

Fund Data

Investment Policy

The fund invests primarily in equities of issuers having their registered office or principal business activity in Asia. A company is viewed as having its principal business activity in Asia if the greatest part of its earnings or revenues is generated there. Considered as Asian issuers are companies having their registered office or principal business activity in Hong Kong, India, Indonesia, Korea, Malaysia, the Philippines, Singapore, Taiwan, Thailand and the People's Republic of China. The fund is actively managed.

(1) The Total Expense Ratio (TER) generally includes all expense items charged to the Fund apart from transaction costs and performance fees. If the Fund invests portions of its assets in target funds, the costs of the respective target funds will also be taken into account. The Fund incurred the total expenses listed here in its last financial year, which ended on 31/12/2025. They are subject to change from year to year.

Fund Management's Comment: DWS Invest Top Asia

Equity Funds - Asia

Data in relation to the fund or the leading unit class.

February 2026

As at 27/02/2026

Performance Review

In February the S&P 500 declined by 0.8%, and the technology-focused NASDAQ lost 3.3% (both in U.S. dollars). The U.S. dollar remained nearly unchanged against the euro. In Europe, the MSCI Europe rose by 4.1% and the DAX advanced by 3.0% (both in Euro). In Asia looking at individual markets (all in EUR), China was the worst performing country (-5.3%), driven by declines in China's internet stocks. This was followed by Indonesia (-1.0%), depressed by continuing volatility post MSCI's flag about risks on ownership transparency. On the other hand, the South Korean market gained a stellar 22.9%, helped by renewed optimism about governance reforms and the continuing momentum of tech stocks. Latter trend also helped the Taiwanese market to gain 12.9%. Thailand (+20.4%) rose on hopes for political stability after a strong showing by the Bhumjaitai Party. The Hong Kong market gained 3.1% supported by improved macro indicators (retail, housing, exports) and stronger government fiscal conditions. Some of the smaller markets also did well, with the Philippines gaining 7.8% and Vietnam 5.2%.

Performance Attribution

The DWS Invest Top Asia underperformed in February its benchmark. From a country perspective, the positioning in India had a positive effect on the performance. On the other hand, the positioning in Hong Kong, Taiwan and South Korea was not that beneficial.

From a sector perspective, the major benefit came from consumer staples. Contrarily, IT and communication services had the most negative effect on the fund's relative performance. Looking at single stock's performance, the most positive effects in the month of February came from SK Square, Samsung Life, SK Hynix and KB Financial Group. Contrary to that, the most negative relative effects came from Samsung Electronics, Tencent and TSMC.

Current Positioning

The fund is overweight in Korea, Hong Kong, Korea and underweight mainly in Taiwan, China and Indonesia. From a sector perspective, the fund is overweight in financials, industrials, consumer staples, communication services and real estate. In contrast, it is underweight in IT, materials, utilities and energy. The positioning of the fund remains generally long-term. The focus on stocks of companies with sustainable, growth-oriented business models, solid balance sheets, strong management and attractive valuations still drives the portfolio composition and is highly relevant especially in times of turbulence on the stock markets.

Outlook

The ongoing tariff negotiations and the potential impact on trade remain a key source of uncertainty for global equity markets. Additionally, the recent surge in geopolitical tensions in Iran has introduced another layer of uncertainty that could further unsettle global risk sentiment. Geopolitical risks, particularly the ongoing tensions between China and the USA, are adding uncertainty to Asian equity markets. The Chinese housing market is still struggling, and combined with consumer sentiment weakness, this could continue to weigh on global economic developments, despite recent policy support measures that have temporarily boosted market sentiment. In India, there are early signs of an improvement in the macroeconomic outlook and the newly reached free trade agreement with the EU adds positively to that. The protective US leadership will most certainly pose further challenges to the Asian markets and could bring more volatility. However, in the medium to long term, emerging markets are expected to remain a key driver of global economic growth.

Opportunities

In accordance with the investment policy.

Risks

- The fund invests its assets in selected regions or sectors. This increases the risk that the fund may be negatively influenced by the economic and political conditions in the respective regions or sectors.
- The fund invests in equities. Equities are subject to strong price fluctuations and thus also to the risk of price decreases.
- The fund invests in bonds, the value of which depends on whether the issuer is able to afford its payments. The deterioration of credit quality (ability and willingness to repay) may have an adverse affect on the value of the bond.
- Due to its composition/the techniques used by the Fund management, the investment fund has elevated volatility, i.e. the share price may be subject to significant fluctuations up or down within short periods of time. The share value may fall below the purchase price at which the customer acquired the share at any time.

Investor profile: Growth-oriented

The Fund is intended for the growth-oriented investor seeking returns higher than those from capital market interest rates, with capital growth generated primarily through opportunities in the equity and currency markets. Security and liquidity are subordinate to potential high returns. This entails higher equity, interest rate and currency risks, as well as default risks, all of which can result in a loss of capital.

General information

When the custodian sets the price on the last trading day of the month there can be a difference of up to ten hours between the times at which the fund price and the benchmark are calculated. In the event of strong market movements during this period, this may result in the over- or understatement of the Fund's performance relative to the benchmark at the end of the month (this is referred to as the "pricing effect").

Subscriptions can only be made and units held in accordance with the terms set out in the current version of the sales prospectus, the prospectus and/or the KID (Key Information Document) .

General Risk Warnings

Any investment in units of a collective investment scheme entails or is associated with equity market, bond market, exchange rate, interest rate, credit, volatility and political risks. Each of these risks may appear in connection with other risks. A brief description of some of these risk factors is provided below.

Prospective investors should have previous experience with the financial instruments that are in use in the specified investment policy. Investors should fully understand the risks associated with investments in fund units and only make investment decisions after consulting with their legal, tax, financial or other advisors in regards to (i) the suitability of an investment in units in view of their personal tax and financial position and/or other circumstances; (ii) the information contained in this prospectus; (iii) the investment policy of the collective investment scheme; and (iv) the risks associated with the investment under the planned investment policy presented by the collective investment scheme.

Please note that investments in collective investment schemes entail both opportunities on the upside and risks on the downside. Units of collective investment schemes are securities and as such their value fluctuates with the rise and fall in the value of the underlying assets. The value of the units may accordingly rise above or fall below the purchase price. No guarantee therefore is given that the objectives of the investment policy will be achieved. Past performance is not necessarily a guide to future returns.

Alpha

A measure of the difference between the risk-adjusted return on an investment and a benchmark. The alpha measures the part of the performance that cannot be explained by market movements or market risk, but rather is derived from the selection of securities within the market. Alpha is a way of measuring the active contribution to performance made by the portfolio manager. It is also a good yardstick to use when comparing several funds. The figure is calculated on a 3-yearly basis.

Average dividend yield

Measures the average dividend amount, based on the current share price. This figure is calculated based on the shares (including ADRs/GDRs - > Depositary receipts) and REITs contained in a fund.

Average market capitalization

Measures the average market capitalization of the shares, REITs and ADRs/GDRs (depository receipts) contained in a fund. The market capitalization represents the total market value of a company as determined by multiplying the number of shares issued by the current share price.

Beta factor

A measure of sensitivity - given as the average percentage change in the price of a fund when the market (benchmark) rises or falls by 1%. A value over (under) 1 means that on average the fund exhibits more (less) volatility than the benchmark. The figure is calculated on a 3-yearly basis.

Correlation coefficient

Describes the degree to which two values (fund versus benchmark) move in the same direction. The value of the correlation coefficient is between -1 and +1. A correlation of +1 means that the fund generally moves in the same direction as the benchmark, while -1 indicates that the fund generally moves in the opposite direction. A correlation of 0 means that there is no relation between the price movements of the fund and the benchmark. The figure is calculated on a 3-yearly basis.

Coupon

The coupon is the portfolio's average weighted coupon.

Duration (in years/in months)

A measure of the sensitivity of an investment to changes in interest rates. Duration, which was developed by Frederick Macaulay, is the average period for which invested capital is committed. Because of the interest payable over time on the invested capital, duration is shorter than -> maturity. This version of duration is used in DWS Top Reporting and refers to invested assets (without "Cash and other holdings").

Information ratio

The information ratio measures the difference between the annualized average return of the fund and that of the benchmark, divided by the Tracking error. The higher this value is, the more the investor compensated for the risk in the fund. The figure is calculated on a 3-yearly basis.

Maximum drawdown

The maximum drawdown is the largest percentage drop in value in a given period of time. It measures the amount the fund falls from its highest point to its lowest point in the selected timeframe. The figure is calculated on a 3-yearly basis.

Modified duration (in years/in months)

Serves as a measure of interest-rate sensitivity. Modified duration indicates the percentage change in price of a bond (in a portfolio) when the market interest rate changes by 1%. In order to calculate the percentage change in the bond price, the modified duration of the bond is multiplied by the percentage change in the interest rate. This figure helps investors assess the risks and opportunities of a bond at a glance.

Sharpe ratio

A measure of risk developed by William F. Sharpe, defined as the excess return on an investment over that of a risk-free investment in relation to the risk of the investment. The higher the Sharpe ratio, the higher the return the investor receives for the risk the investment carries (expressed in volatility). The Sharpe ratio can be used to compare multiple funds. The figure is calculated on a 3-yearly basis.

Tracking error

The tracking error is the standard deviation of the yield differential between a fund and its benchmark. This makes it a measure of how well the fund manager tracks the benchmark. The figure is calculated on a 3-yearly basis.

VaR (Value at Risk)

A measure of risk that indicates the maximum fund losses with a given probability for a given period of time (holding period). VaR is calculated on the basis of the daily prices of the individual securities contained in the portfolio for a year.

Weighted Average Life

The weighted average life of the times of the principal repayments of a liability, i.e. a bond. Refers to invested fund assets (without "Cash and other holdings").

Yield

The yield is the annual return on a capital investment, measured as the actual interest earned (effective yield) on the capital invested. It is based on the fund's income (e.g., interest, dividends, realized capital gains) and change in the price of the assets held in the fund. The yield of a fund is

derived from the invested assets (without "Cash and other holdings") and is presented as a "gross" figure, i.e., before the deduction of total expenses/fee.

Volatility

Volatility expresses the degree to which the yield on an investment (the price performance of a fund, for example) varies from a mean value in a specific period of time. This makes it a measure of fund risk. The greater the variation from the mean, the higher the volatility. Knowing the volatility allows investors to assess how uncertain the return potential of an investment is. The figure is calculated on a 3-yearly basis.
