Definition of additional performance measures

Adjusted revenues

Adjusted revenues present net interest and non-interest income excluding material non-recurring income items that are clearly identifiable one-off items, such as disposal gains. We use this metric to show revenues on a continuing operating basis, in order to enhance comparability against other periods.

Adjusted cost base

Adjusted costs are an expense measure we use to better distinguish between total costs (non-interest expenses) and our ongoing operating costs. This measure is adjusted for litigation, restructuring, severance costs as well as for transformational charges in relation to our multi-year transformation program and other material non-recurring expenses that are clearly identifiable one-off items.

Management fee margin

The management fee margin is calculated by taking the management fees and other recurring revenues for a period, divided by average AuM for the same period. Annual average AuM are calculated using AuM at the beginning of the year and the end of each calendar month (i. e. 13 reference points for a full year).

Assets under management

Assets under management means assets (a) we manage on a discretionary or non-discretionary advisory basis; including where we are the management company and portfolio management is outsourced to a third party; and (b) a third party holds or manages and on which we provide, on the basis of contract, advice of an ongoing nature including regular or periodic assessment, monitoring and/or review. AuM represent both collective investments (including mutual funds and exchange-traded funds) and separate client mandates. AuM are measured at current market value based on the local regulatory rules for asset managers at each reporting date, which might differ from the fair value rules applicable under IFRS. Measurable levels are available daily for most retail products but may only update monthly, quarterly or even yearly for some products. While AuM do not include our investments accounted for under equity method, they do include seed capital and any committed capital on which we earn management fees.

Net flows

Net flows represent assets acquired or withdrawn by clients within a specified period, except when a third party holds or manages the assets on which we provide, on the basis of contract, advice of an ongoing nature including regular or periodic assessment, monitoring and/or review in which case we include the difference in the value of such assets within the specified period which may include currency effects, market performance and other effects. Net flows are one of the major drivers of changes in AuM.

Cost-income ratio

Cost-income ratio (CIR) is the ratio of non-interest expenses to net interest and non-interest income.

Adjusted cost-income ratio

Adjusted cost-income ratio is the ratio of adjusted costs to adjusted revenues.

Long-term

Long-Term AuM typically represents assets with a long-term strategy.

Cash AuM following an investment strategy which focuses on short term and other money market instruments and thus are classified as "Cash AuM".

Advisory Services are assets hold or managed by a third party on which we provide, on the basis of contract, advice of an ongoing nature including regular or periodic assessment, monitoring and/or review.

Advisory Services flows are the relevant change in the value of such assets which may include currency effects, market performance and other effects.
