specific exclusion threshold values as described in more detail in the section entitled “What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?”. With this methodology, various assessment categories are used as sustainability indicators:

- The **Assessment of norm controversies** serves as an indicator for the extent to which norm-related controversies with respect to international standards arise at a company.
- The **ESG Quality Assessment** serves as an indicator for comparing the environmental, social and governance aspects of an issuer with its peer group.
- The **Freedom House Status** serves as an indicator for the political rights and civil liberties of a country.
- **Exposure to controversial sectors** serves as an indicator for determining the extent of a company’s involvement in controversial sectors.

- **Investment in companies (including deposits with credit institutions) subject to the exclusion criteria for EU Paris-aligned Benchmarks** in accordance with article 12 (1) of the Commission Delegated Regulation (EU) 2020/1818 (PAB exclusions).
- The **Sustainability Investment Assessment** serves as an indicator for measuring the proportion of sustainable investments as defined in article 2 (17) SFDR.

(Pre-contractual disclosure according to Annex II of the Commission Delegated Regulation (EU)2022/1288 supplementing the Sustainable Finance Disclosure Regulation.)

Data sources and processing

DWS employs an in-house developed software solution, the DWS ESG Engine. This tool standardizes and aggregates data across various sources to derive ESG assessments, which then are used by the DWS investment professionals to take into account relevant sustainability criteria. DWS sources sustainability information from commercial data vendors which may include, for example: Information concerning involvement in controversial sectors from ISS-ESG, MSCI ESG, S&P TruCost; concerning norm violations and controversy issues from ISS-ESG, MSCI ESG, Morningstar Sustainalytics; concerning general ESG quality of corporates, sovereigns and/or funds from ISS-ESG, MSCI ESG, Morningstar Sustainalytics; concerning specific carbon and water data from ISS-ESG, MSCI ESG, S&P TruCost, ESG Book; concerning specific data on sustainable investments (Art.2 (17)) from ISS-ESG, MSCI ESG; and/or DWS internal research where relevant or as part of the respective methodology. Furthermore, information from non-commercial sources may be sourced most notably from Urgewald, Freedom House and Science Based Targets initiative (SBTi). Each of the commercial data vendors established upstream controls to ensure quality of their processes and of the data that is being provided. In addition, DWS has set up different quality control processes for inbound ESG data and ESG assessments derived by the DWS ESG Engine. This concerns checks on availability and integrity of the data as well as scrutiny towards cases where significant assessment changes are observed compared to previous periods. The ESG assessments are quality controlled and/or validated by responsible teams and/or councils. Based on current understanding of the regulatory guidelines on estimates, DWS classifies all data that is not publicly reported by investee companies under (regulatory) reporting requirements as estimated data (including data received from data vendors if they do not disclose their coverage of estimated data). Therefore, up to 100% of the data used may be reported as estimated data. For further information on ESG data sources and processing, please see the procedure document on ESG methods, data sources and processing available at <https://download.dws.com/download?elib-assetguid=986a39002ddf4c50929a8d3dbb46c818>

Limitations to methodologies and data

DWS ESG assessments are based on external vendor data and/or DWS internal assessments and research. In both cases, potential expert-based subjectivity weighs in. The prevalence of potential subjectivity constitutes a limitation if not properly mitigated. DWS mitigates this potential challenge by selecting the methodology deemed most reasonable for the relevant DWS ESG assessment under consideration, e.g. by seeking for cross vendor consensus in order to avoid bias or by applying a worst off assessment approach in order to gather different facets deemed relevant by different ESG providers regarding the same topic. ESG assessments based on DWS internal research follow at least a four-eye principle approach and are regularly reviewed by the relevant DWS ESG council. Further data limitations, including limited data coverage for certain asset classes and investments, outdated data and structural data update issues, may apply. These data limitations and how these are mitigated are further described in the procedure document on ESG methods, data sources and processing (please see the link to the document above).

Due Diligence

The due diligence carried out on the underlying assets of a financial product is governed by relevant internal policies, key operating documents and handbooks. The due diligence is based on the availability of ESG data which the sub-fund management sources from external ESG data vendors. In addition to the external quality assurance by the vendors, the sub-fund management has processes and governance bodies in place that control the quality of the ESG signals.

Engagement policies

Engagement with investee companies is carried out centrally by DWS according to DWS's established policies, procedures, and governance framework, as described in the DWS Stewardship Statement related to stewardship activities, which also include the exercise of voting rights. As such, engagement and other stewardship activities are exercised based on the aggregated holdings managed by the DWS legal entities in scope of the DWS Stewardship Statement. Engagement, or stewardship generally, is therefore not conducted or reported at the individual product level.

While stewardship is conducted at entity level, engagement and voting activities may still relate to corporate issuers (investee companies) held in the portfolio of this sub-fund.

In particular, DWS conducts engagement with corporate issuers across both equity and fixed income holdings. Engagement activities are carried out exclusively in relation to directly held equity and fixed income positions. DWS does not conduct engagement with corporate issuers where exposure arises exclusively through indirect holdings, e.g. corporate issuers held in the portfolio of target funds.

Engagement activities are intended to identify and address financially material risks and opportunities relevant to long term value creation. While engagement is applied across both equity and fixed income instruments, stewardship activities are inherently more limited for fixed income instruments due to the absence of shareholder voting rights.

The description of the policies regarding the exercise of voting rights and engagement activities of the Management Company is available to investors online at www.dws.com/footer/legal-resources. Information on the exercise of voting rights and on engagement activities carried out is published in aggregated form at the level of the DWS legal entities covered by those policies described in the DWS Stewardship Statement, which includes DWS Investment S.A as Management Company.

Designated reference benchmark

This sub-fund has not designated a reference benchmark to determine whether it is aligned with the environmental and social characteristics that it promotes.

Version history according to Art. 12 of Regulation (EU) 2019/2088
