Fund Data

Investment Policy

DWS Invest Global Infrastructure invests primarily in equities from issuers in the global infrastructure sector. This includes the following segments: Transportation (roads, airports, marine ports and railways), energy (gas and electricity transmission, distribution and generation), water (irrigation, drinking water and sewage) and communications (radio and cell towers, satellites, fiber optic and copper cable). The fund is actively managed.

Performance

Performance (in %) - Share Class LC(EUR)

Fund

Calculation of performance is based on the time-weighted return and excludes front-end fees. Individual costs such as fees, commissions and other charges have not been included in this presentation and would have an adverse impact on returns if they were included. Past performance is not a reliable indicator of future returns.

(2) The Total Expense Ratio (TER) generally includes all expense items charged to the Fund apart from transaction costs and performance fees. If the Fund invests portions of its assets in target funds, the costs of the respective target funds will also be taken into account. The Fund incurred the total expenses listed here in its last financial year, which ended on 31/12/2025. They are subject to change from year to year.

(3) The Total Expense Ratio (TER) generally includes all expense items charged to the Fund apart from transaction costs and performance fees. The total expenses listed here represent an estimate since the Fund was launched on (SEK FD:15/01/2026). Actual expenses will be calculated and published once the first financial year has ended. The annual report for each financial year will contain the expense details with their precise calculation.

Important notice: Distribution agents such as banks or other investment service providers may report costs or expense ratios to interested investors that may differ from and exceed the costs described here. This may be due to new regulatory requirements for the calculation and reporting of costs by these distribution agents, in particular as a result of the implementation of Directive 2014/65/EU (Markets in Financial Instruments Directive - "MiFID2 Directive") from January 3, 2018.

Fund Management's Comment: DWS Invest Global Infrastructure

Equity Funds - Sectors/Categories

Data in relation to the fund or the leading unit class.

April 2026

As at 30/04/2026

Performance Review

April's market tone was marked by a tension between strong AI-driven optimism and a much less stable geopolitical and energy backdrop. Investors remained encouraged by U.S. growth and a sharp rise in business investment, particularly in AI-related equipment and software. Illustrating the strength in the U.S., the Dallas Fed's Weekly Economic Index's rolling 13 week moving average (one quarter) hit its highest level since 2022, suggesting strong economic momentum hence any respite in energy prices could provide further longevity to the growth cycle. Quarterly corporate earnings results may prove less representative of the summer's market direction than the realization of the known unknowns. Yet to be determined is the impact of the still-impaired Strait of Hormuz, Brent oil's move higher, and jet fuel prices in Singapore and Rotterdam which have risen to a level two-times their pre-war level. This fractured mosaic left investors balancing enthusiasm for AI capex and technology earnings against the risk that higher energy costs and supply-chain disruptions could weigh more heavily on growth and margins.

For Global Infrastructure Securities, companies in Europe outperformed those in Asia Pacific and the Americas. In Europe, the Communication segment outperformed infrastructure companies in the UK, as well as those in the Utilities and Transport sectors. In the Americas, the Rail and Communication segments outperformed all other areas of the market, while MLPs and Midstream Energy companies also outperformed to a lesser extent. Conversely, LatAm Airport, Americas Utilities and Waste underperformed as they generated negative returns. In Asia, infrastructure companies in Japan generated negative returns and underperformed the broader region, especially Australia, which led the region.

Performance Attribution

Regionally, performance benefited the most from holdings in the Americas, followed by Europe ex-UK. Holdings in Australia, the UK, and Japan detracted from relative performance. In the Americas, the Midstream Energy segment generated strong performance as they benefitted from higher oil prices and increased demand for U.S. assets. The Americas Rail segment also contributed to performance, and conversely, the Americas Communications segment detracted from relative returns. In Europe, the Transport segment outperformed the most, followed by Utilities, while the Communications segment underperformed. In Australia, fund performance benefitted from holdings but not owning other companies in the opportunity set drove relative underperformance as they outperformed. It was a similar story in the UK where our holdings lagged the performance of others in the market. In Japan, Airports and Gas companies underperformed, which weighed on the fund's gas holding in the country.

Current Positioning

Exposure continues to be driven by stock-level fundamentals and relative valuations. In summary we increased energy exposure in the U.S. while reducing other exposure in Asia and the UK. In Asia, the headwind of higher energy prices and reliance on imports weighed on the economic outlook and in Japan, it was also dampened by expectations of higher interest rates and a weaker currency. During the month, the largest intentional increases were in the Americas Communication, Americas Midstream Energy, Europe Utilities, and Americas Rail. Conversely, the largest intentional decreases in exposure were to in Australia, Europe Transport, Asia ex-Japan, and the UK.

Outlook

We believe it is important to monitor relative valuations and focus on companies that can maintain and grow cash flows to assess opportunities within the space. In the near term, given the conflict in Iran, we would expect a potential supply shock to increase inflation while negatively impacting GDP, all else equal. We would expect that this will likely manifest in stronger performance for defensive sectors and those sectors exposed to the energy markets, as well as utilities, towers, and waste sectors. More specifically regarding energy, the conflict in Iran has meaningfully improved the fundamentals of the sector in the near to medium term. A wider slow down could negatively impact certain transportation companies, but we are actively monitoring real-time data to see how any economic weakness could impact investments. We are monitoring the situation in the Middle East and are mindful that a change in the geopolitical landscape and the resumption of trade flows could materially change the markets' orientation and our outlook for infrastructure, specifically within the energy and transportation segments. We remain positive on electrification and increasing power demand themes and expect those related infrastructure companies should generate above average earnings and cashflow growth. In the event of higher inflation, Infrastructure should benefit given its inflation passthrough traits and necessity-based assets, and a lower cost of capital in the form of lower long-duration bond yields would also be a positive. While the telecommunication space saw a dip in growth expectations due to DISH eschewing their contractual lease payments, recent interest from infrastructure funds has brought a bid back to the stocks. We anticipate performance dispersion among companies to continue, affording active managers potential alpha opportunities.

Opportunities

In accordance with the investment policy.

Risks

- The fund invests its assets in selected regions or sectors. This increases the risk that the fund may be negatively influenced by the economic and political conditions in the respective regions or sectors.
- The fund invests in equities. Equities are subject to strong price fluctuations and thus also to the risk of price decreases.
- The fund invests in bonds, the value of which depends on whether the issuer is able to afford its payments. The deterioration of credit quality (ability and willingness to repay) may have an adverse affect on the value of the bond.
- Due to its composition/the techniques used by the Fund management, the investment fund has elevated volatility, i.e. the share price may be subject to significant fluctuations up or down within short periods of time. The share value may fall below the purchase price at which the customer acquired the share at any time.

Important note on the investor profile:

Investor profile: Growth-oriented

The sub-fund is designed for growth-oriented investors who wish to achieve capital appreciation primarily through equity gains and exchange rate movements. Expected earnings are offset by high equity, interest rate and currency risks as well as creditworthiness risks and the possibility of heavy losses of the invested capital, up to the total amount invested. The investor is willing and able to bear such a financial loss, and does not prioritize capital preservation.

The Company provides additional information relating to the profile of the typical investor or target customer group for this financial product to distribution agents and distribution partners. If the investor is advised on the acquisition of units by the Company's distribution agents or distribution partners, or if they act as brokers in the purchase of units, they may also provide the investor additional information that also relates to the profile of the typical investor.

Supplementary information on the target market and product costs resulting from the implementation of the MiFID2 Directive and made available to distribution agents by the capital management company can be obtained in electronic form from the Company's website at www.dws.com.

Lipper Leaders Rating System - Ratings from 1 (lowest) to 5 (highest)

First digit = Total Return; second digit = Consistent Return; third digit = Preservation; fourth digit = Expense

Important Notice

When the custodian sets the price on the last trading day of the month there can be a difference of up to ten hours between the times at which the fund price and the benchmark are calculated. In the event of strong market movements during this period, this may result in the over- or understatement of the Fund's performance relative to the benchmark at the end of the month (this is referred to as the "pricing effect").

This document is intended as marketing communication. Please read the fund prospectus and KID before making a final investment decision.

DWS is the brand name under which DWS Group GmbH & Co. KGaA and its subsidiaries do business. Clients will be provided DWS products or services by one or more legal entities that will be identified to them in relevant documentation.

This document does not constitute investment advice.

Complete information on the Fund, including all risks and costs, can be found in the relevant current prospectus. Together with the relevant key information document, these constitute the only binding sales documents for the Fund. Investors can obtain these documents, together with regulatory information, as well as the latest constitutional documents for the Fund [in German] from DWS Investment GmbH, Mainzer Landstraße 11-17, 60329 Frankfurt am Main and, in case of Luxembourg domiciled Sub-Funds, from DWS Investment S.A., 2, Boulevard Konrad Adenauer, L-1115 Luxembourg, in printed form free of charge, or for active products available for download from Germany: www.dws.de or from different locations in respective language from <https://funds.dws.com> and for passive products under www.etf.dws.com.

A summary of investor rights is available: Germany (in German) <https://www.dws.de/footer/rechtliche-hinweise/>, Austria (in German) <https://funds.dws.com/de-at/footer/rechtliche-hinweise/>, Belgium (in Dutch) <https://funds.dws.com/be/NLBE/Belangrijke-Informatie>, (in French) <https://funds.dws.com/be/FRBE/Information-Importante>, France (in French) <https://funds.dws.com/fr-fr/footer/ressources-juridiques/>, Luxembourg (in German) <https://www.dws.de/footer/rechtliche-hinweise/>, Spain (in Spanish) <https://funds.dws.com/es-es/header/reclamaciones/>, Netherlands (in Dutch) <https://funds.dws.com/nl-nl/footer/juridische-bronnen/>, Ireland (in English) <https://funds.dws.com/en-ie/footer/legal-resources/>, Sweden (in Swedish) <https://funds.dws.com/se/important-information> and Italy (in Italian) <https://funds.dws.com/it-it/footer/avvertenze-legali/>.

The Investment Company may decide to terminate the arrangements made for the marketing of this fund.

Forecasts are not a reliable indicator of future performance. Forecasts are based on assumptions, estimates, opinions and hypothetical performance analysis, therefore actual results may vary.

The decision to invest in the advertised fund should not only depend on the sustainability-relevant aspects. All characteristics or objectives of the advertised fund should be taken into account. These can be found in the prospectus and KID.

The gross-performance calculated (BVI method) considers all costs on the Funds/Sub-Funds level (e.g. Management Fee). In addition, the net-performance considers a contingent Upfront Sales Charge.

Past performance is not a reliable indication of future performance.

Tax information can be found in the relevant prospectus

DWS Investment GmbH, 2026

Alpha

A measure of the difference between the risk-adjusted return on an investment and a benchmark. The alpha measures the part of the performance that cannot be explained by market movements or market risk, but rather is derived from the selection of securities within the market. Alpha is a way of measuring the active contribution to performance made by the portfolio manager. It is also a good yardstick to use when comparing several funds. The figure is calculated on a 3-yearly basis.

Average dividend yield

Measures the average dividend amount, based on the current share price. This figure is calculated based on the shares (including ADRs/GDRs - > Depositary receipts) and REITs contained in a fund.

Average market capitalization

Measures the average market capitalization of the shares, REITs and ADRs/GDRs (depository receipts) contained in a fund. The market capitalization represents the total market value of a company as determined by multiplying the number of shares issued by the current share price.

Beta factor

A measure of sensitivity - given as the average percentage change in the price of a fund when the market (benchmark) rises or falls by 1%. A value over (under) 1 means that on average the fund exhibits more (less) volatility than the benchmark. The figure is calculated on a 3-yearly basis.

Correlation coefficient

Describes the degree to which two values (fund versus benchmark) move in the same direction. The value of the correlation coefficient is between -1 and +1. A correlation of +1 means that the fund generally moves in the same direction as the benchmark, while -1 indicates that the fund generally moves in the opposite direction. A correlation of 0 means that there is no relation between the price movements of the fund and the benchmark. The figure is calculated on a 3-yearly basis.

Coupon

The coupon is the portfolio's average weighted coupon.

Duration (in years/in months)

A measure of the sensitivity of an investment to changes in interest rates. Duration, which was developed by Frederick Macaulay, is the average period for which invested capital is committed. Because of the interest payable over time on the invested capital, duration is shorter than -> maturity. This version of duration is used in DWS Top Reporting and refers to invested assets (without "Cash and other holdings").

Information ratio

The information ratio measures the difference between the annualized average return of the fund and that of the benchmark, divided by the Tracking error. The higher this value is, the more the investor compensated for the risk in the fund. The figure is calculated on a 3-yearly basis.

Maximum drawdown

The maximum drawdown is the largest percentage drop in value in a given period of time. It measures the amount the fund falls from its highest point to its lowest point in the selected timeframe. The figure is calculated on a 3-yearly basis.

Modified duration (in years/in months)

Serves as a measure of interest-rate sensitivity. Modified duration indicates the percentage change in price of a bond (in a portfolio) when the market interest rate changes by 1%. In order to calculate the percentage change in the bond price, the modified duration of the bond is multiplied by the percentage change in the interest rate. This figure helps investors assess the risks and opportunities of a bond at a glance.

Sharpe ratio

A measure of risk developed by William F. Sharpe, defined as the excess return on an investment over that of a risk-free investment in relation to the risk of the investment. The higher the Sharpe ratio, the higher the return the investor receives for the risk the investment carries (expressed in volatility). The Sharpe ratio can be used to compare multiple funds. The figure is calculated on a 3-yearly basis.

Tracking error

The tracking error is the standard deviation of the yield differential between a fund and its benchmark. This makes it a measure of how well the fund manager tracks the benchmark. The figure is calculated on a 3-yearly basis.

VaR (Value at Risk)

A measure of risk that indicates the maximum fund losses with a given probability for a given period of time (holding period). VaR is calculated on the basis of the daily prices of the individual securities contained in the portfolio for a year.

Weighted Average Life

The weighted average life of the times of the principal repayments of a liability, i.e. a bond. Refers to invested fund assets (without "Cash and other holdings").

Yield

The yield is the annual return on a capital investment, measured as the actual interest earned (effective yield) on the capital invested. It is based on the fund's income (e.g., interest, dividends, realized capital gains) and change in the price of the assets held in the fund. The yield of a fund is

derived from the invested assets (without "Cash and other holdings") and is presented as a "gross" figure, i.e., before the deduction of total expenses/fee.

Volatility

Volatility expresses the degree to which the yield on an investment (the price performance of a fund, for example) varies from a mean value in a specific period of time. This makes it a measure of fund risk. The greater the variation from the mean, the higher the volatility. Knowing the volatility allows investors to assess how uncertain the return potential of an investment is. The figure is calculated on a 3-yearly basis.
