

CROCI® Performance Report September 2023

© DWS 2023. Report prepared on 5 October 2023.

MARKETING MATERIAL

This information has been prepared by and is being delivered to the recipient on a confidential basis by the Issuer for the sole purpose of providing information.

EMEA: For Professional Clients (MiFID Directive 2014/65/EU Annex II) only. No distribution to private/retail investors.

For Investors in Switzerland: For Qualified Investors (Art. 10 Para. 3 of the Swiss Federal Collective Investment Schemes Act (CISA)).

For Investors in Singapore and Hong Kong: This material is provided to addressees only who are institutional / accredited investors in Hong Kong / Singapore respectively (or equivalent classification in other jurisdiction). Further distribution of this material is strictly prohibited.

Australia and New Zealand: For Wholesale Investors only

Korea: This material has been provided upon your specific request on a reverse solicitation basis

This document does not constitute investment advice nor stock recommendation.

For Argentina, Brasil, Chile and Mexico: For Institutional investors only. Further distribution of this material is strictly prohibited.

This document is intended purely as marketing material for professional/qualified investors only, and not for distribution into the USA.

This document has been produced by the CROCI team of DWS and represents the views of only the CROCI team. It does not constitute investment advice, investment recommendation or independent research. The CROCI team bases its views on the application of the CROCI valuation methodology as well as its own views on the financial markets. The CROCI team does not manage client portfolios.

This document does not constitute marketing of any product connected to CROCI Strategies or an offer, an invitation to offer or a recommendation to enter into any product connected to CROCI Strategies. Investment strategies under various wrappers linked to CROCI strategies may be marketed and offered for sale or be sold only in those jurisdictions where such an offer or sale is permitted and may not be available in certain jurisdictions due to licensing and/or other reasons, and information about these strategies is not directed to those investors residing or located in any such jurisdictions. This material has been deemed falling under the MIFID definition of marketing material as not presented as an objective or independent piece of research accordance with Article 24 section 1.a (Article 19.2 in directive 2004/39/EG) of implementation directive 2004/39/EC.

Key Risk Factors:

Past Performance: The CROCI Strategies level may rise or fall. Any products linked to a CROCI Strategy may not be capital protected and investor capital may be at risk. The value of investment products linked to the CROCI Strategies may go down as well as up. Past performance, whether live or simulated, is not a reliable indicator of future results.

Membership and performance of CROCI Strategies prior to their going live is simulated. The simulations apply an investment strategy retrospectively to data that was in part reconstructed and not necessarily available at the time. As a consequence there may be instances when realised returns would have shown variation from those simulated and the latter may have had the advantage of hindsight.

The CROCI Model: The Concentrated Value Strategies have been built on the CROCI premise that stocks with lower CROCI Economic P/E ratios may outperform stocks with higher CROCI Economic P/E ratios over time. This premise may not be correct and prospective investors should evaluate this assumption prior to investing in these Strategies. CROCI represents one of the many possible ways to analyze and value stocks. Potential investors must form their own view of the CROCI methodology and evaluate whether CROCI and investments associated with CROCI are appropriate for them.

Sustainable Dividends Assumption: The CROCI Dividend Strategies make the assumption that Dividend Yield, Cash Returns, Financial Leverage and Price Volatility can impact the ability for companies to maintain their dividend payments as well as provide performance. This premise may not be correct and prospective investors should evaluate this assumption prior to investing in the Strategy. There is no implied assurance that a stock in the CROCI Global Dividends Strategy and/or CROCI US Dividends Strategy will not cut its dividend while it is in the Strategy.

The CROCI Intellectual Capital Strategy has been built on the premises that

- 1) Both R&D and Brands are forms of intellectual capital and these are captured as capitalised intangibles in the CROCI model;
- 2) Companies with intellectual capital may outperform companies without intellectual capital;
- 3) Financial Leverage and Risk-Adjusted CROCI can impact the ability for companies to maintain or grow their intellectual capital as well as provide performance;
- 4) CROCI equity earnings are a suitable basis for the construction of portfolio weightings.

These premises may not be correct and prospective investors should evaluate these assumptions prior to investing in this Strategy. Note also that this Strategy excludes any companies without capitalised intangibles in the CROCI model (either in form of R&D or Brands), and therefore excludes large parts of entire sectors that have low exposure to intangible assets such as Financials and Utilities.

Important Notice: CROCI was part of DB Markets Research until 15 Oct. 2013, any content published after this date does not constitute independent investment research but should be deemed marketing material created by the CROCI team, which is now part of DWS.

Important Information: All CROCI Concentrated Strategies in this Report except CROCI Intellectual Capital underwent minor implementation changes on 2 Jun. 2014:

- 1) Change of reconstitution frequency from monthly to quarterly (with the exception of CROCI Global Dividends and CROCI US Dividends which were already reconstituted on a quarterly basis prior to this date);
- 2) Introduction of selection buffers to reduce constituent turnover.

What is a "selection buffer"? By way of example, consider a portfolio consisting of the 40 stocks with lowest Economic P/E, and a 5-stock selection buffer. Without the buffer, a stock moving from rank 40 to rank 41 would be replaced in the portfolio. With the buffer, an existing constituent is only replaced if it no longer ranks among the 45 cheapest stocks (by Economic P/E) on the selection date. A new constituent will only enter the portfolio if it is within the 40 cheapest stocks (by Economic P/E) on the selection date.

- 3) CROCI Sectors increased selection pool to Pan-Europe and full US coverage and introduced a sector buffer to reduce turnover.

- 4) Removal of "backfill rule" from CROCI Sectors Strategy (4th June 2014).

What is a "backfill rule"? The CROCI Sectors Strategy selects 30 stocks. Under the old "backfill rule", stocks chosen from a sector had to be below the median Economic P/E of their respective sector. Where not possible (i.e. when a sector has fewer than 20 stocks in the selection pool), the backfill rule required that the portfolio be filled up by selecting stocks with lowest Economic P/E from the remaining six sectors. This resulted occasionally in exposure to more than three sectors. Since the backfill rule was removed, the CROCI Sectors Strategy always selects 10 stocks from each of the three selected sectors

The aim of these changes (quarterly reconstitution and introduction of buffers) is to reduce portfolio turnover and transaction costs. The CROCI Team believes that these revisions should reduce turnover while having little or no impact on the exposure to real value. Backtests simulating these changes suggest that they would have had no material negative impact on the performance of CROCI Strategies: assuming 50 bps transaction costs, backtests for the period 2 Feb. 2004 - 31 Mar. 2014 indicate that the annualised returns of CROCI US, CROCI Euro, CROCI Japan, CROCI World, CROCI Sectors, and CROCI Global Dividends would have been at least 70 bps higher with buffers and quarterly rebalancing than without these measures. The annualised return of CROCI US Dividends would have been 7 bps lower with buffers and quarterly rebalancing than without these measures.

All the **Real Earnings Weighted Indices** underwent minor implementation changes on 21 Sep. 2018:

- 1) Inclusion of Financials sector stocks which are covered by CROCI Team;
- 2) Excludes any secondary share classes – only one eligible share class per company will be included.

Also, prior to 13 Sep. 2016, the two indices CROCI REW US Large and CROCI REW US Mid defined large cap and mid cap US companies by reference to CROCI Economic Earnings. Effective from that date, large cap and mid cap US companies are defined by reference to market capitalization.

Implementation of ESG Characteristics in CROCI Concentrated Strategies:

Effective 1st Jan. 2022, all CROCI Concentrated Strategies in this report, except CROCI Intellectual Capital, incorporated environmental, social and governance (ESG) characteristics based on DWS Basic Exclusions, a DWS proprietary ESG assessment methodology, provided by DWS ESG Engine.

These facets seek to attain environmental and social characteristics by assessing potential investments via a proprietary ESG assessment methodology irrespective of economic prospects of success. This methodology is based on the ESG database (DWS ESG Engine), which uses data from multiple ESG data providers (a list of data providers is available at www.dws.com/solutions/esg), public sources and internal assessments (based on a defined assessment and classification methodology) to derive combined scores.

Past performance, whether live or simulated, is not a reliable indicator of future results. Performance is shown gross of fees and does not reflect investment advisory fees. Had such fees been deducted, returns would have been lower. Allocations are subject to change without notice. This document is intended purely as marketing material for professional/qualified investors only. This document is strictly confidential. This information is intended for informational purposes only and does not constitute investment advice, a recommendation, an offer or solicitation. No distribution is allowed into the USA

ESG

Environmental, social and governance – a collective term referring to all aspects considered conducive to sustainability

DWS ESG Engine

The DWS ESG Engine is a DWS proprietary software system that uses data from five leading ESG data providers (ISS-ESG, MSCI, ESG Book, Morningstar Sustainalytics and S&P Trucost), as well as ESG data from publicly available sources and proprietary DWS research.

DWS ESG Assessment

This sustainability indicator measures the weight of those companies in the fund or benchmark that are identified as ESG leaders or laggards. ESG leaders and laggards are identified in the DWS ESG Engine using a best-in-class ESG approach, which takes into account a wide range of environmental, social and corporate governance criteria (e. g. resource management, contribution to climate change, product responsibility, corporate ethics). Best-in-class means that issuers are rated relative to their reference group. The reference group is determined by the region (developed countries vs. emerging countries) and industry (not applicable to countries). The DWS ESG quality assessment ranks issuers on a scale of A-F, whereas a grade of A and B identifying ESG leaders and a grade of E and F ESG laggards.

DWS Basic Exclusion Filter

The implementation of DWS Basic Exclusions, seeks to eliminate securities from the investment universe if the issuer of the security does not meet the DWS Engine's DWS Basic Exclusions criteria. Hence the investor is not exposed to the financial return of the excluded securities. The impact of the exclusion on the investor's portfolio return cannot be guaranteed. Financial return considerations do, under no circumstance, influence the ESG exclusion process. It is possible that the information or data on which an exclusion is based is wrong, not available or not available in time. In the event of delayed information, the exclusion is not performed, but will be once the information is confirmed. Potential investors should confirm that the ESG rule framework that DWS applies is consistent with their expectations and views concerning ESG.

DWS Basic Exclusions			
[transparent pursuant to article 8 of the Regulation (EU) 2019/2088]			
Exclusion category	Exclusion criteria	Assessment ¹	Revenue threshold ²
CCWs and controversial weapons	Controversial conventional weapons ³	No D / E / F	>0%
	Depleted uranium weapons ⁴	No D / E / F	>0%
	Nuclear weapons ⁴	No D / E / F	>0%
Controversial sectors	Tobacco	No D / E / F	≥5%
	Oil sands	No D / E / F	≥5%
	Civilian firearms	No D / E / F	≥5%
	Military defence	No E / F	≥10%
	Thermal coal	No F	≥25%
	International norms (corporates)	No F	-
General ESG	Climate and transition risk (corp. & sov.)	No F	-
	Freedom House Status (sovereigns)	"Not free" → No E / F	-

Principle adverse impact indicators (PAII)⁵: PAII #2 / #3 / #4 / #10 / #14

Share of sustainable investments according to SFDR Art. 2(17)⁶: individual per fund

Share of sustainable investments according to EU Taxonomy⁷: 0%

For ESG filter terminologies

1) DWS Assessment scheme

The ESG database derives "A" to "F" letter coded assessments within different categories. Within each category, issuers receive one of six possible scores, with "A" being the highest score and "F" being the lowest score. If an issuer's score in one category is not considered eligible, the portfolio management is prohibited from investing in that issuer, even if it is eligible according to the other categories. For exclusion purposes, each letter score is considered individually and may result in exclusion of an issuer.

2) Revenue threshold

Shown is the %-revenue threshold which, when it is greater or equal to, triggers an exclusion. The focus is on manufacturing or production, i.e., for tobacco the production of tobacco products, oil sands the extraction of oil and for military defense the production of military goods. Exceptions are coal and civilian firearms (includes coal distribution and electricity generation respectively the sale of small arms).

3) Controversial conventional weapons

Controversial conventional weapons (CCW) include cluster munition, anti personnel mines as well as biological and chemical weapons.

4) Controversial weapons

For controversial weapons, any involvement triggers an exclusion, regardless of the revenue share. Involvement is identified as weapon manufacturer (F), component manufacturer (E), and owned by companies with an E or F assessment or own a company with E or F assessment (D), respectively.

5) Principles adverse impact indicators (PAIIs)

Depending on the asset class of the fund and its product strategy, actively managed Article 8 or 9 funds can consider different PAIIs. For example, PAII 16 is only taken into account by funds investing in sovereign issuers.

6) Share of sustainable investments according to SFDR Art. 2(17)

The methodology for determining the share of sustainable investments follows four steps. In order to identify sustainable investments, the first step is to examine whether a company has a positive contribution to the UN SDGs through its business activities. The measurement of business activities is usually based on a company's revenues, partly also based on a company's capital expenses (capex) or operating expenses (opex). The second step is to prove that the company does not have a negative impact on any social or environmental objective when carrying out its business activities (DNSH assessment). If this is the case, the third step is to examine whether the company meets principles of good governance: It will exemplarily be considered whether the company has the worst norm assessment (so-called "minimum safeguards"). One example is the fight against corruption. If this is also the case, the positive contribution of the company identified in the first step can ultimately be taken into account. Thus, the company's share of sustainable investments would contribute to the share of sustainable investments in the portfolio.

Past performance, whether live or simulated, is not a reliable indicator of future results. Performance is shown gross of fees and does not reflect investment advisory fees. Had such fees been deducted, returns would have been lower. Allocations are subject to change without notice. This document is intended purely as marketing material for professional/qualified investors only. This document is strictly confidential. This information is intended for informational purposes only and does not constitute investment advice, a recommendation, an offer or solicitation. No distribution is allowed into the USA

7) Share of sustainable investments according to EU Taxonomy

The EU taxonomy aims to provide clarity on which economic activities are to be considered environmentally sustainable. For this purpose, a list of criteria for companies is used to define which economic activities or revenues contribute to the one of the six EU environmental goals. Due to a lack of data availability, DWS currently does not set a minimum percentage for ecologically sustainable investments according to EU Taxonomy in its actively managed funds.

Fund of fund treatment

For fund of funds, min. 51% of target fund holdings need to be in Art. 8 or Art. 9 SFDR classified funds. In addition, only the exclusion criteria ESG quality (through a specific DWS fund assessment), international norms and climate and transition risk assessment are considered in dependence of the ESG Standard. The ESG filter specific assessment exclusions apply, i.e., for the DWS Basic Exclusions filter no climate and transition risk assessment F and no norm assessment F; for the DWS ESG Investment Standard and DWS ESG Investment Standard + BaFin Guidelines filters no ESG quality E / F, ≤15% in D and ≤5% in M, no climate and transition risk assessment F, ≤5% in E and ≤5% in M, no norm assessment F and ≤5% in E.

This page is intentionally left blank

Past performance, whether live or simulated, is not a reliable indicator of future results. Performance is shown gross of fees and does not reflect investment advisory fees. Had such fees been deducted, returns would have been lower. Allocations are subject to change without notice. This document is intended purely as marketing material for professional/qualified investors only. This document is strictly confidential. vs. MSCI World (EUR)	1.4%	2.1%	-2.5%	-4.0%	0.2%	3.9%	1.6%	0.3%	0.7%
vs. MSCI World Value (EUR)	-0.1%	0.5%	-0.4%	5.1%	4.7%	1.4%	4.5%	2.8%	2.7%

NB. CROCI Concentrated Strategies except CROCI Intellectual Capital underwent minor implementation changes on 2 Jun. 2014: 1) Change of reconstitution frequency from monthly to quarterly; 2) Introduction of selection buffers to reduce constituent turnover. For Sectors, increased selection pool size in Europe and US and introduced sector buffer to reduce sector turnover.

The CROCI REW Indices underwent minor implementation changes on 21 Sep. 2018: 1) Inclusion of Financials sector stocks which are covered by CROCI Team; 2) Excludes any secondary share classes – only one eligible share class per company will be included.

Returns include reinvestment of dividends net of withholding tax and are unhedged in currencies shown. Benchmark indices, where available, reflect total returns net of dividend withholding tax (refer to the Appendix for more information on benchmark tickers used). Where no currency is shown, returns are in respective region's local currency. Strategy performance prior to the live date is simulated. The Simulations apply an investment strategy retrospectively to data that was in part reconstructed and not necessarily available at the time. As a consequence there may be instances when realised returns would have shown variation from those simulated and the latter may have had the advantage of hindsight. Please refer to the disclosures for more information. Source: DWS, Bloomberg Finance LP

NB. CROCI Concentrated Strategies except CROCI Intellectual Capital underwent minor implementation changes on 2 Jun. 2014: 1) Change of reconstitution frequency from monthly to quarterly; 2) Introduction of selection buffers to reduce constituent turnover. For Sectors, increased selection pool size in Europe and US and introduced sector buffer to reduce sector turnover.

The CROCI REW Indices underwent minor implementation changes on 21 Sep. 2018: 1) Inclusion of Financials sector stocks which are covered by CROCI Team; 2) Excludes any secondary share classes – only one eligible share class per company will be included.

Returns include reinvestment of dividends net of withholding tax and are unhedged in currencies shown. Benchmark indices, where available, reflect total returns net of dividend withholding tax (refer to the Appendix for more information on benchmark tickers used). Where no currency is shown, returns are in respective region's local currency. Strategy performance prior to the live date is simulated. The Simulations apply an investment strategy retrospectively to data that was in part reconstructed and not necessarily available at the time. As a consequence there may be instances when realised returns would have shown variation from those simulated and the latter may have had the advantage of hindsight. Please refer to the disclosures for more information. Source: DWS, Bloomberg Finance LP

Past performance, whether live or simulated, is not a reliable indicator of future results. Performance is shown gross of fees and does not reflect investment advisory fees. Had such fees been deducted, returns would have been lower. Allocations are subject to change without notice. This document is intended purely as marketing material for professional/qualified investors only. This document is strictly confidential. This information is intended for informational purposes only and does not constitute investment advice, a recommendation, an offer or solicitation. No distribution is allowed into the USA

Source: DWS, Bloomberg, MSCI Barra. 29 Sep. 2023

¹ 'Net Total Return' is the total return of the CROCI Strategy gross of product fees but including reinvested dividends net of withholding tax. 'Active Return' shows excess return of the CROCI Strategy relative to its benchmark

² 'Sources of Active Return' shows contributions to 'Active Return' resulting from Sector Allocation, Stock Selections within a sector, and/or difference in Currency exposures relative to benchmark. The calculations are performed using the MSCI Barra Model and may vary from actual strategy active return due to differences in computational methodology.

³ 'Sector Allocation' shows the top three positive/negative sectors' contribution to Active return in Local currency (shown in parenthesis), due to difference in Sector exposures (Overweight-OW / Underweight-UW) relative to benchmark.

⁴ 'Stock Selection' shows the top and bottom three companies' contribution to Active return in Local currency (shown in parenthesis), due to Overweight-OW / Underweight-UW positions of the stocks that out / underperform within a sector in the respective benchmark.

Past performance, whether live or simulated, is not a reliable indicator of future results. Performance is shown gross of fees and does not reflect investment advisory fees. Had such fees been deducted, returns would have been lower. Allocations are subject to change without notice. This document is intended purely as marketing material for professional/qualified investors only. This document is strictly confidential. This information is intended for informational purposes only and does not constitute investment advice, a recommendation, an offer or solicitation. No distribution is allowed into the USA.

¹ 'Net Total Return' is the total return of the CROCI Strategy gross of product fees but including reinvested dividends net of withholding tax. 'Active Return' shows excess return of the CROCI Strategy relative to its benchmark

² 'Sources of Active Return' shows contributions to 'Active Return' resulting from Sector Allocation, Stock Selections within a sector, and/or difference in Currency exposures relative to benchmark. The calculations are performed using the MSCI Barra Model and may vary from actual strategy active return due to differences in computational methodology.

³ 'Sector Allocation' shows the top three positive/negative sectors' contribution to Active return in Local currency (shown in parenthesis), due to difference in Sector exposures (Overweight-OW / Underweight-UW) relative to benchmark.

⁴ 'Stock Selection' shows the top and bottom three companies' contribution to Active return in Local currency (shown in parenthesis), due to Overweight-OW / Underweight-UW positions of the stocks that out / underperform within a sector in the respective benchmark.

Past performance, whether live or simulated, is not a reliable indicator of future results. Performance is shown gross of fees and does not reflect investment advisory fees. Had such fees been deducted, returns would have been lower. Allocations are subject to change without notice. CROCI Concentrated Strategies

CROCI US Strategy

Reflects the Total Return (gross of fees) of a basket of around 40 equally-weighted stocks selected on a quarterly basis from a broad universe of large-cap US stocks (excluding financial and real estate stocks) which are covered by the CROCI Team. The portfolio constituents are selected on the basis of low trailing 12-months CROCI price earnings ratio (P/E), according to the CROCI Methodology.

Historical Performance	Live from 2 Feb. 2004									
	1M	3M	6M	YTD	1Y	Annualised (if more than 1 year)				Since Live
CROCI US	-2.8%	2.0%	4.2%	11.3%	27.7%	17.3%	9.5%	10.5%	10.0%	
S&P 500	-4.8%	-3.4%	4.9%	12.7%	21.0%	9.6%	9.3%	11.3%	8.5%	
S&P 500 Value	-4.7%	-4.2%	2.0%	7.1%	21.4%	12.7%	7.6%	8.8%	7.2%	
Excess Return vs. Benchmark										
vs. S&P 500	2.0%	5.4%	-0.8%	-1.4%	6.7%	7.7%	0.2%	-0.8%	1.5%	
vs. S&P 500 Value	1.8%	6.2%	2.2%	4.2%	6.3%	4.7%	1.9%	1.7%	2.8%

Tracking Error (Trailing 12 Months)

The CROCI US Strategy underwent minor implementation changes on 2 Jun. 2014: 1) Change of reconstitution frequency from monthly to quarterly; 2) Introduction of selection buffers to reduce constituent turnover. Please refer to page 3 for more details regarding these changes.

Returns in USD, include reinvestment of dividends net of withholding tax and are unhedged. Benchmark indices, where available, reflect total returns net of dividend withholding tax (refer to the Appendix for more information on benchmark tickers used). Performance before the live date of 2 Feb. 2004 is simulated. The Simulations apply an investment strategy retrospectively to data that was in part reconstructed and not necessarily available at the time. As a consequence there may be instances when realised returns would have shown variation from those simulated and the latter may have had the advantage of hindsight.

CROCI US Dividends Strategy

Reflects the Total Return (gross of fees) of a basket of around 40 equally-weighted stocks selected on a quarterly basis from a broad universe of large-cap US stocks (excluding financial and real estate stocks) which are covered by the CROCI Team and which have above-median dividend yields while focusing on sustainable dividends. Sustainable dividend screens exclude stocks by low Cash Returns, high Financial Leverage and high Price Volatility. Those stocks that pass the sustainable dividends screens are then selected on the basis of low trailing 12-months CROCI price earnings ratio (P/E), according to the CROCI Methodology.

Historical Performance	Live from 13 Mar. 2012

The CROCI Japan Strategy underwent minor implementation changes on 2 Jun. 2014: 1) Change of reconstitution frequency from monthly to quarterly; 2) Introduction of selection buffers to reduce constituent turnover. Please refer to page 3 for more details regarding these changes.

Returns in JPY, include reinvestment of dividends net of withholding tax and are unhedged. Benchmark indices, where available, reflect total returns net of dividend withholding tax (refer to the Appendix for more information on benchmark tickers used). Performance before the live date of 2 Feb. 2004 is simulated. The Simulations apply an investment strategy retrospectively to data that was in part reconstructed and not necessarily available at the time. As a consequence there may be instances when realised returns would have shown variation from those simulated and the latter may have had the advantage of hindsight.

Source for all data and charts: DWS; Bloomberg Finance LP; Factset Research Systems Inc. Data as of 29 Sep. 2023.

Past performance, whether live or simulated, is not a reliable indicator of future results. Performance is shown gross of fees and does not reflect investment advisory fees. Had such fees been deducted, returns would have been lower. Allocations are subject to change without notice. This document is intended purely as marketing material for professional/qualified investors only. This document is strictly confidential. This information is intended for informational purposes only and does not constitute investment advice, a recommendation, an offer or solicitation. No distribution is allowed into the USA.

CROCI World EUR Strategy

Reflects the Total Return (gross of fees) of a basket of around 100 equally-weighted stocks selected on a quarterly basis from a broad universe of large-cap stocks in Developed countries (excluding financial and real estate stocks) which are covered by the CROCI Team. The portfolio constituents are selected on the basis of low trailing 12-months CROCI price earnings ratio (P/E), according to the CROCI Methodology. In addition, the selected stocks aim to have a regional exposure which is materially the same as the benchmark index and a sector exposure of no more than 25 stocks per global sector.

Returns in USD, include reinvestment of dividends net of withholding tax and are unhedged. Benchmark indices, where available, reflect total returns net of dividend withholding tax (refer to the Appendix for more information on benchmark tickers used). Performance before the live date for CROCI Sectors USD Strategy (31 Mar. 2005) is simulated. The Simulations apply an investment strategy retrospectively to data that was in part reconstructed and not necessarily available at the time. As a consequence there may be instances when realised returns would have shown variation from those simulated and the latter may have had the advantage of hindsight.

Source for all data and charts: DWS; Bloomberg Finance LP; Factset Research Systems Inc. Data as of 29 Sep. 2023

Past performance, whether live or simulated, is not a reliable indicator of future results. Performance is shown gross of fees and does not reflect investment advisory fees. Had such fees been deducted, returns would have been lower. Allocations are subject to change without notice. This document is intended purely as marketing material for professional/qualified investors only. This document is strictly confidential. This information is intended for informational purposes only and does not constitute investment advice, a recommendation, an offer or solicitation. No distribution is allowed into the USA.

The CROCI Sectors Plus USD Strategy was inherited from CROCI Sectors USD Strategy on 18 Nov. 2015. The simulated performance shown prior to this date reflects the performance of CROCI Sectors USD Strategy, which was run on live basis since 31 Mar. 2005. The CROCI Sectors USD Strategy underwent minor implementation changes on 2 Jun. 2014: 1) Change of reconstitution frequency from monthly to quarterly; 2) Introduction of selection buffers to reduce constituent turnover; 3) Increased selection pool size in Europe and US; 4) Introduction of sector buffers to reduce sector turnover; 5) removal of "backfill rule". Please refer to page 3 for more details regarding these changes.

¹As of 29 Sep. 2023. Based on constituents selected on 18 Sep. 2023. ²Max drawdown was calculated since Mar. 2005.

CROCI Global Dividends EUR Strategy

Reflects the Total Return (gross of fees) of a basket of around 50 equally-weighted stocks selected on a quarterly basis from a broad universe of large-cap stocks in Developed countries (excluding financial and real estate stocks) which are covered by the CROCI Team and which have above-median dividend yields while focusing on sustainable dividends. Sustainable dividend screens exclude stocks by low Cash Returns, high Financial Leverage and high Price Volatility. Those stocks that pass the sustainable dividends screens are then selected on the basis of low trailing 12-months CROCI price earnings ratio (P/E), according to the CROCI Methodology.

The CROCI REW Indices underwent minor implementation changes on 21 Sep. 2018: 1) Inclusion of Financials sector stocks which are covered by CROCI Team; 2) Excludes any secondary share classes – only one eligible share class per company will be included.

Returns in USD, include reinvestment of dividends net of withholding tax and are unhedged. Benchmark indices, where available, reflect total returns net of dividend withholding tax (refer to the Appendix for more information on benchmark tickers used). Performance before the live date of 30 Sep. 2014 is simulated. The Simulations apply an investment strategy retrospectively to data that was in part reconstructed and not necessarily available at the time. As a consequence there may be instances when realised returns would have shown variation from those simulated and the latter may have had the advantage of hindsight.

Source for all data and charts: DWS; Bloomberg Finance LP; Factset Research Systems Inc. Data as of 29 Sep. 2023.

Please refer to Appendix for an explanation of Real Earnings Weighted.

Past performance, whether live or simulated, is not a reliable indicator of future results. Performance is shown gross of fees and does not reflect investment advisory fees. Had such fees been deducted, returns would have been lower. Allocations are subject to change without notice. Appendix

CROCI

Cash Return on Capital Invested (CROCI) is a cash-flow-based analysis which, by making a series of economic adjustments to traditional accounting data, aims to make non-financial companies comparable - regardless of industry or domicile. The main areas where the “economic data” differ from the accounting data are as follows:

Net Capital Invested (NCI), the economic equivalent of book value, is derived from the reported numbers as follows:

CROCI aims to eliminate the effects of revaluations and inflation so that the CROCI asset base is shown in current cost terms.

Intangible assets (brands and R&D) are capitalised systematically by treating these expenses as investments in fixed assets. Operating leases are brought back on balance sheet and treated as capital invested as well.

Accounting schedules for depreciation are normalised and a measure of economic life is used.

CROCI, the economic equivalent of return on equity, is a real (inflation-adjusted) economic cash return. It is the internal rate of return of gross cash flows (taxed, adjusted EBDIT) over the average asset life of the company’s assets against the gross capital invested.

Enterprise Value (EV) is the sum of all the holders having a claim on the company’s cash flows. The EV consists of market value of equity, debt and other liabilities with probable claims on future cash flows, including warranties, some provisions, pension underfunding and leases.

EV/NCI is thus the CROCI equivalent of the price-to-book ratio. In the absence of growth, the EV/NCI should be directly proportional to the CROCI. Furthermore, if CROCI=The Cost of Capital (COC), then EV/NCI should be equal to one. Economic P/E is the CROCI version of the P/E ratio. Conventionally, the P/E ratio can be derived from price-to-book value (P/BV) divided by return on equity (E/BV or RoE). Thus:

Economic P/E = EV/NCI / CROCI

Definitions

Enterprise Value (EV): Market value of equity (market cap), debt, and other liabilities, such as pension underfunding, warranties, leases.

Net Capital Invested (NCI): Estimated replacement value of the economic asset base, comprising the inflation-adjusted tangible assets, capitalised intangible assets (e.g. brands, R&D), leases and net working capital

Cash Return on Capital Invested (CROCI): Real (inflation adjusted) economic cash return on the adjusted asset base, calculated as an internal rate of return over the company’s estimated asset life

Economic P/E: EV / (CROCI * NCI) or (EV/NCI)/CROCI

EV/NCI: EV/NCI (Economic Asset multiple)

Dividend Yield: Trailing 12months Total Return – Price Return

Free Cash Flow Yield: Free Cash Flow / EV

Leverage: Current Net Financial Liabilities / Current Market Cap

CROCI Real Earnings Weighted (CREW): CROCI Real Earnings Weighted Strategies seek to hold stocks where the companies weight is determined according to its CROCI Real Earnings. CROCI Real Earnings is a measure of the Economic Earning power of each stock according to the CROCI methodology and is calculated as CROCI * Net Capital Invested. This is then systematically adjusted to reflect the economic earnings attributable to equity. The construction methodology systematically manages sector exposure and seeks to moderate exposure to the largest companies. The methodology takes a position in each of the eligible CROCI covered companies in the stated selection universe.

Trailing numbers calculated as (No. of completed months in FY1)*FY1+(12-No. of completed months in FY1)*FY0.

Regulation S: Shares of the fund are only available for certain non-U.S. persons in select transactions outside the United States, or, in limited circumstances, otherwise in transactions which are exempt in reliance on Regulation S from the registration requirements of the United States Securities Act of 1933, as amended, and such other laws as may be applicable. This document does not constitute an offer to subscribe for shares in the fund. It is directed at professional/sophisticated investors and is for their use and information. This document should not be provided to retail investors. The offering or sale of fund shares may be restricted in certain jurisdictions. For information regarding jurisdictions in which the funds are registered or passported, please contact your sales representative. Fund shares may be sold on a private placement basis depending on the jurisdiction. This document should not be used or distributed in any jurisdiction, other than those in which the funds are authorized, where authorization for distribution is required. DWS Distributors, Inc. is authorized by the fund to facilitate the distribution of shares in certain jurisdictions through dealers, referral agents, sub distributors and other financial intermediaries. Any entity forwarding this material, which is produced by DWS Distributors, Inc. (or an authorized affiliate) in the United States, to other parties takes full responsibility for ensuring compliance with applicable securities laws in connection with its distribution. The shares offered hereby have not been registered under the U.S. Securities Act of 1933, as amended (the "Securities Act") or the securities laws of any state, and are being offered and sold in reliance on exemptions from the registration requirements of the Securities Act and such laws. Because the shares offered hereby are not registered under the Securities Act, or the securities laws of any state, the shares offered hereby are subject to restrictions on transferability and resale and may not be transferred or resold except as permitted under the Securities Act and applicable state securities laws pursuant to registration or exemption therefrom. Pursuant to the rules and restrictions of Regulation S promulgated under the Securities Act, (i) shares will not be offered and sold hereunder in the United States or to U.S. persons (other than distributors) unless the shares are registered under the Securities Act or another exemption is available and (ii) hedging transactions involving those shares may not be conducted unless in accordance with the Securities Act. Shares may be offered privately outside the United States or to or for the benefit of an investor that is not a U.S. Person only in accordance with relevant laws of the jurisdiction where the offer is made.

It is not possible to invest directly in a strategy. The performance of any actual investment products may differ significantly.
